As a result of the opinion of the Attorney General and the legislative history of the Taylor Grazing Act, a construction of that character would not seem to be justified.

The only explanation of the proviso that is at all plausible is that, as the bill passed the House of Representatives, the purpose and meaning of the proviso was clear; but that, after the addition by the Senate of the acreage limitation, the proviso is so worded that any attempt to give it any effect leads to an unreasonable result and defeats the purpose of the limitation imposed by the Senate. It would seem that the proviso should be disregarded in order that the later amendment of the Senate may be given effect.

Respectfully submitted.

ROBERT W. McMILLAN,
Assistant Counsel.

JUNE 30, 1942.

Mr. PAGE. I want to emphasize that for you, Mr. Day, for the reason that you remarked that Senator Hayden was interested in this wildlife proposition, and this is a direct statement that he has no interest in any special agencies; that he is going to take no sides whatsoever as to the different agencies. He feels that it is something entirely up to the Interior Department agencies involved.

The cattlemen will speak for themselves, Mr. Chairman. The position is that the whole matter was adjudicated, determined, and agreed upon. They are perfectly willing to cooperate with the buffalo, and help in this management, as they always have. But, in some new issue, like this one we have just uncovered, a new agency, coming in here to get a few preserves, and cut down their existing preferences, take away their vested rights—for that new agency to then turn it over to the State game and fish commission, for them to run; still another agency on top of us in House Rock Valley—and there will be a fight.

Mr. ARTHUR WOOLLEY. May I state one historical fact, Mr. Chairman?

The CHAIRMAN. Yes, sir.

Mr. ARTHUR WOOLLEY. The buffalo were brought into this country in the name of a man called Buffalo Jones. E. D. Woolley, our father, had us gather 200 head of cows off of this range, and trail them to the railroad, and turn the bill of lading over to Buffalo Jones, to take them to Kansas City, and sold them.

Then he went to Texas and New Jersey and into Canada, and bought a bunch of buffalo, 30 head; brought them back to the railroad. And we went out to the railroad and got them and brought them out here. He brought with him a man by the name of Frank Olmstead, and a man by the name of Jim Owens. The history of those two men, and Buffalo Jones, can be found in Zane Grey's *Last of the Plainsmen*.

He formed the Buffalo Cattle Co., which he opened when Buffalo Jones left, as he did immediately; and he and Owens and Olmstead tried to carry on the breeding of the "cattleope," a cross between domestic cattle and the buffalo. At the same time Theodore Roosevelt made available to Buffalo Jones six Caracul sheep that were a gift from the Shah of Persia; brought them down there; and gathered another herd of cattle out here, and sold them, and bought a herd of Merino sheep, to cross-breed them, and make a desert sheep.

When father died, and buffalo were just a nuisance, Jim Owens bought the half interest that the estate had, and then sold them to the State of Arizona when he got too old to handle them.

The CHAIRMAN. All right now, Mr. Day, I would like to have a statement from you, because I am just a little bit hazy on the preliminaries. Is it proposed to increase this withdrawal?

Mr. DAY. No; it is proposed to decrease the withdrawal, from some 44,000 acres to approximately a township of land that—this thing came into controversy here recently, over the boundaries of where the withdrawal might be. It was proposed to reduce it down from 44,000 acres to around 23,000 acres of land, which would be the equivalent of somewhere around 200 head of buffalo.

The CHAIRMAN. Then is it proposed—and either of you gentlemen may answer this—is it then proposed to segregate that from the open public domain that is now being grazed, of which this 23,000 is a part?

Mr. DAY. No.

The CHAIRMAN. In other words, the same arrangement would exist that now exists, whereby the buffalo and the stockmen participate in using the range jointly?

Mr. DAY. That is right. Our interest was to see there was some specific, definite right for that buffalo herd recognized from now on in this area.

The CHAIRMAN. Would that right take from the stockmen more than is being taken from them now, with the 200 head of buffalo?

Mr. DAY. I don't see where it is.

The CHAIRMAN. Of course, if it is, undoubtedly it is a charge upon the range, which now must be accounted for, because they are grazing animals, and they would count in the overgrazing of the area; so that the arrangement now contemplates 200 head of buffalo, and also contemplates the stockmen using the withdrawn area, just as they use the other part of the area?

Mr. DAY. Plus that water that was developed, Senator.

The CHAIRMAN. What is it?

Mr. A. T. SPENCE. May I ask this gentleman a question on that?

The CHAIRMAN. Certainly.

Mr. SPENCE. Has your department set aside, or asked for any specific area on House Rock Valley; set-up any cornerstone where you desire—

Mr. DAY. We have taken the advice of the State game department on this, because we are acting as an intermediary, for the perpetuation of this herd by the State. Mr. Kartchner has indicated an area that the State game department feels should be set aside in this withdrawal.

Mr. SPENCE. At what time did you make that request of the Division? Have you requested the Division of Grazing to set that aside for you?

Mr. DAY. We haven't requested it, discussed it with the Division of Grazing 8 months ago. Following that, our interpretation has been that the Division of Grazing had no jurisdiction, because the original withdrawal held; so that we did not discuss this particular item with the Division of Grazing at that time. Since then it has been referred to them for comment.

Mr. SPENCE. Then you have not asked the Division of Grazing for any corners to be set-up on that allotment for the buffalo?

Mr. DAY. No.

Mr. SPENCE. They are not aware of the area——

Mr. DAY. We have a maximum of difficulties on this thing. We have counterideas juggling back and forth——

Mr. SPENCE. You may not understand why I am asking this question, Senator. I am representing a man who particularly desires that this point be brought out—if they had asked the Division of Grazing to set them aside an area—and that is all.

Mr. DAY. Well, we have an original proposal for setting aside a certain tract of land which amounts to around 23,000 acres.

The CHAIRMAN. And you have discussed that with the Division of Grazing?

Mr. DAY. That's right. It's been under discussion between the Division of Grazing and ourselves for some time.

Mr. ARTHUR WOOLLEY. As a matter of fact, the Division of Grazing has made some kind of a survey recently; have they not?

Mr. DAY. Yes; I think possibly they have.

The CHAIRMAN. Mr. Leech, will you answer that?

Mr. LEECH. Yes; I believe an examination was made by Mr. Brooks.

Mr. BROOKS. I think it was in June.

Mr. ARTHUR WOOLLEY. Of this year?

Mr. BROOKS. When?

Mr. ARTHUR WOOLLEY. When did it first come to the knowledge of the cowmen?

Mr. BROOKS. Previous to that, and at that same time——

Mr. ARTHUR WOOLLEY. May I ask a question, Senator?

Mr. DAY. have you any written directive from your superior, the Secretary, or anyone over you, upon which you base the statement that you do not intend to ask for a segregation of use of this land?

Mr. DAY. No.

Mr. ARTHUR WOOLLEY. In other words, your statement now is merely your predeclared intention?

Mr. DAY. That's right.

Mr. ARTHUR WOOLLEY. What object could you have then, if you do not intend to segregate this land in use, to have the diminish in area and have it measured and delineated?

Mr. DAY. Because we feel that there should be, if this is going through by Executive order, to give us a specific claim for the buffalo herd to range in the House Rock Valley. It must be described in this Executive order, and as such, you have got to define where the area should be.

Mr. ARTHUR WOOLLEY. If you are not going to segregate it, if the Executive order already referred to covers it, why do you need another one?

Mr. DAY. I think if we got a legal interpretation we would still find that 44,000 acres would hold.

Mr. PAGE. That is where we differ.

Mr. DAY. I, personally, am willing to submit it to our solicitor and find out. Submit this Executive order, and that would formally clear this thing anyhow.

Mr. ARTHUR WOOLLEY. Is there any service that you know of in the Wildlife Division to in any manner effect the future use of any part of that area differently from that prescribed in the resolution of the

State Fish and Game Department of Arizona, or the State wildlife department as represented by this resolution that Mr. Page read?

Mr. DAY. Presently, no.

Mr. ARTHUR WOOLLEY. Presently, no?

Mr. DAY. As to what the future might be, I could not say.

Mr. ARTHUR WOOLLEY. What do you mean "presently," sir?

Mr. DAY. I mean at the present time.

Mr. ARTHUR WOOLLEY. How long would you figure you would have to change your mind?

Mr. DAY. Of course, I don't know how long I am going to live.

Mr. ARTHUR WOOLLEY. Would you say it would be for your lifetime, or occupancy of the office? Are you going to play with us here now?

Mr. DAY. My understanding in discussing this with Mr. Kartchner, he is perfectly agreeable to continuing this for the present war emergency, for the present situation. Perhaps in some future time there may be plans or specifications for some adjustments.

Mr. ARTHUR WOOLLEY. Now you are going to pass it over to Mr. Kartchner for the duration of his term of office, if that extends beyond the term of the war.

The CHAIRMAN. Well, it is very little trouble to clarify this: if a withdrawal is made, a permanent withdrawal. This was a temporary withdrawal.

Now, if a permanent withdrawal is made, the Department having jurisdiction of matters in the withdrawal can exclude very promptly, by order, anyone who has been using it. Don't be misled on this thing at all.

Mr. SPENCE. May I ask the gentleman another question, please?

The CHAIRMAN. Well, it's 1 o'clock, and I think the reporter would like a rest for a minute or so.

Mr. PAGE. I would like to bring out one point to clarify Mr. Day's remark, Senator. He said that the withdrawal would be cut down from 44,000 to 26,000, or whatever it is. We don't recognize that temporary withdrawal. The effect it would have would be that the allotment of the Grazing Service for the buffalo would be double over what it is now. That is the point.

The CHAIRMAN. Well, I don't quite catch that, but we will be glad to have it clarified.

We will take a recess for 1 hour.

(Recess until 2 p. m.)

AFTER RECESS

The CHAIRMAN. We are still on the subject of House Rock Valley and the buffalo question. I think probably the fish and wildlife agency of the State of Arizona might be heard now, if they care to be heard.

STATEMENT OF K. C. KARTCHNER, ARIZONA STATE GAME WARDEN

Mr. KARTCHNER. Mr. Chairman, at the outset, I would like to make this statement, that I am sure there has been some misunderstanding in this part of the State of Arizona, as to the attitude of the Arizona Game and Fish Commission, not only the attitude, but some of the underlying principles that have placed us in our present position.

I might say further, too, that the Commission harbors no ill will toward any individual stockman or group of stockmen. Neither does it hold any brief for individuals or groups of stockmen. It is our purpose to get along with them and we take pleasure, in most instances, in the fine relationship that obtains between the Commission and the stockmen of the State of Arizona.

Mr. Page made a very fine build-up this morning. I want to compliment him on the way he presented his case. However, there are certain omissions that were made, deliberately, or otherwise, that did not give a complete picture.

The State of Arizona bought the so-called buffalo herd in House Rock Valley in 1927, constituting at that time approximately 100 head. The State had no water at that time and it depended upon the waters that had been developed by stockmen some years previously.

On December 31, 1930, as has been stated, there were withdrawn some 44,000 acres in House Rock Valley for future classification, or, as an aid to legislation for final disposition of that area, based upon an application of the State game department for a range to be set aside for the buffalo herd and a wildlife management area. Mr. Page went into further detail on that, which I need not reiterate.

In the spring of 1940 I was appointed State game warden under the Arizona Game and Fish Commission, and I no sooner had taken office until my old friend, John H. Page, for whom I worked when I was 16 years of age, came in and we renewed an acquaintance, and it was very amiable. The first official point that he took up was the fact that we had too many buffalo, and proposed that we cut them down to around 50 head, which was all we needed for display purposes. I said, "Mr. Page, I am only new here, and it will take me some time to get the feel of things. I am not in a position to even discuss the matter, other than to keep it in the back of my head for discussion with the Commission later."

At that time we had close to 200 head, about the same number we have now. I asked Mr. Page what he knew about an old withdrawal that was made when I was with the game commission once before, having in mind this withdrawal of December 31, 1930. He said, "That has all been done away with by the Taylor Grazing Act of 1934, and the Grazing Service has already lined out the range, or is lining it out, and they are making an area there for your buffalo herd."

I said, "Do you have definite authority on that?" He said, "Why, sure, it was specific and definite."

I said, "Well, no doubt you are correct, but we reserve the right to check it."

On December 11, 1940, as was stated by Mr. Page, the Grazing Service and the cattlemen, represented by Mr. Woolley and Mr. Page, came to an official meeting of the game commission, with the proposition that we agree that we would hold the buffalo down to 200 head.

The CHAIRMAN. You say they came to you with the proposition?

Mr. KARTCHNER. Yes, sir. Each year through the medium of hunting such as we had carried on in the past we would keep it down. We discussed the matter at great length and we agreed that that was a very good set-up, providing, as they said, that the area was under the jurisdiction of the Division of Grazing. We went into all the factors,

including a proposition by the stockmen that we intercede with the Forest Service for additional cattle on the Kaibab National Forest, in consideration of their agreeing to our keeping the 200 head of buffalo. We told them we couldn't see where the connection was and that we had enough troubles of our own, without interceding for them on an area that was being administered by the Forest Service. We had the notes drawn up on the basis that we would reduce the herd to 200 head each year, and I turned to John H. Page and I said, "What about this withdrawal of 1930?" And again, he stated very positively that that had been rescinded by the Taylor Grazing Act.

I said, "Well, there is one exception to our making this statement of policy, and that is if we find that any rights accrued to the State of Arizona out of that withdrawal of 1930, we intend to assert them."

He once again stated that it had been taken over by the Taylor Grazing Administration, and there was no use to even consider the matter. The chairman of our commission, Mr. Charles P. Beech, at that time spoke up and said, "Oh, yes, that is correct."

In all our dealings on this matter we never have committed ourselves to giving up anything that might accrue from that withdrawal.

The matter went on, and we took it up with Senator Carl Hayden to determine just what the status of these 44,000 acres was, and you got the evidence this morning. That was the result of our investigation.

In the meantime, the Grazing Service came to the Department with the proposition we be allotted 14,000 acres in the extreme southeast corner of House Rock Valley, over next to the main bluff of the Marble Canyon, where it is cut up into numerous other box canyons which enter into it. We looked it over and told them that we didn't believe that that represented our equity in this range, since the buffalo had ranged there since 1905. We stated we had bought them in good faith, and we believed they had as good priority as any other interest. They never once intimated but what they had full jurisdiction.

The CHAIRMAN. Who?

Mr. KARTCHNER. The Grazing Service went ahead and classified each section of that 44,000 acres, and went so far as to outline allotments to the individual or group permittees. Eventually, we received the decisions which were presented this morning. A member of the Grazing Service mentioned the fact to me one day that he understood we had such a decision, and I told him, "Yes." He said, "May we have a copy of it?" And I said, "Surely. You can have a copy of anything we have in our files."

The CHAIRMAN. When you say the "decision," you refer to the—

Mr. KARTCHNER. I keep using the word "decision." That should be an opinion.

The CHAIRMAN. The opinion of the members of the legislative counsel?

Mr. KARTCHNER. That's right. When he read it, he got it in his files and he said, "We have known that since 1928."

The CHAIRMAN. Who said that?

Mr. KARTCHNER. A member of the Grazing Service. Do you want me to mention his name?

The CHAIRMAN. Certainly.

Mr. KARTCHNER. Mr. L. R. Brooks, sitting right here.

Let me say this for Mr. Brooks, he was not in on the original deliberation of the buffalo. He came in later. He showed me a letter

from Mr. F. R. Carpenter who, in 1938, was in charge of the Division of Grazing, stating that the 44,000 acres under this withdrawal, they had determined were not included in the land set-up by the Taylor Grazing Act.

Now, I submit this: The Grazing Service, in spite of that, went ahead and charged grazing fees. You heard that this morning. Up until 1942 they charged grazing fees.

The CHAIRMAN. On these so-called withdrawn lands?

Mr. KARTCHNER. The so-called withdrawn lands; in spite of this letter, of 1938, by F. R. Carpenter. If I may, I would like to have this letter by Mr. Carpenter put into the record, if the Grazing Service has a copy of it.

Mr. LEECH. That is the letter of June 18, 1938, which you are speaking of, Mr. Kartchner?

Mr. KARTCHNER. I am not sure about the date of the letter.

Mr. LEECH. Is this the letter, Mr. Brooks, that you showed to Mr. Kartchner?

Mr. BROOKS. That is the letter; yes.

Mr. LEECH. It will be placed in the record, Senator.

The CHAIRMAN. Very well. Could we know the contents of it now?

Mr. LEECH. I would be glad to read it.

DEPARTMENT OF THE INTERIOR,

DIVISION OF GRAZING,

Washington, June 18, 1938.

MR. HULING USSERY,
Phoenix, Ariz.

DEAR MR. USSERY: On June 2, Mr. Ryan inquired by letter concerning the status of Executive Order No. 5522, dated December 31, 1930, affecting lands now within the boundaries of Arizona grazing district No. 1. A copy of this order is enclosed. You will note that the enactment of the Taylor Grazing Act did not effect its cancelation, as indicated by the last sentence of the order.

The original plans of the Biological Survey contemplated the creation of a wildlife refuge in House Rock Valley in Arizona sufficient to afford range for 200 buffalo as a primary species, and secondary herds of 1,000 antelope and 1,500 mule deer. This number of game animals contemplated was, of course, unreasonable, and to date nothing definite relative to the establishment of that game refuge has been accomplished.

On the basis of an informal conference between J. N. Darling, then Chief of the Bureau of Biological Survey, and myself in June 1935, certain principles were mutually understood between us, although there was no formal agreement adopted or approved. These principles were embodied in a letter addressed to the Secretary of Agriculture on June 25, 1935, which was accepted by that Department. A copy of that letter is enclosed. The purpose, of course, was to clear the deck for the establishment of grazing districts within areas in which the Biological Survey had expressed a preference for wildlife refuges. Two of such refuges were contemplated in Arizona:

(1) The King of Arizona, which was later modified and is now practically abandoned insofar as the Biological Survey is concerned, in view of the contemplated establishment of Arizona grazing district No. 3.

(2) The House Rock Valley, which is discussed above.

The requests of the Biological Survey at that time substantially stalemated the establishment of the grazing districts within which these wildlife areas were located. No formal agreement pertaining to wildlife in Arizona grazing district No. 1 exists.

On May 12 you were furnished with a number of copies of joint regulations relating to the protection and administration of game ranges or wildlife refuges established in conjunction with the organization of grazing districts under the Taylor Grazing Act.

If the local representative of the Biological Survey has been afforded representation on the board in Arizona grazing district No. 1, he is, of course, restricted

in authority. He has not been appointed by the Secretary in the regular order, and his duties are not those of a regularly elected district advisor as described in the code. Division of Grazing Circular No. 3 provides for a wildlife representative on each board in New Mexico. He is, however, elected and must have the same qualifications as board members representing the livestock industry, except that he need not be an owner of livestock. Your granting a representative of the Biological Survey informal membership on the board is a good cooperative gesture.

Very truly yours,

F. R. CARPENTER, *Director*.

The CHAIRMAN. Very well.

Mr. KARTCHNER. Now, considerable has been said about the Arizona Game and Fish Commission agreeing to holding the buffalo herd at 200 head. But now it seems to be something else. I wanted to bring out clearly that all through our preliminary discussions, particularly with Mr. Page, we very consistently stated if we do have any rights under this proclamation of 1930 we intend to assert them.

Now, getting back to the 200 head, we never have indicated that we intend to increase the buffalo over 200 under present conditions. Naturally, when we got these decisions we ceased to recognize the Grazing Service as having jurisdiction over these lands and refused to go into a long investigation with them as to where we felt like our lines should run on a permanent allocation of range for the buffalo herd.

Not long ago we made application for an additional withdrawal, modifying the one of 1930, reducing it from some 44,000 acres to some 23,040 acres of public lands.

The CHAIRMAN. Why do you call it an additional withdrawal if it is a reduction?

Mr. KARTCHNER. I should not say additional. I should say an amended withdrawal, perhaps. In addition to the 23,000 acres there are something like 3,000 acres of school lands, we understand, under lease by the stockmen.

The CHAIRMAN. Within the withdrawal?

Mr. KARTCHNER. Within the withdrawal. We made our report and map public. For that matter, anyone could look at it that wished to. The Chief of the Division of Grazing made a report to the effect that the line was unsatisfactory. Again we go back to the best legal opinions available, and state that we can see no interest, no direct interest to be asserted by the Grazing Service, since they have no jurisdiction over the lands. They came back and stated that since they would fall their to what remained after we might be allotted this 23,000 acres, they felt that they did have a direct interest. We still failed to see that as a reasonable ground for taking too direct an interest.

The CHAIRMAN. In other words, "I will get what you leave, but I will direct you what to leave"; is that it?

Mr. KARTCHNER. Yes; that's right.

Now, in conclusion, we think the buffalo herd of Arizona is one of the most unique herds of its kind left in the United States. It is a wonderful attraction for people coming here from all over the United States. It brings people into the country, particularly when they have gasoline and rubber. It means business for the local people and business for the people of Arizona. Again, we feel they are of quite an economic value in the production of meat. There is very little difference between the buffalo and a cow. It is true,

you take domestic animals and feed them up to where they weigh more, and thereby they represent a greater amount of meat. But the difference is not much. It is true, they are publicly owned which, in a sense, might be taken as reducing private enterprise to that extent. However, the Arizona Game and Fish Commission is working for the public, the entire people of Arizona, and endeavoring to look after its interests to the best of its ability.

It is not a matter like a national monument or a national park where they sew up the resources absolutely for all time. It is a matter of settling upon a final allocation of range for a unique herd of buffalo, which is productive year after year. There is an annual crop; not only of meat but a great sporting event, some of the other notwithstanding to the contrary.

A lot of people say, "Why, I'd rather go out and kill my own milk cow"; but if you would go out and attend one of those winter hunts it is one of the greatest sporting events we have. In addition to the meat it produces, it is a great event.

Now, unless there is something further, I am happy to have had the opportunity of making this statement. I certainly have not acted in bad faith with anyone. We have not changed our minds or been underhanded in any way whatsoever. We have stated our purpose and gone ahead in good faith, trying to carry it out. It is not the intention of the Arizona Game and Fish Commission at this time to increase the buffalo herd beyond 200 head this winter. We will have to take off something like 50 head this winter, in order to comply with that agreement.

The CHAIRMAN. Now, if this new and amended withdrawal were made in accordance with your request, have you any assurance that that part of the present withdrawal not embraced within your new boundaries would be returned to the open domain?

Mr. KARTCHNER. As far as I know it would automatically go into the Division of Grazing, since it would be a hiatus, or a pocket in there between grazing district No. 1 and the new withdrawal.

The CHAIRMAN. Now, if this new withdrawal, which is an amended withdrawal, were to be approved, it would be a withdrawal that would direct the use of the land by some Federal agency, presumably the Fish and Wildlife. There could not very well be a withdrawal that would direct the use of the withdrawal by the State of Arizona. I might correct that; it could be used and would be used for the exclusive purpose of having the State of Arizona using it for a certain given purpose. But what I am now driving at is this: Is it your intention, as far as you know, if this amended withdrawal is approved, it will be removed from use by the stockraisers of the district?

Mr. KARTCHNER. Not at all.

The CHAIRMAN. Then you would use it as it is being used now. The two services would work together; the stockraiser would graze it as commoners, without permit, and without fees, and your buffalo would not only graze that district, but it would graze the outside as well?

Mr. KARTCHNER. That's right. I may add, on that point, something was said about supposing we can't work out a system there that is mutually advantageous. We have gone so far as to say if we find we cannot hit it off, we might eventually consider fencing,

but, so far as I can see, there is no intention to fence. Certainly we have committed ourselves very definitely not to consider fencing for the duration of the war.

The CHAIRMAN. Fencing off of 23,000 acres, or any number of acres—from the picture that has been presented here—and if that fenced-off area was precluded from grazing, that would militate against the grazers of that district.

Mr. KARTCHNER. There would be a portion of House Rock Valley which, prior to our water development, for the most part was dry.

The CHAIRMAN. I take it, from what I hear here this morning, that the stockmen of the district are interested in the question of whether or not the 23,000 acres, or any number of acres, is to be withdrawn from the grazing lands of that district. That seems to be the big controversy; and, very frankly, I don't know that that subject addresses itself to this committee at all, because it would be between the State of Arizona and the stockmen of this district.

On the other hand, where the Federal committee enters into it is whether or not there should be any withdrawal which would affect the rights of the stock grazers, or stock raisers in the district more than what there is now. In other words, to boil it down again from another angle, if you got your new amended withdrawal for 23,000 acres, you would get it permanently.

Mr. KARTCHNER. That is what we are asking for.

The CHAIRMAN. Today it is only temporary, a temporary withdrawal for a given purpose, until certain legislation is worked out, so if you got the new withdrawal, it would be a permanent withdrawal. Either you or the Wildlife Service of the Government could administer it as you saw fit; and you would exclude grazing domestic cattle on it if you saw fit; or you could admit them if you saw fit. It would not in reality come under the Grazing Service at all, unless it was by some other temporary arrangement. That is about the way you understand it?

Mr. KARTCHNER. Yes, sir.

The CHAIRMAN. Any questions?

Mr. PAGE. Mr. Kartchner, any criticism of your position is only to this point, that you assume from certain unknown sources, without any direct decision of the Secretary of the Interior, that the 44,000 acres in the temporary withdrawal for classification is not in Arizona grazing district No. 1; and you have gone on that basis, changed your working with the Grazing Division and gone to the Wildlife Service for assistance.

Mr. Day says that he came into the picture with the Wildlife Service to give the permanency to the buffalo range for the State of Arizona. Isn't that correct, Mr. Day?

Mr. DAY. That's right.

Mr. PAGE. By saying that, that is really an inference that the Grazing Division has no permanency and is not entitled to be considered as a permanent administrator of grazing rights, as was contended under the Taylor Grazing Act. In other words, there is a clash between two United States bureaus.

Now, when anybody tries to say that that 44,000 acres is not in Arizona grazing district No. 1, that it wasn't put in there and that it isn't still in there, I maintain that is incorrect, because who is the

authority who has the jurisdiction under the Taylor Grazing Administration, under those withdrawals which are under the Interior Department? The Secretary of the Interior in his original order put that "all areas in Arizona grazing district No. 1," in spite of that other withdrawal for the whole area, and confirmed that in 1940 by a modified order which confirmed it, and fully stated that it was in Arizona grazing district No. 1.

I can't conceive why the grazing district officials stopped collecting fees when they had no instructions from Washington that there was any subsequent ruling to change the status. Certainly there has been no revocation of the Arizona grazing district withdrawal orders and correction orders.

Mr. KARTCHNER. We take the opposite view, Mr. Page.

Mr. PAGE. To clarify that one point, Mr. Day said to reduce the present 44,000 to 23,000. Well, you know what the 44 is now, temporary withdrawal; and the present set-up for the Wildlife, with permanent withdrawal is the 23,000, but the Grazing Service allotment for buffalo for the 200 head is about half what that 23,000 acres would be. Therefore, the result, if it is successfully put over, these cattlemen in House Rock Valley would be the grazing allotment for the 200 head of buffalo would be doubled over what it is now, and they would lose the difference in the areas of their own allotments.

Mr. KARTCHNER. On whose authority do you make that statement, Mr. Page?

Mr. PAGE. What statement?

Mr. KARTCHNER. How do you know how much that land would carry, unless it is actually demonstrated?

Mr. PAGE. The Grazing Service has the figures on the carrying capacity.

Mr. KARTCHNER. Can anyone blame us for taking the advice of the Senate counsel, in Washington, D. C.; the United States General Land Office; and the Solicitor of the Department of the Interior? Is there any higher legal counsel than those three, working together?

Mr. PAGE. The Secretary of the Interior—

The CHAIRMAN. Will the Solicitor of the Department of the Interior give an opinion on that?

Mr. HAVELL. Mr. Graham, of the Solicitor's department, is not here. He has been with us on many occasions, but he is not here. I don't know that I am the proper person of the Interior Department to express an opinion here, but as I said this morning, I do not know of the question—everything having been referred to the Solicitor of the Interior Department. I don't know that the matter has ever been gone into, or an opinion expressed by the General Land Office.

My personal opinion is that the matter, when it was raised, should have been referred to the Solicitor of the Interior Department for an opinion. It has not been. I think possibly our good friends in the Grazing Service have been remiss in their duty in discontinuing the administration of this area until they got an opinion from the Solicitor of the Interior Department.

As I see the situation today, the lands are withdrawn, and if the theory that has been advanced here today is sound, then the lands are being grazed without any supervision or administration, which clearly is not the intention or purpose of the Taylor Grazing Act. What super-

vision is being given to these lands. Are they a "no-man's land" being grazed by any and everybody who wants to? I think it was the purpose of the Taylor Grazing Act to place grazing lands under an administration.

Mr. PAGE. All in specified allotments, Mr. Havell.

Mr. HAVELL. My personal opinion is—and I fear I might be reversed when the matter is referred to the Solicitor—my personal opinion is that under section 1 of the Taylor Grazing Act, lands that are withdrawn or reserved, may be placed in a grazing district with the consent of the Federal agency having jurisdiction. I think it could be really reasoned legally that since the Secretary of the Interior placed these lands in the grazing district, and since the Secretary of the Interior had the administrative jurisdiction over the lands that were reserved—the 44,000 acres—that the Secretary's action in so doing was his consent to the inclusion of the lands in the grazing district for administration. That is my personal opinion, and I may be reversed by the Solicitor, but once more, I think the record that is being made here is going to be very helpful to the Department in disposing of this question that is now before it, as to the future action on the pending questions for a supplemental withdrawal.

Mr. KARTCHNER. Let me say this: Naturally we are subject to any final decision that might be made. In this case, with the information available, we naturally come to the assumption that this area is not under the jurisdiction of the Grazing Service.

The CHAIRMAN. You asked a question a minute ago. You said, What higher authority could you follow than the advice of the Solicitor of the Interior Department? That immediately aroused my attention as to whether there was an advice, or conclusion by the Secretary of the Interior.

Mr. LEECH. Well, not to my knowledge, Senator. I am in a position on the case, Senator, I think we should have submitted it to the Department and had an opinion from the Department before we returned any grazing fees, or quit administering the area in 1942. I have to agree with Mr. Havell. I think we should have submitted it to the Department and been instructed.

The CHAIRMAN. I would offhand take that same view, because, as I understand it now, the Secretary of the Interior included these lands in the district. In other words, there was no distinction made between the temporary withdrawn lands and the general lands of the district and, when you allotted the lands to the stock growers, you included this temporary withdrawal as well.

Mr. LEECH. Yes, sir.

The CHAIRMAN. And you charged them for the use of it as well, just as you did the outside lands. That being true, the lands had that status until some order from the Secretary of the Interior came down changing the status. Wouldn't that appeal to you as being the reasonable position?

Mr. LEECH. That is the way it should have been, Senator, except no order has come down from the Department.

The CHAIRMAN. Therefore, you shouldn't have changed the service.

Mr. LEECH. Action taken by the Grazing Service, without reference to the Department, which I admit, in my opinion, was wrong.

Mr. KARTCHNER. What I have in mind here, Senator, is the statement of Senator Hayden that he had been told, informally by the

Solicitor of the Department of the Interior, that this was the case; and it had been confirmed by the records of the United States Land Office.

Mr. HAVELL. As I said this morning, Senator, the letter from Senator Hayden addressed itself to the existence of the temporary withdrawal, and I am quite sure, if the Senator asked, we said that withdrawal was still in force and effect, and it is, but I don't think the Senator addressed his question as to whether the creation of a grazing district had the effect of lifting that withdrawal, or modifying it. I think that is the purport of the letter from the Senator. I really think that is what the Senator meant.

The CHAIRMAN. I really think, gentlemen, we are largely making a tempest in a teapot as regards the present status. Let's assume that the Grazing Service has inadvertently, or otherwise, made a mistake and should have been charging fees for the use of these withdrawn lands. It doesn't affect the order temporarily withdrawing the lands. The lands still have the status of being temporarily withdrawn lands. Nor does it affect your position. You now come in and ask for an amended, permanent withdrawal, or rather, the Wildlife, I take it, would ask for that, or would you ask it?

Mr. KARTCHNER. No; the Game Department initiated that.

The CHAIRMAN. You asked for a permanent withdrawal, of an amended nature. That is the reason I asked you the question in the first place, would your application request the return of the surplus land over and above the 23,000 acres? It seems to me that it should. Otherwise, you would have a temporary withdrawal, and a permanent withdrawal within a temporary withdrawal, and you would still have the questionable status of the balance then, between this 44,000 and the 23,000 acres, which should be cleared up at once.

Mr. DAY. Mr. Chairman, to answer that question, the withdrawal that we had prepared and which was submitted to the Land Office, and turned back to the Grazing Service, where all of this circle began to start, says as follows:

Subject to valid, existing rights to an existing reservation for purposes affecting portions thereof, the Public Lands within the following described area are hereby withdrawn from all forms of appropriation under the Public Land laws, including the mining laws, and reserved under the jurisdiction of the Department of the Interior for use by the Game and Fish Commission of the State of Arizona as the House Rock buffalo range and Wildlife Management area, under such conditions as may be prescribed by the Secretary of the Interior.

It describes the land itself, and then the last paragraph:

Executive Order No. 5522 of December 31, 1930, withdrawing the public lands in the above-described area with other lands for classification and in aid of legislation is hereby revoked—

which turns the rest of it back to the grazing district.

The CHAIRMAN. That would clear the land; the difference between 23,000 acres and 44,000 acres would return to the open public domain.

Mr. ARTHUR WOOLLEY. May I ask Mr. Leech a specific question concerning this?

The CHAIRMAN. Yes.

Mr. ARTHUR WOOLLEY. How many acres in your total adjudication did you allot to the 200 head of buffalo?

Mr. LEECH. In the decision, Mr. Woolley, I said a carrying capacity for 143 buffalo yearlong, and, as the herd increased, other carrying

capacity, within the House Rock Valley, was to be furnished this herd. I gave, under the decision, and the map, no particular allotments. It was all in carrying capacity, based on the testimony of the range examiner that testified at the hearing.

Mr. WOOLLEY. What acreage do you give per cow?

The CHAIRMAN. Per buffalo?

Mr. WOOLLEY. No; domestic cattle?

Mr. LEECH. I believe the carrying capacity varies, in the House Rock Valley. I would have to ask Mr. Brooks as to the variation, of whether it is 10 acres, or 12, or 15 per head.

Mr. BROOKS. We figure, I think, anywhere from around 7 to 15 head of cattle, per section, yearlong.

The CHAIRMAN. How do you agree with the testimony given here yesterday as to the necessary acreage for support of one animal, one cow, one head of cattle, I think it was. I believe the testimony was one and a third grazing acres per animal.

Mr. BROOKS. No; that was forage acres, Senator.

The CHAIRMAN. Does the Grazing Service—

Mr. BROOKS. It takes several acres of land to produce a forage acre of feed.

The CHAIRMAN. The forage acres, as testified to yesterday, do you agree with that?

Mr. BROOKS. We agree with it; yes, sir.

The CHAIRMAN. That is all right. I just wanted to get the two departments to agree on the one subject.

Mr. PAGE. Well, Senator, speaking about the testimony yesterday, beautiful areas and meadows—

The CHAIRMAN. Waving grass, and mowing hay, and one thing and another—

Mr. PAGE. Were to be better to carve out a wildlife preserve area already under the Government—

The CHAIRMAN. It is all being used for grazing, isn't it?

Mr. PAGE. Not in the parks.

Mr. ARTHUR WOOLLEY. When they first brought the buffalo here they grazed them at Bright Angel. That is now in the park where the tourists go down there, in a very rich meadow.

The CHAIRMAN. I tell you frankly, gentlemen, it seems to me we have boiled this down to the point where the quarrel is between you gentlemen and the State of Arizona.

Mr. PAGE. It would be, Senator, if the Wildlife Service had not injected itself into the picture, bluffed the Grazing Division out and confused the issue, and it must be the one to get this withdrawal made under Federal authority. Therefore, it is a Federal question, and, therefore, we maintain, it is in the jurisdiction of this committee.

The CHAIRMAN. Did you say "bluffed the Grazing Service out"? You can't tie the Grazing Service down long enough to bluff them out.

Mr. ARTHUR WOOLLEY. I think they dogged them out with the coyotes.

Mr. DAY. Mr. Chairman, could I make a statement, on the position of the Fish and Wildlife Service? We have no intent in this thing, no particular desire to come in here and run the buffalo herd, no such intention. As I stated this morning, we came into this picture by authorizing the expenditure of some \$18,000 of money that we must

approve. To do that we asked the State to give us assurance that this buffalo herd had a permanent right in there, at least long enough to drink \$18,000 worth of water. If they couldn't do that, we wanted the assurance—they asked us if we would consider withdrawing sufficient land to take care of this buffalo herd. As to the 44,000 acres, Mr. Page himself told me last night that he planned the 44,000-acre withdrawal. In fact, I think he wrote the order and he helped get it through. Maybe it doesn't take 44,000 acres now, but it did at the time this withdrawal was made at his request, so I am assuming that the Arizona buffalo herd has some rights in there. It is something that the State of Arizona wanted away back a long time ago.

Mr. PAGE. The further project was to buy out the cattlemen's water there, too, along with taking the Federal range under this proposition. There is nothing there limiting the rights of the cattlemen's water.

Mr. KARTCHNER. Mr. Page, you told me they wouldn't take less than \$50,000 for the water.

Mr. PAGE. That's talking about 1930, when I handled it myself.

The CHAIRMAN. So now, more and more, I am coming to the conclusion that it is not within the province of this committee. It is between the State of Arizona and its own citizens. That is exactly what it looks like now.

Mr. PAGE. Not if it gets a withdrawal by the Wildlife Service, taking additional—

The CHAIRMAN. But, your State of Arizona is asking for the withdrawal.

Mr. PAGE. The game warden, not the State of Arizona.

Mr. KARTCHNER. I am merely representing the Arizona Game and Fish Commission, which in turn is representing the sportsmen of this State and the entire public.

The CHAIRMAN. The Legislature of the State of Arizona could stop this whole matter, in a twinkling. All the Governor would have to say is, "Mr. Kartchner, don't make that guess on authority of the State of Arizona." I still think it is the State of Arizona—

Mr. ARTHUR WOOLLEY. May I make this observation, Senator, that the original order was a withdrawal in aid of legislation which contemplated a gift to the State of Arizona, of certain lands. Now, the proposed withdrawal is not vesting anything in Arizona, but puts a control of another Bureau over an acreage of that land, a Federal Bureau, with no right in the State of Arizona.

Mr. Kartchner has undertaken to infer here that he was deceived and so is justified in now circumventing the agreement with these cattlemen. He lays that upon Mr. Page's opinion, which you now assume is not true. He now justifies a betrayal of that agreement which was incorporated in the minutes of the board, which employs and supervises him, which is still in force and effect.

Now, to entirely evade the effect of that agreement by inferring that he has been deceived, based upon an opinion which is contrary to Mr. Page's; therefore, Mr. Page and the stockmen have deceived the State of Arizona, and he is exonerated from the agreement.

Now, that is the worst I have ever encountered, in all of my life.

The CHAIRMAN. I don't follow you. I wish I could. But I can't follow you that the Wildlife Bureau of the Interior Department is involved in this situation. The Wildlife Bureau testifies here before

me that on request of the State of Arizona, speaking through its wildlife agency, they will ask for this permanent withdrawal. They say they don't want it themselves. They don't want anything to do with it. They will turn it over to the State of Arizona for their buffalo herd.

Mr. PAGE. But it will be theirs just the same.

The CHAIRMAN. If the State of Arizona doesn't ask for the withdrawal, I take it the Wildlife isn't going to ask for the withdrawal.

Mr. JOHN SCHOPPMANN. I understood him to say a minute ago that he understood they wanted \$50,000 for their holdings. I don't think Mr. Kartchner ever asked anyone what they would take for their holdings in House Rock Valley.

Mr. KARTCHNER. I asked Royal B. Woolley what it was worth, and he said, "You can't buy it for \$50,000."

Mr. ROYAL WOOLLEY. I said it wasn't for sale at any price.

The CHAIRMAN. Anyway, it does seem to me that we have intricacies enough here. I want to keep away from the entanglements—

Mr. ARTHUR WOOLLEY. I have commented on the commitment of the wildlife. Now they did not desire this supplemental or amended withdrawal.

The CHAIRMAN. Will Mr. Day correct me if I am wrong? My understanding from the statements made here before this committee this morning is that unless the State of Arizona requests through the Wildlife Bureau of the Federal Government a withdrawal for these buffalo, the withdrawal will not be requested by the Wildlife Bureau. Is that correct?

Mr. DAY. That is correct. We have that request, from the State of Arizona that this be done. This whole thing was started on that basis, as far as the legal question is concerned. I am perfectly willing to submit this to our solicitor and find out whether the original 44,000 acres is the same, or whether it isn't, and after we get that we can proceed from there.

As far as I am concerned, I think these boys ought to get together. If they can reach an agreement, I know that the Grazing Service and Wildlife can reach an agreement.

Mr. KARTCHNER. Oh, they are trying to get together. They want to put us over in the southeast corner with some 1,000 acres. We initiated the application in good faith. We requested the Fish and Wildlife Service to bring about an amended withdrawal for some 23,000 acres, in lieu of the original 44,000. That was our sponsorship throughout. The Fish and Wildlife Service made no proposal whatever, except in approving the project for \$18,000 in developing water. They, naturally, asked us what tenure would be there for the buffalo herd.

Mr. ROYAL WOOLLEY. Might I say something? I would like to ask Mr. Kartchner, talking about the State of Arizona. I would like to ask you if the State of Arizona is making this request, or the game warden of the State of Arizona?

Mr. KARTCHNER. The Arizona Fish and Game Commission is making this request.

Mr. ROYAL WOOLLEY. The State of Arizona is not?

Mr. KARTCHNER. I am asking for them.

Mr. ROYAL WOOLLEY. Do I understand you to say the request must come from the State of Arizona?

The CHAIRMAN. No; I didn't say that. What I said was this: Mr. Kartchner is a servant of the State of Arizona. He is either appointed or elected, I don't know which. I take it you are appointed.

Mr. KARTCHNER. That is right, by the commission. The commission is appointed by the Governor.

The CHAIRMAN. In other words, you are a servant of the State of Arizona; and certainly the State of Arizona through its sovereign set-up can stay your hand any time it wants to in matters of this kind. There is no question about that at all.

Mr. ROYAL WOOLLEY. I am sorry Mr. Page wasn't here when this first started, and Mr. Kartchner gave considerable prominence to the fact that at this Game Commission meeting referred to, on September 11 or December 11, 1931; the prominence in the discussion of any accrual from this 44,000 acres, he was going to take advantage of, and he said Mr. Beech also made the same statement.

Now, I was there, and I don't remember being given that promise. I do remember a little discussion, on the side, between Mr. Kartchner, Mr. Painter, and Mr. Page on the question as has been discussed here. Now, I have thought that if that had been given such prominence that the minutes would so state, that they reserved the right to anything that accrued. The minutes doesn't say anything about it at all. I don't remember the statement that way.

Mr. W. S. CONNOR. Chairman, Arizona Game and Fish Commission, Phoenix, Ariz. I want to clarify this remark of Mr. Woolley's that it was Mr. Kartchner's request for these different things. We commissioners are appointed by the Governor of the State of Arizona to administer the fish and wildlife in the State, and the State game warden is appointed by the commissioners, and we have given him full authority to make statements in this meeting.

Now, we would feel it very remiss in our duty to the people of the State of Arizona if we would not have it in the record here that we are representatives of the people, and what goes on here is being said for the people of the State of Arizona.

The CHAIRMAN. That is all right.

Mr. ROYAL WOOLLEY. Can I ask the gentleman a question? I want to know whether or not your board, acting formally on the matter of making the request through the Wildlife Division of the Federal Bureau—

Mr. CONNOR. Did they make it formally?

Mr. WOOLLEY. Did you make a formal request, as a board action of which you have minutes?

Mr. CONNOR. Through our Pittman-Robertson set-up, we have.

Mr. WOOLLEY. Did you meet as a board and pass a resolution or directive to your game commissioner to make this request of the Wildlife?

Mr. CONNOR. Absolutely.

Mr. WOOLLEY. On what date?

Mr. CONNOR. What occasion?

Mr. WOOLLEY. What date?

Mr. CONNOR. At a regular commission meeting.

Mr. WOOLLEY. Do you remember when it was?

Mr. PAGE. I asked Mr. Kartchner before I left Phoenix if there had been any minute entry concerning the buffalo matter since the minutes that I read this morning. He said there had not been.

Mr. KARTCHNER. Let's keep the matter straight, Senator. You had reference to another subject, Mr. Page. You said, "Have you taken any action to rescind that agreement of December 11, 1940?" And I said "No."

The CHAIRMAN. It all comes back again. I am sorry, I would like to change my mind, but I can't change my mind. I say the State of Arizona, acting through the executive department, can stay the hand of the fish and game commission of the State of Arizona, or Mr. Kartchner, as their representative, any time they want to. They can hold it up, or put the approval to the request.

Mrs. KEITH. Mr. Chairman, speaking for the Arizona Cattle Growers Association, I just want to take issue with the Fish and Wildlife Service, on one thing. A number of years ago—that was before Mr. Day, I think, was connected with it—I heard a man who was in charge of the Fish and Wildlife Service, then the Biological Survey, in Arizona, say that they deplored the fact that they own no land in Arizona, and that was too bad. So I think, maybe, in the background of the United States Fish and Wildlife Service they might like to own some land in Arizona. I just wonder if that policy has changed; so that they don't care any more?

Mr. DAY. I'd be glad to answer that. We are having difficulty in getting enough men to administer the lands that we have now. We are not looking for any more, particularly in Arizona. I don't know who said that, but we have no designs.

The CHAIRMAN. It boils down to the conclusion I came to some time ago. I can't see—

Mr. PAGE. Senator, if it is a withdrawal, proposed and in process, a withdrawal by the Interior Department for the Wildlife Service, it certainly is putting a Federal agency preserve in a new place, and making a new withdrawal in Arizona.

The CHAIRMAN. Yes, yes; but it is being made at the request of the State of Arizona. Now, there is no question about that. Mr. Kartchner speaks for the State of Arizona in this respect. If he doesn't speak for the State of Arizona he can be told so by the State of Arizona. If he does speak for the State of Arizona and he is making his request to the Wildlife Department of the Federal Government, who in turn makes a request for the withdrawal on the request of the State of Arizona—they have told you, over and over again, they don't want it. If they don't want it for themselves they want it only for the State of Arizona, speaking through its wildlife department. That is the whole story, isn't it?

Mr. KARTCHNER. That's the way I understand it.

Mr. ROYAL WOOLLEY. I would like to clear up one point right there. Is it the game commissioners, Mr. Kartchner, or the State of Arizona? I give you an instance; the Arizona Legislature was in session last year, and the State game department made the request, or introduced a memorandum, asking the State Legislature of Arizona to memorialize Congress to set 23,000 acres aside for a buffalo refuge; and the legislature—it foundered in the committee of the legislature. I want to know, is it the State of Arizona or Mr. Kartchner?

Mr. CONNOR. As chairman of the fish and game commission, I would like to reiterate our statement. We are requesting the Fish and

Wildlife Service to secure this land, in permanency, for the buffalo.

The CHAIRMAN. Yes, that is quite clear to me; and I think it is clear to Mr. Day, of the Wildlife Service. I think it is clear to Mr. Havell, and to everyone here.

Mr. ROYAL WOOLLEY. May I make a request?

The CHAIRMAN. Yes.

Mr. ARTHUR WOOLLEY. Well, we'll request that Mr. Day's Bureau do not act upon it until the State of Arizona, as the people think they are, have a reasonable opportunity to stop this thing. It has now just come to light to them that it is being perpetuated.

The CHAIRMAN. I don't know how far I can go here. I am feeling out for jurisdiction. To be very frank with you—

Mrs. KEITH. May we make the request, the Arizona Cattlegrowers Association, that the State game and fish commission ask for it as State land; that it be withdrawn as State land? We need some.

The CHAIRMAN. All of that addresses itself to your servants.

Mr. KARTCHNER. I might make this statement on that; that we had thought about, and would try anything. We would try anything we thought possible to secure that land as a permanent buffalo range, but it didn't seem possible to have it directly granted to the State. The only possibility there seemed to be was to have it included in the amended withdrawal through the Fish and Wildlife Service, to be turned over to the Arizona Game and Fish Commission for the operation of this buffalo herd.

The CHAIRMAN. Of course, all that the Federal Fish and Wildlife could do, after the Executive order was made withdrawing the territory, would be to turn it over to the jurisdiction and management for a specific purpose. The land would remain subject to Executive order, and the whole matter of lands would still be Federal land, withdrawn for a specific purpose.

Now, if you went into the subject of having the land turned over to the State of Arizona, I give it to you as my offhand opinion that you would have to go through Congress in order to do it.

Mr. DAY. The order, Mr. Chairman, that we have drawn, and this is nothing new—we have done this in several instances, under the Pittman-Robertson, where the State acquires tracts of land, and intermingled with Federal land—we have withdrawn those, and turned them over to the State for administration with their State land, which is just good business. This order as drawn stipulates specifically that:

It is reserved under the jurisdiction of the Department of the Interior for use by the Game and Fish Commission of the State of Arizona, as the House Rock buffalo and wildlife management area.

We couldn't use it in any other fashion under that order, than that, for use by the State of Arizona.

The CHAIRMAN. That's right. If the State of Arizona ceased to use it for that purpose—

Mr. DAY. This order would be invalid.

The CHAIRMAN. The land would revert and remain in your jurisdiction. It would be invalid as far as one part of it is concerned, but the Federal Government does not lose control over it.

Mr. SPEAR. I would like to know from the gentleman if the grazing of these buffalo will be limited to the lifetime of the game warden?

The CHAIRMAN. Well, may he live long!

Mr. ALEC FINDLAY. We have never objected to this 200 head. We don't care how many sections it takes to feed those buffalo, up to 200 head. We are willing to give them that. Now, all we want is what is left. We have agreed to that. That has been the understanding, all the time. This withdrawal, over where the water is, that was simply by the request of the Grazing Service. Now, we don't come into this picture until after Mr. Leech gave his decision on the House Rock Valley. We got 947 head, I believe, as I remember. Now we come in there in good faith, paid \$20,500 for that property; and under this withdrawal they come within 2 miles of our main ranch, which will virtually take all value away from it. It is not worth a thing, if we haven't any grazing privileges; just a water hole there, piped down from the mountain.

Now, we have never denied the Grazing Service anything of our facilities out there. They come and camp in our house, and I presume they burn our wood and keep warm—the game department does, and they are welcome to do that. We never made any objections, and we have watered their buffalo for something over 2 years for nothing; and, under these papers we got from the old company, we have a quitclaim deed to this particular water they piped down. Now, I don't know whether that quitclaim deed is worth anything or not. There is a lot of springs listed there. I don't even know where they are. But I do know where these South Canyon springs are. We have a quitclaim deed to them.

I don't know where the game commission got their water rights from; maybe from the Forest Service, prior to the time we got this water. The Forest Service had piped it down into the South Canyon area, and I presume the game commissioner got the right to pipe it on out. I don't know how he is going to use some area up at the pools, when the water is down there. If we decide not to water them any longer—we're not trying to run the buffalo out, but we want this thing settled; and we don't figure they should take our property away from us, which they do when they take our ground, because it isn't worth anything else.

That is all. Thank you.

The CHAIRMAN. All right, thank you.

I don't know that I have any right to make an observation on the matter at the present time. I can, maybe, express myself as to how it appears. It appears that this withdrawal would be a most unpopular thing, certainly in this section of the State of Arizona. From what I can gather, and this may be wrong again, but, from the expressions here today, it would look as though it is unpopular. It would seem to me, while I have no right to make any suggestion to the servants of the people of the State of Arizona, it seems to me it would be a time to pause and go into the matter, and get popular support for the activity.

Now, if I can address myself to the Federal agency, it would be partially along the same line. I don't know whether that would get anywhere, or not, but it would ease the situation.

Mr. HAVELL. As I said this morning, I got in touch with the home office, and I have asked that no action be taken in this matter until the report of this hearing can be examined. If there is anything

else that anyone here would like to present to the Department for consideration before action is taken, we would be very happy to get it.

Mr. LEECH. Mr. Chairman, in that connection, this proposed Executive order has been the subject of numerous conferences between representatives of the Fish and Wildlife and the Grazing Services. After we received the copy for our endorsement, we made a counter-proposal, as we explained this morning, I think the matter is still a matter for the users and the State to agree on, if they wish a withdrawal of so many sections of land. The Grazing Service is understanding, and has always insisted that there be enough carrying capacity set aside there for the 200 head of buffalo. I think Mr. Day and I are in perfect agreement on that, and always have been.

The CHAIRMAN. Again may I revert to the fact that the congressional delegation of the State of Arizona certainly should know of this; and certainly this record will be of great interest to them, Senator Hayden and Senator McFarland, and the Congressmen; and they are amply, and eminently, able to deal with it. It is presumptuous on the part of this chairman to make these suggestions, and I have been overly presumptuous in doing it; but I thought, perhaps, something might grow out of this that might bring ease into the situation.

Mr. PAGE. Senator, just one more thought as to the game department, and that is, before they proceed on that new basis, without anybody knowing it—in fact, we didn't know it, until recently, the Wildlife in this withdrawal, on a new set-up to another Federal agency—it would seem that they should have rescinded their agreement that was made, which I read this morning, and which the Commission members directed the game warden to work out with the Grazing Service, as to the buffalo in House Rock Valley.

Mr. A. T. SPENCE. Senator, if that closes that question, I have a case I would like to present.

The CHAIRMAN. I'll see if this is closed.

Mr. Royal Woolley, do you care to be heard further? I have your name here on the list.

Mr. ROYAL WOOLLEY. I don't know what there is left to be said. But I will say this: Mr. Leech said that we all recognized the fact that there should be an area set aside, equal to the carrying capacity of 200 buffalo. I think, as far as that goes, we are all agreed. I think, if that can be done, this thing can end in 10 minutes.

Now, I have been a member of the advisory board, and Mr. Leech stipulated, in his first decision there that there was an area there for 143 buffalo, and, as the herd increased, we gradually would increase the area; which we have done. I think we have moved back and enlarged the area three different times. Take the Grazing Service, I figure they should be the arbitrators in the matter. Well, it should go under their range survey, the area that has been approved by the advisory board and the Grazing Service. That area has a carrying capacity of 231 buffalo, year-long. We have no quarrel from there on.

The CHAIRMAN. They graze at large, do they not, with the other livestock?

Mr. ROYAL WOOLLEY. The other livestock piped their water down, and we got along fine, until they got some water, and then they got cocky.

The CHAIRMAN. Who, the buffalo?

Mr. ROYAL WOOLLEY. The game commission. They don't water at our waters, as they go dry. Our water goes close to the highway. I will ask Mr. Bowman, now, to say a word. He has a different angle to discuss.

STATEMENT OF HAROLD I. BOWMAN, JACOBS LAKE, ARIZ.

Mr. BOWMAN. I happen to be a representative of the game department, on the advisory board. After years of dealing with the tourists, that buffalo herd, of course, primarily has that issue with me, or with what I have been able to observe. I think a buffalo herd that is permitted to roam at large has a great value. If this controversy were to come to the point that we require fencing them off, in a corner, or place on the highway, you might as well not have a buffalo herd.

In other words, I feel that 50 head of buffalo would be worth more, along that highway, than a thousand would down there in an area that people couldn't have access to.

In connection with my lodge, out there, in the evening we run a colored picture, showing the Indians in their dances and ceremonials, along with scenes from Grand Canyon and Kaibab, in the fall; and then we wind up by showing the buffalo herd; and you'd be surprised at the interest that creates. If people were assured they could drive along the highway and contact this herd of buffalo, they are thrilled, because they are a wild, roving herd. But as soon as we place them under a fence they cease to have that value. So that it seems to me that if it could be agreed to have the 200 head, and let that become definite, instead of evading, and saying we are not now asking for more definite policies, there wouldn't be a controversy.

I maintain, if you take the tourist value away from the buffalo herd you have no value left. This morning there was a difference of opinion expressed on the sportsmanship of shooting a buffalo. All right; you go out here and come to a herd of cattle; you would have more trouble shooting one of the cows than you would have shooting one of the buffalo. I think any stockman would bear me out on that. It is kind of silly, especially when they herd one of them to the side, and tell the hunters which one to shoot.

I feel that the buffalo herd is really a tremendous value to the State of Arizona, and we should have it; and I think the control measure that has been adopted by the game department is right, in putting them up as a bonus to the fellow that buys a hunting license. I agree with them all on that, but I think too much value is placed on that and not enough on the tourist attraction.

In other words, I think the tourist business in Arizona is one of our leading industries. You eliminate that in the State, and you eliminate a big source of the revenue that comes from the outside, which adds to our resources, and is not just taking away all the time. So that may interests, and I have expressed myself like this for the last 4 years—I talked to the president of the Fish and Game Wildlife Association, which represents the sportsmen in this State, and made an appeal in a lot of places, that if an agreement could be reached with the cattlemen, so this herd could remain wild, and stay along the highway where people could see them, they would really be doing a service.

Now, I feel that, just in fairness to both sides, there should be a permanent policy agreed upon; no question from year to year until

the duration is over—that might be 6 months, or 6 years, and there is no permanency, or security, from a tourist standpoint. I would certainly like to see them settle the point, where we are sure this buffalo would stay along the highway.

Mr. PAGE. Mr. Bowman, how could the buffalo be along the highway if this new preserve is created down in the south part of the valley?

Mr. BOWMAN. They can't.

Mr. PAGE. That would remove the buffalo from any benefit to the tourists?

Mr. BOWMAN. The only way the buffalo can stay along the highway is with the consent of the ones who control the water and range along the area where the buffalo come. In other words, to be a tourist attraction, if the controversy goes on to the point that there is a distinct separation, then it means that a fence must be built, in order to keep them out. In order to preserve the buffalo at all, they need to be in an area—they would be kept away from water, and they wouldn't have any security, or any other place on the range.

The CHAIRMAN. All right. Thank you very much.

Mrs. Keith, do you care to be heard further?

STATEMENT OF MRS. J. M. KEITH, SECRETARY OF THE ARIZONA CATTLE GROWER'S ASSOCIATION

Mrs. KEITH. Senator McCarran, we would like to express our gratitude to you for coming here and holding this hearing. I think it has meant a lot to the people on the strip. We are all glad that you are the chairman of the Land Committee, because land is the basis of the livestock industry. In fact it is the basis of everything in the Nation. As you know, everything we have, or ever will have, comes from the land. So the proper use of this land is important.

The proper use of the land in Arizona—the citizens here have the privilege of using it properly, but only 25 percent of it, because 75 percent is under the control of the Federal Government. Then, the agencies administering the 75 percent are certainly charged with a grave responsibility, to administer it fairly, and for the best interests of the people. Of course, each one of us sees from our own little individual standpoint; the Park Service sees it from just including everything, so it will grow up wild; the Forest Service sees it from trees and the watershed; and the Grazing Service, well, I think they have not been organized long enough to have it settled on any one thing, but we will come to that later.

The CHAIRMAN. Are you referring to the Grazing Service?

Mrs. KEITH. Well, we see it from the standpoint of production, producing meat and producing taxation, and goodness knows, this country is going to be taxed, and it is going to be something to produce money. We have heard some people say that, temporarily, permits should be given during this period of need for beef. But it is not temporary, because there is going to be need for taxes, and the taxes are coming out of these gentlemen, who are here, not the gentlemen who are administering these lands—they will just pay the withholding tax, every month; but these other gentlemen are the ones who pay the taxes.

There is one thing that I would like to mention that seems too bad to us from this hearing. I gather by rumor there will be at least one

Federal official removed, and I think maybe there were one or two in the former hearing you held in Arizona. Now, I just wonder if these Federal agencies could not clean their skirts without an investigating committee by Senator McCarran. You couldn't come here often enough, probably, to keep the agency's personnel right. So I think that they should be charged with the responsibility of dismissing their men, when they know they are not fair, or doing the right thing, and not just shoving them off onto another unsuspecting State. That happens lots of times, where a man is not doing the right thing in one area; he is just passed on to someone else.

I think that the men who are here, most of them, are my personal friends; so I am not speaking of them as individuals, but as these bureaus. They should have the courage to dismiss a man who is working for the public and drawing a taxpayer's money, when he is not doing the right thing.

Again, I want to say, thank for you coming, and for the privilege of allowing us to meet with you.

The following letter, widely circulated in Arizona, was received after the hearing, for the record, from the Arizona Game Protective Association:

To All Citizens and Organizations Interested in the Welfare of Arizona:

HELP SAVE OUR BUFFALO

READ AND ACT—NOW

In 1905, under private ownership, a small herd of buffalo was brought into House Rock Valley in northern Arizona as an experiment in cross breeding with cattle. The experiment failed and in 1927 the State of Arizona purchased some 100 head in order to prevent the extinction of this fine animal and to give Arizona a rare tourist attraction.

In December 1930, at the request of the citizens of Arizona, the then President Hoover set aside 44,000 acres of Federal land in House Rock Valley for "future classification and as an aid to legislation" with the intention that all or part would be established as a permanent home for this buffalo herd.

After years of experience the State of Arizona decided that 23,000 acres would be sufficient to carry the herd and the State game department then proposed that an area of this size, from the already withdrawn 44,000 acres, be set up under the jurisdiction of the Federal Fish and Wildlife Service for administration by Arizona as a permanent home for these buffalo.

The land already having been withdrawn, Arizona, in cooperation with the United States Fish and Wildlife Service, under the Pittman-Robertson Act, then built an 8-mile pipe line into the area, thus insuring an adequate water supply for the herd.

Reasonable in our request and acting under the premise of the Federal Government's action in 1930 as regards these lands, all that remains to be done is that the citizens of Arizona urge that Senator Hayden handle for an amended Executive order establishing these 23,000 acres for continuous and permanent use by the buffalo. If this Executive order is obtained the Fish and Wildlife Service has agreed to handle as requested.

With no further withdrawal of land involved and with all interested agencies in agreement, it would seem that the Executive order required could easily be obtained. However, certain powerful Utah interests, who have for many years utilized land in northern Arizona, doubtless without or at nominal payment of taxes, now vigorously oppose any action which would set aside land for the buffalo herd.

These Utah interests want the entire 44,000-acre withdrawal canceled and the land set up under the ever land-hungry United States Division of Grazing, with the suggestion that this Federal agency would grant Arizona a license permitting use of the land by a specified and limited number of buffalo.

Under this arrangement Arizona would have no voice in the control of the herd, as the buffalo would then be under the jurisdiction of an advisory board, the

voting members of which are exclusively stockmen and, in this instance, preponderantly citizens of Utah, with no interest whatsoever in Arizona's buffalo herd.

These Utah interests are now active and doing all in their power to neutralize the many years of effort of the citizens of Arizona.

It is for this reason that we of the Arizona Game Protective Association now request and urge every citizen, every civic club, or other organization in Arizona to immediately take the only action possible in saving our magnificent buffalo herd; a letter by you to Senator Hayden requesting that he take immediate action to the end that the 23,000 acres desired be set aside.

Your Governor, the Honorable Sidney P. Osborn, is in full accord with this plan, is doing all he can, and now only needs your help to save your buffalo for you. Write Senator Hayden today.

HARRY FUNK,

President, Arizona Game Protective Association.

P.S.: The reason for our request that you write Senator Hayden is that he is entirely familiar with all the circumstances of this problem as it has developed over a period of years.

STATEMENT OF A. T. SPENCE, JACOB LAKE, ARIZ.

Mr. SPENCE. Senator McCarran, there are quite a few things here that I would like to bring out, and it has been requested of Mr. Allen to bring the records of the permittees of the Division of Grazing on the east side of the Kaibab Forest.

The CHAIRMAN. Who is Mr. Allen?

Mr. SPENCE. The district grazer.

The CHAIRMAN. Do you have those?

Mr. ALLEN. Yes, sir.

Mr. SPENCE. If he would bring them in here, I think we could bring this out, in short manner and not take up too much of your time; no controversy.

The CHAIRMAN. I suggest, if there are some records in this matter, that they be made available.

Mr. LEECH. What records does he wish, Senator?

Mr. SPENCE. The permittees of the Sandhills, and House Rock Valley, starting from the time that the permits were being issued, and up to date.

The CHAIRMAN. Permits or licenses?

Mr. LEECH. He means the case files on them, Senator. We will have those available from 1938. I don't know whether all the files prior to 1938 are available or not.

Mr. SPENCE. I also have a map made up here that will give these cases here as they stand on the ground. I think you can see from here to the board over there, and we can point out the cases as they come.

The CHAIRMAN. Do the cases involve a general policy in one direction or another?

Mr. SPENCE. Yes, sir. I will try not to take up any personal issues of it, at all, except to the administration of the Division of Grazing.

This map covers the Sandhills and House Rock Valley fairly well. It doesn't take in all of House Rock Valley.

Mr. LEECH. Now, what files do you wish, Mr. Spence?

Mr. SPENCE. First, Mr. Alec Cram's.

Mr. LEECH. Would you want to read that from the files?

Mr. SPENCE. I can ask you a few questions, Mr. Leech, pertaining to the files in 1936. What was Mr. Cram's permit allowed him at that time?

Mr. LEECH. Now, I have prepared here, by Mr. Allen, beginning in the year 1937—

Mr. SPENCE. In 1937, what was it?

Mr. LEECH. He was—the year 1937–38, Alec Cram, season, December 1st to April 30; 376 cattle.

The CHAIRMAN. Where is Mr. Allen now?

Mr. LEECH. He has gone to get some more files, Senator.

Now, the next reference he has is 1940. That seems to be from May 1 to November 30; 226 cattle.

Mr. SPENCE. And what was this year?

Mr. LEECH. The winter season of 1940, looks like December 1 to—I beg your pardon, from May 1 to December 31, 176 cattle and 42 horses.

Mr. SPENCE. And, Mr. Leech, may I ask you if the Division of Grazing is still operating under the theory of your original decision?

Mr. LEECH. I will have to ask Mr. Brooks and Mr. Allen if the decision of 1937, which was the adjudication of the House Rock Valley, has been changed in any way?

Mr. BROOKS. I don't know that it has. I haven't been in the area all the time during that period.

Mr. LEECH. Mr. Allen—

Mr. ALLEN. Do you want that tentatively, what that decision was?

Mr. LEECH. I have the decision.

Mr. ALLEN. There have been a few changes, but that is purely in sales of allotments, or one individual selling out to another man. Otherwise, the numbers practically remain the same.

Mr. LEECH. On this point, Senator, I would like to mention that on July 28, 1937, as chief examiner of the Grazing Service, after a number of appeals from the House Rock Valley, and a rather lengthy hearing, I rendered a decision, based on the testimony brought out at those hearings, adjudicating the House Rock Valley, attaching to each decision a map. That decision has been mentioned a number of times today by Mr. Page, Mr. Woolley, and others, and a paragraph or two of it was included in Mr. Page's testimony.

I would like at this time to put the entire decision and the map in the record.

The CHAIRMAN. You can't get the map in the record, but you can put it on file. We will take the decision, and, at your request, we will put it in the record.

Mr. LEECH. All right, sir.

(The following is the document referred to:)

DEPARTMENT OF THE INTERIOR, DIVISION OF GRAZING,
Salt Lake City, Utah, July 28, 1937.

IN THE MATTER OF THE APPLICATION FOR GRAZING PRIVILEGES OF H. S. STEPHENSON, TRUSTEE FOR THE BENEFICIARY OF THE GRAND CANYON CATTLE CO., AND APPEAL FROM THE DECISION OF THE REGIONAL GRAZIER, PHOENIX SERIAL NUMBER 076547, ARIZONA GRAZING DISTRICT No. 1

Decision of Regional Grazier Reversed. Grazing Licenses to Issue. Subject to Right of Appeal

FINDINGS OF FACT AND DECISION OF EXAMINER

March 16, 1936, H. S. Stephenson, trustee for the beneficiary of the Grand Canyon Cattle Co., Phoenix, Ariz., filed application, Phoenix Serial No. 076547, requesting grazing privileges for 7,000 head of cattle and 25 head of horses on public lands of the United States, within the boundaries of Arizona Grazing District No. 1. This application resulted in the issuance of a grazing

license, nonuse, for the year 1936 for 849 head of cattle on lands within the House Rock Unit of Arizona Grazing District No. 1.

February 6, 1937, applicant filed request for renewal of license from May 1, 1937, to May 1, 1938, for 2,000 head of cattle and 15 horses for the same period of time, stating in the application for renewal that same was made on basis of 2,500 head allowed as carrying capacity of the House Rock Unit, the area in which grazing privileges were requested.

Consideration of the application for grazing privileges May 1937 to May 1938 resulted in the decision of the regional grazier, dated May 1, 1937, granting to applicant 815 head of cattle from May 1, 1937, to May 1, 1938, within the House Rock Unit of Arizona Grazing District No. 1.

From this decision, Stephenson has appealed.

Formal notice of hearing issued, designating Fredonia, Ariz., May 27, 1937, as place and date of hearing, before J. H. Leech, examiner, Division of Grazing, Department of the Interior.

At the time and place designated, duly appeared Huling Ussery for and in behalf of the Division of Grazing. The appellant appeared by counsel, John H. Page of Phoenix, Ariz. Formal intervention was made by the following persons: Alex Cram, Royal B. Woolley, W. J. Mackelprang, William Brown, A. H. Brown, Ernest A. Curtis, J. F. Bonal, and Riley Baker.

Arizona Grazing District No. 1 is divided into units. Grazing privileges are granted to applicants and their use is within specified units. Thus, grazing privileges granted to H. S. Stephenson, trustee for the beneficiary of the Grand Canyon Cattle Co., would necessarily affect grazing privileges granted to the above-named intervenors, who have grazing privileges in the same unit. Any reversal or modification of a decision rendered by the regional grazier on the application of one would, to some extent, affect the privileges granted other applicants within the unit. Therefore, each of the above-named intervenors was duly notified of the place and date of hearing and appeared because of such notice having been given to them by the Division of Grazing office at Phoenix, Ariz.

Many witnesses were sworn and testimony was taken May 27 and 28, 1937. It was then stipulated and agreed that the hearing would be continued at a later date in order that the testimony of Range Examiner Miera, a material witness for the Division of Grazing, could be taken. The testimony of this witness was taken July 9, 1937, at Fredonia, Ariz., and gives the results of a detailed range survey made by the Division of Grazing in the House Rock Valley unit.

This survey covers the topography, carrying capacity, of both owned and public lands, location of artificial barriers, watering developments, and stock watering facilities. A very vivid picture is painted by this witness, and his testimony is supported by Division of Grazing's exhibits A, B, and C (of July 9, 1937). The three maps so identified are type cover maps, water facility map, land status map, with service area radii.

May 16, 1936, a hearing was held at Flagstaff, Ariz., involving the 1936 application of H. S. Stephenson, trustee for the beneficiary of the Grand Canyon Cattle Co. The entire proceedings of that hearing were introduced by counsel Page in evidence at the hearing held at Fredonia and such record, together with all exhibits, was before the examiner and considered by him in this decision.

Reference is also made by the examiner to the record made in the case of the *United States of America v. John H. Page, K. K. Kontz, and David B. Morgan*, defendants, involving Phoenix serial No. 072365.

Witnesses testifying for the Division of Grazing, the appellant, and the intervenors, were as follows: John Adams, Riley Baker, J. F. Bonal, A. H. Brown, Alex Gram, Ernest Curtis, Alexander Findlay, Charles Lewis, W. J. Mackelprang, S. M. Miera, and Royal B. Woolley.

The House Rock Valley unit of Arizona grazing district No. 1 is a triangular strip of land bounded by the Colorado River, the Vermilion Cliffs, and the Kaibab Forest. It contains the following lands:

Patented.....	1, 260
State.....	16, 820
Public water reserve.....	1, 945
Vacant.....	142, 846
Withdrawal.....	23, 620
Homestead entry.....	1, 760
Power site.....	2, 020
Total area.....	190, 271

The parties, in addition to the appellant, using this area and to whom grazing privileges have been granted on applications filed with the division of grazing, are as follows:

William M. and A. H. Brown (serial No. Phoenix 077032), 62 head of cattle yearlong.

W. J. Mackelprang (serial No. Phoenix 077098), 628 head of cattle yearlong.

Earl P. Parker (serial No. Phoenix —), 17 head of cattle yearlong.

Ernest A. Curtis (serial No. Phoenix 077253), issued on a basis of a protected pasture, 20 head of cattle yearlong.

Royal B. Woolley (serial No. Phoenix 076847), 377 head of cattle yearlong.

Alex Gram (serial No. Phoenix 076609), 439 head of cattle yearlong.

Riley Baker (serial No. Phoenix 077240), rejected.

Jules F. Bonal (serial No. Phoenix 076107), 310 sheep May 1, 1937 to May 1, 1938

The applications filed by these applicants, who are considered as intervenors, are made a part of the record and such applications list in detail the commensurate property offered by these applicants on which basis grazing privileges were requested.

The history of the cattle industry in this unit was given by the testifying witnesses. Witnesses testified as to numbers of stock run by the Grand Canyon Cattle Co., the numbers of stock that used the watering places of the Grand Canyon Cattle Co., which had been leased to other operators after the company ceased its operations in the House Rock Valley some 10 or more years ago.

The various stages of development of the watering places of Cram, Mackelprang, Baker, Bonal, and Woolley are given at length in both the record made at Flagstaff, Ariz., May 16, 1936, and the record made at Fredonia, Ariz., May 27 and 28, 1937.

The testimony as to numbers of stock and prior use from commensurate watering is contradictory and variable. There is no doubt that the public lands of the House Rock Valley have been abused over a period of years by overgrazing. Various operators have found it necessary to move stock from the valley to prevent their death from want of food during the years 1933 and 1934.

From the contradictory nature of the testimony and the uncertainty of witnesses as to carrying capacities, amount and volume of water, service areas, and direct conflict as to prior-use numbers, it would be impossible to grant grazing privileges on the basis of testimony adduced by the appellant and by intervenors.

FINDINGS OF FACT

(1) Testimony of interested witnesses as to service area and prior use is conflicting and can be given little weight or consideration in applying commensurate rating standards.

(2) The waterings offered as commensurate property by H. S. Stephenson, Alex Cram, W. J. Mackelprang, and Royal B. Woolley are admittedly class I properties as defined by the rules of January 28, 1937. These applicants have an overabundance of stock water and are qualified in volume of water far in excess of carrying capacity available on public lands of the United States within the House Rock unit. Applicants Brown, Parker, Curtis, Baker, and Bonal come within the purview of class I definition of preferences contained in the rules of January 28, 1937, but their properties do not have the commensurate value of both volume of water and prior use numbers as possessed by the commensurate properties of Stephenson, Woolley, Cram, and Mackelprang.

Applicant David C. Lowery, holder of grazing privileges in an adjoining unit, has some use in the northeast portion of the House Rock unit, such use being fully described in finding of fact No. 14. In finding of fact No. 14, provision is also made for preferences of W. R. Russell.

(3) The division of grazing has conducted a thorough range survey and examination in House Rock unit, the results of which survey and examination are given in detail by Range Examiner Miera.

(4) On the basis of the range survey made by Range Examiner Miera and his party the following findings are made: The survey shows that the carrying capacity of the House Rock unit is 2,141 cows yearlong, such figure being arrived at after elimination of types and within the unit but appearing on division of grazing exhibit A (July 9, 1937). This basis was used in an endeavor to arrive at

commensurate ratings due to the topography of the country and location of natural barriers.

(5) House Rock Reservoir unit (consisting of the reservoir and its feeder spring) services the following described area within a 5-mile radius, as limited by competing waters:

Beginning at the NW corner of sec. 15, T. 39 N., R. 3 E.; thence south and east along the forest boundary to the west quarter corner of section 30, T. 38 N., R. 4 E.; thence in a northeasterly direction to a point one-eighth mile south of NW corner sec. 29, same township and range; thence northeasterly to the SE corner of the SW $\frac{1}{4}$ NW $\frac{1}{4}$ of sec. 16, T. 38 N., R. 4 E.; thence northerly to the SE corner of the NW $\frac{1}{4}$ SE $\frac{1}{4}$ sec. 21, T. 39 N., R. 4 E.; thence westerly and northerly along the Vermilion Cliffs to the S $\frac{1}{4}$ corner sec. 11, T. 40 N., R. 3 E.; thence west one and one-half miles to point of beginning.

This area is also serviced by Parker tank, located in sec. 31, T. 39 N., R. 4 E.; Hod Brown tank in sec. 14, T. 39 N., R. 3 E.; and Bonal tank, located in sec. 27, T. 39 N., R. 4 E., and is used in connection with the protected pasture of Curtis. While One Mile and Two Mile Springs both are available to service the area, they are not within House Rock unit and are contending for no grazing privileges within said unit. Therefore they are disregarded in this adjudication.

The carrying capacity of this area is 230 cows yearlong.

As to the settlement claim of Bonal, it is considered by the examiner that he comes within the purview of the rules of January 28, 1937, and under each such rules Bonal will be granted grazing privileges from Death tank within the area previously described.

(6) Kane Spring services the following area within House Rock unit, based on a five-mile radius as limited by competing waters:

Beginning at the NW corner of sec. 6, T. 37 N., R. 4 E.; thence south and east following the Kaibab National Forest boundary to the SE corner sec. 15, T. 36 W., R. 4 E.; thence in a northeasterly direction to the NE corner sec. 14, T. 36 N., R. 4 E.; thence northeasterly to the north quarter corner of sec. 12, same township and range; thence northerly to a point one-fourth mile west of the NE corner T. 36 N., R. 4 E.; thence north to a point $\frac{1}{4}$ mile west of the east quarter corner sec. 25, T. 37 N., R. 4 E.; thence northwesterly to a point one-third mile north of the SW corner sec. 14, T. 37 N., R. 4 E.; thence northwesterly to the NE corner sec. 6, T. 37 N., R. 4 E.; thence west 1 mile to the point of beginning.

This area has a carrying capacity of 319 cows yearlong.

(7) Anderson tank, located in sec. 23, T. 37 N., R. 4 E., is considered public water as the tank is located upon public lands of the United States and is not held under any declaratory reservoir site statement, nor appropriation from the State, nor under section 4 of the act of June 28, 1934, and has only a seasonal use.

(8) Jacob's Pools and its feeder source, namely: Sunset Spring, Millsite Spring, Haycock Spring, and Main Springs, service the following area within the House Rock unit, based on a 5-mile radius as limited by competing waters and natural barriers:

Beginning at the NW corner of the SE $\frac{1}{4}$ SE $\frac{1}{4}$ sec. 21, T. 37 N., R. 4 E.; thence southerly to a point $\frac{1}{4}$ mile east of the W $\frac{1}{4}$ corner sec. 16, T. 38 N., R. 4 E.; thence easterly to the SE corner sec. 18, T. 38 N., R. 5 E.; thence east $\frac{1}{2}$ mile; thence easterly to the E $\frac{1}{4}$ corner sec. 15, T. 38 N., R. 5 E.; thence northeasterly to approximately the NW corner sec. 13, same township and range; thence northerly to a point $\frac{1}{4}$ mile west of the section line between sections 1 and 2, same township and range, along the Vermilion Cliffs; thence following the Vermilion Cliffs in a westerly, southerly and northerly direction to the point of beginning.

Bonal's Death tank also services part of this area. The carrying capacity of this area is 289 cows yearlong.

(9) Soap Creek Waters, claimed by the Grand Canyon Cattle Co., H. S. Stephenson, trustee beneficiary, located in the NE $\frac{1}{4}$ SE $\frac{1}{4}$ sec. 28, T. 39 N., R. 6 E., services the following described area, based on a 5-mile radius as limited by competing waters and natural barriers:

Beginning at approximately $\frac{1}{4}$ mile east from the NW corner sec. 20, T. 39 N., R. 6 E.; thence following the Vermilion Cliffs westerly and southerly to approximately the NE corner of the SW $\frac{1}{4}$ of the NE $\frac{1}{4}$, sec. 2, T. 38 N., R.

5 E.; thence southerly to approximately the NW corner sec. 13, T. 38 N., R. 5 E.; thence southeasterly to the west quarter corner sec. 21, T. 38 N., R. 6 E.; thence east to the rim of Marble Canyon of the Colorado River, located approximately the center of sec. 22, same township and range; thence following northerly along the rim of Marble Canyon, northerly, westerly, and easterly to a point approximately $\frac{1}{4}$ mile NE of the SW corner sec. 30, T. 39 N., R. 7 E.; thence northwesterly approximately 2 miles to the rim located approximately $\frac{1}{4}$ mile west of the E $\frac{1}{4}$ corner sec. 23, T. 39 N., R. 6 E.; thence following said rim southerly and westerly to a point $\frac{1}{4}$ mile south of the NW corner sec. 33, T. 39 N., R. 6 E.; thence northerly to the rim of the Vermilion Cliffs, approximately $\frac{1}{8}$ mile east of the NW corner sec. 20, T. 39 N., R. 6 E., which is the point of beginning.

The carrying capacity of this area is 207 cows yearlong.

(10) Alex Cram Well, located in the NE $\frac{1}{4}$ sec. 4, T. 37 N., R. 5 E., services the following area, based on a 5-mile radius as limited by competing waters and natural barriers:

Beginning approximately at the E $\frac{1}{4}$ corner sec. 15, T. 38 N., R. 5 E.; thence southwesterly to the W $\frac{1}{4}$ corner sec. 33, T. 37 N., R. 5 E.; thence southeasterly to the SW corner of the NW $\frac{1}{4}$ NW $\frac{1}{4}$ sec. 33, same township and range; thence east 1 mile; thence northeasterly to the rim of the Marble Canyon at a point located approximately at the center of sec. 25, T. 37 N., R. 5 E.; thence following the rim of the canyon in a northerly direction to its junction with North Canyon; thence following the south rim of North Canyon in a southwesterly direction to approximately the center of sec. 13; thence northeasterly along the north rim of North Canyon to approximately the N $\frac{1}{4}$ corner of sec. 8, T. 37 N., R. 6 E.; thence northerly to the NW corner sec. 29, T. 38 N., R. 6 E.; thence northwesterly to approximately the NW corner sec. 13, T. 38 N., R. 5 E.; thence southwesterly approximately $1\frac{1}{4}$ miles to the point of beginning.

The carrying capacity of this area described is 380 cows yearlong.

(11) The Woolley watering place located in the SE $\frac{1}{4}$ sec. 31, T. 38 N., R. 5 E., services the following area, based on a 5-mile radius as limited by competing waters:

Beginning at the N $\frac{1}{4}$ corner of sec. 20 T. 38 N., R. 5 E.; thence southwesterly approximately 7 miles to a point $\frac{1}{4}$ mile west of the E $\frac{1}{4}$ corner sec. 23, T. 37 N., R. 4 E.; thence southeasterly approximately $1\frac{1}{8}$ miles to the E $\frac{1}{4}$ corner sec. 25, T. 37 N., R. 4 E.; thence northeasterly approximately $7\frac{1}{2}$ miles to the point of beginning.

The carrying capacity of this area is 47 cows yearlong.

(12) The Anderson Well, located in NE $\frac{1}{4}$ sec. 36, T. 38 N., R. 4 E., services the following area based on a 5-mile radius as limited by competing waters:

Beginning at a point approximately $\frac{1}{4}$ mile east of the W $\frac{1}{4}$ corner sec. 16, T. 38 N., R. 4 E.; thence southwesterly approximately $2\frac{1}{4}$ miles to a point approximately $\frac{1}{4}$ mile south of the NE corner sec. 30, same township and range; thence south $1\frac{3}{4}$ miles to a point $\frac{1}{8}$ mile west of the SE corner sec. 31, same township and range; thence southeasterly approximately 5 miles to a point $\frac{1}{4}$ mile west of the E $\frac{1}{4}$ corner sec. 23, T. 37 N., R. 4 E.; thence northeasterly approximately 7 miles to a point $\frac{1}{8}$ mile east of the NW corner sec. 20, T. 38 N., R. 5 E., thence northwesterly approximately 5 miles to point of beginning.

The carrying capacity of this area is 232 cows yearlong.

(13) The Bean Hole Well, located in the SW $\frac{1}{4}$ sec. 32, T. 38 N., R. 5 E., services the following area based on a 5-mile radius as limited by competing waters:

Beginning at the N $\frac{1}{4}$ corner sec. 20, T. 38 N., R. 5 E.; thence southwesterly approximately $7\frac{1}{2}$ miles to the W $\frac{1}{4}$ corner sec. 30, T. 37 N., R. 5 E.; thence northeasterly approximately 9 miles to the E $\frac{1}{4}$ sec. 15, T. 38 N., R. 5 E.; thence southwesterly approximately $2\frac{1}{2}$ miles to the point of beginning.

The carrying capacity of this area is 87 cows yearlong.

(14) Jet Springs, located in the SW $\frac{1}{4}$ sec. 20, T. 39 N., R. 6 E.; Cottonwood Spring located in the SW $\frac{1}{4}$ sec. 29, same township and range; and Dutchman Spring located in the SE $\frac{1}{4}$ sec. 10, same township and range, are considered public water as they are in their natural state, undeveloped, and there is no

evidence before the examiner that they have been appropriated or are controlled by proper State authority.

Water in Badger Creek, running through sections 1, 2, and 12, T. 39 N., R. 6 E., and water in Soap Creek running through sections 17, 20, and 21, same township and range, are embraced in public water reserves under Executive order of April 17, 1926, and service the area known as the bench, between the upper and lower Vermilion Cliffs and situated in T. 39 N., R. 6 E., except the area lying southwest of a line beginning at the Vermilion Cliffs at a point $\frac{1}{4}$ mile east of the NW corner of sec. 20, thence running southeasterly to the W $\frac{1}{4}$ corner, sec. 33, the approximate location of the lower Vermilion Cliff barrier, this area being serviced by other waters.

Therefore, as the public waters cannot be offered as commensurate property and prior use cannot attach to their use, this area is to be used in common by the holders of adjacent commensurate waters, which waters are: Soap Creek Water owned by H. S. Stephenson, Baker tank controlled by Riley Baker, Baker Springs, also controlled by Riley Baker, the William Russell homestead, located in sec. 28, T. 39 N., R. 6 E., and the waters of David C. Lowery, located in sec. 4, T. 39 N., R. 7 E.

The carrying capacity of this area is 46 cattle yearlong.

(15) The S $\frac{1}{2}$ sec. 30 and the W $\frac{1}{4}$ sec. 31, T. 38 N., R. 4 E., are not serviced by, owned, controlled, or public water situated in the House Rock unit. Due to this fact these lands should be grazed in common by stock operating from House Rock Reservoir, Mackelprang's Anderson Well, and Kane Spring. One-third of the carrying capacity is to be utilized from Kane, one-third from House Rock and one-third from Mackelprang's Anderson Well.

The carry capacity of this area is 12 cows yearlong, or 4 cows yearlong each.

(16) It is found that a fractional part of secs. 26 and 30, all of 31, parts of 32, 33, 34, and 35, in T. 37 N., R. 5 E.; and parts of secs. 2, 11, 14, 15, 19, 20, 21, and all of secs. 3, 4, 5, 6, 7, 8, 9, 10, 16, 17, and 18, T. 36 N., R. 5 E.; and parts of secs. 1, 12, and 14; and all of sec. 13, T. 37 N., R. 4 E., are not within a 5-mile radius of, and therefore not serviced by, owned, controlled, or public water, except by a seasonal tank, and public water known as the Anderson tank located in sec. 23, T. 37 N., R. 4 E., and snow and flood waters of North and South Canyons.

All of the sec. 31, parts of secs. 26 and 30, 32, 33, 34, and 35, T. 37 N., R. 5 E., and parts of secs. 1, 12, and 14, and all of sec. 13, T. 37 N., R. 4 E., are serviced by storm water. The carrying capacity of this area, or its equivalent in feed units, is equally divided between the contiguous waters of Gram, Stephenson, Woolley, and Mackelprang, each of whom are granted one-fourth of the estimated carrying capacity, or 20 head each.

All of the public land in the enumerated sec. in T. 36 N., R. 5 E. having a carrying capacity of 143 cows yearlong, or the equivalent of feed units, are reserved for the purpose of pastureage for the herd of buffalo now roaming and ranging in the House Rock unit. These buffalo roam and range part of the year in the House Rock Valley and part of the year on adjacent forest lands of the United States under the jurisdiction of the Forest Service, Department of Agriculture.

The office records indicate the existence of an agreement between the division of grazing and the Biological Survey, providing for the grazing of not to exceed 200 head of buffalo in the House Rock unit. When and if this herd reaches that number specified in the agreement, adjustments will then be made.

(17) The NE $\frac{1}{3}$ sec. 19, S $\frac{1}{2}$ sec. 20, S $\frac{1}{2}$ sec. 21, SW $\frac{1}{4}$ sec. 22, the fractional W $\frac{1}{2}$ of sec. 27, and that part of secs. 28 and 29, lying north of the north rim of House Rock wash, are not within a 5-mile radius of owned, controlled, or public water, and can be used only with seasonable storm waters. The carrying capacity of this area is 18 cows yearlong. This carrying capacity is granted for utilization in connection with Soap Creek water of applicant H. S. Stephenson.

(18) Part of sec. 33 lying west of the Colorado River Canyon, that part of the E $\frac{1}{2}$ sec. 32 lying south of the south rim of the House Rock Canyon, T. 38 N., R. 6 E.; also that part of sec. 4 lying west of the Colorado River Canyon and the E $\frac{1}{2}$ of sec. 5, T. 37 N., R. 6 E., are not within a 5-mile radius of any owned, controlled, or public water.

The carrying capacity of this area is estimated to be 11 cows yearlong and is to be used during floodwater periods by stock of Alex Cram, because this area is nearest the facilities of Cram.

(19) The Baker Tank in section 7, the Riley Baker Springs in section 18, the Lowery Spring development in section 33, and the public waters on Badger Creek, service the following area:

That area in T. 39 N., R. 7 E., lying between the rim of the Colorado River Canyon and the lower rim of the Vermilion Cliffs, and that area in secs. 12, 13, 24, 25, 23, lying east of the lower Vermilion Cliffs and north of a line running from the east quarter corner of sec. 26 in a northwesterly direction to a point one quarter mile west of the east quarter corner of sec. 23, T. 39, N., R. 6 E.

This area is granted in common to David C. Lowery and Riley Baker, 20 head carrying capacity to Baker, or the equivalent in feed units of this area, and a drift use by Lowery in connection with his license for 15 head in the Ferry Swale Unit. This adjudication is made in accordance with class I privileges under the rules of January 28, 1937.

(20) It is considered that the waters represented to be owned and offered by H. S. Stephenson, trustee for the beneficiary of the Grand Canyon Cattle Co., as commensurate property and waters in House Rock Unit represented to be owned and offered as commensurate property by Cram, Mackelprang, and Woolley, are all admitted to have preference class I rating under the rules of January 28, 1937, and are all, insofar as volume of water is concerned, overcommensurate. That is, these waters furnish a greater amount of stock water than there is public range to be serviced.

(21) As to those applicants having private lands and State-leased lands within the House Rock unit, such are considered as unprotected grazing land as they are unfenced, and such applicants are entitled to a deduction in payment of grazing fees to the extent of the carrying capacity of the sections owned or leased by them. However, as such lands are companionate range to the public lands upon which grazing privileges are granted, such lands are not considered dependent commensurate property.

(22) The carrying capacities and service areas given in the above findings are not in any sense land allotments and are used in this decision for the sole purpose of rating the dependent commensurate properties of the applicants in carrying capacity of cows yearlong. It is fully realized by the examiner that to make allotments of land, as described in these findings of fact, would be wholly impractical. The location of the various watering places are such that it has been necessary to draw radii from each development or facility to determine a service area in order to arrive at the commensurate rating of each. Where these service areas overlapped, divisions were made by bisecting conflicting arcs.

The ownership pattern of land and watering facilities in this unit as they now exist make the granting of allotments impractical, thus necessitating granting of grazing privileges in common.

In view of the complexity of the situation presented in arriving at commensurate rating of the properties, it is thought advisable to attach to this decision a photostatic plat of the unit showing the method by which commensurate ratings were determined.

(23) The carrying capacity of House Rock Valley unit being 2,141 cows yearlong, it cannot be exceeded in the granting of grazing privileges and the above findings of fact are made upon a carrying capacity of that figure.

(24) The licenses previously granted to Jules F. Bonal, Earl P. Parker, and William and A. H. Brown will not be disturbed by this decision. They are for the period of time May 1, 1937, to May 1, 1938, and are to remain in full force and effect until that date, if fees are paid.

DECISION OF EXAMINER

(1) The previous decisions of the regional grazer as to Earl P. Parker for 17 head of cattle, Jules F. Bonal for 62 head of cattle, or its equivalent, W. M. and A. H. Brown for 62 head of cattle, and Ernest A. Curtis for 20 head of cattle, are sustained.

(2) The regional grazer is directed to issue licenses, upon payment of the proper and necessary fees, to the following applicants:

	Head of cattle yearlong
H. S. Stephenson, trustee for the beneficiary of the Grand Canyon Cattle Co.	941
Alex. Cram	411
R. B. Woolley	67
W. J. Mackelprang	343
David C. Lowery	26
Riley Baker	31
William Russell, upon application therefor	11

(3) By consensus of intervenors, copy of transcript for intervenors, if requested, is to be furnished to Royal B. Woolley.

(4) The above decision as to Riley Baker and David C. Lowery is fully explained under findings of fact Nos. 14 and 19.

(5) Findings of fact Nos. 22, 23, and 24 are made a part of this decision, but as they are fully explained under findings of fact so numbered, they are not repeated under the heading "Decision."

You are allowed 10 days from receipt of this decision within which to file notice of appeal. If notice of appeal is filed and you request a copy of the transcript of testimony, such copy will be furnished to you without cost. Notice of intention of appeal and request for copy of transcript must be filed in the office of the chief examiner, Division of Grazing, Department of the Interior, Salt Lake City, Utah.

Within 30 days after date of receipt of the transcript of the testimony, appeal from this decision to the Secretary of the Interior, together with any brief in support thereof, must be filed in the office of the chief examiner, Division of Grazing, Department of the Interior, Salt Lake City, Utah.

J. H. LEECH,

Regional Grazier in Charge of Hearings (Examiner).

Mr. SPENCE. For the present testimony, Mr. Leech, you have before you there—how many head was it that Mr. Cram was allotted in 1936?

Mr. LEECH. I do not have it for 1936, Mr. Spence.

Mr. SPENCE. I think I have. You gave Mr. Cram 411 head originally; it was 608 head he applied for.

Mr. LEECH. Well, you will no doubt find there have been changes in numbers on practically every license. We have 22,000 of them.

Mr. SPENCE. May I ask you and Mr. Allen—has Mr. Cram ever disposed of any of his holdings in House Rock Valley that his permit was based upon?

The CHAIRMAN. Mr. Allen, will you answer that?

Mr. ALLEN. No, sir; he has sold none of his base property.

The CHAIRMAN. Let's go back. I want to get this clear, because it may be interesting before we get through.

In 1936 Mr. Cram made a request for 600 head—

Mr. SPENCE. 608 head.

The CHAIRMAN. Is that according to your records?

Mr. ALLEN. We do not have the 1936 record here.

The CHAIRMAN. Were you in charge then, Mr. Allen?

Mr. ALLEN. No, sir.

Mr. LEECH. In the decision of 1937, July 28, I directed the regional grazier to issue to Alec Cram a license for 411 head of cattle.

Mr. SPENCE. They have already stated that he hasn't disposed of any of his base property.

Mr. LEECH. And, as we read from the record a moment ago, he was given 376 in 1938.

The CHAIRMAN. Gradually he went down in numbers, didn't he?

Mr. LEECH. Then in 1941, Senator, it was 221. That is all, you say, Mr. Allen, that he applied for?

Mr. ALLEN. That is all he applied for.

The CHAIRMAN. Is that all he applied for?

Mr. ALLEN. Yes, sir.

Mr. SPENCE. The balance of his permit was to be carried nonuse.

Mr. LEECH. These numbers that are being given, Senator, as I understand from Mr. Allen, are actual use numbers. Mr. Cram had applied for 350 and would have gotten 350.

Mr. ALLEN. In 1941, I couldn't tell you for sure, back in 1941, without examining the records.

The CHAIRMAN. How many was he allowed in 1940?

Mr. LEECH. 176 head of cattle, and 42 horses.

Mr. SPENCE. Isn't there an additional, to that in 1940; under that in 1940?

Mr. LEECH. There seems to be two entries in 1940, 226 head from May 1 to November 30.

The CHAIRMAN. Who made the records, Mr. Leech?

Mr. LEECH. Mr. Allen.

The CHAIRMAN. Why doesn't he testify on his own records? It will save time.

Mr. ALLEN. A complete case file of Alec Cram is here, from 1938 to date, if you care to examine it.

Mr. SPENCE. How many head permit was Mr. Cram issued in 1943? That has never been answered yet.

Mr. ALLEN. In 1943 Mr. Cram's application was for 185 cattle, year-long; and 90 cattle from July 1 to November 30, 1943; and 90 head of cattle from May 1 to June 30, 1944; and 20 head of horses.

The CHAIRMAN. Now answer the question. What was he allowed?

Mr. ALLEN. That was the application, and it was approved.

Mr. SPENCE. Senator, I would like to attract your attention here. This is taken from a map of 1941 of Mr. Cram's individual allotment; usually runs in common, but that is drawn out as their individual allotment; and there is a withdrawal of the game department, from Mr. Cram, taking away approximately 17 sections, here, at this black line, which indicates where the game department asked that the boundary be put for withdrawal. But, instead, the Division of Grazing has withdrawn that whole area from Mr. Cram. And why is that done, Mr. Allen, taking up this entire area on your '43 permit, going back there in '42 or '43, to give a whole description of his boundaries there, which cuts off this much of his permit. Why is that done?

Mr. LEECH. Let me see if I understand the question? You are speaking now of the first, the proposed buffalo withdrawal, as proposed by the Fish and Wildlife, and then the second line, that you indicate, is the one that was suggested by the Grazing Service. Is that right?

Mr. SPENCE. This is the one suggested by the game department, and this is the one that was withdrawn by the Division of Grazing.

Mr. LEECH. We have made no withdrawal there, Mr. Spence.

Mr. SPENCE. I think if you will present a record of this, first of the 1941 permit, that it will show that—maybe it is 1940—here in one of these permits, giving the lines for where these permits will be—

Here it is, on the 1942 permit. You will find there was that much withdrawn from it.

The CHAIRMAN. Is this the buffalo range we have been talking about all afternoon?

Mr. ALLEN. That's right.

Mr. SPENCE. Showing—I don't know from whom—but showing how discrimination was shown against this man.

The CHAIRMAN. That is what I am trying to get at.

Mr. ALLEN. That is the line of your original 44,000-acre withdrawal.

The CHAIRMAN. Which line?

Mr. ALLEN. That red line, splitting allotments, Mr. Chairman.

The CHAIRMAN. Originally, Cram had all of this; is that right? And you were then administering the buffalo allotment, or the temporary withdrawal, as under the Taylor Grazing Act?

Mr. LEECH. Yes, sir; the whole 44,000 acres.

The CHAIRMAN. Then you came to the conclusion that the 44,000 acres should not be administered under the Taylor Grazing Act, so you eliminated that; is that correct?

Mr. LEECH. We no longer administer it.

The CHAIRMAN. Did you take it from his allotment?

Mr. LEECH. No, sir.

The CHAIRMAN. Off the record.

(Off the record discussion.)

Mr. SPENCE. Another thing I would like to call your attention to, here; how would you make it possible, Mr. Cram's permit here for 42 head, and the same thing for this year, 60 percent on Federal range? As you know, Mr. Cram has nothing other than Federal range.

Mr. LEECH. What about that, Mr. Allen? Do you mean by 60 percent Federal range that the rest is on the 44,000 acres withdrawal?

Mr. ALLEN. Yes.

The CHAIRMAN. In other words, he would utilize the Federal range for 60 percent of the year, and the 44,000 withdrawal for 40 percent of the year?

Mr. LEECH. I believe they figured it in numbers, instead of periods of time.

Mr. ALLEN. Figured on percentage basis.

The CHAIRMAN. Of cattle, or time?

Mr. ALLEN. Percentage of the cattle, for the entire year.

The CHAIRMAN. In other words, if he had 200 head, 60 percent of those would run on that allotment for the year and 40 percent would run on the open range for a year?

Mr. ALLEN. It would be just the other way around—60 percent on the Federal range and 40 percent on the game refuge.

The CHAIRMAN. Well, that is it. All right, what is next?

Mr. SPENCE. Well, as you can see, that is a small area he is allowed, left to run; which will leave him a space of approximately 200 or 240 cattle, after he is cut down in that manner.

The CHAIRMAN. As yet he is not cut down, because, as I understand it, he is running on the temporarily withdrawn land now without paying fees. So he is not cut down. But in this new withdrawal, were it to go through—how would it affect him?

Mr. SPENCE. Well, it would cut him down to this space here. That is all that he would have left.

Mr. ARTHUR WOOLLEY. I didn't get that. Would the line be the same, under his allotment, under the 23,000, as it is under the 44,000? Whether or not, under the proposed 23,000 withdrawal, would it affect him the same as the 44,000? You answered "yes."

Mr. SPENCE. Not if the 44,000 was not taken out. But the Division of Grazing has taken this out, and the game department say they have not asked for it. Why would the Division of Grazing take the authority to exclude this from the permit when the game department hasn't asked for it?

The CHAIRMAN. The Division of Grazing admitted an error here a while ago; and it is of record that they have made an error in that. In other words, they should have continued to administer that 44,000 withdrawal; and they should have continued Mr. Cram so much of it as was necessary for his herd; and they should have charged him fees as they had done in times past. They didn't do it; and he was deprived. I don't think he was deprived of anything. I am not certain.

Mr. LEECH. No; he was not.

The CHAIRMAN. I think he got a little gravy there.

Mr. LEECH. He only paid on 60 percent of the range.

Mr. SPENCE. Well, the final outcome in this—not interested in just today—a man is developing a ranch, not for what it is this year, but what it is going to be 10 years from now. That is the final value of it.

The CHAIRMAN. You have a perfect right to inquire into it, and to try to see if we can straighten it out.

Mr. ARTHUR WOOLLEY. Illustrate what would be done if they took this thing over.

Mr. SPENCE. Next, I would like to take you to the Hod Brown allotment, up here [indicating], which Delwin Hamblin claims ownership now, but sold to me under contract. What is the record of the permits that you have on that?

Mr. LEECH. What records do you have, Mr. Allen?

Mr. ALLEN. *Hod Brown case*, no license issued under that allotment. It is under litigation in the State court; no licenses are issued at present in it; nor in my recollection.

Mr. SPENCE. There have been permits issued on it, have there not?

Mr. ALLEN. I think there have.

Mr. LEECH. Do you have any record on it?

Mr. ALLEN. No, sir.

Mr. LEECH. Do you know anything about the license issued on the Hod Brown case?

Mr. ALLEN. I know it was in litigation, possibly from the time they started issuing licenses on it; and for that reason it is being held in abeyance, as far as we are concerned.

The CHAIRMAN. Are we talking of permits or licenses?

Mr. LEECH. We are talking of licenses.

The CHAIRMAN. We are calling them permits, but we mean licenses.

Mr. LEECH. I don't know whether any permits have been issued in here or not.

Mr. ALLEN. Not on the the Hod Brown; no permit at all.

Mr. SPENCE. Do you recall on August 26, 1940, Mr. Leech, you held a hearing on this particular case, didn't you?

Mr. LEECH. On the Hod Brown?

Mr. SPENCE. At least it was introduced by you, as being the hearings officer.

Mr. LEECH. Well, I remember the case, Mr. Spence. I was just trying to find, on the list, whether or not we had a hearing on it in 1940.

Mr. SPENCE. Well, you did have, on August 26, 1940. This is dated here.

Mr. LEECH. Well, is that my decision?

Mr. SPENCE. It is.

Mr. LEECH. All right.

Mr. SPENCE. And, Mr. Leech, you rejected this permit for 42 head that was given on that place at that time; closed it until ownership was determined.

Mr. LEECH. That is correct.

Mr. SPENCE. That is your reason for rejecting. You knew at that time Mr. Hamblin was in possession of that place, and was living there?

Mr. LEECH. I believe the transcript would say what happened, Mr. Spence. I can't remember, offhand.

Mr. SPENCE. And Hamblin was put off of there, not allowed to run cattle there any longer, was he, at that time?

Mr. LEECH. I don't know whether he was put off or not.

Mr. SPENCE. He presented in this case a quitclaim deed from William Brown, did he not?

Mr. LEECH. That is right.

Mr. SPENCE. And a quitclaim deed is, in ordinary circumstances, sufficient proof of ownership; and a man in possession of a place is nine points of the law, isn't it?

Mr. LEECH. Well, as I remember this case, there was a good deal of so-called quitclaim deeds for various people that were claiming the Brown place; and as I remember I directed they proceed to litigate the matter, and come into the Grazing Service with whoever owned the place; to come in and establish that he owned it; that we were not going to try to determine between the conflicting claimants over the Hod Brown place.

I do not have the record before me, but I am speaking from my memory of the case, as it happened in 1940. Is that about according to what you read?

Mr. SPENCE. That small permit is within the area of the House Rock Valley allotment, in which Mr. Royal B. Woolley operates.

Mr. LEECH. It is within the House Rock Valley; yes.

Mr. SPENCE. And there is no fence between. It is open for the cattle to run in House Rock Valley, and to come right out on the Hod Brown allotment.

Mr. LEECH. I would suppose they do; yes.

Mr. SPENCE. Mr. Woolley is the man whom you referred to as being, or "just other people holding quitclaim deeds." If you notice, they were of later dates than Delwin Hamblin's quitclaim deed.

Mr. LEECH. As to the decision of the examiner, what action was taken by the claimants of this Hod Brown case? I haven't been familiar with it since. I do not know.

Mr. SPENCE. What I asked you, Mr. Leech, was, weren't these other quitclaim deeds of later date; and, on the record, the deed showing after the subsequent receipt of this property by Mr. Cram, immediately after it was issued to him from William Brown, they were of later date; and the first deed would naturally hold as the one in ownership of that, wouldn't it?

Mr. LEECH. Well, I think that would depend on the circumstances surrounding it, and all the facts concerning it. I am not trying to answer any of the particular questions as to those quitclaim deeds, at this time, because I would have to have them before me again to know what we are talking about.

Mr. SPENCE. What I am trying to do here is show that man was in possession of this. He had legal rights, holding it until somebody dispossessed him. Legally he had the right to continue on there.

The CHAIRMAN. Was a permit given to him?

Mr. SPENCE. None open in the range for him. Mr. Woolley, who holds the adjoining permit which allows that much more range, and deprived Delwin Hamblin of anything—who was the holder at that time?

The CHAIRMAN. The trouble is in a case of this kind, if this is illustrative of a policy that is general, the committee would entertain it; but if it is merely to call upon the committee to act as a court of review in an individual case, we question very much that we have that power.

Mr. SPENCE. I am not trying to bring in this court case. It is merely to show an example of how the administration of that Division of Grazing has been carried on in this Arizona strip.

The CHAIRMAN. That is the reason I am entertaining it. If it be one link in a chain of policy, I am going to listen to it. I am waiting for you to round out and show us what the policy is. I think it would have been well for you perhaps to have stated what you proposed to establish in the way of a policy. If you have a policy you can go ahead and show it.

Mr. SPENCE. This is to show the policy of administration.

The CHAIRMAN. That is all right. We'll listen to it as long as we can listen.

Mr. SPENCE. Well, this is a long drawn-out hearing, and Mr. Leech spoke of furnishing this decision for the record. And if necessary Mr. Hamblin could forward to the committee a copy also of the hearing, to show how these cases have been administered here. It would take a long time to go through it in detail, as it is a long drawn-out case.

The CHAIRMAN. Let's see what you are driving at. If you mean it would take a long time to go through this in detail; that is, the individual case, I am not certain that we are going to go through it. But if it is a question of taking a long time to go through a policy, which policy reflects a favoritism on the part of an agency, this committee has ample time to hear it. We will hear it, either now, or at some other time.

Mr. SPENCE. Well, to be frank, my object is to show that in this area we are represented on the advisory board by a man that—well, we don't get any consideration from—as an advisory board member, unless we belong to his group. That is putting it in the plainest words I know how.

The CHAIRMAN. You are referring to whom?

Mr. SPENCE. Royal B. Woolley. Alec Findlay was another one. They are on the mountain here, they are in partners together, in the company. If you have any opposition to them, why consideration is not very great, when it goes before the advisory board.

I would like to cite you these cases to show you.

The CHAIRMAN. The committee is interested in that, if that can be established. We are very much interested in it; so don't hesitate at all.

Mr. SPENCE. Then we will jump from the Hod Brown allotment—

Mr. LEECH. I would like to ask two or three questions on this Hod Brown case, Senator?

Now, Mr. Spence, just what is this Hod Brown tract, a 40-acre tract, is it?

Mr. SPENCE. It is a water right.

Mr. LEECH. In the House Rock Valley?

Mr. SPENCE. It is adjoining House Rock Valley, up on the edge of the cliff there.

Mr. LEECH. That was owned by Mr. Brown, at one time, wasn't it?

Mr. SPENCE. William Brown and Hod Brown.

Mr. LEECH. Both had an interest in this place?

Mr. SPENCE. That is right.

Mr. LEECH. As I remember it.

Mr. SPENCE. That is right.

Mr. LEECH. And one of them sold a certain interest to Hamblin?

Mr. SPENCE. That is right.

Mr. LEECH. And then there were other parties, perhaps Woolley, if I remember right. Did he claim a purchase, also?

Mr. SPENCE. He bought up Will Brown; at a later date, another quit claim deed from him, and from a widow woman here in Fredonia, who, her husband came in and signed the water filing, both of Hod Brown and William Brown.

Mr. LEECH. Was that case later litigated in Flagstaff?

Mr. SPENCE. It has never been litigated. They have been trying for 2 years to get a jury on it, and haven't been able to do so yet.

Mr. LEECH. As I remember this decision, it was to the effect that until an ownership of this place was established on which the Grazing Service could issue a license or permit, we would not issue any.

Mr. SPENCE. But you did issue one, Mr. Leech, until Mr. Woolley attached claim to it.

Mr. LEECH. Who to?

Mr. SPENCE. To old man Brown, and Curtis, who had the lease; and later, Delwin Hamblin took it back; and I think he had a permit on it.

Mr. LEECH. If I remember the fact, the license was issued to Brown as long as he had it. After it was disposed of, to two or three people, did not know to whom to issue it.

Mr. SPENCE. He had the first quit-claim deed of record, when you issued the claim for 1 year.

Mr. ARTHUR WOOLLEY. A suit was pending, in the Arizona courts, about the title to the water hole?

Mr. SPENCE. Yes.

Mr. WOOLLEY. Who is the plaintiff?

Mr. SPENCE. Woolley and Delwin Hamblin.

Mr. WOOLLEY. They brought the suit against whom?

Mr. SPENCE. Delwin Hamblin. It is to determine ownership of the place.

Mr. WOOLLEY. Who brought the suit?

Mr. SPENCE. That I haven't legal knowledge enough to grant you.

Mr. WOOLLEY. Do you know, Mr. Woolley?

Mr. ROYAL B. WOOLLEY. Delwin Hamblin.

Mr. ARTHUR WOOLLEY. Against whom?

Mr. ROYAL WOOLLEY. I don't just remember. I can tell you the outcome of it.

Mr. ARTHUR WOOLLEY. Are you sued in it?

Mr. ROYAL WOOLLEY. Yes; I am a defendant.

Mr. ARTHUR WOOLLEY. Anyone else a defendant?

Mr. ROYAL WOOLLEY. No; my wife and I.

Mr. LEECH. Mr. Spence, at this time do you own any part of the Hod Brown place?

Mr. SPENCE. At the time these sales were made——

Mr. LEECH. At this time.

Mr. SPENCE. I do.

Mr. LEECH. Have you applied for a grazing license from it?

Mr. SPENCE. I have asked for consideration; but I was told it would be useless to do so until ownership was brought into court.

Mr. LEECH. Are you trying to determine that ownership now?

Mr. SPENCE. I am.

Mr. LEECH. When you determine the ownership, the Grazing Service is ready to issue the license or permit to the owner of that property.

Mr. SPENCE. Well, this other man has had this for 4 years; and without reason, a man who was in legal possession until he was dispossessed by an order of the court, he was in possession of this place; and I don't see that the Division of Grazing had any right to dispossess him of the property and kick him out on the road; and I bought those rights.

Mr. LEECH. I don't agree that we did that—kicked him out in the road.

Mr. SPENCE. You have forbidden him a permit, which is the same thing, Mr. Leech. He couldn't stay there any longer without one.

The CHAIRMAN. Well, now, let's see if we can find some light out of this. Who was granted the permit?

Mr. LEECH. Until someone determines ownership of that place, we have not issued a permit in connection with the Hod Brown place.

The CHAIRMAN. Who gained an advantage by there being no permit issued to the Brown place—anyone?

Mr. LEECH. If any advantage was gained, it must be the people that use the House Rock Valley, but I would not know that we increased anyone, anyone increased to the extent of that 42 head.

Mr. ALLEN. No.

The CHAIRMAN. There would be that less number of cattle or livestock?

Mr. LEECH. On House Rock Valley; yes.

Mr. SPENCE. But the other men would have the advantage of the range.

Mr. ARTHUR WOOLLEY. Is the area included in the so-called Hod Brown allotment a common area with a number of other permittees?

Mr. ALLEN. Yes, sir.

Mr. ARTHUR WOOLLEY. In use?

Mr. ALLEN. Yes.

Mr. WOOLLEY. How many other permittees have common use of the area?

Mr. ALLEN. Five owners that bought into the Grand Canyon Cattle Co.: Alec Cram, Billy McIntyre, Woolley, and five others. Those I named, and those other five.

Mr. ARTHUR WOOLLEY. There are how many?

The CHAIRMAN. Let's get that straight if we can. The successors to the Grand Canyon Cattle Co. are the people who hold the permits on this outside range.

Mr. ARTHUR WOOLLEY. Five of them, and two others, two individuals.

Mr. ORMAN CRAM. Mr. Chairman, which there is an excess of 44 head there at the time, which wasn't being used on this Hod Brown place. Still we were cut down on our allotment.

The CHAIRMAN. Who do you mean by "we"?

Mr. CRAM. Me and Alec Cram, my brother.

The CHAIRMAN. You were cut down, notwithstanding the fact this Hod Brown place was given an allotment?

Mr. CRAM. That is right.

The CHAIRMAN. You were cut down and Howard Brown was cut down. Who else was cut down?

Mr. CRAM. I don't know, but Mr. Woolley has been raised on his allotment.

The CHAIRMAN. What do you call the successors to the Grand Canyon?

Mr. ALLEN. Do you want the names?

The CHAIRMAN. Isn't it a corporation?

Mr. ALLEN. It was entered under the name, Hoyt Chamberlain, trustee.

The CHAIRMAN. Who are the owners of the trust?

Mr. ALLEN. Royal B. Woolley, John B. Schoppmann, C. H. Vaughn, Alec Findlay, Rubin Broadbent.

Mr. SPENCE. Which two are on the advisory board?

Mr. CRAM. Mr. Woolley had a private allotment of his own, 47 head. That was raised to 107, if I am not mistaken. Then he traded that to have the other boys that are interested in the Grand Canyon Cattle Co.

Mr. ARTHUR WOOLLEY. That would be a meager statement of the transaction involving Mr. Woolley's permit, I am sure.

The CHAIRMAN. Well, there is a sinister implication of favoritism. We had it here yesterday, made by Mr. Woolley, and now we have it made by someone else, reflecting on Mr. Woolley. I am perfectly willing to hear it through, the same as I did the other.

Now, I want you to be free to tell the whole story. I am not aware what it is. If there is favoritism or reprisal on the part of any agency, we are ready to hear it through. That is a policy, and we are ready to hear it through.

Mr. MILTON CRAM. I am a permittee, with a small holding and, whether in the line of business or out of duty, I was told that my allotment was too small to pay any attention to by the Division of Grazing.

The CHAIRMAN. Who told you that?

Mr. CRAM. Mr. Allen.

The CHAIRMAN. Mr. Allen?

Mr. CRAM. Right.

The CHAIRMAN. How many cattle do you have?

Mr. CRAM. I have a permit for five head.

The CHAIRMAN. Where was that statement made to you?

Mr. CRAM. At my place.

The CHAIRMAN. When?

Mr. CRAM. I can't give you the date of it, but before I—for a while Mr. Allen was under Mr. Blankenagle.

The CHAIRMAN. How long ago was that?

Mr. CRAM. Two years and something.

The CHAIRMAN. That was the former district grazier?

Mr. CRAM. His attitude was this, we got to eliminate the little guy, so we won't have so much trouble with the larger ones.

The CHAIRMAN. You say that was his attitude; he used the express attitude. On what do you base that as a conclusion?

Mr. CRAM. Well, that is a conclusion, maybe, in the power that they have.

The CHAIRMAN. But the other statement you have recited here was actually made by Mr. Allen to you?

Mr. CRAM. I don't know whether it was in the line of duty or not.

The CHAIRMAN. It was actually made to you?

Mr. CRAM. Yes, sir.

The CHAIRMAN. Well, you know when we set up the Taylor Grazing Act, the argument was made on the floor of the Senate and elsewhere, that this would afford an opportunity for the small stockmen, and it was that argument that got the Taylor Grazing Act approved by the Congress. I want to tell you that, frankly, it never would have been approved in the Senate, had it not been for the argument that was made that the little stockmen, the homesteaders, and the small stockmen would gain by this act.

Now, I am not ready to form a conclusion on this thing. I would like to have Mr. Allen make a statement. He is certainly entitled to do so.

Mr. ALLEN. Mr. Cram, I said your outfit was too small to pay any attention to?

Mr. CRAM. Yes, sir; Mr. Allen, you made that statement.

Mr. ALLEN. I sure don't remember. Maybe it is your word against mine.

Mr. CRAM. I have a witness to that effect, and if he wasn't overseas in the armed forces he could verify that statement.

Mr. ALLEN. I am not going to verify that. The facts will verify the statement that there was quite a little bit of work entered into in order for you to run your allotment.

Mr. CRAM. That's right.

Mr. ALLEN. And you know at the time it was obtained I spent quite a little time going over the country with you and getting the facts to the board, so a just decision could be rendered. If it was too little to pay attention to there was no point in going out and going over the area, whether it was one head or three head, or five. I think the record will speak for itself.

Mr. ORMAN CRAM. There is another little matter, Mr. Leech. What was the original allotment for the Emmet Spring?

Mr. LEECH. You are referring to my decision of July 28, 1937? I don't believe that in the adjudication I considered Emmet Springs. Is that what you mean?

Mr. CRAM. Yes, that's right. And now we have piped that down, or started to, within approximately half a mile of Alec Cram's allotment, and put it there. They say it is good for the range. I talked to Mr. Brooks about it, and Mr. Allen, and neither one of them would come down and see our side of it on the range.

Mr. LEECH. You are speaking of a proposed section 4 permit fence; are you not?

Mr. CRAM. Yes.

Mr. LEECH. The Grazing Service fence and a pipe line?

Mr. CRAM. That is the pipe line, brought down; it is not fenced, or anything, you understand.

Mr. LEECH. I know there was something, some agreement made for fences; were there not, between Mackelprang and—

Mr. CRAM. Between Mackelprang and ourselves, supposed to run in common on Soap Creek. They bring this pipe line right down. I don't think it is hardly finished, but it is approved, and they have a right to cross under the highway with the pipe line, and they bring it right down approximately right there. We have already been cut down and they want this water brought down to here and crossed to us, so they can put their cattle in there, while we come out here and feed and eat.

The CHAIRMAN. Who do you refer to as "they"?

Mr. CRAM. The Division of Grazing, and the company here, over here; Mr. Woolley, I suppose, represents them, and so on.

The CHAIRMAN. Who?

Mr. CRAM. This company over here, the owner of Emmet Springs.

Mr. LEECH. I would like for Mr. Brooks to tell us the status of this proposed pipe line. Has it been approved, Les?

Mr. BROOKS. Yes; the pipe line has been approved. However, not as indicated.

Mr. LEECH. Not as indicated by Mr. Cram?

Mr. CRAM. I said started.

Mr. BROOKS. You were in the office, I believe, Mr. Cram, talking with me about it, and I took it up immediately with our district grazier, and asked him to make an investigation of it and determine where the proper location would be, in order that you, or anyone else, would not be hurt, and I am sure that was done. Part of the pipe line has been put in, but not all of it.

Mr. CRAM. That is right.

Mr. BROOKS. As far as I am informed by Mr. Allen, there is no intention to put it across the road.

Mr. CRAM. I have spoken of it, because that was the original intention.

Mr. BROOKS. That was taken up with the District Grazier Allen, immediately upon your appearing in the office, and I asked him for reconsideration of it, and a reconsideration was given.

Mr. CRAM. Who would that benefit—that water being piped down there, Mr. Brooks? As Mr. Leech said, this water never had no base priority or anything in 1937. Who would it benefit?

Mr. BROOKS. Mr. Allen is more acquainted with the users in there than I am. I will ask him to answer it.

Mr. ALLEN. Do you want your question answered?

Mr. CRAM. What's that?

Mr. ALLEN. On the contrary, the records—that entire area in House Rock Valley is open range; it is not fenced. The country is used in common. There is quite an area between what you term as your father's water, and the Soap Creek water, the Emmet pipe line being piped down, whether it is a new improvement, or an old improvement

being repaired, that facilitates the use of the range by livestock, by furnishing additional well-placed waters to afford easier access to the range by the livestock.

Mr. SPENCE. Mr. Allen, may I ask you on the Soap Creek, Mr. Cram previously held a permit on Soap Creek; did he not?

Mr. ALLEN. I don't know. My recollection is, the answer would be "no."

Mr. SPENCE. You don't know?

Mr. ALLEN. As far as I know, he had no license on Soap Creek.

Mr. CRAM. We had 20 head at one time. Here is a letter here.

The CHAIRMAN. What became of the 20 head?

Mr. CRAM. I don't know who got it.

The CHAIRMAN. What became of the permit for the 20 head?

Mr. CRAM. I don't know that either.

Mr. LEECH. Where was this supposed to be, on Soap Creek?

Mr. CRAM. Right on the water, I think you have that there.

Mr. LEECH. The original adjudication showed Cram 380 in one application, outside of the service area of water marked off, 11 head more for the right south of his allotment. He was to run in common with Woolley and Mackelprang, to the extent of 80 head.

Where was this 20 head, that's what I would like to know?

Mr. CRAM. We had one at Soap Creek at one time, 20 head. It doesn't show it here, but I know we had one. Mr. Woolley had 20 head before I bought the place, and Mackelprang had 20 head.

The CHAIRMAN. Mr. Woolley had 20 head before they bought the place?

Mr. CRAM. That's right, the Grand Canyon Cattle Co. had 20 head. Mr. Mackelprang had 20 head.

Mr. LEECH. Is that the area that I said that Cram, Woolley, Mackelprang, and Stevenson run in common?

Mr. CRAM. No; at the same time—we haven't got that now, either, but it was down here at Soap Creek.

Mr. LEECH. Well, at Soap Creek, if I remember right, there were 46 head; were there not? This map shows that the original adjudication said 207 head for the Grand Canyon Cattle Co.

The CHAIRMAN. Is that aside from the three-hundred-odd head that Mr. Woolley has, and some over on South Creek?

Mr. ALLEN. That is on the forest area, 305 on the forest.

The CHAIRMAN. I see.

Mr. LEECH. That is a different operation altogether.

Mr. ALLEN. I might go a little further in clarifying my statement here on this license on Soap Creek. Here is a long-form application made by Alec Cram on March 20, 1938, in which he lists all of his base property. In that he lists one well developed in 1917, located in section 3, Township 37, north, Range 5 east. That is the only water he lists at all.

Mr. CRAM. That was in 1938.

Mr. ALLEN. He lists on here his private holdings, which amount to approximately 160 acres.

Mr. CRAM. Two hundred and thirty acres.

Mr. LEECH. Now, this 20 head that you speak about on Soap Creek; what was that in connection with?

Mr. CRAM. The waters of Soap Creek; one time declared a public water hole; and the land was withdrawn on either side when this bill was first set up. We had run there for years.

Mr. LEECH. Do you still run up there?

Mr. CRAM. No, sir.

The CHAIRMAN. What became of your right?

Mr. CRAM. That's what we would like to know.

Mr. LEECH. That is something I will have to have looked up.

The CHAIRMAN. Were you gradually cut down, or did it all happen at one time?

Mr. CRAM. Gradually cut down. Asking about that pipe line, Mr. Woolley told mother and father he didn't want anything to do with the Emmet pipe line. Here is a letter here where him and Alec Finlay asked Mr. Blankenagel for it. If you come right down to this, if anybody is going to benefit—if there isn't some favoritism somewhere, I will be——

Mr. LEECH. One thing I would like to pursue, Senator, and that is how Mr. Cram—how this Cram allotment has been reduced.

The CHAIRMAN. How are these allotments——

Mr. CRAM. And who has been benefited by this reduction that we got?

Mr. LEECH. I wouldn't know——

Mr. SPENCE. It describes it on your permit there, and gives the outlying sections where the corners lay.

Mr. LEECH. How many numbers; I mean in numbers, Mr. Spence?

The CHAIRMAN. We will pause here for 10 minutes.

(Recess for 10 minutes.)

The CHAIRMAN. Very well, we will proceed.

Mr. LEECH. Mr. Chairman, in connection with the *Cram case*, I am going back again to this decision of July 28, 1937, and——

The CHAIRMAN. That, as I understand, was the date on which you decided the House Rock Valley question. Is that right?

Mr. LEECH. Yes, sir; and there were many conflicting service areas for the waters. The way we determined the service area of those waters was by a 5-mile radius from each one. These circles, different colored circles on the map represent the conflict in the service areas of those waters. We realized that we could not make land allotments where such a confusion of conflicts existed, so I attempted to adjudicate it on carrying capacity and the running of the livestock in common.

I found that Cram's well, which is indicated there by the name "Cram," was entitled to 380 head of cattle, yearlong, within the serviced area of his water. Then south of the service area there was an area available for 80 head, that we provided for Cram and Woolley and Mackelprang and Stevenson, who at that time was the Grand Canyon Cattle Co., to run 80 head here on the east of the Cram allotment outside of the serviced area of the waters, where there was carrying capacity for 11 head more.

I have refreshed my memory a little bit during the recess, and Emmet Spring, indicated here by the words, "Emmet Spring," was left out of my original adjudication. The Grand Canyon Cattle Co. appealed, and we reconsidered the Emmet Spring, and, if I remember right, gave it 15 or 20 head, part of which had to come off of the

Cram and the other allotments, and then this 80 head, as I understand it now, they would run in common. That has to some extent been taken up by the buffalo herd, which in the original adjudication was given 143 head yearlong.

I will be very glad to file with the committee a very detailed statement and reference to the map of this type, with the colored circles, which will explain it much more fully. It has been a long time since I made this adjudication, and I have forgotten a good many of the details.

The CHAIRMAN. Well, I don't know that that detail is essential to the committee; and I don't know that the committee is particularly interested in that. What I am interested in now is again the policy. There is a direct charge here of certain users losing their rights. I want to know why they lost their rights, and why somebody else picked——

Mr. LEECH. If that is the case, Senator, we are very anxious to know that also.

The CHAIRMAN. That is what seems to be the implication, and that is what I am driving at.

Mr. LEECH. Now, I believe the first reference Mr. Spence made, of course, is due to the elimination from our administration of the 44,000-acre buffalo withdrawal. That is a fact, isn't it, Mr. Spence?

Mr. SPENCE. But there is no reason yet shown why, Mr. Leech, you cut that off of these fellows' boundaries, from within their boundaries, when the game department hasn't even asked for it.

The CHAIRMAN. That is admitted. Mr. Leech made the admission here early in the day that that was an error, and that error could be an honest error, without a question of a doubt, and as a matter of jurisdiction.

Mr. BROOKS. Mr. Chairman, I would like to ask Mr. Allen a couple of questions.

The CHAIRMAN. Very well.

Mr. BROOKS. Mr. Allen, in connection with Emmet Spring's pipe line, was there any agreement, or any understanding, with the permittees, or users, in that area, before the pipe line was moved?

Mr. ALLEN. Well, at first there was, first a disagreement on it and two different trips were made into House Rock in regard to this proposed pipe line. The last trip before the pipe line was to be built, Alec Cram was contacted, and I met him right there on the highway, where his road turns off to go to the well. We went back to House Rock waters there, House Rock Station, and there he repeated twice to me that he had no objection whatsoever to that pipe line being built. That was before the work was ever started on the pipe line.

Mr. BROOKS. Even after that was the pipe line changed from its original proposed location as a result of an investigation that was made by you, or Mr. Blankenagel after the protest of Mr. Cram?

Mr. ALLEN. The only change that was made after Mr. Cram's protest was that the end of the pipe line, proposed end, was definitely located by legal description.

The CHAIRMAN. By what?

Mr. ALLEN. By a legal description, and since that time there has been another adjustment, and the pipe line will not cross the high-

way, the end of the line being approximately between 6 and 7 miles from the well of Mr. Cram.

Mr. ORMAN CRAM. I disagree with the mileage there, and so on. I think, if you look at the map, there is approximately 3 miles from the well to our boundary, about 2, or a mile and a half from the other line. Emmet Springs is up in the canyon, and inaccessible to the cattle, if you have them go in and water. If it was piped out to the edge of our allotment and not sent and so on, it would certainly damage us if it was piped out. The nearer it gets down toward our allotment, the more it hurts us.

Mr. ALLEN. Your father definitely disagreed with your statement the last time I talked with him. He had no objection to the pipe line.

Mr. CRAM. Why is it he went in and talked to Mr. Brooks in Phoenix—made a trip down to talk to him? Why did he call in Blankenagel and ask him if he would come down and see how it would hurt us? Mr. Blankenagel never did show up. He told me that he would.

Mr. ALLEN. Mr. Senator, it isn't the object to argue this. The point we are trying to make, after all of this discussion had come about and complete understanding was had, there was no objection to the pipe line by Mr. Cram before the pipe line was installed.

The CHAIRMAN. After he filed an objection, you changed your policy on the pipe line to conform to his objection. Is that right?

Mr. BROOKS. That is correct, and these water improvements, Mr. Chairman, artificial ones, it is important that we give every consideration to the users in the areas, and whether or not by the development of waters in a certain area there will be a tendency to hurt some other user. So we attempt to place those in the most feasible locations, so that they will not hurt any one individual, or any group of individuals. Of course you can't always get unanimous decision as to the exact location of these water developments, but we attempt to obtain it and usually we are successful.

Mr. LEECH. May I ask Mr. Brooks a question? In the location of these improvements, Mr. Brooks, you are dealing purely with the development of the Federal range, and are in no way showing any favoritism to any particular licensee?

Mr. BROOKS. That is correct. The improvements enable the users to use the Federal range to better advantage, not only to themselves, but also to the Federal range. Along that same line, they enable the livestock to graze the range properly, or more nearly properly, because of the improvements having been placed there with the few water developments that are there. Natural ranges are generally overgrazed around the water developments, and perhaps undergrazed in areas farther removed from the developments. The water developments enable a better administration of the range lands, and also enable the stockmen to get more benefit from the ranges than they ordinarily would, otherwise.

Mr. ARTHUR WOOLLEY. Did the location of the Emmet pipe line change any allotment?

Mr. BROOKS. It did not.

Mr. WOOLLEY. Did it affect the issuance or withdrawal of any permits?

Mr. BROOKS. No, sir.

Mr. WOOLLEY. Is the area served by the new pipe line, as it will be located, open range in common?

Mr. BROOKS. It is.

Mr. WOOLLEY. Who are the several permittees who will have use of that improvement, and what are the numbers of their permits; that is, how many cattle?

Mr. BROOKS. I will ask Mr. Allen to give those numbers, and also the names.

Mr. ALLEN. Cattle that have been running in common, in House Rock Valley would be benefited by that.

Mr. WOOLLEY. How many does Cram have that he runs in the valley?

Mr. ALLEN. At present?

Mr. WOOLLEY. Yes.

Mr. ALLEN. At present he made application for 185 head of cattle and 20 head of horses yearlong, and 90 head of cattle on the split season, from July 1 to November 30, and from May 1 to June 30. He puts 90 head of cattle on the forest during the wintertime.

Mr. LEECH. He was granted everything he applied for, Mr. Allen?

Mr. ALLEN. Yes, sir.

Mr. SPENCE. Might that not be far-fetched if the company decided to cut waters as they have done this summer in the valley, cutting other people's cattle away from the water?

Mr. Cram would hold no interest in the water. It is not declared public water, and it wouldn't be far-fetched to have that water cut going on in the valley, anyone else's cattle being watered there other than the company's.

Mr. ALLEN. The improvement isn't completely installed yet, Mr. Spence.

Mr. SPENCE. It is not set up as public water.

The CHAIRMAN. Let me get the picture clearer. Who has the greater number of livestock in the valley?

Mr. ALLEN. The Grand Canyon operators.

The CHAIRMAN. These other fellows are comparatively small operators?

Mr. ALLEN. They would run about in proportion: 941 cattle granted to the Grand Canyon operators, 325 to Cram, and 354 to Mackelprang.

The CHAIRMAN. Where do you come into this, Mr. Spence?

Mr. SPENCE. I am representing Mr. Cram, senior. He is sick in bed, and I have a power of attorney to appear for him.

Mr. ARTHUR WOOLLEY. These were his sons who asked the questions?

Mr. SPENCE. Yes.

The CHAIRMAN. Of course, I take it, the implications—there are a lot of implications going on here. The implication is that the owners of the greater number of the cattle would get the greater benefit from this pipe line, and that those who had the smaller number of cattle would be the losers, because their range would be fed out by the larger number closer to the water. Isn't that the general implication that flows?

Mr. ARTHUR WOOLLEY. Who has the closest allotment to this outlet, as proposed?

Mr. ALLEN. This water is on the Grand Canyon allotment.

The CHAIRMAN. All right. Let's go on.

Mr. SPENCE. I would like to call Mr. Curtis on this *Hod Brown case*. He has a statement that he would like to make with reference to the way it was handled. He was one of the witnesses at the time.

STATEMENT OF E. A. CURTIS, JACOB LAKE, ARIZ.

Mr. CURTIS. I have an allotment here in House Rock Valley. I have got a decision here in my pocket that was written by Leech. Through an agreement with him, this line here was drawn between me and Delwin Hamblin. My kick on that is I agreed to the fence, and they built it, but I give them some private land to fix a driveway through the way they wanted. I wanted, and a neighbor there, Delwin Hamblin—they agreed to pipe this Hod Brown spring down and turn it over to Delwin Hamblin, and they never did a darn thing like it.

The CHAIRMAN. Who did it?

Mr. CURTIS. Mr. Blankenagel. He made that agreement. If you make a deal with Uncle Sam, I think he should live up to his agreements.

The CHAIRMAN. Now, as I understand the way it was, Blankenagel made the agreement to pipe water down there?

Mr. CURTIS. For Delwin Hamblin, on the Hod Brown place. For 5 years I had a lease on it.

The CHAIRMAN. They didn't keep their agreement?

Mr. CURTIS. No.

Mr. BROOKS. May I ask whether you made any attempt to talk to Mr. Allen or me about it recently?

Mr. CURTIS. Well, I don't believe Mr. Allen or you in recent months. I talked to—I am thoroughly disgusted with it, and finally I quit. I have got a decision written by Mr. Leech and decided that he must be a Christian Scientist. In that decision, if you read it, you will see—A. H. and William Brown was present. That was after old Hod had been dead for a year. Mr. Leech had him testify.

The CHAIRMAN. Who? Old Hod?

Mr. CURTIS. Old Hod.

Mr. BROOKS. I would like to make a comment, Mr. Chairman. Whenever any of these fellows have anything—This is an old, old case, and no action has been taken on it; and we would be very, very glad to have them approach us, and discuss the matter with us, and see whether or not we can work something out.

Mr. CURTIS. Well, I wouldn't have agreed to this line if I knew, and I knew, too, in my own mind; I did it against my better judgment. If I had known they were going to turn it over to Royal Woolley I wouldn't have agreed to the line. I wanted Del Hamblin, my neighbor, to have it. I thought he had a right to it and they agreed he did have that right.

Mr. LEECH. When was that agreement made with Mr. Blankenagel?

Mr. CURTIS. Right after this hearing. You sent him out the next day to talk with me.

Mr. LEECH. What did you and he agree to do?

Mr. CURTIS. I would withdraw my claim on the Hod Brown set-up, which consisted of a lease. I never did claim to own it. But my attitude of holding on was causing Delwin to lose out on it. He could have had the C. C. boys put Delwin in a good pipe line and make a set-up for another man to make a living on in the valley, though I don't believe it. They could have tore the Hod Brown springs down to where it had been used, and replaced it with one that was there, only in better condition.

The CHAIRMAN. What finally became of it?

Mr. CURTIS. Well, they give it to Royal Woolley, to all intents and purposes.

The CHAIRMAN. Royal Woolley, is that it?

Mr. CURTIS. Well, that is the company. I don't believe they issued him permits, but it does fall within his area, the company area, this serviced area. If you put a cow out there they would have it trespassed, but he services it from House Rock.

The CHAIRMAN. Who does?

Mr. CURTIS. Royal Woolley and his associates. I believe that is pertaining to the fairness of the thing. That is the reason I wanted to get up here.

Mr. LEECH. May I ask some questions?

The CHAIRMAN. Certainly.

Mr. LEECH. Mr. Curtis, this allotment of yours was set up by agreement. Is that right?

Mr. CURTIS. That is correct.

Mr. LEECH. Did you sign the agreement?

Mr. CURTIS. I signed the agreement.

Mr. LEECH. You were granted an allotment for 25 head?

Mr. CURTIS. No; it was cut down. Originally I had a permit for 50 head, my own base, off and on 1 year to the other. Finally it got down to 12 head.

The CHAIRMAN. How did that reduction come about?

Mr. CURTIS. I don't know. Well, it is kind of a long story to go into. They contended I had no legal waters. Well, when I come in here in '29 I filed on a spring and kept it piped in during those prior-use years. Mr. Page finally succeeded in proving it was a well, and I lost it through a suit with the Commercial Corporation of California, and, of course, that is the water I was using on the place. I had it piped down there and kept it there for 4 years, and during that prior-use period it is the water I had. They contended that I was an outlaw of some kind, had no right to that water. But, as a matter of fact, I did have a permit from the State engineer to put that to use. Simply stopped me from getting the final filing on it and I used it on my own place, piped to my own place.

The CHAIRMAN. Was anybody else using the water during the time you used it?

Mr. CURTIS. Not a soul. Never used it since until the last month. I finally bought those springs and I own them now, 800 acres of patented land up there. The only time in that 20 years that spring was ever used was the time I had it piped down there. I proved that. Mr. Page proved it was a well constructed on the land. That is the way they got possession of it.

The CHAIRMAN. Who?

Mr. CURTIS. The Grand Canyon Cattle Co., represented by Page. Of course, the successor of that outfit is Mr. Woolley here and his company.

The CHAIRMAN. During the time that the Grand Canyon Cattle Co. was in existence, was it?

Mr. CURTIS. Yes; back in 1936.

The CHAIRMAN. Before Woolley and his associates took over?

Mr. CURTIS. Yes.

The CHAIRMAN. All right. Finally you got cut down anyway?

Mr. CURTIS. Yes; I lost my shirt, anyway, when I made this deal. I thought, at least, I would have a neighbor, instead of having Roy there.

The CHAIRMAN. Isn't he a neighbor?

Mr. CURTIS. Yes.

Mr. LEECH. What number of head are you running now?

Mr. CURTIS. Twelve head on the public domain.

Mr. LEECH. That's what you applied for this year?

Mr. CURTIS. I believe it is $12\frac{1}{2}$. It is a 5 or 6 months' period.

Mr. LEECH. You have a license for all the cattle you applied to run?

Mr. CURTIS. What?

Mr. LEECH. You have a license, do you not, for the number that you applied for to run?

Mr. CURTIS. Heck, no; not the last year. Of course, I have done give up since I got the fence around me. You won't find any record where I ever got what I asked for. Of course, the last 2 years I was just asking for the carrying capacity.

Mr. LEECH. How much this year, Mr. Allen?

Mr. ALLEN. Twenty-five head of cattle from May 1 to October 31.

Mr. LEECH. How many were granted him?

Mr. ALLEN. Twenty-five head for the same period.

The CHAIRMAN. What did you start out with?

Mr. CURTIS. I started out, I come in here in 1929 and filed a home-
stead there, filed on this spring, got reservoir, fall of 1929 and early
spring of 1930, and bought a few head of cows, and was adding to
them, running ever since, bought and sold ever since.

The CHAIRMAN. What was the greatest number you had?

Mr. CURTIS. I never varied it a heck of a lot during the prior-use
period, in the neighborhood of 50 head of cows and horses.

The CHAIRMAN. Now you are down to 25?

Mr. CURTIS. Down to 12.

The CHAIRMAN. How about this 25?

Mr. CURTIS. I do have a permit for 50 head on the forest, of course,
with the section of patented land, and feeding operations which can
winter on the forest. That is taken care of by the patented land use.
But this 25 head I get is for just a 6-month period.

The CHAIRMAN. How many do you run altogether on the forest
and the Grazing Service?

Mr. CURTIS. Fifty head, altogether, forest, Grazing Service, pat-
ented lands.

The CHAIRMAN. What other business have you?

Mr. CURTIS. I haven't any.

The CHAIRMAN. Can you make a go of it with 50 head of cattle.

Mr. CURTIS. Well, I think that is one of the things we have got the
boys fighting for, now. What we fought for during the World War,
is the right to try, anyhow.

The CHAIRMAN. That's right. But I would imagine it would take
a pretty hard try.

Mr. CURTIS. Well, if you like it, I think that should be our priv-
ilege.

The CHAIRMAN. That's right; that is all right.

Anything more, Mr. Spence?

Mr. SPENCE. Yes; I have another case here that I would like to cite you.

The CHAIRMAN. All right.

Mr. SPENCE. That is the Jarvis place, Mr. Allen. Have you got the record of the permit allotted, the area allotted to the Jarvis allotment?

Mr. ALLEN. I think I have; yes.

Mr. LEECH. All right, he has it, the Jarvis file.

Mr. SPENCE. What was the allotted number allotted to Mr. Jarvis, in consideration for his improvements?

Mr. BROOKS. What year?

Mr. SPENCE. Starting—he says he didn't bring the records past 1938.

Mr. ALLEN. I have the old file on the Jarvis case.

Mr. SPENCE. What was his permit in 1940?

Mr. ALLEN. I can give it to you from 1936 up. You want 1940. In 1936 nonuse for everything.

Mr. LEECH. And that was Mr. Jarvis?

Mr. ALLEN. Yes, sir. In 1940 he applied for 12 head of cattle from May 1 to December 31.

Mr. SPENCE. What was his allotted area, taking into consideration the improvements, Mr. Allen; is what I asked you?

Mr. ALLEN. At this time, figured on a board estimate, which was 14 head to the section—merely an estimate of the advisory board—it amounted to 203 head.

Mr. SPENCE. And he had an agreement with the Division of Grazing that at the time the water was proven sufficient, he got an additional eight sections, did he not?

Mr. ALLEN. I can't give you the exact details on that old agreement.

Mr. LEECH. Was it a written agreement?

Mr. SPENCE. Yes, it is; and it is of record.

Mr. LEECH. If it is a written agreement, I would like to file a copy of this agreement that Mr. Spence speaks of.

The CHAIRMAN. All right, if you can get it.

What finally became of it?

Mr. SPENCE. After buying that place—it is like all the other waters up in that area, they may go dry, and it has been very dry for the past 2 years, but the first summer I was on there I watered 400 cattle there all summer, which I contended showed there was sufficient water there to water the cattle for the additional eight sections. As it is, you will note here on this Jarvis allotment, the water is here within less than half a mile of the fence. The area that was given to him was all back this way [indicating], and it was not considered a serviced area.

Now, in connection with that, Mr. Allen, I would like to ask you what the permit on the Bonal allotment is, on the adjoining area?

Mr. LEECH. Do you now own the Bonal allotment?

Mr. SPENCE. I own the Jarvis allotment, and was refused the additional eight sections which I supposed at the time I bought the place was laying there to be administered to that water, in case it was proven sufficient to handle it.

Mr. LEECH. And you also own the Bonal?

Mr. SPENCE. I own the Jarvis water, and I bought a third interest on the Bonal allotments; had to settle for four sections.

Mr. LEECH. Do you have an appeal pending on any of these at this time?

Mr. SPENCE. I did not appeal it; no; because the complete rebuff I got from the board when I asked for this additional eight sections, I considered it useless, until some change was taken upon the matter of administration of the Division of Grazing and its advisory board.

The CHAIRMAN. What did the advisory board say to you?

Mr. SPENCE. They turned me down flat in a letter, after I had bought a third interest in this allotment, this Bonal allotment. They straightened out my fence corner there, said there was an additional agreement put on there by Mr. Woolley. I bought Alec Findlay's interest and said that I released all claims, my claim in the Bonal—they call it Goldfish Pond but another water right that Mr. Woolley has up there in Sandpine Pockets, and I asked for that. It was refused me on those grounds, that it was not, that I had signed my rights away when I signed that agreement, that I signed away any right that I had. But at that time it was not supposed to have been a part of the Bonal allotment, nor of the Pine Pocket allotment, either, because that was supposed to be shut up there until the waters were proven sufficient, as I understood it. I was turned down flatly by the board on the ground that, when I accepted this four sections as part of the Bonal allotment—from any settlement on the Bonal allotment they turned me down completely and flatly.

I didn't sign away my rights to the eight sections in——

Mr. ARTHUR WOOLLEY. Do you have a waiver in writing of that?

Mr. SPENCE. Yes, sir.

Mr. ARTHUR WOOLLEY. Have you put it in writing?

Mr. SPENCE. I have.

Mr. ALLEN. Here's a copy of the agreement between you and Alec Findlay.

Mr. SPENCE. This is the grounds that I was turned down on; yes, that's it.

The CHAIRMAN. All right.

Mr. SPENCE. It looks like if on the agreement that I signed that was a part of the Bonal allotment, that the Division was getting a little bit ahead of itself in their issuing this permit to the Bonal allotment, because there hadn't been sufficient time allowed for the various waters to prove there was water there for more cattle.

Mr. ALLEN. Mr. Spence, have you got a copy of that old agreement there that you are speaking of? I can't find it here.

The CHAIRMAN. Is this in reference to the other sections?

Mr. ALLEN. He said the Grazing Service got ahead of themselves there. The reason I said I knew nothing about it, I can't quote verbatim and it is rather indefinite in there, is that it does not state a specific time in which this water of Mr. Jarvis had to be proven, didn't set a closing date on it.

The CHAIRMAN. Who benefited by the transaction, anybody?

Mr. SPENCE. Mr. Woolley.

Mr. ROYAL WOOLLEY. I want to correct you there, owned a very small part——

Mr. SPENCE. You controlled 30 head of it.

Mr. WOOLLEY. No; I didn't.

Mr. SPENCE. I said Mr. Woolley & Co.

Well, we can jump from that, as far as I am concerned, if they will answer the question of what the permit was up until the time Mr. Woolley acquired—Mr. Woolley & Co.—acquired it, and show how the size of it increased after he acquired it, which cut out any further chance of any other allotment being increased.

Mr. ALLEN. You are talking about the Bonal allotment, are you not?

Mr. SPENCE. Yes.

Mr. ALLEN. In the spring of 1939 that was set up as 146 head.

Mr. SPENCE. And in 1941, after Woolley & Co. owned it, what did it rise to? Just the permit for 1941, what was the size of it?

Mr. LEECH. As soon as we find the file we will read all of them.

Mr. ALLEN. The only record I have here, Mr. Woolley had 51 head in the Bonal allotment.

Mr. SPENCE. But the size of the annual allotment——

Mr. ALLEN. I have no record and no way of knowing all of the things you want to bring out.

Mr. SPENCE. That was 160 head, you say, on top, in 1939?

Mr. ALLEN. One hundred and forty-six.

Mr. SPENCE. But you know it was 240 immediately in 1941, after Woolley & Co. acquired it?

Mr. ROYAL B. WOOLLEY. Mr. Chairman, I would like to make some corrections. I have got a better memory than they have got and the record. At the time that was allotted 146, Mr. Bonal owned it. And, on an appeal from Mr. Bonal, under a new code, Mr. Leech came down and made a readjudication which says waters serving an area jointly can be divided equally, and moved the Bonal allotment; and took some off the Jarvis.

The CHAIRMAN. What was the outcome, as regards numbers?

Mr. ALLEN. Two hundred and twenty-nine on the Bonal.

Mr. SPENCE. Today; but in 1940 it was 240, Mr. Allen.

Mr. ROYAL WOOLLEY. On an appeal; after an appeal. Isn't that what your record shows, Mr. Allen?

Mr. ALLEN. Yes.

Mr. ROYAL WOOLLEY. I think I can clear it up, Senator. This Mr. Spence purchased in there. He wanted to straighten out his lines. Well, we had purchased the Bonal from Mr. John Adams and Jennings—Alec Findlay and several of us. Alec Findlay had the lion's share. Mr. Spence came in there and purchased the Adams-Jennings and the Jarvis allotment. He wanted to straighten his fence out, so he made a proposition, "You give me these sections here, and I will buy Alec Findlay out." All right, he bought Alec Findlay out for so much. We got eight sections, and he got four. If that is out-trading him I wouldn't come here and admit it. But that is the fact anyhow. He is free, white, and 21, and if he can't——

Mr. SPENCE. It is not a fact, Mr. Woolley, by golly, you say you got 8 and I got 4. The Bonal allotment calls for 24 sections. You got 20, and I got 4. Now, the map will show it, and the records should show it, on the Division of Grazing. You got 20, and I got 4.

Mr. ARTHUR WOOLLEY. Was it a trade you are kicking about?

Mr. SPENCE. What I am kicking about is being refused on the Jarvis, that additional water; when I proved I had sufficient water, which water was within half a mile of my fence; and I was turned down flat.

MR. ROYAL B. WOOLLEY. I would like to ask Mr. Spence a question on the proving of the water. Now, last year, Mr. Spence, you didn't have sufficient water for your livestock, did you? You had to move out four-hundred-some-odd head.

MR. SPENCE. For 4 days.

MR. WOOLLEY. Where did you come?

MR. SPENCE. Two-mile.

MR. WOOLLEY. Did you have a right there?

MR. SPENCE. I had a right there; yes, sir.

MR. WOOLLEY. Where did you get it?

MR. SPENCE. Mr. Hamblin told me I could come there; and, after Mr. Hamblin told me I could come, later you came to me and told me I could water on Two-mile. But Mr. Hamblin had already told me I could water there—Mr. Hamblin. I got a permit from the Forest Service to run on the Forest Service, those 4 days, and trail the cattle back to Two-mile to water.

MR. ROYAL WOOLLEY. This year the same thing happened, didn't it?

MR. SPENCE. Yes; I watered on Walt Hamblin's allotment.

MR. WOOLLEY. At Two-mile?

MR. SPENCE. Yes, sir.

MR. WOOLLEY. Does that prove the adequacy of your water?

MR. SPENCE. Up until that time, by golly, I was watering 400.

MR. ARTHUR WOOLLEY. How long did you water 400? How many years in succession?

MR. SPENCE. All of the summer, each summer.

MR. ARTHUR WOOLLEY. How many years in succession?

MR. SPENCE. Except for the few days, we were dried out.

MR. ARTHUR WOOLLEY. How many years in succession?

MR. SPENCE. Two years.

MR. ROYAL WOOLLEY. You have been there 5 years altogether?

MR. SPENCE. No, sir; this is 3 years. I was away from that place for 4 days—the grazier over here, Mr. Allen—no; I will take that back, it was Mr. Schoup was there, on two different occasions.

MR. ROYAL WOOLLEY. How long have you been at Sand Hills?

MR. SPENCE. Three summers.

MR. WOOLLEY. Two of which you haven't had enough water.

MR. SPENCE. For 4 days.

MR. WOOLLEY. Driving cattle over your allotment, to privately owned waters.

THE CHAIRMAN. I think we are getting out in a field. I think we had better come back to the corral again, and go on.

MR. LEECH. Mr. Chairman, I take it now, from Mr. Spence's remarks, with reference to the cases that he is endeavoring to establish, that the Grazing Service has been favorable to Board Member Woolley. That is the whole substance of your approach, is it not, Mr. Spence?

MR. SPENCE. Not entirely, Mr. Leech. There are a number of men with the Division of Grazing that I have the utmost respect for.

MR. LEECH. Mr. Allen or Mr. Brooks—

MR. SPENCE. Mr. Allen and Mr. Brooks I haven't anything to say against. But Mr. Blankenagel, who you transferred to New Mexico to get rid of, I claim that he—Mr. Curtis named him very closely a while ago—"Charlie McCarthy," without any Edgar Bergen.

Mr. LEECH. You merely disliked some of his official acts?

Mr. SPENCE. His official acts.

Mr. LEECH. And these cases that we have been talking about; are those his official acts?

Mr. SPENCE. That is part of them.

There is one more that I have to fight yet, that I think is very unfortunate; and what I would like to say is—you are aware of it, Mr. Leech, but do you remember one time, approximately a year and a half ago or 2 years ago, when I was in Salt Lake and Mr. Rutledge and Mr. Molohan, who is in the Army now, and Mr. Kerr and I went to lunch? At that time I presented Mr. Rutledge or one of the three—they were all men in charge of the office in different sections—and I brought you from Major Coker, who is in the armed forces at the present time, an oath showing that a hearing here in St. George that Mr. Blankenagel threatened Mr. Coker that if he cross-questioned him upon the stand that he would see that his client's permit was canceled forever; he would never have a permit upon the forest. That was one of the actions that the people and myself or my attorneys had against this case of Mr. Blankenagel. It was presented to him.

Mr. Blankenagel is still working for the Division of Grazing, as I understand it, and was transferred from this area. I suppose that is one of the men Mrs. Keith referred to a while ago, that the other State is going to have to put up with.

The CHAIRMAN. I want you to correct yourself, if it is to be corrected. You said that Blankenagel stated this party should never have a permit on the forest. You didn't mean that?

Mr. SPENCE. On the Division of Grazing.

Mr. LEECH. Did you say that you brought up to Salt Lake City an oath from Attorney Coker?

Mr. SPENCE. An affidavit, and notarized.

Mr. LEECH. Who did you say you turned that over to—one of those three men?

Mr. SPENCE. One of those three men, while we were at lunch. They were all men of authority in the office; and it was one of those three men that I gave it to.

The CHAIRMAN. Mr. Rutledge?

Mr. SPENCE. Mr. Molohan and Mr. Kerr, too.

Mr. LEECH. I misunderstood Mr. Spence. I thought he said he delivered it to me.

Mr. SPENCE. No; I said you were aware that I was there. I said something of the complaint to you in your office. I said you were aware of the fact that I brought this up here.

Mr. LEECH. I never knew of it—the sworn——

Mr. SPENCE. I gave it to one of those three men, which were at lunch.

The CHAIRMAN. Well, Mr. Blankenagel; he has moved now?

Mr. LEECH. Yes, sir. At the present time he is in New Mexico.

The CHAIRMAN. I see; go on.

Mr. ROYAL B. WOOLLEY. I thought the other side of this faction got rid of him.

The CHAIRMAN. Was there a controversy in a factional dispute over him?

Mr. ROYAL B. WOOLLEY. Well, I understood there was objections from the other group to him.

The CHAIRMAN. Which other group?

Mr. WOOLLEY. The group he is attacking; the cattle company people.

Mr. SPENCE. I never heard that, Mr. Woolley. That is news to me.

The CHAIRMAN. Let's move along, if you please.

Mr. SPENCE. Well, another thing; up to the Bushhead allotment; that is another case.

Mr. LEECH. That is a case I would like to know, if that is now pending on appeal before the Grazing Service.

Mr. ALLEN. No, sir.

Mr. SPENCE. I appealed that; asked the advisory board to give it consideration, or whatever the procedure is.

The CHAIRMAN. What did you ask for?

Mr. SPENCE. Mr. Woolley was on the board, and he is two-thirds owner in Bushhead. I asked for the service area of Bushhead. Bushhead is another one of these waters, like the Jarvis water; it can go dry; only the Bushhead goes completely dry. The Jarvis water never goes completely dry, because it has a small spring feeding it from the bottom.

I asked for the service area of Bushhead.

If you will note here [indicating], this is the dependent water for the Sand Hills, most dependent out there. Here is where the lines come to, from here, against that old established water, and I asked for the service area.

Mr. Williams was sent down here as hearing officer for that case, to hear the case. Mr. Roy Woolley came; and Art Woolley came down here from Salt Lake City to represent Mr. Royal Woolley; and I came to town prepared, with my witnesses; thinking we were going to have a hearing. And in a criminal attorney's manner, the case was argued until 4 or 5 o'clock; and the hearings officer never did take one bit of testimony from each side.

They said it was because they knew there would be too much controversy. Well, the Division of Grazing, with the grazier going out there considerably; it looks like they could have shed a direct light upon the actual condition of this water, or his right for more area. It was argued until 5 o'clock. This hearings officer refused to take any of the testimony.

The CHAIRMAN. Who was the hearings officer?

Mr. SPENCE. Mr. Williams. And I finally conceded, gave up this rather large area, here, six or seven or eight sections. They gave me about two and a half or three sections, over here; losing about four sections to them.

The CHAIRMAN. To whom?

Mr. SPENCE. To Mr. Woolley, and Hamblin, his brother-in-law and partner, I thought there was no other way out, because they refused to take the testimony, under the circumstances.

Mr. LEECH. Mr. Chairman, may I inquire?

The CHAIRMAN. Certainly.

Mr. LEECH. Mr. Spence, you filed an appeal, and it was set for hearing on March 6, 1942. Is that a fact?

Mr. SPENCE. On what?

Mr. LEECH. March 6, 1942.

The CHAIRMAN. Hearing on appeal.

Mr. SPENCE. I had an attorney on that, at the time.

Mr. LEECH. You were represented by O. M. Trask?

Mr. SPENCE. That's right; substituting for Elmer Coker, who was in the Army.

Mr. ROYAL WOOLLEY. He was a lawyer.

Mr. LEECH. That resulted in you men meeting here, and having a pre-hearing conference, and going over the various facts. Mr. Brooks was there, Mr. Blankenagel, Mr. Glenn Hamblin, Mr. Royal B. Woolley, A. T. Spence, and Howard Smith.

Mr. SPENCE. Yes.

Mr. LEECH. And O. M. Trask.

Mr. SPENCE. Yes.

Mr. LEECH. It resulted in an agreement, signed by all of you, on March 6, 1942; and, in connection with Mr. Spence's statement, Mr. Chairman, I would like to file a copy of that, with the committee.

(The agreement is as follows:)

IN THE MATTER OF THE APPEAL OF GLEN HAMBLIN AND ROYAL B. WOOLLEY FROM THE ACTION OF THE REGIONAL GRAZIER IN ARIZONA GRAZING DISTRICT NO. 1 (ARIZONA STRIP DISTRICT)

AGREEMENT

The above matter was set for hearing in accordance with the provisions of section 9 of the Federal Range Code before an examiner of the Grazing Service at Fredonia, Ariz., March 6, 1942, at 10 a. m., at which time and place the appellants appeared in person and were represented by Attorney Arthur Woolley of Ogden, Utah. The Grazing Service was represented by L. R. Brooks, regional grazier and Emil C. Blankenagel, district grazier. Also appeared as an intervener, A. T. Spence in person, represented by Attorneys Ozell M. Trask and Howard J. Smith, of Phoenix, Ariz.

The question in issue, as found by informal discussion by and between the parties in interest and representatives of the Grazing Service, is the matter of establishing a permanent and mutually agreeable range division line between the Bushhead allotment of the appellants and the allotment of A. T. Spence. This matter is a continuation of a controversy between Adams and Jennings whose properties have been purchased by A. T. Spence and Royal B. Woolley and Glen Hamblin, which matter was set for hearing at Kanab, Utah, April 21, 1939, as shown by a stipulation entered into at that time between the parties in interest and which later failed of its purpose in the establishing of an allotment division line.

It is now agreed between the appellants and the intervener that conceding the proper adjudication of grazing privileges from the waters used as base properties by the parties in interest that the proper and permanent division line between their allotments shall be established and is described as follows:

Beginning at a point on the south rim of the Paria Canyon immediately south of the north quarter corner of sec. 9, T. 41 N., R. 6 E., thence due south a distance of approximately $6\frac{3}{4}$ miles to a point a short distance east of the north quarter corner of sec. 16, T. 40 N., R. 6 E.; thence east along the section line to the northeast corner of said section 16; thence southeast through sections 15, 23, and 25 to a prominent point on the north ledge of the Vermillion Cliffs which point is located in the NW $\frac{1}{4}$ sec. 25, T. 40 N., R. 6 E.

It is the mutual desire of both parties that this line be fenced and in view of accomplishing this purpose the district grazier agrees to flag this line as closely as possible to the line described with due regard to taking advantage of topographic features of the terrain and to secure the shortest and most practical fence line.

It is further agreed that the allotments of the appellants and the intervener will be adjusted in accordance with this agreement and licenses issued accordingly as of July 1, 1942.

In view of this agreement the appellants hereby withdraw their now pending appeal. Dated at Fredonia, Ariz., the 6th day of March 1942.

Luster R. Brooks, E. C. Blankenagel, Perry T. Williams (examiner),
Glen Hamblin, Royal B. Woolley, Arthur Woolley, A. J. Spence,
O. M. Trask, Howard J. Smith.

Mr. SPENCE. Mr. Leech, there is no denial that I signed an agreement at 5 o'clock that afternoon, after I was argued down to where I didn't have resistance enough to stand up. By golly, as I told you, criminal attorney procedure had been taken; and not one bit of evidence was accepted by the hearings officer.

Mr. LEECH. Well, that was a conference that you men were holding before the hearing, to determine whether or not you could come to an agreement, wasn't it?

Mr. SPENCE. I asked numerous times, of Mr. Williams, if he was not going to hear our testimony.

Mr. ROYAL WOOLLEY. Have you the transcript of the proceedings at that hearing?

Mr. LEECH. No; I only have a copy of an agreement, Mr. Woolley.

Mr. SPENCE. Were there any proceedings made of record?

Mr. ARTHUR WOOLLEY. I don't remember making a speech on that occasion.

The CHAIRMAN. If you didn't, it was an off occasion. Something was wrong about it.

Mr. SPENCE. They argued from 9:30 in the morning until 5 o'clock in the afternoon.

Mr. ARTHUR WOOLLEY. You certainly put up an argument. You argued with the lawyer; and I never could figure out which one of you fellows was the most bull-headed. I thought, at the time, it was the irresistible force meeting the immovable object. There were you two great big fellows, and as bullheaded a looking pair as I have ever seen. It took all day, trying to argue you both down; and you tried to argue my brother; and finally you compromised on a 50-50 basis. That 50-50 has settled more lawsuits than any other rule; hasn't it, Senator?

The CHAIRMAN. I don't know.

Mr. SPENCE. Well, along with the district grazier, you finally got your argument. He put up as much of an argument as you did.

The CHAIRMAN. Well, all right. What was the outcome of that?

Mr. SPENCE. That was the outcome of it, Senator. It looked like there was no alternative, except to weaken and give him that additional area. As the hearings officer wouldn't hear it, I just give up.

The CHAIRMAN. Who did it give it to?

Mr. SPENCE. Woolley and Hamblin.

Mr. ROYAL WOOLLEY. The essence of that agreement was they would fence between—

Mr. SPENCE. It has been absolutely a year from that date; and the Division of Grazing has not fenced it.

Mr. ROYAL WOOLLEY. We are trying to get them to fence it.

Mr. SPENCE. So am I.

Mr. ROYAL WOOLLEY. We want it fenced, so we won't be bothered with you.

Mr. SPENCE. So am I.

The CHAIRMAN. Well, we've got you both bothering the Division of Grazing now.

Mr. BROOKS. Mr. Chairman, I am happy to report, in connection with this, that fence is under consideration for this fall. However, we have to go through W. P. B. in Washington to get approval on various things.

Mr. LEECH. Are we building the fence, or these two licensees?

The CHAIRMAN. The Division of Grazing promised to build the fence?

Mr. SPENCE. Wasn't that the same thing that you were trying to do last spring, a year ago, Mr. Brooks; trying to get a permit from the War Department to construct the fence?

Mr. BROOKS. That is a long story; several different delays there.

The CHAIRMAN. I have very grave doubts that you will get a priority to use war essential material, especially barbed wire.

Mr. SPENCE. As far as I am concerned, I will furnish half of it, if they will do it.

The CHAIRMAN. It is not a question of furnishing it. You can't get the permit. It is very doubtful if you can get the priority.

Is there anything more on this?

Mr. ROY WOOLLEY. I think I am entitled to say a word in defense of the charges brought. It seems to me, from the evidence, it is not a case of favoritism, but of a man being outraded. And I'd shut up about a bad trade.

The CHAIRMAN. I have some ideas on that.

Mr. ROYAL WOOLLEY. Maybe I shouldn't have said it. I'll retract it.

The CHAIRMAN. I think you had better. I think that can be stricken from the record. I wouldn't say it if I were you.

I don't think it is the part of the Division of Grazing to permit a man to be outraded if he is trying to make a living on the open public domain.

Mr. SPENCE. Advised by an advisory board.

The CHAIRMAN. He should see to it that the man gets a fair break, in all justice and fair play. That is all the comment I have on that. I don't think it is a question of trading; it is a question of fair play.

Mr. ARTHUR WOOLLEY. I wonder if the record might show how many total cattle Mr. Spence is permitted in the area?

Mr. SPENCE. I have bought permits and rights for approximately 1,600 head of cattle, including those four sections here. The Adams-Jennings permit allotted and rated 1,365 cattle; Jarvis, 203—never got the allotment on the four sections from Bonal; and I judge it would be at least 40 head—1,600 head this year. Without even any action, the Division of Grazing mailed me a 10-year permit for 1,173. That is what I have got to show for over 1,600 head of cattle, my reduction. I bought and paid for it, and I haven't got it.

Mr. LEECH. Do we have the record on Mr. Spence?

Mr. ALLEN. Yes.

Mr. LEECH. How many does he run?

Mr. ALLEN. It's hard to determine, when a person represents carrying capacity of the range when it is solid; but in our records, up here, the original record shows that Mr. Spence had a carrying capacity for 1,255 head of cattle, yearlong. That is the original record in our files.

The CHAIRMAN. How many has he a permit for?

Mr. ALLEN. We issued a term permit for 1,172 head of cattle.

Mr. LEECH. That is all the cattle he had?

Mr. ALLEN. That is what the permit reads for. He has never filed a license yet.

Mr. ARTHUR WOOLLEY. Never what?

Mr. ALLEN. Never completely filed the permitted number yet.

The CHAIRMAN. How many cattle are you running, the total?

Mr. SPENCE. I haven't got my permit filed, not even 1,172, because the range is in drought this year. The Division of Grazing has suggested it advisable to keep it light. I thought so myself, consequently it has been kept light. I didn't like to have my prior rating reduced down to this number, when a 10-year permit is issued. I brought that to the attention of Mr. Blankenagel, and I think I mentioned it to you, didn't I, Mr. Allen?

Mr. ALLEN. How's that?

Mr. SPENCE. Didn't I mention to you why the 10-year permit was only listed at 1,172?

Mr. ALLEN. You questioned us on that.

The CHAIRMAN. He claimed he was entitled to 1,600. I don't think it is for the committee to go into that. I think you have to charge that to administration.

Is there anything further?

Mr. SPENCE. That is all I have. I asked for that permit, but that was it.

The CHAIRMAN. Anyone else want to be heard on this line?

STATEMENT OF GEORGE MACE, KANAB, UTAH

Mr. MACE. Well, I have a ranch right here, right on the line, straddling the line.

The CHAIRMAN. What line?

Mr. MACE. The Arizona-Utah line. I was given an allotment 7 years ago, for eighteen 40's; lay on it, adjoining my ranch, between me and Dan Judd. I got Mr. Shoup and one of the officials, Anderson, I think was the young man's name. They came there together, to go over the boundaries. We located them; and finally I fenced on those boundaries, and Dan Judd protested with my fence. Mr. Blankenagel came out to settle this difficulty, looked over the situation; and he said that there was a number of 40's lay inside of Milt Cram's fences, where he had filed on homestead, and that, some cause or other, they had not granted him the full homestead. There was seven 40's, I think, that had been rejected, or had never been set aside, as grazing ground, by the division of grazing.

Well, to settle the thing, he asked if I would accept those 40's, instead of Milt's place, and let Dan have the extra three 40's that he claimed should come in his allotment. Before it, prior to this, the allotment amounted to eighteen 40's; that is, cutting off what was under the point of the hill, up here, about 100 acres. I think I told them, if I could have—if there was vacant 40's, to the amount they claimed them in there—I could have the whole thing, I would accept that, and let Dan have that which was under the point of the hill, adjoining his place.

Well, I don't know under whose instruction it was all carried on, but my fences were removed, and the partition fence put on the line that we settled on, between Dan and I; and another fence was built, to provide a pass for Dan's cattle in between these two buttes, that you see right here [indicating], north of us, about three-quarters of a mile of fence. The C. C. C.'s built the fence. I don't know who furnished

the material. Afterward, I went and talked to Milt Cram, and he said there was only four 40's there, rejected, because they were not set aside as grazing ground; and that he had a lawyer working on it, to get that included in his application. These four 40's, as fenced, have been designated as grazing ground.

The Division of Grazing sent me a map of the condition there. But they cut several of these 40's in two, over here, where I was to join Milt; and I raised a question on it. I would not sign until it established the line there, the survey lines. But it went on for a year, I guess a little over, and during that time the C. C. C.'s built this spring fence, across here. It was on this ground that it had been rejected. The four 40's had been rejected on account of not being set aside for grazing ground.

Well, it took me quite a period of time. I didn't get to contact Blankenagel on the proposition, but there was a man came out here from Arizona, and I talked to him, there, on the street, in Kanab, about it. He said they were going to get it fixed up. Well, the way they fixed it, finally, they notified me that Mr. Cram was entitled to all the ground inside of his fences. Of course, that left that spring fence along this ground. It was an obstruction to the passage of cattle; and the fact that they built the fence in such a way, against the hills, on this side, it was an obstruction to the passing of any cattle.

If I had got the ground over there, which they give Dan, the full width of this valley; but the fence still remains. Now, I understood Mr. Blankenagel to say it would take an act of Congress to move that fence. Now, there is still a 40, laying, that they allotted to me afterward, laying inside of Dan's fences, that would have to be fenced on three sides, in order to throw it in with my allotment.

The CHAIRMAN. What do you know about this?

Mr. MACE. I want to get the privilege of moving that fence over; fencing my land here myself.

Mr. ALLEN. Mr. Mace is talking about two entirely different pieces of ground, a mile and a half apart, separated by the highway, up here.

Now, in regards to the portion of the east side, in Milton Cram's area, that was the place where I was accused of discriminating against Mr. Cram. We went out there, and it has been the policy of the Grazing Service, that where a man has made application for a homestead, and, due to the passage of the Taylor Grazing Act, his homestead—that land being classified prior to 1934, and he has had his land—we have gone ahead and recognized him as having exercised control over the land under his fences, even though he doesn't get the full 640 acres. In this case, Mr. Cram got a portion of his land. The rest of it was still under the fence. It was fenced on the west, the south, and the east side, by Mr. Cram's; and on the north by the Chocolate Rim, which you can view from the doorway here.

In inspecting the entire area, with the district grazier, with the recommendation of the advisory board—they recommended, there, that Mr. Cram should have the small area he always had had under his fence, and had exercised control of, since he had made his application for homestead, and on this west portion of ground, over here. That is quite a controversial subject, between Mr. Mace and Dan Judd. That is one of those places where you can get 30 people to swear that

you are a liar, and 40 people to uphold you. It is just one of those things, back and forth, and as to that, Mr. Judd here can speak for himself, if you so desire.

Mr. MACE. I would like to say this: I have been on that place up there ever since 1908. I lived there, and milked cows, and fought the Indian reserve and everybody else and finally got a title to 640 acres. During that time I was running my cattle in this vicinity, here. They was other fellows came in and took up homesteads and gradually surrounded me until there wasn't much land left. But I raised around 75 to 100 tons of forage there and I have a permit, I have water to water about 5,000 head of cattle on my place, Kanab Creek, and a couple of springs besides.

The CHAIRMAN. How many cattle are you running?

Mr. MACE. A hundred head permit. On the summer grazing, up in district 4, 75 head; and this allotment on this, back here.

The CHAIRMAN. Is there any chance to move any of that water up to the Kaibab?

Mr. MACE. Well, I moved some of the stock out there, once in a while. That condition—I have used that range there before Dan Judd or any of these other fellows had a cow on it, and the other fellow got the consideration. I have got "squoze" down to a couple of sections of brush ground on the gravel surface. It takes more than we can ever get in this country to make grass. That's about the size of it.

The CHAIRMAN. Is this matter still under consideration?

Mr. LEECH. Senator, it is not clear to me whether Mr. Mace is talking about a grazing license or permits, or whether he is talking about an agricultural homestead entry.

The CHAIRMAN. He is talking about moving a fence.

Mr. MACE. Haven't got any allotment fenced. That spring fence there built by the C. C. C. is an obstruction.

Mr. LEECH. Is the fence, however, on an area you were trying to homestead?

Mr. MACE. Wasn't trying to homestead; that fence, that wasn't on my homestead. I was trying to find out if it was possible to get to move that fence. My allotment, that is partly in Dan Judd's.

Mr. ALLEN. The particular piece of fence you required to move in there, Mr. Mace, the Senator has told you materials are extremely difficult and hard to get, and the material has been difficult to get in, taking care of our work.

The CHAIRMAN. Isn't this fence now on the ground?

Mr. ALLEN. Yes. This fence he is speaking of has been constructed.

Mr. MACE. On the ground allotted to me at one time.

Mr. ALLEN. It is no longer in his allotment. The fence, as it was built at that time, was supposedly on a range division line between Mace and Mr. Judd. But the land was allotted to Milton Cram.

Mr. MACE. After they promised it to me, they took it back and gave it to Milt.

Mr. ALLEN. Agreed to split up another man's property.

Mr. ARTHUR WOOLLEY. It is a surplus fence you intend to move some place else. Mr. Cram wants to move it down.

Mr. ALLEN. We have four applications down here at Fredonia to move that for us.

Mr. MACE. I think I've got the priority on that, because it was put there to separate Dan and I; put there for my benefit. I think I've got the first right to it.

Mr. ALLEN. I think we claim the first right, Mr. Mace.

Mr. MACE. Well, if you consider that justice, that's all right.

The CHAIRMAN. I don't know how to decide it. You fellows are on the ground here, and you know more about it. It looks to me like it is an individual case. I tried to listen to it, to see if I could do anything—

Mr. BROOKS. I will be glad to look into this, and if there is any injustice, in any way, we'll take care of it.

The CHAIRMAN. I wish you would.

Mr. MACE. The upshot of it, I got left out. Dan and Milt got the fence and land, and I am just out.

The CHAIRMAN. The land proposition came in under a homestead; isn't that right?

Mr. ALLEN. It was land that had been applied for, but could not be proven up.

Mr. MACE. Vacant ground; at the time we made the agreement.

The CHAIRMAN. I wish you would give further consideration; go into it and see what can be done.

Does anybody else want to be heard?

STATEMENT OF AJAX MORONI, ST. GEORGE, UTAH

Mr. MORONI. I am going to start out with Pipe Valley, about 25 miles out here. In 1930, I came out there and homesteaded, filed a stock-grazing claim, and my intention was to raise cattle. That is the reason I filed that stock-grazing claim, and my father, adjoining the section that I filed on, filed a stock-grazing claim also; and we developed water on my father's place—a well. The well is out in the vicinity, on top—what I mean by on top, there is a low valley, and then there is a high plateau up there and, on top, there was no water developed up there. We developed some water in this place in 1932; the latter part of 1932.

Well, we had no cattle. The depression came at that time, and we didn't have any cattle when we first developed the water. But we leased our place to Mr. Brinkenhoff, a sheepman. I don't know just exactly how long it was leased to him, but it was leased. I think he used it 2 years, and it was also leased to Ben Sorenson, that run cattle out there at that time. He isn't out there now. We applied for a permit, and used the priority for priority rights—the grazing that Mr. Brinkenhoff and other people had done, from that water out there. We were allowed, at one time, 25 head permit, nongrazing permit; see? I had a few head of cattle, but I had 2 sections of land to graze them on. I always figured it would be better for me to graze inside, on the 2 sections, and not use—we let the 25 head nongrazing permit ride, and figured somebody else around there could use it better. Not as well as we could, but it would help somebody else, as long as I had just a few head and could graze there on the 2 sections.

Well, later on, I got enough cattle that I could see that I had to have more outside land. I have tried to get a 25-head permit. I have tried for more. I applied, I think, several times, for 100

head, 50 head—I made several applications for enough cattle that a man can make a living. You can't make a living on a handful of cattle. We never have got on that water. We have never got but a 12-head permit; and a 12-head permit is not enough for anyone. Their argument, the Board's argument, is that we haven't had any priority right.

Well, there are several others. I don't name these here homesteads, because I don't aim to put a slam in against anybody. But I have to name two of them, but not for a slam. One homestead up there, I know all about. I drilled one water well on it and picked a location for the other water well, and I know all about that. The water well that claims a priority was drilled after 1934, and the one that never did amount to much, I drilled that myself, I drilled that in 1933.

The CHAIRMAN. Please get to your point. I think we have the background. What is your complaint?

Mr. MORONI. I want enough land out there to make a living on.

The CHAIRMAN. You want grazing rights to make a living on?

Mr. MORONI. This section, I feel—my father has the one on the next property, and I expect to buy the other, as soon as it is broken. I can't make a living on the 12-head permit, though I own 123, and one-fourth interest in my father's estate. I have three and three-fourths sections of land that I own.

The CHAIRMAN. How much water?

Mr. MORONI. I have plenty of water, and I maintain—

The CHAIRMAN. Who else is running in there?

Mr. MORONI. Lee Esplin and Tom Jensen; and I maintain I went out there—

The CHAIRMAN. Wait just a minute. How is this situation?

Mr. LEECH. Mr. Chairman, on this case we had an appeal from this man, and it was set for hearing, as I understand it, and he did not appear at the hearing. Now we have told him that we will look further into the matter, and the Grazing Service is prepared to make a full examination of it, and, if possible, to do something for him.

Mr. MORONI. May I explain why I didn't appear? I came in here on March 6, wasn't it, 1942. I came in to appeal, and I sat there all day. I am hard of hearing. They argued a half day, up until 9 o'clock, one night. I thought we was having a trial.

The CHAIRMAN. What were you having?

Mr. MORONI. We were having a pow-wow. I thought it was a trial. I was dumbfounded after we had all the talk. They talked like Mr. Spence said—he probably talked his head off, and I did, too—and, come to find out, it was a useless pow-wow. It wasn't a trial I had come in to on that date. That was supposed to be the day. They asked me to come in, and I figured my trial was going to take place. I was told, that night, at 9 or 10 o'clock, that it was too late to continue with the trial now, since I wanted one.

I says "Well, I have to go home." I was in town, here, with another party. Mr. Lee Esplin was also in at the time, and he was going back in the country where I live, and I asked Mr. Esplin if I could go back out with him. I went back out with him, and I was going to come in with him, the next morning, to the trial, but it was raining and

storming like it is now, and the roads was pretty bad, and Mr. Esplin had some cattle to take care of; so I got into town in time to see the bunch leaving. I was supposed to have a man up there, to take care of our interests. This man had one-fourth interest in that estate, and he could have took care of it as well as me. Either one of us could have took care of it.

The CHAIRMAN. Well, you are still going to have a chance.

Mr. MORONI. The reason I didn't appeal it, like Mr. Spence said, I have tried for years out here to get something, and all I ever been is told I haven't any rights. I have got a right to make a living. I've spent more money developing water out there than any one individual in this section.

Mr. LEECH. The day they were discussing the case, I believe they were trying to determine what the issues were they were going to a hearing on. We would be glad to look into it fully, Senator.

Mr. MORONI. I would certainly like it looked into. I think when a man goes out there, like we have—not only myself, but dozens of them—out into this country, and developed it, and put more water out there, and the big cattlemen put out there, and we are out to have a living. You can't live on a 12-head permit.

The CHAIRMAN. Well, the Grazing Service say they are going to hear this matter, and I take it they will hear it. I am going to request that they make a thorough investigation and hearing on it.

Mr. MORONI. Thank you.

The CHAIRMAN. Is Mr. Roy Bundy, from Mt. Trumbull, present? Will you please come forward?

STATEMENT OF ROY BUNDY, MT. TRUMBULL, ARIZ.

Mr. BUNDY. I pretty well represent the community where I come from. I have got it wrote down, so I don't get rattled, and forget some of it. I think I can speak loud enough so the lady will hear me. She'll get it.

I am not—I did not understand from your letter I have in my pocket, here, just what was coming up here. I understand your S. 31 to mean you wanted to enlarge the advisory board's power. I will read this, or give it to you, and then I will tell you why I don't think we should have it enlarged.

Before you enlarge the power of the local board, in our districts, better inform them that there is a section 3 of the Taylor bill that states that local residents, settlers, and owners of land and waters, who have been using the range in the past, are given preference, by the terms of the act, and use of land within such districts: District advisory conference, Salt Lake City, Utah, January 13, 14, 1936, page 26, F. R. Carpenter said, once and for all, land and water.

Page 59, December 9, 10, and 11, 1935, Mr. Carpenter answered a question of Mr. Findlay's, "How can you give the owner of water priority over land owners?"

Mr. Carpenter said, "You cannot."

Now, gentlemen, take my word for it, investigate, and see if all the fences that are put up by the Grazing Department are not for the interests of some member of said board, or has-been members; and it is to their advantage not to have the fence, because they are getting the

feed of the other fellow, which is the case over our way, which another member put it in the local paper, he has 30 miles of fence.

Board members come first in this grazing district. How does it come about?

The CHAIRMAN. What is the number of your grazing district?

Mr. BUNDY. Nos. 1 and 2.

The CHAIRMAN. What section of the strip does it cover?

Mr. BUNDY. This west part; on the rim, and off of the rim.

How does it come first in this grazing district? How does it come that they got all the rating on the public water reserve, when circular No. 1028, regulations relative to the use of land in withdrawn public water reserves, any citizen, or nation of citizens of the United States, or any corporation, duly created, in existence under and by virtue of the laws of the States of the United States, who may desire to improve the productiveness of any water hole or sources of water within the boundaries of public water reserves, or construct such waters from their source within the reserve to a point or place more convenient for public use, may file in the office of the registrar of the United States land district, within which the reservation is situated, an application for permission to use the reserved land or conduct the water over or through the same.

How does it come, I say, Board members get it all and can run it in a sink hole, to keep the others from watering there, which the Arizona State laws make it a misdemeanor for anyone wasting water or trying to keep another from getting it?

Now, I would like to throw a stone at the grazing bill, while I am at it.

The CHAIRMAN. At the bill?

Mr. BUNDY. At the bill.

Grazing bill, section 7, allows for 320 acres of homestead. How is it going to be proven that it is more valuable for agriculture, if he is not going to be allowed to go on it and is stepping on a board member's toes by doing so? We ask for an investigation into the thing, together, the livestockmen and the inspector for the sanitary board of Arizona. They should be able to tell you how much stock such and such a fellow has, since the beginning of this act, and their ages and acres, and how many they have shipped out. You will see who is getting the grass and how many they have permits for on your records. It will tell you.

July 11, 1936, a letter, signed by C. F. Dierking, with license and receipt in, says:

You will be confined to a 5-mile radius around your water, and will not graze within 3 miles of water held by others, except where there is a conflict, and then the case will be divided equally.

Investigate, I say, and see if that is being done to that community over our way.

Senator, the statement you said about the committee, this morning, to investigate the park, the forest up here; we would like to have that committee.

In a letter dated December 30, 1936, signed by John Ray Piker, the letter says:

Federal range has been allotted to you. Failure to provide water for your stock within the allotment, or to keep your stock within the allotment lines, will result in the cancelation of this license.

I would like to say to the regional grazier over there, Is that the policy still?

Mr. BROOKS. What is that question again, please?

Mr. BUNDY. Divide the land half way between to keep within our own allotment, and where there is a conflict divide the line half way between?

Mr. BROOKS. You both have equal water and equal rights, yes; and the land is capable of being covered by livestock equally.

Mr. LEECH. I believe you are referring to section 2-L of the Federal Range Code, where it says that in conflicting areas we will divide it equally between the areas in conflict. Carrying capacity for the area in conflict would be divided between the two waters.

Mr. BUNDY. Mr. Brooks, I want to ask Mr. Brooks if he was over to my place. I have met this man for the first time the other day. Do you know whether or not the line that you said we would try and put through, the fence line, is half way between or not?

Mr. BROOKS. No; I don't know.

Mr. BUNDY. Do you, Mr. Allen?

Mr. ALLEN. I don't know just where your base property is. Is it closer to your base property than it is to the person to whom you refer?

Mr. BUNDY. Well, you were out there, the other day, when we had a plan out there to try to get assigned lines. We have been in the grazing business here now for about 9 years, and they have been getting the graze. You will have to admit that, won't you, Mr. Allen, on my allotment, on my brother James' allotment, my brother Chester's allotment?

Mr. ALLEN. Well, you can't control cattle in Arizona without a legal fence, and I don't believe your allotments are fenced. They are in common, at the present time.

Mr. BUNDY. We asked for a fence a long time back on an investigation into it.

Mr. BROOKS. We have promised that. We will go into that as soon as we can. It is only a mile and a half of fence, and I think we can get that done.

Mr. BUNDY. But all this time that this is being put off members of the advisory board are feeding the feed in our allotment.

The CHAIRMAN. Let me hear that. All this time this is being put off members of the advisory board are getting the feed? Or did you say "fees"?

Mr. BUNDY. The feed that we should have around that community.

The CHAIRMAN. Who are the members of your advisory board?

Mr. BUNDY. They may be ex-members, I don't know; pretty near like the other fellow, pretty near got disgusted, coming in to try to get an adjudication or justice at all.

The CHAIRMAN. Do you know the members of the advisory board?

Mr. BUNDY. Yes; I know the member on the board gets feed, Mr. Jack Findlay and the Schmutz brothers.

Mr. JOSHUA A. CROSBY, Mount Trumbull, Ariz. I would ask Mr. Allen to explain the legal fence that he is controlled. There is an allotment adjoining onto Mr. Bundy and my allotment on the north, just through the fence, the division, and for the past 5 years there hasn't been 30 days in what is called Fern Esplin's Reservoir, controls 17 sections—

Mr. BUNDY. Nineteen.

Mr. CROSBY. Go down onto sheep allotments, and what are you going to do? Mr. Bundy leased the waters, his water, a year ago, and you call for 7 head to the section. If they was 17 head, there was a thousand, on Mr. Bundy and my allotment. Then the rain came, and they moved their cattle from down under No. 2, and by the time they got them there this water, this particular water, was dry, and they were turned loose and went down onto the sheep allotment, 1942; and Mr. Findlay, between 12 and 1 o'clock at night, come and woke me up and wanted to water his horse.

What are going to do about it?

Mr. ALLEN. Would you make your question clearer, Mr. Crosby?

Mr. CROSBY. What?

Mr. ALLEN. Would you make your question clearer, please?

Mr. CROSBY. You say you have a legal, lawful fence in order to control it. Then if Mr. Findlay has a right to move his cattle over on this allotment, and they drift over into these other sheep allotments, coming down Lang's Run; what more right has Mr. Findlay got than anybody else?

Mr. ALLEN. Are you interested in the Fern Pond allotment?

Mr. CROSBY. No; but I am adjoining it; but I was interested in the allotment adjoining Mr. Bundy's, which was overstocked, and they had their allotment in that, and there was enough to cover twice over, or full. I went to market, and they still got an over—

Mr. ALLEN. Don't you think, Mr. Crosby, it is a question of time until those allotments are fenced, and that you have that under control?

Mr. CROSBY. Probably so.

Mr. BUNDY. It's been 9 years.

Mr. CROSBY. But when you was here 2 weeks ago, Mr. Allen, you told me that you and Mr. Brooks would come up and see me personally and contact me, to give me a license to run cattle; and today you tell me that probably you will be out on the 20th of next month; and the cattle are perishing. What is a man going to do with it? Are you going to give it to Mr. Schmutz and Findlay?

Mr. LEECH. Do you have a license now, Mr. Crosby?

Mr. CROSBY. I applied for a license, and it was rejected on the grounds that I did not have water. The reason, the simple reason that I don't get water is that I applied to the S. C. S., the water-facilities, 4 years ago, applying to take care of my Taylor Grazing in a community allotment, a community set-up, in connection with Nixon Spring, Little Spring and Big Spring, which is mentioned in the withdrawal in 1916, signed over on community. I signed it over and, for the simple reason that I leased it in 1939 to W. A. Kent, Mr. Blankenagel informed me that it is canceled. It takes two to make a contract, and how are you going to break it, if Mr. Blankenagel tells me it is canceled, and I haven't got it. Therefore, I haven't got a license.

Mr. ALLEN. You have an appeal pending, haven't you?

Mr. CROSBY. I applied for an appeal, and it was posted in St. George, Utah, on the 17th day of April, to meet here in Fredonia on the 27th day. At Mount Trumbull I received it on the 5th of May. Then I asked for an appeal, and Mr. Allen simply ignored my legal

counsel, and later on he made an application that he would later notify me, which he has not; and I contacted him. He said that he could go over the advisory board's head and give me a license. I have water today, and Mr. Findlay and Mr. Schmutz' cattle are watering; therefore, I haven't got any license.

Mr. BROOKS. Mr. Crosby, as I understand, you have filed an appeal. Your case is now pending, and it hasn't yet been settled?

Mr. CROSBY. Yes, sir.

Mr. BROOKS. We are having one of our men in the regional office accompany Mr. Allen—

Mr. CROSBY. He informed me 2 weeks ago he would meet me.

Mr. BROOKS. We are having Mr. Allen and one of the men in the regional office investigate the four appeals now pending and see whether or not they can be worked out amicably or satisfactorily before a date is placed for a hearing. If those appeals, including yours, cannot be worked out satisfactorily, then you will be given an opportunity to appear at a hearing and put your evidence in the record, and the hearings examiner will make the decision. We are going to come out to your place personally.

Mr. CROSBY. I would like to meet you.

The CHAIRMAN. All right. That will be carried out?

Mr. LEECH, Yes, sir, Senator.

Mr. BUNDY. I want to check this here; scratch it a little. I am glad to hear you say what you said, that the Taylor bill was made for the little fellow. I am wondering how the range code got in there, to put land or water, so the board can perpetuate themselves into office, and whatever they had, the biggest part of that they made the ruling in our district on this water.

Mr. LEECH, you know I have got a stone to throw at you.

Mr. LEECH. All right, Mr. Bundy.

The CHAIRMAN. He is all battered up from this afternoon. You'd better have a heart.

Mr. BUNDY. He knows how much heart he has for me.

I asked you to put in public waters—if I gave it to you, you would do it for me—didn't I?

Mr. LEECH. Yes.

Mr. BUNDY. But you didn't do it. You sent it back to me, did you not?

Mr. LEECH. Which one is that, Mr. Bundy?

Mr. BUNDY. You told us at the hearing that my papers, we wanted to file, I would take them.

Mr. LEECH. Yes, sir.

Mr. BUNDY. I gave you this very number, 1026, on the public water, but you returned it to me without filing it; without carrying it on up.

Mr. LEECH. I returned all of the papers that you gave me for your records; didn't keep them in the file. I made copies of them.

Mr. BUNDY. You made copies, thank you. That is better. I won't hit you quite so hard.

As I said before, this thing has gone about long enough. I believe that right will win out. I didn't think I would ever get a chance at that man, but I knew this local board business would finally come to a hearing, where we might get what the law said that we should have. I say again, investigate it, gentlemen, investigate it, and see whether we have got 5 miles from our holdings.

We asked for an allotment, for a community allotment, give us 5 miles or 6 miles on each side. We own, over there, nearly a township. Did we get it? I bought a section of land, and they painted it in; painted one grazing to match it; and it stayed painted on the books for a long while. I asked them one day—thought they would give me a hearing on that; and, first, Painter rubbed out the paint, before my eyes, and turned me down, while others has got it over there, on their land. I cannot cry as much for an allotment. They gave me—they have cut me down from what they gave me at first, but I wouldn't cry now if the other fellow wasn't getting the feed all the time. I have got my stock on my own patented and leased land today because the other fellow has got his on my range allotment.

As I tell you, this has gone on from year to year. I can bring you plenty of letters from Mr. Painter, from Mr. Dierking; they are going to do something; but we haven't got it done yet. For 9 years, the other fellow gets the feed.

I don't want to forget I want to throw that stone at Mr. Leech over there. Mr. Leech, in 1939, the first time I met you, at an election meeting in St. George; that was it, was it not?

Mr. LEECH. I believe so, Mr. Bundy.

Mr. BUNDY. You told me—I told you about this fence they were going to build in there, that Mr. Crosby here spoke about. Only put that 3 miles; my reservoir, on leased lands. They gave the section down there that belonged to Fern Esplin, a nonresident, 19 sections. Why? Because the grazing board expected to buy it. That was a nonresident.

Now, I can bring you plenty of it. And I asked you at that time about it, and you told me that if they put it in the wrong place they would move it, did you not?

Mr. LEECH. That's right.

Mr. BUNDY. I had occasion to go—since that time I had occasion to go to town. Coming back, I ran into Mr. Brooks. The next day or two he was surveying that fence. That fence went in, and it is there today to bar us. Helped the rest of the cattle, coming 8 miles from their water onto that allotment; no by the Grazing Department's estimate of the carrying capacity of my 11 sections, or 12, but by the feed being tramped out while we wait.

Mr. LEECH. I still say, Mr. Bundy, if the fence is in the wrong place, and if it is established that it is in the wrong place, I will see that we do move it.

Mr. BUNDY. Thank you. But this is the thing I have got against you; we drug along for a year and a half or 2 years, before we got our decision back. I was kind of ignorant about it, knowing the way the hearing would be like. But there was nothing done at that hearing, was there, accomplished; nothing accomplished by it?

Mr. LEECH. Which appeal are you referring to?

Mr. BUNDY. My case.

Mr. LEECH. Is that the one, in 1940, Roy Bundy and Charles H. Esplin?

Mr. BUNDY. That is where you put it, but I objected on all those lines up there. That fence line was the particular one.

Mr. LEECH. I mean he was the intervenor in your appeal, wasn't he—Mr. Esplin?

Mr. BUNDY. Esplin, the fellow you had.

Mr. LEECH. Is that the one we had in 1940?

Mr. BUNDY. Yes, sir.

Mr. LEECH. And what did you say about the decision not reaching you? Didn't you get a decision out of this hearing, within a few days?

Mr. BUNDY. No.

Mr. LEECH. I know I had to write up to you again a time or two to find out. It was finally carried up to the Secretary of the Interior, and he sustained the hearing. It was appealed on the investigation and the examiner's decision was sustained, if I remember right.

Mr. BUNDY. All right. This is the thing I have got against you, and I have got against the other grazing board; this old cripple has time enough to make a living, without being rawhided. When a man takes a man to law, and when you find there is no foundation under him, to come back at him, or anything; why, I call that rawhiding. You had no jurisdiction over the withdrawal of the Boulder Dam recreation withdrawal, where this hearing was had on Esplin, where they are running the water down into the sand pits.

Mr. LEECH. At the time we held the hearing, if we did not have jurisdiction over the area, we certainly thought we did, Mr. Bundy, or we would not have been holding a hearing concerning any part of it.

Mr. BUNDY. I have a letter stating that the Department knew it in 1936, whether you knew it or not; but you should.

Mr. LEECH. Who is the letter from?

Mr. BUNDY. It came around to Carl Hayden, up there, I think, and back to me.

Mr. LEECH. Well, that is an area that, if we issued a license or permit on at the time we thought we were administering it. If that hearing concerned lands within that recreational area, we thought we were administering at that time, Mr. Bundy, or, I swear, we wouldn't have assumed jurisdiction over it.

Mr. BUNDY. I think you were collecting the fees on it right along, like Mr. Waring testified here this morning; collected the fees on it. We are down there in that withdrawal, and that is where the Esplin thing was heard; not on my allotment up here where the fence was, that I spoke to you about; and I asked to have it on all of it.

Now, I would like to get into the Park Service a little, or that recreation man. Isn't he here?

The CHAIRMAN. That is he, right over there.

Mr. BUNDY. He was on this here gazing proposition, that sounds kind of prejudiced to us. There is a map there; Mr. Rose prepared it. I heard them say—you heard me read these letters, and I would like to have you take a look at that Lomereoux and Esplin—I don't know what you call it—driveway, or what not, down there. That goes 10 miles from that recreation line, Boulder Dam withdrawal, or whatever you want to call it. Their water is still up here another 3 miles. This driveway around there, that is anywhere from a half to a mile wide, and it goes over this Tuweep Monument, against the fence there, for two and a half or three sections of land.

If we are going to stay—you read right down there and see; they are following this grazing department's recommendations. Here is a letter from Mr. Hayden.

The CHAIRMAN. While we are on this subject, before we close it—yesterday morning, with reference to a joint meeting or understanding, in that recreational area down here, as to the grazing permitted on it under the Grazing Service—have you gentleman had an opportunity to confer since you have been here?

Mr. LEECH. We are going to do that in Phoenix, when Mr. Rose arrives.

Mr. TILLOTSON. I phoned Mr. Rose this noon, and asked him to be at Phoenix. We will have all of the grazing files for that purpose.

The CHAIRMAN. I think maybe we will be able to work something out of it. I think you have shot enough rocks here, haven't you, Mr. Bundy?

Mr. BUNDY. No; I want to shoot another here, on farming on these communities out here in these districts that is supposed to have, by your Grazing Act, preference, according to it.

In a situation there, we have seven sections. How does the Secretary of the Interior know when to classify that grazing preference of grazing land, or agricultural, without somebody goes on there and demonstrates it? We have got men present here that has been threatened to be taken off; and we have got produce, and plenty, out there, to show you that it will produce; and we would like to have you take and see it.

The CHAIRMAN. Let me say, Mr. Leech, I may have to cut through some lines here, because we are approaching a late hour, and we have to conclude this hearing tonight. But, I say, I want to give you grazing gentlemen, and also the Land Office, just a general statement that has come to the chairman of the committee during the time that I have been here, and that is a very bitter complaint with reference to the denial of homesteads.

In other words, where men have attempted to take up homesteads, they say that no homestead is allowed; and that a very cursory examination, and, in fact, an unworthy examination—I use that expression myself—is made; and that the homestead proposition is merely out. Nobody seems to be able to file a successful homestead, notwithstanding the fact that the land, in many instances, will produce.

Now, that is quite a general complaint. I want to leave it with you. I think it would be very much worth your while to look at it pretty carefully.

Mr. LEECH. We'll do that, Senator.

The CHAIRMAN. I want to say further that I say this on my own individual responsibility. The Taylor Grazing Act did put an impediment in the way of homesteading. In other words, it required another investigation, and another examination, and another agency, to pass on the authority necessary for the homestead entry; but, in my judgment, the time is approaching very rapidly when homesteads will be more sought after, and more to be encouraged than they have been in the past.

I think the time is not so far distant when we will be able to make more use of subterranean waters, and other means of homestead purposes. The time is coming when the little fellow is going to have to

raise enough to sustain himself and his family. The world is getting more congested all the time. The time for the fellow to raise the things that he needs is approaching; so I make mention of that, hoping that I may enlist your sympathetic thought on matters of homesteading.

I think, where land will sustain human activity and human life, under ordinary circumstances, it should be looked upon with favor.

Mr. BUNDY. Thank you.

The CHAIRMAN. That is the thought I have in the matter. I mention that because the complaint has come to me, right along.

Mr. CROSBY. Just one thing for Mr. Allen. Mr. Marshall, an ex-serviceman, has applied as a homestead, pending, and his horses—he has worked horses a-running on the range.

The CHAIRMAN. Where is he now?

Mr. CROSBY. He is supposed to be a-grazing on my allotment. I wish Mr. Allen would not trespass him until there is a decision, whether I have got a grazing right or not. Mr. Schmutz informed me, when I went to vote, that I was a trespasser. Mr. Painter gives me a permit for 143 head, and the permit was canceled; community set-up, and it has been canceled; and, in a meeting, I would like to know how a contract can be broken? I have not received only just the information from Mr. Blankenagel and Mr. Allen, that it is canceled.

The CHAIRMAN. Mr. Crosby, I want to say to you, frankly, as we go along toward the end of the day, that you are speaking very much in generalities. I am sorry to say that, because—

Mr. CROSBY. I will get legal counsel.

The CHAIRMAN. You don't need legal counsel, at all. I think I grasp your subject. I tried to cut through all the red tape and get at the point. That is the reason I made the statement to Mr. Leech that I did. I thought I would be of assistance to you.

I am happy that you brought this subject to our attention. I understand there is an ex-serviceman who has attempted to establish a homestead in good faith. I understand that this is one of the few places in the world where he can live, by reason of the fact that in the First World War he was gassed. I understand his wife is not in good health, that they can both live here in this altitude and locality, if they can be permitted to work out an existence by their own efforts, through a homestead. I don't know the name of the gentleman.

Mr. CROSBY. Robert B. Marshall.

Mr. HAVELL. Mr. Chairman, may I say that case has been before the Department of the Interior twice, and it has been denied, on classification. Nevertheless, I have taken responsibility this morning to ask one of our agents to go and look at the land and see if any injustice is done; and see if there is anything that can be done. It has enlisted our sympathy.

The CHAIRMAN. Thank you very much.

Mr. CROSBY. I wish he wouldn't trespass his horses.

The CHAIRMAN. All right, that is the story.

Now, gentlemen, I regret—I don't know whether you get tired or not, but I am getting a little tired, and we have got to come to an end. Before we go any further, is there anything of serious moment that you would like to present?

STATEMENT OF SENATOR JAMES E. BABBITT, FLAGSTAFF, ARIZ.

Mr. BABBITT. Mr. Chairman, I would like to say just a few words.

We had brought out at this meeting that the Grand Canyon National Monument extends back beyond the rim. The Park Service, Mr. Tillotson, said they had no objection to cutting that back to the rim, which would increase the grazing in that area. Now, then, as far as these people from Fredonia are concerned in this park area, if it could be cut back here to say, within 2 miles of the rim, this would solve every objection that these people have made in regard to their grazing. They would have enough cattle to put on that area to make a fair living, and I am sure that the Division of Grazing would properly handle the forests and the grass.

Now, the same thing applies to the Wupatki National Monument. If they could put it back to where it was, instead of making an antelope range out of it, which they intend to do; that the State has already set aside, that would help us a lot.

Those are the three points I wanted to get before the committee. Then there is a peculiar situation in this district here. The forest office for the Kaibab Forest, all of which is in Arizona, is in Kanab, Utah. We feel that since the forest is in Arizona, the district office should be in Fredonia here. We feel the same way about the Division of Grazing office for this area. All of that land is in Arizona, but the Division of Grazing office is at St. George, Utah. We feel that should be in Arizona.

The CHAIRMAN. All right. Thank you.

Mr. ARTHUR WOOLLEY. Reference has been made, if the Senator please, to certain documents and reports which ought to be inserted in the records. I have the telegram of Roy B. Woolley referred to, addressed to the President of the United States, dated January 4, 1941. I would like to file a copy if I may.

Here is the letter to Senator Smoot from Mr. Albright of January 7, 1933.

The CHAIRMAN. On what subject is that?

Mr. WOOLLEY. With respect to the withdrawal for the Hoover Dam reclamation. It would not affect grazing.

Here is the report of the Kaibab investigating committee, June 8 to 15, 1931, of which the conclusion was read. If the chairman would like to have the whole report, I have copies which I will furnish.

On August 31, 1931, at the request of Governor Hunt, of Arizona, a report was made upon this area, particularly the Kaibab, and these withdrawals, by two gentlemen, one representing the Governor of Utah and the other the Governor of Arizona. It contains a great deal of information and informative discussion. If the committee would like it, I will leave it with you.

In this connection, Roy B. Woolley wrote to Senator Smoot under date of July 19, 1930, a letter which contains a great deal of information concerning the deer situation, and I beg leave to submit it.

The CHAIRMAN. All right.

(The documents referred to Mr. Woolley were placed on file with the committee, and accompany the original transcript of this record.)

Mr. WOOLLEY. I want to thank you very much for your courtesy and fine attention.

Mr. BABBITT. For the purpose of the record, could I also state that only two members from Arizona are on this advisory board covering this grazing district?

The CHAIRMAN. All right.

Now, sir, what is your trouble?

STATEMENT OF EARL PRESLEY, SHORT CREEK, ARIZ.

Mr. PRESLEY. My name is Earl Presley, and I am a homesteader. I have been out running stock out there since 1926. I went out there and squatted a homestead to see if I could make a living by farming.

Before I went into the ground I found I could raise pretty good crops, although the cattle kept—

The CHAIRMAN. Did you have any water?

Mr. PRESLEY. Yes, sir; I built a pond, one of the first things I did, and I built one 2 years later. I built another pond.

Mr. BROOKS. I think we have a record of this, Senator.

The CHAIRMAN. I would like to have you go into this.

Mr. BROOKS. He was out to see Mr. Presley last week. I am sure we can straighten it out.

Mr. PRESLEY. If you please, I would like to bring to your attention how many head of cattle are allowed to graze on the section out there.

Mr. ALLEN. That varies, according to the type of vegetation on the ground.

Mr. PRESLEY. Didn't you say up here, before the Taylor Grazing representative, Mr. Williams—didn't you tell him it is eight head to the section there?

Mr. ALLEN. I might have made that statement there. I would have to refer to the record on our surveys on that.

Mr. PRESLEY. That has been the understanding all through there, eight head to the section in that locality.

Mr. ALLEN. That country is not uniform in there. The vegetation varies, and the type of vegetation determines how many cows per section it will run.

Mr. PRESLEY. Yet you told Mr. Williams up there you could run eight head to the section. That was the allotment at that meeting up there.

The CHAIRMAN. All right, what about it?

Mr. PRESLEY. I have been calling for a little bit more grazing rights. I built two ponds there to water my stock. Of course, at times they still go dry in a drought. Other ponds there that have not serviced the range as much as either one of my two ponds are drawing from 16 to 19 sections. One especially, a sinkhole pond, that hasn't had water in it for years, wouldn't hold water when it does go in any longer than the holes in the wash; not as long and it is drawing 19 sections rating.

When they mapped that water through that part of the country, these fellows come in, Mr. Brooks, I believe Mr. Blankenagel, Mr. Parker, and Mr. Lawrence. That country was strange to them; they didn't know where there was a water hole there, and they wanted to map it out.

I went with them and showed them the ponds and showed them the nearest sections and stated my water. In fact, not only that, but another pond there that we had used for a number of years prior to

the Taylor Grazing, and also a well we dug in clay holes and used that during drought. We got no consideration on those whatever. That was given to other parties.

All right. This one pond that was built by the same spring that my pond was built up around—I run 5 miles above—they don't hold water. But as long as mine does, it draws 16 sections rating right down within half a mile of my pond. That is their line. I had three 40's on section 12. That wasn't surveyed, but I supposed because it is big, they give it both sides right there in the field.

The first pond I built is on that three 40's of about—probably 40 acres. That line there—in giving them the 16 sections on that, run that line, come right down there and cut off my three 40's of my section 12. I never was recognized. Their cattle run all over the block in there and they ate my crop and drank my water, and I never been recognized on it by the Taylor Grazing.

The CHAIRMAN. Has this matter been tried out?

Mr. LEECH. It will be fully gone into if it hasn't already, Senator.

The CHAIRMAN. Has this matter been looked into, and has there been a determination on it?

Mr. ALLEN. On the damage that was done?

The CHAIRMAN. No; the question of whether or not he has his rights?

Mr. ALLEN. Yes, sir. We have an appeal on that. They had an agreement on that rather than go to appeal. Since that time, he has filed another protest and he was denied for additional range on that. He did not post any type of appeal on that. I discussed the whole matter with them this last week out there, and tried to explain it. Whether he understands it yet or not, I don't know.

Mr. PRESLEY. How about this man that came out to me and mapped that water; went there and seen the improvements I done there; how I cleaned out there. Those are natural black rock pockets, one or two; one above where the stock can't get in and down below where the stock does go. I kept that cleaned during the years prior to the Taylor Grazing, and used that for our stock; the pond above the pockets. The other pond we used that for culinary purposes for years. We got no consideration on that whatever. They just ignored it. But this headman that mapped that water, Mr. Morrow, said, "Who did all these improvements here?" I said, "My neighbor and I." He said, "Anybody else do any improvements?" I said, "Never, as long as I have been around this pond."

He said, "That gives you prior right to this pond. We will map this to you."

Two years later I saw that the C. C. Lieutenant was up there looking for water to improve, and he marked that to E. Presley. But I never have been—I have been ignored. It has been allotted to others, the clay-hole wells that we dug. After we got it dug it was a flowing well.

Mr. LEECH. We will be glad to look into it.

The CHAIRMAN. I wish you would go into this again.

Mr. PRESLEY. Here's what I want to bring up to you: I have only been allowed 1 section and three-fourths, and yet I am paying a grazing permit on 28 head of horses, equal to 28 head—18 head of horses and 50 goats.

The CHAIRMAN. I have asked the Grazing Service to go into this whole matter. It would be impossible for this committee, or me, to

determine the matter. The Grazing Service is willing to go into it and give it every possible consideration.

Mr. PRESLEY. The Grazing Service will not give us justice out there whatever. I have been years and years trying to get a little bit more grazing allotment, and all I ever asked for is 5 sections right around my place. It would be handiest for me right on my own water.

The CHAIRMAN. Who has the sections; anybody?

Mr. PRESLEY. Right to my very line, there is a corral on one side, Mr. Findlay and Jensen. On the other side, and I believe Pace and Prince on the other side.

The CHAIRMAN. Well, it is impossible for me to sit here and determine it. All I can do is refer it to the Grazing Service.

Mr. ANDY MATSON (Flagstaff, Ariz.). I understand it will be possible to file a brief with this committee. I have a brief that I would like to file, in regard to the extent of the injury to the taxpayers in regard to the withdrawals of these lands.

The CHAIRMAN. I will be very glad to have it; yes, in deed.

We have got to come to an end. The committee wishes to thank all those who have attended this hearing, and wishes to express the interest shown in the subject matter of this hearing.

(The hearing adjourned at 6:55 p. m.)

ADMINISTRATION AND USE OF PUBLIC LANDS

FRIDAY, SEPTEMBER 3, 1943

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON
PUBLIC LANDS AND SURVEYS,
Phoenix, Ariz.

The committee convened, pursuant to call, at 10 a. m. in the ballroom of the Westward-Ho Hotel, Phoenix, Ariz.

Present: Senator Pat McCarran, Nevada, chairman.

Also present: E. S. Haskell, chief investigator.

The CHAIRMAN. The Committee on Public Lands and Surveys of the United States Senate, having appointed a subcommittee to investigate matters pertaining to the acquisition and administration of public lands in the United States has called this meeting pursuant to the request of many of the citizens of Arizona. I regret to say that due to other very important engagements no other member of the subcommittee is able to attend this meeting here today. We had very much hoped that Senator McFarland and Senator Hayden of Arizona would sit with us during these hearings. Senator Hayden has been called away hurriedly and will return tonight and be with us tomorrow. We hope that Senator McFarland will be able to join us.

All of the proceedings of the hearings are reported in detail. The report is transcribed and then printed, so that everyone who attends the meeting, or those who desire copies of the report, will receive the printed copy. There will be passed among you now, at the opening of the meeting, cards for you to sign your name and your address and what, if any, organization you represent, or what, if any, official position you hold, or any other matter that will identify you in the meeting.

(The list of persons registered is as follows:)

LIST OF PERSONS REGISTERED AT PHOENIX HEARINGS

N. J. Anderson, associate range examiner, United States Grazing Service, Phoenix, Ariz.	Mrs. Ed Bowman, Coolidge Dam, Ariz.
Ramon Aso, 2023 North Eleventh Avenue, Phoenix, Ariz.	L. E. Bowman, Coolidge Dam, Ariz.
John G. Babbitt, 215 North Park Street, Flagstaff, Ariz.	Everett Bowman, Route 1, Box 451-A, Tempe, Ariz.
George A. Ballam, field engineer, Department Mineral Resources, Box 495, Tucson, Ariz.	Bill Boyle, Route 5, Box 258, Phoenix, Ariz.
Curtis A. Bell, High Haven Ranch, Sonolita, Ariz.	Thomas F. Britt, register, United States district land office, Phoenix, Ariz.
Stephen L. Bixby, Gila County Cattle Growers Association, Globe, Ariz.	L. R. Brooks, regional grazier, United States Grazing Service, 504 Heard Building, Phoenix, Ariz.
Henry G. Boice, 75 Primorosa, Tucson, Ariz.	William A. Brophy, special attorney for the Pueblo Indians, 806 First National Bank Building, Albuquerque, N. Mex.
	Eather Brown, Eagar, Ariz.
	S. C. Brown, Eagar, Ariz.

LIST OF PERSONS REGISTERED AT PHOENIX HEARINGS—Continued

- Moris Bunge, Poston, Ariz.
 J. M. Cartwright, Arizona Cattle Growers Association, 140 South Central, Phoenix, Ariz.
 Eugene Campbell, Ash Fork, Ariz.
 La Moine B. Christiansen, field examiner, General Land Office, Branch of Field Examination, Albuquerque, N. Mex.
 Bert J. Colter, Springerville, Ariz.
 James P. Converse, Post Office Box 1831, Tucson, Ariz.
 J. S. Cupal, director, Department of Mineral Resources, 413 Home Builders Building, Phoenix, Ariz.
 George E. Crosby, Greer, Ariz.
 John O. Crow, superintendent, Truxton Canyon Indian Agency, Valentine, Ariz.
 Catherine Cundiff, assistant secretary, Arizona Cattle Growers Association, 140 South Central, Phoenix, Ariz.
 Milton Curtis, St. David, Cochise County, Ariz.
 L. Walter Davis, Western Farm Management Co., 309 Security Building, Phoenix, Ariz.
 W. J. Davis, McNeal, Ariz.
 Albert M. Day, Assistant Director, United States Fish and Wildlife Service, United States Department of the Interior, Chicago, Ill.
 C. F. Dierking, regional grazier, United States Grazing Service, Reno, Nev.
 F. Roy Dobson, Chandler, Ariz.
 Dale E. Doty, Office of the Secretary, Department of the Interior, Washington, D. C.
 Clyde Douglas, Morristown, Ariz.
 Jerome O. Eddy, box 111, Prescott, Ariz.
 Mrs. Jerome Eddy, Diamond and Half Ranch, Prescott, Ariz.
 H. B. Embach, 204 Home Builders Building, Phoenix, Ariz.
 R. Earl Evans, route 2, Glendale, Ariz.
 R. B. Ewing, forest supervisor, Apache National Forest, Springerville, Ariz.
 Norman Fain, State senator, care of Jerome route, Prescott, Ariz.
 Frederic Finter, care of Arizona Stockman, 216 Home Builders Building, Phoenix, Ariz.
 Larkin Fitch, route 1, box 256, Mesa, Ariz.
 Evan L. Flory (regional chief, soil and moisture operations), Indian Service, 607 Goodrich Building, Phoenix, Ariz.
 John C. Gatlin, regional director, United States Fish and Wildlife Service, Department of the Interior, Chicago, Ill.
 C. H. Gensler, Colorado River Indian Agency, Parker, Ariz.
 B. H. Gibbs, attorney at law, 302 Home Builders Building, Phoenix, Ariz.
 Levi Grantham, Young route, Globe, Ariz.
 R. S. Hamblin, Eagar, Ariz.
 Ed Horrell, box 543, Globe, Ariz.
 Hugh Harvey, forester, United States Indian Service, 614 Goodrich Building, Phoenix, Ariz.
 Thomas C. Havell, General Land Office, Washington, D. C.
 Roy Hays, Kirkland, Ariz.
 Mrs. Roy Hays, Kirkland, Ariz.
 Beulah L. Head, superintendent, Sells Indian Agency, Sells, Ariz.
 Sterling Hebbard, 30 East Adams Street, Phoenix, Ariz.
 C. E. Hellbusch, 1006 West Roosevelt, Phoenix, Ariz.
 E. O. Hemenway, land commissioner, Santa Fe Railway Co., Albuquerque, N. Mex.
 Douglas E. Henriques, field examiner, General Land Office, Branch of Field Examination, 355 Federal Building, Salt Lake City, 10, Utah.
 Barney R. Hodgins, engineer, Soil and Moisture Division, Indian Service, Goodrich Building, Phoenix, Ariz.
 Charles T. Hohenthal, field examiner, General Land Office, Branch of Field Examination, 355 Federal Building, Salt Lake City, 10, Utah.
 John P. Hunt, Fairbank, Ariz.
 J. L. Hylton, district grazier, United States Grazing Service, Kingman, Ariz.

 Library and Archives, State House,
 Phoenix, Ariz.
 P. V. Woodhead, assistant regional
 forester, United States Forest Ser-
 vice, Albuquerque, N. Mex.
 W. B. Young, Kirkland, Ariz.

The CHAIRMAN. We have assigned 2 days to this meeting. We must leave here Sunday morning for Albuquerque, N. Mex. We will utilize every hour possible during the 2 days, and will work late, if necessary, in order that everyone who desires to be heard, on any subject pertaining to the regulation of the open public domain or to any other matter within the authority vested in this committee, may be heard.

At a hearing, just concluded, on the Arizona strip, so called, which was exceedingly well attended, the hours were not long enough and the days were too few, but we tried to cover the subjects brought before us. We'll do the same here now.

Let me say that there is one matter that has aroused some public attention, known as Senate bill 1152, which has to do with the conservation of wildlife on the open public domain. If, during the course of these hearings, there is anyone, or any group, who desires to be heard with reference to S. 1152, arrangements will be made so that they may be heard.

Mr. Williams, of the land department of the State of Arizona, is with us and has been designated to lead off on matters pertaining to this hearing. We will now hear from Mr. Williams on the subjects he sees fit to discuss.

As each one comes forward before the committee, or as you stand in the audience to ask questions, you will assist us very much if you will kindly announce your name and your address and what, if any, official position you occupy, and what subject you wish to discuss.

I want to say to all of you here now that this is an informal hearing. We realize that stockmen, ranchers, and those whose business keeps them largely out in the open, are not accustomed to speaking in groups or crowds. We realize that in all probability if we were to go out to your home, you would sit down with us and tell us your story, but to arise in a crowd or group, you will find some difficulty. We hope that you will dispel that difficulty, that you will regard the whole matter as though you were in your own back yard and that you will speak frankly and candidly and in such language as you see fit, providing the reporter can take it down. So be at ease in all of these hearings, be informal, and tell us your story, because that is what we want to hear.

Mr. Williams, will you proceed?

**STATEMENT OF O. C. WILLIAMS, STATE LAND COMMISSIONER,
PHOENIX, ARIZ.**

Mr. WILLIAMS. Thank you Senator. I am O. C. Williams, the land commissioner for the State of Arizona.

It may not be out of place as lead-off man in this hearing to say that having been with the Senator in Fredonia we found him to be very understanding. He is a western man, and he talks western English, and understands it, and he means what he says about wanting people to be at ease. He has been very fair in all the hearings.

I think the first thing that Arizona is interested in—

The CHAIRMAN. Just one moment; do those in the rear of the room hear Mr. Williams now?

FROM THE FLOOR. Not very well.

The CHAIRMAN. Very well, Mr. Williams, if you will try to make yourself heard—it may be some strain, but I wish you would because the object is for everyone here to hear you.

Mr. WILLIAMS. I believe our greatest concern in Arizona, and possibly in this part of the West, is the withdrawals by Presidential proclamation. I think that threat, which is an unseen enemy, which we cannot fight, is a very bad thing; and that we could settle down to a more stable condition in the livestock industry in Arizona if that threat were eliminated. Therefore, we support and urge the passage of a bill now before the Congress, which would take from the President the authority to withdraw land by proclamation. We feel safer in the hands of Congress because we feel that we have representation there and that we can at least have a hearing.

We feel also that there should be a review of the public land agencies with a view of reducing the acreages to the necessity for which these agencies were established. This would be national parks, monuments, and even the national forest. We believe that the parks and monuments should be reduced to the object for which they were created, and the other lands should be turned over to the Forest or Grazing Division or to the public domain, in order that those lands may be utilized to the best advantage.

We believe that on the forests there should be liberalized grazing, of course, under proper supervision, and that all the forage thereon should be used for the production, not only of beef, mutton, and wool, but also to create a national revenue and wealth for State, county, and school districts that are hard pressed for finances with which to maintain their respective governments.

We believe that so far as the forests are concerned they are established primarily for the care and handling of timber, and the forests have done a very splendid job on this. We commend them; and we will support them. However, we believe that the forest limits should be rolled back to the tall timber, and, outside of that it should be turned over to the grazing districts which are also doing a splendid job, and that the grazing business outside the grazing districts should go back into public domain.

From a State viewpoint, and that of the livestock industry, we believe that there should be a liberalization of exchanges in grazing districts. We should have the privilege of using a base for one district for exchange in another district. We also believe that there should be very definite changes in our laws as regards mining and the livestock industry. We find there is no tie between the legitimate miner and the legitimate stock raiser. But we do find there is an interloper who can come in, and, under the guise of a 20-acre placer claim or lode claim, set himself up in the cattle business in the middle of an established unit to the detriment of one who uses the range, provides the water, and has protected the grazing until it is an inducement for someone to come in and live off the other man's legitimate operation.

We also feel that we should have a cancelation of all Indian allotments outside of established Indian reservations. This is quite a serious thing, in some parts of the State where extensions have been created. The promise was held out in those counties, when this was being agitated, that if this extension was allowed, the Indians would

be kept on that reservation without further extension, and that they would not be mixed up with the white men outside of those reservation lines. I understand this may take some special law in Congress to bring this about, as these are individual allotments, and they are administered differently than the reservation as a whole. But we would like to see this brought about.

We are also confronted with some reclamation projects where withdrawals have been put on certain lands, and later withdrawn, and lands taken up under the State or by homesteads, and later under withdrawals clamped on until these titles are so mixed up that we are unable to straighten out with the limited legal talent the titles and abstract titles in the State. We might send to Philadelphia and get someone to do it. We would like to get it straightened out and cleared up.

I think possibly the most important thing before us now is the return of the railroad lands, under the Transportation Act of 1940. This is my main subject, and I want to go into detail on that. Our Senator who is with us, from Nevada, has introduced Senate bill 978 to return these lands to the States. H. R. 838 was introduced in the House as a similar bill, and passed the House last year, and was tied up in committee, and did not pass or get into the Senate. Immediately with the convening of the new Congress, a similar bill, 978, was introduced again. This bill would return to the Federal agencies all railroad lands that fell within their exterior boundaries. We feel that this is taking taxable values from the counties and from the States, that we so badly need to maintain our institutions. Many of these lands, in fact the majority, were not on the tax roll, but we feel that they should have been, and we feel at least that it is potential wealth that is getting away. If this bill of the Senator's, with one amendment, that would better fit our State and other States, was passed, it would not interfere in any way with the administration of any Federal agency, because any lands falling within any such agency's exterior boundaries would be used as base which would be selected from the public domain outside. These lands would then produce revenue for the State and State institutions, thus relieving the tax burden by direct levies in the counties and in the school districts of this State.

The CHAIRMAN. While we are on that subject, I am very glad that you are discussing more or less in detail those particular bills. There are many things involved in those bills. There is the question of withdrawal from the State at the present time of such revenue as flows to the State by their being taxed in the name of the present owners, the railroad companies. Then there is the question of whether or not, if these lands are returned, whether they should be returned to the Federal domain, and thus pass under the jurisdiction of respective agencies, or whether, by returning them to the respective States for specific purposes, or to return them to the respective States for general purposes. The thought of the author of the Senate bill was that they could well be returned to the States for specific purposes. The instant that I cited was for school purpose. In other words, they would return to be a base for school support. It strikes me that that would relieve the taxpayer, to a large extent, of a burden that he must meet from year to year. He must maintain his schools, and it con-

stitutes quite a burden. It might be a relief to him in other ways. That bill, any one of these bills, should be the subject of careful study by those who know the land subjects; and the author of the Senate bill, who happens to be here today, would welcome constructive criticism and suggested amendments, so that the very best might be worked out.

Thank you, Mr. Williams, I am sorry for the interruption, but I thought it might be well worth while.

MR. WILLIAMS. I am glad to get that. That is why I had offered an amendment, which I think had reached the Senator by way of our Senators in Washington. The Senator's bill provides that the revenue of these lands would go entirely for educational purposes. Our proposed amendment which would fit the conditions in Arizona is that the legislature should state the purpose for which these lands shall be used. Now, this is brought about because of one of the biggest subjects that has been before Arizona since statehood, and that is our "L" grant, or railroad bond lands. I don't think that I shall burden the record or you listeners with the full history of this, but I will state the facts that in the late nineties a narrow-gage railway was proposed to be built from Tucson to Prescott. It later developed that this was a swindle from the very beginning. They never intended to build a railroad, but they did induce the counties to bond themselves to the amount of some six hundred thousand dollars for the building of this railroad. These bonds were issued in good faith, and they were good bonds. However, this group who were promoting this railroad connived to exchange worthless bonds, which they themselves issued, for these other bonds. When the bubble burst the counties had worthless bonds for the railroad guaranteeing construction, and the promoters had the good and legal county bonds, and they were in the hands of innocent third parties. As a result this case went to the Supreme Court of the United States, and we beat the bondholders on their illegitimate swindle, or deal, in proposing to build this railroad. However, at the time of statehood or prior thereto this was taken up by the Congress of the United States, and the State of Arizona was saddled with these bonds and, under the direction of Congress, was to pay those off.

The Congress, realizing that they had at least a moral obligation, then said, "We will give you lands or a land grant of \$1,000,000 with which to pay these bonds."

During the years of litigation and the years before the State could make selection and get set up in the handling of this land, the sale thereof, or rents to pay off these bonds, the interest ran up to more than the principal. The counties, feeling that they had unloaded this responsibility, since it was placed upon the State, refused to levy any more to pay them off. However, the courts came back and said that the counties had not unloaded this responsibility, but they must carry on until the State could pay these off. As a result, these \$600,000 in bonds, through accruing interest, now amount to over \$1,300,000. The rentals of this land will not pay it off, nor would the sale of the lands that were possible now liquidate this obligation put upon us by Congress.

We find ourselves in this further peculiar position: During this time the livestock units have been definitely established, and they have been

fed, water provided, and other improvements necessary to the carrying on of livestock units. Now if these lands were forced to sale, it would mean the ruination of our livestock industry, because they would have one of two paths to follow, either force the operators to buy all these lands, which they could not do, because it would break any operator if he was forced to purchase all these lands; the other path is, if they were forced on the market and he could not buy, then they would be thrown open to the general public, and they, buying the lands within the stockman's unit, would ruin him. So, either way we go, they would completely ruin the livestock industry of the State of Arizona.

We have, therefore, undertaken the passage of a law that would give us an additional grant of lands to meet this payment, through the rentals that would accrue to the State. We could ask our Senators to prepare such a law for passage, and Senator Hayden had a bill ready to present when the Railroad Transportation Act of 1940 came into the picture prominently. We immediately asked that these railroad lands be returned to the State, and under the amendment to the Senator's bill, that we be permitted to use so much of these lands as was necessary to add to our "L" grant lands, and through that the rentals pay off these bonds which were saddled upon the State of Arizona. This is the reason for our proposed amendment to the bill, and the major reason that we need these railroad lands, as well as meeting additional revenues to the State.

Now, then, to add to this picture and make it a little more clear, I have here figures prepared by the Federal departments, and I'm sure they are the most nearly accurate of any we have had, which show that Federal holdings in Arizona are now 74 percent of the total acreages of the State, this excluding the new acquisitions for Army purposes, which is rather heavy in itself. In other words, the small balance that we have is the only taxable property with which we carry on the institutions in the State of Arizona. This is very critical. We have in this State the second largest county in the United States. In that county, 8 percent of the land is State or privately owned, 92 percent being federally owned. With that balance they must carry on with only 8 percent of the land all of the institutions of that county.

So we feel that further Federal extensions have gone beyond proper limits. We feel that the granting to the State of Arizona, and the other States of the West, of these railroad grant lands would be a show of good faith, and would also enable us to carry on the institutions of the State with that additional revenue that would come to us. As you know, these lands—the revenue goes to the various institutions, and many of these lands find a way to patent, and come under the tax rolls of the State. Therefore, it would mean a substantial increase of revenue for the State of Arizona. We, therefore, as a State, and as a livestock industry of the State, and the Land Department, urge and recommend that this bill of the Senator's be passed through Congress, returning these lands of the various States; and that this amendment be added whereby the legislatures of the States, who know their individual problems in every State, be given the distribution of these lands to the various State institutions. And I might say that, with our "L" grant land, while that is our biggest problem now, as soon as they are paid off, all of these revenues will go to the State institutions. In this

instance the "L" grant land revenue, after the bonds are paid off—the balance will go to schools, for educational purposes, and will ultimately reach the State end that the Senator's bill would bring about, if it were passed as it now is.

I think, Senator, that is the land picture of Arizona as we see it. There will be others called to amplify it.

(The following data were received for the record from Mr. E. C. Hemenway, land commissioner, Santa Fe Railroad Co., Albuquerque, N. Mex.):

Summary showing land-grant acreage released to the U. S. Government by the Santa Fe Ry. Co. in connection with Transportation Act of 1940

[Exhibit A covers unsurveyed lands that were not on the tax rolls; exhibit B covers surveyed and identified lands on the tax rolls]

State	County	Exhibit	Acres
New Mexico.....	Socorro.....	A.....	16,269.02
	Sandoval.....	A.....	1,440.00
	Bernalillo.....	A.....	120.00
	Valencia.....	A.....	
	San Juan.....	A.....	1,762.48
	Catron.....	A.....	1,280.00
	McKinley.....	A.....	16,236.15

SUMMARY

Total "A" outside Walapai Reservation.....	591,338.49
Total "A" within Walapai Reservation.....	104,865.52
Total "B" within Walapai Reservation.....	696,204.01
Grand total.....	398,004.53
	1,094,208.54

DIVISION

Outside Walapai Reservation.....	591,338.49
Within Walapai Reservation.....	502,870.05
Total.....	1,094,208.54

Of the lands released only the surveyed lands inside the Walapai Reservation were on the tax rolls. The last taxes paid were for the year 1940, as follows:

	Acres	Taxes
Arizona, Mohave County.....	214,609.57	\$3,860.42
Arizona, Coconino County.....	183,394.96	2,127.83
Total.....	398,004.53	5,988.25

The CHAIRMAN. Very well. I'm gratified that you touched on that particular bill, because it is of vital interest to the States that have a high percentage of public lands. Arizona, New Mexico, Nevada, and other States similarly located have a high percentage of federally owned land, and the passage of a bill such as S. 978 should receive the greatest and most serious study.

Thank you, Mr. Williams.

Now, the Arizona Cattle Growers Association has its vice president. Mr. Norman Fain here. Mr. Fain, you may make any statement you see fit to make at this time, on the subject of unpatented mining claims. You may call witnesses, or parties, to make any statements that you see fit.

STATEMENT OF NORMAN FAIN, VICE PRESIDENT, ARIZONA CATTLE GROWERS ASSOCIATION, PRESCOTT, ARIZ.

Mr. FAIN. Thank you, Senator. At a meeting held yesterday, in the office of the Arizona Cattle Growers, many members were there. But we realized there were many members who were unable to attend the meetings yesterday afternoon and last night. If there are any members here who have any other problems that are not brought out in our present outline, please see me.

The CHAIRMAN. I beg your pardon for interrupting you, Mr. Fain.

Ladies and gentlemen, I do not need to introduce your junior Senator, Senator McFarland. I just want to say that, in my period of service in the United States Senate, I know of no one who has come into that body, and in such a short time, made such fine progress, and rendered such fine service for his State.

STATEMENT OF ERNEST W. McFARLAND, JUNIOR SENATOR FROM ARIZONA

Mr. McFARLAND. Thank you, Pat, for those kind words. On behalf of the people of my State, may I welcome you to Arizona. We are sure glad to have you here.

Senator McCarran is one of our best neighbors and he is welcome to Arizona. We have a lot in common with Pat's State, and we are glad to work with him and have him work with us. I don't have to say anything good about Pat, because all that anyone knows is good; and up in Nevada they think he is tops, and we think he is tops down here. Thank you. [Applause.]

Mr. FAIN. Senator McCarran, I might restate that, at a meeting yesterday of the Arizona Cattle Growers Association there were many members who were unable to attend, and if they have other problems which we do not bring out, I think Senator McFarland, as well as the Arizona Cattle Growers, want them to present their problems. I feel safe in saying that the Arizona Cattle Growers heartily endorse the statements made by Mr. Williams, the present State land commissioner. I don't think we can overlook the fact too strongly at the present time, as Mr. Williams stated, that 74 percent of the State is owned and controlled by the Federal agencies. I think the present figures, with the later acquisitions by the Federal Government, puts the figure up close to 82 percent; and as taxpayers, as well as livestock

producers, we must certainly keep in mind that we have a very small part of the sovereign State left to tax.

The CHAIRMAN. Have you, representing the general land office, any corrected figures as to the percentage of land in the State of Arizona that is Federally owned?

**STATEMENT OF THOMAS C. HAVELL, GENERAL LAND OFFICE,
WASHINGTON, D. C.**

Mr. HAVELL. Senator, as of June 30, last year, the percentage was 74 percent. As Mr. Fain has just stated, there are, however, withdrawals that have been made since then. The withdrawal problem is kaleidoscopic; it changes from day to day. The figures today may be different from what they are tomorrow, particularly now while they are making military withdrawals. But the figures, I think, are substantially correct.

The CHAIRMAN. Thank you. I take it that your statement does not include the acquisitions made by the military, and other acquisitions that have been taken off of the tax rolls.

Mr. HAVELL. The 74 percent represents only the public lands that have been reserved, and does not include the purchased lands.

The CHAIRMAN. Now, the purchased lands come under several heads. One is the lands purchased for the Indian Service. Another is the lands purchased for military service. Are there any other heads under which purchased lands come?

Mr. HAVELL. Senator, I think a great many of the bureaus of the various departments have land-purchase programs. Agriculture had quite a land-purchase program, the resettlement and submarginal land program, and I think it runs through the service pretty generally.

Mr. FAIN. From the tax angle alone, I think it can readily be seen the danger that faces this State. All of our taxes, instead of being on land base, must go to our less taxable assets. Every citizen and taxpayer of the State is certainly interested in that problem.

From the livestock point of view, I do not recall ever hearing any livestock producer who has not preferred the State lands over any federally owned and controlled land. I think that speaks well for the management of our State land; and it also gives us the added assets on the tax rolls.

I have several resolutions here, by the Arizona Cattle Growers, in support of these views. This is not altogether a recent fight. Three years ago this memorial was passed by the State senate protesting any withdrawals of State lands for Federal control whatsoever.

The CHAIRMAN. That resolution, do you have a copy of it?

Mr. FAIN. I can obtain it.

The CHAIRMAN. If you have a copy of it, it will go in the record at this point.

Mr. FAIN. I have here resolutions by the Arizona Cattle Growers on different types of withdrawals:

OPPOSING THE WITHDRAWAL OF STATE LANDS

Whereas the State Land Department of the State of Arizona, through the State Land Commissioner has by resolution requested the discontinuance of the policy of arbitrarily withdrawing State lands without notice for the use of the Federal Government and its agencies where there already exist Federal lands

equally or better suited to the purpose behind the withdrawal, and that where it is determined to be necessary to withdraw State and private lands for the use of the Federal Government and its agencies that a hearing should be granted in order to provide opportunity to those interested to be heard, now: Therefore be it

Resolved, That the Arizona Cattle Growers' Association in open meeting assembled have unanimously and wholeheartedly endorsed the resolution expressing the above policy of the State Land Department.

I hereby certify that the above is a true copy of Resolution No. 10, unanimously passed by the Arizona Cattle Growers' Association, assembled for the thirty-eighth annual convention in Prescott, Ariz., February 10 and 11, 1942.

Mrs. J. M. KEITH,
Secretary, Arizona Cattle Growers' Association.

I think in view of the present emergency, this might be somewhat softened, this resolution, in the case of vital and necessary strategic war use at certain small areas of the land. That would be fine, if it were properly used. We will try and show today that there have been a great many abuses in the taking of this land, under the pretext of war use, where other lands, already owned by the Federal Government, could be employed with less hazard to the stock grower than the land they did take.

Our second resolution reads as follows:

RESOLUTION

Whereas approximately three-fourths of all lands in Arizona are now owned or controlled by the Federal Government; and

Whereas such of these lands are not utilized for any useful purpose by the Department administering same; and

Whereas the State of Arizona is in great need of more lands for livestock grazing and other agricultural purposes: Now therefore, be it

Resolved by the Board of Directors of the Arizona Cattle Growers' Association. That we are unalterably opposed to the Federal Government withdrawing any further lands in Arizona for any purpose whatsoever, and that we request the return of lands now held by the Federal Government to the State of Arizona.

Adopted by the Board of Directors, in meeting in Phoenix, July 28, 1943.

Mrs. J. M. KEITH,
Secretary, Arizona Cattle Growers' Association.

We will try and show you, throughout the testimony this morning, the need we have for the land and the desire to have at least some of the land returned to the State.

Our third resolution reads as follows:

OPPOSING ACQUISITION OF LAND BY FEDERAL GOVERNMENT

Whereas there is increasing activity by Government agencies to acquire lands in Arizona, with destructive effects upon State tax structures: Now therefore, be it

Resolved, That no land located in Arizona shall be acquired by purchase, condemnation, or otherwise by the United States or any agency thereof; and be it further

Resolved, That no interdepartmental transfers of land between Federal agencies be made without public hearings.

I hereby certify that the above is a true copy of resolution No. 16, unanimously passed by the Arizona Cattle Growers' Association, assembled for the thirty-eighth annual convention in Prescott, Ariz., February 10 and 11, 1942.

Mrs. J. M. KEITH,
Secretary, Arizona Cattle Growers' Association.

Our last and final resolution is somewhat longer, and I believe more up to date, than some of the others. I wanted to read all of the resolu-

tions to show you the particular meaning of them to the present time, even before the war emergency existed:

RESOLUTION

Whereas to assist in the stabilization of the livestock industry it is the declared policy of the Federal Government to control and conserve forage upon the public ranges of western States;

Whereas the Taylor Grazing Act was passed in the year 1934 for the purpose of accomplishing such control and conservation; and

Whereas a substantial part of lands within the State of Arizona show some surface evidence of mineralization; and

Whereas due to such mineral showing the United States General Land Office has in some instances refused the issuance of grazing leases of qualified stockmen applicants; and

Whereas indication of mineral and/or the location of purported mining claims has and is being made a pretext for the release of livestock within range areas controlled by others; and

Whereas Federal authorities have failed, refused, or been without power to protect legitimate livestock operators from such encroachment; and

Whereas the continued uncontrolled use of mining locations for purposes foreign to mining has and will nullify Federal conservation statutes and defeat the location of public range by proper legal authority: Therefore be it

Resolved, That the Public Lands Committee of the Arizona Cattle Growers' Association, meeting in Phoenix, Ariz., on the 23d day of July 1943, respectfully request that the Secretary of the Interior or the Congress, by appropriate legislation if necessary, take such steps as will insure mining locations, either lode or placer, be confined in use to the purpose for which they were located and proper machinery be established to assure an immediate cessation of the present use of such locations for purposes other than mining.

I would like to bring out one fact here before calling on some of the other people to testify. We do not have a quarrel with the mining industry as such. This is referring to the last resolution. We find we have a type of people using mining claims, under false pretenses to run their stock, and the Federal Government has not furnished the machinery to protect the legal lessees of these claims for grazing. We do not wish to interfere with the miner, and I do not believe that our objection is to the legitimate miner, I know it is not. Our objection is to the man who is using the mining claim as a pretext on which to turn his stock out on a legitimate range proceeding.

Mr. Ronstadt is chairman of the public lands committee, and Mr. Boice is chairman of the forest committee. They will be introduced and the statements they will make will be to portray the reactions of the Arizona Cattle Growers' Association as to the policy, management, and so on, of the federally owned lands in Arizona.

The CHAIRMAN. Before you call them, I wish to make a statement that may be of interest to the people of the State of Arizona and to nearly all of the western public land States.

In enacting any legislation bearing on the subject of ownership or the utilizing of mining claims, great care must be resorted to for this reason: There is a policy proposed to be set up, and it is furthered by some powerful influences, that would do away with our present mining laws and put all mining under a permit or leasing system. To my mind that would be the most destructive thing that the country could endure at this time, or at any future time. The incentive for the prospector has been that he would be the owner of his discovery, within certain limits. If we take from the prospector

the incentive that has caused him to follow his burro into the desert hills of this country and make discoveries in the past, I say, if we destroy the incentive, we will impair, if not entirely destroy, discovery. That is my personal view on the subject. When you come to amending existing laws, which, in my judgment, should be amended in many respects, touching on the subject discussed here by the President of the Cattle Growers' Association, it must be done with great caution and great care, because, as I have stated, there are those who would like to have all mining placed on a lessor basis, which would have the result that I have discussed. So, when your association or any other association considers a change in the mining laws, those who guide the legislation through the Congress must be very careful that it does not take on an entirely different character from our present laws with reference to discovery and possession.

Mr. FAIN. I wish to state again, Senator, that we certainly have no quarrel with the legitimate miner, and I believe this problem can be worked out to the satisfaction of everyone concerned. We would like the cooperation of the mining group, rather than its opposition.

Mr. Ronstadt, who is chairman of the committee on public transfer of the Arizona Cattle Growers, will now take the stand, and introduce other witnesses in support of the objection to the policy, or formation of policy, as seen by the association.

Mr. CHAIRMAN. All right, Mr. Ronstadt, will you come forward, please?

STATEMENT OF CARLOS E. RONSTADT, TUCSON, ARIZ.

Mr. RONSTADT. Senator McCarran, ladies and gentlemen, last night, at a meeting of the public lands committee of the Arizona Cattle Growers' Association, several problems were discussed, among them the abuse of the use of unpatented mining claims. The Senator's statements just now were considered very carefully, last night, and the Cattle Growers' Association concurs with your belief, sir. We feel that it is not the mining interests, nor the legitimate locators of the mineral, that are abusing this privilege, but rather it is our own group. It is supposed, livestock operators, or would-be livestock operators, who are trying to find some method of operating on the public range at the expense of the legitimate lessees, especially on section 15 leases. The problem also comes on the Forest, but, as we understand, they have a method by which they can control it. We also understand that within grazing districts it is being controlled, but this abuse of this use of unpatented mining claims, I again restate, is caused rather by our own group. It is a problem which we can settle among ourselves, because the policy of the Land Department must be changed or must be regulated in order to cover this abuse.

Again, restating what Mr. Fain had to say, unless we can find some method, by amending existing grazing laws such as the Taylor Grazing Act, or possibly by regulations, the amendment of regulations issued by the General Land Office, it may not be able to be solved without an act of Congress. We don't know, we are not competent to say how it can be done, but we are hoping that it can be done by proper policing, possibly, by the General Land Office, or by a change

or regulations. I would like to call some witnesses to tell their stories.

We have tried to pick out, Senator, typical cases, and these cases are, we think, typical of what is going on all over the State. We have many of them and it would be unfair to burden you or these gentlemen who are here and are limited in time with a lot of cases similar to each other. We have tried to pick out short, typical cases, to be given by the men themselves, if that meets with your approval.

STATEMENT OF ROY HAYS, KIRKLAND, ARIZ., CHAIRMAN OF THE BOARD OF DIRECTORS, YAVAPAI CATTLE GROWERS ASSOCIATION

Mr. HAYS. In our neighborhood I and some of my neighbors have a problem where there has been people come in and in some places located claims, and in other places leased the claims that were already located, and have turned these away in excess of carrying capacity for these claims, brought in an inferior class of Mexican bulls, turned them loose on our ranges, and we haven't so far been able to control this in any way. The Department of the Interior have had their men out there and they haven't been able to solve the problem. It seems like they don't have the power or authority to trespass these cattle that are being turned on this range.

The CHAIRMAN. What is the nature of the surrounding range; is it under Taylor Grazing or under Forest?

Mr. HAYS. Taylor Grazing, State lease, and patented lands. I have—majority, my land, most of it, is State leased, several thousand acres of Taylor Grazing land, but we have a problem there where I take my cattle out over the range, and try to conserve that, I had my cattle away on pastureland for the winter, and these parties brought in 200 head, approximately, and turned them loose where I was taking my cattle off and trying to conserve the range.

The CHAIRMAN. They must have a series of either placer or lode claims on which they turn the cattle loose, is that correct?

Mr. HAYS. They have one—one party leased one claim on that State lease, but I believe the claim is a legitimate claim, because it was there before the State acquired the land, but after that they went out and leased some other claims that were scattered around through this area, but the cattle drift plumb off of this area, all over the whole country, for miles away, over the range.

The CHAIRMAN. If they drift on Taylor Grazing land, what is your attitude, Mr. Leech?

Mr. HAVELL. Senator, these are not district grazing problems, these are section 15 grazing leases, as I understand it. Is that correct?

Mr. HAYS. Yes.

Mr. HAVELL. Evidently from what is being said here, they drift from the mining claims onto the leasehold of the lessee, under section 15.

Mr. HAYS. Some of my leases have these mining claims filed right over the leases I am paying lease for, on this land, and the other fellow claims he has the right to graze his cattle, too, on account of his mining claim. We would like some regulation of this, to be controlled so we would be able to handle our ranges as it should be handled.

The CHAIRMAN. Turning 200 cattle loose on a 20-acre mining claim doesn't run up very good to form. I imagine it was an exceptionally fine claim.

Mr. HAYS. In this same area I had leases on some of this ground. They were 1-year leases, and when the lease expired, were excluded for mineral rights along the side of it. Maybe they would take 40 acres out—40 checkerboarded those leases, cutting me off from my water by their mineral rights. I'll admit there is a mineral showing on almost all of this belt that I am in, but why they would reserve one 20 acres, and 20 along side of me, I can't understand. I believe that is about all I have to say.

The CHAIRMAN. Can any member of the Federal agencies here give us any explanation on this? Do any of you desire to make any comment?

Mr. RONSTADT. Senator McCarran, I thought—may I offer this suggestion for your approval?

The CHAIRMAN. Yes, sir.

Mr. RONSTADT. Might we hear the witnesses, and then ask the questions; and then probably we can arrive at some definite conclusion?

The CHAIRMAN. Very well, that is a very good suggestion.

STATEMENT OF HARRY S. KNIGHT, PRESCOTT, ARIZ.

Mr. KNIGHT. My name is Harry S. Knight.

The CHAIRMAN. You are engaged in what line of business?

Mr. KNIGHT. Cattle raising.

The CHAIRMAN. You may proceed and make your statement.

Mr. KNIGHT. I am not very much of a speaker, but I have a little story to tell. I am located in Camp Wood, and I have a winter range down Burro Creek. That Burro Creek country, I have been there 25 years—it has been prospected by a lot of real prospectors; that is, men who knew minerals, and they all told me there is no mineral in this country. Whenever we speak to one of them about it they just pass it by. Nevertheless, a party went down there as soon as these different agencies went in, the Taylor grazing district and lease lands and so on, and located a mining claim. Now, understand, this is in this particular place, and as I say, it is all, practically all, in a malpais country. I have lived there since 1880, in Arizona, and I never heard of any minerals in malpais. Those people have located, I don't know how many claims, but enough to establish themselves, and they are using my range.

Last winter my boys were putting cattle into the winter range; put about a hundred head of cattle down in that particular part of the country. They keep about anywheres from 4 to 8 dogs, and my cattle were only in there about 2 days before they all came home. We went down to see what was the matter, and we found horse tracks and dog tracks where they had dogged them out the canyons when they went in there for water. When the cattle go into the canyons to water, they set the dogs on them and run them out. This outfit went in there with 10 or 15 head of cattle, gentle and broke to milk, raise cattle, and they have pretty close to 40 or 50 head now, 5 or 6 years. If anybody can tell how these dogs live, we have never figured it out, and yet that is my problem.

It isn't the matter of just what they can graze on their own patented claims. We have got several sections in there, and they won't allow our cattle to go in. They dogged them out, and there's nothing I can do about it; yet my range is under fence, and they are inside of the fence.

The CHAIRMAN. Are there any questions from any members of any department? At any time, if there are any questions or suggestions from anyone present, don't hesitate to arise and state your name and ask your questions.

All right, thank you very much for your statement, Mr. Knight.

Mr. RONSTADT. Mr. Earl Evans, of Phoenix.

STATEMENT OF R. EARL EVANS, GLENDALE, ARIZ.

Mr. EVANS. My name is R. Earl Evans.

The CHAIRMAN. Mr. Evans, have a seat. You are from Phoenix?

Mr. EVANS. Yes, sir.

The CHAIRMAN. You are in what line of business?

Mr. EVANS. Cattle production.

I have been asked to make a brief statement concerning the use of mining claims on the withdrawn public lands, stock drives. This location of mining claims on the stock drives has resulted in the location of livestock units, who use a free range that was set aside for a very different purpose, to the extreme abuse and almost absolute ruination of the same.

The CHAIRMAN. Get that picture, now. You are dealing with the subject of driveways?

Mr. EVANS. Driveways, in relation to unpatented mining claims.

The CHAIRMAN. Unpatented mining claims in relation to driveways. In other words, these unpatented claims are held on public territory that is set aside for driveways. Is that right?

Mr. EVANS. That is correct.

The CHAIRMAN. And they use the patented or unpatented mining claims as a basis for running livestock upon this withdrawn area?

Mr. EVANS. Yes, sir.

The CHAIRMAN. All right.

Mr. EVANS. With no restriction of any sort put on the use of these public lands driveways. There are regulations that they do not enforce; no machinery to enforce them. I think, in a previous hearing, we asked Mr. Havell if some such machinery could possibly be set up, and he told us that at the time it could not; and there has been no such machinery set up up to date. The unpatented mining claim on the drive is quite often positively without any mineral showing whatever. Many of them are placer claims; and this is not confined to any one class of livestock, but principally goats and cattle. The south driveways have a very definite function in the livestock industry throughout the State, but they certainly do need some sort of control over their use.

That is all I have to say.

The CHAIRMAN. All right, thank you.

Call your next witness.

Mr. HAVELL. May I ask a question before the gentleman leaves the stand?

Do you know whether these mining claims that are on the south driveways were initiated before or after the establishment of the

driveway? I ask that question because the south driveways are not subject to mining location.

Mr. EVANS. Many of them have taken the location after the establishment of the driveways.

Mr. HAVELL. I do not want this point to get away. If there has been any attempt to locate a mining claim on the south driveway, after the establishment of the driveway, it is contrary to law. We would like to know it, and we will take appropriate action in the matter.

Mr. EVANS. To my personal knowledge such is the case.

Mr. HAVELL. While we are here, can we get together on that? I am anxious to know the locations. You have our 100 percent support on that question.

STATEMENT OF W. B. YOUNG, KIRKLAND, ARIZ., ARIZONA MOHAIR GROWERS' ASSOCIATION

Mr. YOUNG. I was sent here as one of the committee of three from the Arizona Mohair Growers' Association to testify in regard to mining claims on the section 15 leases.

We are very much opposed to regulations. We are very well satisfied with the leases. But there is one exception, and that is in regard to the mining claims. These people take these claims and use them for grazing livestock on where we are paying the leases; and we think we should have some protection. We are not opposed to the legitimate miners, but it is our own livestock people that are doing this, and we are very much opposed to it.

The CHAIRMAN. Let me understand you. The mining claims are taken up within the lands held under section 15?

Mr. YOUNG. That's right.

The CHAIRMAN. Are they taken up before or after the permit or leases are given under section 15?

Mr. YOUNG. I believe some before and some after.

The CHAIRMAN. Then these mining claims are utilized as a base for the running of livestock. Is that right?

Mr. YOUNG. That is true.

The CHAIRMAN. Is mining actually prosecuted upon the claims?

Mr. YOUNG. No, sir; in a lot of cases, no.

The CHAIRMAN. Not at all? How about the annual work?

Mr. YOUNG. Well, I think that on some of them the work has been done; but they are exempt at the present time from doing any work on those claims.

The CHAIRMAN. That is right.

Has this custom come into existence recently, or is it a custom or practice that has been going on for years?

Mr. YOUNG. Well, it is since the Taylor Grazing Act, that is my opinion. Before that it was public domain, and we had no leaseage on this land.

The CHAIRMAN. You had no leaseage?

Mr. YOUNG. No.

The CHAIRMAN. It used to be, as I recall it, customary for the stockmen to lease the placer claims along creeks and creek beds, and thus hold control of the range in that way. That was customary, and I

think it is customary yet in some places in the country. Have you any such process as that, that you know of?

Mr. YOUNG. I think that has been done.

The CHAIRMAN. I knew of placer claims that exist that took in an entire stream, and I never knew of any annual work to be done on the placer claims; but the claims were leased to a stockman who controlled a whole countryside with it. So it has grown up from an old custom apparently, and is now being abused along a different way. The line of demarcation is the line of use. The spirit of the law was to permit a miner to acquire a certain territory for the purpose of prosecuting mining, either placer or lode; but the spirit of the law has been abused into a kind of a letter of the law, whereby they have possession of this surface, and use the surface of the mining claim for an entirely different purpose and object from that for which it was originally granted under the Federal statute.

Is there anything further?

Mr. YOUNG. I believe that is all I have.

The CHAIRMAN. Very well. Are there any questions from anyone?

Mr. RONSTADT. Senator McCarran, I would like to restate the policy of the association, that we feel the Taylor Grazing Act was passed to prevent such things as this, and that is directly contrary to the purpose for which the act was passed.

I'd like to call Mr. H. B. Thurber, from Sonoita, Ariz.

STATEMENT OF H. B. THURBER, SONOITA, ARIZ.

Mr. THURBER. My name is H. B. Thurber.

The CHAIRMAN. You are engaged in what line of business?

Mr. THURBER. Grazing, raising of cattle. The statement that I would like to make, we are living in a mining district, controlled mostly by placer claims, and we have an element down there, I would say, of outfits who move in with their cattle and families, and make their homes. Sometimes assessment work is not done. In one particular instance, in what we call the Gulf country, an old gentleman over there has twenty-five or thirty-five hundred acres of claims, and he controls the water. If you want to drill a well on this particular property—I took it up with the Forest Service, the national forest. The ranger suggested we go and see the old man and talk to him before the Forest Service would issue a permit for the well. We went and talked to him, and he very graciously permitted us to drill the well and put up the windmill and equipment, and today we haven't yet a permit from the Forest Service permitting us to put in that well. That seems to be the extent of the mining laws, at least the way they interpret the mining laws. West of us we have a condition—Atkinson Proctor, he is a legitimate rancher. After Atkinson moved in, these nesters came in on mining claims, Forest Service, there for 2 years, riding that area; have an allotment of cattle. He permits them, some way or another, to carry his cattle. I have talked to the ranger, and he has quite a little trouble straightening things out.

I am a small operator, fenced up in various pastures, some purebred cows, as we have to have purebred bulls through the allotment. That is required by the Forest Service. Through the allotment there are 160, or 80 acres, 9 claims, which are claimed by mineral prospectors, or whatever you want to put it. If they should desire, want to come

and patent this particular country and claim in place—I don't doubt but what there is mineral in place in that particular part of this country—if they did that, as they saw fit, I would be out. These patented lands is 2 or 3 miles apart; they don't come together. That is the situation as we have it at the present time down there. I have talked with the Forest officials and they seem to be sympathetic, but their hands are tied. The mining laws are the law, and the Forest Service is purely administrative. That is all I have to say.

The CHAIRMAN. Are there any questions from any members of the departments, or anyone else?

STATEMENT OF FRANK ROEHL, ORACLE, ARIZ.

Mr. ROEHL. I live at Oracle, and my business is raising cattle. The situation I have is similar to that described by Mr. Thurber. I am dealing with a real-estate promoter who has come out from the East and has already acquired land on the forest, patented it, cut it up into subdivisions, and sold the lots. In connection with that, he has also acquired this range, and that has been done in one section of the forest. Now he is moving down into the center of my ranch and contemplates patenting 30 claims, a sizable amount of land carrying water in there. As I say, his whole history has been that of a promoter, purely. I don't think he intends to go into the cattle business at all, as a matter of fact, but that is the situation. That creates a worry on the part of anyone having forest permits, if a man can come in and patent land in the middle of your property which would be detrimental to the operation of the ranch.

The CHAIRMAN. Let me ask a question to be answered by some member of the Federal group here: Under what act could the land be acquired in fee simple?

STATEMENT OF L. F. KNEIPP, ASSISTANT CHIEF FORESTER, WASHINGTON, D. C.

Mr. KNEIPP. Senator, the act authorizing the creation of national forests specifically stipulates that the lands reserved shall be subject to the mining laws. Otherwise, the lands are withdrawn from all forms of entry except under the forest homestead and under certain rights-of-way and easement acts. The only way these withdrawn lands could be acquired where they are not chiefly valuable for homestead purposes would be under the mining laws. I might say the attitude of the Forest Service with regard to the situation that is described here is that while the mining locator has the right against anybody else to the lands covered by his locations for mining purposes, locations under the mining law do not give him a right to use those lands for purposes unrelated to mining; so that when, within the national forests we find a man who has attempted to use unpatented mining locations for purposes other than mining, such as grazing, we immediately file with the General Land Office—that is, assuming that the claims are not valid claims. We file with the General Land Office a protest and a request for the cancelation of the claims.

Now, as Mr. Roehl has suggested, it sometimes takes quite a while to carry the protest through. But that is the procedure that is followed within the national forest. We do not recognize the right of

a mineral locator to use the claims for any purposes other than mining, and if he attempts to do so he is required to obtain permits; and if he declines to do so, and if the claims are not obviously valid claims with minerals in place and with the development work properly performed, we then file a request for cancelation with the General Land Office. However, if there are mineral values, and if the claimant has met the requirements of the mining law, he can of course proceed to patent; and after he obtains the patents, he has the same rights as any other private owner.

The CHAIRMAN. This appears to present a picture of an individual who has acquired land, and he proposes to subdivide, and that land, as related here, is in the forest. How could that be done? How could he acquire title, so as to subdivide for sale purposes?

Mr. KNEIPP. The process is quite a common one, Senator. He would file locations, either lode or placer. In due course of time he would apply to the General Land Office for a patent, under the mining laws. If that patent were granted, he could then subdivide the land. Prior to patent, if the land were within the forest, and he attempted to take such action, we would follow the procedure that I have just outlined.

The CHAIRMAN. Thank you.

Are there any questions from this witness before he leaves the stand?

Very well, Mr. Ronstadt, you may proceed.

Mr. RONSTADT. Mr. Wayne Taylor.

STATEMENT OF WAYNE TAYLOR, SUPERIOR, ARIZ.

Mr. TAYLOR. My name is Wayne Taylor.

The CHAIRMAN. Mr. Taylor, you live where?

Mr. TAYLOR. I live at Superior, Ariz.

The CHAIRMAN. You are engaged in the livestock business?

Mr. TAYLOR. Yes, sir.

The CHAIRMAN. You may proceed, Mr. Taylor.

Mr. TAYLOR. We operate livestock in Pima, Yuma, and Maricopa Counties, on State land, section 15 land, grazing district land, Forest Service land, Indian Service land, and also patented land. Sometime this spring, in February, there was a man turned loose some cattle. Some 200 head came up to the water we owned, and we started to moving out those cattle; didn't stay there long. But we had to go into court and get a temporary restraining order to make him take his cattle off; but that is only temporary. We own and control all the water, and have the ranges fenced.

The CHAIRMAN. Are these patented mining claims?

Mr. TAYLOR. No.

The CHAIRMAN. I haven't caught the gist of your story. Go back over it a little bit again, please.

Mr. TAYLOR. Well, they turned these cattle loose on unpatented claims without water on them.

The CHAIRMAN. I see. How long have the mining claims been in existence?

Mr. TAYLOR. Well, some of these claims have been, I suppose, for 40 years.

The CHAIRMAN. Was the annual work done on the claims when annual work was required, to your knowledge?

Mr. TAYLOR. Well, I think so, off and on.

The CHAIRMAN. Are they lode or placer claims?

Mr. TAYLOR. Lode claims.

The CHAIRMAN. Now, it is being used for stock raising purposes rather than for mining?

Mr. TAYLOR. Yes.

The CHAIRMAN. Well, it's probably more profitable.

All right, thank you, sir.

Mr. KONSTADT. Senator, we have two more witnesses, to make a brief statement, but we would like to bring—the association would like to point out to the committee that we feel that there is not sufficient regulation of the location of mining claims; not sufficient administration or policing of the use of these mining claims; and especially not sufficient policing for their annual assessment work. We know that the affidavits are filed, in many cases, and the work is never done. To check on these mining claims is quite a job.

We would like to call Mr. Williams, who has a brief statement to make. I assure you it will be brief, but it is about this problem, of which he has very good knowledge.

Mr. O. C. WILLIAMS. It's hard to know where to start on this particular problem. In many cases, where the State is most vitally affected, the State lands, these claims were put on just prior to the filing of the survey by which we acquired the lands for the State land department. In many of these cases, there never was any assessment work done, nor was there any location work done, merely the filing of the claims in the county recorder's office. The main weakness seems to us to be the fact that they are not required to file with any Federal agency, and put them on notice of these claims. We go to the General Land Office, to make exchange applications, and they have no knowledge to these claims; and after we have received the land, in many instances, then they come back and set forth that a claim was put on there, possibly just a few months, or a year, before the survey plat was filed. It appears to us that in many cases it was deliberate knowing that these surveys were being made and it was their last chance to slap this mining claim on. They filed in the county recorder's office and then so far have been able to substantiate that it is a legal claim whether any work has ever been done or not. We feel that if they had to file with the register here of the General Land Office then we would all be put on notice; then the field inspection could be made to ascertain the validity of the claim and as to whether there was any mineral or not. We think that much of our difficulties would be overcome because we are sure that in many of these cases it was strictly a desire to get into the cattle business; a well-organized and watered and protected unit, under the protection of mining, when there are no minerals of sufficient value to justify mining. This is borne out by the fact that they do not attempt to mine; they go into the livestock business, in competition to already established units.

Now, I might say that, while Mr. Havell is here, and the chief investigator, Mr. Lausen, we are going to have a hearing on many of these specific cases, and see if there is any way they can take to iron out our difficulties. It is very serious. I might say that it could fire into open range war, because it has brought up some very bad blood; and some of these westerners still can use firearms, if they have to resort to it. We want protection, so that will not come, to blemish the State of Ari-

zona. I want to say, also, that we are plagued with this when prices are high. When cattle prices are low, they do not have the inducement to carry on this operation; but just as soon as the cattle are scarce, and prices are high, then we are plagued by faked mines and mining claims, as a back door through which to get into the cattle industry.

I think that covers it, Senator, pretty well.

Senator MACFARLAND. Before Mr. Williams leaves, may I make a little statement in regard to these railroad lands? I would like to make a statement, in order that you will understand just what Mr. Williams and Senator Hayden and I have been trying to accomplish, as far as these lands are concerned.

I understand that Mr. Williams made a statement in regard to the railroad lands before I came in. As you know, in 1940 there was an act passed which permitted the railroads to feed back to the Government the lands which had previously been granted them. In other words, that they might relieve themselves of the land rights provided under legislation. Now, there was a bill introduced in the House, which passed the House and came over to the Senate in the last session, which would have given these lands to the Indians. Mr. Williams took this matter up with me, and I was a member of the Indian Affairs Committee. I have been accused of holding that bill in my pocket. I guess I did. My reason for doing that was that I asked the Land Department to tell me just what lands were involved, under that act. In 1940 it excepted from that grant back to the Federal Government, lands from which they had already parted title, and they had deeded quite a large acreage of those lands to private ownership. We don't know just how much land was involved, or what land was involved. They have never furnished me that statement. I thought we should have the statement, upon which to base an amendment along the line which, I am sure, Mr. Williams described to you, in the first statement here this morning.

I can speak for both Senator Hayden and myself. We have intended to either introduce or support an amendment to legislation already in existence, already introduced, along this line. Whether it would be the bill which passed the House in the last legislation, which died, I mean, or a similar bill, or one similar to the one which Senator McCarran has introduced, I'm not sure. That pretty well tells the story, doesn't it, Mr. Williams?

Mr. WILLIAMS. Yes; it does, Senator. Thank you very much.

I might state that this might have gone through, but a little A. P. clipping got into our press; so I wired our Senator, who was able to hold this thing until we could at least review the matter and do something about it.

The CHAIRMAN. Very well.

Mr. RONSTADT. I would like to call Howard Smith, who has a short statement to make on the matter of mining claims.

STATEMENT OF HOWARD J. SMITH, PHOENIX, ARIZ.

The CHAIRMAN. What is your business, Mr. Smith?

Mr. SMITH. I am an agent, in behalf in livestock interests, and have been for a number of years, in connection with both State and Federal leaseholders. With regard to the mining situation, I would like to confine my remarks to one with which I am particularly well acquainted; that is an elaboration upon the situation which faces Roy Hays.

I might say in that regard, that Mr. Hays acquired certain range, all of which was held under lease, either through the Federal or State governments, from a second party. During that time, there were numerous conflicts, and by and with the assistance of agents of the field examiner's office, in Albuquerque, all of those conferences were terminated by agreement. The presumption then being of the necessity, much time having taken place, or gone by, that for one who had any legitimate interest, that is, insofar as livestock operations were concerned, was represented through filing, either within the State or Federal land office. I think everyone with any interests whatsoever was so represented.

The agreements were dictated, as I say, in company with an agent of the Federal Government. Lines were drawn between these several outfits, and, because no further difficulty was anticipated, and with the knowledge of such agents, fences were constructed. Subsequently, leases were received, when, to our surprise, we found that in the midst of the Hays holdings certain lands have been rejected, and today remain open and available to use by anyone; this on the basis of a mineral showing. Additionally, before and since this action, there were locations made in that territory.

Now, these locations, of course, were unknown, in great part, to all of the people involved. Any one who has lived in the State of Arizona, and, for that matter, in any of the Western States, knows that there are tens of thousands of such mining locations. I might add, at this point, that when the Taylor Act was passed I anticipated that the difficulty would be had, as a result of this mining situation. I then tried to interest Government agencies in the determination of the existence of mining locations, but they thought, and they may be right, that these could be adjusted as they came to the attention of the authorities.

Now, peculiarly enough, and involved in this self-same case, immediately adjacent to land which was refused lease upon was a western Navajo exchange application. That necessitates a declaration that the land is not mineral in character. That application was approved for patent by the General Land Office. Subsequently it was withdrawn, because there was no necessity at that time for going through with it.

We have been informed, indirectly, and, I should say, not officially, that petitions had been submitted to the General Land Office for consolidation of additional section 15 leases in this area. This happens to be the only instance of which I am aware where the mineral character, or potential mineral character, of land has been the occasion for refusing to issue leases. We have innumerable cases of where leases have been issued subject to mining claims, because of the belief that there may be mining claims in that particular territory.

Mr. Hays finds himself in the position of having acquired range that was under lease, and which he presumed would continue under lease, and now is unable to control it. I think it is perfectly obvious, because of the mineral character of a large part of the State of Arizona, that if the individuals involved in this were using this land to the location of mining claims, the operation of livestock units, succeed in what they are attempting to do, they have estab-

lished a precedent which can, without any question of doubt, completely defeat the allocation of these lands by Federal authorities. I might add that it is my view, and I think the view of all livestock men, as stated, no one wants to interrupt the continuation of legitimate mining; it means too much to the State of Arizona. But if the livestock interests are to conserve the range for which they are paying fees, they must have some protection from this misuse of land.

Thank you, Senator.

The CHAIRMAN. Are there any questions from either of the departments? This is a very interesting statement here. Mr. Havell, have you any explanation to make on this statement with reference to the application of patents?

PRESCOTT, ARIZ., August 28, 1943.

Mr. E. S. HASKELL,

Care of Arizona Cattle Growers Association, Phoenix, Ariz.

DEAR SIR: In 1940 we put in an application (serial No. 079890) for a Taylor grazing lease (see Sec. 15) for sec. 22, T. 14 I W. which is not patented but held by placer location and has been mined off by dredge. Our applications were turned down after field men Baker and Neil passed favorably on it. It is about half fenced and other improvements consist of rock house and about 2 miles of fence put on land in the 1880's, and concrete dam and ditch put in Lynx Creek by present holder, G. S. Fitzmaurice. The creek runs through the south half of section 22 from west to east and there is no gold on the part of the section.

As all other placer ground in the vicinity was allowed and owing to the fact that the present holder, G. S. Fitzmaurice, has no livestock and hasn't been mining for 4 or 5 years, we cannot understand how it can be held just for mining claims when it has been mined off. We have cattle ranches that join and wish to renew our applications for Taylor grazing lease on this section 22, as it has stock water on it. All we want is the stock water and grazing, as neither of us are interested in mining.

For reference to this entry or application see Departmental Decision A-22761, dated October 28, 1940. We have both been raised in Yavapai County and been in the cattle business all our lives here.

Very truly yours,

W. B. STORM,
Jerome Route, Prescott, Ariz.
BRUCE M. RUSH,
Mayer Route.

Mr. HAVELL. Senator, as the gentleman has just stated, I think this is the only case where we have declined to issue a grazing lease because of the presence of unpatented mining claims.

In that case, if I remember correctly, we made an investigation and found the mining claims to be valid, and under the Supreme Court decision that a mining claimant has property of the highest order in his claim, we thought we did not have the authority to cover those lands within the grazing lease.

Now, I did not intend to discuss this problem at this time. I thought we would get all the witnesses in. But the other side of the story of the problem is troublesome. To what extent has the mining claimant—let's assume a valid mining claim—to what extent has a mining claimant the right to use the claim for other than mining purposes? That is the real problem, as I see it. I think we are surely safe in not issuing a grazing lease under section 15 for lands that are included in a valid mining claim. But whether the mining claimant has a right to use that land for grazing purposes and to lease it for grazing purposes is the real vexatious problem.

Mr. SMITH. I think that is correct, Senator. I might say, in that regard, that is exactly the point we want clarified; exactly what we have not been able to have clarified up to this date. If the mining claim—that is, the locator—could be confined to his use in mining, we would have no difficulty today.

The CHAIRMAN. Very well. That is the reason I asked the question. That was the last witness on the agenda I have before me under the head of unpatented mining claims. Is that the last witness that you have to offer?

Mr. RONSTADT. Yes, Senator; that is the last witness on this particular subject.

The CHAIRMAN. I understand now it would be orderly, and it appears to me that it might be orderly, if we had the departments, if they see fit, discuss under this particular heading of unpatented mining claims.

Mr. RONSTADT. I was going to ask the Senator's permission to do that; to make a suggestion that, unless there are others in the room who might have something they want to say—

The CHAIRMAN. Is there anyone else in the room who cares to discuss under this subject, "unpatented mining claims?" Also, their effect on grazing in the State of Arizona and elsewhere? If there is, don't hesitate to speak; don't be afraid to speak. It doesn't make any difference how you make your statement, we will understand you. Make it any way you like. If you want to swear about it, go ahead and swear.

Now, do the departments care to be heard? I think we have had one statement from the General Land Office, Mr. Havell, and if he cares to discuss this subject further, we can hear him now. It probably would be orderly.

Mr. HAVELL. Mr. Chairman, I think, first of all, that perhaps next to the committee there has not been a more attentive listener to what has been said here this morning than I. It is a problem that the Land Office has been, and is now, wrestling with. I am quite certain we all agree that we don't want the mineral wealth of this country to be locked up merely because we want to use the surface for grazing. In fact, the Taylor Grazing Act specifically provides that lands affected by that act are still open to the operations of the mining laws, so that mining claims can be initiated within a grazing district on the open public lands, within a forest reserve, or within a section 15 grazing lease. The law so provides. We have no discretion in the matter. But I am satisfied that the law contemplates a valid mining claim.

We had this same problem discussed over at Glenwood Springs, as you remember, in connection with the oil-shale cases. They were placer claims initiated under the old placer laws. There the mining claims are being leased for grazing. We have just completed a field examination of those claims. We have also just completed a field examination as to the validity of the mining claims in the case that was discussed here by Mr. Hays. Those two reports are of very recent date. Just about the time I left the office at home they were received, and they are under consideration, and will be further considered in the light of the record that is being made here today.

Unfortunately, the Federal Government is not able to attack the validity of a mining claim for failure to perform assessment work.

That is a right extending only to third parties. Failure to perform assessment work exposes the claim to relocation; but it does not, according to the Supreme Court decision in the *Krushnic case* (280 U. S. 360), and the *Virginia-Colorado Development Corporation case*, give the Federal Government authority to attack the claim. In the *Rizzinelli case* (182 Fed. 676) in Idaho in 1910, concerning the national forest; in the District Court held that the mining claimant had no right to use the claim for such a purpose as a saloon. Just how far the courts will go to support us in holding that the mining claims cannot be used, say, for grazing purposes, is a question. My personal opinion is that the mining claimant has a right to use the claim for mining purposes, or anything incident to mining, but that he has no authority to use the claim for things that are foreign to mining. Unquestionably a mining claimant holding a valid mining claim has a right to graze livestock on that claim, if the livestock, horses or mules, we will say, are used in the mining operation. Whether he can use the mining claim for the grazing of range cattle is a question that has never been determined by the courts. We propose to bring that to an issue just as soon as this matter has been considered in connection with the reports now before us.

Perhaps there is involved in this question the State range laws. We issue a section 15 grazing lease upon the record of the General Land Office, and, as the State land commissioner has pointed out, mining claims are not of record in the General Land Office, or in any of our district land offices. When we have an application for section 15 grazing leases, we look on our tract books, and if we find that the lands are vacant and if the applicant is qualified, the grazing lease is issued for the area shown upon the record. It often happens that there are mining claims of record in the county recorder's office, of which we have no knowledge. If the mining claim is a valid one, unquestionably the mining claimant has a right to fence his property or to keep livestock off of it. I imagine that would be handled through the machinery of the State courts.

Therefore, our grazing lessees, holding leases under section 15, are confronted with a problem with the local mining claimants. When we issue the lease under the Taylor Grazing Act, the lessee has a leasehold. In my opinion, he has a right to defend in the local courts, if there is a trespass. The Federal Government—the General Land Office—has not felt that it was its duty to defend against trespass lands that are leased. I don't know, but I imagine, the State land commissioner, when he leases a piece of school section for grazing purposes, doesn't defend that lease against trespass, but leaves it to the lessee, the same as any lessee would be expected to defend his own property against a trespass.

This is a novel problem. It has never been before the courts in the form in which it is presented here. We are working on two cases the outcome of which, I hope, will be beneficial to the grazing interests without injury to legitimate mining operations.

MR. SMITH. Senator, could I ask a question?

THE CHAIRMAN. Certainly, sir.

MR. SMITH. Did I understand you to say, Mr. Havell, it is the opinion of the General Land Office that the question of the sufficiency of unpatented claims cannot be challenged by the General Land Office?

MR. HAVELL. No; I said that we cannot challenge the mining claims

for the failure to perform the assessment work. If there is lack of discovery, dummy locators, or if the law has not otherwise been complied with, we are in a position to make the attack; but if the sole ground of complaint is the failure to perform assessment work, that is not a matter that we can bring the action on.

Mr. SMITH. Thank you.

Mr. HAVELL. I might add, before I sit down, Senator, that I stated, when we had our meetings here last year, that if anybody found there was an invalid mining claim interfering with any Federal activities, such as a grazing lease, national forest or grazing district administration, if the matter is brought to our attention, we will make a field investigation and do just what Mr. Kneipp has indicated to you. We would bring an action that will, if the claim is invalid, result in its cancelation. We would be very glad to receive any such complaints and give them our careful consideration.

Mr. FAIN. May I make a statement?

The question was raised of fencing these claims. It looks simple to fence the 20-acre mining claim, to take care of the stock that might be turned loose on it. But we find that there is mineral on the whole surface of the State of Arizona, practically the whole surface; so mineral can be found, at least plenty of claims can be made, in any area desired to furnish a foundation to turn loose these, what we might call, illegitimate stock.

In the Forest Service, we do have protection from trespass stock; so we are putting our problem straight up to you, and to the Grazing Department, to protect us on these section 15 leases, and the abuse that has come about. If it was merely a case of fencing, I believe we could handle it ourselves; but it is way past our handling, and the solution lies in either legislation, if the Grazing Department themselves were not able to take care of it.

The CHAIRMAN. I have a letter here and before we go any farther, this letter will go into the record just preceding the statement made by Mr. Havell.

(The chairman therefore read into the record the letter which will be found above, incorporated into the transcript.)

Mr. HAVELL. Senator, I'm not familiar with that case. If the committee would care to let me have the letter—evidently that case has been to the Secretary of the Interior on appeal and final decision has been rendered.

The CHAIRMAN. You may get the letter from the reporter.

Mr. FAIN. May I make a statement on that same case?

The CHAIRMAN. Yes.

Mr. FAIN. At one time I held the lease on this land. A Federal lease was given by your department on the land. I was given a grazing lease on the same lands. I was under the impression at the time that neither conflicted with the other. Actually, we had no conflict in operation. The owner of the mineral lease felt that the grazing lease was a detriment to their holding, particularly in view of sale, and so on. We could never get an interpretation from your department which definitely outlined the status of either party. The case was headed for the courts. We felt that we could better settle among ourselves as neighbors, and, upon the request of the owners of the mineral lease, we canceled our grazing lease. I could give you

correspondence, at the present time, stating our reasons for canceling it, and, if it was ever submitted for release or grazing, that we desired to lease it. But under the existing conflicts it was not practical to hold the lease as it merely resulted in a lawsuit. I would like to talk to you personally about the case further since it came up. I thought we should bring to light all parts of it.

Mr. HAVELL. Senator, there are doubtless many individual cases that present their individual problems, but it has been the policy of your committee, announced many times, that you do not take the time of the committee to discuss individual cases, unless there is a policy or fundamental principle involved.

I would like to say I will be here tonight and tomorrow and probably the next day and would be glad to take up any individual cases. You say a mineral lease was issued; tell me what kind of a mineral lease it was; under the Leasing Act of 1920?

Mr. FAIN. I couldn't give you the date on it, it was a placer lease.

Mr. HAVELL. A what?

Mr. FAIN. Placer.

Mr. HAVELL. What mineral?

Mr. FAIN. Gold.

Mr. HAVELL. Well, you see, the Federal Government does not issue mineral leases, except for leasing mineral oil, gas, oil shale, phosphate, and so on. There is no authority of law for the issuing of a gold lease, so there is something wrong in the facts.

Mr. FAIN. I would like to check it with you personally, but, since the question was raised, it shows we have a lot of clearing up to do on section 15 lands.

The CHAIRMAN. It is now 5 minutes to 12. The committee will pause now. We will reconvene at 2 o'clock. The committee will stand at recess until 2 o'clock. (Recess until 2 p. m.)

The committee convened pursuant to call.

Present: Senator Pat McCarran, Nevada, chairman, and Senator Ernest McFarland, Arizona.

Also present: Congressman John R. Murdock, Arizona, and E. S. Haskell, investigator.

The CHAIRMAN. The meeting will come to order.

Now, Mr. Leech, you were about to address the chair when we recessed.

Again I wish to say to those who are assembled here, I hope you may feel free to interrogate and free to make any expression that you like, when anyone is before the committee.

STATEMENT OF J. H. LEECH, CHIEF OF LANDS, UNITED STATES GRAZING SERVICE, SALT LAKE CITY, UTAH

Mr. LEECH. Mr. Chairman, I merely wanted to state, I was going to say, the policy of the Grazing Service on unpatented mining claims was that the miner, the valid mining claim, we have no controversy with, whatever, but the claim that is not valid, we insist that the locator has only that part of the surface necessary for his mining operation. Our policy is practically the same as that of the Forest Service. If we find these claims in the district, we refer them to the General Land Office, with the request for investigation and cancellation.

The CHAIRMAN. Are there any questions to ask Mr. Leech? He is now speaking for the Grazing Service, on this particular subject of unpatented mining claims.

I think those of you who are here heard the expression, that the chairman of this committee made this morning on the spirit of the law with reference to mining claims. The spirit of that law is to give to the miner the right to certain surface of the earth, on which to work out mineral values. I don't believe it was ever the spirit of the law, or the intent of the makers of the law, that the mining claims should be used for strictly grazing purposes, nor as a basis for grazing rights. It did not enter into the spirit of the times in which mining claims were established by law; and it does not enter into the spirit of the law now.

I am glad the members of the several authorities are here, the Land Office, the Grazing Service, the Forest Service, the Park Service, and others, because I think it all becomes a part of their study to work these problems out. I am sure that while we are here those who seek to confer with the heads of these departments will find a ready ear on the subject.

We now have section 15 leases, as given to us by our agenda submitted here.

Mr. RONSTADT. Mr. Chairman, we have had numerous complaints sent in to the State cattle growers office, that it is very difficult to obtain Federal investigations. Many times there are great delays in the issuance of section 15 leases; and there are great delays in requests for investigations of abuses. It all evolves itself down to the fact that Arizona has to depend upon an office established, I believe, in Albuquerque, N. Mex. We have been told that most of the time the Federal investigators are taken up with going back and forth between Arizona and New Mexico; and the cattle growers request that, if possible—I think we made this request once before—an office be established in Phoenix for the purpose of giving better service to the lessees of section 15 leases. After one or two witnesses, we would like to ask Mr. Havell, with your permission, to give us a summary, or rather a brief statement, as to the policy of the Land Department when it issues section 15 leases, and ask him if it would be possible to establish an office of the Federal examiner in Phoenix.

We would like to have an expression from Mr. Havell as to the policy of issuance of leases, in relation to the fees charged, and any other pertinent information that might be of value to section 15 lessees.

We have two witnesses that we would like to have tell their story. We don't know what they are, because we don't have too much time to go into it; but they requested time, and would like to have your permission to offer them.

The CHAIRMAN. You may call them.

STATEMENT OF FRANK WINGERT, WAGONER, ARIZ.

Mr. WINGERT. I am a little operator of cattle, an independent outfit, came in in the spring of '20 and been in existence since 1892. I am in Yavapai County. I first come in on township 10 north, range 1 west, and then I come into township 9 north, range 2 west, on a homestead.

The Taylor section 15 come along and has taken two of my corrals away from me, and State water rights. I am back to half a section. They have patented mining claims, and deprived me of the use of that. That is my complaint on section 15.

The CHAIRMAN. That grows out of the operation of section 15?

Mr. WINGERT. Out of section 15 of the Taylor Act. Section 15 of the Taylor Act come in; I was operating, paying taxes on either 530 or 550 head of cattle. Now I am down to 115, and I will have to cut this fall unless it changes.

The CHAIRMAN. How long had you been in business and running in that locality, when the Taylor Grazing Act went into effect?

Mr. WINGERT. I went in in the spring of 1920.

The CHAIRMAN. And the Taylor Grazing Act became operative; it became a law in 1934, and became operative along in 1935. Is that correct?

Mr. HAVELL. Yes.

Mr. WINGERT. Approximately.

The CHAIRMAN. Now, were you operating during the base years, so-called, under the Taylor Grazing Act, the 5 years preceding the enactment of the law?

Mr. WINGERT. Yes, sir.

The CHAIRMAN. How many cattle were you running during that time?

Mr. WINGERT. Well, I think along in 1934, either 530 or 550, I was paying taxes on.

The CHAIRMAN. Was that running on the open public domain?

Mr. WINGERT. Partly; I am on forest, State, and Taylor.

The CHAIRMAN. You were running partly on the open public domain and partly on the forest?

Mr. WINGERT. Yes, sir.

The CHAIRMAN. For what percentage of time were you on the forest, and what percentage on the open public domain, off the forest?

Mr. WINGERT. Well, I ran probably 60 percent off the forest, 40 percent on.

The CHAIRMAN. Were you ranging 500 cattle on the forest with a permit?

Mr. WINGERT. No, sir.

The CHAIRMAN. What were you ranging under permit on the forest?

Mr. WINGERT. My permit first started, was about 120 head.

The CHAIRMAN. Then the balance of your 500 head were kept off of the forest?

Mr. WINGERT. Off.

The CHAIRMAN. When were you first reduced in numbers, and how?

Mr. WINGERT. Well, I wasn't reduced; I just saw it coming and had to sell and keep cutting down.

The CHAIRMAN. What did you see coming?

Mr. WINGERT. Well, it was the Taylor Act was coming; my cutting down on the property; the range was soaked up.

The CHAIRMAN. Go into that a little more in detail. In 1935 the Taylor Grazing Act became operative. You were advised to make a showing as to what your use of the open public domain had been. Did you make that showing, before the authority of the Taylor Grazing Act?

Mr. WINGERT. I did; I tried to the best of my ability.

The CHAIRMAN. And you gave them a description of the lands, or the territory on which you had grazed your cattle?

Mr. WINGERT. I did.

The CHAIRMAN. What was the result of your application for Taylor Grazing Act permits, or license, rather?

Mr. WINGERT. Well, the first applications I got more ground than the last. Come down to the last settling of it, I got very little.

The CHAIRMAN. Let's get this a little clearer. The first decision of the Taylor grazing administration gave you all the ground that you had applied for?

Mr. WINGERT. No sir, not nearly.

The CHAIRMAN. Did it give you enough to run your 500 head?

Mr. WINGERT. It did.

The CHAIRMAN. In connection with the forest and the State. Now, then, when were you reduced in acreage?

Mr. WINGERT. Well, it was—I don't know for certain—probably about 4 years ago, the first time.

The CHAIRMAN. Now, how did that come about?

Mr. WINGERT. Through Taylor section 15.

The CHAIRMAN. Well, it wasn't, then, through the Taylor grazing administration that you were reduced?

Mr. WINGERT. Well, it was redistribution for section 15 that did it.

The CHAIRMAN. Is there anyone here in the Land Department who can give us more light on this subject?

Mr. HAVELL. Mr. Chairman, I don't know this particular case, but I imagine we have the same thing here that we had all over the West. Section 15 of the Taylor Grazing Act provides for the leasing for grazing of the public lands so situated so as not to justify their inclusion in a grazing district, provided that preference is given to the homesteader, owner, or legal occupant of adjacent land, to the extent necessary to make the proper use of the so-called base property. In most cases we have found that more than one person is entitled to a preference, because of more than one person owning property adjacent to the open range. When we receive those conflicting applications, our agents meet with the applicants, around the table, and discuss the problem; and they endeavor to work out an agreement among themselves as to what the proper division of the range should be. There is not usually enough public lands remaining to give everyone all that they would like to have. It must be divided according to the respective civic rights.

I imagine that is the case here.

The CHAIRMAN. Let me clarify a little further.

Mr. Leech, are you familiar with this particular locality mentioned?

Mr. LEECH. No, sir; this is not within a grazing district, Senator.

Mr. HAVELL. It is section 15.

The CHAIRMAN. It's a section 15 problem.

Mr. WINGERT. May I add that I did not know of any division of this; didn't get any final notice from the Government; have one day before this 30-day time expired to file the contest. That is the point I don't like.

The CHAIRMAN. I was going to ask you this question: Was there a division between yourself and some other users?

Mr. WINGERT. No, not to my knowledge; and not to my agreement, Senator.

The CHAIRMAN. Was the land taken away from you and given to some other stock raisers?

Mr. WINGERT. Well, it comes so damned close to it I don't know what else you'd call it, taking my improvements.

The CHAIRMAN. Well, that's close enough.

There was, then, a controversy between you and someone else as to the use of the land?

Mr. WINGERT. Three.

The CHAIRMAN. Two others?

Mr. WINGERT. There was four in the community, and the other three set the lines, and I took what was left; nothing asked of me, or nothing given to me.

The CHAIRMAN. Was that decided by a representative of the Land Office?

Mr. WINGERT. I don't know who it was decided, but——

The CHAIRMAN. The case must have been heard by someone. Who heard it, do you remember?

Mr. WINGERT. I wasn't there, or didn't know.

The CHAIRMAN. Was there a hearing?

Mr. WINGERT. I don't know. Not to my knowledge, there wasn't, that I was present at or got any notice of.

The CHAIRMAN. No notice was given to you to appear at a certain place, at a certain time, and make representation as to the use?

Mr. WINGERT. Not in the last and final decision.

The CHAIRMAN. In any decision?

Mr. WINGERT. For the first year, for 1-year lease, and the second lease; didn't have anything done.

The CHAIRMAN. The first lease, did that give you all the land you wanted?

Mr. WINGERT. Well, no; but I think I could have lived off it.

The CHAIRMAN. Speaking of all the land, reminds me of an incident that happened some years ago in Nevada. A very outstanding farmer by one means or another acquired nearly all of the land in one fertile valley. He was an old German citizen, very frugal and industrious. One of the Government agents said to him, "Mr. Springmeyer, why do you want so much land?" He said, "Why, I never wanted very much land; all the land I ever wanted was what adjoined me."

So, sometimes we run into those things.

Has it come to the attention of either of the services?

Mr. HAVELL. I am unable to give you very much information now, but I hope to, before the hearing is over.

Mr. WINGERT. I would like to have a conference.

The CHAIRMAN. You have a conference with Mr. Havell, and if there is anything more you want to bring out at the hearings, don't hesitate. We have to stay away from the individual cases.

Mr. WINGERT. Mine is rather individual, but it means that or quit.

The CHAIRMAN. Well, we hope something will be worked out for you.

STATEMENT OF WILLIAM A. SPENCER, SPRINGERVILLE, ARIZ.

Mr. SPENCER. My name is William A. Spencer, cattleman, Springerville, Ariz.

The CHAIRMAN. We will hear anything you have to say, Mr. Spencer.

Mr. SPENCER. One matter with reference to the section 15, under the Taylor Grazing Act, that I want to touch on, briefly, was the division of a certain piece of land that had been part and parcel of the range that I had purchased in 1934; that was divided up in such a way a controversy is arising over the decision; a contested case, and I wanted to place it briefly before your committee, Senator.

The CHAIRMAN. I think it might be well, for identification purposes, if you would name the parties to the contest.

Mr. SPENCER. The parties to the contest, Mr. Sherwood of St. John, Ariz. This is just a matter of 40 acres, which in itself was of very little value. The land is bordered on one side, in the first place—I might state that lots 1 and 2, each lot comprising approximately 40 acres, section 6, township 10 north, range 29 east. I made application for this tract of land under section 15 of the Taylor Grazing Act.

There is a fence, an old-established fence line, along the west boundary of lot 2. I hold it under State lease, and I hold under State lease the land adjoining lots 1 and 2 on the north; that is, the south half of the southeast quarter of section 31, and also hold the land, all the land contiguous to lot 1 on the east, under State lease; and I hold the north half of the northeast quarter of section 6, which is contiguous land on the south, in fee simple; and the water on the west portion of section 5, which is also flat land.

The tract of land in question was one-half mile, east and west; one quarter mile north and south. There was a fence, an old-established fence line, built by my predecessor some 30 years ago, along the west boundary of lot 2, the lot in question. The investigator, Mr. Turner, made investigations there, and Mr. Havell was also up there and investigated it. The lease, Taylor Grazing Act lease, section 15 lease, was granted Mr. Sherwood, on lot 2 of said section 6.

Now, Mr. Sherwood has made a practice of turning cattle in on all the range in that entire area, with the exception of the southwest quarter of 31, which is also contingent on the west, which is owned by Mr. Sherwood. But the value of the land—he would fence that lot too, which would intervene me, creating a corner, and the cattle get hold up going from range to water. It could be watched and would not because it is a great inconvenience. The cattle come back and water along the fence; but as far as holding the lease on that, and turning cattle in that fence—the only land he controls is this pasture. It doesn't seem fair. I'm having to keep a man there all the time to keep these cattle drifted out. I discussed this matter with Mr. Havell, and he said it was a matter of the division of this range. I cited the fact that my predecessors in interest had had a fence around there, which it didn't go across the west boundary of lot 2. It was virtually necessary to enclose this little portion of unappropriated public domain in order to make a straight fence line.

The CHAIRMAN. I understand you have no objection to the manner in which it was decided to allot that 40 acres? In other words, the

allotting of the 40 acres rights to your neighbor was not objectionable to you. It is the manner in which he uses it; is that right?

Mr. SPENCER. It was that, and it was, too, objectionable to me, Senator. If I were fencing him, he would build a fence three quarters of a mile to fence in the 40 acres, in that part of the county, and it wouldn't pay to put in a 4-wire fence around that, just for the grazing value of the 40 acres.

The CHAIRMAN. Do I understand that your neighbor uses the 40 acres to turn his cattle loose on you?

Mr. SPENCER. I don't know whether he uses—he uses the pretext; goes up and turns the windmill on the patented lands; used to fill the tanks to which the cattle have access to water. I don't think it is fair that, under the circumstances, he be granted that 40 acres as an entering wedge to cause difficulty and trouble among neighbors.

The CHAIRMAN. The 40 acres was as contiguous to someone else as it was to you?

Mr. SPENCER. Well, I controlled land on two sides of it, and he controlled land on one side of it.

The CHAIRMAN. Was there a division of continuous open land? There were two lots, each of 40 acres. Was one of them given to you and one to your neighbor?

Mr. SPENCER. One to him and one to me. But it places him—I didn't make application for any unoccupied, unappropriated public domain, outside of my old-established fence lines, which followed the contour; some patented lands scattered throughout the whole—

The CHAIRMAN. I think it is admittedly an individual case; no part of a policy.

Mr. SPENCER. As far as I am concerned it's strictly individual. I don't know, as far as it affects the policy of the wisdom exercised in this decision, the wisdom of Solomon in the division of the child; I don't know.

The CHAIRMAN. Anyway, you have got one leg.

Mr. SPENCER. One leg, but I can't walk on one leg. That is, the 40 acres require three quarters of a mile fence into his property.

The CHAIRMAN. The difficulty that I see, if you'll pardon me, is this: That the committee of the Senate cannot set itself up as a final arbiter for a matter that does not enter into a general policy. It is an individual case, and if the congressional committee were to set itself up as a final arbiter of all these individual cases, well, we would just be at it all the time, and we wouldn't have any authority whatever.

Mr. SPENCER. My sole purpose, Senator, if you'll pardon me in saying so, in bringing this to your attention, was to see whether or not it is a policy. I feel it is an unfair policy, if it is the general policy. That is my sole purpose in presenting an individual case. I think there are other individuals in the State that have had the same treatment, and I feel that my individual case is unfair, and the same treatment is accorded others. If it is the general policy, it is not for me to determine, because all I can say is that it happens to be my case. If it happens in all other cases, I feel it is rather unfair and unjust.

The CHAIRMAN. Do any of the men of the departments have anything to say?

Mr. HAVELL. No, Mr. Chairman; except that I am not familiar with the details of this individual case. We have thousands of them, and it isn't possible to carry all of them in my mind. I might say, however, for the benefit of the group here as well as for the committee, that over in that section of Arizona we had more applicants than we had land. That presented a problem both to the State land commissioner and to the General Land Office. At the invitation of the State land commissioner I came out here last summer over the eastern part of the State and Mr. Williams and I spent considerable time with the stockmen looking at the range and working out a division of the range that was available to the State as well as to the Federal Government. I believe that good resulted from that joint undertaking. I'm not familiar with this case; we didn't go out and look at this piece of land; but evidently there were two applicants who qualified for preference rights. Two subdivisions were divided between them. That fence that has been spoken of must have been put up on the public land when it was an open range which is contrary to law. The Department has ruled that unlawful fences have no weight in the division of the range between preference claimants.

Mr. SPENCER. The matter was called to my attention today in which the Department through someone else as it did in my case, in spite of the fence, contended the preference rights to this land was not jeopardized because of the previous existence of an illegal fence. That is the case of William S. Litner, Phoenix case 08025.

The CHAIRMAN. As I understand the expression of Mr. Havell just made, an illegal fence does not necessarily jeopardize an application, but neither does an illegal fence give any support to an application. That is the way I understood the rule.

Mr. HAVELL. That's right.

The CHAIRMAN. I wonder if the land department would give this further consideration?

Mr. HAVELL. We would be very glad to.

Mr. RONSTADT. Mr. Chairman, at this time I would like to state the policy adopted by the Cattle Growers Association relative to section 15 lands; the general policy. It has been the belief of the Arizona Cattle Growers Association that all federally owned lands should be given to the State of Arizona. That is a general policy. We feel that a big burden could be taken off the shoulders of the General Land Office, the State of Arizona would be benefited immeasurably, which they are entitled to, if all section 15 lands were turned over to the State of Arizona. That is the statement of general policy.

We also would like to go on record, thanking Mr. Havell for the fine cooperation last year, and his continued cooperation this year. The cattle growers, and all the stock growers in the State of Arizona, appreciate his fine work. At this time we would like to have Mr. Havell give us a brief statement of the general policy of the Land Department, in relation to section 15 leases. We have no further witnesses to offer on section 15 leases.

The CHAIRMAN. Mr. Havell, the committee would be glad to hear from you.

**STATEMENT OF THOMAS C. HAVELL, GENERAL LAND OFFICE,
WASHINGTON, D. C.**

Mr. HAVELL. Mr. Chairman, I feel very pleased, indeed, to have the people in Arizona pay the field examiners of the General Land Office the compliment, that they would like to have them come over into Phoenix and live with them. That bespeaks a friendly and cordial relationship between our field examiners and the local people with whom they deal. As to whether a branch office can be opened in Phoenix, and some special agents, or field examiners, stationed here permanently, is an administrative matter that can only be decided by the Commissioner and the Secretary of the Interior. I am not able to make any commitment as to that, because, as I said before, this entire record will be reviewed by the Department, and they will see from the record the expression on the part of the people of Arizona to have some special agents stationed here permanently. That is as far as I can go on that.

As to the policy of the Land Office with reference to the administration of section 15 of the Taylor Grazing Act, we are governed by a single section in the Taylor Grazing Act itself. The policy has been set forth in the regulations that are available. Copies may be had from the Register of any of the district land offices. I don't believe that the committee would expect me to take the time to read the regulations, but, in substance, the regulations, and the policy, is that the public lands that are vacant and unappropriated and not included in a grazing district, are subject to lease under section 15. Anybody is qualified to apply; but preference must be given, according to the act, to the owners, homesteaders, or legal occupants of the adjacent lands, to the extent necessary to make proper use of the adjacent lands; with the further preference that, where the remaining public land is an isolated tract of 760 acres or less, the whole of the tract must be awarded to the adjoining owner.

Even there, we have difficulty, where there are two preference applicants claiming, as we heard just now, a mere 80-acre tract. We have endeavored to divide the range equitably, according to the needs of the respective applicants. That is the policy in a nutshell.

Now, as to the grazing fees, they are not competitive with the Grazing Service. They are worked out on the same basis as the charges within the grazing district. We do that purposely so that there will be no pressure, because of a difference in fee, to have lands taken out of a grazing district and put over under section 15 leases, or vice versa.

The CHAIRMAN. Thank you, Mr. Havell.

Are there any questions that anyone would care to propound to Mr. Havell, the representative of the General Land Office?

Mr. J. M. SMITH (Central, Ariz.). I would like to ask Mr. Havell if the length of section 15 leases would have anything to do with the fee charged? In the past there have been 1, 2, 3, and 4 leases issued. I have understood, when they were raised to 10-year leases, though, that the fee was increased. Is it the policy of your department to increase fees for longer leases?

Mr. HAVELL. When we started, in order to get the land into use under some sort of administration, we issued the leases for 1 year. During that year our field men were out examining the range, and gathering information on which they could issue a longer lease; so we began to issue leases, then, for 2 and 3 years, and now we are issuing leases for 10 years. There has been no change in the lease, or in the rental, from the 1-year lease to the 2-, 3-, or the 10-year lease. The formula is the same, all the way through.

The CHAIRMAN. Does that answer your question?

Mr. SMITH. Yes, I didn't quite understand his statement a while ago. If you are based on the basis of the grazing district in the vicinity; the fee was based on the basis of the Taylor grazing district in the vicinity. Is that the statement you made?

Mr. HAVELL. The fees are not competitive between the grazing districts and the section 15 leases. It is based upon the 5 cents a head for cattle and horses, and 1 cent per head for sheep; it has been all the time, and is that now.

Mr. SMITH. Mr. Chairman, I knew a case where a neighbor had applied for a 10-year lease and it was granted. His fee was raised from $1\frac{1}{2}$ cents an acre on the land to 3 cents an acre. That is the reason—

The CHAIRMAN. It was raised from what?

Mr. SMITH. From $1\frac{1}{2}$ cents an acre to 3 cents an acre; and he had considerable difficulty in having it cut back down to 2 cents. I think he paid that 2 cents an acre.

Mr. HAVELL. I'd better qualify what I said a minute ago. What I said was correct as to the fees. The rentals, under section 15, however, under no condition, are more than the State charges for its lands. So, when the State was charging a penny and a half, we held ours down to it. If the State raised it, and it was worth the increased amount, we raised ours an equal amount. I qualify my first statement as to that extent.

Mr. SMITH. Let me make this statement, Mr. Chairman, that the State lands were selected a good many years ago, and some of the finest lands in the State are under State lease. What was left for the Taylor Grazing Act and section 15 is not comparable and should not be charged the same amount as State lands.

The CHAIRMAN. I think that is a matter for study and consideration. It is a matter that you will have to work out administratively, I imagine.

Very well. Now, Congressman Murdock is here, and, with reference to Senate bill 978, discussed this morning, Congressman Murdock has a statement that he desires to make.

STATEMENT OF CONGRESSMAN JOHN R. MURDOCK, OF ARIZONA

Mr. MURDOCK. Senator, I want to thank you again publicly for the invitation to attend and take part in this session. I want to say publicly, while you are among us, that I have even more appreciated the several invitations I have had from you and your office to attend other committee hearings, mostly in the city of Washington with reference to mining.

I don't know how many mining men may be present in this audience, but I want to say to you that Senator McCarran, of Nevada, is

the chief exponent of some of our mineral production, especially of the white metal, at the Nation's Capitol; and, naturally, since this is a silver-producing State, I am glad to work with him, and under his direction, on such matters.

There is also a matter on which I wish to express approval of the Senator's efforts. This bill, S. 978, has been partly approved by several bodies, official bodies, here in the State. Senator, you have received communications from several boards of supervisors, unqualifiedly supporting this bill, and I'm glad to say that it has my hearty support. I might say that I was hoping to get here before the matter had been taken up; but I find, upon my late arrival this morning, I had missed the general session on it. I might say that interest in Arizona concerning this bill arises partly out of another bill which is before Congress, chiefly now before the House Public Lands Committee, and that is H. R. 838. That bill, on which hearings have been held, but not concluded, is a departmental bill, which would place all lands relinquished by the land-grant railroads back as a part of the public domain, with the provision that all tracts of land relinquished by railroads should become a part of those withdrawals or reservations within whose exterior boundaries such tracts lie. By "reservations and withdrawals," I have reference to Indian reservations, national forests, and the like.

Now, of the 8,000,000 acres of land in 13 Western States released by land-grant railroads, 2,400,000 acres plus are within the State of Arizona. The departmental bill, H. R. 838, would make the disposition of such lands, as I have just explained. I have opposed that bill. Final action has not been taken on it by the House Public Lands Committee.

This bill, Senator, S. 978, makes somewhat different disposition. At least, this bill would provide that for every acre returned to such reservations and withdrawals an equal quantity of land shall be selected by the State land departments from the public domain and become the property of the State within which it lies, the benefits of which are to be used for educational purposes. I want to say, Senator, that we in Arizona feel that that is a very wise provision, and we trust it will be enacted into law. It would mean, in this State, about 2,400,000 acres administered by the public State land department of Arizona; and it would mean that land formerly on the tax rolls, paying taxes to local and State government, would become again a producer of local revenue for the support of the State institutions.

For my own part, I would like to see the term "educational," as used on page 2, line 1, and page 2, line 21, defined and broadened a little bit, so as to be capable of interpreting the support of eleemosynary institutions, as well as educational institutions.

With that, I want to say, Senator McCarran, thank you for the hearty support of S. 978 in the State of Arizona, and I pledge you my support in its enactment.

The CHAIRMAN. Thank you, Congressman.

Now, we are going to change the order just a little, because our national park and monument authorities cannot be with us tomorrow. They are here now, some of them. We are sorry that Mr. Drury, who is the head of the national monuments, cannot be with us here. He was called back to Wyoming, on account of the Wyoming incident of

the Teton National Park. The heading now is, "National parks and monuments and recreational areas."

Mr. Ronstadt, what do you have?

Mr. RONSTADT. Senator McCarran, it is the policy of the Arizona Cattle Growers Association to again state that we feel there are too many agencies administering grazing lands. We have to deal with the United States General Land Office, the Forest Service, the Grazing Division and national parks and monuments and recreational areas. It is our hope that, some day, this might be consolidated. We don't want to go into it now, however, but we would like to call some witnesses to give some testimony as to what has been going on within our national parks and monuments.

Senator Hayden has a bill before Congress relative to the Saguaro National Monument. We have a man here who lives in this area and knows that problem, and we would like to call on him.

STATEMENT OF JAMES CONVERSE, TUCSON, ARIZ.

The CHAIRMAN. Will you state your name, please?

Mr. CONVERSE. James Converse, Tucson.

The CHAIRMAN. What line of business are you in, Mr. Converse?

Mr. CONVERSE. Livestock.

I think that before this monument question is discussed, and this one in particular, I might say this monument is being used, more or less, as an example; that it would be well if Mr. Kneipp of the Forest Service gave this group some historical background of the set-up of this monument, after which I would be very glad to continue with other angles.

The CHAIRMAN. To which monument do you refer?

Mr. CONVERSE. To Saguaro National Monument.

The CHAIRMAN. Mr. Kneipp, we would be very glad to hear from you.

STATEMENT OF L. F. KNEIPP, ASSISTANT CHIEF, UNITED STATES FOREST SERVICE, WASHINGTON, D. C.

Mr. KNEIPP. For the record, I'll say that I am L. F. Kneipp, Assistant Chief of the Forest Service.

The Saguaro National Monument had its origin in 1932, when President Hoover and Secretary of the Interior Mr. Wilbur visited Tucson and were shown the wonderful stand of saguaro cacti growing near Tucson. At that time President Hoover indicated that he would be glad to take some action which would preserve it. There were certain events that occurred that month that left him only a very little time in which to take such action; so, in the succeeding February, Mr. Frank M. Hitchcock, who had been Postmaster General under the previous administration, after a conference with the directors of the university, and other interested parties, came to Washington with a proposal that the monument be established. It had to be done very quickly.

The attitude of the forest supervisor at Tucson and of the regional forester was that the area proposed for inclusion in the monument was far greater than was necessary. They were proposing to establish a monument of over 63,000 acres, whereas the outstanding or climax growth of the saguaro was on about 10,000 or 15,000 acres. Nevertheless, it was reasoned that since, at that time, national monuments which

were within national forests were administered by the Forest Service, without any impairment of other uses, that, even though the monument appeared to be excessive, there was no real objection to the carrying out of the wishes of the people of Tucson. Therefore, none was offered by the Department of Agriculture. So, on March 1, 1933, a monument was created by proclamation of President Hoover. But it did contain this significant statement:

The reservation made by this proclamation is not intended to prevent the use of the lands now within the Coronado National Forest for national-forest purposes under the proclamation establishing the Coronado National Forest and the two reservations shall both be effective on the land withdrawn, but the national monument hereby established shall be the dominant reservation, and any use of the land which interferes with the preservation or protection as a national monument is hereby forbidden.

The reason for the establishment of the monument was:

Whereas a certain area in the Catalina division of the Coronado National Forest in the State of Arizona and certain adjacent lands of outstanding scientific interest because of the exceptional growth thereon of various species of cacti, including the so-called giant cactus, it appears that the public interest will be promoted by reserving as much land as may be necessary for the proper protection thereof as a national monument.

That was the way the monument came into being.

That same year, the President, by an Executive order, transferred to the National Park Service the jurisdiction over all national monuments, including those within National Forests. That did not cause so much of a change because, by agreement with the National Park Service, the Forest Service continued to administer the grazing, and the fees charged were exactly the same as on the adjoining national forest lands.

The outstanding difference was the fact that within the monument the grazing preferences would last only during the life of the permittee and were not transferable.

In 1934, Dr. Shantz, who happens now to be employed by the Forest Service, but who, at that time, was the president of the University of Arizona, wrote a letter to Arno Cammerer, who at that time was the Director of the National Park Service, in which he raised the question as to the desirable permanent extent of the national monument. His letter was dated February 28, 1934, and he outlined some discussion he had with the representatives of the Park Service. He makes this statement:

We have gradually bought off the settlers and now hold five and a half sections marked in blue on the attached map. This is held in lease from the State with the exception of the quarter sections in sections 10 and 15 to which we have title. The heaviest stands of cacti are in sections 8, 16, 17, 20, and 29. The good stands extend up to the Tanque Verde ridge but thin out to some extent. They extend roughly to about the yellow line. They are scattered stands farther over in the Rincon Basin but it is safe to say that the national monument as set up lies largely outside of the area of the Saguaro stands. With this in mind Mr. Langley thinks it desirable to suspend all plans for the development of the area until an examination can be made to determine boundaries. I have drawn roughly on this map a green outline which would take in all of the best of the Saguaro stands and would also make available the high land back of the stand. In our conference we felt that probably the retention of the sections lying north and east of the Tanque Verde ridge would offer ample opportunity for developing a highland road especially desirable in that it would afford a view of the whole area. I think it would be unwise, however, to make decisions by a study of the map but would much favor a careful examination of the project

on the ground for the purpose of determining the desirable sections of the monument and to eliminate the possibility of developing a large area of wooded mountain which is in no way distinctive and which is in no way connected with the Saguaro stand. The university sees no objection to a reduction of the area to include only the main stand of Saguaro.

That was the point at which a proposal for a reduction in the 63,000-acre area first took definite form. The next major development is the act of May 21, 1934, under which the university was empowered to select certain lands within the adjoining monument area.

The next is a letter from the forest supervisor, under date of May 10, 1937, which brought out certain points as follows:

When the question of establishing the Saguaro National Monument was first under discussion, the meetings for the most part were held in the Forest Service office and the tentative draft of the executive proclamation was drawn up in this office. Not much question arose as to the desirability of including the University sector as a national monument, for it was felt that the stand of Saguaro and other desert-plant growth within this particular area fully measured up to national-monument requirements. Grave doubt was expressed, however, as to the wisdom of including some 53,000 acres of national-forest land included in the Rincon division within the proposed monument for the very good reason that it contained no outstanding scenic features which would justify national-monument designation. In fact, this particular area is typical of thousands of similar acres included in southern Arizona national forests primarily for watershed and forest-protection purposes and to a less extent for the grazing of livestock and for the support of wildlife species.

Then, in June 1937, Senator Hayden introduced a bill S. 2648, which, if enacted, would have had two or three conspicuous results. One would have been to include some limited additional areas in the monument, authorize the acquisition of certain lands and the appropriation of \$95,000 for that purpose, and further authorize a certain selection by the university. Then the bill provided that, with the exception of the lands as described in the first sections, the rest of the monument area would revert to a national-forest status. That bill was not passed; so, on January 4, 1939, Senator Hayden introduced S. 7. Its major features were very much the same. The result of the bill would have been a national monument of 10,960 acres and the return to the national forest of about 50,880 acres. On June 8, 1941, Senator Hayden introduced another bill, S. 259. On January 12 he reintroduced S. 394, of which the purpose was merely to correct a typographical error, or omission, from S. 259. Neither of those bills was enacted, and on January 14, 1943, Senator Hayden introduced the pending bill, S. 379.

The attitude of the Department of Agriculture on these several bills has been generally favorable. The Secretary of Agriculture questioned certain details of the bill, but thought its general purpose was quite desirable, and, except for minor changes, not of very great moment, all of the bills which have been introduced up to S. 394, have had the general endorsement of the Department of Agriculture. I do not believe that the Secretary of Agriculture has as yet made a report on the pending bill, S. 379.

That is the background for the monument, as far as it is seen by the Forest Service. As to the details, I presume the stockmen who are here could speak more in detail upon it than we could.

The CHAIRMAN. Let me say that the bill S. 379 is now pending before the Committee on Public Lands and Surveys and has been referred by that committee to a special committee of two, consisting of the senior

Senator from Nevada and Senator Willis, of Indiana, and these hearings will be conducted so as to give as much information to that special committee as possible. Senator Hayden has, I think, two amendments pendencies to 379. I have copies of those amendments here, but Senator Hayden will be here himself tomorrow and he will have an opportunity to discuss it.

Thank you, Mr. Kneipp. Are there any questions of Mr. Kneipp?

STATEMENT OF JAMES CONVERSE, TUCSON, ARIZ.—Resumed

Mr. CONVERSE. That gives you the background of this Saguaro National Monument.

I think one of the things that the stockmen are vitally interested in in connection with these parks and monuments is the method of acquisition, in many cases. As Mr. Kneipp pointed out, in the early stages the national monuments lying in forest areas were administered by the Forest Service. Their policies were not averse to grazing, and there was never any friction with the stockmen, and things rocked along fine.

When Mr. Roosevelt took office, they took from the Department of Agriculture these monuments and placed them in and under the jurisdiction of the Department of the Interior. Then, of course, the only sensible thing to do was to mix the damned things in with the national parks; and they did that. To create a national park it takes congressional action. To create a national monument requires an Executive order, or the equivalent thereof. The sentiment within the law providing for the creation of these monuments was that, in the places of unique interest, small areas, where there were objects of antiquity and things of that nature, they should be preserved for the use and the beautification of the country and the use of the public. That act provided the machinery whereby these things would be acquired and established immediately, without congressional action. Obviously, after this jumped into the Department of Interior's kitty, it was pretty easy to say, "Well, boys, this is a monument." They had the monuments and the parks, both; it didn't make much difference, it was all the same, from their viewpoint.

I personally think and a lot of the cowmen who are sitting around here will agree with me, that this is a sort of a rough policy; but it was an abuse of this policy as we see it. Originally, there was an agreement between the departments as to the administration of these things, and, as you know, which you probably heard from what Mr. Kneipp had to say, the Park Department did not go along on that agreement, and didn't play their end of the deal.

I hope we are not getting too rough on any park officials that are here, but this is the way I see it, and I'm going to get this whole thing off my chest.

The national parks were set up with the same motive as the monuments, to perpetuate and protect objects that were of national interest, unique places, places of particular beauty, and so on; but it took a little more time to do it. But the law very definitely, in setting up the national parks, specified that these areas should comprise only an area necessary to safeguard and protect that particular object, or those objects. Now, then, when you reach out and take 63,000 acres

to protect ten-thousand-eight-hundred-odd acres, for which I gave them 3 sections to start the deal—because it should be preserved and it was a commendable project. But they are sort of like a pony going down the road, that's too long-legged, and is overreaching a little bit. First, they thought they'd take this site over for the University of Arizona, and then it got over into a State deal. Hitchcock and Hoover got together, and they got shoved along by the influence of some Tucson gals' clubs, and a few things. They went down to Washington and put the pressure on, and it was all done in a hurry. There was no malice in any of it, they weren't out to grab land; but they made the deal in a hurry, and they couldn't see this far into the future.

Now, we had a fire up there, and about 10,000 acres were burned. The lines had been defined as to the Forest Service. They blocked out what belonged to the Park Service. The Park Service has a big-sized corral up there. They hollered about a lot of Chihuahua pine, Mexican pine, being unique to that particular area. Gentlemen, that is not the truth. Those pines are no more unique in this particular area than people are in this room. Those pines exist, have grown and died, on the Catalina and all of the other damned mountains in that end of the country. But the Park Service needed a little more trading stock; they were trying to get the Forest Service out of something that was mapped.

Now, this fire busted loose in that area. There are some experienced fire fighters, good cowboys, who know how to trail a bull elephant through a snowdrift, which is more than the Park Service men demonstrated they knew. Well, they heard about that fire, and they got an airplane, and they flew them over the top of the damned thing in an airplane, and looked the situation over. That is true; I can prove it. The Forest Service boys tendered their services to fight this fire on the Saguaro National Monument, and they were turned down. Instead, the Park Service flew in 13 head-of-park officials in there, from all over the country. They didn't know that country, or anything about it. I sat on the radio all night, while this fire was going on, listening to 13 officials up there watching that fire burning, and fighting each other. Now, I want you to get this story, so you can see the sort of thing that's going on. If I am taking up too much time, I'm sure the Senator will throw me overboard.

Well, they couldn't make up their minds who was the boss, and they kept fighting, and the fire kept a burning, and they refused the services of competent fire fighters, backed up by some Federal fire fighters. Finally, they decided they couldn't do anything about it, so they called the Forest Service over, and they said, "This is the line. This fire is going over into the forest." Well, the Forest Service gathered up all the boys who'd had a number of years of experience in fighting these things, and when those boys get to work with a shovel they can put a fire out fast. The park officials had turned them all down, but they finally had to make use of them; and with the help of the men who knew what they were doing, they finally put it out. That's exactly what happened. The Forest Service went over, and they got shoved around a little. Old Ed McFarland knows what he is doing. He's the forest ranger, in charge of that Catalina district, on that national forest. They had quite a little chin music between the two of them out there, three or four on one

side and a number on the other; and finally Ed said, "This is the Forest Service line; when the fire gets to this line, the Forest Service will put it out;" and that's what happened. The fire could have been put out quite easily in the early stages of the game.

I'm not telling you something I don't know; but because it happens to be on my ranch, I think maybe I do know something about it. But it burned this 10,000 acres, and it burned this Chihuahua pine they were so anxious to save, the whole lot of it; and it cost the public about \$15,000 or \$20,000; closer to \$20,000 than \$15,000.

The whole thing embraced an area far greater than it should have. It was far greater than was originally intended. The project took in things which were no more unique than those found on the top of any mountain in southern Arizona. That was timber, and it was there without adequate protection.

The Park Service never had a man that knew anything about what to do. I told them about some springs on the north side of that mountain, and I figured they could follow the tracks and get to the springs; but they couldn't do it. They had no business being there. But I did, when the fire burned the roots, show them the springs where they could get some water. They had 500 soldiers—lost, strayed, and stolen soldiers—all over that country.

I'm telling you this story to try and show you what I don't believe need be shown, that—I'm going to be awful frank, and somebody's going to get mad at this—but again, I don't give a damn. When Mr. Ickes and his gang get through with their grabbing land, the cowman sure is going to have to look hard to find a place to go.

I think that's all I have to say. [Applause.]

The CHAIRMAN. I told you at the outset to say what you had to say and say it the way you wanted to say it; so everything is all right.

(The following resolution by the Arizona Game Protective Association was submitted for the record after the close of the hearing:)

RESOLUTION No. 22

Whereas the area embraced by the Saguaro National Monument is much greater than is practicable and covers a great area upon which there is no Saguaro cactus: Therefore be it

Resolved, That the Arizona Game Protective Association in convention assembled at Prescott, Ariz., this 25th day of September 1943, strongly protests the unnecessary size of this monument and recommends that it be reduced to an area adapted only to Saguaro cactus, and that the surplus land be returned to the agency from which it was originally taken.

Resolution adopted.

The CHAIRMAN. Mr. Ronstadt, do you have someone else?

STATEMENT OF JOHN G. BABBITT, FLAGSTAFF, ARIZ.

Mr. BABBITT. My name is John Babbitt, and I am a cattleman from Flagstaff, Ariz.

The CHAIRMAN. I want to express the apology of the committee to you, Mr. Babbitt, in that time did not permit us to hear you at Fredonia.

Mr. BABBITT. That was my brother. He is the politician in the family, and I am the cowman.

I'd like to say a few words about the Wupatki Monument, Senator.

About 10 years ago, Senator, 2,200 acres of Indian ruins were set

aside up in our country, in Coconino County, and about 5 years ago we woke up one morning and found out that they had enlarged 2,200 acres of land to around 36,000 acres; and I can say right now that the only reason it wasn't doubled was the fact that the rest of it was on the forest, and the forest people helped us fight it. Well, we weren't able to get a lease on that land until last year, and now the proposition they have to give us is a 3-year lease, which is supposed to be renewable for the life of the permittee.

Well, now, as far as we're concerned, that is a terrible sort of a lease. We have \$25,000 or \$30,000 invested in pipe line, 17½ miles long, that comes down within a half a mile of that national monument; and that water, as far as we are concerned, might be canceled out tomorrow. We have no protection whatsoever. We can't go ahead and develop our land. It is an area enclosed and has a winter carrying capacity of 1,100 head of cattle. If we have to go out of there, with 1,100 head of cattle, we don't know what we'll do with them.

Another thing is we cannot borrow on it; can't sell it; can't do anything. The only thing we can do is pray that we live a long time. I think that it is just common sense that on an area such as that, which shouldn't have been made one-tenth that large to begin with, if they must have that area, they should give us some kind of protection on a lease.

Now, on that lease, this area has on this enlarged area—it hasn't any more Indian ruins on it than any other section of land on our entire range. I don't think that is an exaggeration to say that. I don't believe there is a section of land on any of our ranches, up there, that hasn't got a lot of Indian ruins. Why they want to enlarge it to take in such a tremendous area is something we cannot understand. But since they have got it, let's get some kind of a lease that will give us some kind of protection there; go ahead and develop the country and spread out our cattle; only use it in the winter, when there are no tourists around anyhow. We don't think that is at all unreasonable to request that such a lease be given us on that particular land. As you probably have heard before, in Coconino County we have only 8 percent of the land left in private ownership. The Federal Government has had 60 or 70 years to take the best 82 percent of our county, and we feel that this remaining 8 percent should be saved for the people to live up there; and in that regard, I'd like to say that on this railroad-land proposition we certainly hope that the Federal Government will see fit to give it to the State, those Santa Fe lands for base, so that we can have some revenue in that county, and so that there won't be any Federal acquisitions of land in that county, because we just can't stand to lose any more.

One other thing I'd like to bring your attention to, Senator, not on either of these points, but it is the question of Indian lands. It does not affect us, except in such a very small way, but we have a lot of neighbors, in Navajo and Apache Counties, who have been promised their Indian allotments would be taken out of their holdings and put back on the reservation. That was a promise made when the reservation was extended here some years ago. These Indian allotments have never been consolidated, and are still out on these private ranches, and, although the Indians may have had residence rights there, the

cattlemen certainly have, too. We would certainly think the only fair thing would be that the Indians be made to get back on the reservations.

I think that is all I have to say.

The CHAIRMAN. Just a moment. Are there any questions? This is a very explicit, knowing witness. Is there anyone here who would care to interrogate Mr. Babbitt?

STATEMENT OF M. R. TILLOTSON, REGIONAL DIRECTOR, NATIONAL PARK SERVICE, SANTA FE, N. MEX.

Mr. TILLOTSON. The arrangements that were made with the Babbitt brothers, in regard to the use of the lands on Wupatki National Monument, grazing rights there, I understood, were perfectly satisfactory to the company. Now, they have been a long time working out the deal. Mr. Richards, superintendent of the monuments, made a special trip, in fact several trips, to deal with Mr. Babbitt and his associates, and on his return with the final agreement, I understood that it had been worked out, and the matters were entirely satisfactory, until at Fredonia I asked your brother, Jimmy, about it, Mr. Babbitt, and he said it was unsatisfactory in regard to the termination and the death of the holder.

Mr. BABBITT. Well, Mr. Tillotson, I think we have always tried to cooperate with the National Park Service. I'll tell you, though, when you offer us a 1-year lease, or 3-year lease, or if we finally are able to get a lease for the lives of the survivors, you know what we are going to take. I'm not criticizing you because of the law. I believe the law at the present time is set up that way. The only thing I say is that it is unfair for us to go ahead on that kind of a lease, because we know that some day that is going to be stocked with antelope, or something. Now, we haven't got anything against antelope, we board 700 or 800 of them on our own private land and State leases. They are so numerous that they have declared open season on them this year. We don't object to them. We think they're a fine thing. But this country we are speaking of, there are no conflicts there between the antelope and the cattle, or anything else. But the whole thing is that, with the guiding force in the National Park Service, as Mr. Converse stated, in Washington, you just can't trust them. We have another national monument set up there, without anyone knowing a thing about it. Senator Hayden went to the park officials in Washington and the park officials denied there was any such thing even contemplated. At that minute, there was a proclamation on the President's desk setting up that national monument. So, I say, we want as much protection as possible. If we could only get it through legislation, we think that we are entitled to get it.

Mr. TILLOTSON. The entire matter of policy in regard to determination of grazing permits on the national parks and monuments came in for considerable discussion at the Fredonia hearing; and that is simply a policy, and it is a matter of whether or not the Department of the Interior continues that policy, or whether they see fit to make a change.

Mr. BABBITT. Of course, when this was set up, Mr. Tillotson, there was the original proclamation, saying it was set up subject to vested

right; and I wrote Senator Hayden and asked him what they meant. He said he thought, in his opinion, that that covered stock rights. When those rights were mentioned; there was no time limit put in that proclamation as to how long those rights are going to be good. It says that it is subject to existing rights. If that means what it says, it seems to me those rights should be transferable and be good for perpetuity.

Mr. TILLOTSON. That is an interpretation, and probably a proper interpretation of the limitation.

Mr. BABBITT. As I said, I am not criticizing local officials. We have gotten along fine with them.

Mr. TILLOTSON. There is no question as to that. It's not a matter of personalities, everybody understands that; but that is simply a matter for interpretation of the intent of the proclamation in regard to existing rights.

The CHAIRMAN. If the Federal authorities want to create the parks or monuments until they have covered a substantial part of the State of Arizona, or any other State, and if they continue with the policy that these grazing rights are neither transferable nor can they be handed on, it will be only a couple of lifetimes until there will be little or no grazing in some of these Western States, of which Arizona gives promise of being the very first, because of its natural objects. But, as Mr. Tillotson said, we are dealing with a policy. It seems to me that the matter is properly brought before this committee, because it is the duty of this committee to go into policies, and make its recommendations, and attempt to have legislation passed.

Is there any question while Mr. Babbitt is on the stand? Very well, Mr. Babbitt, thank you.

Mr. RONSTADT. Mr. Chairman, now we have had our witnesses. I would like to state the request for recommendations of the Cattle Growers Association. We request of our congressional delegation and your committee that you try and enact legislation to prohibit the withdrawal by proclamation or Executive order of any recreational, national park areas.

The CHAIRMAN. I might say to you in that respect that Senator O'Mahoney of Wyoming and the chairman of this Committee have already taken time by the forelock and introduced a bill to repeal the monument law. I don't know how far we are going to get with it, but we are going to get somewhere, if we just create a disturbance with it.

Mr. RONSTADT. Also, it has been defined by law, as to the method of granting leases, based on the commensurability of those who grazed in that area previous to the withdrawal.

The CHAIRMAN. I didn't quite catch that last.

Mr. RONSTADT. Also, regulations have been set up, by law, similar to those of the Taylor Grazing Act, setting forth the rights of those grazing within those areas, based on the commensurability of the adjoining lands, and so forth.

The CHAIRMAN. And their right to transmit, or pass on, and dispose of?

Mr. RONSTADT. Correct.

The CHAIRMAN. Is there anything further on this subject? Does anyone here care to say anything further on this particular subject? If so, you may be heard now.

STATEMENT OF J. A. MEDD, SKULL VALLEY, ARIZ.

Mr. MEDD. This is a resolution, in cooperation with the other stock growers of the State of Arizona, presented by the Arizona Mohair Growers Association:

The Arizona Mohair Growers' board of directors, in regular meeting August 28, by unanimous vote, regularly passed the following resolution for the information and guidance of the Arizona congressional delegation and the McCarran Lands Committee.

In the past much land has been withdrawn from beneficial range use by the establishment of national monuments by Executive order. This withdrawal has, in many instances, worked a hardship on the livestock industry of the State, reduced the State tax base, and interfered with private use of land: Be it therefore

Resolved, That this association go on record as being unalterably opposed to this procedure, and that they urge that Congress, at the earliest possible date, pass such legislation as is necessary to revoke the authority granted the Chief Executive by previous legislation to create national monuments by Executive order and place this authority in the Congress.

The CHAIRMAN. The resolution will be entered into the record.

Are there any questions? Does anyone care to state anything further?

Mr. MEDD. I have nothing further at this time.

Mr. RONSTADT. Mr. Chairman, I am sorry; I overlooked one witness, Mr. Steve Bixby, of Globe, Ariz.

STATEMENT OF STEPHEN L. BIXBY, GLOBE, ARIZ.

Mr. BIXBY. Senator, I have been asked to bring to your attention, because in your last hearing there was a discussion of a fencing project on the Tonto National Monument, in Gila County. As an outgrowth of that, Mr. Hugh Miller, their acting regional superintendent, I guess, or Director of the National Park Service, agreed to get together on the ground with the affected stockmen regarding fencing of the monument. They followed through, in part, but not in whole, and so the situation is still very bad, as far as the stockmen are concerned. The situation was that, following the hearing, Mr. Richey, Director of the Southwest National Monument, got together on the ground with the local forest ranger and the local custodian and the stockman, Mr. Cooper, neighboring stockman, and Mr. Neil, and agreed on a fenced line.

Well, then, when they started fencing, on one end of it they did all right. They more or less followed the agreed line. But on the other end of it they deviated so far from the agreed line that they took in about a section more than they had agreed to, and also got over the natural drift of the cattle to about two additional sections of range. That man who operates on this area is a very small stockman; he only has a forest permit for 160 head, breeding herd; so that large an area, cut out the best part of the range, is materially lost to him. He feels he has been short-cutted, because they have a definite agreement on the ground. Although he protested to the foreman of the fence job all the time during construction, it went ahead and they fenced it off.

The CHAIRMAN. With whom was the agreement?

Mr. BIXBY. With Mr. Richey.

The CHAIRMAN. Is Mr. Richey here?

Mr. TILLOTSON. No, Mr. Chairman.

The CHAIRMAN. How far away is he?

Mr. TILLOTSON. He is in Santa Fe, Assistant Director of the Southwestern National Monuments.

The CHAIRMAN. Do you know anything about this?

Mr. TILLOTSON. This is simply a matter of an individual case, about the location of the fence; is that right?

Mr. BIXBY. Yes; but it shows they don't always follow through what they say they will at these hearings. That is why I want to bring it out. We think these hearings could be valuable, in a legislative way, if these administrators would follow through with their expressed intentions here.

The CHAIRMAN. We had hoped that they would serve both purposes, and to a large extent these hearings have served both purposes. It is really encouraging to know how many individual cases have come to a fairly satisfactory conclusion, after these hearings, and I hope that this one can be worked out the same way.

Mr. TILLOTSON. May I make a point, Mr. Bixby, to take this up immediately on my return to Santa Fe, which will be the 9th of September? I don't know enough about the details of the fence lines to go into it with you now; but I would be glad to talk to you after the meeting, and I assure you I will find out about it as soon as I get back to the office on the 9th of September.

Mr. BIXBY. I appreciate your expressed intention.

Mr. TILLOTSON. What is the name of the individual concerned?

Mr. BIXBY. Chester Cooper. I hope the results will be a little bit better next time.

The CHAIRMAN. This supervisor, will he be at the Albuquerque hearing?

Mr. TILLOTSON. He can be there.

The CHAIRMAN. I would be pleased if he would be there.

Anyone else on this subject of grazing districts?

Mr. RONSTADT. Senator McCarran, the Arizona Cattle Growers Association held a meeting last night, and questions were asked as to any testimony that might want to be given today by any individuals as to their relations with the Grazing Service. There were no individual cases, at that time, that might typify policy, but we did go on record as appreciating the good work that has been done in this State by Mr. Brooks, of the Grazing Service, and the fine cooperation that the cattle growers have had from his department. We wish that that be made a part of this record.

However, there may be many here that were not at the meeting last night, who have some problems they would like to bring before the Senate committee.

There is Senate bill 31, however, that came to the attention of the committee last night, which has been introduced by you, Mr. Senator; and the Cattle Growers Association wishes to endorse that bill and pray that it be passed. That bill covers—I might read for the benefit of the audience:

The Secretary shall not make any change in the fees payable for grazing livestock within any district unless the advisory board for such district has consented to such change.

We would like to have a brief statement from Mr. Leech, of the Grazing Service, as to any contemplated changes in policy, if he has any.

The CHAIRMAN. Very well, Mr. Leech.

Mr. LEECH. Are you referring to the question of fees under S. 31?

Mr. RONSTADT. Yes.

Mr. LEECH. The matter of fees, increase, or change in fees is held in abeyance for the duration, under an agreement between the Director of Grazing and the National Advisory Board Council. That meeting was held at Salt Lake City in January of 1941, at which time the range appraisal that was presented to Senator McCarran's committee at a number of hearings, was gone over again, fully, with the national council; and at that time the director and the council agreed to hold the matter of fees in abeyance for the duration.

The CHAIRMAN. I might say that, with reference to S. 31, there are many reasons behind the introduction of that bill. I can anticipate that the Department will not look with favor upon the bill. At the same time, if a democratic form of government is to prevail, with reference to the administration of the Taylor Grazing Act—and that was the policy set up by the Interior Department—then the advisory boards should have a greater place, or a place of greater prominence, in the fixing of fees in their respective districts, because they, being on the ground, and knowing the conditions, should certainly be consulted, and have a heavy hand in the fixing of charges and dues pertaining to the welfare of the stock-raising industry.

Is there anything else under that head?

Mr. Havell, of the Land Office, I notice your name is on here. Is there anything you wish to say?

Mr. HAVELL. I think there is nothing here calling for a discussion.

The CHAIRMAN. That brings us down to stock driveways.

Mr. RONSTADT. Mr. Chairman, we had quite a long discussion; we have had stock driveways—I might mention for the record that it may be unusual in this State, I don't know whether it happens in other States or not, that the mohair growers, the wool growers, and the cattle growers, always agree on land problems, which is quite unusual, I think. Today a meeting was held with the president of the wool growers' association, the cattle growers' association, and the two associations agreed to try and settle their difficulties on the stock driveways, and to submit it to the Department of the Interior, or the General Land Office, for their approval. We would like to go on record, at the present time, notifying Mr. Havell that he will receive, shortly, a compromise agreement between these two organizations, and hope that he will accept it.

The CHAIRMAN. That also applies to the other services as well?

Mr. RONSTADT. I think so, although that was not discussed.

We have one witness who would like to be heard; two witnesses, in fact. Mr. O. C. Williams, of the State land department has had quite a lot of experience with stock driveways, and we would like to have the committee hear what he has to say.

Mr. O. C. WILLIAMS. Mr. Chairman, I had thought that this last meeting of these two services, or two organizations, would possibly take care of the stock driveway questions.

The CHAIRMAN. In these stock driveways, it is a brand-new question to this committee, because at no other hearing have we had it, neither at Wyoming, Utah, Nevada, or any of the other hearings. It is a very interesting subject, and it seems to me to be a rather perplexing

one. Anyone who has anything to offer to the committee, that might look toward a solution of the problem, it seems to me, should offer it.

Mr. WILLIAMS. I might say, on these stock driveways, we have had numerous meetings with the wool growers and cattlemen, trying to work out this problem, and it is a complex one. The complete problem arises from the necessity of making connections from public domain land, connecting links of stock driveways, from the forest department lands and public domain land, and connecting up with the feeding ground, where the sheep are transported. If this question is pursued, some purchases will have to be made, and lands set aside for these stock driveways, because they are only on isolated sections now, sometimes 10 miles between one stock driveway section and the next one. In the intervening lands, they have to be driven over patented lands or State lands. I believe that it might be best, unless there is some particular question you want to ask, to let this question go over until these committees meet and make the recommendations to the General Land Office and the other land agencies, and then, at a later date, see if we can't work this problem out.

The CHAIRMAN. Are there any questions to Mr. Williams? Is there anything that anyone wishes to ask Mr. Williams?

Mr. HAVELL. Senator, we might call attention to the fact that one of the bills on the agenda, H. R. 2197, is for the purpose of making available funds for the purchase of lands to remove the bottlenecks in these driveways, and for other grazing purposes.

The CHAIRMAN. That has passed the House?

Congressman MURDOCK. That has passed the House; yes.

Mr. HAVELL. It is on the agenda of this committee.

Mr. WILLIAMS. Mr. Havell, may I ask—the livestock association wanted to know—these funds come only from the grazing lands in the grazing districts, do they not?

Mr. HAVELL. No; Mr. Williams, the funds come from the Taylor grazing administration; and if the funds are from the grazing districts, they will be available; if the funds are from section 15 grazing leases, they will be available. This bill is broad enough to permit the purchase of lands within or outside of grazing districts.

Mr. WILLIAMS. Thank you.

Mr. HAVELL. That would include our stock driveways.

Mr. WILLIAMS. We had that question up last night and couldn't answer it, so we are very glad to get that information.

The CHAIRMAN. Is there any other question or discussion?

Mr. MEDD. Since I am representing the Arizona Mohair Growers, I think the mohair growers should be on that driveway committee too.

The CHAIRMAN. My understanding was that they were.

Mr. RONSTADT. The conference is between the wool growers and cattle growers, but I'm sure, I know, the cattle growers would welcome a representative from the mohair growers.

The CHAIRMAN. We will pause here for 10 minutes.

(Recess until 3:45 p. m.)

The CHAIRMAN. The meeting will come to order.

On the subject of stock driveways, has all been said that you care to say?

Mr. RONSTADT. Senator, many times in the past—I won't say many times, but sometimes in the past—agreements have been worked out

between sheep and cattle men as to their respective rights on driveways, with the consent of the Department of the Interior, or rather, the General Land Office, for their approval, and they have stayed there and nothing has come out of it, and the cattlemen are very anxious that should not happen.

The CHAIRMAN. Mr. Havell, can you say anything on that subject?

Mr. HAVELL. Senator, I don't recall anything reaching the office, but the office is a big one, and it may be there. I know nothing about it. Perhaps it would be better if you were to write me an additional letter, to me personally, in Washington, and call it to my attention. I assure you some action will be taken upon it.

Mr. RONSTADT. I'll see that the cattle growers do that, thank you.

STATEMENT OF JERRIE W. LEE, SECRETARY, ARIZONA WOOL GROWERS ASSOCIATION

Mr. LEE. There has been one case in which there was worked out an agreement with the cattlemen and the sheepmen and passed on by the field investigators. It was submitted to Washington but was turned down. We still have that matter pending, and we would like, if we are to have a committee meeting between the various groups here and agree on something, to have due consideration given to our recommendation.

The CHAIRMAN. I don't understand from that that there is anything now pending in the Land Office.

Mr. LEE. It is the case of F. N. Bard, on the Hillside stock driveway.

Mr. HAVELL. Is it a request for the elimination of some lands from the driveway, down on the Bard property?

Mr. LEE. Yes.

Mr. HAVELL. There has been a field examination made of that, and the matter is still under consideration. I had a talk with Mr. Bard, within the last few months. The matter is still under consideration.

Mr. LEE. The trouble there is, they can't use the driveway. Anything that would be helpful to us in disposing of it, we would like to have it.

Mr. HAVELL. I'll be glad to give it to you.

The CHAIRMAN. Is there anything further, under this heading of stock driveways? Does anyone else care to be heard?

Very well, we will consider that item closed, for the time being.

The next topic comes under the head of Indian lands.

Mr. FAIN. Senator, I have a couple of letters from Mohave County that I would like to read. As was stated before—I beg your pardon, we have two letters here from Mohave County in regard to Indian lands where they are particularly concerned as a county. With your permission I will read them:

KINGMAN, ARIZ., August 17, 1943.

Mrs. J. M. KEITH,

Secretary, Arizona Cattle Growers' Association, Phoenix, Ariz.

DEAR MRS. KEITH: I have your letter August 4, 1943, regarding railroad lands returned to the Federal Government and granted to the State, the proceeds to be used by the State exclusively for education purposes.

In the Hualapai Indian Reservation, mostly in Mohave County, there are some 400,000 acres of such lands on which the taxes have been paid by the railroad company.

If these lands are taken out of the county a very serious tax situation will prevail.

It is our opinion that if those lands now in Mohave County, and therein taxed, be exchanged within Mohave County, it will not materially change the tax structure.

The lands in the reservation could first be put up for exchange so that individuals or corporations within the county could acquire them, giving the reservation public domain in the place of the railroad lands taken out, thereby holding together our taxable property.

Then if the Federal Government wishes to give the lands to the State, the Grazing Service or the Hualapai Indian Reservation, Mohave County, would not be financially affected.

Very truly yours,

ROBERT ODLE,

President, Mohave County Livestock Growers' Association.

I might also add that this would affect the State tax structure, possibly to a smaller extent than the county structure; nevertheless it would also affect the State.

I have a somewhat longer letter from Mr. Ed Jameson, State representative for Mohave County. He was a big cattle producer in Mohave until the range was taken and he was thereby put out of business. The letter reads as follows:

KINGMAN, ARIZ., August 17, 1943.

Mrs. J. M. KEITH,

Phoenix, Ariz.

MY DEAR MRS. KEITH: In Mohave County the loss to the Federal Government during the last few years has been principally through two withdrawals. One was a withdrawal of land by the Department of the Interior for a recreational area along the banks of the Lake Meade, which consisted of about 990,000 acres. The avowed intention of this withdrawal was for recreation. In my opinion, the amount of land actually used for recreational activities would not exceed 5,000 acres. While the remaining acreage was not very valuable at present, because of its semidesert character, it does have a potential value of unknown amount for mineral possibilities. This area had never been thoroughly prospected. The presence of the water in Lake Meade would make such a survey practicable now. It seems unreasonable to set aside 990,000 acres for the use of people for recreational purposes when at least 980,000 of these acres would never be seen by persons so occupied.

The next large acreage lost to the Federal Government is the land inside the exterior boundary lines of the Hualapai Indian Reservation. This reservation includes about 1,000,000 acres of the best grazing land in Mohave County, at least 700,000 acres of which are usable for grazing.

The total population of the Hualapai Tribe is 490. This means that about 2,000 acres of land is now being used for every man, woman, and child in the tribe. By the testimony of the superintendent of the reservation, each member of the tribe had an income of about \$1,200 last year. This income for a family who have the use of land absolutely free, no taxes, no fees, no improvement or upkeep costs, seems a little out of line when compared with the average income of the white ranchers, costs taken out.

There is a suit now filed in the Federal court to gain possession of an additional vast acreage of land adjoining this reserve on the west, to be used for this same tribe of Indians, which is, of course, a matter for the courts to decide. However, we remember when this half million acres inside the reservation, claimed by the Santa Fe Railroad as grant lands, was a matter for the courts to decide, and we also remember that the Federal court at Prescott and the court of appeals at San Francisco decided against the Indians, only to have the case reversed by a Roosevelt Supreme Court, after the Santa Fe had been removed from the case by the provisions imposed by the Transportation Act of August 1940.

The loss of taxes on these lands may appear to be a small matter, but the people of this county are very much against the principle involved. We feel that the local government should be consulted before such land control is switched about. We feel that matters which are principally of local concern should be under local control, and that matters which are of State concern

should be under State control. We find it a constant struggle to carry on as a county when we find it necessary to police, school, and provide roads, etc., for such a large area of land when such a small percentage of the land is now or ever will be taxable.

Such a tax on Federal property is not probable, at any rate, so we are opposed to a further widening of the gap between the payers and the spenders of tax money.

We held a meeting of the cattle growers' association and these matters were taken up and discussed. Our secretary was directed to write you a résumé of that discussion, which I am sure he has done.

Sincerely,

E. L. JAMESON,

Cattle Grower and State Representative, Mohave County.

(Marginal note on above letter: "Like Mr. Havell's statement, we do not want grazing or mineral wealth locked up.")

I might say I believe we agree with Mr. Havell, of the Department of the Interior, that we should not lock up the mineral reserves, and we are not trying to do it in the land we are using. We do not believe that such an area as this should be set aside for the land to be used.

I believe that is about all that we have to give on the Indian questions.

The CHAIRMAN. Does anyone else care to be heard? Are there any representatives from the Indian tribes who would care to be heard? Is there anyone connected with the Indian Service who cares to be heard?

Congressman MURDOCK. Senator McCarran, if I may at this point, following Mr. Jameson's letter, state that I find the facts about as he has related them with regard to the Indian lands in Mohave County; and that is the basis of my opposition to a bill now before the Public Lands Committee in the House, of which your bill, 978, would be a substitute. I wanted to go on record at this point in the Senate hearings that I also agree with Mr. Jameson that it is contrary to good public policy for those lands to be incorporated in the Hualapai Indian Reservation.

The CHAIRMAN. Thank you, sir.

Is there anyone who cares to discuss the matter from any other angle? Don't hesitate if you have anything else to present on this subject.

Mr. FAIN. Another problem that has arisen in the livestock industry, as a result of the war, has been the taking over of large areas for cantonments, and so on, training camps, ammunition dumps, bombing ranges, target ranges, within the State. We realize that there is a necessity to have these camps and ammunition dumps, and so on, but we found that the big part of them have come out of our little 18 percent of private land that we have left in the State; private and State lands. We have found in many cases the possession of the land has been taken away from the original owner and he has been immediately dispossessed with very little recognition; and later there is considerable difficulty in arriving at a price for the land taken, and considerable misunderstandings have developed.

I believe in 1942 a delegation of stockmen and the State land commissioner were sent to Washington to consult there with various representatives of these Western States. They received very fine consideration; legislation was enacted whereby men only owning permits and licenses on public lands were allowed to be paid for their improvements

and their holdings there. We thought the question was fairly well settled. Later, though, when this was put into operation we find although legislation was enacted, it was not followed through as we were given to believe by our committee in Washington, and we're having considerable trouble in many cases of even getting the question before the courts. Now, we have a few examples to illustrate these cases and I would like to first call on Mr. Jack Morgan of Prescott.

STATEMENT OF JACK MORGAN, PRESCOTT, ARIZ.

Mr. MORGAN. My name is Jack Morgan, and I live at Prescott.

The CHAIRMAN. What line of business are you engaged in?

Mr. MORGAN. I'm a cattle grower.

I want to touch on the apparent policies of the real estate division of the Army. Briefly, I have leased from the Santa Fe Railway Co. large acreages of land and I hold a grazing license for 1,140 head on that land. The real-estate division, after several months, offered me \$611 a year for the use of that land and stipulated that I was to continue to pay the leases and taxes on that land. Now, that aggregates something more than \$2,000 a year. In other words, I was to pay \$1,400 a year out of my pocket.

The CHAIRMAN. Were your cattle to be excluded, or livestock to be excluded from the range?

Mr. MORGAN. I had not put the land into production yet, but I was ejected from the land. The land is posted, and I can't even get on it.

The CHAIRMAN. That is being used as a bombing range?

Mr. MORGAN. An aerial gunnery range.

The CHAIRMAN. So that you're paying the fees to the agencies from which you acquired the land, and you're receiving how much from the Army?

Mr. MORGAN. Well, I haven't received anything yet, but they offered me \$611 a year.

The CHAIRMAN. How was that arrived at, especially that \$611? I'm interested in that.

Mr. MORGAN. I haven't the slightest idea. I can't find out anything from the office. You ask them and they say they don't know or can't tell you.

The taxes alone on this property are something a little over \$1,200 a year, and my deal with the railroad was to pay them a certain amount for the leases and the taxes.

The CHAIRMAN. You are to pay the taxes besides?

Mr. MORGAN. Yes sir.

The CHAIRMAN. How much were you to pay for the lease?

Mr. MORGAN. Something over \$800.

The CHAIRMAN. And the taxes come to how much?

Mr. MORGAN. \$1,200 and something.

The CHAIRMAN. Making two-thousand-odd dollars?

Mr. MORGAN. Yes sir. I have a letter in my grip now from Mr. Hemenway asking me to pay something around \$1,000 which is due right now and, I'm being requested, as you might say—I just can't afford to keep up my leases, and I can't afford to sign up and accept their \$611.

The CHAIRMAN. Who visited you from the Army?

Mr. MORGAN. Well, offhand, I don't know their names. Mrs. Morgan, my wife, was handling some of the deals. She'd called on the office in Phoenix here, Mr. Wilkinson, I believe, she talked to a number of times, and finally in about April of this year a man came from the Los Angeles office. I was living in Fullerton, Calif., at the time and this man formally called on us with this offer of \$611 a year.

The CHAIRMAN. Is there a representative of the real-estate board here? Is there any representative of the Army in Phoenix that has to do with this line of business?

Mr. MORGAN. The real-estate office of the Army is, or was, located here.

The CHAIRMAN. Does anyone know whether it is located here?

Mr. WILLIAMS. It is located here. Mr. Wilkinson is in charge.

The CHAIRMAN. What is his given name?

Mr. WILLIAMS. Francis, I think.

Mr. MORGAN. I have a copy of the lease which they presented to me right here.

The CHAIRMAN. We'll attempt to have Mr. Wilkinson here tomorrow morning to discuss this matter, because it is not an isolated case; it is a case the nature of which has come to the attention of the committee in other places.

Mr. MORGAN. I might say, in that same area, there are other cattle growers that are interested, and they have been treated much the same way, as far as I know. At least, that is what I have been told.

The CHAIRMAN. In other words, this applies to several stock growers besides yourself?

Mr. MORGAN. Yes, sir.

The CHAIRMAN. How long have you been engaged in the stock business?

Mr. MORGAN. Since 1934; and my wife and her family were there for year and years.

The CHAIRMAN. Running in that locality?

Mr. MORGAN. Not in that locality; they have a place in Preston, and this particular place that I'm speaking of is at Yucca.

The CHAIRMAN. Well, I know nothing we can say at the present time except to try to get a representative of the Army real-estate board here tomorrow morning and see if we can get his version of it.

Mr. FAIN. Senator, we have three other witnesses on this subject. Would you rather hold them over until the morning?

The CHAIRMAN. I think it would be well to hold them over, and take it all at one time, with the hope that we may have the representative of the real-estate board here. I have asked our investigator to get word to him at once and we would like to have him here tomorrow morning.

Mr. FAIN. We had supposed, Senator, with these hearings on these other subjects that we would use about all the time up today. The Forest Service program, the balance of our program is not as yet prepared. It is rather late to start on it anyway. Could you handle the meeting now, bring up anything you might have, and leave the rest of our program until tomorrow?

The CHAIRMAN. That is all right. I think it would save time to have a representative of the Army real-estate board here, and we may go

over. He probably will say he has no jurisdiction, that it addresses itself to some other tribunal; but we'll try and find out and get information as best we can. I want to say to you very frankly that the matter of dealing with these condemnations and these leases of the Army, and the utilization of the open public domain by the Army is an exceedingly difficult problem because the Army, as you all know, and as we all know, is having pretty much its own way, in preparation for the war and, while we try to work the spirit of justice into the thing, sometimes arbitrary methods are resorted to. I am not saying they are in this case; I am not prejudging the matter at all, but we are going to try to get all the authorities here that we can get here to have a full and free discussion on the subject.

Now, there is another subject that I wish to bring to the attention of this group. I touched on it this morning and I touched on it at Fredonia just the other day.

There is introduced in the Senate of the United States, by the chairman of this committee, a bill known as S. 1152. S. 1152 grows out of hearings conducted by this Committee and is for the purpose of arousing the interest of the people of this country in vital matters pertaining to the conservation and preservation of wildlife, and at the same time the preservation of the open public domain.

The bill has, up to date, served a valuable purpose in that it has aroused more attention to the subject than has been aroused in the history of this country before. Magazine articles, rather scathingly couched, have been put out, some of them taking a shot at the author of the bill, and all of them taking a general shot at the object of the bill; but none of them discussing the subject from its fundamental standpoint. If there are those here who desire to discuss S. 1152, or the matter of preservation of wildlife, or the matter of reduction of wildlife on the open public domain, an opportunity will certainly be afforded you, because the committee and the author of the bill are very desirous of having a full and free discussion of the subject, to the end that when, as and if, legislation is enacted, it may be legislation based on progressive, far-sighted views.

It is never a good thing, and especially in a case of this kind, to merely condemn. It is very easy to condemn; it is no trouble for those who are interested in the subject to say, "Kill the bill," but killing the bill will not answer the question. The question in the bill and the subject matter of the bill arise from experience itself; a condition, and not a theory that confronts the people of western America. The condition arises from experience.

I wish to state preliminarily, so that those who wish to discuss it later may have the benefit of the views of the chairman, who is, by the way, the author of the bill, that the law has been fairly well settled. In fact, has been definitely settled as to what the Federal Government can do with wildlife on the open public domain. It was settled by the famous Arizona case of *Hunt v. The Government*. It arose out of conditions on the Kaibab National Forest. It was also settled by a North Carolina case, known as the *Chalk case*. It has been settled by State courts as well.

The Supreme Court of the United States has emphatically stated the law, that the Federal Government, being the owner of the open public domain, whether it be in forests or parks or on the grazing

lands, has a right to go upon the lands and remove anything that is destructive of the open range or the conditions in the localities. You will recall the *Kaibab case*, where the Government, through the Forest Service, went in and destroyed vast numbers of deer because the deer were destroying the range. They had become so prolific that they were a destructive agency. It was sought to stop the Federal Government. The Supreme Court of the United States, to which the case was taken, decided the law, which had always been the law, which reannounced the law emphatically, in which the Government was upheld in destroying the deer.

The *North Carolina case* went along the same lines. Other cases have gone along similar lines. The question is, Who owns the wild animals on the open public range in the States? There is an erroneous theory that has gone wild that the wild animals belong to the State. That is not a correct statement of the law. Animal life on the open public domain belongs to the people; belongs to all of the people. The State is the custodian, and the State has the right to regulate the taking of animals on the open public domain, and is custodian, and acts in that capacity, regulating, so that all may take alike, and all may enjoy the animal life that grows on the open public domain. But the open public domain belongs to the Government of the United States. If the public domain belonged to John Smith or Tom Jones, he would have a right to go in and remove trespassers or those that were destroying, whether wildlife or otherwise, his property. The same principle applies to the Federal Government as applies to an individual.

Now, why are we looking to having the public aroused by this pending bill, known as S. 1152? Because of some things that have developed here today, among other things. We have two methods in this modern day and age by which law becomes effective against the individual. One is by congressional act and the other is by Executive order. Executive orders have become more prolific, if I may use that term, in the last 10 or 15 years than have legislative acts. Executive orders are issued without even the knowledge of the legislative delegation from the respective States. Witness the Executive orders that have issued just a few months ago with reference to the Jackson Hole territory in Wyoming. The congressional delegation of the State of Wyoming had no previous information or knowledge that an Executive order was going to issue whereby hundreds of thousands of acres would be taken out of the open public domain and out of use by the grazers of that country and placed in a monument, if you please.

Now, the same might occur in the State of Arizona. In the State of Nevada, where 84 percent, perhaps 86 percent, of all the lands within the boundaries of the State of Nevada belonged to the Federal Government, an Executive order, exaggerated perhaps, but an Executive order, could issue putting it all into a monument with just as much cogency as did the Executive order placing the Jackson Hole country in a monument. If that may be true, then an Executive order could issue tomorrow morning, without knowledge of anyone, directing any one of the services to go in upon the open public domain and destroy the wildlife because it was too promiscuous, there was too much wildlife in any particular territory.

What we are seeking to do is to preserve, as far as possible, the sovereign rights of the sovereign States over wildlife, for the preserva-

tion of wildlife, and yet at the same time to bring a coordination between the Federal Government, the owner of the open public domain, and the State, where the people enjoy the right of sportsmanship, to go out on the open public domain and take, under the permission of the State, the wildlife. If something is not done legislatively, then something may be done executively. To get away from the disturbing conditions that usually prevail in an Executive order, the conditions cannot be amended by legislation and it is very difficult to amend by departmental order. It struck this committee as being worth while to arouse the people of this country to the conditions, that they might be discussed freely; and, out of that proposed legislation, there might come progressive, far-sighted legislation that would give to those who like to take wild game upon the open public domain the rights that their States would afford them, and at the same time would insure that another Kaibab incident might never occur.

That is the object of the bill. It is no trouble for you to say, "Kill the bill." The author of the bill introduced it and then had the bill referred to his own committee and it is now in this committee, subject to amendment. It is subject to discussion. We think that those who live in the open public domain States might well discuss the subject from a constructive standpoint; so at each meeting we are bringing it to the attention of those who assemble, that at any time during the meeting that group interested in the subject might request a period at which their thoughts on the subject might be presented; and we assure you that they will be welcome; that they will be studied; that they will be considered to the fullest extent.

Is Mr. Kartchner here?

Mr. KARTCHNER. Yes, Senator.

The CHAIRMAN. We are glad you are here, Mr. Kartchner. I don't know whether you heard my statement at Fredonia, but I have made it here today. I am very happy that you are here, being president of the Western Fish and Game Commissioners. The same statement is being made at each group meeting.

Mr. KARTCHNER. Senator, may we have a little time tomorrow morning to discuss 1152?

The CHAIRMAN. We would be very glad to have you, either tomorrow morning, or it might be well in place of tomorrow morning if you could come in tomorrow afternoon.

Mr. KARTCHNER. That would be just as well.

The CHAIRMAN. In other words, we'll continue with this general hearing until tomorrow afternoon and we will be glad to hear you and your group before we adjourn the meeting tomorrow.

We have just been advised that Mr. Wilkinson has sent word to us that he will be here tomorrow morning to discuss this gunnery range, bombing range matter.

Mr. WILLIAMS. I had one subject pertaining to lands, State and Federal, that I would like to take up before we get to something else.

The CHAIRMAN. Very well.

Mr. WILLIAMS. This runs to the question of these lands in reclamation withdrawals that are so mixed up as to title, and I would like to have Mr. Mulford Winsor take the stand and tell us something in detail about it.

The CHAIRMAN. I want to say, in furtherance of another subject that was brought up here by one of these letters, the subject of the utiliza-

tion of the recreational area of Boulder Dam, or Lake Mead, that the Park Service and the Monument Service have been very courteous in having their representatives assembled here at the request of this committee, with the idea that they would get together during the session here and work out the problem of the utilization of the Lake Mead area for grazing.

Mr. TILLOTSON. You may be interested to know that has been worked out and completed this noon and it is now being typed; it is all complete.

The CHAIRMAN. Thank you very much. Can we have that as soon as it is finished?

Mr. TILLOTSON. Yes; it will be ready tomorrow morning.

STATEMENT OF MULFORD WINSOR, DIRECTOR, DEPARTMENT OF LIBRARY AND ARCHIVES, PHOENIX, ARIZ.

Mr. WINSOR. My name is Mulford Winsor, and I live at Yuma, but I am never at home.

The CHAIRMAN. You and the chairman of this committee are in the same boat.

Mr. WINSOR. It is a pretty rocky boat, Senator.

At the suggestion of the State land commissioner, I am glad to make a statement regarding a situation that affects the title to a great many tracts of State school land. I happen to be one of those individuals who find that his title to a tract of State school land, for which he paid his hard money and improved, is now confronted with the unpleasant suggestion on the part of the General Land Office and Reclamation Service that the State had no right to sell the land and that, therefore, the ostensible owner has no land, improvements or otherwise.

Mr. Williams, perhaps, has the figures. I understand that there are some two-hundred-odd tracts in that condition. You are aware that as early as 1854 Congress enacted legislation giving to the Territories and States, or States derived from the Territories, for the benefit of the schools, sections 16 and 36. Arizona was no exception to the rule. Those sections were reserved for the future State of Arizona, through the medium of several enactments by Congress; and in 1912, when Arizona became a State, the State land department undertook the administration of sections 16 and 36, and, in addition thereto, sections 2 and 32, which, by the Enabling Act of 1910, were granted to the State. The remarks that I am making do not refer to sections 2 and 32, but to sections 16 and 36. The rights of the States, under the law, became effective upon the approval of a survey by the United States Government of sections 16 and 36. A great many of those lands were sold by the State land department and certain of them were under reclamation withdrawals.

Now, it develops—I don't care to discuss this question from my own personal standpoint, but in order that the picture may be properly made here I might as well state my own case.

A reclamation project is being developed, known as the Gila project, under which I have a tract of land that I acquired in 1926, which was sold by the State of Arizona in 1918. I undertook the improvements of that land in 1926, and from that date until now I have

held the contracts with the Reclamation Service for the delivery of water to my land, and have paid 2 percent per annum for the construction costs of the projects, having paid something like \$34 an acre already on the construction costs of the project. Now, the Gila project proposes to supply water to that land, which will be a very fine thing. I was requested by the Reclamation officials for right-of-way for a canal, to which I had no objections. But I did have some questions to ask that would clear up certain engineering points. While those negotiations were in progress, the Reclamation officials advised me that the Reclamation Council in Washington had decided no right-of-way was necessary; that the State had no title to the lands and it was under reclamation withdrawal at the date of statehood, and that the State, therefore, had no right to dispose of it; and the State having no title, I had no title; and therefore, there was no occasion for a right-of-way from me.

That creates a very undesirable situation. It is probably comparable to the situation in which 200 or more other landowners find themselves; and they can do nothing with their land. More unfortunately still, they cannot borrow any money on it to grow their crops. It is a matter that the credit and the faith of the State of Arizona is very seriously involved in, having sold these tracts and given patents to them. It is a matter that, as a matter of policy, should be ironed out.

I wonder, possibly, if the Land Commissioner might not care to ask me some questions that would clarify the matter.

The CHAIRMAN. Mr. Havell?

Mr. HAVELL. I am not familiar with the case, Mr. Chairman, but I might ask if the lands were reserved for reclamation purposes before the survey was made that identified the land.

Mr. WINSOR. No, sir; the survey was made long before the lands were withdrawn for reclamation purposes.

Mr. HAVELL. Do you know on what ground it was held that the State had no title?

Mr. WINSOR. Merely on the ground that the land was under reclamation withdrawal at the date that Arizona became a State, the contention on that score being that the reservation of the State of Arizona did not become effective when there was a reclamation withdrawal on the lands.

The CHAIRMAN. In other words, while the State of Arizona was a Territory, she was not entitled to sections 16 and 36 out of each township?

Mr. WINSOR. That would appear to be the argument. Of course, as a matter of fact, the land was reserved for the future State of Arizona.

Mr. HAVELL. No title passed to the Territory. Of course, the lands were held in trust for the future State. I don't know the basis upon which the State's right and title was held not to be good. It is a principle of law, of course, that is well recognized, that if the lands were withdrawn before the State's title would have otherwise vested, whether that vesting took effect at the date of the grant, the lands being then surveyed, or took effect at a later date, when they were surveyed and identified, then the State's right did not vest. Now, whether those are the facts attending this case or not, I don't know, but there must be some reasoning back of the decision of the Department that the State did not get title to these tracts of land.

The CHAIRMAN. As we would gather the theory, it is that 16 and 36 were surveyed and identified during the time Arizona was a Territory, and the reclamation withdrawal having taken place after the survey, but before the State became a State, therefore the reclamation withdrawal became dominant over the State. That seems to be the theory. Whether there is anything in the theory, I don't know.

Mr. WINSOR. That would be the theory, Senator.

Mr. HAVELL. That would not only be the theory, Senator, but it would be the law.

The CHAIRMAN. Well, I suppose—

Mr. HAVELL. There is this further thought: in more recent years Congress has passed an act that authorizes the States to apply for a patent as evidence of title—that was in 1934—and thus have an adjudication, and forever close the chance of the Federal Government raising the question. That could be tried out.

Mr. KNEIPP. Mr. Chairman, this question also came up in connection with some lands in the national forest. I might, perhaps, be able to throw a little light on the problem. It arises out of the wording of the two acts of statehood. Those acts, as Mr. Winsor said, not only granted the State sections 2 and 32, but went on to provide in the sections that if the lands thus granted were at that time within any permanent form of reservation, the State title would not attach until the described sections had been eliminated from that reservation.

Now, the two acts were so worded that, according to the Comptroller General of the United States, and I think, also, the Attorney General, that stipulation applied not only to the sections 2 and 32, which were additionally granted by the act, but also to the sections 16 and 36, which previously had been granted under the act of 1854. The people in the Department of Agriculture were studying the question when I left; but that is the crux of the whole situation, the peculiar wording of the two State enabling acts, or the sections thereof which granted these lands to the State.

Mr. WINSOR. I might say that, in the course of the negotiations between the Reclamation officials and myself, for a right-of-way, they submitted to me a deed of execution, ostensibly proposing that if I would execute that deed conveying to the United States certain rights-of-way—and I must say that they included all the rights-of-way that have ever been thought of—and agreed to certain allegations, including the allegations that the State of Arizona erroneously sold the land and had no title thereto, that they would execute a withdrawal for cancellation of the reclamation withdrawal.

That proposition was one that I could not comply with for the reason that I could not make the allegation that the State had intentionally—I couldn't make the allegation that the State had no right to sell the land, and it was impossible to agree to the terms.

Now, as to the effectiveness of the reclamation withdrawal, which I don't care to enter into a legal discussion of, it strikes me that there is very serious doubt as to whether the reclamation withdrawal would take precedence over the reservation to the State of Arizona for the reclamation law distinctly says that the Reclamation Service may withdraw lands needed for reclamation projects on the public domain, and I seriously question whether the lands reserved to the future State on their survey is subject to any other withdrawal. Perhaps

the Attorney General may have an opinion on the subject, but I am not aware of any final determination of that question in the courts. I am sure it is not the desire of the purchasers of State school lands, who are in the predicament that I mentioned, to advise what judicial determination should be asked. It doesn't seem that that is necessary. Here is a matter of equity, of honesty, of fair play, and justice. Certainly it can be ironed out, without the necessity of legislation, but I do believe that if it can't be done without legislation, it is a fit subject for legislation.

The CHAIRMAN. Has the matter ever gone to a departmental decision, to your knowledge?

Mr. KNEIPP. In connection with the national forests, it developed that the enabling acts provide that the lands shall continue as part of the reservations in which they were situated at the time of the statehood, and not be the property of the State until they are eliminated; but the State shall receive from the revenues of the reservations that part thereof which is proportionate to the area of these granted sections. In calculating the payments due the States, we had assumed that all lands that had been surveyed prior to the creation of the national forests were State lands, and, therefore, not subject to the act; and that they should not be taken into account when figuring the proportionate revenue, and the right of the State to lease them had been recognized. A decision by the Comptroller General of the United States as to the amounts payable to the States held that even though the Territory had acquired title prior to 1910 and prior to the creation of the reservation, yet, under the terms of the State enabling act, the lands, nevertheless, were subject to the same conditions as the lands newly granted by the act. I have a recollection that the Attorney General passed on it, but I am not sure on that point.

Mr. HAVELL. This question has gone to the Department on appeal many times, and so far as the administration of the Interior Department is concerned, it is uniformly followed that a withdrawal before the State's right attaches is superior to the State's right.

Mr. WINSOR. That doesn't answer the question of when the State's rights attach?

Mr. HAVELL. No; that is a matter of adjudication, in each particular case. We were talking of general principles, I gather. I think what the witness referred to a while ago came to my attention in the office. I think the Reclamation Service, in this particular case, offered to lift the reclamation withdrawal, so that the State rights would attach, if certain agreements were entered into. Now, that is a matter between the Reclamation Service and the claimant.

Mr. WINSOR. Yes; that's correct; but impossible conditions were imposed.

Mr. HAVELL. If the reclamation withdrawal is lifted, then the State right does attach.

The CHAIRMAN. It seems to be quite a serious problem here, involving a considerable amount of land.

Congressman MURDOCK. Do I understand from the witness that if this is not to be judicially determined; that legislation is the logical remedy?

Mr. WINSOR. It is an extremely important matter and serious situation. My idea would be that it should be determinable without leg-

isolation; but, in the event that it is not, then it is a fit subject for legislation. The equities are so clear; the interest, not only of the land purchaser, but of the State of Arizona, are so clear, that there certainly should be a means of arriving at an agreement with the departmental officials and straighten it out that way.

The CHAIRMAN. From the statement made by Mr. Kneipp, although I have never had occasion to look at the enabling act, I would gather that the enabling act is the turning point in the case.

Mr. KNEIPP. I think that is correct, Senator, and I believe this question arises only in Arizona and New Mexico, and by virtue of the language of the acts creating those two States.

The CHAIRMAN. I think it might be well, if it is convenient, Mr. Williams, that we might have a copy of the enabling act.

Mr. WILLIAMS. I might say that there are some 200 parcels of land affected; that is, virtually 200 sections. It goes to the patents and titles of those lands. We are having a meeting this evening with the General Land Office, and we would like to have the privilege of taking the subject up again in the morning, and of bringing the copies of the enabling act, and also whatever information we may get tonight from this meeting.

The CHAIRMAN. I think that the matter addresses itself very vitally to the congressional delegation of the State of Arizona, and the Committee, of course, would be glad to assist in every way in working the problem out. It certainly is a serious problem.

Mr. WINSOR. Mr. Chairman, the last Legislature of Arizona concerned itself with this question, and adopted a memorial. It strikes me that, if you have no objection, it would be worth while putting that memorial into your record.

The CHAIRMAN. We will be very glad to do it. I was going to say that it might be well to put a copy of the Enabling Act into the record also, if it isn't too voluminous.

Mr. WILLIAMS. We will have copies for you.

(The memorial referred to, and excerpts from the enabling act, are as follows:)

[S. J. M. 4, State of Arizona, Senate, Sixteenth Legislature, regular session]

A JOINT MEMORIAL Requesting Congress and the United States Land Office to clear the title to certain school lands sold by the State

To the Congress of the United States and the Secretary of the Interior:

Your memorialist respectfully represents:

By numerous Acts of Congress, sections sixteen and thirty-six in each township were reserved and set aside for the benefit of the public school systems of the territories of the public lands area of the West and of the states thereafter to be created out of such territories.

By the Acts approved September 9, 1850, and July 22, 1854, following the Treaty of Guadalupe Hidalgo and the Gadsden Treaty, respectively, the same course was pursued with respect to New Mexico, of which Arizona was at that time a part.

The Act of July 22, 1854 (10 U. S. Stats., 309), provides: "That when the lands in the said Territory shall be surveyed * * * sections numbered sixteen and thirty-six * * * shall be, and the same are hereby, reserved for the purpose of being applied to schools in said Territory, and in the States and Territories hereafter to be created out of the same."

By authority of the Act of Congress of March 26, 1896 (29 U. S. Stats., 90), authorizing the Territory of Arizona to lease "all of the school land in the Territory of Arizona for school purposes, the Territory of Arizona, under the Act of the Territorial Legislature effective September 1, 1901, assumed the ad-

ministration, through the Boards of Supervisors of the several counties, of all school lands which had been surveyed and the plats thereof approved, and continued to administer them until statehood, for the benefit of the public schools.

The Arizona Enabling Act, approved June 20, 1910, recognized and confirmed the reservation of sections numbered sixteen and thirty-six, and granted two additional sections in each township.

Following the state's admission into the Union, the Arizona state land department assumed the administration of these school lands, and in conformity with the terms of the Enabling Act, the state constitutions and the state land code, sold and leased the same.

Among the lands sold were numerous tracts of school land comprising all or parts of certain sections numbered sixteen and thirty-six, located chiefly in the Salt River Valley, the irrigated and irrigable areas near Yuma, and at other points adjacent to the Colorado river, which in most cases have been brought under a high state of development and large investments made thereon.

It now appears that the United States Land Office denies that title to these lands has ever vested in the State of Arizona, basing its denial upon the withdrawal of the lands from entry under the terms of the Reclamation Act of 1902, prior to the granting of statehood to Arizona, while ignoring the fact that they were reserved for school purposes by the Act of July 22, 1854, and that the lands were surveyed and the plats approved long prior to the passage of the Reclamation Act, and were administered by the Territory by authority of an Act of Congress of 1896.

Thus the State of Arizona, which administered in good faith the grant in favor of the common schools, and in all respects complied with the laws of the United States, is placed in the position of a defrauder, a seller of property to which it had no title, and of taking under false pretenses the money received for these lands. The innocent purchasers are in the position of having bought and paid for the lands, made large investments and extensive improvements thereon, and having for their money, their enterprise, and their labors a title repudiated and denied by the United States.

Wherefore, your memorialist, the Legislature of the State of Arizona, urgently requests:

1. That the United States Land Office, upon application of the State Land Department of Arizona, issue patents to all such sections sixteen and thirty-six which have been sold and deeded by the state, failing which, that the Congress by legislation validate the title of the State of Arizona to such lands.

LAND GRANT

ORGANIC LAWS

(R. S. U. S., Sec. 1946.) Sections numbered sixteen (16) and thirty-six (36), in each township of the territories of New Mexico, Utah, Colorado, Dakota, Arizona, Idaho, Montana, and Wyoming shall be reserved for the purpose of being applied to schools in the several territories herein named, and in the states and territories hereafter to be erected out of the same.

ENABLING ACT

SECTION 24. That in addition to sections sixteen (16) and thirty-six (36) heretofore reserved for the Territory of Arizona, sections two and thirty-two (32) in every township in said proposed state not otherwise appropriated at the date of the passage of this act are hereby granted to the said State for the support of common schools; and where sections two (2), sixteen (16), thirty-two (32), and thirty-six (36), or any part thereof, are mineral, or have been sold, reserved, or otherwise appropriated or reserved by or under the authority of any act of Congress, or are wanting or fractional in quantity, or where settlement thereon with a view to preemption or homestead, or improvement thereof with a view to desert-land entry has been made heretofore or hereafter, and before the survey thereof in the field, the provisions of sections twenty-two hundred and seventy-five (2275) and twenty-two hundred and seventy-six (2276) of the Revised Statutes, and acts amendatory thereof or supplementary thereto, are hereby made applicable thereto and to the selection of lands in lieu thereof to the same extent as if sections two (2) and thirty-two (32), as well as Sections sixteen (16) and thirty-six (36), were

mentioned therein; Provided, however, that the area of such indemnity selections on account of any fractional township shall not in any event exceed an area which, when added to the area of the above-named sections returned by the survey as in place, will equal four (4) sections for fractional townships containing seventeen thousand two hundred and eighty (17,280) acres or more, three sections for such townships containing eleven thousand five hundred and twenty acres (11,520) acres or more, two (2) sections for such townships containing five thousand seven hundred and sixty (5,760) acres or more, nor one section for such townships containing six hundred and forty (640) acres or more; and provided, further, that the grants of sections two (2), sixteen (16), thirty-two (32), and thirty-six (36) to said State, within national forests now existing or proclaimed, shall not vest the title to said sections in said State until the part of said national forests embracing any of said sections is restored to the public domain, but said granted sections shall be administered as a part of said forests, and at the close of each fiscal year there shall be paid by the Secretary of the Treasury to the State, as income for its common-school fund, such proportion of the gross proceeds of all the national forests within said State as the area of lands hereby granted to said State for school purposes which are situated within said forest reserves, whether surveyed or unsurveyed, and for which no indemnity has been selected, may bear to the total area of said sections when unsurveyed to be determined by the Secretary of the Interior, by protraction or otherwise, the amount necessary for such payments being appropriated and made available annually from any money in the Treasury not otherwise appropriated.

Mr. WINSOR. I might say, on that score, that I could almost repeat the terms of the enabling act in that regard:

In addition to sections 16 and 36 heretofore reserved to the future State of Arizona, there is hereby granted sections 2 and 32—

it goes specifically to the previous reservation of sections 16 and 36. I believe that is clear, that sections 16 and 36 are not of the same category with sections 2 and 32.

Senator McFARLAND. I might state to the witness that I agree that if this cannot be worked out, it is a problem subject to legislation, but I hope that it can be worked out where legislation won't be necessary.

Mr. WINSOR. That would be the better way to work it out, without legislation.

The CHAIRMAN. Of course, if what Mr. Kneipp says is true, the Comptroller General has passed on it, and perhaps the Attorney General. You may have those impediments.

Senator McFARLAND. It can be worked out by the withdrawals.

Mr. HAVELL. I don't think we are bound by the Comptroller General's decision. His decision goes to the distribution of moneys. He has no jurisdiction over the questions of law relating to the public domain. I think the Attorney General's decision would be the one, not the Comptroller General's decision.

Mr. KNEIPP. This decision, Mr. Chairman, came up in connection with New Mexico. I think there might be a slight difference between the two acts. The crux of the decision is that the limitation of the act applied not only to the newly granted lands but to the previously granted lands.

The CHAIRMAN. Is there any further statement on this subject? It will come up again tomorrow. Is that correct?

Mr. WILLIAMS. Yes.

The CHAIRMAN. Very well.

Senator McFarland has intimated that he might have to leave tomorrow afternoon. I think it had better come up early in the morning, for I would like to have it come up while a congressional delegation is here. We'll try to take it up the first thing in the morning.

Is there anything further that you have to offer this afternoon?

STATEMENT OF ROBERT H. ROSE, SUPERINTENDENT, BOULDER DAM NATIONAL RECREATIONAL AREA, BOULDER CITY, NEV.

Mr. ROSE. Senator, I thought perhaps I had better make a statement to help clarify a couple of questions that came up in the letter referred to, about 30 minutes ago, by the gentleman at the end of the table. The questions brought up in the letter, signed, I believe, by Mr. Jameson, referring to, first, the lands included within the recreational area established up there in the Boulder Dam country, and, second, to the privileges of mining or the exclusion of those lands from mining. I think it is well, perhaps, for the record that I do include a statement or two for clarification, and perhaps Mr. Jameson will also be interested in having the information.

The Boulder Dam National Recreational Area includes lands that have previously been withdrawn under the reclamation laws. That was prior to the establishment of the area, October 13, 1936, and were the lands that were withdrawn which were necessary in connection with Boulder Dam and the reservoir project. Therefore, when the recreational area was established, this did not involve any additional withdrawals. That merely superimposed the recreational area upon lands already withdrawn, and thereby did not remove any more public domain included within those boundaries.

Now, going to the second question, the question of mining; mining and prospecting are permitted within the confines of the recreational area. The procedure is slightly different than the procedure applying to public domain.

The procedure for mining on reclamation withdrawn lands is outlined in an act of Congress approved April 13, 1932. In that act it states that where public lands of the United States have been withdrawn for possible use for construction purposes, under the Federal reclamation laws, and are known or believed to be valuable for minerals, and would, if not sold, be subject to location and patent under the general mining laws, the Secretary of the Interior, when in his opinion the rights of the United States will not be prejudiced thereby, may in his discretion and so on open the lands to location, entry, and patents, and the general mining laws. Therefore, I think it is rather important to have then in the record the statement that if this procedure, outlined by the act of 1932, is followed then the lands may be subject to entry and location.

The CHAIRMAN. Let us analyze that a little bit, Mr. Rose.

The prospector would have to apply to the Park Service or the Interior Department, to some service, for permission to take out a mineral discovery?

Mr. ROSE. That is not quite, Senator, the way the procedure is set up. Under the procedure as set up, the person who believes that there are mineral values makes application to the General Land Office to have the lands in question thrown open to mineral entry. Then, once the lands are opened to mineral entry, the procedure more or less is the same as on the public domain. The General Land Office, however, will refer that application for mining to the National Park Service and such other agencies as might be involved.

It is rather interesting, and perhaps relatively simple, this procedure, from the prospector's standpoint, because the General Land

Office handles that matter of reference to all of the other agencies rather than the prospector himself having to do that.

The CHAIRMAN. May he set up his discovery monument, or make his location, before he has permission; before it is thrown open?

Mr. ROSE. I have been quite interested in that question, Senator. That involves certain legal technicalities which I doubt whether I could answer. It does seem to me, however, that the prospector who has been out in that country a long time searching for minerals, and who has lived under the rather trying conditions, he should certainly have a prior right to locate the mineral lands in question.

The CHAIRMAN. I'm just wondering how we could establish that right as against another locator's. There is an interesting kink in the thing.

Mr. ROSE. I think that is rather an interesting kink, Mr. Chairman, the question as to the prior right of the individual who makes the request to open the lands to entry. Unless the person originally making the application for throwing the land open to mineral entry does have a prior right, it does seem to me that certain prospectors could live under those difficult conditions, perhaps, on dry bread and stale bacon, and so on, and then perhaps some armchair miner, sitting off somewhere watching the activities of this prospector in question, might come in and locate ahead of the man who actually initiated it in the first place.

Now, I am not fully enough informed on just that technicality, but it does seem that the person who did the hard work should be entitled to the prior location.

The CHAIRMAN. Have you had any attempted procedure along that line? Has anyone attempted to acquire the mineral rights?

Mr. ROSE. I will say that there has been one instance of confusion that has arisen in that regard. That has to do with a little manganese mining location, some few miles from Boulder Dam. I think the particular instance I bring up was satisfactorily adjusted among the claimants involved. I know we lent such help as we could in solving the problem, but I believe they largely solved it through counsel among themselves.

The CHAIRMAN. It seems to me that question of removal of sands from that area was uppermost and we had to put through legislation so they could remove the sands on a royalty basis. Am I right in that?

Mr. ROSE. That is correct. There has been legislation enacted by which sands and other nonmetallic minerals can be removed. I don't recall just what the limitations of the areas involved in that act are, but I do know that it is already applying to certain lands in the vicinity of Overton in southern Nevada.

Mr. FAIN. May I ask a question of the witness, Senator?

The CHAIRMAN. Yes.

Mr. FAIN. Could you tell me if this procedure, as outlined by you, has been in common usage? Is it a practice that is being used successfully for prospecting and locating minerals at the present time?

Mr. ROSE. I believe, in answer to the question that has been raised, I can answer that in the affirmative; that the procedure has been used. Our files contain as many, I believe, as 8 or 10 different examples of where applications to the mine have been made, under the procedure

outlined. I would like to give you a copy of that procedure, as outlined in the act of 1932.

Mr. FAIN. Has the right been granted to these applications, to go ahead and mine?

Mr. ROSE. I believe there have been cases where these applications have been cleared by the various services involved. I am sure that I am correct in that.

The CHAIRMAN. Are there any further questions?

Mr. ROSE. That is all; thank you very much.

The CHAIRMAN. We were very glad to see you here, Mr. Rose.

Is there anything else that anyone wishes to bring up this afternoon? We are about to take a recess until tomorrow morning, at 9:30. We want to get through with everything that anyone wants to bring up tomorrow. We will remain in session until we do get through with it.

If there is nothing else, the committee will stand at recess.

(Recess until 9:30 a. m., Saturday, September 4, 1943.)

ADMINISTRATION AND USE OF PUBLIC LANDS

SATURDAY, SEPTEMBER 4, 1943

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE
ON PUBLIC LANDS AND SURVEYS,
Phoenix, Ariz.

Present: Senator Pat McCarran, Nevada, chairman; Senator Carl Hayden, Arizona; Senator Ernest McFarland, Arizona.

Also present: Congressman John Murdock, Arizona; and Mr. E. S. Haskell, special investigator.

The CHAIRMAN. The meeting will come to order.

We are very happy to have the senior Senator from Arizona with us this morning. With these two Senators present from Arizona, the Senator from Nevada has to sit on his hat, because anything that isn't nailed down, and chained to the other side, these boys will bring it to Arizona. They're working for Arizona morning, noon, and night. We are happy to have them with us.

We are also happy to have the Representative of the congressional district, Mr. Murdock; and we hope the other Congressman may be present.

Senator HAYDEN. May I say a word, Mr. Chairman? I want to let you know how much we in Arizona appreciate your coming here. You have performed an excellent public service, by taking the time that other Senators would spend in their own States, or off on long vacations, in view of the trying times we have had, to come here to listen to our problems. You have accomplished a useful purpose, in that respect. There are controversies that naturally arise between occupants of the public lands and those who control the administration of them. A sore will fester when it is covered up. You come in and expose the proud flesh and interested people get a chance to tell their story. In many instances, to my own knowledge, you have accomplished adjustments promptly that otherwise might not have been made at all, or would have been long delayed. For your time, efforts, energy, good nature, and patience, we thank you.

The CHAIRMAN. Thank you, Senator.

Mr. Wilkinson, will you kindly come forward and have a seat with us? Will you kindly state your name and your place of residence and your business?

STATEMENT OF F. M. WILKINSON, DISTRICT ENGINEER, UNITED STATES ARMY, PHOENIX, ARIZ.

Mr. WILKINSON. My name is F. M. Wilkinson, 92 West, division engineer, War Department. The address is 204 Home Builders Building.

The CHAIRMAN. You are in the real estate business here?

Mr. WILKINSON. No, sir; not personally.

The CHAIRMAN. Have you been?

Mr. WILKINSON. Yes, sir.

The CHAIRMAN. What is it that you are now doing, Mr. Wilkinson?

Mr. WILKINSON. I am chief of the suboffice of the Division of Engineering, Acquisition of Real Estate Department, of the War Department.

The CHAIRMAN. What experience have you had, in the past, evaluating property, especially grazing property and country property?

Mr. WILKINSON. For several years I farmed in the valley here; irrigated land. For 43 years I was Federal appraiser; 15 years making loans on land to the farmers. For 15 years I was in charge of the loans of the Joint Stock Land Bank in Arizona. For 6 years I was governor of the Water Users Association, the Salt River Valley Water Users Association, and 2 years president.

The CHAIRMAN. Is the gentleman present who brought up the matter of the acquisition of the gunnery range?

Mr. JACK MORGAN. Yes, sir; Jack Morgan.

The CHAIRMAN. Are you familiar with the Morgan matter, the Morgan case?

Mr. WILKINSON. More or less.

The CHAIRMAN. Did you sit as an appraiser in that case?

Mr. WILKINSON. No, sir.

The CHAIRMAN. Do you know how the appraisal came about?

Mr. WILKINSON. I believe his appraisal was based on the C. Y. L. carrying capacity.

The CHAIRMAN. "C. Y. L. carrying capacity" means what; year-long use of the range by cattle?

Mr. WILKINSON. Yes.

The CHAIRMAN. Did you have to do with that case at all?

Mr. WILKINSON. I talked to Mrs. Morgan. She came in to my office, and we talked to her about it.

The CHAIRMAN. Who made the appraisal?

Mr. WILKINSON. Harry Embach.

The CHAIRMAN. Is he here?

Mr. WILKINSON. Yes.

The CHAIRMAN. In this locality?

Mr. WILKINSON. In my office.

The CHAIRMAN. Was he under you in the making of the appraisal, or was he superior to you in the office?

Mr. WILKINSON. No; he was under me.

The CHAIRMAN. Is Mr. Embach in the room?

Mr. WILKINSON. No; I think he is up at the office.

The CHAIRMAN. Do you know what the terms, or conditions, of the taking were? How did it come to your attention, in the first place? Tell us the whole story; who brought it to your attention, who asked you to act, what authority or capacity did you act in, and what did you do?

Mr. WILKINSON. Capacity as chief of the suboffice. We received orders; orders were received from the division office to appraise this land. Certain appraisers are assigned to certain projects. In this case Mr. Embach is the appraiser in the Yavapai. The appraisals are turned in and submitted for approval and then we are ordered to

negotiate on the basis of the amounts the Government authorizes us to offer. That was done in that way.

The CHAIRMAN. What did you find in your office as to the number of cattle that Mr. Morgan and his outfit had?

Mr. WILKINSON. I don't recall that there were any cattle at all on the range.

The CHAIRMAN. Would your notes or your records show definitely?

Mr. WILKINSON. Yes, sir.

The CHAIRMAN. You haven't those with you?

Mr. WILKINSON. No, sir.

The CHAIRMAN. I submit this to the members of the committee here, in order to shorten the thing up. Would it not be well to have Mr. Wilkinson bring his assistant and the records here so that we might go over them all at one time and be through with them? Could you do that within a reasonable time?

Mr. WILKINSON. I can telephone and have them come down.

Senator McFARLAND. Mr. Chairman, before you do that, would it not be a good idea to ask if there are other cases that need to be discussed, so that he could bring other records?

Mr. J. MOEUR (attorney at law, Phoenix). Mr. Chairman, I had a number of those cases, Mr. Jameson, and John Neil, and several others. I want to say, as far as Mr. Wilkinson is concerned, that I think he tried to work out an amicable adjustment of this matter and a decent adjustment. I don't think he was able to do so. I think the amount paid these people—I have some details here. I think it was absurd and out of line with the bill that was passed that proposed to give them reasonable compensation. I had some correspondence with Senator Hayden on it; rather, I think he has some. I think the probable illustration is a case where they actually paid the man less than his railroad leases, by the time he gets through with it.

The CHAIRMAN. Well, this case that was presented yesterday, the Morgan case, where they offered \$611 for a settlement which embraced taxes and leases amounting to about \$1,200, as I recall—

Mr. MORGAN. Better than \$2,000, Senator, the total taxes and leases together.

The CHAIRMAN. I just wanted to get to the method by which the conclusion was arrived at.

Senator McFARLAND. Mr. Chairman, there isn't any limit placed on the amount that the Government will pay in this bill. I don't know what limitations they are working on, because there are no limitations in the bill. The limitation of the bill would be what the property is worth. I don't know where the War Department gets any limitation.

The CHAIRMAN. Well, it might be well for us to find out what the basis of evaluation was. I think the details should be disclosed here, because it has been stated here by Mr. Morgan that his outfit have been running cattle in that vicinity for many years—

Mr. MORGAN. I beg your pardon, Senator. I had never put the property into production, but I held a nonuse grazing lease for 1,140 head.

The CHAIRMAN. Didn't you state here to us yesterday that your wife's folks had been running cattle in there before?

Mr. MORGAN. Not on that property.

The CHAIRMAN. But in that vicinity?

Mr. MORGAN. In the State of Arizona.

Mr. MOEUR. All these people I represent were running cattle there. That is the difference.

Mr. WILKINSON. You are aware, Senator, that the instructions to the employees of the War Department do not allow them to disclose appraisals, War Department appraisals.

The CHAIRMAN. Well, I don't know that this committee is going to be barred by that.

Mr. WILKINSON. I don't say you are.

The CHAIRMAN. I want to conform in every way that is reasonable, but I'm not going to be barred by an unreasonable—

Senator McFARLAND. I think one thing ought to go in. One of the complaints that has come to me is the people can't find out what the appraisals are. The people that want to settle these claims can't find out what the War Department is appraising them at. I think they are entitled to know.

Senator HAYDEN. I would suggest, when the witness returns, that he bring the instructions under which he operates. What Senator McCarran is interested in is the way in which you do business, the general basis of your operations; the limit and scope of your authority. That is, whether you have authority to settle a thing yourself, or whether it has to go to somebody else, for approval in some other place.

Mr. WILKINSON. We can negotiate for the greatest amount the Government offers in that particular case. That is as far as our authority goes.

Senator McFARLAND. Who sets the figure though? Who makes the offer?

Mr. WILKINSON. There is an appraisal made and we negotiate on that basis.

Senator HAYDEN. That is to say, a man has a permit in a grazing district, and you want to move him off. First, someone goes on the land and looks it over and estimates what his property is worth. That figure is handed to you, above which you cannot go?

Mr. WILKINSON. That is correct.

Senator HAYDEN. If you are in your own mind satisfied that the figure is too low, what can you do about it?

Mr. WILKINSON. Refer it to the division office, and ask for another appraisal. They may permit it and they may not.

Senator HAYDEN. Where is that located?

Mr. WILKINSON. Our division office is in San Francisco.

Senator HAYDEN. You have to refer everything to San Francisco when there is a dispute?

Mr. WILKINSON. Yes.

Senator HAYDEN. If the landowner or permittee is satisfied, you settle; if they are not satisfied, you can refer it back to San Francisco. Who passes on it there?

Mr. WILKINSON. The division director. If he is not satisfied, he can pass it up to the Chief of Engineers, at Washington.

Senator HAYDEN. Are the people that pass on these questions at all familiar with the local conditions?

Mr. WILKINSON. They have reviewing appraisers in this office and the San Francisco office, and those reviewing appraisers have been in

this territory. You not only have an appraiser but a reviewing appraiser that passes on his work.

Senator HAYDEN. In this case, has a reviewing appraiser passed on it?

Mr. WILKINSON. Yes, sir.

Senator HAYDEN. Is that the last there is of it, short of a condemnation suit?

Mr. WILKINSON. I can't say. We have been ordered to put in a condemnation. I hope some arrangements can be made, a better settlement. In many cases where we take a declaration of taking, we can settle by a stipulation. Later the court provides. These people are protected, they don't have to accept that.

Senator McFARLAND. There is no protection in the courts, Mr. Wilkinson, under this bill where it is under the Taylor Grazing Act, because the Government does not recognize any rights. It is left up to the fairness of the War Department to make a fair settlement.

Mr. WILKINSON. In this particular case they pay no grazing fees.

Senator McFARLAND. That may be true of this particular case; but in most of the cases there is no protection of the courts. They can't go into a court. They are wholly dependent upon a fair settlement from the War Department.

Senator HAYDEN. I want to inquire about livestock to be removed from Butler Valley. I have here a memorandum from Henry P. Steele, one of those affected there. According to a notation that I have from the Grazing Service he had a license for 1,900 goats on his Federal range allotment within the area and all of his livestock must now be removed. The letter that I have from him indicates that he is going to suffer a serious loss. Do you have the papers in his case in your office?

Mr. WILKINSON. That project has just been given; in fact a directive came in on it about a week or two ago. The appraisers are just in from the field and were to write up their appraisals now; that is on the grazing, not on the mining. The appraisals haven't been written up.

Senator HAYDEN. I have a list from the Grazing Service here, showing a record of all who have livestock interests of any kind in the area. Then I have a letter from Mr. Steele that states his case. According to what you say, the matter is not finished, because the appraisers from your office have just gone out and are writing up appraisals now.

Mr. WILKINSON. They came in this morning.

Senator HAYDEN. If they made an appraisal satisfactory to any particular landowner the case is settled. If it is not as I understand you, the permittee or whoever has livestock out there can file an appeal that goes to San Francisco and then they will send some other appraisers to check the work of the first ones.

Mr. WILKINSON. They may or they may not.

Senator HAYDEN. What is the use of making an appeal if they won't?

Mr. WILKINSON. If they feel that the appraisal is adequate they may not, or a new appraisal—

Senator HAYDEN. How do they know if they don't look into it?

Mr. WILKINSON. As I say, they have reviewing appraisers that go over these matters, and their work is final, unless the chief will order a new appraisal. The appeal is made directly to him.

Senator HAYDEN. I want to reiterate what Senator McFarland said. We had considerable difficulty when this question first arose, because the War Department merely took the position, I remember, down in the Gila Bend country, that there were certain persons there with permits to graze upon the public domain and that all that had to be done was cancel the permits and tell them to move off. When they took their cattle away they had no rights at all.

The present law does permit consideration to be given to the range improvements, how long they have been there, how it affects their business. As the Senator said, there is no limit in the law on what can be paid to a man. It simply depends upon the judgment of the appraiser in coming to an agreement with the stockman as to what is the right thing to do. It has been surprising to us that, in a considerable number of instances, there was such a wide variance between what the permittee felt was due him and what was allowed.

Mr. WILKINSON. The Gila Bend was all cleared up, cleared them up and paid them off.

Senator HAYDEN. They got their money?

Mr. WILKINSON. Yes.

Senator HAYDEN. How long did they have to wait for it?

Mr. WILKINSON. They didn't wait very long after I came in charge of it. I was in charge of the southwest division. Before it was turned over to me—but after the appraisals were made, I don't think it was more than 60 days before they paid off.

The CHAIRMAN. Is Judge Shute here? Will you please come forward?

I think, Mr. Wilkinson, if you will do us the courtesy of getting the data from your office, and also have your assistant here as soon as possible, we will go into this thing again.

Senator McFARLAND. Mr. Chairman, I would like for Mr. Williams to tell us at some state of the game, either before or after Mr. Shute, how he thinks this law is working in the State as a whole.

The CHAIRMAN. Very well.

Mr. Shute, will you kindly state your name, your place of residence, and your business?

STATEMENT OF JUDGE J. W. SHUTE, PHOENIX, ARIZ.

Judge SHUTE. My name is J. W. Shute, my residence is Phoenix, Ariz. Sometimes I practice law and sometimes I monkey with this cattle business.

Senator McFARLAND. Which is more profitable?

Judge SHUTE. That is not a fair question.

The CHAIRMAN. Did you have to do with any of these cases of taking by the Government for military purposes?

Judge SHUTE. Yes, Senator.

The CHAIRMAN. Will you kindly state the cases and what your experience and observations were, and what the results were, in your own way?

Judge SHUTE. Well, Senator, I couldn't state it any other way except in my own way; but as a sort of preliminary to my statement that I may make, I wish to assure you that I don't think I ever felt more at home than I do in making my statement that I have to make to you, because I based that upon contacts that I have had with others from

Nevada, your Governor, your present attorney general, your engineers up there. I have always found that all of those representatives from Nevada were extremely generous and extremely anxious to accommodate, and willing to go more than half way on any subject that you might present to them, and my experience and my understanding of this 2 days we have had here with you leads me to believe you have been tarred with the same stick they have been tarred with.

The CHAIRMAN. I fell in the tub!

Judge SHUTE. Well, anyhow, I have been sort of boosted into the position here of making a sort of a protest against the action of the War Department and other departments, too, in dealing with the citizens of Arizona in acquiring the land which they have needed for the furtherance of the war effort. That protest goes, I think, to a policy, although you might call it a habit; certainly it is a practice.

Senator McFARLAND. Judge, would you mind stating what capacity you speak in?

Judge SHUTE. In a dual capacity. I was asked by the Arizona cattle growers to present this question to this body; and I also act in the capacity of representing two or three of these people whose lands have been taken—I was about to say condemned, but I withdraw my thoughts of condemnation. If I should permit a little feeling to creep into the matter, I hope you will forgive me, for it does seem to me we ought not to permit feeling to sway us in any way in times like these and in matters such as these, but sometimes we can't help it.

I think the cattlemen of Arizona yield to no man in their loyalty and patriotism, or to any group of men, for that matter, in carrying on the war, and in doing what they can to benefit and bring it to an end as quickly as possible.

In order to lay the proper foundation for the statement that I may make to you, I think I can say without fear of contradiction by anyone that all of these ranges in Arizona have been occupied for two or three generations. You find them much the same as you find them in Nevada and other Western States, and all of them, I think, with but very few exceptions, were occupied, fully used, taxed, and constituted a part of the going political and social concern of Arizona, even long before the Forest Service was ever thought of. That lays a sort of foundation for my statement, because a part of these lands are influenced, either directly or indirectly, by forest regulations.

In order to illustrate it properly, I will furnish you with two specific instances, and then I shall be glad to answer any questions that may be shot at me, either from a legal viewpoint or a practical viewpoint, as best I can.

Just west of Flagstaff, at a little place called Belmont, where this Navajo ordnance concern is put in, there is a range that embraces almost two townships, 4 and 5 east, 21 and 22 north. In order to get this picture properly, I may again restate that these lands have been occupied as cattle range, well, since the beginning of our history. A good many years ago—that is, several years ago—a man and his wife by the name of Osborne occupied these two sections, the eastern part, or section, of township 5, which contains all the permanent waters. Township 5, used in connection with and as a part of section 4 lying to the west, was used as a basis for putting all the permanent improvements upon the land. On this township Osborne put fences,

houses, corrals, tanks, and other improvements necessary to conduct the business that he was engaged in.

Now, in order to have a little bit better and more full and complete picture of this proposition, I want to explain to you, Senator, that the west part of this range, or township 4, has no permanent water on it of any significant size. It is used in connection with township 5 and it contains good grazing and can be used in connection with that very profitably, as I shall attempt to show you by actual figures which have been compiled for this purpose. Some time about the 1st of March, or the latter part of February of 1942, not very long after our unfortunate incident at Pearl Harbor, certain individuals, whose names I do not now have, went to Osborne and made the statement to him that they wanted to use a portion of his range for the purpose of putting in this arsenal.

They were met more than half way, and he consented to their going upon the land and making a survey of it, and consented to tentative figures that were arrived at for the purpose of later getting a price for this cattle ranch. On the 4th day of March—I will use these figures from data that I have—on the 7th day of March 1942 a Mr. Russ Tatum, whom I know lives here in Phoenix and with whom most of us are very well acquainted, secured from Osborne and his wife a written permit for a survey of these lands.

Senator McFARLAND. Are these lands patented?

Judge SHUTE. I will state that a little later. Most of them are not patented.

Senator McFARLAND. Was this before the bill was passed, or after?

Judge SHUTE. It was long before that, long before the bill. I can see your trend of thought, because I'm sure your thought and mine run along the same way.

Anyway, this arrangement was made in writing. Russ Tatum signed the agreement with a man by the name of—this looks like "Blair"—whoever that may be; I don't know him. At the same time Tatum, representing himself to be empowered with the right to appraise the lands, made a tentative arrangement with Osborne for that purpose. The exact amount of that arrangement is somewhat surrounded in mystery, somewhat in doubt, and therefore I do not use it. However that may be, it was not so very long after that until Osborne, after he had thought the matter was arranged properly and that he was going to be paid and recompensed for his land, had to go home for some purpose, or was going home for some purpose, after he had been away for a few days. He feeds cattle here in the valley, largely, and is gone a good portion of his time and devotes a good portion of his time between the two places, going back and forth.

I will go back a ways to make more explicit the situation with respect to your question, Senator, McFarland. On township 5 of this range, Osborne has approximately 900 acres of patented land, and, of course, on this patented land his houses and improvements were put, the tanks, and things of that sort. The tanks and improvements were placed wherever he thought the tanks would do the most good for the purpose of the range, and I may say in passing that all these tanks cost not under \$1,000, and from that on up to \$1,500, or along in there. They were large tanks, such as are in general use throughout that sec-

tion of the country, and are used for storing water for the benefit of the livestock using that particular range.

Osborne, upon returning from the visit to wherever he was, was confronted at the gate of his place by an armed soldier who told him they had taken the place over and he couldn't go in. He was not able to remove the furniture from the house until he had gotten an order and a permit from the commanding officer. Now, probably I shouldn't have any objection to that, as I understand that is a military way of doing things; but in view of the situation that developed prior to that time, it was an aggravating way of going about acquiring the ownership of land.

In August of 1942 Osborne was served with a petition of condemnation. Simultaneous with the filing of this complaint or petition, the authorities who were in charge of the operation up there secured from the Federal court an order for the immediate possession of these lines.

Senator McFARLAND. That would have been shortly after this bill was passed, wouldn't it?

Judge SHUTE. About a month after the passage of this bill.

Senator McFARLAND. I believe the President signed it some time in July.

Judge SHUTE. The bill was passed on the 12th of June 1942, and became a law on that day.

Immediately the military authorities proceeded to do with this land as they pleased. Then it became known that all they wanted for it was this township 5. As I have heretofore stated, all of his living water—he had some beautiful meadows—all the improvements and practically everything of any moment at all were upon this township 5. They proceeded to fence it. Then they came back about that time with an offer of compromise—I am not sure about this exact figure; I hoped Mr. Osborne would be here, so I might get it—but I think the offer was \$6,400, that they offered for this entire township, or township 5, eliminating completely the west half of it, and putting the fence down on the line between townships 4 and 5, thus making it impossible for Osborne to use township 4 since, as I have heretofore stated, there was no water upon it that would support the cattle that he wanted to use for that time.

Now, going back just a little, he had a forest permit on the forest for 472 head of cattle.

Senator McFARLAND. Judge, I would like to state this, if I may interrupt you, that it was thoroughly discussed at the hearings on this bill, and it was thoroughly understood by the War Department, and everyone concerned, that frequently the taking of a part of a range might make the whole of a range valueless to the owner.

The CHAIRMAN. That appraisal should take that into consideration.

Senator McFARLAND. That was thoroughly understood by everyone concerned in Washington.

Senator HAYDEN. We had some difficulty in making them understand it, you remember, Senator McFarland, wherein the Gila Bend case left Tom Childs' house and well just outside his grazing permit? That case, however, was just the reverse to what you are talking about here. Tom Childs was left with water and no place to put his cattle. Here they take the water, and there is no place for the cattle to drink; so the range is useless.

Congressman MURDOCK. I would like to verify the statement my colleagues have just made. Such was the understanding, at the other end of the Capitol, in the enactment of this law.

Judge SHUTE. They shouldn't have much difficulty in understanding that. If I am correctly informed, about all you can find in Washington is lawyers, especially in connection with these different departments, because it has always been the law of condemnation that, if you take a man's property, a part of it, and thereby damage the other property, you must pay for it. That's always been the law. I don't believe anyone would dispute that situation.

I have rather lost the trend of my story, but I believe I had reached the point where Osborne was down to this permit for 472 head.

Senator McFARLAND. Would you rather we would not interrupt you?

Judge SHUTE. I would like for you to make a more perfect record; but do whatever you feel like. I'm a good deal like the story they used to tell about the sausage; cut them off anywhere, and you still have sausage.

Now this permit for 472 head didn't by any means tell the story with respect to what John's right was on these 2 townships because on the patented land that he had on both sections, townships 4 and 5. It permitted him to run an amount in excess of that, which ran the matter up to 654 head that he could use for the season. Well, after the putting of these fences through, and the taking of the east half of township 5—and let me say in extension of that, that it does not embrace exactly the entire township, but so near it we may use them without regard to a few acres—it runs under in some spots, and over in others. After they had fenced it, and had made John this counteroffer of \$6,400 for the eastern township, and the west thus becoming absolutely worthless to John, he had to do something with it; so the Howard Sheep Co., who owned permits both north and south of township 4, was approached. Finally, an arrangement was made whereby, for this west half, or township 4, they paid John \$7,800.

Now, I want to emphasize particularly that on this west township there were no improvements of any magnitude at all. True, it was fenced, and valuable; but the difference immediately shows you how absolutely out of line it was on the compromise, when you take into consideration the sales that have been had.

Now, stopping just for a moment, of course, these things, as soon as we get into them, bearing in mind this has been well over a year now since these negotiations were entered into—after the filing of the complaint, in almost a year and a half since they began negotiations, it created quite a lot of interest in different spots. Much correspondence was had with Senator McFarland, in which I have expressed myself several times. I don't know whether I ever wrote Senator Hayden or not. If I didn't, its the first time I never wrote to him about something.

We have had communications from officials representing the War Department, one of which is particularly interesting, and upon which I might be permitted to comment, bearing in mind that all of the people of Arizona, represented by their individual, wonderful land man, Mr. Williams, here, and other citizens, had been to Washington, and

had an understanding. They told all the people of Arizona about what was going to be done with the wholesale taking of these lands in Arizona. In answer evidently, to a letter which Senator McFarland had written to the War Department, I have before me a letter, dated July 29, 1943, addressed to the Honorable Ernest W. McFarland, and signed by Thomas McRobbins, major general, Acting Chief of Engineers. Probably this letter will explain some things. I will not read it all, but the second paragraph of that letter, which is important to this question, says:

A report from our field representative has just been received which discloses that the appraisals of the land within the above project area have been made on a fair and impartial basis. Special consideration has been given to the cases, referred to by Mr. Stanley Leonard, Phoenix, Ariz., in his letter of June 24, 1943, and in each case it is felt that the prices offered are fair and consistent with the current market values.

Either Major Robbins wilfully misrepresented, or was woefully mistaken in his facts.

Now, he can get on either horn of that dilemma that he wants to. The reason that he makes this statement is this, that on all of these national forests they have consistently recognized these permits as property. Now, the Forest Service, and the forest supervisor, will probably deny that, from a legal standpoint; but whether they do or don't is wholly immaterial because they recognize them. A man may sell or may waive the grazing permit. He can without exception, as far as I know, always secure the permit upon the forest. Now, in order to know whether or not the deal is what it should be, the Forest Service generally requires the filing of these papers and records with them, so that they may know what has been done. In many instances that I have handled myself, the figures upon the sale represent how it was done, usually upon a per head basis; and the amount that was paid would depend entirely upon the character of the range carrying capacity, where located, and would run from \$15 to \$80 per head, from my own experience. Now, it would not have been difficult for Mr. Robbins, or any one of the lackeys, which he has, and I think he has plenty of them, to have investigated the heads of these departments, and have seen at a glance what these permits were worth, if they wanted to use that basis.

Now, these things are usually sold, I may say, in three different ways: first, a man may say, "How much do you want for your range?" "I want so much," without regard to rhyme or reason. That is an old way, that is not followed much any more. The usual, and the way it is most often followed, is, "I have a forest permit for 500 head of cattle, and I think it is worth \$30 a head," or whatever they may agree on. In my own experience, that has run from \$15 to \$80 a head, short-season permit. A short season up there, and that drops down to an ordinary scale, because it isn't a year-round operation. But, on the other hand, it represents a grass country, where they can put their yearlings and cattle in, and get them ready for market during the summer months; where ordinarily the country is covered with grass and feed for them. But, however, that may be. If they didn't want to take those figures of so much per head, it would have been a simple matter for those who wanted to find out the value, to have found out what the return would be upon that.

For that purpose, I have some sales here which have taken place in this area: E. M. Smith, Hibbard, 714 head, sold for forty-eight-thousand-some-odd dollars, which equals \$67 per head for the 5-month period; or \$28 per head for the permit.

The CHAIRMAN. What was the date of the sale?

Judge SHUTE. That date was 1941, in April or May. These figures, no matter what they may be, the longer back they are the less they would be. Since the migration of the dudes, they have been going up with mighty leaps and bounds.

We have another one here: Miss Fry, 547 head sold for \$19,000, or \$34.73 per head, for the same period of time, in the same area. Here is another one: 245 head, \$90 per head year-long, or \$38 per head, which was turned down because they wouldn't take it. Another: 541 head, \$63,910, or \$118 per head year-long, \$49 per head for the 5 months. Travis, Miller: 400 head, \$18,000; \$45 per head for the 5-month period. The total of the 5 sales averaged \$38.94 per head upon that basis.

Now, I wish to say that in leaving that question of value, and how it might have been arrived at, that is the very thing that these people would have discovered had they seen fit to go to the heads of the departments and ascertain the actual sales that had taken place of similar ranges in that vicinity.

The CHAIRMAN. Now, these sales and records are on file in the local offices, the grazer's office, the forest ranger's office?

Judge SHUTE. In the forest supervisor's of each of these forests.

Senator MCFARLAND. I might state in that connection, Judge, at the hearing the statement was made there in response to a question of mine as to policy, whether they were going to pay the man for the use of the premises during the duration of the war, or whether they would buy them outright; and the grazing authorities said they wanted it so they could have authority to pay them a price that they could go and buy lands and grazing permits in other places and set up in business in another place.

Judge SHUTE. That is the word that came out here. That was the word that most all of these cattlemen received.

Senator MCFARLAND. You may be sure Mr. Williams gave you the correct report on that matter. All the departments were represented, and when this bill was drawn up, it was agreed to by our representatives in Arizona, and agreed to largely because of the attitude of those in Washington in the War Department, in the grazing department, and in every department.

Senator HAYDEN. And the Attorney General's office.

Senator MCFARLAND. And representatives of the Attorney General's office. The only objection that was made to this bill—Senator McCarran, you can correct me if I am wrong—was a fear of Senator McCarran that, because the bill did not set up machinery for court action, they would not give the cattleman a fair break.

The CHAIRMAN. That is right.

Mr. WILLIAMS. The Senator's statement is correct, and we had all interested parties at those conferences. It was decided that the settlement would be a fair per animal unit basis; that, if they had to go elsewhere for the duration, they could continue in the cattle business there, or return after the duration on their own premises, if it was not a per-

manent installation; and they would be paid sufficient to set-up in the cattle business later; or the revenue would be the same for the time they were dispossessed so that when they came back they could continue in the cattle business.

Congressman MURDOCK. To confirm that, Mr. Chairman, it was pointed out in all hearings that meat production is a part of the food production, and vitally a part of the war effort, and that this was a part of the war effort the same as the establishment of gunnery schools and bombing ranges.

Judge SHUTE. Now, that just about concludes this first illustration, this first example, except that I wish to say Osborne has never received one dime for his stuff. He has been kept out of the possession of his land, except what he got out of the sale, which he himself accomplished, to the Howard Sheep Co. of township 4. I may say that is the situation as far as I have been able to ascertain. It has been fairly illustrative of the way most of those cattlemen up there were treated. But I do want to use one other illustration that I think is very illustrative of the high-handed methods that these men will take, and which is another fine example of what will happen when you pin a tin star on the best citizens of the world, or place a gun in the hands of some man with the power to use it. He will run over you roughshod. They seem to think that is the thing that should be done.

This second illustration is one I take a considerable amount of pride in—it is a small thing. I mean by that I like to tell it.

A young fellow by the name of M. D. Moeller, he is an airman. Here is the boy now. I am going to tell this story and then you can shoot at him, because I think he can tell it better. Anyhow, he is flight instructor at Thunderbird No. 1 Field, Phoenix, where he has been training these boys to show the Japs and Germans what bombing in airplanes really means.

He has been working along, and he decided he would like to have a place where he and his wife could go in the summer for a vacation and at the same time have a place to live on. Proceeding up near Flagstaff, 6 miles from Flagstaff, east from Mr. Osborne's allotment, and under the same jurisdiction, he paid \$2,000 for 120 acres of land. I think he paid all the land was worth. At least that was his own business and the business of the man who was selling it to him. Mr. Moeller was approached in the same way that Osborne was approached, and, I suppose, with the same weasel words, induced to say, "Everything is lovely; I want to participate; I want to do what I can to further this war effort." He agreed that he would take for his land just what he had paid for it, \$2,000. He was going to improve it. He bought it in August, and he was approached in December. I want to say that, so it cannot appear that he in any way was speculating. He wouldn't know the meaning of the word. He was buying it for the purpose of a summer home.

He agreed to take that amount. A little later the authorities came back and said they had had the matter appraised and offered him \$2,000 for it. He was rather curious to know why this \$2,000 would be the exact amount. They said they had gone to the recorder's office up there and found, from the revenue stamp on the deed, that was what he had paid for it. An appraisal was so near it that they made it \$2,000. He thought he was going to get the money. I don't know

whether he had spent any of it or not. Not very long after that he found out they had changed their minds completely about it, and they came back and offered him for that land, as a compromise measure, the magnificent price of \$3 per acre, or \$360 for the land. Needless to say, he refused it. It has been my understanding that he has not gotten a dime out of it either.

Now, let me review for a moment how this affects me in representing these different people. I recognize the power of the Federal Government, and particularly do I recognize the power of the War Department in time of war. All of the machinery, taking and paying, is in the hands of this War Department or in the hands of some of the other governmental agencies who have been given the power to condemn and to take, or to take and condemn. Men like Osborne and men like Moeller, who are fairly illustrative of the entire cross section of the citizens who have been dealt with, they can ill afford to rent the courts, because they know that behind the governmental agencies with whom they are dealing are hired paid attorneys, who can take the matter to the Supreme Court of the United States if they want to, which is a long process, and in the end they might get something out of it; but the day is long and the road is rough.

Senator McFARLAND. May I interrupt you right there and state that is one reason we didn't try to put anything in the bill in regard to court actions. In the first instance, we had the Government officials against us, which made the passage of the bill problematical. If we had tried to do it, the chances are we wouldn't have got it passed. But particularly our people, our representatives, came to us and told us that the ranchers did not want to go into court. All they wanted was a fair settlement; to get the money and go on to someplace else or buy something else. What you are saying was told to the people in Washington at the time the bill was passed.

Judge SHUTE. Well, it is now being put into effect.

Now, realizing long ago that the probability of getting anything for Osborne, or one or two other clients that I represent—and I wish to say here, I do not represent this boy Moeller in his effort; I happened to know about that, that about what the effects are—it just seemed to me there was the one thing to do, get in and have the matter adjudicated. Whatever they would say we were entitled to, we would be satisfied with it upon that score, and the only score we had fear upon was that the attitude of these officials meant that we probably would never be able to get a dime until the end of the road.

Now, what has brought that about? I do not know. I've had a motion, a couple of times, to set a couple of these cases, and I haven't been able to get my motion set. My motion has been presented, but it hasn't been set. There may be a justification for that, on account of the work in the courts. Maybe, in view of the fact that we were just entering the summer period, caused the courts to stop and hesitate, in view of statements to the effect they were trying to work these things out. I hardly agree with those statements. I wish to say, if they had a little more time we'll be worked out entirely, to where we won't get anything.

I think, Senator, that is about all of my statement. I'd be glad to answer any questions.

I wish to say these actions have been brought under the Second War Powers Act, and I know, or at least I think I know, what it contains.

I see no reason why these men should be treated like they are, particularly in view of the fact they were all so anxious to cooperate and aid in the effort to carry on the war successfully.

The CHAIRMAN. Where is the place of residence of the general whose name you mentioned?

Senator HAYDEN. Robbins is assistant to Major General Reybold. He signs the mail when the General is out of town. His name is Thomas M. Robbins.

Senator McFARLAND. He's in Washington?

Senator HAYDEN. Washington, D. C.

Let me add this, that in talking with officers of the Land Division of the Office of Chief Engineers I have found, in some instances, a disposition not to settle; but to let a local jury determine the value, the implication being, of course, that the case can go promptly to trial, and the jury can fix the amount in a condemnation. If the dispute can't get to trial, then the whole process is blocked. What is surprising to me is that there should be opposition on the part of those representing the Government to letting a jury pass upon the values, in a condemnation proceeding.

Judge SHUTE. Well, Senator, maybe I made the wrong impression. I don't know. I know that in urging my motion for setting I was rather emphatic about it, and Judge Ling said we shouldn't do anything which would in anywise interfere with the war effort, and stated to me he had been trying cases over in California, some of which had been pending for a period of 3 years. That didn't sound very good to me, so I immediately suggested that probably that was due to the fact the work over there was congested. He said it was probably true; but it had no application to Arizona, since the work in Arizona is not congested, at least, to the extent that we ought to be delayed in going to trial. He did say, however, in most instances where they had left those matters to the juries, the juries had not found an amount for the owner in excess of the amount that had been offered.

In many instances they found less. But that is all right; that part of it. We must take our chances with the jury. I did not feel we would have much danger, in any of the cases that I represent, or either of the two instances that I have recited to illustrate the protest which we made over the treatment we are receiving.

Senator HAYDEN. There is an old saying, "All injustice lapses with time." If delayed long enough, all the parties would be dead. I am just stating that the policy of the Army Land Division as indicated to me, was to let a jury of the vicinity, determine what the value of the land is, and then promptly pay the bill." I can't understand why there is any reason for putting off a trial if that is the basic attitude.

Judge SHUTE. Of course, that would be the theory upon which I would try to get my case set, Senator Hayden. I am as well satisfied, as I am telling this story, that there are lawyers enough mixed up in that so that we won't get final judgment until we have gone through the usual procedure, at least through the circuit court of appeals.

Senator HAYDEN. Let me interrupt there. We negotiated for this law with the distinct understanding, as far as the Department of

Justice is concerned, that it was to be fairly administered. We had difficulty with lawyers who were utterly inexperienced in respect to western conditions, to get it through their heads just what we were driving at. But we finally did, and they then became enthusiastic advocates of the bill, and helped us out materially. It may be true there would be a minor official of the Department of Justice who would like to drag out his job; but I don't believe, once you have got the cases to the jury, it would be difficult to get a settlement. You starve a man to death by denying his subsistence.

Judge SHUTE. You must remember, all the time these things are dragging forward, being turned over, and hashed and rehashed, you're building up a psychological situation in the minds of the people. They absolutely refuse to go anywhere, except upon their own estimates or appraisals, that are made in some way unknown to me, and I tried my best to find out how they arrived at that figure, approximately. They told me it was none of my business; in a nice way, of course, but that is the way I was told. I've tried to see if we couldn't get together and make an offer to compromise. In one instance, I did get quite a ray of hope, maybe I'll be able to get some place. But in this *Moeller case*, and the *Osborne case*, we have not been able to go anywhere; and you can see from the difference in the appraisals made how hard it's going to be to get anywhere.

The CHAIRMAN. Who, in your judgment, makes the appraisals, as far as you can determine; local people, or people from the outside?

Judge SHUTE. Senator McCarran, I really don't know. Russ Tatum acted for a while and in one instance we were sent to the man we were talking about yesterday, in the Lawyers Tower, to take the matter up with him. Whether he did it or not, or how it was done, I don't know. When I talked to the attorney, I was told that was a matter they could not divulge. In another instance they could not divulge what basis or what figures they were using, so it was whistling in the dark, so far as we were concerned.

The CHAIRMAN. Mr. Wilkinson was here before us this morning. I think that was before you came in. He gave us, preliminarily, the first statement that he was precluded from divulging the method of appraisal, or how it was brought about, or what value they had arrived at, and said he wanted the committee to protect his office in that. I'm not altogether certain that the committee is going to take any such stand whatever. The committee is going to take the stand that it will bring to light the truth. We are going to take a stand all the way down the line on that, and we're going to try to bring the light out, so that we can find out whether or not these things are justified. If they're not justified, we're going to try to find a way to justify them. It may take a little time, and a little drastic action, but the committee is not afraid of its position.

Senator MCFARLAND. Judge, just one other question: I don't want to comment on the case that is in court, because I don't know anything about it, but does that case involve a patented land, involve patented land, or do some of those cases involve the grazing permits?

Judge SHUTE. They involved both. I think the basis of their appraisals has been on patented land. They took the position, when I first began to treat with the situation, that as far as the State land leases, of which there is one here—section 18—were concerned, and the

forest lands were concerned, we didn't have anything, and therefore it was not worth anything, and therefore they wouldn't pay us anything.

Senator McFARLAND. They recognize in Washington the vested rights in the State leases in the permits under the Taylor Grazing Act. They wouldn't recognize the vested right that you could go into court and recover on, but it was always recognized in Washington by everyone that these cattlemen had a right that should be paid for, and the Congress of the United States recognized that. Now, if these people are not carrying out the intent of Congress, I am very sorry, because it was the intention of Congress, when this bill was passed, that these people have a fair price for their property.

Judge SHUTE. Well, the passage of the act of July 12, 1942, was——

Senator McFARLAND. That is the act that I say we recognized they did have a right there, for which they should be paid.

The CHAIRMAN. I am going to ask at this juncture if the Forest Service cares to enlighten the committee on any knowledge bearing on these cases.

Mr. KNEIPP. Mr. Chairman, in relation, for instance, to the Navajo ordinance depot, the Forest Service had no prior knowledge; in fact, it was pretty much accomplished by the time we heard of it; and from that time on, as far as I am aware, the Forest Service had nothing to do with the appraisal of the land.

The CHAIRMAN. I am wondering if at any time the Forest Service, or anyone connected with the Forest Service, was consulted by those seeking to take the land.

Mr. KNEIPP. Going back to the act of July 12, the only part the Forest Service had in that was to go there before the committee and express the opinion that, where a cattleman or sheepman was deprived of the use of a part of his range, he did suffer a real loss, and ought to be compensated for it. We had no part in determining what the method of payment should be, or how it should be computed. We did make some suggestions to Col. John J. O'Brien, who was in charge of this real-estate work for the War Department, as to the principles of evaluation. But I don't think they were, in fact, I am sure they were not, adopted in full; and it was some time before we were able to determine what method they had finally decided upon. The method that was discussed most generally was that the compensation would be on the basis of what they term damage appraisals; in other words, what was the outfit worth before the range was taken away from them, what was it worth after the range was taken away from them, and the difference between the two represented the damage sustained by the livestock men. Whether that is the principle they are following, I cannot say, but that is the principle we were discussing, the last time I heard about the matter.

Senator HAYDEN. That goes to the very heart of the situation. If you can't know what instructions were given to the appraiser; if he is simply acting on his own judgment, and making guesses, without a directive that tells him how to arrive at his conclusion, you are going to have different results in different instances. I think, Mr. Chairman, what we've got to find out before we get through with this hearing is the basis for such appraisals, and what kind of instructions came from on high down to the man who was on the ground making them.

The CHAIRMAN. Certainly there can't be anything confidential or secret in that. That is a policy.

Senator HAYDEN. One can understand perfectly, if a law suit is anticipated, a Government lawyer would not disclose his case to the opposing attorney before they went to court; but that hasn't anything to do with the basic principle upon which an appraisal should be made. That certainly should be determined by the War Department in the instructions given to the appraiser.

The CHAIRMAN. Are there any questions of the Judge, while he is on the stand here? Does any member of the Land Department here desire to question him?

Thank you, Judge, very much, for that very enlightening statement.

I wish to say that I made an error this morning, in opening the proceedings. I promised Mr. Havell of the Land Office that he might correct or modify a statement which he made in the record yesterday, and I now apologize to Mr. Havell. He may make the statement now.

Mr. HAVELL. Thank you, Mr. Chairman.

Yesterday, I made the broad statement that mining claims could not be established on a stock driveway. That was the provision of the original act, but I overlooked an amendment to that act that permits of the establishment of mining claims on stock driveways, with the restriction that it shall not interfere with the surface use of the land any more than is absolutely necessary; and such provision is carried into the patents.

Thank you for the opportunity of correcting my statement.

The CHAIRMAN. Judge Shute, will you come forward again, please? Mr. Sterling Hebbard, will you also come forward? Will you kindly state your name and residence, and your business.

STATEMENT OF STERLING HEBBARD, PHOENIX, ARIZ.

Mr. HEBBARD. My name is Sterling Hebbard, and I live in Phoenix, Ariz. I'm in real estate and ranch lands.

The CHAIRMAN. Have you had experience, or occasion, to observe these transactions whereby the Federal Government, through the War Department, or other agencies, seeks to take private property for public use?

Mr. HEBBARD. Yes, sir.

The CHAIRMAN. Will you kindly state to the committee, in your own way, whatever you may know about it, and what experience you have had, or what you know, if you know anything about these systems or plans or policies adopted and applied?

Mr. HEBBARD. I know nothing of the system or policy applied by the Government in arriving at their values.

The CHAIRMAN. Is there anything else you wish to state, with reference to your experience or knowledge?

Mr. HEBBARD. I have sold a great number of these ranches throughout the State, and the value of them, the sales price, should determine the value of the property. Taken over a reasonable length of time, there have been a number of sales in the various vicinities.

The CHAIRMAN. Those are private sales?

Mr. HEBBARD. Yes.

The CHAIRMAN. In the various vicinities. Now, in negotiating these transactions between the Federal Government, or an agency of

the Federal Government, and a private owner, did you bring to the attention, or did you have occasion to bring to the attention, of the representatives of the Government, the sales made in those localities?

Mr. HEBBARD. I have never discussed it with any member of any Federal Government agency.

The CHAIRMAN. What experience have you had? What have you observed of the manner in which it is conducted?

Mr. HEBBARD. From what I have observed, along the same lines as Judge Shute brought out, that the prices that have been offered have, in my opinion, not been in accord, at all, with the fair value of any of the properties, in any of the instances that I have heard about.

The CHAIRMAN. Did you make your opinion or conclusion known to those who were purchasing?

Mr. HEBBARD. Not the Federal agents. I never discussed it with any Federal agent.

The CHAIRMAN. Have they ever attempted to discuss it with you, with the idea as to getting information as to the value and the specific locality?

Mr. HEBBARD. Yes, one time there was a gentleman from San Francisco who called me up and asked me to come to the Lawyers Tower Building, and offered me a job as a Government appraiser.

The CHAIRMAN. Did he discuss with you the method of making the appraisal?

Mr. HEBBARD. No, sir.

The CHAIRMAN. Did he go into the matter, at all, as to what you would be expected to do in the way of acquiring the land?

Mr. HEBBARD. No, we discussed compensation, and that's as far as we went.

The CHAIRMAN. You didn't go into the Service?

Mr. HEBBARD. Not for \$2,400 a year, and pay my own expenses.

The CHAIRMAN. Is there anything else you wish to say, based on your experience, for the enlightenment of the committee?

Mr. HEBBARD. Well, the various ranges taken over by the Government for their various purposes, from what I have heard, the prices offered have been within—I am guessing at this—10 to 25 percent of what a fair market value would be on that property, at the present time.

The CHAIRMAN. That covers the whole range, of which you have knowledge?

Mr. HEBBARD. Yes.

The CHAIRMAN. The whole range of transactions of which you have knowledge?

Mr. HEBBARD. Yes, sir.

The CHAIRMAN. And you base that statement on a number of years of experience in the line of business which you are in?

Mr. HEBBARD. I have been in the business a great number of years, and appraisals, selling, all over the Southwest.

The CHAIRMAN. Are there any questions anyone cares to propound to Mr. Hebbard?

Senator McFARLAND. I have one question. Do you know of any cases in which a satisfactory settlement has been made, from the standpoint of both parties, the party that had the range?

Mr. HERBARD. Not to my personal knowledge, there hasn't been any settlements.

The CHAIRMAN. Thank you very much.

Senator HAYDEN. Mr. Chairman, Mr. Wilkinson has brought us here, and I have had an opportunity to glance over, the general policy statement with respect to Army appraisals. From reading it, it is quite evident that it is based upon the acquisition of property in the eastern part of the United States, where range conditions do not exist at all. For instance, it says, with respect to farm lands—

Where farm lands are concerned, inspection should include a particular examination of the cultivable fields in order to determine the type, character, quality, of the soil, their fertility and other conditions contributing to the land values.

There is no indication that they were thinking about anything else except tillable lands. That is the only reference I find here to lands. The instructions to the appraiser are—

Since the appraised evaluations are confidential departmental information, the appraiser must be careful not to divulge his findings and opinions to anyone except his immediate superior or other appraisers engaged in the same project.

This indicates that the appraiser should fully inform himself, in case he is later called upon to testify in court as to why he arrived at the conclusion, but not until that time. My judgment is that there was no contemplation of the condition such as described here this morning in handing down the general instructions, as far as may appear on the printed pages.

Senator McFARLAND. As far as that instruction is concerned, it applies to permits under the Taylor Grazing Act. I think it is clearly improper, because they have no right—the Government does recognize a right to go into court and condemn, and they ought to put their cards right on the table, where the people can see them and see the basis for them.

The CHAIRMAN. Are there any questions coming from those present, either from the departments or others present? I want to say again, don't hesitate at any time to ask a question from the audience. We will be very glad to hear you, and you don't have to worry about how you are going to have to propound the question. We'll understand you some way or another, so don't worry about that.

Is Mr. Howard Smith here? Mr. Smith, your name is given to us here under this heading of "Military lands," and we would like to know what experience or observation you have had with reference to the acquisition of military lands in the State of Arizona.

STATEMENT OF HOWARD J. SMITH, PHOENIX, ARIZ.

Mr. SMITH. I've had very little, Senator, and I don't think I could elaborate on the statements that have been made by others here to the advantage of this committee. I think it has been covered by others, and anything that I might add would be entirely repetition.

The CHAIRMAN. Very well; thank you, unless there is a question.

STATEMENT OF J. H. MOEUR, ATTORNEY AT LAW, PHOENIX, ARIZ.

Mr. MOEUR. My name is J. H. Moeur. I live here in Phoenix, and I am a practicing lawyer, and, like Judge Shute, I spent a considerable time in the practice of land, mining, and irrigation law.

If the committee please, the War Department acquired a considerable acreage of land for target range in Mohave County. Evidently they let it be known they were contemplating the acquiring of these ranges about 2 years, with the result a good many stockmen in that country were very much disturbed, and some of them did not attempt to restock the ranges. They sold some of their cattle because they thought this thing was coming, and thought they were going to be protected, because they knew of the passage of this act in Washington that has been referred to here by Mr. Jameson, in particular, one of the leading stockmen in this country. He was in Washington with Mr. O. C. Williams when the act was passed, and they all thought they were going to get, shall I say, a fair deal.

Senator McFARLAND. Mr. Jameson testified before the committee.

Mr. MOEUR. I represent him and his partner, John Neil, Mrs. Gardner, and Lester Pyeatt. Also I have been in conference with most of the other people affected by the target range, including Mr. Lloyd Lakin, who is here today, and may have something to say about it.

As I say, they let it be known they were contemplating these ranges, and made no effort to determine what would be paid for the using or to determine what they wanted. The matter was referred to the War Department in Washington, Board of Engineering, without any previous notice. The matter then having been referred to the proper legal department, they served Mr. Neil here in Phoenix with an order for immediate possession. They didn't even tell these people they were taking this range over. The suit was filed Saturday, and they started Sunday using arms and told these people to move off. The people didn't have a chance to protect themselves. Most of these people were living and occupying and using these ranges; most of them living on the ranges, many of whom have been on it for a good many years. John Neil has been in business up there for 50 or 60 years. I'm not going to call your attention to all of these; some of them are so much out of line, Senator. The Senator here says he's sorry this act will not work. He has reason to be sorry.

The CHAIRMAN. You may feel at liberty to present it vividly, by cases and examples, if you will.

Mr. MOEUR. I'm going to cite two or three cases, briefly give you the facts and figures, and show you what happened in two or three cases that are typical of the other cases involved, which to my mind was pretty bad. As I said before, I am not blaming Frank Wilkinson or Harry Embach here, or the local office. Somebody else is grossly to blame for the inadequate compensation.

Senator McFARLAND. That is what we want to find out.

Mr. MOEUR. It's up to you to find out, because we couldn't find it out.

When these suits were filed and immediate possession was begun, we contacted the local office to find out what was it all about. Well, at the conference in my office were Mr. Wilkinson, Mr. Carson, representing the legal department, and Mr. Hemenway of the Santa Fe Railroad Co.; and we were told that offers would be made to us under this picture. The offers were made and were so grossly inadequate that we refused the offers and asked them to renegotiate. We didn't get far with the renegotiation. Let me say first, preliminarily, most of these ranges, most of these rights affected by those target ranges up there,

are composed of approximately one-half of land owned by the Santa Fe Railroad and the other half was under grazing permits, particularly in the grazing district.

I am very apprehensive about trying any of those cases in court. Carson told us, frankly, if we went into court they would be compelled to take the position, as far as the case in court was concerned, that no compensation would be allowed for the permit. They held that in the grazing district any compensation for the holdings of their permits would have to be allowed; but while the War Department negotiations—the court itself did not allow that. I rather think he is right. I think maybe—in spite of the congressional delegation not agreeing—I am apprehensive about the results of one of those cases in court.

Senator McFARLAND. Let me interrupt you right there. At the suggestion of Senator McCarran, here, any right that may have existed was protected by the bill; the bill did not take any right away from the people. Senator McCarran would have opposed the bill if we had taken any rights away from them. That's one thing he thought ought to have been in the bill, and would like to have seen in. If we had thought we could have gotten—

Mr. MOEUR. Your bill provided that the War Department had the authority to negotiate and take things into consideration, and should take them into consideration. Whether the court would allow that damage to be proved or not, I question very much, because every permit on section 15, Taylor Grazing Act leases, carries the provision that if the United States Government needs that land for any purpose they can take it without compensation.

I'm going to give you a couple of illustrations, in order to better illustrate it. I want you to see the way these ranges are cut up. I will present to you here a plat, which will give you the illustration, because I think you have entirely overlooked what might happen to the rest of the range.

This particular plat that I am now referring to, for the sake of the record, is a plat of the Kingman aerial gunnery range. This is the Yucca gunnery range.

Mr. MORGAN. Since my property is in that area, may I have the privilege of looking at it?

The CHAIRMAN. Come forward now and look at it.

Mr. MOEUR. I call your attention to one particular range in here, this Piatt range. This is included in this gunnery area, a portion of that range which is exactly in the center there, having left a tract on each side. Do you get the significance of this? I am going to give you figures, and facts of what happened on this Piatt range.

The establishment of the Yucca gunnery range, owned by Piatt—I refer first to the lower range, 14 north and 18 west, consists of 29 sections in this range down here. As far as the upper range is concerned—at the time this condemnation suit was filed Piatt had no cattle on this range, it was only partly fenced and he used it as a winter range, and had been using it for years. In the upper range at the time this suit was filed Piatt had approximately 300 head of cattle ranging there. His home is on the eastern part of that and was not taken in by the gunnery range. The records of the Phoenix grazing office indicate that on this particular tract below the tract he has a permit for 174 head. That is the record of the Grazing Service here.

In the upper range, consisting of 70 sections, he had a permit for considerably more cattle, for 266 head; and these two ranges were used, back and forth, by Piatt. At the time the suit happened he had actually 300 head of cattle on this upper range. Now we asked him if there was any possibility to fence more range off, over to the railroad by Yucca here, to fence off this portion over here. They considered he wasn't damaged by that and they told us we couldn't fence that. I say that the eastern part of the range is practically rendered useless. For some unexplained reason the cows insist in drifting back onto the other side here. They offered him the sum of \$971 for 3½-year period, out of which he would have been compelled to pay the railroad leases for that 3½-year period, which would have totaled \$1,083. That was the original offer.

If I am not correct in these figures, I notice Mr. Wilkinson and Mr. Embach have come back and they can give you the figures on this picture. We tried to work out a joint use on these ranges. They refused to consider any joint use on the lower range; and as far as I know, I don't know whether he had signed up or tried to work out joint use up above here. After the suits were filed they indicated that the cattle might use these ranges and range partly, at least 2 or 3 days a week. By that method some thought we might get some use out of these ranges. The cattlemen thought they would have to sell the herds and go to raising steers. They could, by running steers out 2 or 3 days a week, get some benefit out of this. As a net result, when we got through with this picture, after a lot of these negotiations and sending to Washington two or three times, we offered to take what they originally offered us, and be allowed to use this range in joint use; but they came back and said, "No, we can't do that." Those local boys would have done that if they had had an opportunity to do so. If you get joint use you have to pay the grazing fees, and of course you have always got to pay your railroad leases; consequently the matter comes down to practically nothing as far as that north range is concerned. On the actual overhead, in final analysis, on these 70 odd sections on the north range, they offered him \$827, and his grazing fees and Santa Fe leases for the same period came to \$552.15; a net use to you, for the period of 3 years, \$275, which was what they offered him for that, if they took exclusive use. Whether they did take the exclusive use was a question.

The second proposition they offered him, under the joint-use proposition, taking that portion of the range, they would pay him annually the sum of \$126.50 grazing fees on that portion of the range; and the railroad leases would amount to \$130.55, or would have cost him a net of \$4.05 for the privilege of the Government having the privilege of using that under what they offered him for joint use.

The CHAIRMAN. And he was deprived of the right of letting his cattle drift in?

Mr. MOEUR. He could use it to some extent, but it would cost him \$4 and some-odd-cents a year.

Senator HAYDEN. I assume that if any of the cattle were killed he would take the loss?

Mr. MOEUR. He assumed all risk of personal property and cattle.

On the lower range, the only offer they ever made him—they were going to take this over exclusively. I hand you this paper from the

War Department, from their engineers' department. The total amount offered him is \$4.65 less than it cost him to pay his railroad leases in that tract there.

Mr. LLOYD LAKIN, Phoenix, Ariz. In addition, was he not required to sign a relinquishment or rather a responsibility from any danger or accident that might be incurred through the use of the range? Isn't that true?

Mr. MOEUR. That is true; the assumption on his part of anything that might happen. What is more, they do not agree to put the improvements back in the condition they are in or anything else.

The situation with reference to Mrs. Gardner's range was practically the same, except a little worse. That Gardner range is shown here. She is the widow of a man who had been in the cattle business, who had a son, Kenneth Gardner, who runs these two places together. The proposed target range took in only a portion of their range, the west portion. The east portion of it remained out. Again, they could not get provisions for fence or anything else, nothing. They finally moved their cattle several miles north to the Charlie Michael ranch, and paid \$1.17 per head per month for pasture. The Michael range was sold shortly after that, and they had to sell their cattle; had sold their cattle and gone out of business and they never received a dime. It cost them \$500 to remove those cattle and get them up to this upper range, and they're never going to get them back again. The offer made to Mrs. Gardner, and she finally signed up, they told her she was aiding the war effort, but the offer was way out of proportion. The Gardner holdings consisted of approximately 126,000 acres of land, approximately 50 percent of which was already leased, 5-year cancellable railroad leases.

The CHAIRMAN. And the balance?

Mr. MOEUR. The balance was the permit from the Grazing Service. In some of these instances, some patented lands. Most of those ranges—that is the difficulty up there, you have got a range where the Government owns half of it already and the other half is by the railroad. Mr. Hemenway will tell you they have recognized these railroad leases as an ownership in the property as long as people pay their rent, renew them again, operators of the range and the improvements on there. Mr. Lakin will tell you he bought a range for \$30,000 and spent \$26,000 for improvements on that ranch, and they took it as part of this range. He can tell you what he got for it.

Now, Mrs. Gardner had, as I see it—

The CHAIRMAN. Let me ask you a question right there. Are these holdings under the Taylor Grazing Act permits or licenses?

Mr. MOEUR. Permits from the Grazing Service.

The CHAIRMAN. The permit, then, is a 10-year permit? The reason I asked is that the status has not yet been arrived at—was it under annual licenses?

Mr. MOEUR. These are 10-year permits. For instance, Mrs. Gardner's first is dated July 1, 1941, expiring June 30, 1951. That is answering the question. The designation of that permit is number 1-9DG1745. Under that permit, under those two joint permits, they have 600 or 700 head of cattle; permits have been issued on the basis of 60-percent carrying capacity of this range up there. The gunnery range on the Gardner range takes in, out of the 126,000 acres, about

57,000 acres on the west of that range. The break-down on the offer is this: The amount offered for that part of the ranch didn't take into consideration what is going to happen to the rest of the ranch. The amount offered, that part of the ranch, they take this 3½-year period, \$3,330.50, out of which the Gardners are compelled to pay State land leases and railroad leases in the amount of \$2,100, which left them in the neighborhood of \$1,700 for 3½ years for 57,000 acres of land. And that is the only offer ever made.

We came back and offered to take the \$3,330 if they would give us the joint use, and they answered "No; if you get the joint use you have to pay half the grazing fees on this particular range that you occupy just the same." When we asked them under the joint use to give us any assurance that they would continue to use it the same as they were now using it, what would happen if they started to using cannons instead of .30-caliber machine-gun bullets, they wouldn't tell us what they are going to do. They said they were going to take it and do what they pleased with it.

Now, I appreciate that is all the War Department can do; but if you accept a proposition like that you have to take full responsibility for anything that happens to you. A good many of these people signed up, and they don't know whether they are precluded from further release or not. I don't blame these local men; if these people had been let alone, some decent proposition would have been worked out. Somewhere down the line somebody slipped, and it has been bad. They practically bankrupted Mrs. Gardner on her range up here, and have hurt everybody else.

Now I have tried to find out what the basis of these appraisals was. I was met with the same situation met here this morning. At one time I was informed that these were appraised on the basis of the actual carrying capacity of the particular portion of the range taken in by the target range. That was unofficial. I was told, and I have some correspondence, that that was based on \$30 per head carrying capacity. I told the man who gave me that information that if he could buy those ranges for \$30 a head I would quit practicing and, like some of these contractors, I'd go into some of this Government work. We see all around us these Government contracts. There's a lot of money spent in the war effort, and we should all do all we can to further the war effort, and they are doing these things regardless of expense.

Here are people who are actually in business, and have been for years and years, and they seem to want to chisel them down to the last possible dollar, like this little fellow Pyeatt. He hasn't the money to go into court and fight one of these cases; hasn't the money to go in and fight that case and pay the attorney to carry that case on through. All he could ever expect to get out of it would be a nominal amount. It seems absurd to ask him to pay \$4 and something a year and give the Government the privilege of using his range for a target range.

Senator HAYDEN. There are two things that are perfectly obvious: first, so far as the scope and authority of any official having to pass upon these appraisals, the act of congress gave him the widest latitude and discretion to make adequate compensation. The second thing is that there is no question about the fact that money is available to make the appraisalment. We have appropriated for the fiscal year

beginning July 1, 71½ billion dollars for the United States Army, and 2½ billion for the United States Navy; that is, \$99,000,000,000; 99 thousand million dollars to run this war, which is \$300,000,000 a day that is available to carry on the conflict. There is no question about the money being available to make the payment immediately if a just settlement can be made.

Senator McFARLAND. Third, if I may add to the comment of my colleague, it is clear that it was the intent of Congress that a fair value should be paid to these people.

The CHAIRMAN. That is what I was going to say, that at the hearings conducted before the approval of the bill, and before the passage of the bill, the spirit was indicated that Congress desired to express in the law that these people, when their rights were taken away from them, should be paid on a fair and equitable compensatory basis. The whole spirit of the hearings, if they had read the hearings, if they had read the statements made by all those interested in it, would have disclosed what the intentment of Congress was, as to what should be done in the way of fairness.

Senator McFARLAND. They would also have read their own promise of the War Department to be fair.

Mr. MOEUR. I attempted to get the figures on the sale of this Michael ranch. I can't say except from hearsay. I understand the Michael ranch, from which she moved her cattle off, have sold on the basis of between \$60 and \$70 a head on the carrying capacity. All the ranges that I know of, and I have handled a good many sales in the forests and different places for the last 10 or 15 or 20 years, all of the sales I know of recently or proposed sales, have been on the basis of \$60 and \$70 per head carrying capacity. The last Forest Service case I handled was for a livestock company permit on the herd. I remember it was around \$55 a head, some 4 years ago. Since then they have gone up. There is pretty good range up there, worth \$30 a head carrying capacity.

Mr. MORGAN. This Lester Pyeatt that you refer to, his lower place: I wanted that, because I surround it on 3 sides. I offered Mr. Pyeatt \$100 per section for his leased rights, and Mr. Pyeatt refused it, saying it was not enough.

Senator HAYDEN. How would that translate into carrying capacity?

Mr. MORGAN. One hundred and seventy-four head for approximately a township; but he refused it, saying that it would not be enough just for his lease rights, and then, of course, I would have had to continue paying the Santa Fe, Pacific Railroad their leases.

Mr. MOEUR. Now, actually, the Government is offering him—there is no chance for him to run the cattle—the sum of \$4 and some-odd cents for the 3½ period; less than it will cost him to pay his Santa Fe leases.

Mr. MORGAN. I would like the opportunity, when time permits, to enlarge a little on my business in that area.

Mr. MOEUR. I think that is all I have to offer at this time, except to say these are typical of the rest of the situations up there. A little more money; a little more of the range may be taken into the target range. Mr. Jameson and Mr. Neil, I think everybody concerned up there; I think Mr. Lakin will tell you the same thing. I would like to have him give you the facts on what they offered him, there on his

range, and what he accepted, because he was a good sport and didn't want to go into court about it.

Judge SHUTE. May I amplify one point that I overlooked, that your conversation has brought out? I did overlook it. It is true that Congress has appropriated billions of dollars to carry on the show, as you expressed it, Senator Hayden. But not one dollar has been appropriated for the purpose of A's, B's, or C's land. It is a general appropriation to carry on this expense. Now, the title to these lands, where actions are brought in condemnation, does not pass until a judgment of condemnation is entered; when you are proceeding under the Second War Powers Act, that is. Title does pass under the act of 1931, when you file your declaration of intention to take it and use it. They have carefully kept away from that declaration of intention to take it, have not filed this declaration of intention to take in any case. So, if the war ends tomorrow, what are these men going to do? There is no appropriation; and they are going to be compelled to go into the Court of Claims where their great-great-grandchildren may at some time in the future realize a dime out of it. That is the situation I wanted to make a point of.

Senator HAYDEN. Mr. Morgan said he would like to amplify his statement.

Mr. MORGAN. First, I just want to state that some of Mr. Moeur's clients are adjacent to my property. Mrs. Gardner is to the south of the property; Mr. Lakin is to the east; and Mr. Pyeatt, this portion referred to as his lower place, you might say, is in the middle.

To state very briefly the history of my dealings in this territory, in July 1941, which, by the way, was several months before Pearl Harbor, I began dealing with the men that had some sections leased from the railroad company there. I finally purchased his leases and paid him \$100 a section for his lease rights and then proceeded to lease some larger area from the railroad company. I finally took in a total of about 110,000 acres, leased from the railroad company and about equal acreage which is Government land, making a total of about 220,000 acres. Now, the first lease I signed with the railroad company was in September 1941.

Then there was another area included later, which lease was not signed until March 1942, principally because the springs in the lease were erroneous, and it was sent back to Mr. Hemenway and was changed, and it was May 1942 before this lease was signed.

In the meantime, I had started arrangements to improve this land. I made numerous trips out there, and wore out an automobile going over the rough roads, and consulting fence contractors, and got them out there to build the fence. Well contractors were giving me prices to build wells. I bought a carload of barbed wire and made all the necessary arrangements, and even made an arrangement with the Santa Fe Railroad Co. to buy water from live land, and discussed, in a preliminary way, the arrangements for water from the Peter Lakin ranch, who have a well right close to the boundary line, investigated numerous springs on what is known as the Chemeluevi Mountain, and my wife and I were prepared to improve the range and stock it. Apparently we had been discriminated against because we were not using the property and did not have it actually in use, but

we were prepared to, and have gone to a lot of expense to get the land into production.

Senator HAYDEN. Just for the record, because somebody is going to read this record who has no conception of this type of range, how many acres does it take to carry a steer in that area?

Mr. MORGAN. Some of that land, according to the graziers, the United States grazer's appraisal, is rated at 2 cows to the section, and some of it is rated as high as 10 cows to the section. On my first lease we took in 54,000 acres of railroad lands and about an equal amount of Government lands. I was given a nonuse permit for 1,140 head of cattle. That was approximately half of the ultimate acreage that I had to take in.

Senator HAYDEN. What is the average annual rainfall in that area?

Mr. MORGAN. I'm sorry, I don't know.

Senator HAYDEN. The average around Phoenix is about 7 inches, in Yuma it is about 3. My guess would be somewhere between those two figures; very light annual rainfall.

Mr. MORGAN. It is lower than here. I imagine it is 3, or 4, or 5 inches.

Senator HAYDEN. I'm asking these questions because some time ago when the township near the Big Sandy were surveyed, they found out that by error a great many of the settlers were living on railroad lands. To obtain patents for the ground in which they were living, Congress had to provide for an exchange. I had great difficulty impressing on the House of Representatives how low the carrying capacity of this land is. Somebody says, "You have acquired the right to use better than 200,000 acres of land," and thinks you are a land baron who is monopolizing the country. But, if they realized that it required a half section to carry a cow, it paints a very different picture.

Mr. MORGAN. I want to point out that I also own cattle range in Yavapai County in Prescott which I have stocked, and which has been in continuous operation, either by myself or my wife's family, since 1909. I was considering this range near Yucca as an auxiliary range. That is, some seasons of the year this range would be good and at other seasons the range near Prescott would be good.

The CHAIRMAN. I missed some of your statement. How did you acquire, or, what holdings do you have on the Yucca range, so-called?

Mr. MORGAN. In July 1941 I bought out a man who held some leases from the railroad company, paying him \$100 per section for the lease rights.

The CHAIRMAN. Did he have the range stocked?

Mr. MORGAN. No; I don't believe he did; but he had paid the fee for the grazing license that he held there.

The CHAIRMAN. That was from the railroad company? Is that right?

Mr. MORGAN. Leased it from the railroad company.

The CHAIRMAN. Paid the railroad company how much?

Mr. MORGAN. I imagine the same amount per acre that I am paying.

The CHAIRMAN. What is that?

Mr. MORGAN. Well, the whole thing amounts to a deal whereby I pay them the lease and the tax on the property, and it amounts to little better than \$2,000 per year, for my holdings there.

The CHAIRMAN. For how many land sections?

Mr. MORGAN. For 110,000 acres.

The CHAIRMAN. And you haven't that range stocked?

Mr. MORGAN. No, sir.

The CHAIRMAN. You are simply holding the range by lease from the railroad company and anticipating stocking the range later?

Mr. MORGAN. I was in the process; all ready to improve it. The fence contractors were out there, and I had bought barbed wire, and I had gone out with well drillers, getting prices on drilling wells, as I stated a minute ago. And I have worn out an automobile, going over the property and hunting the springs and making plans on how to improve these watering places and springs; and had considerable correspondence with the Santa Fe Railroad Co. with regard to purchasing water from them, in one of their watering stations. Then these rumors started coming up about the aerial gunnery range, after I had leased the property.

The CHAIRMAN. How long before you heard of the aerial gunnery range had you leased the property from the railroad?

Mr. MORGAN. I started dealing for the property along in July 1941, and I finally signed the lease in September 1941, which was a few months before Pearl Harbor. I want to bring that out because the impression has been created that some of us were trying to speculate on war business. Certainly I had no hint that we were going to be in the war that early.

The CHAIRMAN. How many cattle were you running on the other range, at that time?

Mr. MORGAN. At the Prescott place?

The CHAIRMAN. Yes.

Mr. MORGAN. At the Prescott place it will carry 200 head the year round. I don't remember, at that time; I probably had 150 head.

The CHAIRMAN. How long had you been running them at that time?

Mr. MORGAN. At that time, those cattle were purchased in 1938, I believe. I wouldn't be sure about those dates.

The CHAIRMAN. Had you taken any steps toward the purchase of cattle to stock this Yucca range?

Mr. MORGAN. I had discussed purchasing some Brahma cattle to put out on there, with different parties, and then, because of the rumors of the War Department taking that area over, I stopped my preparations for purchasing and improvements on there, because I didn't want to spend several thousand dollars there and have it go for nothing.

The CHAIRMAN. Is there any one else ranging, or utilizing the range, on the Yucca range, so-called?

Mr. MORGAN. Not this particular part.

The CHAIRMAN. Any part of it?

Mr. MORGAN. Oh, yes; adjoining me.

The CHAIRMAN. I mean, on the land you had leased from the railroad company.

Mr. MORGAN. No, sir.

The CHAIRMAN. Was any one else using it?

Mr. MORGAN. No, sir.

The CHAIRMAN. It was not being grazed, then?

Mr. MORGAN. No, sir; and because I could not improve the property, I didn't want to build fences on there. Then I thought, per-

haps, I could utilize this property and put it into production, I could run goats or sheep on there.

The CHAIRMAN. How long since that range had been grazed, if at all, to your knowledge?

Mr. MORGAN. Well, I would say probably 5 years. I don't know.

The CHAIRMAN. You know of no grazing on that particular range that you leased from the railroad company within approximately 5 years?

Mr. MORGAN. To my personal knowledge, I don't.

The CHAIRMAN. So that the range had been rested to that extent.

Mr. MORGAN. Yes, sir; you might say it was virgin country. Parts of it were in very good shape; and Lester Pyeatt—Mr. Moeur referred to him—has this little area here, that I surround on three sides, and Lester Pyeatt has been running cattle in that area, which is very similar to parts of my ranch. As I say, I started to buy some goats, because I could run those without a fence. I made the deal to buy the goats, and I paid one-fourth of the money down on this herd, and hired a man to operate them, and bought a pick-up truck. In fact, I went to considerable expense. Then the rumors began getting thicker and thicker about the War Department taking over almost certainly. I dropped the goats.

The CHAIRMAN. What were you offered for the range, if anything, by the War Department?

Mr. MORGAN. I was offered \$611 a year for the use of the range, and it cost me \$2,000 a year for my railroad leases and the taxes.

The CHAIRMAN. With whom did you negotiate, or who negotiated with you?

Mr. MORGAN. Mr. Wilkinson's office; and a man called on me with a lease already prepared, with these conditions set forth. I refused to sign it, and he asked me what he should report back. Well, I told him—

The CHAIRMAN. Who was that man, if you know?

Mr. MORGAN. I don't recall his name. He was sent down from the Los Angeles office, I think, merely to deliver these papers and have me sign them, to be sent over to Phoenix. I told him that I thought the market value of the range was \$6,700 per year, based on the estimated carrying capacity of 1,140.

The CHAIRMAN. Who had made that estimate of the carrying capacity of the particular range?

Mr. MORGAN. U. S. grazier's office in Kingman.

The CHAIRMAN. That, you knew?

Mr. MORGAN. Yes, sir.

The CHAIRMAN. Is there any one in the Grazing Service who has intimate knowledge of this case?

Mr. L. R. BROOKS (regional grazier, Phoenix). We have, Senator.

The CHAIRMAN. What did you estimate for the carrying capacity?

Mr. BROOKS. I don't have the figures on the detailed estimates of the carrying capacity.

The CHAIRMAN. How does the estimate appear, that was just made by the witness as to carrying capacity rated at \$67?

Mr. BROOKS. Well, the carrying capacity in that area is extremely low, Senator. That is a slope down toward the Colorado River, southwest from Yuma, and from Kingman or Yucca, and the rainfall is

exceedingly low. I don't happen to know what it is, probably not over 4 or 5 inches a year. The vegetation does not grow in there, except in times of considerable rainfall, and those times are not every year. The area is in a seasonal type of range, used only when there is adequate rainfall to produce annual growth. Insofar as this particular permit is concerned, the application was made in 1941, and we granted it, subject to the showing of waters which would service the area, and granted nonuse. There was no livestock put on it whatsoever. Then another application was made, and it was still granted nonuse, subject to a showing that there was control of waters. The area, insofar as the Grazing Service knows, was not grazed during the priority period. There were no livestock on the area, and as far as we have records, we consider it a class 2 area. There was only the one application made for use of these lands, and that was by, I presume, Mr. Morgan.

Mr. MORGAN. That's right.

Mr. BROOKS. It is in the name of Learah Morgan. We do not recognize a class 1 right in the area, since the area has not been stocked to our knowledge.

Senator HAYDEN. The period over which you would have knowledge was a period of a long drought in this State, was it not?

Mr. BROOKS. That is right, including the year 1941, which was an exceptionally good year, Senator.

The CHAIRMAN. Was the showing of developed water ever made to you?

Mr. BROOKS. No showing has ever, as yet, been made, Senator.

Mr. MORGAN. I hadn't gotten to that point, Senator. We had made numerous trips down there, and had found water. We found off hand, I would say, probably 8 or 10 springs. There were two wells. We had made arrangements to purchase water from the Santa Fe Railroad Co., in our land adjacent to the railroad, and we had also discussed, as I said a minute ago, tentatively, a proposition to acquire water from the Lakin-Peter's range, which joins us on the east. There is water there. I have been, personally, on 6 or 8 of the springs. I have made a survey to locate the sections there, and I have been to 2 or 3 of the wells. I understand that the man that made the appraisal of that property turned our range in as a dry range. Now, one of the men that was there—I wasn't able to be there, but Mrs. Morgan was there, and she went out with him upon the mountain, to the foothills of the Chemehuevi Mountain, to show him these watering places. It seems they were having trouble with their tires and car, and were hot and tired, and only went to one well. Mrs. Morgan asked them if they didn't want to go up into the next canyon to see another watering place, and they replied, "We have seen what we need to see," and went back to the ranch house, which happens to be my wife's sister's place, and spent 4 or 5 days around the house. To my knowledge they never made another trip up into the country.

The CHAIRMAN. Do you remember who that was?

Mr. MORGAN. I think his name was Mackus.

The CHAIRMAN. Where was he from?

Mr. MORGAN. Mr. Wilkinson's office, I believe.

The CHAIRMAN. Are there any questions by any member of the departments? Does anyone in the audience wish to interrogate?

Thank you very much, Mr. Morgan.

Mr. FAIN. Senator, we have one other witness on this subject who might add a little light on it. He has had the same experience, along this line. He is a range operator. His name is Mr. Lloyd Lakin.

Mr. MOEUR. In connection with your statement just made, Mr. Brooks, these ranges of Yucca, the Pyeatt range, Mr. Lakin's range, and the Gardner range—those are all ranges, are they not?

Mr. BROOKS. They are; yes.

Mr. MOEUR. They have water developed and are not in the same situation as the range you are talking about, which is farther west?

Mr. BROOKS. They have been recognized by the Grazing Service.

Mr. MOEUR. What is the carrying capacity on those ranges; do you know?

Mr. BROOKS. Considerably higher than the lower slope down toward the Colorado River.

Mr. MOEUR. I wanted to get that impression.

The CHAIRMAN. Do you mean that the committee should understand these ranges, mentioned by the last questioner, have a higher carrying capacity than the range mentioned by Mr. Morgan?

Mr. BROOKS. By and large; yes. There may be certain portions of them that still have low-carrying capacity, but parts of them are up in the higher mountains, that area that is considerably higher, and has a higher carrying capacity.

Mr. MORGAN. The area taken over by the gunnery range—I have in mind particularly the Lakin-Peter range, which joins me on the east, and the Gardner range—do you consider those considerably higher carrying capacity than the range I control?

Mr. BROOKS. The east portions of them are.

The CHAIRMAN. Will you kindly state your name for the record?

STATEMENT OF LLOYD LAKIN, PHOENIX, ARIZ.

Mr. LAKIN. My name is Lloyd Lakin, Lakin-Peter Cattle Co., Phoenix.

I didn't expect to be called on. I am not fully prepared to testify.

The CHAIRMAN. You don't need any preparation.

Mr. LAKIN. We had 189,000 acres, part of which is on the Yucca gunnery range. Of that 105,000 acres was taken over by the gunnery range, and we were told in, I believe, September 1941, to remove our cattle. The road from Yucca to Sentinel is the dividing line, which divides also our range from that portion of our range which was taken over by the Army. Through our range is a matter of 15 miles, along this road that is not fenced. Well, naturally, it would be very difficult for us to move our cattle from the 105,000 acres and put them on the portion left to us, some 84,000 acres, and to keep them from drifting back into the gunnery range, which we were told to keep our cattle off of. We decided to try and remove enough cattle, so that the rest of them could have enough feed. We attempted to ship to Phoenix, and we were unable to get automobile transportation, because of the scarcity, as you know, so we did attempt railroad transportation. On one shipment, alone, we lost 7 head, through delayed transportation. It took 5 days to get 3 carloads to Phoenix, and 7 head out of that we lost. We decided we couldn't do that,

and then we found another range near by, the Dowdle range, and negotiated for that, and purchased that range, approximately three townships, for \$30,000, simply because we had to have a place to go to with our cattle. We were made the offer, as the rest of the cattlemen in that vicinity have been made, of a very unsatisfactory deal.

The CHAIRMAN. Do you care to give us the details of it?

Mr. LAKIN. It was pretty hard to get any details. We couldn't pin them down to anything real definite.

The CHAIRMAN. Was any definite offer made?

Mr. LAKIN. Well, it was approximately \$1,300 a year that we would have been paid for the use of that 105,000 acres. Then Mr. Wilkinson—then I wrote a letter to Mr. Wilkinson stating that although I felt it was entirely unfair, and definitely unsatisfactory, we did not want to be placed in the position of obstructing in any way the war effort. We didn't want to go to court, so we would agree to accept the proposition if they would build 15 miles of fence along the division line, which would allow us to use the rest of the range that was left. That was definitely refused.

Then Mr. Wilkinson came back to us with the proposition of what Mr. Moeur has mentioned, the joint use, in which we were given the privilege of paying the Government \$12.85 a year to use the 105,000 acres at our own risk in case any cattle were killed. In addition to that we had to assume all liability for any accidents that might occur through the use of the range. In other words, if somebody should be driving down that road and had been hit by a .50-caliber machine gun, we would be liable for maybe a \$50,000 lawsuit; and we would have to accept that responsibility. Naturally we didn't care to do that.

The CHAIRMAN. You would pay the grazing fee?

Mr. LAKIN. We would pay the grazing fee. Everything summed up, the net total was an obligation for us to pay \$12.85 per year.

Senator McFARLAND. That is, the grazing fees would amount to that much more than what they would give you?

Mr. LAKIN. The grazing fees and the rental.

The CHAIRMAN. Are there any questions?

Mr. LAKIN. There is one more thing I would like to say. We had hesitated in signing up for a long time, and finally Mr. Wilkinson met me on the street one day and said, "When are you going to sign upon that?" Well, I said, "I don't know that we are going to sign up," and he said, "Well, you had better because if you don't you are very likely to lose your rights up there. The Government will declare a writ of taking," or whatever the legal language is, "on that and you will get no compensation whatever for the use of your range." Shortly after that we signed.

The CHAIRMAN. Now, under what conditions are you operating?

Mr. LAKIN. Well, we still—

The CHAIRMAN. Joint use?

Mr. LAKIN. No; we did not sign on the joint use.

The CHAIRMAN. You signed to turn the range over to the Government for approximately \$1,300 a year?

Mr. LAKIN. That's right. It amounts to something like \$4,000 for the 3½ years.

The CHAIRMAN. And what has it cost you to remove your cattle to another range? The purchase of the range was how much?

Mr. LAKIN. I couldn't give you the exact figures on that. The purchase of the range was \$30,000 and in addition, that expense in attempting to move the cattle, moving the cattle from the ranch to the present location which, by road, is some 90 miles from our headquarters to the headquarters of the latter place. While we do adjoin the range, it is 90 miles to get from one place to the other.

The CHAIRMAN. You paid \$30,000 for the new range. Is that a range that you lease, or have a permit on?

Mr. LAKIN. The same thing as the other, a Santa Fe lease and Taylor Grazing; yes, sir.

The CHAIRMAN. I see.

Are there any questions by anyone?

Mr. MORGAN. I would like to ask a question. The amount you were paying—I think you mentioned \$1,300 a year over and above the amount you have to pay for your lease and taxes?

Mr. LAKIN. Mr. Wilkinson could probably give you the exact figure. It was something over \$4,000.

Mr. MORGAN. Over and above your leases?

Mr. LAKIN. That is net; yes.

Congressman MURDOCK. I have heard a great deal about the joint use. Would you amplify that a little bit? You say you did not see fit to avail yourself of it. What are the conditions?

Mr. LAKIN. Joint use—you would be permitted to move your cattle back on to the range they have taken over in September 1941. They told us we must remove our cattle from, and we couldn't move our cattle back on there. Under joint use we could move our cattle back on there now, but we would accept all responsibility and any loss entailed through killing of cattle would be ours.

Congressman MURDOCK. Do you know whether any stockmen ever availed themselves of that offer?

Mr. MOEUR. Mr. Jameson and Mr. Neil took the joint use.

Mr. LAKIN. I might also add, we were definitely assured that the airplanes that are doing the shooting would all be aimed in the other direction when they came close to our lands; but more than 20 .50-caliber machine gun bullets have been picked up in the yard around our headquarters, and within the last 2 weeks a small child, a baby who belonged to our foreman, was nearly hit by a bullet. We remonstrated with a colonel up there in charge, but I haven't heard anything from him.

The CHAIRMAN. Very well, thank you very much.

Senator McFARLAND. I thought maybe Mr. Embach could tell us something further about this.

Mr. WILKINSON. May I make a statement, Senator, before Mr. Embach takes the stand?

The CHAIRMAN. I think you better come forward.

Mr. WILKINSON. I don't want you to get the impression our office is not willing to testify if you insist on the appraiser divulging his appraisal. We will comply, but we'll do that under protest for the reason that our instructions from the War Department are not to divulge appraisal methods.

Senator HAYDEN. As far as I am concerned, I would like to hear from Mr. Harry Embach, not for my purposes at least, by requiring him to divulge the reason why any particular appraisal on any par-

ticular range was undertaken, but I would like to know what basic instructions he has, by what he is bound in arriving at his conclusions. In other words, on what basis do you operate? Are your instructions so inflexible that you cannot function in the way in which your own private judgment would dictate?

STATEMENT OF H. B. EMBACH, PHOENIX, ARIZ.

Mr. EMBACH. The appraisal on them is all based on condemnation. Under condemnation the basis for arriving at a valuation of range is the market value, as evidenced by what a willing buyer, who is not forced to buy, would pay a willing seller who is not forced to sell, and as a basis for arriving at those, we have had to secure the authentic sale data on various ranches in the localities in which these projects are located. Then, of course, it is the question of measuring up the particular outfit as to the above or below average of what those nonsales represent. That is the basis of all of our War Department appraisals, the appraisals for condemnation purposes.

Senator HAYDEN. Are sales of this kind of property frequent?

Mr. EMBACH. Sometimes there are long periods in between. We have to take the last-known sales.

Senator HAYDEN. In the Mohave County area, have there been many recent transfers which you could use as the basis?

Mr. EMBACH. Mohave, northern Yavapai, and parts of Yuma cattle localities, there has been quite a few sales within the last 3 or 4 years.

Senator HAYDEN. Please elaborate a little bit on how you go about it as a general rule.

Mr. EMBACH. The first principle, of course, is to base the value of the range on the carrying capacity. We have instructions, on all these range outfits, to base our appraisal values on the carrying capacity of the range in question.

Senator HAYDEN. Do you get the figures from the Grazing Service?

Mr. EMBACH. The Forest Service, the Grazing Service, and investigations, in most cases.

Senator HAYDEN. And you feel you could obtain accurate information in that respect?

Mr. EMBACH. I feel that information is, in most cases, very accurate. Researches have been made, reconnaissance records made, by different Government agencies.

Senator HAYDEN. How do you account for the discrepancy between \$30, as against \$60 and \$80?

Mr. EMBACH. There may have been some sales recently at those values. We take sales only up to the day of condemnation. The Government condemned the Yucca area on September 25, 1942. For the purpose of condemnation, we do not take the sales that happened after that date. In other words, sales that happened prior, comparatively fresh sales within 2 or 3 years. That is the time that the Government sets the value on the range, not 1 year after or 2 years after.

Senator McFARLAND. Let's put it this way: Do you consider the regulations of fair value being offered to these people, or is it disagreement with an owner as to the fair value? What do you consider the trouble here? What we're trying to get at is, what is causing the difficulty?

Mr. EMBACH. Well, in answer to that, let me elaborate a little. You have two classes of acquisitions, a fee acquisition, where the Government is taking the property in perpetuity. The Navajo Ordnance Depot Airport, Wachuka Artillery, are not leased propositions but permanent installations of the Government, and you have also these aerial gunnery ranges, a leased proposition whereby the Government leases from the owner for a term of years not to exceed 6 months after the ending of the emergency. In that case the owner is paid a rental, based on the appraised value of the property. In some cases where an owner has a range that is pretty nearly all public domain, monthly leases or anything like that, of course, his operating cost is lower and he gets a higher value, and he may probably be more satisfied with the offer made him than a party who has higher operating costs but whose range, from the point of view of the average buyer, is not worth as much as the fellow who hasn't got the heavy overhead cost.

Senator McFARLAND. Have you any precedents to go on in valuing these leases?

Mr. EMBACH. We have rental values, not very many of these non-rental values where rentals have been paid for ranges prior to the date of condemnation. Those, we have those all tabulated; and those figures are approved in Washington and are submitted as to the rate of rental, based on comparable rental paid for other similar ranges.

Senator McFARLAND. Coming right down to the meat of the question in regard to those leases, I am speaking, of course, generally. We cannot apply it any other way unless we take specific cases, of course; but, generally, has the difficulty been that in your opinion the Government has not offered a fair value on account of regulation, or that the owner wants too much for the property, in your opinion?

Mr. EMBACH. Well, the cases we have not settled yet, apparently the owner wants too much for the property. That is, taking the appraisals—and I haven't made all of them; I've made a few of them—taking the appraisal as a fair appraisal, the fact remains, Senator, that 90 percent of the property taken has been settled without going into court.

The CHAIRMAN. That doesn't answer the question, because of the argument made.

Mr. EMBACH. That is true.

The CHAIRMAN. The argument made as testified here, the argument was that it probably would effect a settlement because the owner gives up in despair, or else he feels that a patriotic duty is imposed upon him, according to the statements made here.

Senator McFARLAND. In addition to that, he can't go into court. That is the position of the Government; he can't go into court in regard to these permits; he hasn't any right or standing to go into this court. The Attorney General has given that ruling, and I think all the attorneys of all the departments of the Government have given this ruling, that he can't go into court. I am wondering in what percentage of the cases are the owners fairly satisfied with the settlement that has been made, or have they been settled because they figure they couldn't get what they thought they ought to have? What is your opinion in regard to that?

Mr. EMBACH. I would say, roughly, I think it is 50-50. Some of them have settled without reservation because they've been satisfied.

Others have undoubtedly settled because they didn't want to go to the bother of going into court, and also because they didn't want to interfere with the war effort.

Senator McFARLAND. I appreciate your frank answer in that. I want you to know that I do.

The CHAIRMAN. Are you familiar with the *Osborne case*?

Mr. EMBACH. Yes, sir.

The CHAIRMAN. Did you negotiate on that?

Mr. EMBACH. Yes, sir.

The CHAIRMAN. Did you hear the statement of Judge Shute this morning?

Mr. EMBACH. I wasn't in here, sir.

The CHAIRMAN. The *Osborne case* has not been settled as yet?

Mr. EMBACH. No, sir.

The CHAIRMAN. What seems to be the trouble there?

Mr. EMBACH. The appraiser never does the negotiating, Senator. Apparently, from my knowledge of the case, the amount offered him by the negotiator wasn't high enough.

Senator McFARLAND. Who are the negotiators?

Mr. EMBACH. The different project managers in charge of each particular project. No appraiser is permitted to negotiate.

The CHAIRMAN. You appraised that Osborne property?

Mr. EMBACH. Yes, sir.

The CHAIRMAN. Have you followed the outlines to see the negotiation going on?

Mr. EMBACH. Not particularly.

The CHAIRMAN. Did you appraise in the *Moeller case*?

Mr. EMBACH. Yes; I appraised that.

The CHAIRMAN. The record made this morning was to the effect that he was first offered what he asked, which was the amount that he paid, of \$2,000; and then, when he was ready to accept that, another offer was made of approximately \$300, if my memory serves me. Can you give us any light on that change of attitude, and change of negotiation? Why was it?

Mr. EMBACH. I think the reason was that an entire reappraisal was ordered for the Navajo ordnance depot.

The CHAIRMAN. Well, you had the facts before you that he had paid \$2,000 for the range?

Mr. EMBACH. No, sir.

The CHAIRMAN. You didn't?

Mr. EMBACH. No, sir. I appraised the property as it was, without regard as to what it had cost him. Those are our instructions.

The CHAIRMAN. Wasn't that a recent sale to Moeller, from the party owning the property?

Mr. EMBACH. It was made in 1941.

The CHAIRMAN. That was about as recent a thing as you could find in that locality, wasn't it?

Mr. EMBACH. I don't know whether the deed disclosed the situation or not, offhand. I don't remember.

The CHAIRMAN. Weren't you interested in what he had paid for it?

Mr. EMBACH. As an abstract measure, yes, sir. But our instructions are, for condemnation purposes, to appraise that property on the basis of what the market had been on it, the going market.

The CHAIRMAN. It had come because there was an acceptance of that?

Mr. EMBACH. An acceptance of the first option. I had no knowledge of it. The appraiser never has anything to do with the negotiations.

Senator McFARLAND. I believe the testimony was that the negotiator made the statement that the appraisal was so nearly what he paid for it that they would give him the \$2,000. The appraisal and the price that was paid were so nearly the same that they would give him the \$2,000.

The CHAIRMAN. That is right, hence the price that he paid for it must have been known to you, if you were the appraiser, according to the statement made before the committee.

Senator McFARLAND. It must have been known, Mr. Chairman, to the negotiator.

The CHAIRMAN. Undoubtedly to the appraiser also.

Mr. WILKINSON. Prior to the Phoenix office having charge of that project, it was in the southwest division, and some work was done up there. The southwest division is in Dallas, Tex. This project was turned over to this office and the records left by their office were not sufficient for us to carry on the negotiations, so we had a new appraisal of the whole project from this office. In fact, we started in and appraised it as a new project. That was handled from another division.

The CHAIRMAN. Didn't the records show the evaluation made by the other division?

Mr. WILKINSON. I didn't get those records.

The CHAIRMAN. Had you no knowledge whatever as to the amount he had paid?

Mr. WILKINSON. Absolutely none.

Mr. EMBACH. Not at the time the appraisal was being made.

The CHAIRMAN. Or since?

Mr. EMBACH. Since, I have heard it said that he paid \$2,000.

Senator McFARLAND. What I can't understand, Mr. Chairman, is why a reappraisal of the whole district would make such a big change in the appraisal of this particular property, if the property was originally appraised, according to the evidence, at close to \$2,000. Now, it evidently was appraised at about \$300 at one time or another. The appraiser must have made a terrible mistake.

The CHAIRMAN. The evidence is, they knew what he paid for it and were willing to pay him the amount that he had paid for it. That is the evidence before us here today. Whether it be in this office or in the former appraiser's office, makes but little difference. Certainly the records must have been transferred here if there was a business transfer of the whole matter.

Senator McFARLAND. Can you explain why there was such a change in the value of the property, why the reappraisal would have brought about such a big change in the value of the property in so short a time?

Mr. EMBACH. Appraising is not exact, since two appraisers may look at the same thing, may agree on it, may vary. I don't know what the original appraisal was.

The CHAIRMAN. Let me ask you, how long have you been engaged in the business of calling upon your judgment as an appraiser in this locality?

Mr. EMBACH. I have been in Arizona for about 35 years, identified with the cattle and sheep business most of the time. I have been in the loan business, making loans on these outfits, and I have appraised for the Ohio National Life Insurance Co. I have appraised for the War Department since August 8, 1942.

The CHAIRMAN. Did you appraise these properties for the War Department on the basis of your experience in appraising and in the making of loans?

Mr. EMBACH. That was part of the ground work of my experience, was as an appraiser.

The CHAIRMAN. You realize these people were parting with their property, don't you?

Mr. EMBACH. Certainly.

The CHAIRMAN. So it was not a question of loan value, in these instances?

Mr. EMBACH. No; this was appraised for condemnation.

Senator McFARLAND. I'm a little bit confused as to the facts. Did you make the first appraisal?

Mr. EMBACH. No, sir; the second.

Senator McFARLAND. I understood it the other way. I beg your pardon.

The CHAIRMAN. Wasn't the record of the first appraisal available to you, before you made the second appraisal?

Mr. EMBACH. No, sir.

The CHAIRMAN. Weren't the files and records of the other office available to your office?

Mr. EMBACH. They were fragmentary, as I understand.

The CHAIRMAN. Well I'd like to know on what basis you make that.

Mr. EMBACH. On knowledge, and what I have been told.

The CHAIRMAN. There are no files or records removed from the former office to your office?

Mr. EMBACH. I believe there were some. I would like Mr. Wilkinson to answer that. He is the chief of the office.

The CHAIRMAN. Will you answer that?

Mr. WILKINSON. The files were very meager. In fact I had to write into Washington for any options made on this project. I couldn't get them; couldn't find them.

The CHAIRMAN. Do you have any files or records bearing on the first appraisal on the *Moeller case*?

Mr. WILKINSON. I am not sure about that.

The CHAIRMAN. Consult your records during the noon recess, and let us know, please.

Senator McFARLAND. Now, in line with what the chairman asked, it is my understanding you have that consideration and experience in regard to values in Arizona; do you feel that the regulations permit you to make an appraisal that reflects the fair value of the property?

Mr. EMBACH. Yes; I believe they do. Of course, those regulations are supplemented by letters from Washington, from the Chief Engineer's office, enlarging, and also bringing up new subjects; but we are held, of course, in appraising for value by appraising for condemnation.

Senator McFARLAND. I am trying to get at whether there is anything in Washington that ought to be changed, as to whether the difference

of opinion is a difference of opinion in the values of property by the individual, or whether it is controlled by regulations which don't permit you to make a fair value.

Mr. EMBACH. I don't believe I'm competent to answer that, Senator. I may have certain opinions about certain people, and the other person's opinions might be entirely different.

Senator McFARLAND. Maybe I didn't make myself clear. What I meant was, coming back to my original question, whether the regulations in Washington permit you to place a value on the property which could be considered a fair value, in line with your experience and knowledge of the values of property in the State of Arizona?

Mr. EMBACH. Yes; the regulations do.

The CHAIRMAN. Do you put a value on permits and licenses on the open public domain, when you evaluate the grazing economic set-up?

Mr. EMBACH. Inasmuch as they reflect part of the per head value on the range.

The CHAIRMAN. What do you estimate the per head value on the average range in the State of Arizona is?

Mr. EMBACH. Frankly, I don't know that there is an average. Most of the country in Arizona is desert, or mountain country; and then you have some of the finest grazing in the world, and some of the poorest range. It is pretty hard to match up what would be the range.

The CHAIRMAN. What is the judgment of the range taken over by the Ordnance?

Mr. EMBACH. Pretty good, most of the permits, of course, were not a year-round range.

The CHAIRMAN. What was the average value of that range taken over?

Mr. EMBACH. I'm sorry, that is disclosing information.

The CHAIRMAN. I'm asking you for it. I'm asking you what the average value was.

Mr. EMBACH. \$30 for a 5-month permit.

The CHAIRMAN. The committee will take a recess now until 1:30 o'clock.

(Recess until 1:30 p. m.)

AFTERNOON SESSION

The CHAIRMAN. Will the witness who was on the stand when we recessed, please take the stand again? Is either of the gentlemen here, either Mr. Wilkinson or Mr. Embach? As soon as they come in we will continue with that subject. We have to try to utilize all the time we can.

Mr. LAKIN. I would like to have a further statement.

The CHAIRMAN. You may make such statement as you see fit.

Mr. LAKIN. I just wanted to say that more than a year before the condemnation of the gunnery range in this area, Mr. Peter, my partner, and I had decided, because we thought it was wise, to attempt to increase cattle production. We had spent more than \$27,000 in the area that the Government took over. We built 65 miles of barbed wire fence; 9 miles of pipe line, piping water down into an area that did not have water; and we drove four deep wells. The water is quite deep up there, 500 feet to the water. All of this was expensive. We did spend \$27,000 on the area that was taken, not in the area or any part of the land we have left.

The CHAIRMAN. Was that brought to the attention of those who appraised the land?

Mr. LAKIN. Yes; I talked to Mr. Wilkinson about it.

The CHAIRMAN. Mr. Embach, will you come forward?

To clarify the record in my own mind, you have been in the appraising business here in this vicinity for how long?

Mr. EMBACH. Actually appraising, for about 4 years.

The CHAIRMAN. You were connected with the wool industry at one time?

Mr. EMBACH. Yes, sir.

The CHAIRMAN. What was your official position with the wool industry?

Mr. EMBACH. General manager of the National Wool Growing Corporation.

The CHAIRMAN. What other ranges have you appraised for purchase, if any, by private agencies?

Mr. EMBACH. In the past years, I have appraised ranges for Babbitt Bros., in my capacity with them years ago as a member of their livestock department.

The CHAIRMAN. In the same vicinity in which you appraised these properties for the War Department?

Mr. EMBACH. Generally, yes, sir.

The CHAIRMAN. How did your appraisal for the property of the Babbitt Bros. compare with your appraisal of the property for the War Department, as to the carrying capacity, particularly?

Mr. EMBACH. We had a general knowledge, in those days, from observation of cattle on the range, and from the general livestock information, about what a range would carry.

The CHAIRMAN. Was it \$30 per head in those days?

Mr. EMBACH. No, sir.

The CHAIRMAN. How much?

Mr. EMBACH. In those days the forest ranges and other public ranges—there wasn't much value attached to the range. It was the cattle you were buying. That was common all through the West.

The CHAIRMAN. Do you know of any private sales that have been made where the carrying capacity was evaluated at as low as \$30, where the transaction was between private individuals?

Mr. EMBACH. Yes, sir.

The CHAIRMAN. Will you name these people, please, some of them?

Mr. EMBACH. I'm afraid I would have to go through my records for that. Which outfit are you referring to now?

The CHAIRMAN. Any outfit, where there was a sale from one individual to another, where the seller was not forced to sell and the buyer was not forced to buy.

Mr. EMBACH. The sale of the Barnard cattle outfit up in Coconino County, 1942, I think it was, or maybe later in 1941, a year-long permit. It was sold on the basis that would be less than \$30 per head for a 5-month period.

The CHAIRMAN. Did you have to do with that transaction, so that you know its details?

Mr. EMBACH. I secured it for the man that bought the outfit.

The CHAIRMAN. How did you arrive at the figure of \$30 per head carrying capacity?

Mr. EMBACH. I think, if I remember rightly, Senator, there were 4 or 5 sales that had been made in very recent years, in Coconino County, that were made from about \$25 to \$35; that is, up to the time that the appraisal was made, and in comparison, the base on the Navajo ordnance was \$30; some higher than that on the Navajo ordnance.

The CHAIRMAN. What was the highest on the Navajo ordnance?

Mr. EMBACH. \$32.

The CHAIRMAN. And the lowest?

Mr. EMBACH. \$30.

The CHAIRMAN. Was that year-round permit?

Mr. EMBACH. Those are for 5-month permits.

The CHAIRMAN. 5-month permits, all of them?

Mr. EMBACH. All of them at the Navajo.

The CHAIRMAN. Did you have to do with the transaction related here before the committee this morning and just concluded by the witness who left the chair?

Mr. EMBACH. As I came in he was concluding.

The CHAIRMAN. Did you have to do with the Lakin transaction?

Mr. EMBACH. Yes, sir; I was in charge of the appraisal.

The CHAIRMAN. Were you advised of the amount of money invested in improvements on the Lakin holdings?

Mr. EMBACH. Yes, sir.

The CHAIRMAN. What did you place the value of the carrying capacity per unit on the Lakin holdings?

Mr. EMBACH. If I remember rightly, it was \$34 a head, yearlong. The value in improvements, of course, Senator, made up that market value.

The CHAIRMAN. You give credit, of course, in value, to the permits, do you not?

Mr. EMBACH. To the permits?

The CHAIRMAN. Or the leases?

Mr. EMBACH. Anything that makes up the fair market value.

The CHAIRMAN. The leases or the permits, and their stability and duration, and so on and so forth?

Mr. EMBACH. Yes, sir.

The CHAIRMAN. I take it you also take into consideration the character of the range, together with the character of the cattle?

Mr. EMBACH. Well, if you mean the condition of the cattle, yes. On this particular range, Brahma cattle, there wasn't anything else. We would not—some breeding cattle—we would not mention any distinction on that. It would be the condition of the cattle.

The CHAIRMAN. Well, the grade of a herd also has to do with its value; and if it has to be moved, that would, I think, be taken into consideration, if it had to be moved from a place where it was brought up to its present standard?

Mr. EMBACH. In appraising for eminent domain, Senator, all we take into consideration, in setting our appraisal values, is anything that goes into the market value.

The CHAIRMAN. Were you appraising for eminent domain in these cases?

Mr. EMBACH. Yes, sir.

The CHAIRMAN. Under what authority?

Mr. EMBACH. Instructions of the Government. We know that is what is going to happen.

The CHAIRMAN. Eminent domain had not been invoked. The Government was as a private purchaser; no court had taken over; nor had the jurisdiction of any court been invoked, as I understand it.

Mr. EMBACH. The Yucca range was.

The CHAIRMAN. Go back to this eminent domain. Where did you get your authority to base the value of this property under eminent domain? Eminent domain is a condemnation of a public agency for public use of private property. This was a private agency, coming in here under authority of a specific act of Congress. Now, where did you get it into your head that you were acting under the authority of eminent domain?

Mr. EMBACH. Under the War Powers Act, that Yucca condemnation; Yucca condemnation was entered on Yucca on September 25, 1942.

The CHAIRMAN. Before you entered into this, did you read that act that was passed the 12th of July, I think it was?

Mr. EMBACH. I have seen that.

The CHAIRMAN. Did you give it any consideration?

Mr. EMBACH. Yes, sir.

The CHAIRMAN. What part of it did you give consideration in fixing the value?

Mr. EMBACH. The fullest values we possibly could, in our opinion as appraisers.

The CHAIRMAN. And you are willing now to say that you did give the fullest values that you possibly could?

Mr. EMBACH. Based on the information that was available to us at the time, a fair market value based on the comparable sales.

The CHAIRMAN. Does anyone care to interrogate?

Mr. MOEUR. I would like to ask him a few questions, if I might, Senator.

The CHAIRMAN. Yes, sir.

Mr. MOEUR. Mr. Embach, I'm going to refer particularly to the Mohave County set-up. What ranges were sold in Mohave County, or the vicinity, that you took into consideration in arriving at this value?

Mr. EMBACH. Well there was the Sloger sale.

Mr. MOEUR. How much did that sell for, on carrying capacity basis; do you know?

Mr. EMBACH. I couldn't tell you that offhand. There was a deal of Smith's, Al Smith's.

Mr. MOEUR. When was the Sloger sale?

Mr. EMBACH. I think that was probably in 1941. Now I am just guessing at this, because I would have that recap before me.

Mr. MOEUR. And the Al Smith sale, when was that?

Mr. EMBACH. That was about the time, I think all the sales, if I remember correctly, were from 1939 on.

Mr. MOEUR. Were they small outfits or big outfits?

Mr. EMBACH. Very large outfits. The sale of the Gardners in 1939, I believe it was.

Mr. MOEUR. Did you take into consideration improvements made on these places after they were bought?

Mr. EMBACH. Yes.

Mr. MOEUR. When you took that into consideration, it figured out \$30 a head?

Mr. EMBACH. We may have figured in some cases it did.

Mr. MOEUR. Don't you know you couldn't have bought, anywhere in Arizona, in the last 2 or 3 years, decent range at any price like that? You know that of your own knowledge, don't you?

Mr. EMBACH. It all depends a good deal on what you consider decent range.

Mr. MOEUR. Those are pretty good ranges, the Jameson, the Neil range, and the Gardner range?

Mr. EMBACH. Yes; the Jameson-Neil range and part of the Gardner is good range; not the part that was taken, however.

Mr. MOEUR. Don't you know that by private sales, that you couldn't have bought a ranch that was running a thousand head of cattle for \$30,000, at any time in the last 3 or 4 years?

Mr. EMBACH. Sales to base an appraisal on, I couldn't, out of my head, give you a list of my sales. Those are the instructions the appraisers are given. If he didn't observe that, the reviewing appraiser would throw the appraiser out. The appraisals are reviewed to see that they are particularly correct.

Mr. MOEUR. Did you give any consideration to the cost the operator would be to, in moving cattle, and so on, to another range?

Mr. EMBACH. Not in the consideration.

Mr. MOEUR. Any consideration to the rest of the range that he could use?

Mr. EMBACH. We did, when we granted severance.

Mr. MOEUR. Explain that.

Mr. EMBACH. If we had damaged a man by taking part of the outfit away and rendered the remaining part of the outfit less valuable, the difference between the remainder and what the whole would be, we would grant him severance on the outfit damage proven.

Mr. MOEUR. Did you do that in the Mohave County set-up?

Mr. EMBACH. I think nearly every case had severance.

Mr. MOEUR. How did you arrive at these values when you got through? How could you say that a man whose range is cut down the middle is to get the small amount of money that he gets?

Mr. EMBACH. Naturally, the rental would be lower than it was on appraisal. He is getting the rental. I don't mind saying that the Pyeatt range, in the opinion of the appraiser, has the lowest value for range in that district.

Mr. MOEUR. From the appraisal standpoint?

Mr. EMBACH. Yes; in my opinion.

Mr. MOEUR. After they appraise the ranges, then the negotiators enter the picture. Is that correct?

Mr. EMBACH. That's correct.

Mr. MOEUR. The amount of the negotiation is the amount of your appraisal; or is it a less amount?

Mr. EMBACH. I think, as a general rule, the negotiator offers the rental value, based on the appraisal; offers the price of the appraisal. In some cases they probably do get it for a little less.

Mr. MOEUR. You said this morning, in testifying here, that in your opinion, 50 percent of the people were satisfied with these settlements.

Mr. EMBACH. That is from observation. I don't know some of their innermost thoughts. The only thing that I am basing that on

is the ease of the negotiating. If the negotiator has no trouble in getting the signature on the option, apparently there is not much disagreement.

Mr. MOEUR. Do you think that 50 percent of the people in Mohave County are satisfied with those settlements?

Mr. EMBACH. I am not talking about Mohave; I'm talking about all of the War Department.

Mr. MOEUR. Talk about Mohave County. You think 3 percent of them in Mohave were satisfied with those settlements?

Mr. EMBACH. No; I don't think they were.

Mr. MOEUR. As a matter of fact, you appraised this land as though you were proceeding to condemnation?

Mr. EMBACH. Yes; because condemnations had already been entered.

Mr. MOEUR. You found, under the rules and regulations you thought you had to work under, you couldn't give him credit on this congressional act. That is what happened on this, isn't it?

Mr. EMBACH. Of course, the act authorizes the head of an agency to do anything he sees fit.

Mr. MOEUR. I'm talking about you personally. I'm not criticizing you; but you found you were up against that?

Mr. EMBACH. We gave as liberal values as we could.

Mr. MOEUR. You couldn't give any values at all, hardly, could you?

Mr. EMBACH. We had to base values on known sales in order to have something that would stand up in court, later on.

Mr. MOEUR. As a matter of fact, when you went in to give appraisals you felt you couldn't give much attention to this act, because of the rules and regulations you were working under?

Mr. EMBACH. No; I wouldn't go so far as to say that, because an appraiser is allowed certain latitude as an appraiser. Beyond that point he cannot go.

Mr. MOEUR. I think that is all I have to ask.

The CHAIRMAN. On what basis was your compensation?

Mr. EMBACH. Per year.

The CHAIRMAN. Per year?

Mr. EMBACH. Yes, sir.

The CHAIRMAN. Are there any questions?

Mr. LAKIN. I want to correct Mr. Embach's statement as to \$34. It was \$25 for 626 head on the part they took from us.

Mr. RONSTADT. Senator McCarran, I think that people are entitled to know, if possible, if it is a fair question, as to what the appraisal value of this gentleman was, on a specific piece of property, so they can compare with the offered price. I think that is where the trouble is, the negotiators.

The CHAIRMAN. He made the statement before lunch that it was \$30.

Mr. RONSTADT. I had in mind a particular case that I think is before everybody's mind; that is the Moeller case. An appraisal and offer was made on one appraisal of \$2,000. Mr. Embach testified he had made the second appraisal, and the offer of the second appraisal was \$300.

The CHAIRMAN. They stated before lunch, or the recess, that the records transferred to this office were rather sparse. I asked them to bring in what records they have. I take it that they have the records with them. Have you the records of the first appraisal?

Mr. WILKINSON. Yes, sir.

The CHAIRMAN. What was the first appraisal?

Mr. WILKINSON. \$2,000.

The CHAIRMAN. Have you any record there that shows, in substance or effect, that some agent, either the appraiser or the negotiator, stated that the appraised value was so near the amount he had paid for it that they were going to give him the amount he had paid for it, the \$2,000?

Mr. WILKINSON. No such record. This appraisal was sent to me by the division office. I did not receive it from the project office connected with the southwest division.

The CHAIRMAN. When was that record first in your office?

Mr. WILKINSON. The letter of transmittal was dated July 28, 1942.

The CHAIRMAN. When was the second appraisal made?

Mr. EMBACH. About August 15, I think. August 10 or August 15.

The CHAIRMAN. Before the file was received in your office?

Mr. WILKINSON. No; that would be after.

The CHAIRMAN. After. Then you did have knowledge that he had been offered \$2,000, when you made the second appraisal?

Mr. EMBACH. No, sir; I had no such knowledge.

The CHAIRMAN. The knowledge was available to you. It was in your office, was it not?

Mr. EMBACH. Senator, the appraiser is not——

The CHAIRMAN. I don't want you to evade the question. Answer the question.

Mr. EMBACH. No; it was not available to me.

The CHAIRMAN. It was not in your office?

Mr. EMBACH. I don't know whether it was in the office. Mr. Wilkinson says it was in the office.

The CHAIRMAN. Did you make an exertion to find out what the first appraisal was, in order that you might be guided accordingly, or did you just go at it as though there had never been another appraisal?

Mr. EMBACH. Reappraisal of the second appraiser; he goes at the matter cold and performs his own opinion.

The CHAIRMAN. You went at this one pretty cold?

Mr. EMBACH. Yes; I did.

The CHAIRMAN. Well, you cut it down from \$2,000 to \$300.

Are there any questions?

Mr. RONSTADT. He hasn't been asked yet what his appraisal was, the second time.

The CHAIRMAN. What was your appraisal the second time?

Mr. EMBACH. \$360.

The CHAIRMAN. That was based on what?

Mr. EMBACH. On a fair piece of land, 120 acres, lying out, some rock over it. It had been cultivated at one time; there was a shack in ruin, and about 100 feet of rusty barbed wire.

The CHAIRMAN. Well, some young man, who is now giving his services to the Government, had thought enough of that property to pay \$2,000 for it. Does that impress you, at all?

Mr. EMBACH. It wouldn't have impressed me in the slightest, under my instructions for appraisals.

Mr. MORGAN. I have a question, please.

In your appraisals for various properties, to what extent do you take into consideration the taxes on the property; and how do you account

for the fact that, in my particular case, I was offered \$611, when the taxes on the property are over \$1,200 per year?

Mr. EMBACH. You had a lot of land down there, about a hundred-and-some-odd-thousand acres, roughly speaking, valued at a tax valuation of 40 cents an acre, and the rate, I think, last year, was 2.8; well, almost 3 cents per \$100 valuation. As far as giving consideration to tax valuation is concerned, we give no consideration whatever, because there is no relevancy between what a county assessor puts on a piece of property as tax value and what the property is actually worth, or what it should be valued as a fair market value.

The CHAIRMAN. Are there any further questions? I'd like to have you bring the record forward on this *Moeller* case, if you please, the record that is in your office.

That is all, Mr. Embach.

Is there any correspondence in that from the other office, or from any former evaluator?

Mr. WILKINSON. This is the appraisal.

The CHAIRMAN. The first appraisal?

Mr. WILKINSON. Yes.

The CHAIRMAN. Is Mr. Moeller in the room?

Mr. MOEUR. No, Senator; he had to leave.

The CHAIRMAN. Will you kindly state what you have just stated to me, here, inaudibly?

Mr. WILKINSON. There is a letter in the file, from the Southwest Division, stating they had transmitted an option to Washington. It did not give the amount of the option, but the statement was they had transmitted the option to Washington. We have never had a copy of the option in the file. If the option was transmitted to Washington, and it was accepted and approved by the Chief of Engineers in the War Department, Mr. Moeller received an acceptance notice of that option. He should have received a copy of the option, with the acceptance on it. If he received it, there is no reason why he shouldn't collect the amount of his option.

The CHAIRMAN. I notice here that the first appraisal gives the appraisal of land, \$600; improvements, \$700; and home site an additional \$700; making a total of \$2,000 for the appraisal on the *Moeller* case. That is the first appraisal.

Now, Mr. Embach says that he gave no consideration, and didn't see—he said he didn't see this file before he made this second appraisal, and so on.

Mr. WILKINSON. As far as being the chief of the Phoenix suboffice, I wouldn't allow him to see the file if I could help it. He is supposed to make the appraisal on his own initiative and his own knowledge. That is the reason for the appraisal. If we are ordered, from the chief's office of the division office, to have another appraisal made, we never show the first appraisal to the second appraiser. That would defeat the object of the second appraisal.

The CHAIRMAN. All right. That is all.

Mr. WILKINSON. I would like to make a little statement here, if I could, generally.

The CHAIRMAN. Yes; certainly.

Mr. WILKINSON. In acquiring the use of this land, over some 3,000,000 acres of Federal land, about 170,000 acres of State land, there has been about 23,000 acres of private land acquired in fee, at a valu-

ation of some \$33,000. That is the acquisition in fee of private land. There has been some 70,000 acres of State land acquired. The leaseholders have been paid off, and the State land is up for transfer with Federal land, and there are some 70,000 more acres of State land that is not under lease.

Now, our relations with the State land department have been very cordial, and the State, through Mr. Williams and the Governor, have allowed the Government to use this land for nothing, or a very nominal amount, to make the transaction legal, and relations have been very cordial. This applies to other parties in Tucson, Phoenix, the Counties of Mohave and Navajo; they have leased land to the Government for \$1 a year, for the use of certain of these fields.

I want to go on record that in this office here, relations have been very cordial with these people; and, as far as we are concerned, we consider they have rendered every effort to be cooperative.

The CHAIRMAN. Are there any questions?

Mr. Williams, would you care to be heard on this?

The Federal statute bearing on this subject will be inserted in the record at the proper place.

(The statute is as follows:)

[PUBLIC LAW 663—77TH CONGRESS]

[CHAPTER 500—2D SESSION]

[S. 2599]

AN ACT Authorizing the head of the department or agency using the public domain for war purposes to compensate holders of grazing permits and licenses for losses sustained by reason of such use of public lands for war purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That whenever use for war purposes of the public domain or other property owned by or under the control of the United States prevents its use for grazing, persons holding grazing permits or licenses and persons whose grazing permits or licenses have been or will be canceled because of such use shall be paid out of the funds appropriated or allocated for such project such amounts as the head of the department or agency so using the lands shall determine to be fair and reasonable for the losses suffered by such persons as a result of the use of such lands for war purposes. Such payments shall be deemed payment in full for such losses. Nothing herein contained shall be construed to create any liability not now existing against the United States.

Approved, July 9, 1942.

STATEMENT OF O. C. WILLIAMS, ARIZONA STATE LAND COMMISSIONER

Mr. WILLIAMS. Mr. Chairman, I don't know what I should add to this.

As has already been stated, I went to Washington, and had a hand in the passing of this law. In our conferences, it was definitely understood that every effort would be made to make a prompt settlement, and fair settlement, so that these men could either have money to live on, for the duration and then return to their own lands, or might have money to set up elsewhere. We especially made the plea that this should be set up so that they would not have to go into court; that there be no court action, and that it would be unnecessary for them to hire attorneys, and spend what little they would get out of their property.

This has been a general disappointment among livestock interests, in the fact that it has been impossible to get early settlements; and I think that, as far as I know, there has been no satisfactory settlement, so far as prices and amounts paid. I don't know of one in the State, that they felt that they got the full value for the property taken away from them. It seems, in no instance, has the fact been considered that these people are dispossessed, must leave their homes, in many cases, break up a lifetime of experience in operations, and that they must either go to town and hold their hands until the war is over, or else get into some other business, or buy some other ranch, at a price in excess of what they themselves received. I think, in spite of this condition, they have been very patient. They are all willing to do their part, and have very gladly given up what the Army needed; but they feel they should not stand the full cost of the war effort, and should be reimbursed.

As far as the State goes, as stated by Mr. Wilkinson, our relations have been most pleasant; and in cases where we have unleased lands, we have offered them to the Army without charge for the duration; and there are many thousands of acres of State lands so occupied. We, in many cases, helped them get leases from our lessees, and these leases, in some cases, were turned over without any payment to the lessees. We waived our fees, giving them the land for \$1 for the entire piece of land; not for every acre, but \$1, for the duration; which dollars we have not yet seen, and never expect to. I am sure no one can charge the people of this State, the cattlemen, with not cooperating in every possible way. We feel there is some reason why prices have been beaten down lower than they should be, and there should be some good reason why payments have not been made.

These are the things that the cattlemen are disturbed about; the things they would like to get to the bottom of. If this committee can help to solve that problem, I am sure you will have their undying gratitude.

I think that is about all, unless there is a question to me.

The CHAIRMAN. Thank you, Mr. Williams.

(The following letter was received for the record after the close of the hearing:)

PHOENIX, ARIZ., September 7, 1943.

Mr. E. S. HASKELL,

Care of New Mexico Cattle Growers Association,

Albuquerque, N. Mex.

DEAR MR. HASKELL: In accordance with our conversation at luncheon Saturday, September 4, I am pleased to submit for your and Senator McCarran's information the following data on sales and offers refused for properties comparable to those properties taken over by the War Department and located at what is known as the Navajo ordnance depot, Belmont, Ariz. These sales and offerings were all made approximately within a year's time of the Government's acquisition of the Belmont properties.

E. M. Smith, purchaser; Barney Schley, seller: Bar Heart permit containing 714 head yearlong. June 1941. This allotment lies approximately 20 miles west of the Navajo ordnance depot in the Kaibab and Prescott National Forests, and the price based on 5 months' carrying capacity is \$28 per head. This is the low sale that Mr. Embach recited at the hearing. I would like to add that this was a stock ranch and was bought range and cattle. After evaluating the cattle, the permit was considered cheap at this figure. This might also be construed as a force sale as Mr. Schley was going into the Air Corps, which he did do and has since been killed.

Jack Frye, purchaser; Al Smith, seller: Government Mountain permit containing 547 head for a 5-month period. July 1942. This is located just north of the

Belmont project in the Kalbab National Forest, and the price based on a 5-month carrying capacity is \$35 per head.

Tremaine, offer; Fox, owner: Foxboro permit located in the Coconino National Forest containing 245 head yearlong. I offered Fox for Tremaine a price equal to \$38 per head for 5-month carrying capacity and this offer Fox turned down. This was in June 1942.

Leeds, purchaser; McGill, seller: This was a permit for 541 head yearlong located in the Prescott National Forest a considerable distance from the Belmont project and the territory is not as good. This was bought in June 1941 and based on a 5-month period, sold for \$49 per head.

Miller, purchaser; Travis, seller: This is a permit for 400 head for a 5-month period located in the Kalbab National Forest, approximately 30 miles northwest of the Belmont project. It was purchased in the spring of 1942 at \$45 per head.

The average for the 5 sales based on a 5-month period of time is \$38.94 per head. This information I gave to a Mr. Munholland who I believe was the assistant to Mr. Wilkinson, of the United States War Department appraisers, and told him where and how the information could be obtained by their appraisers. When I was on the stand and the Senator asked me what contact I had had with the War Department appraisers, I forgot about this Mr. Munholland calling on me.

I placed a value of \$50 per head on the John Osborne range located in the Belmont project. The reason for putting this above the average is that it is a better than average range particularly because of transportation accessibility, water, and feed.

Mr. Moeller asked me to correct his initials and the spelling of his name which went into the records erroneously. It is M. D. Moeller. His rank I do not know but he is in the Air Corps and stationed at Thunderbird No. 1 Field, Phoenix, Ariz., rather than Luke Field as Judge Shute stated on the stand. You will recall that his case is the one that Embach reappraised at \$300 which had cost Moeller \$2,000 in August 1941.

I trust Senator McCarran will be successful in bringing some pressure to bear on the War Department to make satisfactory settlements at a fairly early date with these various parties. Don't hesitate to contact me for any additional information. I am only too glad to help.

Trusting that I may have the pleasure of meeting you again and with kindest regards, I remain

Yours very truly,

STERLING HEBBARD

(The following letter and memorandum are inserted in the record by request of Senator Hayden:)

MOEUR & MOEUR,

PHOENIX, ARIZ., September 13, 1945.

HON. CARL HAYDEN,

United States Senate, Washington, D. C.

DEAR CARL: I had hoped to see you before you left Phoenix to discuss with you some two or three matters, but I was unable to contact you, and hence I am forced to write you concerning these various things that I have in mind.

With respect to the hearing before the Senate subcommittee on the question of compensation offered stockmen for ranges taken over for war purposes, particularly the Kingman and Yucca aerial gunnery ranges. As far as I am concerned it was evident from the testimony of Wilkinson and Embach that the War Department has completely ignored the congressional enactment that was entered to give some relief to these stockmen and further, that after arriving at value of the ranges in question, for some unexplained reason, there has been deducted from this value the cost of leases that will have to be paid to the railroad company as well as the grazing fees that were waived.

For instance, in the case of Lester Pyeatt on his lower range, they arrived at a gross term rental value of \$432.04, then deducted the grazing fees that he would have to pay the Grazing Service during that period of time of \$95.50, leaving a net to him for the term of \$336.54, and then deducted the term lease costs to the Santa Fe of \$341.19 which left net to Pyeatt for that range \$4.65 in the red. Undoubtedly they should have added the \$341.19 and not deducted it. That was a part of the cost that he still has to carry and should have been a part of the compensation offered him. I think that their basic figure of \$432.04 is all out of line and should have been considerably higher; if instead of paying him minus \$4.65 for the term they had offered him the gross rental less grazing

fees or \$336.54 plus the \$341.19, or \$677.73, the situation would not have been so absurd.

I have prepared a brief memorandum in which I have analyzed the hearing. I would like for you to look it over, and if you think it would serve any useful purpose, I would like to have it put in the records.

I want to emphasize that these people that did accept the offers made them do so under pressure. We were told if we did not accept these offers that undoubtedly the War Department would proceed with the condemnation of the fee taking the land over from the railroad company, which would, of course, have put the stockmen entirely out of business. They would have merely received the compensation for the unexpired term of their leases and would have no assurance that after the war was over they would be able to continue in business. That was the club that was held over their heads and the reason that most of them signed up on the absurd basis offered them.

These people need some help, and I hope that something can be done for them.

Very truly yours,

J. H. MOEUR.

MEMORANDUM RE KINGMAN AND YUCCA AERIAL GUNNERY RANGES

The hearing before the Senate Subcommittee on Public Land with reference to the compensation offered and paid stockmen for land taken for war purposes seems to clearly indicate:

First, that the compensation offered these stockmen is grossly inadequate;

Second, that the War Department has completely ignored the spirit, if not the letter, of the congressional enactment that was passed for the purpose of enabling the War Department to deal fairly with these stockmen;

Third, that a number of stockmen have been high-pressured into accepting the inadequate offers made to them because of the costs of carrying the matter through the courts and because they do not want to be put in the light of in any way impeding the war effort. If these stockmen get any relief, it will be through the efforts of the Senate subcommittee. Just exactly where the fault lies seems difficult to ascertain, but apparently the local appraisers are largely to blame. However, I am inclined to think that a part of this fault can be attributed to the War Department officials in Washington. The absurdity of the situation taken by the War Department, both locally and in Washington, can best be illustrated by one or two examples:

The committee's attention was directed to the case of Lester Pyeatt, a small stockman who had two little ranches that were affected by the creation of the Yucca aerial gunnery range. Let us consider the situation with reference to the so-called lower Pyeatt range consisting of 29 sections in township 14 north, range 18 west. We know that this was not a particularly good range, that it was not particularly well improved and only partly fenced, but Pyeatt had been running cattle on this range for several years. This range is composed of approximately 50 percent Federal land and 50 percent Santa Fe-owned land that Pyeatt held under lease. The Santa Fe land was a year to year lease, but the railroad has always recognized the right to renew where the land was being used for range purposes. Evidently the Grazing Service considered this ranch of some value because the records of the Phoenix Grazing Service show a permit issued to Mr. Pyeatt for 174 head of cattle on this ranch. Assuming the inadequately low figure that the War Department set on ranges of this kind of \$30 per head carrying capacity, then this range according to their own estimate should have been worth to Mr. Pyeatt \$5,220. A witness who testified before the subcommittee, named Morgan, said that he had offered Pyeatt \$100 a section for his leases on this range, that Pyeatt had refused this offer. So evidently Morgan thought the range was worth \$2,900 and Pyeatt thought it was worth more. Any conservative value of the range must be somewhere between \$2,900 Morgan offered and the value of the range from a carrying capacity standpoint. Assuming the very lowest figure of \$3,600, if Pyeatt had been offered a reasonable return on that investment of, say 10 percent, this would have amounted to \$300 a year, or, for the 3½-year period, something over \$1,000. Instead of that, the appraisers by some method that was not fully disclosed, arrived at the conclusion that the range for the term in question was only worth \$432.04, and then proceeded to deduct from that pitifully small amount the grazing fees that Pyeatt would have paid to the Grazing Service and the cost of the leases to the Santa Fe, which left him exactly \$4.65 in the red.

Why, in the name of common sense, do they deduct these rentals after having arrived at the value of the range? I think that is the trouble in all of these cases. The range was certainly worth something to this man over and above what he had to pay for rentals. This fact must be obvious, and I am of the opinion that the trouble with all of these cases is that these appraisers have arrived at an inadequately low price for the value of the ranches affected, and then have deducted from that low price the grazing fees and rentals instead of adding them to the appraised value.

We next direct your attention to the holdings of Eudora L. Gardner and Kenneth C. Gardner. Eudora L. Gardner is the mother of Kenneth C. Gardner, and while there are two ranches and two permits involved, they are operated as one unit and, therefore, can best be analyzed jointly.

The total holdings in these two ranches is 126,728 acres. Actually included in the gunnery range was 65,643, or over one-half of the total acreage of both of these ranches. Again, these ranches consist of approximately 50 percent Santa Fe Railroad land held under a 5-year noncancelable lease dated June 15, 1943, expiring June 15, 1948, and approximately 50 percent government land held under Taylor permits. These two permits total 524 head and were actually very low because these people had not overstocked their range. Grazing Service admits that this was not more than 80 percent of the actual carrying capacity of the range, and would probably at any time application had been made to them, increase these permits. Included in these ranges was also a small amount of State land held under lease. The ranches were both fenced and were being used at the time of the creation of the gunnery range.

As a matter of fact, this information was given to the War Department appraisers together with the further information that these people, in compliance with the Government order, had moved about 400 head of the cattle at an out-of-pocket cost in excess of \$500 to another range where they purchased feed. At least 15 head of the cattle died as a result of being moved and many others were seriously hurt. The pasture that they purchased for these cattle cost them \$1.17 per head per month, and they were obliged also to spend an additional sum in caring for the cattle while they were on this other range. These cattle were pastured on the range of Mr. Charles Mickle. Afterward Mickle sold his ranch and the Gardners thereupon sold their cattle, all at a loss.

As we have heretofore pointed out, the gunnery range actually took in approximately one-half of these ranches, to wit, the west half thereof. Assuming the lowest figure possible—that is, that the total ranch had a carrying capacity of 524 head, then one-half of that carrying capacity at \$30 value set by the appraisers would indicate that the value of that portion included in the gunnery range was \$7,860. At 10 percent per annum for the 3½ year period on that value would amount to \$2,751. This would disregard any damage by reason of the fact that the rest of the ranch could not be used, and would disregard any cost of moving cattle or loss incident thereto. If these people had been paid just 10 percent of the actual value of that part of the ranch included in the gunnery range, plus the cost of the leases on that part of the ranch, then the offer to them would have been the figure of \$2,751 plus the sum of \$2,100, cost of rentals to the Santa Fe Railroad and State land department, or a total of \$4,851. Instead of that, they were offered and finally forced to accept the sum of \$3,830.50. Certainly these people were entitled to some consideration for the inconvenience and expense they were put to and also some consideration for the loss of the use of the rest of their range. Again, apparently the appraisers arrived at some value for this ranch and then deducted from that value the cost of the rentals.

This same general situation exists with reference to the holdings of other stockmen on the Kingman aerial gunnery range, the Yucca aerial gunnery range and the Kingman ground-to-ground gunnery range.

Respectfully submitted,

MOEUR & MOEUR.

STATEMENT OF JUDGE LEVI S. UDALL, ST. JOHNS, ARIZ.

Mr. UDALL. My name is Levi S. Udall, and I live at St. Johns, Ariz. I am justice of Superior Court of Apache County, engaged on the side in farming. However, I do not appear here in any way in my official capacity.

It should be self-evident that my appearance before you has nothing to do with my judicial position; and it may be that as one who has never held a forest permit, nor made any particular study of the forest rules and regulations and the laws governing same, I should not presume to attempt to make any constructive contribution to this phase of the hearing.

I appear here today, gratuitously and at my own expense, at the request and in behalf of the great majority of the few remaining people living in the communities of Alpine and Nutrioso. These two mountain settlements lie on the Apache National Forest in Apache County, Ariz., on what is known as the famous Coronado Trail, running between Springerville and Clifton. They were both settled long before there was a Forest Service, back in the late seventies or early eighties. Each of them became thriving communities, with a fairly stabilized population, consisting of from 40 to 60 families each. Some of the big men of the State, such as the late W. W. Pace, of Safford, laid the foundations of their fortunes there.

For more than 20 years past I have had occasion to be in both of these communities two or three times a year, and I have seen them gradually decrease in population until now Nutrioso has less than 50 people, where once there was 300, and the beautiful town of Alpine, which is at the crossroads of the Coronado Trail, and one of the beauty spots of the State, is down to less than 100 people, or approximately where they were 60 years ago. I attribute this decrease wholly to what I consider the short-sighted and unfair policy of the Forest Service in the administration of this, our greatest resource, and the practice and system that has grown up of parties being permitted to traffic in forest permits. If I understand the situation, originally these permits were not commercialized by being bargained and sold as they are today, but they were granted by the Government to permittees with those residing on the forest being given first and superior rights.

Please understand that I am not criticizing the men who now hold these important forest positions, such as my good friends, Mr. Pooler, the regional forester, and the local supervisor, Bob Ewing. Nor am I charging that there has been any discrimination against my people in these communities. As a matter of fact, I consider Mr. Ewing one of the best and fairest supervisors we have ever had on the Apache National Forest. It is the system that I am complaining of. I think it is all wrong. Surely it is not the policy of the Federal Government, the present administration of which professes such solicitude for the welfare of the common man, to stifle the development of such communities as those referred to.

These towns are located at elevations of from 7,000 to 8,000 feet. Their growing seasons are short, the crops that can be grown at all are limited, and diversified crops are out of the question. By farming alone, one cannot support a family. Stock raising presents the only chance for economic security, and yet by and large the people living in these communities—and I have no doubt there are many other similar communities over the State—are only given a permit for 10, 15, or 20 head of stock, which anyone knows is but an aggravation, the economic unit being too small for a livelihood. They are unable to even keep the calves from their milk cows. I could cite you many individ-

ual cases where men who have lived there for 60 years, who have reared families, been good, loyal, and law-abiding citizens, have as of today permits for no more than the figures just given. As their children reach their majority they have had to leave home as there is no future there for them.

It may be that many of the individuals who have lived in these communities have not been too far-sighted. Some may have sold their birthrights for a mess of pottage. Doubtless when some financial crisis arose in their lives they may have in their desperation sold their permits.

In the State of Arizona we have a law, and court decisions confirming same, that makes water and the land inseparable. Might not some such arrangement be worked out by law or forest regulation whereby these permits, held by local individuals on the community permit, could not be sold, however desperate might be the individual's need, without the patented land being sold with the permits, and then limit these sales to others in the community? It seems most unjust and unfair that entire communities of old-time settlers should be allowed for their community permit but a small fraction of the number of livestock which are granted to other adjacent large holders, many of whom are even nonresidents of the State of Arizona.

I am not suggesting that permits now held be confiscated, nor do I subscribe to the doctrine that vested property rights should be taken from those who own them and given to others, at least not without fair and just compensation. But I do say that some changes in the system must be made so as to encourage the growth and development of such communities, rather than sound their death knell. If something is not done to change the system and offer economic security to the inhabitants, it will only be a few more years until these communities are but a memory, and one or two ranchers will hold forth where once were thriving communities. Their homes, schools, and churches will crumble and go back to the forest primeval.

I note that the Forest Service, in its rewording of the so-called Johnson bill (S. 1030), declares it to be the sense of Congress—

That it is in the public interest to bring about the greatest practicable stability in the use of the range resources of the national forests by domestic livestock consistent with (a) the protection of the range and other resources of the national forests * * * (c) and equitable distribution of the grazing privilege among those found to be most in need of the privilege * * * and particularly those which are the basis of individual family support.

This states concisely and exactly what my people are contending for, and I trust that this Senate committee and the Forest Service will put these principles into law and actual practice. In other words, my appeal is for a more liberal treatment of the small bona fide settler on the forest, and for a gradual increase and expansion of these so-called community permits. They ask no more, and less than that would be an injustice.

I thank you.

The CHAIRMAN. Are there any questions?

Mr. KNEIPP. At the proper time I believe there are some other gentlemen who are going to make similar statements with respect to other areas. Perhaps you might want to hear them first.

Senator HAYDEN. I would like to ask the judge this question: Can the policy you have indicated be carried out without serious disruption of the existing livestock industry?

Judge UDALL. I should think it could, Senator Hayden, particularly if it were done over a period of a few years. I don't think in any one respect it is to be done instantly, but I am saying to you, Senator, those communities are going to be wiped out if the present policy is continued.

Senator HAYDEN. One factor to be considered is: What is a sound economic unit for the individual stockman to depend on for his livelihood? If he has irrigated land, he has something to go on.

Judge UDALL. These communities are on the forest. Attempts to irrigate from this elevation, and their limited crops, I think, experience will show that no man can successfully make a livelihood who depends only on his farming activity.

Senator HAYDEN. That would be your idea, to supplement the farming activity by—

Judge UDALL. Suitable permits.

Senator HAYDEN. On the forest. The two would have to go together.

Judge UDALL. That is right. Furthermore, Senator, I am not blaming the Forest Service entirely. I think the people who live there have been very unwise and not farseeing themselves. I think they should be protected from themselves. I think there should be some system whereby they were unable to sell these permits, and there ought to be a gradual increase in the community permits. I am speaking as one who has lived there. I haven't owned a permit, but I have observed those conditions, and they are getting gradually worse.

Senator HAYDEN. I know, as a matter of fact, there are a good many of the large stock outfits in Arizona and elsewhere which have been built up by buying out groups of small stockmen who could not make it because they did not have an economic unit on which to function. My own judgment is, taking good years against bad years, wet seasons against dry, high prices against low prices, by and large, a man is safe in trying to support a family solely from the livestock industry only if he handles about 500 head of cattle.

Judge UDALL. I think these people would be happy if they had permits for even 50 or 75.

Senator HAYDEN. You wouldn't expect a family to make a living from 50 to 75 cattle?

Judge UDALL. On the farms they have they would get along nicely, Senator, and would be very happy about it.

Senator HAYDEN. You are predicating that on the point that there are two classes of permits, one where the man is engaged in nothing but the livestock industry—he must therefore have a substantial unit to support himself and a family in good years and bad. There is another type where the man has an outside income from a farm, from labor, or something else, where a few head of cattle will benefit him. Do you think those two processes can exist side by side by proper adjustment?

Judge UDALL. Yes, sir; I do, Senator.

The CHAIRMAN. Are there any questions?

Thank you very much, Judge.

At the Fredonia hearings it was brought out, with considerable emphasis, that the recreational areas surrounding Mead Lake on the Arizona side had been withdrawn from use for grazing. At that time the chairman of this committee requested Mr. Drury, head of the Park Service, who was with us there, Mr. Tillotson, Mr. Leech of the Grazing Service, and others connected with that recreational area, to please get together and see if a plan could not be worked out whereby grazing might be permitted on the recreational area on the Arizona side surrounding Mead Lake. Mr. Drury was exceedingly gracious about it, as was everyone else connected with it.

I am advised by Mr. Leech that the plan has been worked out, that grazing will be permitted now in the recreational area. Mr. Leach is here and we will hear from him now, briefly, on the subject.

Senator McFARLAND. Just before you do that, may I take this opportunity to say—I have got several appointments to fill this afternoon and then I have to be on my way to Washington. I am going to drive back, so I'll have to start a little bit ahead of Senator Hayden and Congressman Murdock.

I want to assure you that I will read the record of the rest of these hearings and consult with Senator Hayden and Congressman Murdock and Senator McCarran, and we will study these proceedings very carefully, as will Senator Hayden, of course, consult with us on the hearing that we had yesterday. I again want to thank you, Senator McCarran, for coming here, and I am glad to have heard the problems of our State discussed here yesterday and today. [Applause.]

The CHAIRMAN. Now, this is a very interesting proposition. It affects vitally those who have grazing, or would have grazing rights on the recreational area, and it effects a complete change of policy from that which has prevailed. I think it may bring a ray of contentment and happiness to those who are interested. We hope so.

Mr. J. H. LEECH (Chief of Lands, United States Grazing Service, Salt Lake, Utah). Mr. Chairman, under your instructions given at Fredonia, we have worked out a memorandum of understanding, signed by Mr. Day, of the Fish and Wildlife Service; Mr. Rose, of the National Park Service; Mr. Tillotson, of the National Park Service; and Mr. Brooks and Mr. Dierking, of the Grazing Service. It covers the recreational area, both in Nevada and in Arizona.

It provides that grazing will be handled by the Grazing Service under their machinery of issuing licenses and permits up to 10 years. On improvements placed on the area, the various agencies will consult, and improvements satisfactory to the Fish and Wildlife Service or the Park Service can be constructed by the permittee or licensee. The fee rate is the rate charged by the Grazing Service.

There are certain stipulations concerning watering and the distances of grazing from Lake Mead; those are stipulations that were put into the agreement.

We all believe that this agreement will work very nicely, and it is in effect right now as having been signed yesterday and this morning, and we will offer the agreement.

The CHAIRMAN. It may go in the record. Thank you, Mr. Leech.

Mr. LEECH. That distance is from the dam itself, and not from Lake Mead.

(The agreement is as follows:)

SEPTEMBER 3, 1943.

MEMORANDUM OF UNDERSTANDING

Between the regional graziers of regions 3 and 9, Grazing Service; Superintendent of the Boulder Dam national recreational area, National Park Service; Bureau of Reclamation, Boulder Canyon project; and the Fish and Wildlife Service, Department of the Interior, covering grazing on the Boulder Dam national recreational area and Boulder Canyon National Wildlife Refuge, Nev. and Ariz.

PREAMBLE

Pursuant to the memorandum of understanding between the National Park Service and the Grazing Service, approved by the Secretary of the Interior on February 20, 1940, which is designated for the purpose of coordinating range supervision with reference to livestock which graze part time in grazing districts under Grazing Service regulations and part time in reservations under the jurisdiction of the National Park Service, and particularly to section 4, which provides for the formulation of field agreements to be entered into by local representatives of the two Services covering the details of such cooperation, and further pursuant to paragraph 5, article II, of the memorandum of agreement between the Bureau of Reclamation and the National Park Service, approved by the Secretary of the Interior on October 13, 1936, under which the Boulder Dam national recreational area is developed and administered and which places responsibility in the National Park Service for handling grazing on the recreational area, and

Whereas the Fish and Wildlife Service, Department of the Interior, having jurisdiction over all wildlife on a large area embraced within the confines of the Boulder Dam national recreational area known as the Boulder Canyon National Wildlife Refuge, is vitally interested in any grazing by domestic livestock on the refuge area, and (for the purposes of this agreement the Boulder Dam national recreational area shall hereafter be designated as the recreational area, and the Boulder Canyon National Wildlife Refuge shall hereafter be designated as the refuge; the superintendent of the recreational area shall hereafter be designated as the superintendent; the director of power of the Boulder Canyon project, Bureau of Reclamation, shall hereafter be designated as the director, and the refuge manager of the refuge shall hereafter be designated as the manager) as further evidenced by the agreement between the Park Service and the Biological Survey (now the Fish and Wildlife Service) approved by the Secretaries of Agriculture and the Interior on April 3 and May 12, 1937, respectively, and

Whereas grazing supervision on the recreational area and the refuge can best be coordinated by the Grazing Service, particularly since the same stock graze part time on adjacent grazing district lands and part time on recreational and refuge lands; therefore it is mutually agreed that—

1. The Grazing Service will supervise all grazing by domestic livestock on the recreational area and refuge in the manner provided in the Taylor Grazing Act of June 28, 1934 (48 Stat. 1269), as amended, and the rules and regulations thereunder, commonly known as the Federal Range Code, approved September 23, 1942, and subsequent amendments thereto, insofar as supervision of grazing is not in conflict with the purposes of the said recreational area and refuge where contiguous, or the recreational area where not contiguous with the refuge.

2. Grazing permits or licenses issued by the Grazing Service in accordance with this memorandum of understanding will carry, in addition to Grazing Service, or special recreational area, or refuge provisions, as the case may be, a stipulation providing for the cancelation or modification of grazing privileges or areas on lands covered by this memorandum of understanding when such lands are required for higher use or for wildlife purposes. Advance written notice of 12 months will be prerequisite to actual cancelation of grazing privileges, and notice of cancelation or modification and reasons therefor shall be given the Grazing Service in writing by either the superintendent, director, or manager when involving the refuge and by the superintendent when not involving the refuge, with copy of such cancelation order to be provided the other agencies concerned.

3. It is mutually agreed that no refund of a grazing fee for any of such lands involved in this agreement shall be made unless application therefor is made within 30 days after the expiration of the grazing period described in the license. The Grazing Service shall make every reasonable effort to obtain final disposition of such applications for refunds within 5 months from the receipt of any such applications; and the refunds of grazing fees for any of such lands, which may be made by the Grazing Service, shall be deducted from the grazing fees collected for the lands before payment is made to the Bureau of Reclamation

as provided in paragraph 4 hereof. The grazing fees fixed by the Secretary of the Interior for the use of grazing district lands adjacent to the recreational area and refuge shall apply also to the lands in the recreational area and refuge.

4. In accordance with the Boulder Canyon Project Act of December 21, 1928 (45 Stat. 1066), as amended, the Grazing Service shall pay to the Bureau of Reclamation the grazing fees collected in connection with the lands involved pursuant to this agreement, less such refunds of such fees as may be made in accordance with the provisions of paragraph 3 of this memorandum. Said payments shall be made to the Bureau of Reclamation by the Grazing Service annually upon a calendar year basis. The accounting for such payments shall be in such manner agreed upon by the Grazing Service and the Bureau of Reclamation, as will meet the accounting requirements of both.

5. In order to secure the best possible management and use of the recreational area and refuge, users of the range will be encouraged to finance and to construct necessary improvements under special free use permits to be issued by the Fish and Wildlife Service providing such permanent improvements are first approved by the superintendent and the director or their authorized representatives as to location, design, need, and affect of same on higher use purposes of the lands involved. Where improvements to lands involve only recreational area lands the superintendent or his authorized representative will issue special use or section 4 (see preamble) permits. All permanent improvements shall be maintained by and at the expense of the permittee using same in a manner satisfactory to the manager and/or the superintendent and/or the director, as the case may be. All permanent improvements upon completion shall become the property of the United States, shall not be removed by the permittee, and shall be under the jurisdiction of the National Park Service when located on recreational area lands outside the refuge, and under the jurisdiction of the Fish and Wildlife Service when located on refuge lands. Temporary improvements placed on the lands must be removed by the permittee upon cancellation of his grazing permit when so requested by the manager and/or the superintendent and/or the director, as the case may be. If not removed within 60 days after termination of grazing permit or date of cancellation thereof, property shall automatically become the property of the United States, under the jurisdiction of the National Park Service when located on recreational area lands outside the refuge, and under the jurisdiction of the Fish and Wildlife Service when located on lands inside the refuge area.

6. There shall be performed each year, if desired by either the Fish and Wildlife Service, Grazing Service, or Park Service, a joint inspection of the area or areas used or to be used by livestock, and which inspections may be the basis for issuance, cancellation, amendment, or modification of existing or proposed grazing permits.

7. Before the beginning of each grazing season the respective regional graziers, superintendents, and the manager, or their respective authorized representatives, shall confer and decide upon areas to be grazed, the number of livestock and species of livestock to be grazed on each respective area, and grazing season. Where refuge area is not involved the manager will not be represented.

8. Copies of permits for the manager, the director, and the superintendent, setting forth the area, number of livestock, species of livestock, and period of grazing, as well as the owner of the stock and the brands or other identifications on the stock, shall be provided by the Grazing Service at the time, or before the stock is turned loose on the area.

9. The memorandum of agreement between the Bureau of Reclamation and the National Park Service, dated October 13, 1936, is hereby amended insofar as any stipulations included in this memorandum of understanding may be at variance with the already existing memorandum of understanding mentioned above.

10. It is understood by all concerned that there shall be no grazing within a radius of 8 miles from the Boulder Dam.

11. In connection with the above supervision of grazing by the Grazing Service it is agreed that the Grazing Service will cooperate with the National Park Service and the Fish and Wildlife Service in any trespass by domestic livestock either from stock permitted by the Grazing Service outside or inside the recreational area or refuge. In the case of trespass stock inside the refuge area the regulations of the Fish and Wildlife Service shall apply, and on the recreational area not coinciding with the refuge, the National Park Service regulations shall apply.

The National Park Service and/or the Fish and Wildlife Service as the case may be, shall notify the Grazing Service of any trespass stock before any trespass action is taken by either the National Park Service or the Fish and Wildlife Service, and if appropriate action cannot be taken by the Grazing Service, then the affected agencies shall enforce their trespass regulation.

The National Park Service or the Fish and Wildlife Service, as the case may be, may request the Grazing Service in cases of repeated trespass for the cancelation of the permit of the offending permittee.

12. Necessary amendments to this agreement may be made from time to time in accordance with suggestions from the agencies involved, each of the agencies to be signatory to such amendments and to receive copies thereof.

Approved:

ROBERT H. ROSE,
Superintendent of Boulder Dam National Recreational Area.

L. R. BROOKS,
Regional Grazier, Region 9, Arizona.

C. F. DIERKING,
Regional Grazier, Region 3, Nevada-California.

ALBERT M. DAY,
For Regional Director, Region 3, Fish and Wildlife Service.

M. R. TILLOTSON,
Regional Director, Region 3, National Park Service.

J. H. LEECH,
Acting Director, Grazing Service.

The CHAIRMAN. Thank you, Mr. Leech, and the chairman of the committee, in behalf of the committee, expresses the gratitude of the committee to Mr. Leech, Mr. Rose, Mr. Brooks, Mr. Tillotson, Mr. Drury, and the others who participated in the agreement. I think it is a progressive agreement and I think it will be a boon to those who see fit to utilize that area. If the committee has not done anything else since it has been in Arizona, I think we have accomplished a little something for the people of Arizona, in that respect. We are very happy about it.

The CHAIRMAN. There is a wire here from Margaret M. R. Lee, from Tuscon, Ariz., addressed to Mrs. J. M. Keith, Arizona Cattle Growers Association, that reads as follows:

Cannot be at Senator McCarran's hearing, but wish to protest expensive Army maneuvers, and particularly future Coronado national monument on our range. The war will be over some day but the Park Service will go on forever.

Mr. RONSTADT. Mr. Chairman, may I ask a question on this agreement? The Cattle Growers Association would like to know if these permits are transferable, or just for the life of the permittee?

Mr. LEECH. The permits are issued by the Grazing Service and are attached to the property. There is no provision made in here of this lifetime of the permittee. As I understand it, we will issue the 10-year permit, based on the property.

Mr. RONSTADT. In other words, it will be just like the Grazing Service?

The CHAIRMAN. Let's clarify it a little further: It is not revocable on the death of the permittee?

Mr. LEECH. It will be our regular permit form. Of course, it carries a provision that if a man loses his base property the permit is canceled.

The CHAIRMAN. That is the general provision?

Mr. LEECH. Yes, sir.

The CHAIRMAN. There were some things that, I think, should be brought up here. One that I want to bring in is an Indian matter

that Senator Hayden has. That, I think, might come in right now in the hearings. Senator, if you will proceed with it as you see fit, we would be very glad.

Senator HAYDEN. Mr. Chairman, I received a long-distance telephone call from Leo Weaver, at Flagstaff, advising me that four Hopis, interested in protecting their reservation were on their way to this hearing. I suggested to him that they come here with someone to speak for them, and that they prepare a statement with regard to the matter. Two of them would like to be heard. I think the first one, perhaps, is the president of their organization, Emory Sikoquapluva.

Have you a statement you would like to read to the committee?

Mr. SIKOQUAPLUVA. I have the statement that I brought along with me, and I will read it to you if you would like.

At a general meeting of the stock owners of Third Mesa, on the Hopi Reservation, called by the Hopi Stockmen's Association, it is thought best to discuss the livestock reduction program by the Superintendent of the Hopi Agency.

The stock owners see no necessity for this reduction as the Hopis are endeavoring in every manner to produce enough meat and wool to maintain themselves and to contribute to the war effort.

The members of the association have had difficulties in producing any surplus of livestock on our range. The Hopi Superintendent now claims that his records show overgrazing, but by actual count of our livestock we are able to produce figures contrary to the Agency's count.

For the above reasons this proposed reduction will seriously affect the Hopi's livelihood and the Nation's urgent need of both meat and wool. In a meeting held August 10, 1943, with a representative of the Hopi Superintendent present, we found irregularities on the reservation which existed without our knowledge. During the month of November 1942 our horses were branded and handled very roughly by the range rider, the result being that one Indian mule was nearly killed. This man used profanity with the Indians and was the cause of much trouble from the beginning.

Our complaints are never considered and the Indian field representatives have never furnished us with their report findings, all of which we feel is an injustice to our people at large. We further feel that there should be no secrets in the Indian Service or any information withheld from the Indians, especially information concerning the Indians.

We have always been taught that we live under a democracy and we have developed this land as first Americans and yet are given no rights whatsoever.

We ask that district No. 6, which was set up by the Navajo service, be abolished in its entirety and that the Executive order of 1882 be restored in full to the Hopi people and then to be managed by the Hopi Tribal Council in conjunction with representatives of the Office of Indian Affairs.

We respectfully request your assistance toward the end that the Hopi Tribal Council be called into consultation before any other decisions are made regarding stock reduction or other matters of importance to the Hopi people.

Senator HAYDEN. Mr. Chairman, I wonder if there is anyone here representing the Indian Service who might discuss this matter?

The CHAIRMAN. Is the attorney for the Indian Service here?

Mr. WILLIAM BROPHY (United States Indian Service). I am attorney for the Pueblos, Mr. Chairman, and I don't know anything about this particular problem.

The CHAIRMAN. Is there anyone here in the audience connected with the Indian Service sufficient to know this problem? Will you please come forward?

Mr. FLOYD H. PHILLIPS (regional forester, Indian Service, Phoenix, Ariz.). Mr. Chairman, I doubt very much if I can give you any information in regard to this particular question. I have only been here since March of this year, and I am not familiar with the Hopi situation. However, I would be glad to answer any questions which I could, if you so desire.

Senator HAYDEN. You may know whether it is true or not that there has been a demand for a reduction in the number of livestock carried on Indian lands in northern Arizona. Is that true?

Mr. PHILLIPS. I understand that is true, Senator Hayden.

Senator HAYDEN. Do you know when that reduction was ordered?

Mr. PHILLIPS. No; I could not give it to you.

Senator HAYDEN. Perhaps you can answer, Emory. This program has been going on for some years. Have you made reductions heretofore, or is this the first time the Indian Service has called on you to cut the numbers of livestock?

Mr. EMORY SIKOQUAPLUVA. Back in 1936, I believe it was; I have got the regulations there with me, in my brief case, over there, maybe I could get that.

Senator HAYDEN. What I want to know is whether this is something that has been going on for a long time, or something new?

Mr. SIKOQUAPLUVA. Well, it has never been in effect there, you know, until last spring. In that statement, you know, when the horses were branded, that was the first time that it was taken action on.

Senator HAYDEN. It makes a lot of difference what kind of a season you have, whether you have had good rains or not, and whether your range is in good shape or not, as to how many it will carry. Were these regulations made at a time when there was a drought, and do you have good grass now?

Mr. SIKOQUAPLUVA. We have practically the same conditions now that we grazed on when that was made. I mean when that was put into force.

Senator HAYDEN. One complaint is an objection to reduction in the number of livestock that are to graze on the range?

Mr. SIKOQUAPLUVA. Yes.

Senator HAYDEN. The second proposition here—I can illustrate it Mr. Chairman, if you will glance at this map of Arizona. You will notice that there is a large square area to which he refers in his letter, under "Executive order of 1882." Now, he says that that order set aside a reservation for Hopi Indians. The hatched area, in the center, with the red lines, the very much smaller area, indicates, apparently, the actual grazing region now occupied by Hopi Indians; but you will observe that it is very much smaller than the larger square area. His prayer is that the Executive order reservation be restored, in full, to the Hopi people, to be managed by the Hopi Tribal Council; but there, of course, you enter into a conflict of interests between yourselves and your neighbors, the Navajos?

Mr. SIKOQUAPLUVA. Yes.

Senator HAYDEN. Do you believe it is possible to adjust that difference, without harm to either side?

Mr. SIKOQUAPLUVA. The Hopi people, as I understand, do not wish to harm anybody, and we are not asking that anything be given to the Hopi people that is not theirs rightfully.

The CHAIRMAN. How many are there of you, now, in the reservation? How many Hopis?

Mr. SIKOQUAPLUVA. Approximately 3,000, Senator.

The CHAIRMAN. How does that compare with your former population?

Mr. SIKOQUAPLUVA. It is maintaining itself, at least.

The CHAIRMAN. It has not reduced?

Mr. SIKOQUAPLUVA. It has not reduced any to make much difference, Senator.

Senator HAYDEN. Upon the other hand, your Navajo neighbors have multiplied greatly in numbers?

Mr. SIKOQUAPLUVA. That is true.

Senator HAYDEN. Mr. Chairman, in view of the fact there is no one present from the Indian Service who can discuss this matter, may I make this suggestion, that this communication be incorporated in the record, and that the clerk of your committee be directed to bring it to the attention of the proper authorities in Washington. When the response is made, I shall be very glad to cooperate with you in seeing what action be taken that might be effective in the matter.

(The communication referred to is as follows:)

FLAGSTAFF, ARIZ., September 2, 1943.

Senator CARL HAYDEN,
Westward Ho Hotel,
Phoenix, Ariz.

MY DEAR CARL: The bearers of this letter are Hopis—Emory, Roger, Fielding, and Simon—all highly esteemed in their country. You will find them intelligent, honest, and receptive to suggestion, and you may talk with them as you would with me.

C. B. Wilson and I have talked with them and find them sorely in need of your help as to how they should proceed with their serious problem. C. B. is most anxious that you understand that we do not wish to offer you our advice in this procedure, but we are asking yours, as your long experience will be most helpful and the Hopis will follow your advice implicitly.

My own thought on the matter is, there is to be a tribal council meeting at Oraibi in the near future which will be a representative gathering of the Hopi Tribe as a whole and C. B. and I will attend this council in the hope that we may be able to assist them. We, in turn, will immediately forward you the findings of the meetings. You may perhaps feel it wise to postpone testimony of the Indians at the public-land hearings to be held in Phoenix, Saturday.

It is most important that you understand that the Hopi people have no desire to take away from others * * * they have no desire to injure any individual, for they are asking only what rightfully belongs to them. President Chester A. Arthur, in 1882, set aside for the use of the Hopi people a tract of land, designated as the Executive order. During the ensuing years, the Hopi people have been restricted in the use of this land until today they are allowed to use but one-third of their own reservation. The range they are now allowed to use is known as district No. 6, and the attached map will enlighten you as to the restriction.

The Hopi people must of necessity produce sufficient meat and wool for their own consumption. They would like to place, to Government use and the war effort, any possible surplus. They are patriotic * * * they have sent their young men to fight for our democracy and they are loyal to our Government to a degree.

Their plea is for relief.

Their hope is that their land be made accessible to them as it was in the past. This will allow them their simple living and will improve their daily standards which is their just due, even as it is yours and mine. They realize this will demand a tremendous effort on their part and are prepared to put forth this effort, and we believe you will be doing a wonderful service for a people if you will assist them.

Accept my sincere thanks and with all good wishes,

Sincerely yours,

LEO WEAVER

The CHAIRMAN. We had the promise that three superintendents would be here. I think one of them was the Hopi Superintendent.

Mr. HAVELL. I understand, Mr. Chairman, that the Indian Service will be represented at Albuquerque. Mr. Stewart is to be there, the former Chief of the Lands Division.

Mr. BROPHY. I will undertake to have a report furnished to the committee by the Superintendent of the Hopis, and by the Indian Office.

Senator HAYDEN. Can you do that at Albuquerque when the committee is there?

Mr. BROPHY. I will try to have it ready in Albuquerque.

(The following letters and report were later received for the record:)

UNITED STATES DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D. C. November 9, 1943.

HON. PAT MCCARRAN,
Chairman, Subcommittee of the
Committee on Public Lands and Surveys,
United States Senate.

MY DEAR SENATOR MCCARRAN: At the recent Phoenix meeting of your subcommittee a question was raised by some members of the Hopi Tribe concerning the division of use of grazing lands between the Hopi Tribe and the Navajo. The Superintendents of the Navajo Service and the Hopi Agency has prepared a statement on this matter, copies of which I enclose for your record.

Sincerely yours,

OSCAR L. CHAPMAN,
Assistant Secretary.

UNITED STATES DEPARTMENT OF THE INTERIOR,
OFFICE OF INDIAN AFFAIRS,
NAVAJO SERVICE,
Window Rock, Ariz., October 7, 1943.

MY DEAR MR. BROPHY: There is returned herewith original letter dated September 2, 1943, addressed to Senator Hayden by Leo Weaver of Flagstaff, Ariz., enclosing two petitions signed by the Governor of Kigotsmovi and the president of Hopi Stockmen's Union, opposing the livestock reduction program insofar as it applies to Hopi livestock and also insisting that the original Executive order area of 1882 be restored in full to the Hopi people.

Under date of December 16, 1882, President Arthur signed an Executive order whereby an area consisting of 2,472,320 acres, or approximately 3,860 square miles, was set aside for the use and occupancy of the Hopi Indians, together with such other Indians as the Secretary of the Interior might settle thereon. This wording implies that the Hopi rights were not exclusive.

It is known that both the Hopis and Navajos inhabited the area at the time it was set aside by Executive order, and at that time there were approximately 2,000 Hopis and several hundred Navajos living within the area in question.

Since 1882, the Hopi population has increased to a total of 3,500 and the Navajo population within the area to approximately 4,500. Records indicate that even though there were few domestic livestock grazing within the area in 1882, land-use disputes existed between the Navajos and Hopis at that early date. The increasing infiltration of Navajo Indians within the area has created a grave economic and administrative problem and threatens seriously to throttle the Hopi Indians from an economic standpoint. Neither tribe is willing to agree to a division of the area and the creation of respective reservation boundaries. The Hopis believe that such an agreement would embarrass their traditional claims to large areas of land. The Navajos wish the privilege of utilizing the entire 1882 reservation as far as possible. From an administrative and economic standpoint it has been necessary to divide the Executive order area into a land-use district for the use of the Hopis and the balance allocated to Navajo land-use districts. The setting up of land-use districts on this and contiguous Navajo areas has been absolutely necessary for the proper protection of the range from destruction and for the effective enforcement of the regulations, that Hopi and Navajo grazing be separated. In the years 1936 and 1937, it became obvious that the entire area of the Navajo and Hopi Reservation was deteriorating, due to overuse by the grazing of excessive numbers of livestock. Range surveys and forage checks were made and livestock inventories obtained.

Subsequently, efforts were and are still being made to adjust the numbers of livestock grazing within each district area to the carrying capacity of the range, as determined by careful surveys; and although many livestock were removed from the range, there are yet areas upon which the livestock numbers are in excess of the rated carrying capacity. The land management district set apart for the exclusive use of the Hopi Indians and identified as district No. 6 is entirely inadequate for the needs of the Indian population. This is likewise true of the contiguous Navajo land management districts.

Precipitation within district No. 6 during the year 1943 has been far below average; production of corn, the principal food crop, is estimated to be less than 50 percent of normal; forage for livestock is estimated to be less than 50 percent of normal. This is true of the entire Executive order area in question, and the range lands located therein are in a very bad condition, and unless large numbers of livestock are moved out, extremely heavy livestock losses will occur during the forthcoming winter. Regardless of the serious economic problem, the protection of these Indian lands from destructive overgrazing must be maintained. The entire Hopi-Navajo grazing lands in Arizona are woefully inadequate to support the Indian population and unless some means of expansion is found, the economic situation of these people will quickly become a national tragedy.

Sincerely yours,

J. M. STEWART,
Superintendent, Hopi Agency.
BURTON A. LADD,
Superintendent, Hopi Agency.

Senator HAYDEN. Did the Governor desire to present a statement, also, to be inserted?

Mr. SIKOQUAPLUVA. He will have to use an interpreter. Ask him, please, to come forward and identify himself and submit the paper.

The CHAIRMAN. Your paper will go into the record.

Senator HAYDEN. Will you be kind enough to explain to the Governor that, because of the press of time, we would like to have him present his letter, and ask to have it printed in the record; and, also, that we will give copies to representatives of the Indian Service. This matter will be considered by the committee when it meets at Albuquerque next week.

Mr. SIKOQUAPLUVA. He is very glad and very happy to present the statement, and he will not read it on account of shortage of time.

Senator HAYDEN. Then, I ask, Mr. Chairman, that the statement be included in the record.

The CHAIRMAN. It will go into the record at this point.

STATEMENT OF ROGER QUOTSHYTEWA, GOVERNOR OF KIGOTSMOVI

I, Roger Quotshytewa, Governor of the Hopi village of lower Oraibi, herewith present you with a statement: In behalf of my people, I oppose the present proposed drastic reduction in the Hopi's livestock. All Hopi people are opposed to it and definitely do not want it.

This is our principal problem and our superintendent and his employees are not interested in our welfare, neither have they shown any inclination to cooperate with our tribal council members. We are sorry to point out to you that they have violated our self-government bylaws when they refuse to talk over our problems and to offer us the opportunity of shouldering our own responsibilities and problems. They also force on us rules of which we have never heard, and this has caused much difficulty and misunderstanding among our people and has disrupted our tribal council membership. We all feel that we are like sheep that have gone astray without a shepherd.

In the year of 1881, Chester A. Arthur was president of the United States and during that year the Hopi people sent delegates of the tribe from all Hopi villages in their desire to deal in a friendly manner with the Government in Washington. Our desire was to secure perpetual use of land for the Hopi people.

Why has not the Indian a right to settle anywhere in his own country? As that great statesman, Abraham Lincoln, declared, "All men are created equal, with liberty and justice for all."

Our land is sorely inadequate for our needs; out of 2,000,000 acres of land, comprising the Hopi Reservation, our Hopi stock owners are permitted to use less than one-fourth of the range area of our reservation. The balance of our own reservation is set aside for the use of Navajo stock and the Navajos have a reservation of thousands upon thousands of acres.

The above statements are very important to us and on behalf of my people, the Hopi Indians, we plead for your full consideration of our problems and respectfully request your help.

I hereby present my petition as Governor of the Hopi village, Kigotsmovi, at Oraibi, Ariz.

Senator HAYDEN. We are very much obliged to you.

Mr. J. M. SMITH (Central, Ariz.). I have noted, with some interest, this conversation, and I'm glad these Indian boys are sticking up for their rights a little bit. I don't know how many thousand stock they have—less than 10,000—but there is plenty of room on the Apache Reservation. In the recent last 10 years several thousand head, some of those Indian outfits, have been moved out of Graham and Gila Counties, and the only thing you've got down there is a bunch of grass growing up to burn your reservation up, with no cattle to eat it.

The CHAIRMAN. What reservation is that?

Mr. SMITH. The Apache. There was a time when I objected very seriously to the removal of the white men off the reservation. I was one of them. We are all gone now. But it's a funny thing to me, you have got one part of the State there where in a time like now, when we would like to have production, and you fellows that want to go to the butcher shop and get a steak can't buy one because you've got a scarcity of beef—that you can throw a rock from here to one of the best ranges in the State of Arizona that hasn't got a cow on it. Now, there's something wrong somewhere with the Indian Service. I'd like to see those Hopi boys—I doubt if they're overstocked up there; I question it; I haven't seen the range, but I question it. If they haven't got over 10,000 head, there is plenty of room for them down on the Apache Reservation.

The CHAIRMAN. Do you care to be heard? Will you please state your name?

STATEMENT OF SIMON E. SCOTT, HOPI

Mr. SCOTT. My name is Simon Scott, and I am a member of the cattle association of the Hopi Reservation.

The CHAIRMAN. Take your time and tell us what you have to say.

Mr. SCOTT. At a time when I began to go to school, to learn something for what life is today, and the first instructions was given me by the superintendent of Riverside, Calif., school, my school I went to. At the time I was there they instructed us very definitely—of course, we are Indians and are slow thinkers. At that time he had instructed us that in time to come that we shall stand up on our toes and speak for the rights of our people. That is first law I was handed down by the United States Government, or Indian Office. After the instruction was given to us that we shall take and thoroughly study what purpose of educating Indians—and I guess I must be one of them—I have took it seriously. Of course, I am sorry to say I did not finish the school; but, however, my father had a little stock at home, and he was

too old to take care of it himself, so he asked me to stay home, which I have did. Up to this time we began to visit among our white brothers in their country, through Nevada and California, and other places, and I was very interested in those countries where I have been. All the ones that I have went through I have studied that, I have put through in my head, and I wish I had the money to do like my white brothers out here. When I come home and live in my little home, I look around, and there was no way to make a living.

I have a family today of my own, and I want to live up as a standard, because time comes that we Indians are going to be taxpayers, and that is the way the Government is preparing the Indians for that life. I am sorry to say this is my knowledge: I have worked very hard and worked with my officials on my reservation. I have asked this and that but have never been given no opportunity whatever to be given it. I sometimes fought pretty hard, as I think. Look among you white men here, as my brothers, that I should be doing this and that, because that is what I am educated for. However, up to this time we are in such fix we can make no production, on account of small area that has been given to us on this Executive order map, which was given by President Arthur in 1882; so we ask your Senators' committees to take this matter with you and take it under deep consideration for my people, so that in time they will have better life to live. Our children are now in the Army, in the training camps, or now fighting, I suppose. I had one boy who is now in a training camp today.

At one time we had a meeting with our superintendent on the reservation. I am the father of my children, and it was my idea to give them a start with a few head of stock; and he says to me that it cannot be done; after the war they will have better opportunity than the Indian ever had. I just could not believe, because I know very well that the Government promised anything; and I just want to know if that has been put down in black and white; whether they are going to get the best opportunity after the war is over. I want you to take this with the Indian Office, when you go back, and in the long run we may have better chance to live.

I thank you. [Applause.]

The CHAIRMAN. Is Mr. Boice here? You may make such statement as you see fit, Mr. Boice, representing the Arizona Cattle Growers Association, and you may name such parties as you see fit, who care to make statements.

STATEMENT OF HENRY G. BOICE, TUCSON, ARIZ., REPRESENTING ARIZONA CATTLE GROWERS ASSOCIATION

Mr. BOICE. Mr. Chairman, I am chairman of the national forest advisory board of the Arizona Cattle Growers Association, and I have been asked by them and designated by them to present their position in respect to forest legislation.

A few years ago—I don't remember the date—Senator Johnson, of Colorado, introduced a bill in the Senate, which was designated as Senate bill 1030. The Arizona Cattle Growers Association endorsed the principles of that bill. However, it was not enacted. When that bill died, the representatives of the cattle association had several

conferences with representatives of the forest office in an effort to iron out the differences between the forest permittees and the officials of the Forest Service. Considerable progress was made in ironing out those differences. However, there was one difference which remained and which apparently was impossible to reach an agreement on. As a result there is a revision of the old Johnson bill, S. 1030, which I will refer to as "the stockmen's revision." There is also a revision I shall refer to as "the Forest Service revision." Both of these bills are in mimeographed form, are not before the Senate. I wonder, Senator, if those copies should be put in the record?

The CHAIRMAN. I think these copies, if they have not already been put in the record, will be put in the record, at your request, at this point.

This so-called "Forest Service revision"—I am not certain that that designation is correct, but it is a revision. I want to be fair with the Service; it is a revision which I believe the Forest Service would accept. I think probably that is a better way of putting it; otherwise it might be construed as a revision drafted by the Forest Service, and I am not sure that the Forest Service wishes to be put in that position. I wouldn't want to embarrass them by forcing them into that position. (The two revisions of the former Johnson bill are as follows:)

REVISION OF S. 1030 (JOHNSON BILL)¹

A BILL Relating to the management and administration of national forest grazing lands

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled. That in the administration of national forest grazing lands, the Secretary of Agriculture, or his authorized representatives, shall not (a) deny any permittee, who has complied with the regulations and instructions to which he may be subject and who owns commensurate property or other facilities, as provided in section 2 of this Act, a renewal of his permit to graze livestock in the national forests, similar as to number and kind of livestock and for national forest grazing land of substantially equivalent grazing quality and accessibility, or (b) reduce the number of permitted livestock upon the transfer by any permittee of livestock, land, or both, unless the secretary, after according the permittee an opportunity to be heard, finds that such denial of renewal or such reduction is necessary—

- (1) to protect such lands from overgrazing;
- (2) to preserve public resources thereof from destruction or improvident impairment; or
- (3) for the orderly administration of the use or uses to which such lands shall in fact be put for reforestation, recreation, wildlife conservation, mining, public watershed protection, or public water storage and flood control.

In the event of such denial or reduction, the Secretary, upon the request of the permittee affected, shall set forth in writing the grounds upon which such denial or reduction is based.

SEC. 2. (a) The renewal of a preference in the grazing use of the national forests shall be contingent upon the ownership of commensurate property by the applicant or permittee and upon the use of such property by the applicant or permittee in management of the permittee's livestock. For the purposes of the first section, property shall be considered commensurate if it consists of a recognized livestock operating base which is adequate to support permitted livestock in accordance with the customs of the localities during the period or periods of the year in which grazing upon national forest lands is not authorized, and which is complementary to such national forest lands in comprising a properly balanced year-long livestock operation: *Provided*, That where such grazing is authorized during

¹ Form approved by American National Livestock Association.

the entire year, property shall be considered commensurate for such purposes if it consists of suitable headquarters and ranch or range improvements, or other facilities.

(b) The Secretary of Agriculture is authorized to promulgate regulations and instructions fixing such additional standards for each area containing national forest lands as may be necessary and proper for the purpose of determining whether property or the facilities are adequate and suitable for the purposes specified in subsection (a).

SEC. 3. (a) To provide national forest grazing permittees means for the expression of their recommendations concerning the management and administration of national forest grazing lands, a local advisory board shall be constituted and elected as hereinafter provided for each national forest or administrative subdivision thereof whenever a majority of the grazing permittees of such national forest or administrative subdivision so petitions the Secretary of Agriculture. Each elected local advisory board existing for such purpose at the time of the enactment of this Act, and recognized as such by the Department of Agriculture, shall continue to be the local advisory board for the unit or area it represents, until replaced by a local advisory board or boards constituted and elected as hereinafter provided.

(b) Each such local advisory board shall be constituted and elected under rules and regulations, consistent herewith, now or hereafter approved by the Secretary of Agriculture, and shall be recognized by him as representing the grazing permittees of the national forest or administrative subdivision thereof for which such local advisory board has been constituted and elected.

(c) Each such local advisory board shall consist of not less than three nor more than twelve members, who shall be national forest grazing permittees in the area for which such board is constituted, elected, and recognized. In addition, a wildlife representative may be appointed as a member of each such board by the State game commission, or the corresponding public body of the State in which the advisory board is located, to advise on wildlife problems.

(d) Each such local advisory board shall meet at least once annually, at a time to be fixed by such board, and at such other time or times as its members may determine, or on the call of the chairman thereof or of the Secretary of Agriculture or his authorized representative.

SEC. 4. Upon the request of any party affected thereby, the Secretary of Agriculture, or his duly authorized representative, shall refer to the appropriate local advisory board for its advice and recommendations, and any matter pertaining to (a) the modification of the terms, or the denial of a renewal of, or a reduction in, a grazing permit, or (b) the establishment or modification of an individual or community allotment. In the event the Secretary of Agriculture, or his duly authorized representative, shall overrule, disregard, or modify any such recommendations, he or such representative, shall furnish in writing to the local advisory board his reasons for such action.

SEC. 5. (a) At least thirty days prior to the issuance by the Secretary of Agriculture of any regulation under this Act or otherwise, with respect to the administration of grazing on national forest lands, or of amendments or additions to, or modifications in, any such regulation, which in his judgment would substantially modify existing policy with respect to grazing in national forests, or which would materially affect preferences of permittees in the area involved, the local advisory board for each area that will be affected thereby shall be notified of the intention to take such action. If, as a result of this notice, the Secretary of Agriculture shall receive any recommendation respecting the issuance of the proposed regulation and shall overrule, disregard, or modify any such regulations, he or his representative shall furnish in writing to the local advisory board his reasons for such action.

(b) Any such local advisory board may at any time recommend to the Secretary of Agriculture, or his representative, the issuance of regulations or instructions relating to the use of national forest lands, seasons of use, grazing capacity of such lands, and any other matters affecting the administration of grazing in the area represented by such board.

SEC. 6. Nothing in this act shall be construed as limiting or restricting any right, title, or interest of the United States in any lands or resources.

[NOTE—The president and the executive secretary of the American National Livestock Association have later suggestion that the first sentence in section 2 (a) be eliminated, as unnecessary.]

FOREST SERVICE PROPOSAL FOR REWORDING S. 1030

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That it is declared to be the sense of Congress that it is in the public interest to bring about the greatest practicable stability in the use of the range resources of the national forests by domestic livestock consistent with (a) the protection of the range, and other resources of the national forests, (b) the proper correlation of the grazing use with other uses of the national forests, and (c) an equitable distribution of the grazing privilege among those found by the Secretary of Agriculture to be most in need of the privilege, with due consideration to sustaining those enterprises which include use of national-forest ranges, and particularly those which are the basis of individual family support, and to encouraging the largest practicable contribution by such enterprises toward an adequate supply of livestock products for the public need. In promulgating and administering rules and regulations to govern the use of national-forest ranges by livestock, the Secretary of Agriculture is directed, in making any further adjustments which he finds necessary to accomplish the purposes of (c) above, to bring about the adjustments in such manner as he may determine will least affect existing permits.

SEC. 2 (a). To provide national-forest grazing permittees means for the expression of their recommendations concerning the management and administration of national-forest grazing lands, a local advisory board shall be constituted and elected as hereinafter provided for each national forest or administrative subdivision thereof whenever a majority of the grazing permittees of such national forest or administrative subdivision so petitions the Secretary of Agriculture. Each elected local advisory board existing for such purpose at the time of enactment of this Act, and recognized as such by the Department of Agriculture, shall continue to be the local advisory board for the unit or area it represents, until replaced by a local advisory board or boards constituted and elected as hereinafter provided.

(b) Each such local advisory board shall be constituted and elected under rules and regulations, consistent herewith, now or hereafter approved by the Secretary of Agriculture, and shall be recognized by him as representing the grazing permittees of the national forest or administrative subdivision thereof for which such local advisory board has been constituted and elected.

(c) Each such local advisory board shall consist of not less than three nor more than 12 members, who shall be national-forest grazing permittees in the area for which such board is constituted, elected, and recognized. In addition, a wildlife representative may be appointed as a member of each such board by the State Game Commission, or the corresponding public body of the State in which the advisory board is located, to advise on wildlife problems.

(d) Each such local advisory board shall meet at least once annually, at a time to be fixed by such board, and at such other time or times as its members may be determined, or on the call of the chairman thereof or of the Secretary of Agriculture or his authorized representative.

SEC. 3. Upon the request of any party affected thereby, the Secretary of Agriculture, or his duly authorized representative, shall refer to the appropriate local advisory board for its advice and recommendations, any matter pertaining to (a) the modification of the terms, the denial of a renewal of, or a reduction in a grazing permit, or (b) the establishment or modification of an individual or community allotment. In the event the Secretary of Agriculture, or his duly authorized representative, shall overrule, disregard, or modify any such recommendations, he, or such representative, shall furnish in writing to the local advisory board his reasons for such action.

SEC. 4 (a). At least thirty days prior to the issuance by the Secretary of Agriculture of any regulation under this Act or otherwise, with respect to the administration of grazing on national-forest lands, or of amendments or additions to, or modifications in, any such regulation which in his judgment would substantially modify existing policy with respect to grazing in the national forests, or which would materially affect the preferences of permittees in the area involved, the local advisory board for each area that will be affected thereby shall be notified of the intention to take such action. If as a result of this notice the Secretary of Agriculture shall receive any recommendations respecting the issuance of the proposed regulation and shall overrule, disregard, or modify any such recommendations he or his representative shall furnish in writing to the local advisory board his reasons for such action.

(b) Any such local advisory board may at any time recommend to the Secretary of Agriculture, or his representative, the issuance of regulations or instructions relating to the use of national-forest lands, seasons of use, grazing capacity of such lands, and any other matters affecting the administration of grazing in the area represented by such board.

Sec. 5. Nothing in this act shall be construed as limiting or restricting any right, title, or interest of the United States in any lands or resources.

Mr. BOICE. I think probably, Senator, that is more accurate a statement than the statement I have made, so if I refer to statements on the Forest Service revision, I mean the revision which the Forest Service is willing to accept.

At a meeting of the national forest advisory board of the Arizona Cattle Growers Association, on the 2d of July, both of these bills were read and discussed. As a result of that discussion a statement of the position of the board was prepared and I am instructed to present that.

At this meeting referred to, the board unanimously endorsed the stockmen's revision of S. 1030 and definitely opposed the first section of the revision prepared, or approved, by the Forest Service. The first section of the Forest Service bill, and the two sections of the stockmen's bill, deal with the question of distribution, which is the term we use in referring to the former policy of the Forest Service in taking portions of permits from one stockman and giving them to another stockman. Ever since the Forest Service started distributing grazing permits, the stockmen have strenuously objected, because it created antagonism between neighbors and between stockmen and officials of the Forest Service. It made it difficult and almost impossible to cooperate in matters of range conservation and range development. The distribution policy made the use of forest ranges unstable, and on account of the interlocking of forest ranges with outer lands, made the whole foundation of the livestock business in this State unstable.

In 1936 and 1937 the Forest Service conducted an intensive economic survey, and, as a result, modified the regulations so that for all practical purposes distribution was discontinued. Harmony was immediately brought about in cooperation between the users and those interested in the forest reserve, and has rapidly increased. The Forest officials tell us that they have no intentions of going back to a system of distribution, but they do not want to be legally deprived of the authority to again distribute forest permits, if they should decide to do so at some future time. The difference between the Forest Service version of the proposed legislation and the stockmen's version, boils down to the insistence of the Forest officials that their authority to distribute be equalized, and the stockmen's insistence is that the law be so written as to prevent officials or groups from putting into effect another distribution policy.

In support of their position, the stockmen's committee would like to point out that the Forest Service was created by an act of Congress, whose primary object was the preservation of timber and watersheds. At that time the ranges set up in the forest reserves were already occupied by livestock. In carrying out the purposes of the Conservation Act it was necessary for the Forest Service to regulate the use of the forest range. The authority to say who should use the forest range was not given by the Conservation Act. The Forest Service assumed that authority, and we believe that this action on their part had re-

tarded the conservation and development programs which they were created to carry out.

Congress has never acted directly in regard to the distribution policy of the Forest Service. However, it did definitely express its ideas when it passed the Taylor Grazing Act. In that legislation Congress expressed itself by recognizing the right to graze on the public domain by those who owned land and water and who made prior use of the public domain.

The CHAIRMAN. Let us pause a moment.

Ladies and gentlemen, I have the honor to announce the presence of your youngest Congressman, Congressman Richard Harless, of Arizona. [Applause.]

Congressman HARLESS. I just came in and I'm sorry I have not been here to hear what has been going on. Please proceed, Mr. Chairman.

Mr. BOICE. To repeat the last sentence, Congress has never acted directly, with regard to the distribution policy of the Forest Service. However, it did definitely express its ideas, when it passed the Taylor Grazing Act. In the legislation Congress expressed itself by recognizing the rights to graze on the public domain by those who owned land and water and who had made prior use of the public domain. In that way the redistribution of grazing rights on the public domain was definitely forestalled and stability was established.

We believe that the users of the ranges on the national forests are entitled to the same stability which Congress has granted to the users of the public domain. The proposed legislation does not weaken the authority of the Forest Service in any of its conservation programs. Under this legislation the Forest Service can provide for reforestation, recreation, wildlife conservation, mining, public watersheds, production of public water storage, and flood control. The stockmen willingly concede to the Forest Service those functions and the bill specifically grants the right to make reductions in livestock for range protection without limit where cases of need for protection exist. In other words, the proposed legislation merely prevents the Forest Service from taking range from one permittee and giving it to someone else, and we feel that the enactment of the proposed bill will give the ranges to Arizona and harmony and cooperation will be increased and the conservation and development of ranges will proceed with increased rapidity.

The provisions with regard to the advisory boards are the same in both the Forest Service and stockmen's proposed bills. Both recognize the importance of having these committees legally established with more duties and responsibilities.

That completes the statement of the national forest advisory board of the Arizona Cattle Growers' Association.

I would like to add one thought. With the exception of the provisions in the bill dealing with cuts on transfers, the bill puts into effect, to all practical purposes, the regulations which the Forest Service now have in effect. This bill has been discussed in its present form and in its original form, and there is almost unanimous agreement in support of this bill.

There have been elected, by the permittees on the various forests in Arizona, forest advisory boards. Each of those boards has sent a delegate to this hearing, and, with your permission, Senator, I would

like to call on each one of these delegates to express the opinion of their board in connection with this proposed legislation.

The CHAIRMAN. Very well. Are there any questions, first, to Mr. Boice? If not, we will call your people as you wish.

STATEMENT OF A. C. WEBB, ADVISORY BOARD, TONTO NATIONAL FOREST

Mr. WEBB. My name is A. C. Webb, and I am secretary and member of the advisory board on the Tonto National Forest.

The CHAIRMAN. Mr. Boice, do you care to interrogate, or to have him make his statement?

Mr. BOICE. Let him make the statement.

Mr. WEBB. I have been on this board since its inception, and while our going hasn't been too smooth all the time, I feel it has been worth while, and I think, with more authority, it could be a lot more effective.

The CHAIRMAN. How did you go in in the first instance? How was the board constituted?

Mr. WEBB. The board was constituted by appointment. I believe Mr. Pooler—I won't be sure of Mr. Pooler—the forest officials, Mr. Woodhead, at least, and Mr. Dutton, and our cattle growers officers, that also included the local supervisors, I think—they made selections of the first board. The next board was elected.

The CHAIRMAN. How are the memberships selected now?

Mr. WEBB. Our board was elected during January of last year by a ballot submitted to the permittees on each district, and a member elected from each district, and we had a representation by mail of about 60 percent of the permittees on the whole district.

Mr. P. V. WOODHEAD (assistant regional forester, United States Forest Service, Albuquerque, N. Mex.). May I interrupt, and clarify the record on one point? Those boards were originally appointed by the board of directors of the Arizona Cattle Growers Association, I believe, were they not?

Mr. BOICE. I don't remember.

Mr. WOODHEAD. At any rate, the Forest Service didn't have anything to do with the selection or appointment of the original board members.

Mr. WEBB. I wasn't present at the meeting, and I might not be correct in my understanding. The first thing I knew, I got a letter asking if I would be willing to serve.

Mrs. J. M. KEITH (secretary, Arizona Cattle Growers Association). He was asked to serve until such time as they could hold an election.

The CHAIRMAN. Very well, thank you, Mrs. Keith.

Now, what provision in this bill, called the "stock-growers bill," is it that you are especially interested in with reference to your advisory board?

Mr. WEBB. Certain matters that must be submitted to the board by the Forest Service. I'm not too familiar with this bill, but—

The CHAIRMAN. First of all, is this not the thought, that, under existing conditions, your board is selected by vote, but that whole set-up is permissive, whereas if it was set up by a statute it would become a part of the statute law?

Now, that same thing applied in the Taylor Grazing Act when the Taylor Grazing Act was first set up. The Secretary of the Interior

voluntarily set up what he called an advisory board. It was entirely permissive, and then we amended the Taylor Grazing Act so as to make the board recognized by the law.

Mr. WEBB. That is correct. Our board now is strictly advisory under this law now. For instance, now, any appeal over any decision in which the Forest might not agree, would be just a refusal to accept our idea, while, if it was under the law, it would be necessary for the appeal, the reasons for the appeal, to be put forth in writing, which would be much more definite.

The CHAIRMAN. I want to say to you that there is a bill, and it has been introduced, that would provide that no change in the fees in any district would be sanctioned without the acquiescence of the advisory board. I suppose that would strike you as being about right?

Mr. WEBB. I would hardly be capable of saying anything on that subject. The fees have been increased under the present plan until they are quite high, and I think there is maybe some adjustment in the fees that might be asked for.

The CHAIRMAN. Well, if the advisory board is in the position of being advisory, and if it is in the district, it is supposed to know the district, and it would know whether or not an increase of fees would be justified. Don't you believe that?

Mr. WEBB. They would; yes, sir.

The CHAIRMAN. Of course, this bill will not have the sanction of the Forest Service, nor would it have the sanction of the Interior Department, but nevertheless it is the thought that your advisory board might well hold in consideration.

Is there anything further that you wish to state?

Mr. WEBB. Only that I wish to make it plain that we are very much in favor of the legislation, and we would like to see it put through as it is; that is, the stockmen's bill.

The CHAIRMAN. Another item in that legislation proposed is putting a stop to the reduction from the forest, the cuts, the transfer cuts. That would be prohibited by the so-called Johnson bill, which is now called the stockman's bill.

Very well, are there any questions?

Mr. BOICE. William A. Spencer of the Apache National Forest, would like to be heard.

**STATEMENT OF WILLIAM A. SPENCER, SPRINGERVILLE, ARIZ.,
MEMBER, ADVISORY BOARD, APACHE NATIONAL FOREST**

Mr. SPENCER. Senator McCarran, I am a member of the forest advisory board for the Apache National Forest. The board consists of three members, one member representing each of the two districts, and I represent the forest as a whole, the Arizona division of the Apache Forest.

Speaking for the forest advisory board of the Apache Forest, we are unanimous in our support of the revised Johnson bill, the stockmen's revision. The feature of it that we particularly approve is the elimination of the possible reduction or distribution as breaking down the established economic unit. Another feature of the bill which we approve of is the fact that commensurate property is taken into consideration in the granting of permits; that is, permit preferences.

We, in our country, use the forest ranges seasonably; they run from an elevation of about 7,000 feet close to 10,000. Different permittees have permits for different lengths, all summer ranges, some of them have 5, some of them have 6 months.

The CHAIRMAN. Do you not have some on that area that are year around?

Mr. SPENCER. Not in that immediate section. There are some small permits under the mountain that are used partly as winter range; but, by and large, they depend on commensurate property, deeded lands in that valley upon which crops are produced, patented grazing lands, and State lands. It represents quite an investment regardless of the size of the permittee, the value of the croplands or grazing lands off the forest, it must maintain, in order to establish a balanced operation. It is a country in which a good deal of supplemental feeding is done in the wintertime. If a permit on the mountain is reduced without comparable reduction in that portion of the range use of the winter range, the operation is out of balance. The investment in the patented and State grazing lands and improvements off the forest, mean quite a heavy burden for the operator to bear unless he can run sufficient livestock to meet his costs. Those are two features of the proposed, or amended, revision of the Johnson bill that we approve of and believe are necessary.

Both bills, as I understand it, that one which the Forest Service might approve and that which the stockmen propose, provide by statute for the advisory boards. Theoretically, in that regard, I think that is quite worthy. I believe the advisory board, while it should remain entirely advisory rather than administrative, there is a certain function they can perform, a certain service they can render to the permittees, a service between the administrator in the uses of these forest ranges.

The CHAIRMAN. What have you to say about transfers and administrative cuts?

Mr. SPENCER. I think the cuts should be made wherever necessary for range protection. I am aware of the fact that we do not own this range, that it is owned by the people of the Nation as a whole, the same interest in it accruing to the residents of New York as that to the residents of Arizona. We are the users of it, and we should not be allowed to destroy it. I have always been in agreement with the administrative policy of the forest to reduce these animals to the point where they will not despoil the range. They are a public trust. I don't think that the present generation has any right to dissipate them. That is my philosophy; and I think it is true down my way.

The CHAIRMAN. That addresses itself largely to your opinion as to administrative cuts; but the transfer cuts seem to have come in for the greatest amount of criticism in our various hearings.

Mr. SPENCER. Yes; they are the ones that disrupt the operating organization, and will make a ranch, if cut below a certain point, undesirable and unprofitable to operate.

The CHAIRMAN. Very well, thank you very much.

**STATEMENT OF JOHN A. McLEOD, JR., TUCSON, ARIZ., MEMBER,
ADVISORY BOARD, CORONADO NATIONAL FOREST**

Mr. McLEOD. Mr. Chairman, I am a member of the Coronado advisory board, and, in the absence of Mr. Findlay, who is Chairman, I wish to say that our board endorses the stockmen's revised Senate bill No. 1030; and, furthermore, the number of permittees that I have been able to contact on the forest have all expressed their endorsement of the bill. I am a brand new member of this board, and I don't believe I have anything more to add, unless there are some questions.

The CHAIRMAN. Thank you, Mr. McLeod.

**STATEMENT OF STEPHEN L. BIXBY, MEMBER, ADVISORY BOARD,
OF CROOKS NATIONAL FOREST**

Mr. BIXBY. Mr. Chairman, I am here representing both the Crooks National Forest advisory board, of which I am a member, and have been delegated by the Chairman, who was unable to be here to represent that board, and also the Gila County Cattle Growers Association, the headquarters of which is at Globe, Ariz., which is my residence.

I am a cattleman in that neighborhood. I could go to great length, but I realize time is growing short in this hearing, and I'll try to make my remarks as brief as possible and touch on generalities.

The CHAIRMAN. Thank you.

Mr. BIXBY. Most of the cattlemen in my neighborhood, all of them operate on the forest. Most of them are small; there are some medium-sized operators, but they are all practically unanimous in endorsing this stockmen's revision of the Johnson bill. In fact, last Saturday, both at Clifton and at Globe, meetings were held of local cattlemen. At Clifton the meeting was a meeting of the Greenlee County Cattle Growers Association, and the meeting at Globe was a meeting of the Gila County Cattle Growers Association. At both of these meetings, without any prearranged attempt, the Johnson bill, that is, the stockmen's revision of it, was, by resolution, heartily endorsed. At both meetings they requested that Congress be urged, as soon as possible, to enact legislation of that kind.

They also expressed dissatisfaction with the so-called Forest Service revision.

The CHAIRMAN. Why?

Mr. BIXBY. Well, because, frankly, they feel like the Forest Service revision is trying to write out of the bill exactly what they want written into it. We feel that the stockmen's revision is present forest policy, so why should the Forest Service try to change it? We just want the present Forest Service policy written in the law. We have worked for a good many years to get the present forest policy, and we don't think we should take a step back into the past, and have all the trouble to go through again that we have had about this taking from one to give to another.

At both of these meetings, disappointment was expressed that Congress has not enacted legislation of this kind. Of course, we realize

that we are in a war, and more matters have come first. However, we do hope you can find a little spare time to enact legislation of this sort.

I want to stress that some people seem to think that this stockmen's revision of this bill is a large stockman's bill. It definitely is not. Like I say, in my neighborhood we are very small, with some medium operators, and, at both of these meetings that I speak of, there was not a single voice of opposition to the stockmen's revision. The small cattlemen are just as eager to get the stability that this legislation will give us, as the large ones.

The CHAIRMAN. That is your statement? Very well, thank you very much.

Mr. Eugene Campbell, will you please come forward? It seems to me I have heard of the Kaibab Forest somewhere before.

**STATEMENT OF EUGENE CAMPBELL, ASH FORK, ARIZ., MEMBER,
ADVISORY BOARD, KAIBAB NATIONAL FOREST**

Mr. CAMPBELL. I am a committee member of the advisory board of the Kaibab Forest. In our last meeting we unanimously endorsed the stockmen's revision of the Johnson bill, and are opposed to this other one.

The CHAIRMAN. Do you think that was a fairly well attended meeting?

Mr. CAMPBELL. Yes, we had a full membership there.

The CHAIRMAN. Do you think they had pretty good understanding of the bill?

Mr. CAMPBELL. Yes, sir; both bills were read and discussed.

(The following telegram was received from the chairman of the Kaibab National Forest Advisory Committee:)

FLAGSTAFF, ARIZ., September, 2, 1943.

Hon. PAT McCARRAN,

Care Mrs. Keith, Arizona Cattle Growers' Association.

Phoenix, Ariz.:

The permittees and advisory committee of the Kaibab National Forest strongly endorse S. 1430 as substitute for the old Johnson bill. We feel it is necessary that the continual threat of cuts in permits should be removed in order to give protection, stability, and permanence to the permittees' rights and investments. Furthermore, the bill gives the advisory committees legal standing, and defines definitely their duties and responsibilities which is very necessary if the committees are to properly function. Our sincere hope is that this bill will have your strong support in the interest of the livestock industry.

H. V. WATSON,

Chairman Kaibab National Forest
Advisory Committee.

The CHAIRMAN. Thank you very much.

Mr. BOICE. Mr. Chairman, that completes the representatives of the forest advisory boards. Mr. Robert E. Perkins, of Prescott, is here. He is a representative of the Yavapai cattle growers. He doesn't happen to be a member of the advisory board, but I think the Yavapai Cattle Growers Association has acted on this bill, if you would like to hear his statement.

The CHAIRMAN. You represent the Arizona cattle growers?

ROBERT E. PERKINS, (Prescott, Ariz.). No; I represent the Yavapai cattle growers. I am secretary of the Yavapai Cattle Growers Asso-

ciation. I am quite sure, from all the past proceedings, that the Yavapai cattle growers are unanimously in favor of this revised stockmen's revision of the Johnson bill, because it involves the very thing that they have endorsed, from time to time. They have a full advisory board, that is functioning, and they seem to be well satisfied with the procedure. However, most of them feel that these advisory boards should have more authority than they have just at the present time.

I think that is about all I have to say.

The CHAIRMAN. Thank you very much.

Mr. BOICE. Mr. Chairman, the President of the Arizona Wool Growers Association is here, and many of their members are permittees on the national forest. I would like to ask Mr. Bob Lockett, president of the Arizona Wool Growers Association, to present their position on this.

STATEMENT OF ROBERT LOCKETT, FLAGSTAFF, ARIZ., PRESIDENT, ARIZONA WOOL GROWERS ASSOCIATION

Mr. LOCKETT. Mr. Chairman, speaking for the Arizona Wool Growers Association, I want to say that they very heartily support this bill. That is all I have to say.

The CHAIRMAN. Has it been discussed by the members of your association?

Mr. LOCKETT. Yes, sir.

The CHAIRMAN. Do you think they have a fair knowledge of its contents?

Mr. LOCKETT. Yes; they do.

The CHAIRMAN. Very well; thank you.

Is that your list of witnesses?

Mr. BOICE. That completes the witnesses in connection with the Johnson bill.

There is one other matter I want to mention for the record. Would you like to have that now?

The CHAIRMAN. Very well.

Mr. BOICE. The fees paid on the national forests, at the present time, are based on a range appraisal which was made, I believe, in 1924. This range appraisal determines the base fees. The current fees are fluctuated from year to year in relation to the market price of cattle. I think that, while the fees have been raised on account of that formula, the formula is generally approved. In Arizona and New Mexico, they have entered into the range appraisal, which is so very complicated, an arrangement in connection with the improvements which existed, or had been placed upon the forest ranges by the permittees prior to the time of the range appraisal. The method of handling these improvements, the ownership of which was recognized as being in the permittees, was rather complicated. These improvements have now been considered by the Forest Service to be retired, and they consider that the permittee no longer has an investment in these improvements. As a result, there has been a substantial increase in the amount of cash grazing fees which have been paid during this year.

The advisory board on the Coronado Forest has checked into this matter, and they believe that the old range appraisal program, which

was made in about 1924, needs revision. They believe that there are a number of arbitrary comparisons, which enter into that arrangement, which need revision; but they suggest that this revision be postponed until after the war and the manpower is available.

However, there are several matters which can be adjusted, at present, in connection with the computation of these grazing fees. These matters have been taken up with the Forest officials, and are in process of negotiation now. We are in hopes that some of the inequitable features can be worked out. The use of 8 percent as an interest rate, applied to investments, is obviously high, under present day standards. The question of the retirement of these improvements, involving as it did, no allowances for depreciation during the period that they were being retired, also, we feel should be adjusted.

These matters, as I stated, Senator, are in process of negotiation, but I was asked by the members of the committee to present the facts here.

The CHAIRMAN. Thank you, very much.

Now, the Forest Service is with us, headed by Mr. Kneipp. We would be very glad to have Mr. Kneipp make a statement now, if he sees fit, bearing on any subject pertaining to the department that has come up.

STATEMENT OF L. F. KNEIPP, ASSISTANT UNITED STATES FORESTER, UNITED STATES FOREST SERVICE, WASHINGTON, D. C.

Mr. KNEIPP. Mr. Chairman, and gentlemen: This has been a very interesting afternoon. First, Judge Udall's statement, and then the statement of Mr. Boice and the members of the advisory boards. They present the two extremes of this picture. I think it was quite evident that, no matter how desirable it might be, from the standpoint of individual, community, and State and national forests, to effectuate some redistribution of stock, to meet the conditions which Judge Udall so effectively described, if this stockmen's bill is enacted there will be no possibility of doing so. I think that ought to be definitely borne in mind in considering this subject.

The CHAIRMAN. Will you tell us why?

Mr. KNEIPP. Because, first, we have to remember that, after all, the ranges do not have an unlimited capacity. Certain physiological growths of plants produce so much vegetation and will support so many cattle. Therefore, new people are to be given permits, and the small permittees are to be increased; it can be done only by reducing the permits of those who have larger shares. If those permits are, by statute, made immune to reduction, then the small permittees cannot be provided for.

That is the reason the Forest Service and the Department of Agriculture did not favor the Johnson bill.

There were three phases of the bill, one with regard to commensurability, one with regard to the statutory recognition of advisory boards, and one with regard to distribution; that is, the limitation of reduction on established permits.

As I reported at other meetings of the committee, the Department's last formal expression of opinion on that bill was through the

letter from the Under Secretary of Agriculture, under date of July 23, 1941. Since that letter has already appeared in the record, it does not seem necessary to read it again in detail, but, in substance, the report was this: That, as to the commensurability standards, the general theme of the report was that no need for legislation was seen by the Department. The bill would require the local publication in minute detail of all of such standards; and the Secretary's opinion was that no great service would be rendered by that practice, because the permittees could all familiarize themselves with the standards, but that, if it were deemed desirable, for any reason, to provide by statute for such publication, the Department interposed or offered no objection.

As to the advisory boards, the Department pointed out that, from the very beginning of the Forest Service, the recognition of the advisory boards has been the accepted practice. I can say personally that the regulations of the Forest Service as they exist today, in relation to grazing on national-forest lands, are largely the outgrowth of those advisory boards, which have been an important feature in the whole range management work of the National Forest Service. In fact, the practice was so firmly established that the need for legislation was not evident. But there, again, the Department's attitude was that, if there was a general desire for a statutory authorization of advisory boards, the Department had no objections to offer.

So that reduces the negative attitude of the Department toward S. 1030, or the recent redraft thereof down to one element, the element of distribution.

Now, it is true that in recent years, in deference to a great many demands arising here and there, based upon economic conditions and need, there has been a rather general cessation of reductions for distribution. That does not seem, however, to be a fixed condition. It is quite conceivable that in the years to come there may be new conditions, widely recognized, that would dictate some modification, some readjustment, of grazing preferences; and the Department believes that the Secretary of Agriculture should not be barred from making those adjustments if he finds that they would be generally in the public interest.

Now, at earlier meetings—it has not occurred here—at Glenwood Springs, for instance, several frank references were made to the fact that what the proponents were seeking to establish by the Johnson bill was a property right which could be transferred or be defended in court. The general viewpoint of the Department throughout has been that the establishment of property rights in the forests would be quite negative to the general public interests in those reservations; and that the Department, therefore, should continue to oppose any legislation which would either have that result or which would contribute to that result.

There has been a great deal of emphasis, by stockmen supporting the Johnson bill, on the fact that what they want is a definite policy; but the stockmen's draft is not a policy, it is a rule of law. The draft in which the Forest Service participated is a policy; it is a statement by Congress of what it believes should be the fundamental conditions governing the disposal of range resources. The Johnson bill is a definite fixation of certain existing rights against any possible change

to meet new needs or demands of people, no matter how well qualified they might be.

As you have heard me say before, the transfer cut actually grew out of the recommendations of a livestock association in Idaho, many years ago. It was based on the simple premise that if reductions were going to have to be imposed upon the permittees, to prevent damage to the range or provide room for new applicants or small permittees, it would be more equitable to impose such cuts upon the men who were going out of business, going to cease their use of the range, than upon the men who intended to continue the use of the range for the rest of their active careers. That was in the days before these preferences acquired a high market value. Possibly the Idaho Wool Growers Association today might take a different position; but the logic of their proposal at that time seemed good to the Secretary of Agriculture, and the Department, and it was adopted as a working principle. I don't know whether there would be dissent on the part of all concerned as to the equity of that principle now or not. Obviously dissent would be expressed by a man who thereby under the principle was able to capitalize only 90 or 80 percent of the preference, as against a full 100 percent; but, viewing the subject in a large way, looking at it from the standpoint not alone of the current permittees but also that of potential permittees or small permittees seeking a more practicable basis, there may still be some logic in the principle.

There is one other point in this situation, as it stands, that is quite significant. That is, out of all the national forest cattle and horse permits, 17 percent of the permittees use 63 percent of the cattle and horse ranges. The other 83 percent only use 37 percent of the range. Out of all the sheep and goat permits, 8 percent of the permittees use 33 percent of the range, and 36 percent of the permittees use 75 percent of the range. So there exists a very definite question as to whether these proportions are the final proportions, or those that would finally be accepted as being the equitable and best balanced, most economically sound distribution of grazing privileges among those people who live in or near the national forests and depend on those resources for their livelihood.

That is essentially the position of the Forest Service up until the time I left Washington, which was not very long ago. There had been no change up to that time. In other words, if it is desirable to recognize advisory boards by the statute, such action really won't make any difference, because they have been administratively recognized ever since 1905, or '07, or along in there. If it is desirable that range commensurability requirements, which vary widely, according to local practice, shall be advertised annually in minute detail, no objection is made to that except the cost. So the crux of the whole argument about the stockmen's bill is on this one point of reduction in preferences.

Mr. Boice touched also on the matter of fees. He said, however, if I understood him correctly, that the formula is generally approved. He referred to the range appraisals being made for 1924. Actually, Chris Rachford was brought in to Washington and assigned to that job in 1920, and the collection and compilation of rental data continued until, as I recall it, 1927, and resulted in the accumulation of a tremendous amount of data. Finally, I think partly at the sug-

gestion of the stockmen themselves, the basic formula that is now in use was adopted.

The CHAIRMAN. What is that formula?

Mr. KJEPP. That formula was—I can read briefly from the instructions here—this is a part of the national forest manual:

FEES

Derivation of the 1931 base fees for national forests.

The 1931 base fees for grazing on the national forests were derived from a study of the rentals paid to private persons, corporations, States, Indian reservations, and other Government agencies for use of comparable grazing lands. This study covered a period of years and areas sufficiently large to insure fair comparisons. Allowance was made for cases showing abnormal competition or involving considerations other than use of the forage. Base fees per head per month thus derived averaged 14.5 cents for cattle and 4.5 cents for sheep.

Derivation of base livestock prices.

The periods, 1921 to 1930 in the case of cattle, and 1920 to 1922 in the case of sheep, were selected as fairly reflecting representative and complete price cycles for each industry. Therefore, the average prices received by producers in the 11 Western States during these periods were established as the base prices for use in determining the relationship between current grazing fees and current livestock prices. Base livestock prices thus derived were \$6.62 per 100 pounds for cattle and \$0.15 for sheep.

Adjustment to correlate with annual fluctuation in livestock prices.

Current fees will bear approximately the same ratio to the 1931 base fees that livestock prices received by producers for the year preceding bear to the base livestock prices. The 1931 base fees will be adjusted annually to assure this ratio, except that no adjustment will be made where application of the formula affects the monthly base fee by less than one-half cent for cattle and one-quarter cent for sheep.

Each year in January the Chief's office will obtain from the Bureau of Agricultural Economists the average livestock prices of the preceding year. These will represent the average prices per hundred pounds paid producers in the Western States for beef cattle (exclusive of calves) and lambs. These prices will then be used to calculate the percentages to be applied for the current year to the established 1931 base fees, as follows:

1. The average price received for beef cattle for the period 1921–30 was 6.62 cents per pound.
2. The average 1931 base fee was 14.5 cents per head per month.
3. The average price per pound received for beef cattle in the 11 Western States in 1941 was 8.64 cents.
4. The 1941 market price of 8.64 cents is 130 percent of the base livestock price of 6.62 cents.
5. Then the 1942 average fee per head per month would be 130 percent of the 1931 base fee of 14.5 cents or 18.85 cents, which, when rounded off to the nearest 1 cent, would be 19 cents.

That has been followed ever since; and is now in effect.

In 1933 the cattle rate dropped to 9.05 and the sheep to 2.05, because there had been a slump in prices. In 1934 it dropped to 7.51 for cattle and 2.38 for sheep. In 1935 it rose to 8.04 for cattle and 2.71 for sheep. In 1936 it went up to 13.05 for cattle and 3.36 for sheep. In 1937 it dropped again to 12.55 for cattle and rose to 3.66 for sheep. In 1938 it rose to 14.98 for cattle and 4.24 for sheep. In 1939, 13.4 for cattle and 3.3 for sheep. In 1940, 14.89 for cattle and 3.68 for sheep. In 1941, 15.97 for cattle and 3.85 for sheep. In 1942 it was 18.9 for cattle, 4.6 for sheep, and in 1943 it is 23 for cattle and 5.5 for sheep.

The CHAIRMAN. That doesn't say anything about points, does it?

Mr. KNEIPP. No, this was before we got 16 points apiece, Senator.

There are some deviations. This rule does not apply in the eastern regions; their conditions are different. In region 7, fees fluctuate from year to year as in the case of western regions. Region 8 has a flat rate of 4 to 6 cents per cow or horse a month for grazing under open range conditions. In the Lake States Region the price is 15 cents per head for horses and 12 cents for cattle, 4 cents for goats, and 9 cents for swine. In other words, the cost of the permittee's range fees bears a very direct relation to what he had received for the product of the previous year's use. Mr. Boice referred to the particularly peculiar condition that exists here in Arizona and New Mexico, which in essence is this: National forest fees were based on rental paid for the comparable private land after adjustment for the relative values of the forage. As an element affecting the price actually being paid for those private lands, consideration also was given to the nature and extent of the improvements on those lands, which the permittees had to install or maintain. If, as in the national forest lands, as frequently was the case, the permittees had to install and maintain larger investments in range improvements, that fact was recognized by taking the difference between the investment on the private land and that on the forest and crediting the established fee with a sum equal to 8 percent of the improvement differential each year for a sufficient period of time to amortize, or retire, the difference in cost of improvements, or for the time the improvements would normally remain usable, or until such time as they were replaced by other and better improvements.

Now, the objection to the 8-percent rate is not clear to me, because it would seem to be favorable to the permittees. If the permittee were only given a credit of 5 percent on his improvements, he would get a smaller credit than if he got 8 percent. I want to emphasize this fact. In this region, here, at the time these range appraisals were being made, the total investment in range improvements made by the Forest Service was only \$60,000 or \$70,000. Since that time, there have been about \$5,000,000 worth of range improvements constructed in the forests in the two States, at the expense of the United States.

Senator HAYDEN. That was to provide work for the unemployed.

Mr. KNEIPP. Nevertheless, these improvements are there and if soundly conceived, they enhance the value of the range. I understand that the stockmen had their part in formulating the program contributing to the usability and value of those ranges. That fact, however, has not entered into the calculation of the grazing fees. That fact also tends to minimize the importance of those early improvements, which the stockmen had constructed, for which they were given credit in the manner that I just briefly outlined. I understand some of those credits are being given, in some cases yet, for the reason that there was a period during which they had been suspended. When that fact came to the attention of the Forest Regional Office, they adjusted the matter by giving the credit that was not given in earlier years.

We feel that the principle on which the national forest fee is based is quite fair to the grazing permittees. I think the members of the committee will be struck by the fact that when the public range is so managed, and is available at such a reasonable fee, that it has a capital investment value of \$30 to \$90 per head, and is recognized on the open market at those values, it can't be an awfully poor range and it cannot

be charged for at an exorbitant price because that investment for range for one cow is a pretty heavy investment, pretty close to what economists regard as the maximum allowable investment.

That is all I have to say, unless somebody wants to take me apart and show how wrong I am.

Mr. BOICE. Mr. Chairman, I would like to ask Mr. Kneipp a question in regard to transfer cuts. It is perfectly true that when the Forest Service was following a policy of distribution, the stockmen naturally figured that they would rather have the man cut that is going out of business than the man that stays. At that time most of the forest allotments were community allotments, which makes a great deal of difference, a different situation from the one that exists today, where most of the allotments are exclusive allotments. I have wanted to ask Mr. Kneipp if that was not the condition?

Mr. KNEIPP. I think that is true, Mr. Boice. The individual range allotment is now more generally the case than it was in the earlier years. But I don't think the stockmen were concerned wholly by distribution cuts even in these days because when these forests were taken over and were found to be supporting stock far in excess of what they could support—in fact, some of them are yet—the protection cuts, so-called, coincident with the distribution cuts, were in those earlier times considerable. It is true that in earlier years cuts were applied to considerable numbers of permittees whereas those cuts might now fall on a single permittee. However, it would be possible by readjusting certain fences to make the cut—

Mr. BOICE. That is the point now, with the exclusive allotments, with reduction in permits. Of course, Senator, the stockmen have no objection to protection cuts, if they are needed. We don't ask the Forest Service to restrict themselves in cases where protection cuts are necessary. But in the case of an exclusive allotment which exchanges hands there is certainly no sense in a transfer cut.

Mr. KNEIPP. Only, Mr. Boice, where the numbers of stock on that allotment are safely within the permanent capacity of that allotment. Now, there are any number of allotments where that is not true.

Mr. BOICE. Then it is up to the Forest Service to make a protection cut.

Mr. KNEIPP. That is true. As a matter of fact, it too often has seemed necessary to temporize or compromise in past years. I am for rigidly adhering to the purposes for which the national forests were created.

Mr. BOICE. Now, another question: The Forest Service, for a period of over 35 years, followed a policy of distribution designed to take care of the situation which, we might say, is illustrated by the situation which Judge Udall presented. At the end of 35 years those conditions still exist. Now, I have a very high regard for the officials in the Forest Service, after having about 25 years' acquaintance with them; but on account of the fact that they are human, and these are economic problems, I doubt their ability to handle these things conclusively. I believe that after 35 years more of distribution the same condition would exist as exists today, and for that reason the stockmen have been very much in favor of the complete discontinuance of distribution.

Mr. KNEIPP. There are all kinds of angles to the situation. I have seen a lot of them myself. I had the pleasure of once working with Bert Potter when he first developed the national forest-range program. The play of human forces is quite interesting. Many people have come in and gotten their small permits, and were fairly well content; and then some man who wanted to enlarge his operations, under the regulations of the Forest Service, would get the little fellow to waive his permit, on at least part of the stock, and buy him out. That has been going on all the time. Then, sometimes, the new permittee, after being in the stock business a few years, found it wasn't as attractive as he thought it would be.

There has been that fluctuation of livestock ownership going on all the time. The motives of some new applicants may have been speculative. But if this country finally is going to develop into what it should be, provision should be made for correlating range use with economic need. You will look for full realization of the West's potentialities, more homes, more people out through these mountain countries. That will depend on people's ability to maintain a reasonably adequate existence. They will be willing to stay in a locality only if they can make a living there. In many instances the associated use of the range, associated production of livestock, is going to be one of the essentials to that end. Settlers may not be able to market their bulky crops; by any practicable means other than to feed them to a certain number of livestock. The connection of range use with farming operations would give them a better balanced operation and a little more security, a little more cash, thereby making it possible for them to maintain an economic life in their small communities. The establishment of such conditions unquestionably should be the objective of the public agencies.

The CHAIRMAN. Very well, Mr. Kneipp.

The committee will take a 10-minute recess now.

(Recess until 3:50 p. m.)

The CHAIRMAN. One of the members of the Hopi Tribe here has requested, during the recess, that he be permitted to make a further statement; a short statement.

You may come forward now and make your statement. For the record, your name is what?

STATEMENT OF SIMON SCOTT, HOPI INDIAN

Mr. SCOTT. My name is Simon Scott. I have forgotten one thing that I would like to express to you, Senators' committee, and friends here at this meeting.

It is my knowledge that these Senators' committees at this present meeting, that we have rights; that they are to protect us from what we have been led during the past; so I urge them, when they go back to Washington, and I wish that they will take into deep consideration and make such adjustment for my people so that in time we will have better life to live. I ask the people in Arizona to give us some support also, as we are one nation. You must understand this, that this is not Japan nor Germany, but America; so let us work altogether and stand shoulder to shoulder so that in time the Indian will live standard; and I wish you people at this meeting today would take this consideration to yourselves and help us along in the line of life.

We Indians realize that you people have been paying taxes in order to educate the Indian, and from that point we Indians appreciate what you have done. Furthermore, if there is some appropriation to be made by the Congress, we would like to have what has been passed by Congress spent right on the reservation so we will get the benefit of the appropriation.

Congressman MURDOCK. Do I understand that the part of the reservation you are now using is about one-fourth of the original reservation, according to the measure of 1882 that established it?

Mr. SCOTT. Yes, sir.

Congressman MURDOCK. How long have you been confined to the one-fourth of the original reservation?

Mr. SCOTT. Since 1934.

Congressman MURDOCK. If I am not mistaken, prior to 1934 then, you were using the entire reservation of 1882?

Mr. SCOTT. I have been trying to use it as much as we can, but, however, we have been encroached on by some other tribe, and have lost our rights. We have made several reports to our agencies to take it up, and they promised to do it, but no action has been taken.

Congressman MURDOCK. Have the other three-fourths been used by other Indians?

Mr. SCOTT. Yes, sir.

Congressman MURDOCK. I want to say, Mr. Chairman, that the witness has made a splendid statement of what we hope will follow after this war, when he posed that question which none of us were so ready to answer on his first appearance. We hope, at the conclusion, the men of Indian blood as well as the men of white blood will know for what they have been fighting, and will realize their hopes.

Mr. SCOTT. Thank you very much, sir.

The CHAIRMAN. Thank you very much, Mr. Scott.

Now, the president of the Cattle Growers' Association wishes to make a final statement here.

Mr. FAIN. May I correct that, Senator? I am the vice president of the association, in the absence of Mr. Reid, our president.

I have a brief summary to make. Before making it, I wish to say a word about the witnesses called and the manner in which they were obtained. The Arizona Cattle Growers' Association was requested by the committee to present a list of people who would like to appear and state their cases. That was one manner in which the witnesses were obtained.

The Arizona cattle growers have certain policies, and formations of policy, which they wish to bring out, and in doing so they invited and requested certain witnesses to appear; so the witnesses came from two sources, and I might say that I know of no one who asked to appear and state his troubles through the Arizona cattle growers that was not put on the list. If anyone has not had his opportunity, I would certainly like to know of it.

I would like to briefly summarize some of the main points which we, as the Arizona cattle growers, think should be corrected in the policy of administration of our forests and public lands. I stated yesterday we are opposed to withdrawals of any kind. We are particularly opposed to withdrawals by proclamation. If necessary, we feel it should be done by Congress, and we certainly hope for the passage of the pending bill, with the amendments. We agree that most of these

withdrawals should be returned to the State; and would like to repeat again the substance of the statement made yesterday; I believe that 99 percent plus, in fact, as far as I know, 100 percent of the users of the various types of land in Arizona prefer State land over any other type of land.

We would like to see the parks and monuments cut down to a reasonable size. Under the Taylor grazing bill, peculiarly, the main object does not come to the administration of the major part of the land in this hearing; but we find that section 15 comes in for most of the criticism, first, in regard to the livestock turned loose on mining claims on section 15 land. Secondly, we need an office in the locality for the administration of these lands. I would not say this is a direct criticism of the Department or management of the lands, but we do find that machinery has not been set up to adequately take care of section 15 lands. Whether it needs departmental regulation or legislation, we are leaving that in the hands of the Department and the committee.

The CHAIRMAN. I think a statement was made by Mr. Havell on that subject. You heard that statement, did you not?

Mr. FAIN. Yes.

Third, we have been greatly impressed by the unfairness and failure to abide by the spirit of the act of 1942, in the acquisition of lands for military purposes. The policy as followed has not only been unjust, but it creates a lack of faith in our Government, and we have no recourse to court in correcting this error.

We are very much in favor of the stockmen's version of the Johnson bill, when it comes to the Forest Service, because the stockmen—and I have found it equally true, or the association has, of the small stockmen as well as the larger ones—they are mainly interested in stability; and we feel that we do not at present have that stability.

We have tried to give a fair and unbiased opinion in statement of facts and illustrations of these policies.

On behalf of the Arizona cattle growers, I wish to thank the committee, Senator McCarran, and our delegates to Washington, and the various departmental officials who have helped and aided in the hearing, as well as the witnesses who have appeared; and in closing I might ask if the Senator, or anyone present, has ever seen so many sheepmen and goatmen and cowmen all driving in the same direction, as we have had at this hearing?

The CHAIRMAN. Now, S. 379, pertaining to the boundaries of Saguaro National Monument; we will take that up now. We had it up, temporarily, yesterday; but we wanted to take it up while Senator Hayden and the Congressmen are here, because, as I view it, from the history given yesterday in detail, it is quite an important question in the State of Arizona; and Senator Hayden and Senator McFarland, on the Senate side, I think we stand together pretty solidly against withdrawal of further public domain. I am speaking now of public domain from the State of Nevada and the States of Arizona and New Mexico and the other Western States. We certainly stand solidly against the withdrawal of vast acreages of public domain in monument form where small, or very much smaller, acreages would suffice to preserve the natural or historic features sought to be preserved.

Senator Hayden has introduced a bill, and then he has introduced some amendments to it. If either Senator Hayden or anyone wishes to

discuss it, I think this is the time to discuss it. The chairman of this committee occupies a peculiar position in that he was appointed chairman of a subcommittee of two, Senator Willis, of Indiana, being the other member, to pass upon and report on this particular bill. So Senator Hayden, if you care to be heard, or to call any witness, we would be very glad to hear you.

A copy of the bill will be inserted in the record at this point.

[S. 379, 78th Cong., 1st sess.]

A BILL To revise the boundaries of the Saguaro National Monument

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the exterior boundaries of the Saguaro National Monument, Arizona, established by proclamation of the President dated March 1, 1933 (47 Stat., pt. 2, 2557), are hereby revised and amended so as to include within said monument all lands in section 8, the northwest quarter, the south half of the northeast quarter, and the south half of section 9, the southwest quarter of section 10, the west half of section 15, sections 11, 14, 16, 17, 20, 21, 22, 23, 26, 27, 28, 32, 33, and the north half of section 34, township 14 south, range 16 east, Gila and Salt River base and meridian.

SEC. 2. The Secretary of the Interior is hereby authorized and empowered, on behalf of the United States, to purchase at an appraised value of \$25 per acre, all privately owned lands and rights thereto within section 8, the south half of the southeast quarter of section 9, the north half of section 17, and section 29, township 14 south, range 16 east, Gila and Salt River base and meridian. There is hereby authorized to be appropriated the sum of \$12,000 for the purposes of this section.

SEC. 3. The Secretary of the Interior is hereby authorized and empowered, on behalf of the United States, to purchase, at the appraised value of \$1,300, a certain well and pumping machinery in place, together with the following-described land surrounding and including said well:

Beginning at a point one thousand and seven feet south of the north boundary of section 31, township 14 south, range 16 east, Gila and Salt River base and meridian, and thirty feet east of the west boundary of said section 31, thence due east four hundred and sixty-eight feet, thence due south one hundred and eighty-six feet, thence due west four hundred and sixty-eight feet, thence due north one hundred and eighty-six feet to the point of beginning, a total of two acres more or less, all located within the northwest quarter of the northwest quarter of said section 31: *Provided*, That such purchase shall include easements of way for power lines and water lines to be forever vested in the United States through the north half of said section 31 between the above-described land and the dedicated county highway land on the north boundary of said section 31: *And provided further*, That said purchase shall vest in the United States absolute title to all water rights in the west half of the northwest quarter of said section 31. There is hereby authorized to be appropriated the sum of \$1,300 for the purposes of this section.

SEC. 4. The Secretary of the Interior is hereby authorized and directed, on behalf of the United States, to acquire title from the University of Arizona to the southwest quarter of section 10, and the west half of section 15, and from the State of Arizona to all of sections 11, 14, 22, 28, and the east half of section 21, all in township 14 south, range 16 east, Gila and Salt River base and meridian, and there is hereby authorized to be appropriated to said university as partial reimbursement for the value of the southwest quarter of said section 10, the west half of said section 15, and in consideration of the expenditures of said university in protecting and acquiring for the benefit of the United States the cactus forest growth on all of the lands described in this section, the sum of \$55,000.

SEC. 5. With the exception of the lands described in section 4 of this Act, the State of Arizona may relinquish in favor of the United States such portions as it may see fit of all other State lands described in section 1 of this Act, and shall have the right on such relinquishments to select in lieu thereof other unreserved and nonmineral public lands within the State of Arizona equal in value to those relinquished, said lieu selections to be made in the same manner as is provided for in the Enabling Act of June 20, 1910 (36 Stat. 558), or, in the discretion of the State of Arizona, under the provisions of section 8 of the

Act of June 28, 1934 (48 Stat. 1269), as amended and supplemented by the Act of June 26, 1936 (49 Stat. 842). The payment of fees or commissions is hereby waived in all lieu selections made pursuant to this section.

Sec. 6. The provisions of the proclamation of the President dated March 1, 1933 (47 Stat., pt. 2, 2357), creating the Saguaro National Monument, are hereby repealed insofar as they affect the north half of the northeast quarter of section 9, the north half and the southeast quarter of section 10, and the east half of section 15, township 14 south, range 16 east, Gila and Salt River base and meridian, and section 5, township 15 south, range 16 east, Gila and Salt River base and meridian.

Sec. 7. Jurisdiction over all lands within the boundaries of the Saguaro National Monument as described in section 1 of this Act is hereby vested in the Secretary of the Interior acting through the National Park Service. Except for the areas described in sections 1 and 6 of this Act, all lands within the Saguaro National Monument as established by said proclamation of the President dated March 1, 1933, are hereby restored to the Coronado National Forest, to be administered in accordance with existing law by the Secretary of Agriculture acting through the United States Forest Service, subject to all valid existing rights which may have accrued in favor of private individuals.

Senator HAYDEN. I would like to make a general statement with respect to the Saguaro Monument, which is an area near Tucson.

The CHAIRMAN. Yes.

Senator HAYDEN. That withdrawal came about by a glaring example of acquisition by precipitous Executive order, without consultation, and without facts. The President of the United States Mr. Hoover, on tour of the West, was passing through Arizona on a special train going East. Shortly after the train left Tucson, Mr. Frank Hitchcock, a very distinguished citizen of southern Arizona, pointed out of the window to a growth of Saguaro cactus, and suggested that it was a very unique plant, which it is. It only grows in the United States, from the Williams River south toward Mexico. Mr. Hitchcock suggested that the area should be set aside for cactus preservation, since people were in the habit of coming along and lighting matches to the thorns and doing other damage. An Executive order was issued without any consultation with the United States Forest Service. It actually did not cover the land pointed to out of the car window as the President went by. It included land that should not have been removed from the national forest and privately owned lands. It was just one of those hasty actions that made a mess. We have never been able to correct it.

The University of Arizona has lands, within the area, that they would be willing to surrender with compensation, because they depend upon land resources, in part, for the maintenance of the university. It is one of the most glaring examples of the evil of doing something in a hurry. I do not think any President of the United States ought to have the power, by simply signing his name to a paper, to change the status of land. [Applause.]

I say that, based upon a long experience in Congress. For instance, everybody recognizes that the Grand Canyon was an area that ought to be in a national park. But how was it first established? Theodore Roosevelt, after a hunting trip, slapped on an Executive order. That was the first great stretching of the National Monument Act over a tremendous area of land on both sides of the Grand Canyon, a large part of which was devoted exclusively to grazing. Now, the scope of that statute, I hope, will finally be determined by the Supreme Court in the *Jackson Hole* case in Wyoming, of which you are well aware. Anyone can read that law and see that it simply is

designed to take care of comparatively small areas of land, which have some historic significance. That is all it was for. To stretch it, to take in great areas where natural scenery is the prerequisite, would not be so bad, if confined to the scenery such as the Grand Canyon. To correct the original mistake Congress passed the Grand Canyon National Park Act, setting it up by act of Congress, as it should be. We said there should be, within this national park, the gorge of the canyon, and a sufficient area near the rim to provide a road system, so people could use the gorge. In that act, we very greatly reduced the size of the national monument. We returned to the national forest the area that was used exclusively for grazing. But subsequently, there have been areas added to the park by Executive order, as you very well heard about up at Fredonia, areas that Congress never contemplated.

In the Jackson Hole case there is the same situation with no attempt to consult the people of Wyoming. I think Senator O'Mahoney performed a valuable service in raising the issue, and I supported him in doing so, upon the floor of the Senate. Congress can do one thing, we can tie up the maintenance money; that is what we did this year by providing in the appropriation bill that no part of it could be used to administer the newly created Jackson Hole Monument. We did it upon the specific ground that the State of Wyoming would ask the Supreme Court to determine what Congress had in mind when it passed the National Monument Act.

There has not been an instance in this State, where it was necessary to carry out a public purpose, but what we could not come to accord with the Federal authorities if consulted. Nobody wants to abolish the Grand Canyon National Park; but that doesn't mean to take in a vast wilderness area, unless you are following, in fancy, an idea that nobody should see it unless he can organize an expensive expedition and hire guides and cooks. Otherwise, so far as the general public is concerned, this wilderness area idea is a rich man's game, and I personally do not approve of it.

I am hopeful we can do, with respect to these national monuments, what Senator Mark Smith did with respect to the Indian reservations in Arizona. He attached to a bill a provision that no Indian reservation in Arizona could be extended except by the consent of Congress, and that is exactly what we have got to do with respect to national monuments.

We have got to try now to correct the boundaries of the Saguaro National Monument, to make sense out of it. We can do that, I hope, sometime; but to do it we have to compensate the owners of private lands, and compensate the University of Arizona. It is a bad situation from end to end; and the only cure is to make it certain, by law, that the status of land desired for national monuments shall be passed upon by the Congress of the United States. Do it by law, and not by executive order.

The CHAIRMAN. In that regard, the special committee having the matter in hand will, naturally, look to your own delegation, Senator, or the Forest Service, acting with you, for a definition of what should be actually in that withdrawal, because, undoubtedly, it has too much land now, and it is proposed to put in more land, which, according to the statements made yesterday, are not covered by anything that is of a unique nature. So, it seems to me, we must have some definition of what is actually covered by this peculiar growth of cactus.

Senator HAYDEN. I shall cooperate with you in that regard. I should like to present for the record photostatic copies of certain documents containing some of the understandings at the time the monument was set up:

UNITED STATES DEPARTMENT OF AGRICULTURE,
FOREST SERVICE,
Washington, February 24, 1933.

MEMORANDUM FOR THE SECRETARY

DEAR MR. SECRETARY: Ament the attached papers, consisting of a letter from Mr. Frank Hitchcock to Secretary Wilbur under date of February 20, accompanying draft of a proposed proclamation establishing the Saguaro National Monument, Arizona, and plat thereof and Mr. Albright's memorandum of February 24 to Secretary Wilbur in relation thereto.

Members of the Forest Service who are familiar with this area state that while it may not be the finest example of the saguaro type in the Southwest, it probably is the best remaining in public ownership. The Director of the National Park Service in his last annual report emphasized the desirability of preserving a suitable area of that type, and I agree that its value for scientific and educational purposes would warrant such action.

The area shown on the plat accompanying Mr. Hitchcock's letter lies mainly within the Santa Catalina Division of the Coronado National Forest. Its establishment as a national monument would not appreciably complicate the administration of that unit of the forest if the national monument was administered by the Forest Service. If the monument were under another and separate administration, then the management of the relatively narrow strip of national forest land outside of the monument would be difficult and complicated. I recommend that you concur in the action proposed by Mr. Hitchcock, with the understanding that the monument shall be administered by the Forest Service. The boundaries as proposed embrace 15 square miles that is not now within the national forest, but the addition to the Forest of a part of the unreserved land has been proposed by officials of the university. Mr. Albright's memorandum would indicate that with the exception of 42 acres, all of the 15 square miles is in State or private ownership.

Very sincerely yours,

R. Y. STUART, *Forester.*

FEBRUARY 20, 1933.

HON. RAY LYMAN WILBUR.

Secretary of the Interior, Washington, D. C.

DEAR MR. SECRETARY: Referring to the several talks we have had about the proposed Saguaro National Monument near Tucson for the preservation of various species of cacti, I enclose herewith a draft of a suggested proclamation by the President reserving "from all forms of appropriation under the public land laws" the lands described.

The suggested proclamation has been drafted after a painstaking study of the lands concerned in which Dr. Homer L. Shantz, president of the University of Arizona, and Mr. Frederic Winn, forest supervisor of the Coronado National Forest, with their respective assistants, have actively collaborated. The phraseology of the proposed proclamation has been accepted in a joint meeting.

As the principal part of the tract selected to be reserved is within the boundaries of the Coronado National Forest, it appears that this national monument, if created, will fall more logically under the jurisdiction of the Forest Service of the Department of Agriculture than under that of the National Park Service in your Department. However, as my discussions of the matter have been with you and with Director Albright I am taking the liberty of placing the papers in your hands, knowing your keen interest in the plan and your expressed desire to have it consummated in this administration. I earnestly hope that notwithstanding the extraordinary demands on your time in these closing weeks of the administration you will be able, with the approval of Secretary Hyde, to secure the issuance of the proclamation.

Our delay in submitting this matter has been caused in large part by the failure of Superintendent Toll of the National Park Service, to arrive here sooner and to give the project a little more time. He left rather unexpectedly after spending 2 or 3 days here and so was unable to render us much assistance. Since he left

we have been working most diligently to perfect the plan and to get it before you in season for action by President Hoover.

It will be a grievous disappointment to those of us especially interested if action is not taken before March 4 to preserve for all time the remarkable growth of giant cactus included within the boundaries of the national monument as outlined.

Forest Supervisor Winn, who has immediate jurisdiction over the forest lands affected, has submitted to Regional Forester Pooler at Albuquerque, we understand, a favorable recommendation.

It is my purpose to leave for the East before the end of the present week and I expect to reach Washington not later than March 1. Promptly after arriving I shall call to see you about this proclamation, but I trust that meanwhile you will arrange for the completion of any preliminaries that may be necessary before consideration by the President.

With cordial regard,

Sincerely,

FRANK HITCHCOCK, *Tucson, Ariz.*

SAGUARO NATIONAL MOUNMENT—ARIZONA

BY THE PRESIDENT OF THE UNITED STATES OF AMERICA

A PROCLAMATION

Whereas a certain area within the Catalina Division of the Coronado National Forest in the State of Arizona and certain adjacent lands are of outstanding scientific interest because of the exceptional growth thereon of various species of cacti, including the so-called Giant Cactus, it appears that the public interest will be promoted by reserving as much land as may be necessary for the proper protection thereof as a national monument.

Now, THEREFORE, I, HERBERT HOOVER, President of the United States of America, by virtue of the power in me vested by section two of the Act of Congress approved June eight, nineteen hundred and six, entitled, "An Act for the preservation of American antiquities," do proclaim that there are hereby reserved from all forms of appropriation under the public land laws, subject to all valid existing rights, and the right of the State of Arizona to select for the use of the University of Arizona all or any portions of Sections 11, 14, 22, 28, and E. $\frac{1}{2}$ 21, T. 14 S., R. 16 E. G. S. R. M., and set apart as a National Monument, the following described tracts of lands in the State of Arizona:

T. 14 S. R. 16 E.—Sections 8 to 17, inclusive, sections 20 to 29, inclusive, and sections 32 to 36, inclusive.

T. 14 S. R. 17 E.—Sections 7 to 36, inclusive.

T. 14 S. R. 18 E.—Sections 7, 8, 9, Sections 16 to 21, inclusive, and Sections 28 to 33, inclusive.

T. 15 S. R. 16 E.—Sections 1 to 5, inclusive.

T. 15 S. R. 17 E.—Sections 1 to 6, inclusive, and Sections 11, 12, 13, 14, 23, and 24.

T. 15 S. R. 18 E.—Sections 4 to 9, inclusive, and Sections 16 to 21, inclusive. G. & S. R. M.

The reservation made by this proclamation is not intended to prevent the use of the lands now within the Coronado National Forest for national forest purposes under the proclamation establishing the Coronado National Forest and the two reservations shall both be effective on the land withdrawn but the National Monument hereby established shall be the dominant reservation and any use of the land which interferes with the preservation or protection as a National Monument is hereby forbidden.

Warning is hereby given to all unauthorized persons not to appropriate, injure, deface, remove, or destroy any feature of this National Monument, or to locate or settle on any of the lands reserved by this proclamation.

IN WITNESS WHEREOF, I have hereunto set my hand and caused the seal of the United States to be affixed.

DONE at the City of Washington this 1st day of March, in the year of our Lord nineteen hundred and thirty-three, and of the Independence of the United States of America the one hundred and fifty-seventh.

[SEAL]

(Sgd.) HERBERT HOOVER.

By the President:

(Sgd.) HENRY L. STIMSON.
Secretary of State.

UNITED STATES DEPARTMENT OF THE INTERIOR,
NATIONAL PARK SERVICE,
Washington, February 24, 1933.

Memorandum for Secretary Wilbur.

Subject: Giant Saguaro area near Tucson, Ariz.

On the attached map we have shown in red the area referred to in Mr. Frank Hitchcock's air-mail letter to you of February 20.

The lands shown in green are those within the present national forest. We have made a thorough study of the Giant Saguaro in the past several years and our findings show that the finest of the Giant Saguaro are in T. 14 S., R. 16 E. Practically all of this land in this township is either patented, owned by the State, or in the national forest. There are only 42 acres of free land at the present time.

In Mr. Hitchcock's letter he suggests that a national monument be established, and also states that no doubt it would fall under the jurisdiction of the Forest Service, but has turned the matter over to you inasmuch as he has spoken to you about it in the past.

The Park Service believes that the Giant Saguaro in this section should be preserved. I am in hopes that the Forest Service will be agreeable to establishing a national monument for this purpose. Such a national monument under the present agreement would fall under the jurisdiction of that Service.

Attached we are returning Mr. Hitchcock's letter, together with the proposed proclamation which he suggested.

HORACE M. ALBRIGHT, *Director.*

UNITED STATES DEPARTMENT OF AGRICULTURE,
FOREST SERVICE,
Washington, D. C., February 25, 1933.

MR. MEADOR: The Secretary called me up about this on Friday. I promised to send a memo, which is attached.

R. Y. STUART.

FEBRUARY 25, 1933.

The PRESIDENT,
The White House.

DEAR MR. PRESIDENT: I have the honor to transmit herewith the letter of the Honorable Frank Hitchcock recommending the establishment of a national monument in the Santa Catalina division of the Coronado National Forest in the State of Arizona for the preservation of the Giant Saguaro areas.

I have gone over this matter carefully and I recommend this area be reserved as a national monument. A form of proclamation prepared by the Honorable Frank Hitchcock in connection with the authorities of the University of Arizona is attached hereto. This form would, in my opinion, be satisfactory.

Sincerely,

ARTHUR M. HYDE.

The CHAIRMAN. Are there any further statements on that?

Mr. S. C. BROWN (Eagar, Ariz.). In regard to one policy, I don't believe we have anything to say—two or three of us men let get away from us a policy which we would like to discuss.

The CHAIRMAN. Would you care to come forward and discuss it?

STATEMENT OF S. C. BROWN, EAGAR, ARIZ.

Mr. BROWN. My name is S. C. Brown, and I am from the northern part of the State, Apache County.

The CHAIRMAN. What is your address?

Mr. BROWN. Eagar, Ariz., Springerville.

Mr. BROWN. What is your line of business?

Mr. BROWN. Well, I am a farmer and a small cattleman.

I would merely like to ask a few questions, and possibly state an individual case that exists with, not only me but several other mem-

bers of the little vicinity in that part of the State. I might start out by saying something in regard to the advisory boards. I listened very attentively to the comments by individuals and the way they were functioning, but as far as I am concerned personally, if they are all functioning like the one in the part of the State where I live, I sometimes wonder where guys of my own standing are benefited in any way.

I might bring up my personal opinion in regard to what I mean. I might say that the advisory board up in our part of the State consists of men—as far as I am concerned, I have no kick at all—but it consists of men who are some of the biggest permittees in that entire section; which means that, as far as I am concerned, I don't believe that I ever would get any jurisdiction or any comments from them in my regard, at all. Now, this is merely a proposal in a way, I think, that should be. I'll tell you, for one reason, I believe advisory boards could actually meet the demands of all people concerned, and should be made up of possibly one large permittee, one man, you might say, that is a small permittee, and possibly a third member without a permit. But the way we have it up there, you have three large permittees. As far as the small man is concerned, now, how is the advisory board going to act in his behalf?

I might bring up one little incident that was told to me, about a little man making application for a permit; he was notified to appear before this here advisory board to follow his application. Our supervisor, addressing his advisory board—I shall call them "his advisory board," I don't know how apt that is, as far as I'm concerned, the little man didn't have anything to do with the voting on the appointments, or anything of that sort—anyway he addressed his advisory board and says, "You men are settled in your minds that nothing can be done for this man," and turned right around and asked this little man if he wanted to plead his case. Well, he didn't have a case to plead, did he? In other words, they settled the facts before he appeared before the advisory board, and there was nothing for him, no case to plead.

The CHAIRMAN. Was that a forest advisory board?

Mr. BROWN. Yes, sir.

The CHAIRMAN. Who was the forest supervisor?

Mr. BROWN. I was told of this incident. Mr. Bob Ewing was the supervisor.

The CHAIRMAN. In other words, the matter related to you was that the supervisor said to the advisory board, "You have made up your minds there is nothing for this man?"

Mr. BROWN. "You all agree," he said, "the facts are, there are no available permits, and so on and so forth; you all agree, and so on and so forth, to the point you don't know where we are going to get him any permit; but if he does want to plead his case we will listen to him."

I might go ahead and relate my opinion, and the way I feel against the Johnson bill. Certainly, it is a good thing for possibly the majority of the men assembled here today, but I happen to be one of those smaller men, and I am going to relate a few instances. I have two or three places, of patented land; one or two of those places are on the forest. They are about 13 miles above the settlement of Round Valley, right on the forest, and we have one large ranch, White Mountain Hereford ranch, it is called, 3 miles below my place. Now, that place

has been sold four or five times to my knowledge—four times, I believe, to be specific—from the time that I have been there. Now, if this here Johnson bill is enacted, wherever is going to be my chance to secure a little permit? There have been the sales of that permit which, according to the rules and regulations, what I understand of it, the United States Forest, there should have been cuts on those permits for the redistribution for the protection of the range. It has been commercialized, this permit, to the point now that men have come in there who are range specialists, more money than they know what to do with, and have bought places like that to play with, use as playthings there. I'm a little permittee trying to get the chance to buy a few head permit, and lo and behold, you go into some of these big permittees and ask them and say, "Mister, what about selling me a little permit over here, aside from your bigger permits?" And they say, "No, no; we don't want to sign any waiver with the United States Forest Service. Whenever we sign a waiver we lose certain rights," and so on and so forth. So there I sit, waiting, you might say, for the Forest Service to take enough interest in their own rules and regulations to make their cuts on men now that are commercializing on the fact that they are not utilizing their range.

All right. On that same outfit I'm talking about right next to me, I have heard tell Forest men say, "I'm sorry, there is no available range." All right, one man, that owned that ranch, he moved his cows from his ranch right up past my place out on top of the permit, through it, and on to the allotment, and let them out on top of the mountain, through that allotment; moved them to Phoenix, for 3 years. There wasn't a cow on the allotment for that 3 years, that allotment surrounded by my ranch, and yet they said there was no available range. Well, I'd gladly take some of that range, if they'd give it to me. Well, of course, now the outfit that has that is putting cows in there; but for 3 years it wasn't utilized, and they didn't need it for the protection of the range because there is plenty of grass there.

I say, as far as my opinion is concerned, if the Johnson bill is enacted, what few guys are in the business might as well get out now, instead of staying there 4 or 5 years more.

The CHAIRMAN. How many cattle are you running?

Mr. BROWN. I have about 30 head.

The CHAIRMAN. What is your permit now?

Mr. BROWN. A permit for 22 head.

The CHAIRMAN. For the forest?

Mr. BROWN. Yes; sir; and I have tried and tried for what I can get.

The CHAIRMAN. How long have you had that permit?

Mr. BROWN. Well, my father has had it for 10 or 15 years. He got killed, and I took over his little place. When it comes right down to it, I don't have any permit. I am running those places, and feel that if there is a preference on the forest, there should be some consideration there.

The CHAIRMAN. You are running the outfit that your father ran before you?

Mr. BROWN. Yes, sir.

The CHAIRMAN. And have you increased your numbers any during the time you have been running?

Mr. BROWN. Since I have taken over, it would be practically impossible for me to increase for cattle because of the fact I have no

place to put them; although I will make this statement, with what patented land I have for foundation, quite a little. A comment as to what Judge Udall said from the stand this morning; the fact is that not a farming district suitable to a man with his family making a living on farming. For one reason we are too far away from the railroads to have any market for the produce we actually produce on our farms. You might say that the market, through our little farms in that vicinity, came from putting what you produce on them farms into the livestock, and then marketing the livestock; and, for that reason, you might say it would be nearly impossible for a man such as me, over a period of years, to exist.

The CHAIRMAN. Does the permit still stand in the name of your father?

Mr. BROWN. Yes, sir; it is in the estate.

The CHAIRMAN. You have a family?

Mr. BROWN. Yes, sir.

The CHAIRMAN. Living there with you on your unit?

Mr. BROWN. Yes, sir; I have a 6-year lease for my mother and the rest of the children on these places. I am the oldest one of the family, and I need to take that responsibility.

The CHAIRMAN. You are sustaining your own family, and your widow mother?

Mr. BROWN. Yes, partially.

The CHAIRMAN. What else do you do besides stock raising; anything else?

Mr. BROWN. Farming and stock raising in the wintertime. I possibly can say a little bunch of cows I have got are not handled in the best possible way. But why? Because a man with small group of cows can't afford to sit around all winter and feed that little bunch of cows like he could if he had enough to pay him for doing it. I have to work, maybe drive a logging truck in the sawmill, in the wintertime; let that logging truck go, catch my saddle horse, and ride out on the ranch and feed them cattle, and so on and so forth. As far as the summer months are concerned, they are utilized in the running of this place, farming, and taking care of my cows.

The CHAIRMAN. Is the supervisor of that forest here?

Mr. R. B. EWING (forest supervisor, Apache National Forest, Springerville). Yes, Mr. Chairman.

The CHAIRMAN. Do you know anything about the case?

Mr. EWING. I have a general knowledge of the case, Mr. Chairman. It is the type of case Mr. Kneipp described awhile ago, a small owner dependent to a large extent for increases on further adjustment, made possible through transfer reductions.

I want to add one thing, however, that certainly we make no effort to dictate to the advisory board. All members of the board are here this afternoon, and I believe they prefer that they speak for themselves on that subject.

The CHAIRMAN. I am wondering if, out of all this, there is any hope for the little fellow, generally speaking, without regard to this specific case.

Mr. EWING. The outlook, Mr. Chairman, is not too bright.

The CHAIRMAN. He does make one statement there that does catch my ear, and that is that large outfits come in and play with the in-

dustry. I don't know how far that goes, but there is something in that that I have heard of before.

Mr. EWING. That is true of large outfits, like the one Mr. Brown described near his home; they are running registered cattle. That is the main reason they were brought down to be placed on feeding. They are owned by the White Mountain Hereford ranch. Later, the owner of the White Mountain Hereford ranch sold, and the people there now are utilizing the range, but, of course, for a certain area on all of our allotments, certain portions are underutilized. But on each of those allotments you always find areas that are overused, and of course that is true in this case. There are areas that are underused and other areas that are overused.

The CHAIRMAN. This man has had an application in before you for some time, as I gather it.

Mr. EWING. I don't recall distinctly whether he has made application for increases or not. He probably has. Many of them have; yes, sir.

Mr. BROWN. Mr. Chairman, I would like to relate my opinion along one line. In the little allotment where I am there is one gentleman, a friend of mine, and he has a 50-head permit. Due to certain unknown reasons he got hard up and he sold the cows. He still maintains the permit. The fact was that some of my neighbors, not having permits and a few cows, which might not be right as far as the law and the rules and regulations are concerned, placed some cows on this permit that was not being used. This man didn't have the cows to fill it himself, and so on, and so forth. They were kicked off of that and this man now has 15 head of cows on it, declared nonuse on the other 35 head. It is not being utilized, and yet they say there is no available range. Until that man can actually utilize that 35-head permit, why couldn't it be given to me for a year or 2 years, until he could utilize it, to see that that grass doesn't go to waste? Those are questions in my mind. They say there is no available range and I can see it all around me.

I might add a little further. We had a few pastures around there that belonged to the Government, I suppose; ranger station pastures, and so on, and so forth. I know some small guys that made application for those pastures and they weren't given any consideration. They were turned over to men who were actually some of the biggest permittees there was. As far as the policy is concerned, I don't believe there is anything right about the granting of those pastures to big permittees for the reason that it might as well have been given to some small fellow and he would have utilized it.

The CHAIRMAN. What do you know about that, Mr. Supervisor?

Mr. EWING. The pasture lies within the White Mountain Hereford range, and they have been given the permit for the use of that pasture. There are two other Government pastures in the Greer allotment, turned over to the Greer permittees, being used by them now.

The CHAIRMAN. What is your regulation on nonuse?

Mr. EWING. I don't know anything about this case Mr. Brown refers to, but we are encouraging nonuse in many sections of the country.

The CHAIRMAN. That is to rest the range, isn't it?

Mr. EWING. For recuperation; yes, sir.

The CHAIRMAN. Well, of course, the committee cannot set itself up as a court of arbitration or a court of final determination for matters that are jurisdictional. We have stated at every meeting that we cannot set ourselves up to pass on the individual cases, unless individual cases typify a policy. Now, there have been many cases that I, personally, would have liked to have been of some assistance to iron out, and here is a case now that appeals to one, naturally. But if this committee were to undertake to set itself up as a court of last resort on these cases, first of all, we haven't the jurisdiction, we haven't the authority; and secondly, we would continuously be at it all the time. All I can say, and all the committee can ever say to those in authority, cases of this kind do present, as they are presented to us, they do present what might be typified meritorious complaints. We don't get it all; I don't think we get the whole story; but as we get it, all we can say to the administration, all the power we have is to say, please give this thing further consideration, with the idea of rendering a full and exact measure of justice. That is all we can say in any one individual case unless it typifies a policy that governs a whole course of administration.

Now, I am sorry to say to you that this committee does not have the power or the time to take up individual cases, although your case, as it is presented to us, seems to have a meritorious side to it.

Mr. BROWN. I'd like to ask a question, if you'll pardon me, in regard to the advisory boards and the Forest Service. This is a question, not only in my mind, but in several other men sitting here, which I think should make it worth merely answering a few questions for me in regard to the advisory board. Who selects the advisory boards in these vicinities? Some gentleman said something about it a while ago, but I never did get it.

The CHAIRMAN. Will you answer that?

Mr. EWING. This advisory board was selected, as Mrs. Keith described a few minutes ago, originally by the Arizona Livestock Association. Afterward an election was held and the same members were elected.

Senator HAYDEN. What are the qualifications of the elector?

Mr. EWING. Just that they have a permit.

Senator HAYDEN. Large or small, they all have one vote?

The CHAIRMAN. Does each permittee, regardless of the size of his outfit, have one vote?

Mr. EWING. Just one vote.

Mr. BROWN. How long does he hold office; for the rest of his life?

Mr. EWING. No; they were first elected 2 years ago. We are holding an election for one member this year, and another next year, and another one the following. In other words, they are elected for a period of 3 years with terms of office staggered.

Mr. BROWN. Was that put in here after the cattlemen themselves vote on that?

Mr. EWING. The present ruling is still just the permittees.

Mr. BROWN. In other words, us permittees in this section should have the right to vote?

Mr. EWING. Certainly.

Mr. BROWN. Fine!

The CHAIRMAN. In this case, where it is an estate that is being run by the son, does the representative of the estate cast the vote?

Mr. EWING. Absolutely. Didn't you get a blank ballot, Mr. Brown?

Mr. BROWN. No, sir.

Mr. EWING. We sent one to every permittee.

Mr. WOODHEAD. Mr. Chairman, the only thing I wanted to state for the record is this—this matter of how long an advisory board shall hold office, and the general procedure of the board—they meet and they shall hold an annual meeting and election of their own officers. That sort of thing is left to each board to determine; and so far we have made no attempt, the Forest Service in this region, at least, to set up any standard policy as to how long and for what period a board member shall be elected. But almost all the boards have followed something along the line Mr. Ewing has mentioned, that is, they elect their members so that one man goes out every year or two; so that on a large board you always have on the board two or three more men who have been on the board for some little time. Now, the Apache Board could change their system, as Mr. Ewing just described, if they desire to do so.

The CHAIRMAN. Thank you.

Thank you very much.

STATEMENT OF HENRY G. UDALL, EAGAR, ARIZ.

Mr. UDALL. I am chairman of the advisory board under Mr. Ewing. That is the way we were elected. The permittees all voted and had an election. I think we had two different elections, and they elected us.

The CHAIRMAN. How often?

Mr. UDALL. Just once; didn't have any election last year.

The CHAIRMAN. You were elected 2 years ago?

Mr. UDALL. Yes, sir; all three of us were elected 2 years ago. But in regard to Mr. Ewing trying to coerce the board, there is nothing to that; I want to say that Mr. Ewing has never, at any time; he has just been cooperative with the board.

The CHAIRMAN. How long have you been a permittee?

Mr. UDALL. Well, practically since about 1912, I think; somewhere around there.

The CHAIRMAN. What is your name?

Mr. UDALL. Henry G. Udall.

The CHAIRMAN. How many cattle do you run in there?

Mr. UDALL. About 300 at the time I was elected. I think I had a permit for 289 head, 6 months.

The CHAIRMAN. What is it now?

Mr. UDALL. 320 now.

The CHAIRMAN. For what length of time?

Mr. UDALL. I purchased a year ago another 46 head.

The CHAIRMAN. You run 6 months now on your permit?

Mr. UDALL. It runs 5½ months now.

The CHAIRMAN. Now?

Mr. UDALL. Yes, sir.

Mr. BROWN. Mr. Chairman, I believe there is a misunderstanding. The fact that I said Mr. Ewing told the board, I merely wanted to

make the point, the fact that the board had it settled in their minds as to the fact, inasmuch as they were talking to a man that didn't have any permit, they had utilized all there was on the forest. There was no place for the small guy because they had it all. Thank you. [Applause.]

STATEMENT OF R. S. HAMBLIN, EAGAR, ARIZ.

Mr. HAMBLIN. I am R. S. Hamblin, from Eagar, Ariz. The policies outlined by our head forester, Mr. Kneipp, I believe, are the policies that are best suited for the small man in our community; and the policies that were outlined here by the Cattle Growers Association and advanced by these advisory boards may represent a large number of stock, probably, and range; but I don't believe they represent the largest number of people that have to make a living from the benefit of the forest. For that reason I am against the Johnson bill and in favor of the program as outlined by Mr. Kneipp, because I believe that is for the benefit of the small man.

The **CHAIRMAN.** Where do you run?

Mr. HAMBLIN. I run on the Apache National Forest. I was here at this hearing 2 years ago. I represent one of the people that probably Judge Udall told about here, struggled along for several years to get a permit. I have one question I would like to ask our supervisor, or should have asked him in his own office during the time I was here before. At the present time I have purchased a permit for 50 head and that permit was cut 20 percent. The reason, according to Mr. Ewing, was that the range was overgrazed. At the same time, another man was cut 10 percent on the range and on the same kind of a purchase.

Now, that never was clear to me and I would just like to ask Mr. Ewing why that was.

Mr. EWING. I would be glad to answer that. That was not the same kind of a purchase, Mr. Hamblin. You bought only ranch property and, therefore, was subject to only 80 percent renewal. The other man bought both the ranch property and the cattle.

Mr. HAMBLIN. I didn't understand. I'm glad to know why that cut was made.

The **CHAIRMAN.** I wonder if many of these questions that are perplexing could not be straightened out if there was a little more, well, we'll call it neighborliness, between the supervisor's office and the permittee? So now, if you had gone to the supervisor's office and asked that question you would have had it and you wouldn't have been disturbed in your mind up to the present time. It would have been a much happier situation for the supervisor in authority, and everybody else. That is only a suggestion.

Mr. HAMBLIN. I am glad you brought it up, Mr. Chairman. I have often wondered what it is. I realize it is the case in most small permittees—they feel like the Forest sort of feels like they are sort of a headache on them. Maybe I am wrong, but that is the way I feel and a good many others. When we go in there we sort of are a headache to the Forest Service. Larger men seem to be more agreeable or sociable with them.

The CHAIRMAN. Well now, sometimes that grows out of imagination. If you harbor it, it will grow into colossal proportions when, as a matter of fact, it doesn't exist at all. I make that as a suggestion.

Mr. KNEIPP. Mr. Chairman, these gentlemen live in a town which is near one of the districts on the Apache Forest, the Greer district. That district presents a very complicated situation. Many small ranch owners live there, and there is a heavy demand for stock. So in 1942 there was a very exhaustive analysis made of the population, the land ownership, crop production, livestock, and all the different elements that entered into the picture. In 1943, on the basis of that analysis, there was worked out a program of action which seemed practicable. These are rather lengthy documents; but I am wondering whether you would think they were sufficiently valuable to the members of the committee, or members of Congress, to incorporate them into the record. This is a report exemplifying a problem, quite a problem, of the kind mentioned here. It includes the Nutrioso and Alpine districts which adjoin the Greer district, and where conditions are very much the same. It also illustrates the approach the Forest Service is trying to make. Whether it would be worthwhile to put those in the record—

The CHAIRMAN. How voluminous are they?

Mr. KNEIPP. Forty or fifty typed pages.

The CHAIRMAN. I would like to have those in the record because they do exemplify an activity to deal with intricate questions.

I am a little bit stingy about extending the record to that extent, but if you would let us have copies of your plan, and how you worked it out, we could file it with the committee.

Mr. KNEIPP. Yes, sir.

The CHAIRMAN. We would be very glad to have it.

STATEMENT OF R. L. SHARP, NUTRIOSO, ARIZ.

Mr. SHARP. My name is R. L. Sharp. I am from Nutrioso.

The CHAIRMAN. Have a seat and tell us your story.

Mr. SHARP. I haven't got much of a story. I am one of the advisory board. I think I got a permit on the forest for fifty-some-odd head, see?

The CHAIRMAN. How did you get on the advisory board?

Mr. SHARP. The permittees elected me, I guess.

The CHAIRMAN. Did you go out and make a big campaign?

Mr. SHARP. I sure did.

The CHAIRMAN. Well, you got enough votes to put you on.

Mr. SHARP. That's right. Thank you very much.

STATEMENT OF EATHER BROWN, EAGAR, ARIZ.

Mr. BROWN. I would like to object to this stockmen's bill. In our country, if things continue on in the future as they have in the past, 99 percent of us, I think, is going to have to move, and the four or five in the country who belong to the stockmen's association will have to take it over. Thank you.

STATEMENT OF GEORGE E. CROSBY, GREER, ARIZ.

Mr. CROSBY. Well, I have problems here, and I guess in the first place it is this revised Johnson bill, why, as has been stated, the Forest Service revision of that bill, I favor that instead of the Arizona Cattle Growers or the American Cattle Growers attitude.

I'd like, at this time, to say something on the policy of the Forest Service.

The CHAIRMAN. All right.

Mr. CROSBY. It is the policy of the Forest Service to discourage little men here in having permits. When they go before the forest supervisor, instead of letting them make an application for a permit, they refuse to accept an application.

The CHAIRMAN. Are you running stock on the forest now?

Mr. CROSBY. Yes; on the Apache National Forest.

The CHAIRMAN. When did you first get your permit?

Mr. CROSBY. All my life—

The CHAIRMAN. Did you get it by application?

Mr. CROSBY. Yes, sir.

The CHAIRMAN. How long ago did you make the application?

Mr. CROSBY. Well, I don't remember; 20 years or so.

The CHAIRMAN. You have the same permit, and have had it ever since?

Mr. CROSBY. No; they have cut some off of it since then.

The CHAIRMAN. How many cattle are you running on that permit?

Mr. CROSBY. About 50 head, or 49, or something like that.

The CHAIRMAN. Do you cast your vote for the members of the advisory board?

Mr. CROSBY. No; I didn't?

The CHAIRMAN. You do not vote?

Mr. CROSBY. No, sir.

The CHAIRMAN. You heard it stated here that advisory boards are elected by the vote of the permittees?

Mr. CROSBY. Yes, sir; that's right.

The CHAIRMAN. You have no objection to that system?

Mr. CROSBY. I object to the actions of the advisory board. They claim it's cooperation. I claim it is not; dictated by a power, a Quisling, or something of that sort.

The CHAIRMAN. Let me get that. What do you mean by that?

Mr. CROSBY. Well, for instance, they tell you there is no place, they write and tell you there is no place for you on the forest, and this case has been tried before the advisory board. Well, your advisory board and the Forest Service admitted to me just awhile back there was slack on the forest there, and the advisory board said that there wasn't, and also the Forest. When you pin them down to it, they claimed there was unused land on the forest.

The CHAIRMAN. Don't you think, or do you think, that the advisory board, composed of permittees on a given forest region, is more liable to look with favor upon the little fellow than if it were left in the hands of the supervisor?

Mr. CROSBY. Well, it could be that way; yes. I don't know whether it is or not.

The CHAIRMAN. Have you anything to complain of in that respect?

Mr. CROSBY. Only in that what they should—before they go into this and refuse you a permit, they should go into it thoroughly so that if this range is available it could be made for use. But they did not do that when you pinned them down. I did at the meeting awhile back. They claim there was range that was available, right there, at a meeting, they admitted that there was range, and Mr. Woodhead, at the regional office admitted that.

The CHAIRMAN. Did he say for you to make your application?

Mr. CROSBY. He didn't say to make an application. He said there was unused range there.

The CHAIRMAN. Did he tell you it was being unused for a specific purpose, or anything of that kind?

Mr. CROSBY. No.

The CHAIRMAN. What were you applying for?

Mr. CROSBY. For more cattle; to try to make a living with and run my ranch.

The CHAIRMAN. What is the largest number on that particular forest? Who has the largest number?

Mr. EWING. Of cattle, I think Mr. Spencer, a thousand head.

The CHAIRMAN. And Mr. Spencer is from where?

Mr. EWING. The Greer district.

The CHAIRMAN. He was a witness here today, was he not?

Mr. EWING. He is a member of the advisory board; yes, sir.

Mr. CROSBY. The last hearing, when you was here; I would reopen the Voigt case; it was brought up. I would like to reopen that case.

The CHAIRMAN. Now, the Voigt case, as I recall it, and I have a hazy recollection on it right now, was the case in which an employee of the Forest Service was given a permit, an enlarged permit. Is that it?

Mr. CROSBY. Yes, sir.

The CHAIRMAN. What was the disposition of the Voigt case; can anyone tell us?

Mr. KNEIPP. Mr. Chairman, some time ago we forwarded to Mr. Haskell, a very complete chronological report on the Voigt case in two parts, one dealing with his whole period of employment with the Forest Service, and the other dealing with his status as a permittee.

I might make an explanation. Mr. Voigt was at one time a member of the Forest Service; he resigned to go into the livestock industry and apparently was quite successful. He bought out a previously permitted outfit and was running that outfit when the C. C. C. program was inaugurated. One of the most difficult propositions was to find trained men who would plan and program the work to be done, and who were familiar with the Government procedure, and Mr. Voigt was known to possess all those abilities. Previously, when he had been in the Forest Service, he had shown unusual capacity. If he had stayed he probably would have advanced rapidly to a much higher position, so when this need arose his services were solicited. Nobody knew how long the C. C. C. program was going to run. It might have been a very short affair. Mr. Voigt was not willing to accept employment if that necessitated giving up this livestock outfit, which he had resigned from the Forest Service to build up, so he was put on the pay roll and still continued as a permittee.

It so happened that the C. C. C. program ran for a considerable number of years. Mr. Voigt's services in that capacity were of quite an unusually high order, so he was retained throughout the period. He also continued to enjoy his permit.

At Mr. Haskell's suggestion, we had the regional office prepare a very detailed record, which Mr. Haskell has, and the regional forester assures me in preparing that record, he covered every possible point, except one, and he sent in an extra page, numbered 61½, for addition to the record to cover that one additional point. I think the record will show that Mr. Voigt's status as a permittee was in strict accord with the regulations; that there was no favoritism or undue advantage afforded him. It will also show that his employment during the C. C. C. program was in accordance with the procedure that was generally in effect. The only possible criticism that I could see would be that here was a man who already had the basis of a good living in the livestock business and was also given a good job. Now, the reason he was given that job was because he possessed some unusual qualifications for that particular position; his previous experience, previous training as a forester, and his well-demonstrated ability.

The CHAIRMAN. What have you to say to that?

Mr. CROSBY. Well, I have looked at this report in the Voigt case, and find that it lies all the way through, from beginning to end. It lies, all the way through.

The CHAIRMAN. Now, you are making a pretty strong statement. Have you seen this report?

Mr. CROSBY. Yes, sir.

The CHAIRMAN. How did you come to see it?

Mr. CROSBY. I looked at it with Mr. Haskell.

The CHAIRMAN. Well, I don't think we are going to have time to settle the question of veracity here. Can you specify where it is wrong; in what specific instance?

Mr. CROSBY. It says the grazing privileges enjoyed by A. W. Voigt—it says all his privileges were obtained through the purchase of established outfits, waiver of grazing privileges in each case. Well, at three different times here, he was given added land without the purchase of any land.

The CHAIRMAN. Added range?

Mr. CROSBY. Yes, sir; added range. This map, Mr. Chairman, will show you only two times that this map shows it; but the third time is right here when the Forest Service don't dare show that. I don't know for what reason they won't dare to show that, Mr. Chairman. This was taken from the Greer allotment and it was actually taken from one Romanos Mandez, who was a sheepman.

The CHAIRMAN. As far as this committee is concerned the matter turns largely on whether or not this man Voigt was at that time in the employ of the Forest Service and if by reason of his employment in the Forest Service he was given special privileges over and above what he should have been given as a permittee. Now, the statement—let's see how far you agree with this: He did resign from this Forest Service. Is that right?

Mr. CROSBY. Well, that shows back here; yes, he did resign at one time when he purchased—do you mean he purchased this?

The CHAIRMAN. Before he purchased it?

Mr. CROSBY. Not before, no; after, 8 or 9 months later.

The CHAIRMAN. He had these permits before he resigned?

Mr. CROSBY. Yes, sir.

The CHAIRMAN. All right. Finally he resigned; and the C. C. C. activities came along. I don't construe the C. C. C. activities as a part of the Forest administration. It was a separate administration, set up for the purpose of improving the forest. Now, it would be a stretch of the rules to say that they could not employ someone to manage or supervise the C. C. C. activity for the improvement of the forest, simply because that party possessed a peculiar inability in having livestock as a permittee on the range. Now, if it could be said that there were others, possessed of the same ability, that would be one thing.

Mr. CROSBY. Well, we think there was plenty of men, at that time, just as capable as he.

The CHAIRMAN. Did he get any priority, or any of the best of it, by being connected with the C. C. C.?

Mr. CROSBY. It will show by the record that he took the C. C. C. man on to his permit, and did the improvements.

The CHAIRMAN. That is, he utilized the C. C. C. for his special advantage?

Mr. CROSBY. Yes, sir.

The CHAIRMAN. Of course, that puts another face in here. Is he in the service now?

Mr. CROSBY. No, he is not.

The CHAIRMAN. He is running cattle as a permittee, is he?

Mr. CROSBY. That is right.

The CHAIRMAN. Has his allotment been enlarged recently?

Mr. CROSBY. Well, through purchase, and this line here, purchase and otherwise. That part there was given to him.

The CHAIRMAN. How many cattle is he running on the forest?

Mr. EWING. I think the number is 286.

Mr. A. W. VOIGT. 286.

The CHAIRMAN. 286?

Mr. VOIGT. Yes, sir.

The CHAIRMAN. How many did you have when you started out, Mr. Voigt?

Mr. VOIGT. I purchased 150 head.

The CHAIRMAN. What year was that?

Mr. VOIGT. 1924, early 1924.

The CHAIRMAN. Were you in the employ of the Forest Service?

Mr. VOIGT. I was, at that moment. The purchase wasn't arranged until I had signified my intention of resigning from the service.

The CHAIRMAN. Let me get that; weren't you in the Forest Service employ when you first acquired this forest permit?

Mr. VOIGT. No, sir.

The CHAIRMAN. When you acquired the cattle, were you in the employ of the Forest?

Mr. VOIGT. The deal had not been closed, absolutely.

The CHAIRMAN. You resigned from the Forest Service before the deal was consummated?

Mr. VOIGT. I resigned as soon as I could after the deal was consummated.

The CHAIRMAN. How long was that?

Mr. VOIGT. I don't remember exactly now, but it wasn't very long; it just gave me time to finish up the work that I was doing.

The CHAIRMAN. What year was that?

Mr. VOIGT. Early in 1924.

The CHAIRMAN. 1924?

Mr. VOIGT. Yes, sir.

The CHAIRMAN. From 1924 to 1933, did you acquire any additional allotments on the forest?

Mr. VOIGT. Yes, sir; I believe I did. I purchased some cattle.

The CHAIRMAN. During the time you were working for the C. C. C., did you acquire additional allotments on the forest?

Mr. VOIGT. Yes, sir; I purchased some sheep, along with some other permittees, and later transferred to cattle.

The CHAIRMAN. What about this charge that you used the C. C. C. to improve your allotment?

Mr. VOIGT. I don't think there could be any truth to that.

The CHAIRMAN. Did you work the C. C. C. on your allotment?

Mr. VOIGT. Not personally; no, sir.

The CHAIRMAN. Personally or otherwise?

Mr. VOIGT. No, sir. Well, I'll qualify that this way: the improvements of the C. C. C. were made, the program was approved by the forest supervisor and the regional forester and the Washington office. I couldn't have any say in the direction as to the approval. There were, I think, two spring developments made on the range which was allotted me, and they were part of a program approved by the office of the Forest Service.

The CHAIRMAN. You are out of the Service now, are you?

Mr. VOIGT. Yes.

The CHAIRMAN. How long since you have been out of the C. C. C. service?

Mr. VOIGT. Since the day after this hearing, December 4, 1941, I believe.

The CHAIRMAN. You are in no wise connected with the Forest Service now?

Mr. VOIGT. No, sir.

The CHAIRMAN. You are running cattle as a permittee now?

Mr. VOIGT. In the summertime; yes, sir.

The CHAIRMAN. How many months of the year?

Mr. VOIGT. Five and one-half months.

The CHAIRMAN. Well, I am at a loss to know what this committee can do. This man has severed connections with the Forest Service and with the C. C. C. If we were to assume that he did violate a rule, or that the Forest Service violated a rule, or principle, by continuing in employment while he was running the cattle, the matter has all been ended. What could we do now?

Mr. CROSBY. There is nothing that could be done about this range that they give him; when the small man is making application for range, he can't get any.

Mr. KNEIPP. Mr. Chairman, may I make a comment? As I understand it, talking with the regional forester and the supervisor, there was a study made of the various range capacities in that section, by this method of range survey, and, as I understand it, there were some readjustments made, under which Mr. Voigt would get approximately

the same grazing capacity for cattle as the others. That involves some changes in allotment boundaries; but I was assured that the range he got does not give him a grazing capacity of one more head of stock than the others got. There was an adjustment of the range, between the several users, to balance or equalize the use over the area.

Might I ask Mr. Crosby to enumerate these instances. What did Mr. Voigt do on his range, to Mr. Crosby's knowledge, that constituted his betterment through the C. C. C.?

Mr. CROSBY. I don't say to his betterment. He took men on there and built fences, and developed springs, and one thing or another.

Mr. KNEIPP. How much fence?

Mr. CROSBY. I see by your report here—I don't know how many they built, but when Mr. Ewing was on the stand here before in this, he said they didn't do nothing but develop these springs.

Mr. KNEIPP. Was this fencing program a part of a general program of range fencing, in that part of the Apache Forest, or confined to Mr. Voight's range?

Mr. CROSBY. I'm sure I couldn't tell you. Down by my ranch they first moved the C. C. C. camp, and started to fence there, and never did finish it; so I supposed by that it was the fellow that had the most influence with the Forest Service.

Mr. KNEIPP. You assert, then, that fences were constructed on Mr. Voight's range, springs were improved on Mr. Voight's range; am I to understand that was not done also on the other ranges?

Mr. CROSBY. No, no; it was done, sure, all over the forest, as far as I know.

Mr. KNEIPP. In other words, there was a general program for the betterment of the forest through the installation of various range facilities. Mr. Voight was in charge, in a general way, of part of that program, and part of the program happened to be on his range, on his allotment. Is that the situation?

Mr. CROSBY. I suppose so; I suppose he laid out the program. He was the one in charge of it.

Mr. KNEIPP. Mr. Supervisor Ewing, were you there at that time? Do you know how it was developed?

Mr. EWING. I was there since 1928. Mr. Voigt was in charge of the work in the field, as a staff officer; but he was not concerned with the formulation of the program. That was my own job. If there is any fault to be found in the improvements constructed on Mr. Voigt's range, it is not Mr. Voigt's fault.

The CHAIRMAN. All right.

Mr. CROSBY. I'm glad to see Mr. Ewing will take that responsibility. It looks to me like something should be done in this case. You take them here; when they refuse to admit here they take this land from this sheepman alone, it looks to me like it is a pretty bad condition.

The CHAIRMAN. My understanding is that Mr. Voigt bought out the sheepman.

Mr. CROSBY. No; he did not. This was taken a long time before, 8 or 10 years before, back here this little corner here, before that purchase was ever made.

The CHAIRMAN. That is what I say, that is the reason I—

Mr. CROSBY. I say they didn't take it from the Greer permit, instead of the Romanos Mandez. They lie.

The CHAIRMAN. Mr. Supervisor, what is your recollection of that?

Mr. WOODHEAD. Mr. Chairman, I would like to get into this a little bit.

The CHAIRMAN. Were you on the ground?

Mr. WOODHEAD. No, but I did this; at the request of the regional forester, after your last hearing, inasmuch as I was a new man in the region, and I knew none of the principals—when I say I knew none of the principals, I didn't know Mr. Voigt, and I didn't know Mr. Crosby—the regional forester asked me to take all of the available records and make a careful analysis of them, and try to determine whether or not anything had been done in this case that would indicate that Mr. Voigt had received any special consideration that he would not have received had he not been an employee of the Government. I made that analysis as carefully as I could. That map Mr. Crosby has before him, I prepared from the record, and that map represents, as far as I could find out, from a very careful search, the facts.

Now, that little 160 or 80 acres, whatever it is, in that corner, that question came up when we had that meeting of the advisory board to which he referred some time ago. It may be there was some point there that I overlooked. If I did, it was an honest mistake anyone might make in analyzing a record 10 or 15 years old. Perhaps the supervisor can explain that tract of land.

Mr. EWING. Mr. Chairman, may I see the map, please?

The CHAIRMAN. Yes; indeed.

Mr. EWING. This is the area taken from the sheep allotment, shown right here. It amounted to 60 or 80 acres, and was added, I believe, in 1932. At the same time, there was a small area added from the Greer allotment. That was tacked on by the Greer association, received their approval, they went over it on the ground. This corner, as you see here, was added to give a pathway into this portion, here.

The CHAIRMAN. Who was that taken from?

Mr. EWING. It was taken from—I have forgotten the name of the outfit.

Mr. CROSBY. The Aztec Sheep Co., an old man. Why was that taken without some remuneration, or some permission from them?

Mr. EWING. It was taken, as I say, to create a pathway into this Falkes pasture. Otherwise, there would have been no corner here.

Mr. CROSBY. There was plenty to pass on, on this other side. You took some more there, and give them plenty for passing.

Mr. EWING. Well, it seems to be controversial yet.

Mr. VOIGT. Mr. Chairman, I would like to state that I know, personally, there was an agreement with that sheepman for this little area.

The CHAIRMAN. With whom?

Mr. VOIGT. I was out of the service at the time.

The CHAIRMAN. It still resolves itself down to a matter of past history, that seems to have taken care of itself. If he was continuing in the service, it would be a vexing problem. When we were here before, he was in the service at that time; but I think he severed connection with the service right after it was severely criticized by this committee.

Mr. KNEIPP. Mr. Chairman, I think Mr. Dan Judd, the other day, over at Fredonia, told you that I gave him—I was then regional

forester—I gave him the option of giving up his cattle or giving up his job. In other words, the policy has been that no permanent employee of the Forest Service could share in the use of the national forest resources. Mr. Judd was an exemplification of that policy.

The CHAIRMAN. That policy has been carried out?

Mr. KNEIPP. Yes, sir.

The CHAIRMAN. The report shows that; and the report of the Grazing Service also shows that.

All right, is there anything else?

Mr. CROSBY. We have another problem, in regard to a driveway, there; at the same time, before this C. C. C. problem. It was some shipping pens were constructed on the lower end of the Greer allotment, and we have asked the Forest Service several times to set aside a driveway, to take care of these cattle that cross the Greer permit, going to and from the shipping pens, and they have had 2 years to do it, and have refused to do a thing about it.

The CHAIRMAN. Can anything be done about it? These are all individual cases overstepping the bounds.

Mr. EWING. We haven't refused; we have made an effort to adjust that thing; shipping corrals were built. We recognized the fact it would increase the driving, to some extent, across the Greer allotment. These shipping corrals, or the pastures that went with them, were taken from the adjoining sheep allotment; but they always refused the drive on the Greer permit, the permittees who drove down that 25 or 30 miles. So far we haven't been able to adjust it.

The CHAIRMAN. That is a matter you are working on?

Mr. EWING. We are working on it.

Mr. CROSBY. Mr. Chairman, as I said, of course, the Greer allotment, that represents a group of people. There is not an individual case on the whole Greer allotment.

The CHAIRMAN. This is an individual case of the driveway, and they tell us they are working on it. We are in hopes they will work it out. If they can't work it out, I don't believe this committee can work it out.

Mr. CROSBY. I don't believe they will work it out.

The CHAIRMAN. I live more in hopes than you do.

Mr. CROSBY. So do I; but it is a problem I think we should meet, and if there isn't something done about it we're kinda like these Indians here on the stand, we are out of luck, see, bucked up there against a law, the forest law on one side, and the Forest Service on the other. That's the only condition, either starve or fight for something justly yourself.

The CHAIRMAN. Mr. Kneipp, while you are here, take that matter up and see if it can't be worked out.

Mr. KNEIPP. I might explain, these permittees on the Greer allotment, those to the south, as I understand, from information here, drove cattle around the south end of the Greer allotment. This shipping arrangement was discontinued. A need arose for a truck shipping point, and the Forest Service went in and spent about \$2,500 developing a truck shipping point for those people; and, as I understand it, that location which, incidentally, was taken from a sheep range, met with the approval of the Greer people. It is to their advantage. Now, the people to the south and east of them, who could only get to the shipping point by going along the east edge of the Greer allotment, formerly went along the south and west edge of the Greer allotment. The

cattle do pass through there, about a thousand head, from those allotments immediately south of the Greer allotment, to reach the shipping point, but it seems as if it was the best shipping point that could be suggested, and the Forest Service proceeded accordingly in making this improvement for the advantage of the permittees.

Now, there is a certain give and take there, but those in the south need an outlet, and the only way for them to get that outlet is to go through the Greer range.

Mr. CROSBY. No; like they used to do, we proposed they go—they used to come down the sheep allotment.

Mr. KNEIPP. Sir, otherwise they would have to cut across south, and up the west side of the Greer allotment, and back to the shipping point.

Mr. CROSBY. Well, all right, you might as well admit, they might as well go around there as put a whole group of people out of business.

Mr. KNEIPP. Have they put any people out of business?

Mr. WOODHEAD. Mr. Chairman, perhaps I can wind this up. We have appreciated for 2 or 3 years the need for changing that driveway situation. They have proposed building another shipping coral at another point which will leave this part. The matter has been discussed in the advisory board, and certain of the permittees on the other route object, so that it takes time to work that thing out. It is being studied carefully, and the Forest Service is not laying down on the job. I think we'll be able to work it out.

Mr. CROSBY. I would like to say one more thing. It is the policy of the Forest Service to try to put the little man out of business.

The CHAIRMAN. I am sorry to hear that; but now for 3 days we have been hearing about the little man, and nearly all from the little men, with a rare exception here and there. I haven't heard really big men in this whole set-up.

Senator HAYDEN. Mr. Chairman, Stephen A. Spear, of the Arizona Tax Research Association, had hoped to address the committee this afternoon, but the hour is such that he doubts the advisability of it. Could I ask that he be introduced and present certain resolutions relating to the regulations that affect the land in the Walapai Indian Reservation, with permission to later supply a brief regarding the matter that might be included in the record?

The CHAIRMAN. Yes, indeed.

I apologize to you, Mr. Spear. You were cut out of the hearing at Fredonia.

STATEMENT OF STEPHEN A. SPEAR, ARIZONA TAX RESEARCH ASSOCIATION, PHOENIX, ARIZ.

Mr. SPEAR. Mr. Chairman, no apology is necessary. I asked that I be left, at Fredonia, because the hour got so late there.

First of all, I want to compliment you and to express to you our thanks for the patient and understanding way in which you have conducted these meetings. I have sat through the 4 days of meetings and I know it must have been very trying to you. I hope some good has been accomplished.

I think, in line with the agreement you worked out between the Grazing Service and the Park Service, the trip is well worth while. I

hope Mr. Brooks will remember the lava flow when he's putting his grazing up there, and doesn't let the cows get out to eat the rocks.

I did have quite a bit I wanted to talk about, but the hour is so late and everyone wants to leave. I am going to give you the resolutions and then take advantage of your offer to extend my remarks in the record, as it were.

I have here resolutions from several counties in the State concerning Senate bill 978. You, being the author of that bill, I think you are well acquainted with it. I might say that all the people I have talked to are very much in sympathy with the amendment, as proposed by our Land Commissioner, Mr. Williams, which will give us a little more leeway in distributing these lands.

The CHAIRMAN. I think they are salutary and worth-while amendments.

Mr. SPEAR. We hope they will be adopted.

I also have a resolution concerning a bill introduced by Senator Hayden, with reference to the appropriation for national monuments, and support his thought very much; that it should be done only by congressional approval. I would like to have that in the record.

I also have here something which I think would be of interest to all concerned that should go into the record on behalf of the taxpayers. It is the amount of various pieces of land that have been acquired by the military throughout the State and removed from the tax rolls.

With that explanation, and with the opportunity which you have offered me for extending my remarks, I am going to again thank you for being here, and I will get the stuff out.

(The documents referred to are as follows:)

COUNTY OF MARICOPA

STATE OF ARIZONA

OFFICE OF THE CLERK

STATE OF ARIZONA,

County of Maricopa, ss:

I, James E. Desouza, clerk of the board of supervisors, do hereby certify that the following resolution was unanimously adopted by the board of supervisors at a meeting held May 10, 1943:

"RESOLUTION

"Whereas it has come to the attention of this board that legislation is pending in the United States House of Representatives (H. R. 838) providing for the relinquishment of Arizona lands by the Atchison, Topeka & Santa Fe Railroad Co., the enactment of which would deprive the State of all tax revenues therefrom: Now, therefore, be it

"*Resolved*, That the Board of Supervisors of Maricopa County express its disapproval of said proposed legislation; and be it further

"*Resolved*, That endorsement be given to United States Senate bill No. 978 which provides that the income from such relinquished lands be credited to Arizona school funds in order to reimburse the State to the extent of such receipts.

"In witness whereof, I have hereunto set my hand and affixed the official seal of the board of supervisors. Done at Phoenix, the county seat, this 10th day of May A. D. 1943.

"J. E. DESOUZA,

"Clerk of the Board of Supervisors."

MAY 13, 1943.

HON. CARL HAYDEN,
United States Senate, Washington, D. C.

DEAR SENATOR HAYDEN: Recently there was brought to the attention of the members of the board of supervisors House Resolution 838 and Senate bill 978, relating to the disposition of lands acquired by the Federal Government from the Santa Fe Railroad.

It is understood that these lands were once given by the Government to the Santa Fe Railroad Co. in the early days of railroad development through this western country. As such they were, then, private lands on which the railroad company paid taxes and from which it derived such revenues as it could from sales and rentals. As one of the considerations of the grant, the Government was given freight-free transportation of its shipments over grant lands.

The members of the board discussed the two proposed bills and have directed me to advise you that they have gone on record as opposed to House Resolution 838 and solicit your earnest efforts in defeating its passage, and in supporting Senate bill 978.

The Federal Government has, undoubtedly, been paid many times over for these lands through freight-free shipments and inasmuch as for many years they have been in private ownership, it seems that they rightfully should continue to accrue to the benefit of the people of the State of Arizona.

As you know, Yavapai County has joined with the other counties of Arizona in support of the interests and efforts of the Interstate Association of Public Lands Counties of the 11 Western States, and with the Government already owning some 63 percent of our State and some one-third to five-sixths of the lands of the 10 other Western States, is opposed to further acquisitions by the Government of large sections of land.

Your serious consideration and efforts in behalf of Senate bill 978 will be appreciated.

Yours very truly,

KENNETH AITKEN, *Clerk,*
Board of Supervisors, Yavapai County, Ariz.

GLOBE, ARIZ., May 4, 1943.

Senator ERNEST W. McFARLAND.
 Senator CARL HAYDEN.
 Representative JOHN R. MURDOCK.
 Representative RICHARD HARLESS.

DEAR SIR: The board of supervisors of Gila County has instructed me to write you relative to H. R. 838 and S. 978.

The three members of this board are in favor of the passage of S. 978 and against H. R. 838 and will appreciate anything you may be able to do to insure the passage of S. 978 and the defeat of H. R. 838.

Thanking you for your consideration in this matter, I am,

Yours very truly,

ADAH H. ANDERSON, *Clerk.*

KINGMAN, ARIZ., May 7, 1943.

ARIZONA TAX RESEARCH ASS'N,
Heard Building, Phoenix, Ariz.:

The Board of Supervisors of Mohave County urge your support of Senate bill 978 and request that you make every effort to see that House Resolution 838 is defeated.

MOHAVE COUNTY BOARD OF SUPERVISORS,
 By W. D. LANE, *Chairman.*

RESOLUTION OF THE BOARD OF SUPERVISORS, PIMA COUNTY, ARIZ.

Whereas there are pending in the Seventy-eighth Congress of the United States House Resolution 838 and Senate bill 978, relating to the release of lands heretofore owned and claimed by railroad carriers; and

Whereas it is deemed by this board to be to the best interests of the State of Arizona and the counties thereof that said House bill do not pass, and that said Senate bill do pass: Be it therefore

Resolved by said board of supervisors, that said board is opposed to the passage or adoption of said House Resolution No. 838, and that said board approves and desires the adoption of said Senate bill No. 978, and; be it further

Resolved, that a copy of this resolution be sent to Senators Hayden and McFarland and to Representatives Murdock and Harless.

Dated this 10th day of May 1943.

R. H. MARTIN,
Chairman.
THOMAS COLLINS,
Member.

STATE OF ARIZONA,
County of Pima, ss:

I, Sylvia G. Powell, clerk of the board of supervisors, Pima County, Ariz, do hereby certify that the foregoing is a true and correct copy of a resolution passed by said board on the 10th day of May 1943, as the same remains of record and on file in my office.

In witness whereof I have hereunto set my hand and seal this 10th day of May 1943.

SYLVIA G. POWELL,
Clerk, Board of Supervisors.

RESOLUTION

Whereas there is now pending before the Seventy-eighth Congress of the United States Senate bill 978, introduced by Senator McCarran, of Nevada, relating to certain lands released to the United States by carriers by railroad pursuant to section 321 (b) of the Transportation Act of 1940; and

Whereas it appearing to this board that said Senate bill 978 provides that any lands with respect to which a release has been filed with the Secretary of the Interior by a carrier by railroad shall be granted by the United States Government to the State in which said lands are located, and the proceeds from the sale of said lands to be used by said State exclusively for school purposes: Therefore, be it

Resolved, That this board go on record as favoring and urging the passage of said Senate bill 978 as written; and be it further

Resolved, That copies of this resolution be mailed to each of this State's Representatives in the United States Congress.

BOARD OF SUPERVISORS OF GREENLEE COUNTY, ARIZ.,
By S. A. FOSTER, *Chairman.*
W. L. FERGUSON, *Member.*
STANLEY GRADY, *Member.*

Signed and dated this 3d day of May 1943.

Attest:

H. E. BRUBAKER, *Clerk.*

JUNE 14, 1943.

HON. CARL HAYDEN,
United States Senate,
Washington, D. C.

DEAR SENATOR HAYDEN: During the past 30 days I have received quite a lot of correspondence regarding House Resolution 838 and Senate 978 relating to the disposition of lands released by the railroad companies to the Federal Government.

In discussing these bills the Board of Supervisors of Coconino County directed me to advise you that they favor Senate 978 as the better of the two. They are very much opposed to H. R. 838 and solicit your every effort to defeat the same should it reach the Senate.

We believe that these lands should be handled in such a manner as to benefit the taxpayers of this county and any other county in which they are located. Senate 978 does not take this into consideration but will indirectly benefit the county taxpayers by helping the schools.

Coconino County's stand on Federal acquisition of lands is well known to you and we urge that you give us every consideration on all such matters that may come before you.

For the benefit of Arizona, we urge you to defeat H. R. 838 and pass Senate 978.

Yours very truly,

COCONINO COUNTY BOARD OF SUPERVISORS,
SHELBY MCCAULEY, *Clerk.*

RESOLUTION

Whereas the Federal Government of the United States through its various bureaus administers and controls approximately 76 percent of the entire area of the State of Arizona in national parks, national monuments, Indian lands, etc.; and

Whereas such bureaus have set aside for national parks and monuments great areas of range and timber lands to the detriment of Arizona's principal industries, and these parks and monuments, in many instances, embrace considerably more acreage than is necessary for the administration of such national parks and monuments; and

Whereas tremendous areas have been withdrawn from the public domain without the knowledge or consent of the respective State's congressional delegates or the taxpayers of such States; and

Whereas the general opinion and wish of the taxpayers of Arizona is that a program of reduction, rather than further expansion, be instituted without delay; and

Whereas Senator Carl Hayden of Arizona has introduced a bill in the Congress of the United States which will prevent further withdrawals of land from the State of Arizona for parks and monuments, etc., without congressional action thereon: Now, therefore, be it

Resolved, That Arizona citizens do protest the further withdrawal of lands for parks and monuments and that those already thus withdrawn be reduced in area wherever possible; that legislation be enacted whereby no such lands be withdrawn except by an act of Congress, and that Senator Hayden's bill receive our unlimited support; and be it further

Resolved, That this resolution be made a part of the record of the hearings of the House Subcommittee on Public Lands held at Flagstaff, Ariz., the 4th and 6th of August 1943, Congressman J. Hardin Peterson, chairman and presiding officer.

Adopted August 19, 1943.

BOARD OF SUPERVISORS, MARICOPA COUNTY,
By JOHN A. FOOTE, *Chairman*.

Attest:

J. E. DE SOUZA, *Clerk*.

PRIVATELY OWNED LANDS TAKEN OVER BY UNITED STATES GOVERNMENT

Senator HAYDEN. Mr. Chairman, I would like to have entered in the record this letter by Mr. Brooks, giving the names of those interested in the land that was taken in the Camp Bouse training area withdrawal.

The CHAIRMAN. Very well.

(The letter is as follows:)

DEPARTMENT OF THE INTERIOR,

GRAZING SERVICE,

Phoenix, Ariz., August 30, 1943.

HON. CARL HAYDEN,

United States Senate, % Postmaster, Phoenix, Ariz.

MY DEAR SENATOR HAYDEN: Pursuant to your recent request for information relative to the effect the Camp Bouse training area withdrawal will have on various livestock operators in the area, we submit the following information. The War Department advises that joint grazing use cannot be permitted in this area under any circumstances, and that all livestock ranging thereon must be removed immediately. The training area includes approximately 351,360 acres.

John Hargus has a 10-year term permit for 520 cattle or the equivalent in goats. All of his Federal range allotment is included within the Camp Bouse training area. His current use is 1,500 goats, 70 cattle, and 17 horses. The withdrawal will necessitate removing all of his livestock.

Henry Stieg has a license for 1,900 goats. All of his Federal range allotment is within the area and all of his livestock must be removed.

Tom Miller has a license for 25 cattle. All of his Federal range allotment is within the area and his livestock will have to be removed.

Mrs. Rhoda Hatch Nohlecek has a free-use license for six burros used in conjunction with her mining operations in the vicinity of Cunningham Pass. All of her stock will have to be removed.

F. C. Tatum has a license for 40 horses. All of his Federal range unit is within the area and his livestock will have to be removed.

George Cline has a Federal range allotment, most of which is in the area, and the small balance is so situated that grazing use cannot be made on it as a unit. He has a term permit for 385 cattle, but at the present time he has no livestock on his allotment.

Kenneth Hodgman and Carl Miller, operating as a partnership, have a license for 300 cattle and 6 horses. The training area embraces their headquarters ranch in section 29, T. 9 N., R. 9 W., and two reservoirs on the Bullard Wash in the same township. Their headquarters ranch is the only permanent water available to livestock on their Federal range allotment and the training area will necessitate the removal of all their livestock.

The operators heretofore mentioned are the most seriously affected by the withdrawal inasmuch as their livestock operations are entirely eliminated.

Pedro Aguillo, Mrs. Ila May Gray, and Elias Orosco range their stock in a community allotment. The Camp Bouse withdrawal eliminates a relatively small part of the allotment and will not seriously affect the normal livestock operation since the waters servicing the range are some distance from the military boundary. Pedro Aguillo has a term permit for 80 cattle but his current use is 30 cattle and 6 horses. Mrs. Gray has a term permit for 70 cattle but does not have livestock on the allotment at the present time. Elias Orosco has a term permit for 80 cattle but his current use is only 35 cattle and 10 horses.

Pete Masse has a term permit for 470 cattle. His present grazing use is only 125 cattle and 7 horses. Mr. Masse's allotment is so located that he can continue to operate his present numbers. However, he would not be able to operate the stocking allowed under term permit.

R. E. Miller and J. E. Mattison have a term permit for 242 cattle. They are ranging at present only 50 cattle and 4 horses. They can continue to operate their present numbers, but would not be able to operate the numbers allowed under the term permit.

John H. Myers has a term permit for 363 cattle. However, he is not making current use of his Federal range allotment. The training area is so situated that he will not be able to operate his full term permit numbers.

R. H. Thompson has a term permit for 365 cattle or its equivalent in goats. His current use is 75 cattle and 5 horses. Although the training area embraces considerable land in the Thompson Federal range allotment, it is not believed that the withdrawal will necessitate reduction of his present numbers. The livestock on the allotment at this time are running along the Bill Williams River and they can be controlled so that only rarely would they graze on the training area.

J. B. Wilbanks has a term permit for 465 cattle. His present operations are 300 cattle and 20 horses. The training area will not materially affect this allotment and will not cause a reduction in present numbers of livestock.

In the Bill Williams community allotment there are several operators ranging from 21 to 300 livestock. The allotment is reduced by approximately 39½ sections which necessitates a reduction of livestock under permit by 121 head. In this area current use is somewhat greater than the term permits. The excess numbers are covered by temporary licenses on a short-season basis. C. M. Kimmel has a term permit for 17 cattle. His current use is 39 cattle and 8 horses. Ivan Kuykendall has a license for 52 cattle which is the number he operates at the present time. The Jesus Madril estate has a term permit for 28 cattle and the current use is 60 cattle. S. G. Madril has a license for 30 cattle and 70 horses which just covers his current use. Mrs. Wenceslada Olea has a term permit for 21 cattle. Her current use is 40 cattle and 3 horses. E. E. Rodgers has a term permit for 20 cattle, his current use is 21 cattle. Harold Shontz has a term permit for 225 cattle and his current use is 300 cattle and 5 horses. The training area will necessitate a proportionate reduction by the operators in this Federal range allotment equivalent to 121 animal units.

Over all, the entire training area will result in a reduction in current use equivalent to 1,265 animal units and the total reduction in term permits is equivalent to 2,151 animal units.

As you suggested, we are making a copy of this letter available to Senator McCarran for whatever use he may desire in connection with his current land hearings.

Sincerely yours,

L. R. BROOKS, *Regional Grazier,*
W. J. ANDERSON, *Acting.*

Senator HAYDEN. There is also a letter written by Henry P. Stieg, which I think would be appropriate to insert, in connection with these other matters.

(The letter is as follows:)

Hon. CARL HAYDEN,
Senior Senator of Arizona,
Phoenix, Ariz.

PHOENIX, ARIZ., August 18, 1943.

DEAR MR. HAYDEN: Relative to the matter of condemnation of my property for Federal Government use.

Upon receipt of this information it was necessary for me to secure additional property for the transfer of my stock. I was able to get a lease on additional property at a cost of \$500 and have already moved 900 head. The balance of my stock will be moved within a week from this date. The expense of moving will be approximately \$600.

The Office of the United States Engineers have advised me that no funds have been appropriated for the reimbursement of expense of establishing my business or recovery of my investment. They only have the authority to appraise the property on the basis of the value to anyone else.

It is not possible to dispose of my stock at the prevailing prices for meat purposes without suffering a loss of approximately \$4,000, and of course the improvements I have made would be lost entirely, also the use of my water rights would be a loss.

The amount of my investment and expenses is as follows:

Transfer from John Hargis of the west portion of his allotment consisting of approximately 70 square miles, which is now known as the Henry P. Stieg allotment.....	\$3,000
For the purchase of goats grazing on this allotment.....	9,500
For improvements and water rights.....	4,000
Total.....	16,500

In order to establish my business it was necessary for me to incur obligations amounting to \$5,000.

It does not quite seem just and equitable according to American standards to require a person to lose his savings and deprive him of the opportunity of paying his obligations necessary in the establishing of his business. You doubtless appreciate the fact that should my holdings consist of ordinary farm land and necessary equipment for farming it would be less difficult to vacate, and when the appraisal is made on a goat ranch it will doubtless be considerably less than it would be on farm property as goat raising is a special line of business in which only a few may desire to engage.

It is my earnest desire to assist and cooperate in the war effort in every way possible and my object in addressing this communication to you is with the hope that a thorough understanding of my situation may be had and that the condemnation proceedings may be tempered with justice.

Respectfully,

HENRY P. STIEG.

The CHAIRMAN. I made the announcement that those who wish to be heard as regards Senate bill 1152 would be heard at this hearing. Is Mr. Kartchner here now? Do you care to be heard?

STATEMENT OF K. C. KARTCHNER, STATE GAME WARDEN, PHOENIX, ARIZ.

Mr. KARTCHNER. Senator McCarran, I realize the hour is getting late, and certainly I had better make this as brief as possible.

You know by this time that all the game departments of the 11 Western States are opposed to the provisions of your bill, S. 1152, and if it has not already been done I would like to introduce into the record our resolution No. 1, adopted at our annual meeting in Reno in June, pertaining especially to the provisions of that bill.

I am speaking now as a representative of the 11 Western States, for the game or conservation departments, who have unanimously gone on record against this bill. Incidentally, I might mention that your own State of Nevada has joined our association recently and we welcomed them into the organization.

Now, all I want to say in introducing that resolution, each of us has a thought as to the exact title of wildlife within the States. Some are of the opinion that wildlife within the borders of a sovereign State belong to the people of that State, and they are held in trust by the officers of the State and administered accordingly. Some others hold that wildlife on the Federal lands within the State go with the land and belong to all the people of the United States.

Now, I do not presume to be a lawyer, but I would like to cite, briefly, one or two decisions that have borne on that relationship. In the famous *Kaibab case*, *U. S. v. Hunt*, 1927, it was held and rightfully so, that the Government may stop the menace of overpopulating game, to put a stop to the damage to the trees and vegetation; and that, of course, is recognized by all State departments. There is this significant statement in that decision, however: "This is not to include the licensing of hunters to transport deer killed on reserves to places outside the same in violation of the game laws of Arizona." We feel that is a definite recognition of Arizona's claim on this game.

Here is another very interesting decision, which was back in 1896, by the United States Supreme Court, *Geer v. The State of Connecticut* (161 U. S. 519). They held that, on the subject of wild game, the State may preserve for its own citizens the wild game if it pleases. Another part of it states that the ownership of the wild game within the limits of the State, so far as it is practicable, the ownership is in the State for the benefit of all the people in common.

Another citation here is a case back in 1909, a decision rendered by the Supreme Court of the State of Florida, which is significant in its relation to the Original Thirteen Colonies, which came together in a federation and laid down the foundation for our great Nation:

The power to regulate the killing and use of game was vested in the Colonial governments of America and passed with the title to game in its natural condition to the several States as they became sovereign.

We like that decision.

In connection with this bill, 1152, we believe that the machinery has already been set up to handle over-populated areas; and we believe that the game departments, particularly of the West, of which we have most knowledge, and largely throughout the United States, have advanced in the science of game management on a par with the Federal agencies. We claim that the wildlife on Government-owned land is in the same status as the wildlife on the privately owned land. Certainly, when a deed is issued to private ownership, it does not carry with it the wildlife thereon. There are provisions set up in the State laws wherein the game damages, damage to private property, the owners may apply to the constituted agency handling wildlife for relief. It is incumbent upon that agency to take some action in the matter, and I think the same will apply in any case of over-populated game on federally owned land. The State game departments should take cognizance of the overpopulated game areas, and is ready and willing at all times to cooperate with the Federal agencies in examination of those areas, and, in a cooperative effort, to determine what the problem is and what is necessary to correct it.

I understand in the State of Colorado they have a system there of committees composed of representatives of the Forest Service, the stockmen, and the State game department, to examine these areas from time to time to determine the condition and what is necessary to

properly regulate the wildlife in its relationship to the livestock industry and other legitimate interests. We believe that that is the solution of that problem wherever a game problem arises, and that certainly the Kaibab incident, which is so often referred to, was one of the most outstanding lessons, not only to the Federal Government but to the State game departments; so what will happen if you make conditions so favorable for the production of game that eventually it will eat its head off and devastate the range. It is one of the world's worst examples in history of game management. We will all take note of that and profit by the mistake as much as the Federal Government.

We don't see any need for 1152 because, I think, the range is taken care of as well without necessitating the Federal Government stepping in, and attempting to issue licenses to anyone in the United States, regardless of State residence, taking active control of the hunting of this game, and allowing it to pass across State boundaries, and allow the sale of this game. We are getting far in the direction of usurpation of State rights when that is threatened, and we think the entire country, the great success we made in this Nation, was based upon the State unity. If such legislation as this is enacted, I wonder what would follow, in the way of Federal Government coming into the State and handling the affairs that have heretofore been handled under State sovereignty.

I believe that is all, Senator. I do have one gentleman here I would like to have heard for a few minutes.

(The resolution referred to by the witness is as follows:)

RESOLUTION No. 1

The Western Association of State Game and Fish Commissioners in its Twenty-third Annual Conference at Reno, Nev., June 24, 25, and 26, 1943, has given very careful consideration to Senate bill No. 1152 which was introduced by Senator McCarran, of Nevada, and which has been referred to the Public Lands and Surveys Committee. The association, after deliberating and after hearing arguments thereupon unanimously reports as follows:

Since the days of early England it has been the unquestioned right of the sovereign to control the taking of fish and game. Prior to the Magna Carta, the title to fish and game was fixed in the crown and since that time, and particularly since the adoption of the system of English common law by the sovereign States of the United States, it uniformly has been held that the title to fish and game within the boundaries of the State is vested in that State in trust, however, for the people thereof. This theory has been upheld uniformly by the decisions of the courts of last resort in every State where it has had judicial cognizance, and by the Supreme Court of the United States where it has been on appeal many times. It is submitted that inasmuch as the questions presented by Senate bill No. 1152 here in question, already have had the judicial interpretation of our courts, the States affected should take a determined stand that these judicial decisions shall not be reversed or again brought into question by the passage of any such bill which is obviously endorsed by certain ambitious governmental agencies.

We feel that the threatened passage and enforcement of Senate bill No. 1152 is an unlawful appropriation of the property of the people of a sovereign State which the officers of that State, and particularly the fish and game commissioners thereof, are sworn to defend. Any attempt on the part of a Federal bureau or agency, even though supported by such a bill, to transgress upon this duty and right is in direct violation of all of the principles of the organic acts and constitutions of the States involved as well as of the Federal Constitution itself. It is also in direct violation of the spirit of all former statutes and acts promulgated by the Congress of the United States, the legislatures of the several States, and the judicial interpretations rendered thereupon. We believe the States involved should see to it that this bill is defeated to the end that no part of the principles

involved shall ever accepted by the public, for while the initial steps in the passage of such a law may seem mild and of little consequence, still it may be and we believe that it would be the initial step in complete usurpation of States' rights. Furthermore, without question it would amount to confiscation of property without due process of law.

We feel that the principle is entirely unsound, unjust, and uncalled for. We believe that this is an unprecedented encroachment upon State rights even at the present level of such infringements as are being made from day to day by various bureaus and agencies of the Federal Government. If it be that Senate bill No. 1152 is being sponsored by any individual or agency in the name of the war effort, we condemn that as an absolutely invalid and unjustifiable excuse and subterfuge to hide the real motive.

Therefore, we respectfully recommend that all States involved, and every State in the Union is involved, unite in vigorously protesting the passage of this bill which, if passed, would result in Federal bureaus further seriously encroaching upon State rights.

While we are appreciative of the cooperative work done by the various Federal land administrative agencies with the fish and game departments of the several States in furtherance of propagation and protection of wildlife, and while we shall continue to welcome such cooperation as long as the same does not ripen into usurpation of State powers, we resent this attempt to take over control by Federal agencies of game on Federal land by the issuance of hunting licenses or permits. We submit further that, laying aside all questions of the legal status of game and the prerogative of its control, the provisions of the bill would be impossible of administration due to the fact that land ownership on national forests, public domain, and other publicly owned lands are of a checkerboard type, private lands, State lands, and Federal lands alternating to an extent that no hunter would be able to determine definitely at any given time whether or not he was hunting on public land, private land, or State-owned land. This fact alone is sufficient reason for defeating this bill.

NOW, THEREFORE, it is ordered by the Western Association of State Game and Fish Commissioners that copies of this resolution be sent to every Member of the United States Congress, and that, in addition, the special attention of the Public Lands and Surveys Committee be called to the facts presented herein. It is further ordered that a copy of this resolution be sent to the State game commissioners of all the States of the Union and to all State and national organizations directly and indirectly interested in the welfare and proper management of the wildlife resources of this country. It is further ordered that a copy of this resolution be sent to every livestock organization in the Western States with the request that they join this association in opposing Senate bill 1152, which would be an unjustified encroachment upon State rights.

STATEMENT OF R. K. WICKSTRUM, PHOENIX, ARIZ.

Mr. WICKSTRUM. I am representing the organized sportsmen of Arizona, and I am also the vice president and a member of the directors in the Western Federation of Sportsmen.

Mr. Chairman, I would like to say to the stock people present that, without question, the Western Federation of Sportsmen and the sportsmen of the State of Arizona very definitely recognize that the stock people of the West do have a problem in certain areas of overpopulated game. Recognizing that problem, they also feel that they have, the States themselves, have a greater problem in solving it. The sportsmen also feel that this thing is a new thing that has come into the West, in fact, we might say, in the last few years; and that the game departments, as Mr. Kartchner pointed out, have changed in their methods of handling game, and they should be given time to solve these problems in these very isolated cases where we do have an oversupply of game.

We feel, too, that the stock people themselves fully recognize that public lands do have a multiple use, and we know from our experience and contacts with them that they very much approve of wildlife on

the ranges. We are thankful to Senator McCarran that, by his introduction of S. 1152, he has brought this issue before the public of the West, and we are confident that it will bring about changes in the management of game, especially game problems that we have on the national forest, to where they will be handled by the States themselves.

We think largely the problem is one of education, that the sportsmen must be somewhat shown that there is a problem that exists there, and we believe that that can be done.

Our principal objection to S. 1152 is the point Mr. Kartchner brought out, which we believe the stockmen themselves will agree with us on, and that is that it definitely does take away from the people in the States the right to manage their own problems.

I think that is all.

The CHAIRMAN. I just want to make a very short statement there.

There isn't any question in the mind of the author of S. 1152 as to where the ownership of wildlife rests. The Supreme Court has decided it time and again.

But that is not the question, gentlemen. The people themselves have fixed the law on the subject. If the Federal Government would refuse, from year to year, to appropriate money for the eradication of predators on the open public domain, the cry would go up to high heaven, from every State in the West, and rightfully so. That the public domain is the property of the Federal Government is acquiesced in by every man who sits here today, because he lends himself to the domination of the Federal Government over the public domain when he takes the allotments from the Federal Government, and is governed by their control; so the ownership of the open public domain is a settled question. Now, has a private individual the right to remove a destruction to his property? The answer is "Yes." The Federal Government is a private owner of the public domain, so-called; so it has the right, for the welfare of the Federal Government, and for the welfare of the allottees on the Federal range, to remove that which destroys or impairs the range. You agree in one instance; you say, "remove the predators," but you question the authority on the other.

I only dwell on this to show you that the people themselves have built this law. We are not dealing with a theory; we are dealing with a condition. The Federal Government has, by reason of a certain condition in the State of Arizona, taken the step that proves the question; and that is, they went into the Kaibab and killed off the deer, and the Supreme Court of the United States held they had a right to do it. What is more, the Supreme Court went further than the circuit court of appeals and said they could remove the bodies by taking them. So we have it settled by law.

That is the law now. If we let it stand as it is, and we can do so, the Federal Government is dominant, because they have the law settled in their favor.

Now, what do we want? Do we want an Executive order, handed down to us here, to tell the Forest Service to step in, on a certain territory, and remove the game animals there? Do we want an Executive order that will say that wherever the Grazing Service finds that a certain territory is overburdened with wildlife, it may go in and kill off? Or would we rather have an act of Congress which would bring into it cooperation with the States of the Union?

No one will contend that this bill is a perfect bill. I contend that it was introduced, and is now before the public, for the purpose of arousing the interest of the public, and the knowledge of the public, in a fundamental thing; and that is, that the game on the open public domain is the property of the Federal Government, that it may be removed by the Federal Government, when it becomes a destructive agency.

Now, in order to get the State and the Federal Government into cooperation, we sought to have the Federal Government, first, compelled to go to the State and say, "You have within your boundaries a certain area that is overinfested with game animals, and we ask you to make arrangements, immediately, for their reduction." That is the very first provision of the bill. Some States have already taken the step in the other direction. My own State passed an act, in the last legislature, which is in the record now. It sets up a committee to deal with that question; that, where there is an overabundance of wildlife in a given section, a committee may be set up composed of a representative of the Forest Service, a representative of the Grazing Service, a representative of the Park Service, a representative of the State, and other representatives of interests, to deal with something there that is recognized to exist. So, there is a meeting of the minds in the State and the Federal Government, trying to get together.

This is a prohibitory bill as it stands now, because it is in there; and, if it were to become a law, the Federal Government could not go in and kill without first submitting the question to the State and asking the State to take hold of the problem. Today, it can; and if an Executive order were to issue, which might come down overnight, as the Jackson Hole order came down overnight, so other things have come down overnight, if an Executive order were to issue to go in and kill on the Kaibab, or kill on some other forest, here, you and I would have to remain mute. We wouldn't have a chance to say a word. All we could do would be to implore in the future that the Executive order might be modified or rescinded or set aside.

The law is already settled, by the Supreme Court of the United States, that it can be done. With Executive orders being handed down day and night, they have become the prevalent form of law today.

I sought to arouse the interest of the people of this country in a problem, to get the States in line, so that your organization, the State organizations, the sportsmen's organization of all kinds, in place of shooting at this thing and saying, "Kick it out," would get their heads together and say, "Let's formulate a progressive piece of legislation; get it into the hands of the States where it belongs."

If this bill, by simply being introduced, will do that, it will have served a splendid purpose.

Mr. WICKSTRUM. I think you are right, Senator McCarran.

The CHAIRMAN. The trouble is, my friends, and I say this in all good nature, you say "Kick it out," and you don't say, "Here is a suggestion I could make."

I could make a suggestion to you in a minute, because I can see through it. I think that one objection to this bill S. 1152, is that it sets up a conflict of authority, within the administrative departments of the Government. In other words, the Forest Service can say, "We will kill in here," and the Grazing Service says, "We will

not kill off here," so the Grazing Service does not harmonize with the Forest Service. I can see that; and, in that, it must be remedied. Any legislation which subsequently must get by must be remedied.

I can see another improvement to the bill. I can see, and nobody yet has suggested it, in place of putting in the alternative, where the Government says to the State that a condition exists here, and they would like to have the State go in and eliminate that wildlife, it could be said that the Federal Government shall not eliminate wildlife on any given area until it has first advised the State, and until the State has had an opportunity to act.

Those are, to my mind, proper criticisms of the bill. Some people thought the bill was going right through. Bills don't usually go through so fast. As a matter of fact, I saw to it that the bill would not go through, because I introduced the bill and then referred it to my own committee. It is here in this committee, now, and I have brought it here before you.

And that, gentlemen, is the whole story.

Mr. WICKSTRUM. May I ask, if you have no fear of this infringement of States' rights angles in the bill, do you not fear that these steps we are taking, one by one, day after day, through the years, will end in our finally being governed entirely from Washington?

The CHAIRMAN. Indeed I do. I am the most apprehensive member of the Senate, in that regard. I can see it coming, in leaps and bounds, and I regret it more than anything else, and I would stop it as much as I possibly can. I am the strongest exponent of States' rights that sits here today. I want the State to govern its people, because I believe the nearer you bring the Government to the individual, the lighter government rests on the shoulders of the individual. That is my belief, all the time.

Now, in respect to this bill, the law is already settled. It isn't a question of making a new law; the Government has the right, it is their property, and they have the right to go in and kill. They don't have to come to you at all. You simply cannot say we are throwing away States' rights in this bill. The rights are already established.

Today the Federal Government can go into the Kaibab and kill off, if the Federal Government determines there is too much wildlife in the Kaibab. That is the law now. Does this bill take anything away from that? No, it reduces that power, because this bill says before you can go into the Kaibab you have got to go to this gentleman down here, and the Governor of the State of Arizona, and whoever the authority is, and say, "We find this condition in the Kaibab and we want you, the State of Arizona, to remedy it." If you don't remedy it, they can take action. So the law, as it stands now, is much more drastic in its disregard for States' rights than S. 1152.

Mr. WICKSTRUM. We have, perhaps, two instances where that has been invoked in the United States.

The CHAIRMAN. Two are enough.

Mr. WICKSTRUM. Well, supposing the supervisor over public lands has an idea there is too much here and too much there—

The CHAIRMAN. Supposing you got an Executive order that put it down in harder and faster terms than this bill, S. 1152? Then you'd say to Congress and your Representatives, "Why didn't you take care of this by legislation?"

Now, I say to you gentlemen here, who are interested in sportsmanship, and I am, as much as you are, I say, let's get our heads together and formulate a progressive piece of legislation that will handle an intricate subject.

Mr. WICKSTRUM. I believe that is right.

Mr. KARTCHNER. May I make one more comment? You say that is already the law?

The CHAIRMAN. Yes, indeed.

Mr. KARTCHNER. The Supreme Court has carefully made the exception of not allowing the transportation of deer, if it is not in accordance with State law; and certainly in no case is there a law that provides for the sale of wildlife.

The CHAIRMAN. Here is what the Kaibab decision said: The court accepted the opinion and decree of the lower court, with the modification that all carcasses of deer, and parts thereof, shipped outside the boundaries of the reserve should be plainly marked with tags, or otherwise, in such manner as the Secretary of Agriculture might provide, to show that they were killed under his authority, within the limits of the reserve.

Mr. KARTCHNER. That is the Government doing it itself.

The CHAIRMAN. That is the Government doing it itself. Certainly, that is the owner of the territory eradicating what it deemed to be evil to the territory. They have a right to remove the bodies. The court says they have the right to dispose of them as they like. The court says so. The only thing the court says, with which we agree, is that they could not bring in licensed hunters, but that is so easily gotten around there is nothing to it. It doesn't protect us at all.

What I want is some protection for the States, and for the sportsmen of the States, and for the wildlife within the States, to get away from that drastic rule that has been the law since the Kaibab decision, and was the law before. That is the whole story.

I thank you very much. I appreciate your criticism, I hope you will give it further study, and that I might have the benefit of constructive criticism that will in time bring about legislation that will be worth while.

Mr. KARTCHNER. I want especially to emphasize for your indulgence, it is amazing to us how you can continue on with these hearings and are able to do so without getting tired. We thank you very much.

The CHAIRMAN. Each little problem is interesting to me. I get a lot of fun out of it. The only thing is, I get tired when it gets to be the same thing over and over again.

There was one case, Mr. Spence came down here, all the way from Fredonia. Is Mr. Spence here now?

Now, Mr. Spence, you testified up at Fredonia.

Mr. A. T. SPENCE. That's right.

The CHAIRMAN. Since that time the Grazing Service requested permission to put this summary into the record, showing the changes of allotments made to certain parties on the range, with reference to which you testified, and you will be permitted—the Grazing Service has not put it in the record as yet, but you will be permitted to make any comment you see fit.

(The summary referred to is as follows:)

Region No. 9—Arizona strip-grazing district

Name	May 1, 1936, to April 30, 1937	May 1, 1937, to April 30, 1938	May 1, 1938, to April 30, 1939	May 1, 1939, to April 30, 1940	May 1, to Dec. 31, 1940	Jan. 1, to June 30, 1941	July 1, 1941, to June 30, 1942	July 1, 1942, to June 30, 1943	July 1, 1943, to June 30, 1944	Term permits

1 Sold out.

2 Acquired Jump Springs and Inlay resort holdings in fall of 1939.

3 A. of yet determined (Sept. 7, 1943).

4 License during 1938 and 1937 held under name of Jos. T. Atkin & Sons, and interests divided in 1937 and 1938 between Rudger and Anthony Atkin.

5 Died and property acquired by A. F. Jensen.

6 Interests sold to Royal B. Woolley and others.

7 Properties sold to David and Lee Espin.

8 Base properties sold to Cecil C. Fugh and Merle Brinkerhoff.

9 Acquired the Earl Childers Properties in 1937.

10 Operations from May 1, 1936, to April 30, 1940, on a percentage basis on monument and forest lands; operations from May 1, 1940, to present time computed only on Federal range.

11 Acquired interests in House Rock Valley from the Grand Canyon Cattle Co. in 1941.

12 License from May 1, 1936, to May 1, 1940, issued under name of E. J. Foremaster & Sons; license from May 1, 1940, issued on a division of base properties.

13 Acquired holdings from the Nutter Livestock Co. in 1938.

14 License from May 1, 1938, to May 1, 1940, issued to Hatch Bros.; interests divided in 1941 between James L. Houston, and M. V. Hatch.

15 Acquired holdings from the Nutter Livestock Co. in fall of 1939.

16 Purchased part of LeRoy Cox base properties.

17 Acquired Junior Taylor holdings in March of 1940.

18 Acquired holdings from Lester Parker in October 1939, William Higley et al. in September 1939, John Sturzenegger in December 1938, and Nutter Livestock Co. in January 1941.

19 Acquired additional interests in Houserock Valley from the Grand Canyon Cattle Co.

20 Increase by reason of use of base properties purchased from the Grand Canyon Cattle Co.

STATEMENT OF A. T. SPENCE, TUCSON, ARIZ.

Mr. SPENCE. Well, I have additional statements here I would like to make, in addition to what I made in Fredonia; and with the permission of the committee I would like to add to the statement made at Fredonia, at which time I attempted to show from the records of the Division of Grazing how the grazing permits for certain individuals and had been imposed upon, reduced in number, or taken from them and given to others in that area.

Acquainted with the situation as I am, it seems very difficult for anyone to see this picture clearly without visiting the lands in question and investigating it, and also, at the same time, investigating how these permits have been issued.

I would like to cite a few instances to you. In one case cited at Fredonia a permit that had rated approximately 300 head of sheep which would have meant 60 head of cattle, after acquisition by another party, was increased to 240 head. In the second instance, as also previously stated to you, a permit on a given area was rated at 80 head, apparently, whereas this self-same area is now under permit to another and has been given a rating of approximately 300 head. These are cited instances, but are not by any means all of the cases in which a similar adjustment has been made.

In an attempt to secure an investigation for the situation, on two different occasions I visited the offices of the Chief of Grazing in Salt Lake City, Mr. Rutledge, and there talked to Mr. Rutledge, Mr. Mollohan, and Mr. Kerr, requesting an investigator from their office to visit the ground, and look into the matter as complained of, and on both such occasions I was assured there would be an investigator designated for this purpose, but to date no one has appeared, to my knowledge, or to the knowledge of anyone else.

If the Senator will recall, when I appeared at this hearing previously down here in Phoenix some 2 years ago, the question I advanced for discussion was with regard to the manner in which the advisory board members are elected. At that time I was concerned with and driving at this subject, with the hope that the present difficulties with which I am concerned might be avoided or eliminated.

The CHAIRMAN. Right there, will you pause for interruption?

You heard stated here today, I think, how these advisory board members are elected?

Mr. SPENCE. Yes, sir.

The CHAIRMAN. As stated here by the permittees—that was the forest, that is right, but the same is true under the Grazing Service?

Mr. LEECH. Yes, sir, Senator.

The CHAIRMAN. They are elected by the permittees?

Mr. SPENCE. That is true, Senator, but in our district up there a man might receive sufficient votes to be elected from other parts of the district, other than the precinct that he is representing, and at that time I was not so well acquainted up there. I had only been there a short time and I thought they might eliminate that trouble by getting this situation down by vote, but as I know it now, it perhaps would not have helped a great deal, because the advisory board member is still there.

Either I am right or wrong in assuming that discrimination is occurring in favor of some permittees as against others, and the ones

profiting by it specifically are members of the advisory board. I have consistently so stated, and I have been assured that the subject would be investigated in its entirety. If any effort had been made to do this, I would not be here to burden the committee with my story today; but after 18 months of constant efforts to obtain action, the matter remains unsettled. Therefore I am here for the express purpose of requesting the appointment and assignment of an investigator from the Washington office who can approach this subject without bias or prejudice or prior knowledge, and who can and will make a report upon this matter, without regard to the influence or standing of permittees within the area concerned.

The CHAIRMAN. I just want to make this remark, and it comes from the chairman on his own responsibility: An advisory board member should certainly be exceedingly cautious, and his board should be cautious, to the end that he receives no benefits, no prerogatives, no rights, more than the average permittee in the district. He occupies a very serious place. He is naturally under observation, and he would naturally be under scrutiny. It is natural for the fellow who does not get the privileges he should have to complain if he sees some board member getting something, although he may be entitled to it. It is one of the serious things that has impressed me during these hearings, because I think it was my bill that set the advisory boards into the law, and I think the advisory boards are democratic organizations. I think they bring the advice of the grazers into the office of the supervisor, and I think they do a splendid work, by and large; but I do think that great care should be exercised by the individual on the advisory board, because he is going to be under fire, and if he is under fire just to that extent he weakens the powers and influence and democratic atmosphere of the board of which he is a member.

Now, it is awfully easy to make accusations. There are some men who are bigger in certain communities and they are regarded and looked upon as powerful individuals. I think that is true in this case, that you have a certain individual who is looked upon as a powerful individual. He is, if I may use a homely expression, he is a big toad in a little puddle, and naturally the little fellows, with 25 and 30 and 50 head of cattle are looking at him all the time, and if he gets something that the little fellow thinks he shouldn't have, he is going to be the target, just as sure as I live, and yet he may be perfectly innocent.

Mr. SPENCE. Might I add this: So long as we have gone that far I offer for the information of any investigator who comes to look this situation over in this particular case, so far as large permits are concerned, I have bought, purchased, and paid for over 1,600 head. This particular advisory board member I refer to today has a much larger permit than I have. He has not purchased, I would say, much less than half of what I purchased, but today he has a larger permit than I have.

The CHAIRMAN. Well, we have that condition, and there was an expression made at the Fredonia hearing that I think should never have been made. That was when a member of the advisory board said to you while you were testifying that the only trouble with you was that you had been out-traded. That did not ring up good.

Mr. SPENCE. It was not true, Senator, in the first place.

The CHAIRMAN. I don't know whether it was true or not; whatever it was, this is not a trading question. In the administration of the open public domain, it is a question of rendering fair and exact justice, and God knows that is hard enough to render under conditions that prevail out here in the open. But that lent something to your argument that wasn't in your argument before.

Mr. SPENCE. When I say it wasn't true, I have not been outraded from an individual point. I don't think Mr. Woolley has ever outraded me, if I may mention names.

The CHAIRMAN. I am going to terminate this because Mr. Woolley is not here and it is hardly fair to go on with these hearings in his absence. He was at the Fredonia hearings.

Mr. LEECH. Mr. Chairman, I will be glad to take a list of cases that Mr. Spence would like to have looked into, and I will be glad to have each and everyone of them investigated.

STATEMENT OF DALE E. DOTY, SECRETARY'S OFFICE, INTERIOR DEPARTMENT, WASHINGTON, D. C.

Mr. DOTY. In view of the charge that has been made, an independent investigator will be sent out to this region to make the investigation.

The CHAIRMAN. That settles it. I'd like to say that I believe the charge has been made in all sincerity, and that the investigation should be made.

Mr. SPENCE. Senator McCarran, I would like to say this, too, I am very glad to hear Mr. Leech make that statement because if Mr. Leech recalls in his office I mentioned some of these subjects to him, and we were going to have an investigator down there from Salt Lake City or some place. Mr. Leech, I asked you for some other investigator than the immediate district grazier to be sent out there to investigate.

Mr. LEECH. I recall that, Mr. Spence.

Mr. SPENCE. You assured me that it would be done, and it has never been done.

The CHAIRMAN. I think you can go ahead now, gentlemen.

We are about to close this meeting. We may not have been able to meet everyone who was here, but we have utilized about all the hours there were in the day, up to this time.

We are grateful for those who came here, and we are glad of the advice you have given us. We are especially grateful for the presence here of the various services, and we want, here and now, in this city, to express our gratitude to the Second Assistant Secretary of the Interior who sent a representative of his office, who has attended these hearings right along.

If there is nothing further the committee will bring this hearing to a close.

(Hearings adjourned at 6:30 p. m.)

ADMINISTRATION AND USE OF PUBLIC LANDS

TUESDAY, SEPTEMBER 7, 1943

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON
PUBLIC LANDS AND SURVEYS,
Albuquerque, N. Mex.

The subcommittee met, pursuant to call, at 10 a. m., at Albuquerque, N. Mex., Senator Pat McCarran presiding.

Present: Senator Pat McCarran, Nevada (chairman), Senator Dennis Chavez, New Mexico.

Also present: Clinton P. Anderson, Congressman, New Mexico; Antonio M. Fernandez, Congressman, New Mexico; E. S. Haskell, special investigator.

The CHAIRMAN. The meeting will come to order.

This meeting is conducted by a subcommittee of the Committee on Public Lands and Surveys of the United States Senate pursuant to a resolution passed by the Senate of the United States. We wish to say at the outset that we approach these meetings with the hope that those who are interested in the subject under discussion will feel at ease; that they will feel at liberty to discuss the problem or the subject in their own way. You need have no fear of consequences. Let me say, emphatically, that this committee is prepared to defend its hearings; and any attempt at reprisals, as regard those who make statements for the record, before this committee, will be dealt with in a way that those found guilty will wish that it had never happened. We want the people of this community to know that this is an attempt on the part of the Government of the United States to bring the Government out to the field so that it may listen to the people who are governed; so that we may hear your problems, and understand your troubles; so that we may receive suggestions for the betterment of the administration.

We have had the privilege, in these hearings that we have conducted in Nevada and in Arizona, during the past 2 weeks, of having with us the representatives of the several departments and bureaus. They are here with us now. They have come, some of them, all the way from Washington, to be present at these hearings; that, out of these hearings, there might come a full understanding and a cooperation between the administration of the several bureaus and departments and the people who are governed by them.

We realize that men who are in the stock business and in the business of the utilization of the open public domain are not accustomed to public speaking. As a rule, they are reticent to speak in public. We realize that if we could go out onto your stock range with you or onto your farms with you, you would probably tell us your story

in your own way. We also realize that if we were able to go out to the Indian reservations we might hear from the Indians and from their administration. We want you all to be at ease and want you to tell your story just as you would to us if we were out in the reservation or on the range with you. Use your own language. Our reporter has an asbestos machine, so you don't have to worry about burning up the record. Use your own language and tell us your story just as you would tell it to your neighbor. We are here for the purpose of trying to help you in every possible way.

Now, let me say before we open this meeting, in the Phoenix paper, in the city of Phoenix, day before yesterday morning there was published excerpts from a letter purported to be signed by Henry Chee Dodge. The letter was addressed to Senator Hatch, of New Mexico. The letter appears to have been dated September 1. Senator Hatch's secretary, Mr. McMains, who is here, states that the Senator has not yet received the letter.

That letter challenges this committee in no uncertain terms. It challenges this committee by attempting to throw fear into this committee and into its investigator by saying we were coming here and would be misled by statements that would be made to us. Whoever inspired this letter was in very small business. The chairman of this committee, on his own authority, now says that this committee is not to be intimidated. No letter coming in this form, especially when delivered through the press to this committee before it is delivered to the Senator to whom it is addressed, will have much weight with this committee. We will hear these problems as they are presented and there isn't any fear of this committee being misled by anyone nor by anything. The agency that may have inspired this letter may be tempted to mislead the committee, more than some other agencies referred to. Let that matter drop right here and now. The committee has no fear of any misleading. We have feared that the truth may not come out. That is the one apprehension that we have, because men are not inclined to talk freely on their own problems.

So far as the Indian question in this district is concerned, it will be listened to freely, fairly, frankly, and without fear or favor to or from anyone.

We have with us Senator Chavez, the junior Senator from the State of New Mexico. We hope that the two Congressmen will come forward and take a seat with us. Senator Hatch, the senior Senator from New Mexico, wired me some days ago that it would be impossible for him to be here because of previous engagements. Mr. McMains, the congressional secretary to Senator Hatch, is here, and the committee invites Mr. McMains to participate in this hearing. He is the clerk of the Committee on Public Lands and Surveys of the United States Senate, and he is free and invited to participate fully in these hearings, in any way that he may see fit, either by way of interrogation or suggestion. We want Senator Hatch to have a full transcript of what transpired here in his own State.

It has been suggested, as a policy of procedure here, and we are accepting this suggestion, that the question of what is known as district No. 7 be brought up first, and then other areas in the historical belt here in New Mexico.

Let me say that Governor Dempsey is here on the platform. We hope that he will find it convenient for him to be with us at all of these meetings. We hope that he will participate so far as he may see fit. He is invited to participate in every way. The congressional delegation will also participate fully and we hope that they can remain with us constantly.

There will be cards passed through the audience. On these cards will you please place your name, your post-office address, and your business. If you are connected with any organization or if you are an officer or representative of any organization, please make note of that on the card. This is the only method of registration of the attendance that the committee has, and we find it most convenient.

(The following is the list of persons registered at Albuquerque, N. Mex., hearings:)

- Diego Abeita (secretary, Isleta Indian Pueblo), Isleta, N. Mex.
 John R. Abeita, governor of Isleta Pueblo, Isleta, N. Mex.
 Dr. S. D. Aberle, superintendent, United Pueblo Agency, United States Indian Service, Albuquerque, N. Mex.
 John A. Adams, United States Forest Service, Albuquerque, N. Mex.
 James R. Ahl, district grazer, United States Grazing Service, Department of the Interior, Alamogordo, N. Mex.
 John J. Alonzo, Box 198, Albuquerque, N. Mex.
 J. F. Akers, Conejo, N. Mex.
 Rupert F. Asplund, director, Taxpayers' Association of New Mexico, Post Office Box 557, Santa Fe, N. Mex.
 O. Fred Arthur, supervisor, Cibola National Forest, 408 Federal Building, Albuquerque, N. Mex.
 Elliott S. Barker, state game warden, Santa Fe, N. Mex.
 Arthur Bibo, Cubero, N. Mex.
 William A. Brophy, special attorney for Pueblo Indians, 806 First National Bank Building, Albuquerque, N. Mex.
 Edgar A. Bond, Ramah, N. Mex.
 W. A. Berryhill, Prewitt, N. Mex.
 J. Wylie Brown, Box 127, Quemado, N. Mex.
 George A. Boyce, director of Navajo Schools, Window Rock, Ariz.
 Wilson Bennett, Alamogordo, N. Mex.
 Frank Bryant, El Paso, Tex.
 J. F. Branson, Box 67, Thoreau, N. Mex.
 Franklin Bond, Box 1327, Albuquerque, N. Mex.
 Eli Beardsley, Box 763, Winslow, Ariz.
 Roderick M. Beach, Box 94, El Morro, N. Mex.
 Marvin E. Bezemek, Albuquerque, N. Mex.
 M. W. Burks, Mills, N. Mex.
 Isabel Benson, secretary, New Mexico Wool Growers' Association, Albuquerque, N. Mex.
 Keith Begay, Rehoboth, N. Mex.
 L. G. Boldt, assistant engineer, United Pueblos Agency, Albuquerque, N. Mex.

Let me say that if there are groups or organizations, that wish to be represented by counsel here, they are at liberty to be represented by the counsel whom they may designate. Any organization or any group desiring to have their group or organization represented by attorney or counsel or by an individual, all that they will have to do is to designate that to the committee, and we will proceed accordingly. What is more, during the course of the hearings, if anyone in the audience desires to ask a question of a witness on the stand, or if any counsel or attorney for any group desires to interrogate, they may do so. I

find that the acoustics in this room are not any too good and the lights are not good; but we hope to improve both very shortly.

Governor Dempsey, did you desire to say anything at this time?

Governor DEMPSEY. Not at this time, Senator.

The CHAIRMAN. Mr. Secretary Chapman is here and has come all the way from Washington to represent the Interior Department. If he desires to make any statement at this time, we would be very glad to hear from him.

Assistant Secretary CHAPMAN. Mr. Chairman, Senator Chavez, Congressmen, and Governor Dempsey, I see some familiar faces here this morning, and it takes me back to 1934 when we had a meeting of the stock people of this State up at the university. I can see many cattle and sheep people who were interested in that at that time; and the Department was interested in their problems and is no less interested this morning. I, for one, welcome, and feel that a good conference and a clearing of our thoughts and understanding of the program that is being administered in any given area, is a healthy thing, and is good for the administration of the program itself. So, this morning, we welcome the opportunity for an open and free discussion of the problems of the stock people of this State. We realize some of the problems that you have been faced with; and I think that a good opportunity to clear our thoughts and a discussion of them here this morning will be most helpful.

I have no further statement to make at this time other than to say that Mr. Jim Stewart, who is the superintendent of the Navajo Agency, will present to you a pretty full picture of the historical background and the problems involved in the general land purchase problem of this area, specifically discussing district 7.

Senator, I believe that is all.

The CHAIRMAN. Thank you, Mr. Secretary.

Now, Mr. Stewart, if you wish to proceed with the explanation of the history of the district, district 7, you may do so.

If, at any time, the voice of the speaker does not reach the rear of the room, kindly let us know. We will try to adjust the acoustics here as best we can. I can realize, from the way my voice is shot back at me here, that I am not reaching, at times, those in the rear of the room; so don't hesitate to let us know.

It has been suggested, Mr. Stewart, that you go into the history of the acquisitions and formations of the district mentioned.

Mr. STEWART. And the other areas as well.

The CHAIRMAN. Very well.

Ladies and gentlemen, we are honored with the presence of Governor Dempsey of New Mexico, and I have prevailed on the Governor to say a few words to this group, while we are waiting for the adjustment of our facilities here.

STATEMENT OF GOVERNOR DEMPSEY OF NEW MEXICO

Governor DEMPSEY. Senator McCarran and members of the congressional delegation of New Mexico, ladies and gentlemen, I know you are as happy as I, and proud to have Senator McCarran and his committee here with us today. Unfortunately, Senator Abe Murdock has not arrived here and I do hope he will be here before the meetings have terminated. Senator McCarran is well known to us

all in New Mexico as a Member of Congress for some 10 years. It has been my privilege to have known the Senator quite intimately, and there is no man in the United States Senate for whom I have a greater regard.

In his statement to you he has put you on notice that anything you desire to say, you are privileged to say, and you need not worry about being penalized in the future by saying it. Senator McCarran comes from a Rocky Mountain State, and because of that, and because of the fact we were once a Rocky Mountain State, we have much in common. I think that if you will unburden yourselves as freely to this committee as you have to me on different occasions, and to others representing you, that our problems will be ironed out quite satisfactorily. I know of no committee that I would welcome more wholeheartedly, to our State, than the Committee on Public Lands of the United States Senate, and the subcommittee presided over by the able gentleman from Nevada, Senator McCarran.

We have many problems in connection with our public lands and this is the time to bring the problems to the attention of those who not only have the ability but, I am sure, the willingness to solve them to the extent they believe they should be solved for you. Thank you. [Applause.]

The CHAIRMAN. Thank you Governor, Let me say, at the outset, that the committee will be unable, and we deem it beyond our jurisdiction, to hear individual cases, unless individual cases exemplify a policy. What I mean by that is this, that where an individual case or a series of individual cases emphasize a policy pursued by a department or an administrator, then we will hear the individual cases, as exemplifying the policy. But where there are isolated cases showing a difference of opinion between an administrator and an individual and it does not appear to belong to a policy, this committee has no jurisdiction. You can readily understand that the time of the committee would not permit us hearing them. We would like to hear them, would like to aid in their solution, but it is utterly impossible. We will work long hours, we will work evenings, if necessary, and we will work earlier in the morning. We are here for a 3-day hearing and we will try to put in as much of the time as our physical endurance will permit us to do.

You may proceed, Mr. Stewart.

STATEMENT OF JAMES M. STEWART, SUPERINTENDENT, NAVAJO INDIAN AGENCY, WINDOW ROCK, ARIZ.

Mr. STEWART. This map was constructed so as to give the picture to the people here of the problem of administration, not only of the Indian Service but of the several other Government agencies involved in this area. It strikes me that the people here today, as throughout the State, are definitely interested in facts as to the Indian lands, in terms of acreages; Indian lands in terms of acquisition; lands, under the control of the Indian Service, that were purchased by the Resettlement Administration, the so-called submarginal-land program, not only in district 7 but also in the Rio Grande Valley. With the permission of the chairman, I would like, first of all, to touch upon the land-acquisition program that has taken place; has been completed several years

ago in the Rio Grande Valley; and, from that description, move on to district 7, if that is agreeable with the Chair.

The CHAIRMAN. Very well.

Mr. STEWART. During 1933 a good deal of emergency relief money was made available. As all of you know, the country was facing difficult times—livestock men, farmers, businessmen, and all were economically up against it. As a result of that condition the Congress made available certain relief moneys. Out of those relief moneys, some \$25,000,000 was allocated to certain bureaus of the Government.

Now, those bureaus, in order not to confuse you, were largely relief bureaus involved in rural relief—the Federal Emergency Relief Administration, the Federal Surplus Relief Corporation, and lastly, the completed agency of these lands purchases, the Resettlement Administration. So for the purpose of simplification I shall refer to these purchases as, let us say, Resettlement Administration purchases, because that is the term that is generally and commonly accepted as an identification of these purchases, Resettlement Administration purchases.

Now, then, some time in 1933 a plan of ultimate Pueblo Indian land expansion had been drafted by the Indian Service. That plan of expansion was, so to speak, put on the shelf for future use and reference if and when conditions and moneys became available for its execution. When the Resettlement Administration program, which, as I mentioned before, was inherited from the Federal Emergency Relief Administration; when that program was inaugurated these plans which I just mentioned, of land expansion, were taken out and submitted to the general agency handling this submarginal-land program. That agency was a bureau of the F. E. R. A. The name of this bureau is the Land Program, an unusual name and term, but that is and was the name of that bureau.

The CHAIRMAN. What is that? Will you please name it again?

Mr. STEWART. The Land Program.

The CHAIRMAN. The Land Program?

Mr. STEWART. Yes, sir.

That land-program agency was directed by Mr. J. S. Lansill, and it was through his direction that the Indian Service came into the picture of land acquisition. The procedure, and the rules, as laid down by Mr. Lansill, had, among other things, not merely the release of stranded rural populations but also the release of Indian groups that were more or less in an uneconomic situation insofar as obtaining a livelihood from land was concerned. The procedure and policies of this so-called land program are very interesting. I have a letter with me setting out what should constitute an Indian land program. I shall read parts of it, from time to time, as I go on.

Senator CHAVEZ. Who was it written by?

Mr. STEWART. This is a letter of policy written by Mr. Lansill, the Director of the Land Program, Senator Chavez.

Now, then, concurrent more or less with that land-acquisition program pursuant to these resettlement or land-program funds, there was in effect in the Pueblo area another land-acquisition program. That program was the result of an action or actions taken and completed by what was termed the Pueblo Lands Board, which was created, as many of you know, pursuant to an act of Congress passed in 1924.

That act of Congress, which was supplemented and amended by Congress in 1933, had for its purpose the resettlement of long controversial claims by Indians and non-Indians within these several pueblos up and down the Rio Grande Valley, which I have indicated on this map.

I would like to briefly mention some of the important parts of those two pueblo acts, because they do have an important bearing on subsequent, or concurrent, submarginal land-acquisition programs, which took place here. The Pueblo Lands Board Act of 1924 was a recognition by Congress that a chaotic condition of land ownership existed within these pueblos. Incidentally there are 19 pueblos involving approximately 3,000 non-Indian claimants. The act authorized the creation of a board whose responsibility was to investigate, determine, and report on the status of all land within the exterior boundaries; all lands claimed by the Pueblo Indians; and, further, in passing on non-Indian claims it was provided that all claims should prove either a continuous, exclusive, adverse possession under title since January 6, 1902, with taxes paid; or be continuous, specific, adverse possession since March 16, 1889, with taxes paid, without title. The act provided that the Board should investigate and report on the values of those lands and water rights, and that the United States should compensate the Pueblos for their losses of lands, water rights, and improvements; and, in case the title was extinguished on the part of the Government with respect to non-Indians, the Secretary of the Interior was requested, in fact, directed, to report his recommendations to Congress concerning losses suffered by those who could not meet the requirement of the Pueblo Land Board sufficiently to have the Indians' title to their lands extinguished, yet who initiated claims that dated to the Pueblo grant, prior to January 8, 1912. That act is quite lengthy.

Now, this Board performed its actions as to 7,400 claims, which were considered. Many of them were not allowed. The Indians—the subsequent act of 1933 gave the Indians an increased compensation by the Congress for losses. The non-Indian claimants were, by virtue of that same act and the prior 1924 act, paid directly for their claims. I mention this, because at the time of the land program this other program was in effect and a good deal of confusion has resulted in the minds of people as to which was which and why. Both were separate, both were involved, however, in acquiring lands for Pueblo Indians.

For the record, I would like to submit this factual information. It is a statement of purchases made within the pueblos pursuant to the Pueblo Lands Board Act, as amended. It gives the lists of all pueblos, the acreage acquired through purchase, the purchase price, together with acreage acquired through exchange processes as also authorized by the act. I merely would like to read the totals and submit this statement for the record.

The CHAIRMAN. Very well.

Mr. STEWART. The acreage acquired through purchase, pursuant to that Pueblo Lands Act, as amended, 49,830.183 acres; the total amount of compensation money paid out, \$357,641.91.

So much for the purchases. As to the exchange, acquired through exchange processes, 111.326 acres; and the Pueblo lands relinquished in the exchange process 137.267 acres.

(The statement referred to is as follows:)

United Pueblo Agency—Compensation, purchases, and exchanges

Pueblo	Acreage acquired through pur- chase	Purchase price	Acreage acquired through exchange	Acreage relin- quished in exchange
Cochiti.....	199.968	\$26,655.45	4.520	8.983
Isleta.....	1,308.76	13,382.36		
Jemez.....	9,652.031	7,900.00		
Laguna.....	7,795.10	31,955.00		
Nambe.....	85.565	13,614.31	10.662	19.442
Picuris.....	58.464	5,222.05	30.394	35.632
Pojoaque.....	22.468	3,762.50	8.228	12.113
San Felipe.....	2,324.875	53,863.39		
San Ildefonso.....	320.500	44,290.05	6.043	7.168

Santo Domingo.....	132.76	15,050.00		
Taos.....	27,011.366	59,336.37		
Tesuque.....	318.05	14,000.00		
Total.....	49,830.183	357,641.91	111.326	137.267

Mr. STEWART. Now then, to get to the authorities for the submarginal land purchase; that is quite important. The authority for these purchases was originally contained in the National Indian Recovery Act of June 16, 1933, and section 55 of the act of August 24, 1935, later known as the Agricultural Adjustment Act, section 55 of which reads as follows:

There is hereby made available, out of any money appropriated by the Emergency Relief Appropriation Act of 1935, such amount as the President may allot for the development of a national program of land conservation and land utilization. The sums so allotted may be used, in the discretion and under the direction of the President, for the acquisition of submarginal lands and their use for such public purposes as the President shall prescribe.

In carrying out the provisions of this section the President is authorized: (a) to make contracts and grants; and (b) to acquire, by purchase, any real property or any interest therein (with or without reservations) in accordance with the policy herein set forth.

That is the authority under which this tremendous submarginal land program was inaugurated and not quite completed.

The CHAIRMAN. Does your tabulation, just offered for the record, contain the land purchased under the submarginal program?

Mr. STEWART. No, sir; that is coming.

The CHAIRMAN. That is a separate list?

Mr. STEWART. I am concerned with giving this committee, and the people here, a true picture of the total lands owned by Indians in this State; not those controlled, but lands owned by the Indians, as differentiating from those that have been turned over, through Executive order of one type or another, to the administration of the Indian Service. I shall also include that, subsequently.

The CHAIRMAN. With reference to these lands, to which you have last made reference, purchased under the submarginal program, were they turned over to the Indians after purchase?

Mr. STEWART. Partly so, yes, sir. I would like to lead up to that.

The CHAIRMAN. Very well.

Mr. STEWART. Would the committee care to have the procedure and policies of the land program and the Resettlement Administra-

tion, insofar as this purchase program is concerned, read or submitted for the record?

The CHAIRMAN. How voluminous is it? I think you can state it better than reading it. If it is not too voluminous, perhaps we might put it in the record.

Mr. STEWART. I would like to have that, sir.

The CHAIRMAN. Very well. It will be inserted here.

(The information requested is as follows:)

PROCEDURES AND POLICIES

The first allocation of moneys for this submarginal land acquisition program was made to the Federal Surplus Relief Corporation, and a program was set up by resolution adopted December 28, 1933, which provided in part that such lands "shall be lands that in total amount balance against the land, the reclamation or improvement of such has been provided for under the comprehensive program of public works on condition that counterbalancing lands be withdrawn from conservation."

This program was found to be inadequate, and under date of July 24, 1934, this allocation of money was transferred to the Federal Emergency Relief administration for the purpose of carrying out a program of land acquisition, outlined in a memorandum signed by Mr. John S. Lansill, director of the land program, under date of July 16, 1934. This memorandum was designed to extend the scope of land purchases so as to provide for the acquisition of lands for the rehabilitation and betterment of the economic condition of population groups. It included the following:

"Demonstration Indian lands projects: These include land projects in which land to be purchased is to be used primarily for the benefit of the Indians, under the jurisdiction of the Bureau of Indian Affairs, Department of the Interior."

In listing the objectives of the land program, Mr. Lansill states that one of these is "improvement of the economic and social status of 'industrially stranded population groups,' occupying essentially rural areas, including readjustment and rehabilitation of Indian population by acquisition of lands to enable them to make appropriate and constructively planned use of combined land areas in units suited to their needs." Attached hereto and made a part hereof is copy of letter dated July 14, 1934, addressed to the Commissioner of Indian Affairs, signed by Mr. Lansill as Director, land program of the Federal Emergency Relief Administration, and which covers changes made in the administrative structure of the land program. Also attached and made a part hereof is copy of the memorandum of July 16, 1934, above referred to.

Subsequently, on January 1, 1935, the Director, the land program, furnished a written statement outlining in detail the policy of the land program and initiating acquisition of land for Indian use. This statement or declaration of policy was approved by the Commissioner of Indian Affairs, and a copy thereof is attached hereto and made a part hereof. Particular attention is invited to this detailed declaration of policy.

Mr. STEWART. There were four major project approvals by the so-called lands program, among which item No. 3 is entitled "Demonstration Indian Land Project." These include projects in which land to be purchased is to be used primarily for the benefit of the Indians under the jurisdiction of the Bureau of Indian Affairs, Department of the Interior. In addition to that were projects of the following types: Demonstrational agricultural projects, demonstrational recreational projects, demonstration Indian lands projects, and demonstration wildlife projects. That is the total of the major project requirements. With your permission, I would like to submit this document for the record.

(The matter referred to is as follows:)

MEMORANDUM

JULY 16, 1934.

To: Hon. Harold L. Ickes, Secretary, Department of the Interior.

From: John S. Lansill, Director, land program, Federal Emergency Relief Administration.

Various conferences have been held during the past 3 months for the purpose of formulating a land-acquisition program. Active investigation in the field by the agencies cooperating in the land program has led to the necessity of reconsidering the plan and scope of the land program. The necessity for such reconsideration is agreed to by all land-use agencies involved in the land program of the Federal Emergency Relief Administration.

As a result of these conferences, in which the President, Secretary of the Interior, Secretary of Agriculture, Federal Emergency Relief Administration, and the Governor of the Farm Credit Administration have participated, it is understood that the following program of projects will be carried out under the authority of the Federal Emergency Relief Administration to expend funds for these purposes.

A. Projects will be of the following major types:

(1) *Demonstrational agricultural projects.*—These include projects in which the major use (or combination of uses) of land to be purchased includes farming, forestry, or other uses falling within the administrative jurisdiction of the Department of Agriculture.

(2) *Demonstration recreational projects.*—These include projects in which the land to be purchased is to be used primarily for recreational purposes, as submitted by the National Park Service, Department of the Interior.

(3) *Demonstration Indian lands projects.*—These include projects in which land to be purchased is to be used primarily for the benefit of the Indians, under the jurisdiction of the Bureau of Indian Affairs, Department of the Interior.

(4) *Demonstration wildlife projects.*—These include projects in which land to be purchased is to be used primarily to carry out the wildlife program of the Biological Survey of the Department of Agriculture.

(5) *Other demonstration projects.*—These will include projects which may be suggested by authorized Federal or State agencies not above named.

B. The land program has three major phases:

(1) The purchase of land.

(2) The conversion of land purchased to a use beneficial to the people of the United States.

(3) The permanent rehabilitation of the population at present living on land purchased.

C. The objectives of the land program will include:

(1) Conversion of poor land to other and more proper uses.

(2) Prevention of the misuse of land by erosion or other causes, and a restoration of land productivity.

(3) Improvement of the economic and social status of families occupying poverty farms.

(4) Improvement of the economic and social status of "industrially stranded population groups," occupying essentially rural areas, including readjustment and rehabilitation of Indian population by acquisition of lands to enable them to make appropriate and constructively planned use of combined land areas in units suited to their needs.

(5) Reducing the costs of local governments and of local public institutions and services.

(6) Encouragement of land-use planning by setting up experimental projects which will serve as repeatable demonstrations of types of adjustments applicable to various regions in the United States.

D. In general, it is understood that whenever land is being misused or whenever land may be put to a different and more beneficial use, such land may be acquired under the land program of the Federal Emergency Relief Administration.

JOHN S. LANSILL.

FEDERAL EMERGENCY RELIEF ADMINISTRATION,

*Washington, July 14, 1934.***MR. JOHN COLLIER,***Commissioner, Bureau of Indian Affairs,**Washington, D. C.*

DEAR MR. COLLIER: There have been certain changes made in the administrative set-up of the land program which are passed on to you for guidance in connection with Indian lands projects.

To clarify the new procedure, the following is enumerated:

(1) A grant of \$25,000,000 by the Public Works Administration has been made to the Federal Emergency Relief Administrator for purchase of submarginal farm lands. A grant of \$12,500,000 has been made to the Federal Emergency Relief Administration through the deficiency bill appropriation, for purchase of stricken agricultural lands in the drought areas.

(2) The Federal Emergency Relief Administrator has placed me in charge of the land program, both the land acquisition and the resettlement phases, which hereafter will function through the Rural Rehabilitation Division of the Federal Emergency Relief Administration, instead of through the Federal Surplus Relief Corporation.

(3) The Federal Emergency Relief Administrator has given me authority to secure through the regular channels sums necessary for resettlement and land acquisition.

(4) Regional representatives of the land program will be charged with the responsibility for all projects within their respective region. This will include the development of detailed plans for land acquisition and resettlement, which will be prepared under the direction of technical agencies, such as the Office of Indian Affairs for Indian land projects, the Land Policy Section of the Agricultural Adjustment Administration for agricultural projects, and the National Park Service for recreational projects.

(5) Detailed plans of all projects are to be approved by: First, the regional representative; second, by the technical Federal agency; and third, by myself; after which orders will be issued through the required channels for expenditure of funds for land acquisition, and by grants to the State relief administration, then to the Rural Rehabilitation Corporation, for resettlement.

(6) Col. Lawrence Westbrook, Assistant Administrator in charge of Rural Rehabilitation, will organize a rural rehabilitation corporation in each State, comprised of seven directors, four of whom will be the regional representative of the land program, the field representative of the Federal Emergency Relief Administration, the director of the State agricultural extension service, and the State relief administrator. These four will nominate the three additional directors.

(7) The execution of approved plans for resettlement will be done by the State rural rehabilitation corporation, with the regional representative of the land program reporting to me as to progress and execution of the plan and policies agreed upon.

Considerable red tape will be eliminated by the above procedure. As it relates to the Office of Indian Affairs, the procedure would be as follows:

Detailed plans for Indian land projects would be developed by the Office of Indian Affairs. These plans, together with options and the endorsement of the regional representative of the land program, would be forwarded to your office for approval. When the plans are approved by your office they should be submitted to me with a definite request to the Federal Emergency Relief Administrator to purchase the land specified in the plans, in accordance with the terms and conditions of the funds granted to the Federal Emergency Relief Administrator for purchase of submarginal lands. After clearance of titles by our Legal Division the necessary orders will be given for the purchase of land.

At the present time \$2,500,000 of the original grant of \$25,000,000 for land purchase has been reserved for Indian lands projects. I hope that you can submit, at the earliest moment, projects totalling this amount. I should like also to receive from you, through the same procedure, projects totalling at least \$1,500,000 additional. It is extremely important that the land purchase program begin at once. Any help that you can give to speed up operations will be appreciated. The land program is anxious to cooperate with you fully. If there is anything in this letter which is not clear will you please get in touch with this office.

Sincerely yours,

J. S. LANSILL,

Director of Land Program.

Mr. J. O. SETH. My name is J. O. Seth. I am representing the cattle growers and sheep and wool growers of the State of New Mexico. Is there a copy of that, Mr. Stewart?

Mr. STEWART. Yes, sir.

Mr. SETH. Will you please submit us a copy of that?

Mr. STEWART. Certainly.

I would like to ask if Mr. Formhals is here with the summarization of the total purchases?

Pursuant to this approved program certain projects, as they were termed, were set up. The approval of those projects as such, originally set up by the Indian Bureau, had to be approved by the original director of the then land program, subsequently by the Resettlement Administration, which had its headquarters in Ogden, Utah, and in turn had to be approved in Washington by the land program itself. The program or project was set up in what is called the Taiwan Basin project, the northern pueblo area; and then another or several projects were set up covering the central groups of pueblos down to this point and westward over Acoma to Zuni. I won't go into details because they are voluminous but, very briefly, the total purchases under this program were 851,339 acres.

Senator CHAVEZ. That is for the pueblos alone; you are talking now for the pueblos alone.

Mr. STEWART. At the moment, yes, sir. Unfortunately, within these project area boundaries were a considerable number of small operators, livestock operators. We received sudden directions, late in the fiscal year, leading up to the calendar date of June 30, 1937—we received sudden directions from the authorities of the Resettlement Administration that the funds had been drastically cut and no more options would be taken after June 30, 1937, and some of the projects were uncompleted. Some of the people in those project areas were left in there completely confused.

Recognizing that situation, the two Secretaries, the Secretary of Agriculture and the Secretary of the Interior, arranged and agreed for the creation of a board known as the Interdepartmental Rio Grande Advisory Board, which would have for its purpose and its responsibility the study and planning of a division of use of these large areas of submarginal lands heretofore purchased. That took place, and out of that total of 851,339 acres some 434,447 acres was designated to the agency of that Board for non-Indian use, leaving for Indian use, out of the total, 416,892 acres.

I have here a copy of the document approving the creation of that Board. It is very brief, and I would like to submit it for the record.

The CHAIRMAN. Approving by whom?

Mr. STEWART. Secretary Wallace and Secretary Ickes.

The CHAIRMAN. Who constituted the membership of that Board?

Mr. STEWART. Representatives of the several bureaus within the two Departments.

The CHAIRMAN. Have you their names?

Mr. STEWART. No; I do not have them; but one of the members of the Board is here present and has indicated his willingness to discuss details of the Board, its membership, and its actions.

Senator CHAVEZ. Of what Department?

Mr. STEWART. Mr. John Adams, of the United State Forest Service, is here.

The CHAIRMAN. If there is anyone now who has the names of the membership of that Board, we would like to have them stated.

Mr. JOHN ADAMS (United States Forest Service). Mr. Chairman, there were three representatives from the Department of the Interior. The General Land Office was represented by Antoinette Funk, the Grazing Service was represented by A. D. Ryan, and the Indian Service by Walter V. Woehlke. In Agriculture I was the representative of the Forest Service, E. Shevsky was a representative of the Soil Conservation Service, and the Farm Security representative was Maurice Kelso.

Senator CHAVEZ. Did you have one from the Bureau of Agricultural Economics?

Mr. ADAMS. I might correct one statement there; the two Secretaries appointed this committee to make a study of the conditions and, at the conclusion of that, we made certain recommendations. We recommended that a board be set up and that board was to constitute four members from Agriculture and four members from Interior. From then on we made our recommendations as to the divisions of these purchases.

The CHAIRMAN. You say "we recommended"?

Mr. ADAMS. I mean the Rio Grande Board.

The CHAIRMAN. Let me get that straight again. The Rio Grande Board is the board whose membership you have just mentioned?

Mr. ADAMS. No; that was the committee the Secretary appointed. He appointed the committee, and at the conclusion of their study recommendations were made, and those recommendations included the setting up as an interdepartmental board, of which there would be four members from Interior and four members from Agriculture.

The CHAIRMAN. For administrative purposes?

Mr. ADAMS. Advisory; in order to integrate and coordinate the Federal program operating in the Rio Grande Valley.

The CHAIRMAN. Was its purpose administration?

Mr. ADAMS. No; to advise.

The CHAIRMAN. Who was going to administer?

Mr. ADAMS. Separate agencies would do the administration, but the Board would endeavor to coordinate the program.

The CHAIRMAN. Who constituted that board finally?

Mr. ADAMS. The Board as set up was, from the General Land Office, Guy V. Harrington; the Grazing Service was represented by A. D. Ryan; the Indian Service by Walter V. Woehlke; and the Bureau of Reclamation by J. C. Foster. In the Department of Agriculture the Soil Conservation Service was represented by Hugh G. Calkins, the Bureau of Agricultural Economics was represented by Maurice Kelso, the Farm Security Administration was represented by Ralph Weil, and the Forest Service by myself. The Board was set up with a memorandum of understanding which outlined what its duties and responsibilities were and how they were to advise the Federal agencies operating in the drainage basin.

The CHAIRMAN. What became of that board finally?

Mr. ADAMS. For the duration the Board is, you might say, quiescent. Up to that time we worked with all agencies in the Rio Grande watershed endeavoring to coordinate and integrate their programs.

The CHAIRMAN. Very well.

Mr. STEWART. Mr. Chairman, this is a copy of the memorandum of understanding approved by the two Secretaries that Mr. Adams just referred to. I would like to submit it for the record.

The CHAIRMAN. It may go in the record.

(The statement is as follows:)

MEMORANDUM OF UNDERSTANDING BETWEEN THE DEPARTMENT OF AGRICULTURE AND THE DEPARTMENT OF THE INTERIOR FOR THE CREATION AND FUNCTIONING OF THE INTERDEPARTMENTAL RIO GRANDE BOARD

The drainage area of the upper Rio Grande River is one of the largest western watersheds and one of the oldest areas of settled human habitation in the United States. Approximately one-half of the surface area of this watershed is still in the possession of the United States. Through more than a century of intensive misuse and overuse of the basic resources of soil and water, the watershed has, because of overgrazing and the resulting accelerated erosion, suffered loss of its topsoil and is now in a critical condition. At the same time the pressure of the population upon the inequitably distributed basic resources has greatly increased. As a result of these factors, a very large proportion of the rural population and a smaller proportion of the urban population has become dependent upon the Federal Government for a part of its living through direct and work relief, and the programs of several Federal agencies have been made difficult of execution. These conditions, as set forth in the Report of the Interdepartmental Rio Grande Committee of October 1937, make necessary early remedial action through the coordination of the activities of the Federal agencies operating in the watershed in order that such agencies may be enabled effectively to carry out their respective programs.

In order to bring about this coordination and correlation of Federal activities and to make possible closer cooperation between the Federal agencies and the State and other public and private agencies, the Department of Agriculture and the Department of the Interior enter into the following understanding:

UNDERSTANDING

The Secretary of Agriculture and the Secretary of the Interior agree to designate representatives of various bureaus in their respective departments to form a committee to be known as the Interdepartmental Rio Grande Board. The Secretary of Agriculture agrees to designate as members of the Board a representative of the Forest Service, a representative of the Soil Conservation Service, a representative of the Bureau of Agricultural Economics, and a representative of the Farm Security Administration. The Secretary of the Interior agrees to designate as members of the Board a representative of the Office of Indian Affairs, a representative of the Division of Grazing, a representative of the Bureau of Reclamation, and a representative of the Department. The Secretary of Agriculture and the Secretary of the Interior will from time to time designate other members of their respective Departments to work with the Board in an advisory capacity.

The Chairman and the Vice Chairman of this Board shall be designated by the two Secretaries from the membership of the Board.

The Chairman, with the approval of the Board, shall be authorized to arrange with the appropriate member bureaus for detail of the full or part-time services of necessary technical and clerical assistants.

It is mutually agreed that during the life of the permanent board each member organization will contribute for the use of the permanent board personal services and other facilities as may be necessary to effectuate the purposes of this understanding.

It shall be the duty of the Board to recommend to the heads of the participating agencies appropriate policies and programs which will correlate and coordinate the activities of the Federal agencies operating in the watershed and to obtain the cooperation of other public agencies, corporations, and persons in making effective an approved long-term program of land use, social, and economic adjustments.

The Board shall have the following functions:

Through the heads of the Federal agencies represented on the Board to call for reports, data, statistical, or other pertinent information necessary for the proper performance of its function.

With the approval of the participating agencies to initiate and organize multiple-phase surveys of the watershed, to set up standards and establish unified procedure for these surveys, and to assist in the uniform interpretation of the results of investigations.

To formulate programs of land-use adjustments for the various subdrainages of the watershed, to recommend priorities of planning and of action for these subdrainages according to the critical nature of the problems.

To assist the several Federal agencies in carrying out those parts of the total watershed program within the scope of their respective fields.

To negotiate with and obtain the cooperation of State planning commissions, State and other public officials, and other public and private interests in bringing about land use, economic, and social adjustments.

To recommend, to the Secretaries of Agriculture and of the Interior, legislation for the facilitation of proper land use, economic, and social adjustments.

To recommend to the departments changes in the rules and regulations of the Federal agencies participating in land-use adjustments within the watershed.

To recommend to the Secretaries of Agriculture and Interior the name, salary, and duties of an executive officer to serve the Board on a full-time basis.

Through the heads of the participating agencies, to call for progress reports concerning those parts of the watershed and subdrainage programs undertaken by them.

The territory to be served by the Board shall be the watershed of the upper Rio Grande River in the States of New Mexico and Colorado. The Board may by agreement of the Secretaries extend the territory to the contiguous inland drainages and related contiguous areas.

This memorandum of understanding shall remain in force until terminated. It may be terminated in 90 days by either Secretary upon giving written notice.

The Interdepartmental Rio Grande Board shall be guided as to policy and objectives by recommendations Nos. 2, 3, and 4 of the Interdepartmental Rio Grande Committee.

MARCH 25, 1938.

HAROLD L. ICKES,
Secretary of the Interior.

MARCH 21, 1938.

HENRY A. WALLACE,
Secretary of Agriculture.

The CHAIRMAN. Perhaps if you have copies it might be well to submit the copies to the representatives of the organizations here.

Mr. STEWART. Subsequent to the actions of this Interdepartmental Board and the findings, certain of the purchased areas were, by Executive order, transferred to the jurisdiction of the Secretary of the Interior for administration by the Commissioner of Indian Affairs. More or less concurrently, similar Executive orders were promulgated transferring jurisdiction over a good deal of the area to the Secretary of Agriculture for administration for the benefit of non-Indians. Copies of those Executive orders are in the process of being made and, if it is agreeable, I think it would be helpful for the future historical record if they could be made a part of this committee record.

The CHAIRMAN. What is that?

Mr. STEWART. Copies of the Executive order signed by the President transferring the administrative jurisdiction to the respective Secretaries of the Interior and of Agriculture as to a good deal of this submarginal land purchase.

Senator CHAVEZ. The one that belonged to the non-Indians, to be used by the non-Indians, went to Agriculture and the one to be used by the Indians went to the Interior?

Mr. STEWART. That is right.

The CHAIRMAN. Those Executive orders may be inserted in the record. I think they belong in the record to make the story complete.

(The Executive orders are as follows:)

EXECUTIVE ORDER

TRANSFER OF JURISDICTION OVER CERTAIN LANDS FROM THE SECRETARY OF AGRICULTURE TO THE SECRETARY OF THE INTERIOR

NEW MEXICO

Whereas certain lands, together with the improvements thereon, largely contiguous or in close proximity to existing Indian Reservations, in the State of New Mexico, have been, or are in the process of being, acquired in connection with the projects hereinafter designated, under authority of Title II of the National Industrial Recovery Act of June 16, 1933 (48 Stat. 200), the Emergency Relief Appropriation Act of April 8, 1935 (49 Stat. 115), and section 55 of Title I of the act of August 24, 1935 (49 Stat. 750, 781); and

Whereas it appears that the transfer of jurisdiction over such lands from the Secretary of Agriculture to the Secretary of the Interior for administrative purposes would be in the public interest; now, therefore, by virtue of and pursuant to the authority vested in me under the aforesaid National Industrial Recovery Act, the Emergency Relief Appropriation Act of 1935, and the act of August 24, 1935, it is hereby

Ordered, That jurisdiction over the hereinafter-described lands, together with the improvements thereon, acquired or in the process or acquisition by the United States in connection with the hereinafter designated projects, be, and it is hereby, transferred from the Secretary of Agriculture to the Secretary of the Interior; *Provided*, however, that the Secretary of Agriculture shall retain such jurisdiction over the lands now in process of acquisition by the United States as may be necessary to enable him to complete the purchase of such lands; and the Secretary of the Interior is hereby authorized (1) to administer, through the Commissioner of Indian Affairs, such lands for the uses for which they were, or are in the process of being acquired, and insofar as consistent with such uses, for the benefit of such Indians as he may designate, (2) in connection with the administration of such lands to exercise all powers and functions, insofar as they may relate to these lands, conferred upon the Secretary of Agriculture by Executive Order No. 7530 of December 31, 1936, and Executive Order No. 7557 of February 19, 1937, and (3) to prescribe such rules and regulations as may be necessary to carry out the purposes of this order:

Sia-Santa Ana Project, LI-NM-6

Sandoval County, New Mexico

T. 14 N., R. 1 E.: Secs. 1, 3, 11, 13, 15, 23, 25, 27, and 35.

(Copied from Federal Register, January 21, 1938, vol. 3, No. 15, pp. 161-163)

EXECUTIVE ORDER

TRANSFER OF JURISDICTION OVER CERTAIN LANDS FROM THE SECRETARY OF AGRICULTURE TO THE SECRETARY OF THE INTERIOR

NEW MEXICO

Whereas certain lands, together with the improvements thereon, largely contiguous or in close proximity to existing Indian reservations, in the State of New Mexico, have been, or are in process of being, acquired in connection with the projects hereinafter designated, under authority of title II of the National Industrial Recovery Act, approved June 16, 1933 (48 Stat. 200), the Emergency Relief Appropriation Act, approved April 8, 1935 (49 Stat. 115), and section 55 of title I of the act of August 24, 1935 (49 Stat. 750, 781); and

Whereas by Executive Order No. 7908, dated June 9, 1938, all the right, title and interest of the United States in such lands, acquired, or in process of acquisition, were transferred to the Secretary of Agriculture for use, administration, and disposition in accordance with the provisions of title III of the Bankhead-Jones Farm Tenant Act, approved July 22, 1937 (50 Stat. 522, 525), and the related provisions of title IV thereof; and immediately upon acquisition of legal title to those lands now in process of acquisition, said order, under the terms thereof, will become applicable to all the additional right, title, and interest thereby acquired by the United States; and

Whereas it appears that the transfer of jurisdiction over such lands from the Secretary of Agriculture to the Secretary of the Interior for administrative purposes would be in the public interest:

Now, therefore, by virtue of and pursuant to the authority vested in me by section 32 (c), Title III, of the said Bankhead-Jones Farm Tenant Act, and upon recommendation of the Secretary of Agriculture, it is hereby ordered that jurisdiction over the hereinafter-described lands, together with the improvements thereon, acquired, or in the process of acquisition, by the United States in connection with the hereinafter-designated projects, be, and it is hereby, transferred from the Secretary of Agriculture to the Secretary of the Interior: *Provided, however*, That the Secretary of Agriculture shall retain such jurisdiction over the lands now in process of acquisition by the United States as may be necessary

to enable him to complete their acquisition; and the Secretary of the Interior is hereby authorized to administer such lands, through the Commissioner of Indian Affairs, for the benefit of such Indians as he may designate, under such conditions of use and administration as will best carry out the purposes of the land-conservation and land-utilization program for which such lands were acquired:

FRANKLIN D. ROOSEVELT.

THE WHITE HOUSE, September 16, 1938

(No. 7975)

(Copied from Federal Register, September 20, 1938, Vol. 3, No. 183, pp. 2252-2253)

EXECUTIVE ORDER

TRANSFER OF CERTAIN LANDS FROM THE SECRETARY OF AGRICULTURE TO SECRETARY OF THE INTERIOR

NEW MEXICO

Whereas certain lands, together with the improvements thereon, have been acquired by the United States in connection with the Cuba-Rio Puerco Project, LU-NM-38-22-1, in Valencia and Bernalillo Counties, New Mexico, under authority of Title III of the Bankhead-Jones Farm Tenant Act, approved July 22, 1937 (50 Stat. 522, 525); and

Whereas it appears that the transfer of jurisdiction over such lands from the Secretary of Agriculture to the Interior for administrative purposes would be in the public interest:

Now, therefore, by virtue of and pursuant to the authority vested in me by section 32 (c) of Title III of the Bankhead-Jones Farm Tenant Act, and upon recommendation of the Secretary of Agriculture, it is hereby ordered that jurisdiction over the hereinafter-described lands, together with the improvements thereon, acquired by the United States in connection with the Cuba-Rio Puerco Project, LU-NM-38-22-1, be, and it is hereby, transferred from the Secretary of Agricul-

ture to the Secretary of the Interior; and the Secretary of the Interior is hereby authorized to administer such lands through the Commissioner of Indian Affairs, for the exclusive use of the Pueblo Indians, under such conditions of use and administration as will best carry out the purposes of the land-conservation and land-utilization program for which such lands were acquired:

Valencia and Bernalillo Counties, New Mexico

New Mexico Principal Meridian

Tps. 7, 8, and 9 N., Rs. 1, 2, and 3 W., those parts lying within the Antonio Sedillo Grant as described by Plat and Survey approved by the Court of Private Land Claims July 15, 1901.

FRANKLIN D. ROOSEVELT.

THE WHITE HOUSE, February 28, 1941.

(No. 8696)

(F. R. Doc. 41-1538, filed, March 1, 1941, 11:26 a. m.)

(Copied from Federal Register, March 4, 1941, pp. 1229-1230)

The CHAIRMAN. If those who represent the various organizations have not copies of these instruments, I hope that those who have the instruments will do everything in their power to facilitate the making of copies to be turned over.

Mr. STEWART. That just about covers, Mr. Chairman, the Pueblo area in general terms. There are many details that will, no doubt, come up for discussion. If it is the pleasure of this group, I will move on to the district 7 area.

The CHAIRMAN. Are there any questions that anyone would care to address to the witness now with reference to his statements and the area mentioned up to this point?

Judge SETH. I think we would rather wait until he gets through, Senator.

The CHAIRMAN. Very well. You may proceed then, Mr. Stewart.

Mr. STEWART. In 1936, a subcommittee of the Senate Committee on Indian Affairs visited the Southwest and held hearings at Gallup, Farmington, Navajo Agency, and at Santa Fe. Senator Chavez participated at those hearings. Those hearings were held in connection with what is now called grazing district No. 7. At that time, some time previous to 1936, an attempt was made by the Indian Service to enlarge the Navajo boundaries of the Navajo Reservation, through extension of its boundary in toward the East, into New Mexico. Now, those hearings were very full and complete. Everyone that is interested in facts, and in a complete discussion of grazing district No. 7, as to its general background—it will be found in part 34 of those hearings. Rather than take the time of this committee, in going into that background, when it is already available, I would like to make of record the fact, as I have stated, that this part 34 of the Navajo boundary and Pueblo hearings in New Mexico, of this subcommittee—

Senator CHAVEZ. Since we had the hearings at Gallup and Window Rock and Farmington, no attempt has been made by the Indian Service to get legislative action to increase the Navajo Reservation. Is that correct?

Mr. STEWART. That is correct.

The CHAIRMAN. Was it prior to those hearings that a bill was presented to the Congress to increase the Navajo Reservation?

Mr. STEWART. Yes, sir.

The CHAIRMAN. That bill went through one House, did it not?

Mr. STEWART. I believe it did.

I would like to touch on that matter, without going too much in details, because it is important in the later discussion to take place on district 7. On July 8, 1931, the Secretary of the Interior withdrew, in aid of what was then proposed legislation to extend the boundaries of the reservation, withdrew virtually all of the public domain which is now within grazing district No. 7. Shortly thereafter, legislation was drafted, having for its purpose the enlargement of the reservation, not to the full extent, however, of the withdrawn areas. That legislation failed of enactment. Subsequent legislation likewise failed of enactment.

The CHAIRMAN. May I ask a question right there? I hope these questions do not disturb you?

Mr. STEWART. No, sir.

The CHAIRMAN. Before that legislation was drafted, were the users of the territory embraced within district 7, the withdrawn area, consulted?

Mr. STEWART. I'll answer this way, Senator, I personally held hearings, public hearings, at Gallup, at Farmington, and at Aztec. In general, at one time that proposed legislation was acceptable in general. As time passed, however, that acceptance, locally, of the proposed legislation largely disappeared. But at one time we did make a real attempt to acquaint the local people with what we were proposing; and I am sure we did acquaint them, and they were favorable to the proposition, in general. There were some people that did not approve of it; but, by and large, I would say that the people affected at one time did approve of that proposed legislation.

Senator CHAVEZ. Did you have any hearings along the Rio Puerco?

Mr. STEWART. No; we did not.

Now, then, during this interim, this proposed legislation, these lands were subject to the departmental temporary withdrawal. Temporary withdrawal was made, under authority contained in section 4 of the act of March 3, 1927, which allows the Secretary to make temporary withdrawal.

Senator CHAVEZ. Mr. Stewart, may I interrupt you right there? On the proposed extension of the reservation, the last bill that went before Congress, the area included in the proposal did not take in many of the allotments that the Indians have now outside of the proposed reservation?

Mr. STEWART. That was the problem area, Senator. The north part, up in San Juan County, was where the allotments were, and that were not taken out in the legislation.

Senator CHAVEZ. Not taken out in the legislation?

Mr. STEWART. Not taken out in the legislation.

Senator CHAVEZ. They still remained outside?

Mr. STEWART. That is right.

Senator CHAVEZ. Over 1,200 of those; were there not?

Mr. STEWART. I believe 800 in that San Juan area; 1,200 swinging down along the whole line.

Senator CHAVEZ. So, by the proposal you would take in something like two and one-half million acres, and still have about 1,200 allotments outside of the new extension?

Mr. STEWART. That's right.

The CHAIRMAN. These allotments, what was their character and nature?

Mr. STEWART. Congress authorized the allotting of Indians on the public domain under authority contained in section 4 of the act of June 24, 1887, and those allotments not merely adhered to the Navajo, but throughout the United States, in Indian country, where public domains did exist. Those allotments were trust allotments in that the title was held in trust for the individual Indian, not the tribe. In addition to these allotments, Congress also granted the Indians, by an act passed in 1875, a preference right to receive a homestead on the public domain if and when the particular individual met certain qualifications. Likewise, the homestead was held in trust for the Indian.

I'd like to pause, at this moment, and hang on here a map of district 7 showing the land status in that district, so that we will both better understand the problem, if I may.

The CHAIRMAN. Before you leave this map would you kindly indicate the territory on this map that is embraced within district 7?

Mr. STEWART. Roughly; yes, sir. District 7 roughly covers—this is the eastern boundary of the Navajo Reservation, this solid yellow block. That is the southern boundary in New Mexico. District 7 roughly covers an area following this general pattern [indicating]; then across over to the Arizona boundary line.

The CHAIRMAN. There is no color scheme by which district 7 is set out on this map?

Mr. STEWART. No; but I have a map showing district 7 in toto, with pattern.

Senator CHAVEZ. Will you please, before you proceed with your explanation, point out where Crown Point is?

Mr. STEWART. This is the Navajo administrative site, here.

Senator CHAVEZ. All right. Now, with reference to allotments and areas at Gallup and Window Rock, do you recall the testimony that in that area, in through there, there was something like 150 allotments, and only three Indians living on these allotments? Do you recall that testimony?

Mr. STEWART. I don't recall the testimony, Senator, but—

Senator CHAVEZ. Mr. Presley, didn't you make that statement in Gallup to that effect?

Mr. KELSEY PRESLEY. I don't remember whether I did, but the statement was made there at that time. I would like to ask Mr. Stewart at this time if these allotments were made, if the Indians asked for these allotments and homesteads, or did the Indian Department go out and allot them and tell them, "Here you are, take them." Isn't that the way it was carried out?

Mr. STEWART. The answer to that is, the Department did both ways. It was done in the early days.

Mr. PRESLEY. There are many Indians that have allotments to this day who don't know where their allotments are located; never lived on them; don't know where they are set up in the Grazing Service. When they go to check up and try to find out where the Indians' al-

lotments are, the Indians don't know where they are; they have never lived on them and don't know.

Senator CHAVEZ. That is correct, about the 115 allotments.

The CHAIRMAN. Now, this map you have just put up represents district No. 7?

Mr. STEWART. Yes.

The CHAIRMAN. Will you kindly explain the various colors and what they represent.

Mr. STEWART. This map represents, on a different scale, but more in detail and with more accuracy, that area I roughly indicated on the larger map a few minutes ago. Now, this map—I would like to make this statement as correct as we can make it. It is subject to errors of omission and of commission by the people making it, but it is reasonably correct as to land status.

There are within that—I might as well make a better picture of it—this line here [indicating] is the exterior line covered by this Secretary's withdrawal of June 8, 1941, which I mentioned a little while ago.

Senator CHAVEZ. Practically the description of the contents of the legislation that was introduced?

Mr. STEWART. With the exception of this, Senator Chavez, the boundary which starts here, this line, did not take in that San Juan County area; did not take in that railroad consolidated area; come up along here and come out and form a sort of a hook effect. The land status, the land tenure, in that district is very complicated, as you can see. There are State land grants, public domain, Indian allotments, and homesteads, citizen homesteads, as distinguished from the Indians, railroad land grants, privately owned, in terms of individual ownership other than Indian, and other Federal-owned land other than public domain. This red, in general, within the district indicates public domain.

The CHAIRMAN. All of the red?

Mr. STEWART. Yes, sir, inside the district lines.

The CHAIRMAN. Wherever it may appear?

Mr. STEWART. This yellow indicates Indian lands. By that, I mean lands the title to which is either in the Navajo Tribe or the individual allottee, plus some land relinquished by the Santa Fe Pacific Railroad Co., pursuant to an exchange item in an appropriation act passed by Congress in 1921.

The CHAIRMAN. Just at that point, may I interrogate, please? Will you explain how these released lands came about, and what was their status after having been released?

Mr. STEWART. I don't remember the terminology of that 1921 exchange item, but, in general, I do. It provided for the relinquishment and exchange by private owners, by the State, by Indian allottees of their land holdings within San Juan, Valencia, and McKinley Counties, N. Mex., whereby they could exchange base land which they had for unselected public domain within those counties for the purpose of effecting consolidation and the blocking out of their holdings. Substantially that is what is in that act.

The CHAIRMAN. Those lands that were released, then, what became of them?

Mr. STEWART. Those lands that were released by the Santa Fe Co. were conveyed directly by deed to the United States.

The CHAIRMAN. Did they become a part of the open public domain of the United States?

Mr. STEWART. That is a question that I cannot answer, but I think Secretary Chapman can indicate that it will be answered. Is that correct?

Secretary CHAPMAN. That is correct. An opinion is being drawn and worked on at this moment, Senator, on that. It has been under discussion for some time as to the legal status of that land.

Senator CHAVEZ. Does that mean that the Indian Bureau might claim it as being Indian lands instead of public domain?

Secretary CHAPMAN. It is for determination of the status.

Judge SETH. Isn't the Indian Service claiming it as Indian land, and so administering it?

Mr. STEWART. We have. That is, the Indian Service has claimed these lands as inuring to the exclusive benefit of the Navajo Indians.

Senator CHAVEZ. Did the legislation of 1921 provide that?

Mr. STEWART. No, sir.

Senator CHAVEZ. You just did it?

Mr. STEWART. That's right. Moral obligation somehow was felt to exist that these relinquished lands within this proposed Indian consolidated area should inure to the Navajo Tribe of Indians. Many of these—I won't say many, I would say approximately 134 Navajo allottees—gave up their land in the railroad consolidation area for lieu selection by the railroad company in return for, as they understand, the lieu selections within the so-called relinquished area or Indian consolidation area.

Senator CHAVEZ. If that was the intention of Congress in 1921, why did you lead the legislation in 1934 to extend the reservation? You did include that particular land?

Mr. STEWART. That's right.

Senator CHAVEZ. You didn't need the legislation if you were correct that the law of 1921 gave that to the Indians.

The CHAIRMAN. Gave what to the Indians?

Senator CHAVEZ. The released lands.

Mr. STEWART. No, Senator; the act of 1921 did not give the released lands to the Indians.

Senator CHAVEZ. Well, under what authority do you now claim it for the Indians? If it didn't, why do you want an opinion from the Solicitor?

Mr. STEWART. The spirit and intention leading up to the enactment of this legislation had been for the purpose. The act was and is faulty.

The CHAIRMAN. What?

Mr. STEWART. Faulty—doesn't qualify at all where that title should go.

The CHAIRMAN. As to these allotments that were relinquished by the Indians, were they allotments of the same character in the way of selection that you have depicted as to the allotments generally; that is, selected by the Indian or selected by someone for the Indian, allotments which the Indian didn't know anything about?

Mr. STEWART. Both ways, Senator.

The CHAIRMAN. Both applied. So you used the Indian allotment provisions regardless of whether the Indians selected it or not, as a basis for your position that the land inured when released by the railroad company to the Indian?

Mr. STEWART. I think there is merit in that observation, yes. I might also say that the reverse is true.

Now at the present time there are approximately 54 of those allottees, who gave up their allotments to the railroad company who refused, absolutely refused to go out and take lieu selections. Under the administrative authority which we do have, we can make those lieu selections for those people. If ever this problem is to be solved, we will have to make those lieu selections for them. It is arbitrary action to be sure, but it is holding up a planned use, a planned exchange program of grazing allotments within district 7. I think in this instance the means justify the end.

The CHAIRMAN. The committee will be interested in knowing how that plan is formulated and how far the Indian himself goes into the plan, whether it be a plan by the Department without Indian knowledge, or worked on by the Indians with their understanding and acquiescence. The committee would certainly be interested in knowing how it was worked out.

Mr. STEWART. I would be very glad to, wherever we take into consideration the arbitrary action, if it is necessary, of these several allotments that have not yet been satisfied as to lieu selection. Incidentally, I might mention that most of them are in the status of deceased allotments, where numerous heirs and their interests are fractionating their 160 acres until the ownership will be so small as to being almost unrecognizable. That, likewise, complicates the problem and indicates we will have to take arbitrary action.

The CHAIRMAN. You have made the statement there, on two occasions, that interests me. You say the Indians, in certain cases, 50 cases I think you said—

Mr. STEWART. Fifty-four, I believe it is.

The CHAIRMAN. The Indians have absolutely refused to approve the procedure. Now, why did they refuse?

Mr. STEWART. I frankly don't know.

The CHAIRMAN. Isn't it largely because they don't know where the land is?

Mr. STEWART. No, I don't think so. I think it goes, fundamentally deeper than that. This area here, contrary to general belief, is ancestrally Navajo area. It is their home.

Senator CHAVEZ. You could say that for the entire United States.

Mr. STEWART. No. The Navajo people drifted westward instead of eastward onto what is now this reservation. I am told by older leaders of the tribe that the historic night chant of the Navajo people originated right over in here. These people down in this area here that do not want to make lieu selections, this is their home. They don't care at all about making lieu selections up in here or somewhere else. That is their home and that is why they want to keep it where they are. I think, fundamentally, Senator, that is the answer. We found that to be true with the returned Navajo soldiers. Over 2,000 of them are now in the armed forces, and they invariably want to get home to their home country, Navajo country. They are not concerned with anything else except with getting home.

Senator CHAVEZ. Probably the idea is they don't want to go to the place you now want to send them to.

Mr. STEWART. Exactly. I agree with you; that is correct.

Now, this area in here is not within the district. This is the railroad consolidation area that took place pursuant to the 1921 act.

The CHAIRMAN. What is the general nature of the holdings of that land?

Mr. STEWART. It is so solidly owned by the railroad company and a couple of little spots of public domain in there, I don't suppose it would be justifiable to put it within the district.

The CHAIRMAN. I didn't catch that before. That is a railroad holding, largely?

Mr. STEWART. All except two or three spots of public domain in there.

The CHAIRMAN. That was the consolidation that was created. Is that right?

Mr. STEWART. With the railroad company, yes.

The CHAIRMAN. The thing that I notice, there are what I choose to term allotments. Is that correct, those black spots or those spots that are partially black?

Mr. STEWART. The black is privately owned land. This dull color is the State sections. There are a few Indian allotments left in there, but I think a couple of them were oil possibilities. That is why they were not taken out in the exchange program.

The population of this area, district 7; the Indian population, as disclosed by an especially good indication, the rationing system—none of them missed their ration books, although many of the census enumerators of the Government in times past have missed them—is somewhat over 12,000. It is 12,934. I believe that is the figure.

The CHAIRMAN. In where, what territory?

Mr. STEWART. District 7.

The CHAIRMAN. Very well.

Mr. STEWART. That is an average of five to the family.

Mr. CHAIRMAN. I haven't it clear in my mind. The reservation is off to the left?

Mr. STEWART. This is it here.

The CHAIRMAN. What is that green and white territory?

Mr. STEWART. That is national-forest area.

The CHAIRMAN. The white and green?

Mr. STEWART. No; we are only concerned with showing the boundaries of the district. This is outside of the district. We have nothing in there. This area here is the district boundary.

Senator CHAVEZ. What is that white, above the green, there?

Mr. STEWART. I don't know what that is. We have nothing in there. We are not concerned in there. This is the line, Senator, the boundary line.

Mr. FLOYD LEE. That happens to be my holdings—that one yellow spot to the right in township 5, right above the green. We control that.

Mr. STEWART. That is State land there. There is a little district down below, in district 7, too. I don't think anybody can see it. I think most of the people understand it.

I might mention this, too, is an area south of Gallup, called the Ramah area. It is in the grazing district. Over here, south of Albuquerque, and a little bit west, is called the Puertecito country, and Canyoncito is over here. From Albuquerque, down that far south, is the Socorro; west, over from Santa Magdalena, is this Puertecito area.

Judge SETH. How far is that away from the main district?

Mr. STEWART. I'd say a hundred miles from the nearest part. West of Albuquerque here going out on Highway 66, a little bit north, probably 19 or 20 miles, is the Canyoncito Navajo group. The administration of these two groups is under the United Pueblo Agency here in Albuquerque. It is much more convenient.

I would like to close my observations by giving the total figures of Indian land within the State. These are the official figures, not for land purchased under the Resettlement Administration or Soil Conservation Service but lands title to which is actually in the Indian.

Senator CHAVEZ. Beside the 12,000 Navajo that you say live within the area of district 7, how many non-Indians are making their living in there?

Mr. STEWART. I think it is 285. We have made the survey—285 are dependent on livestock.

Senator CHAVEZ. And, of course, there are others outside of the district that have their business in there, too. Isn't that correct? People that live at Gallup or Thoreau or over here on the Rio Grande?

Mr. STEWART. Business activities are interchangeable.

Mr. CHAIRMAN. Just a moment, please. I notice that the room is quite congested. I notice that some who came in late are unable to secure seating space. I am very much concerned about that because quite a number of them are of the Indian race, and some the Spanish-American race, and I don't want anybody to be crowded out here. I am wondering if, at the noon recess, it may be possible to secure larger quarters.

If it is, I hope that our investigator or someone will assist us in the securing of larger quarters. In other words, I don't want it ever said that anyone was not permitted to get in because it was too much of a crowd. I would like very much, if it is at all possible, to secure quarters capable of accommodating all who see fit to attend. I make that suggestion that those who are interested in this might give us a thought about what we can do.

Pardon the interruption, Mr. Stewart.

Mr. STEWART. It will be of interest to the committee and to the people present to know what the land, Indian land, ownership is in this area, in terms of acreage, and what it leases. The Navajo Tribe, using its own funds, leases 200,241.13 acres in this general area that we are talking about, largely from the railroad company and from the State. It pays a rental, out of tribal funds, of \$9,941.70 annual rental on those lands. The tribe has also purchased with its own funds a total of 187,382.16 acres; right in this heavy yellow-colored area; that is, but within district 7.

The CHAIRMAN. Pardon me; would you kindly repeat that statement.

Mr. STEWART. Yes, sir. The Navajo Tribe has purchased, through use of its own tribal funds, a total of 187,382.16 acres within grazing district 7, largely contiguous to the present eastern and southern boundaries of the reservation in New Mexico.

Senator CHAVEZ. What authority did you have for that?

Mr. STEWART. Originally, the act passed in 1928 which authorized the use of \$1,200,000 for tribal funds on reimbursable basis for the purchase of lands in Arizona or New Mexico.

Senator CHAVEZ. Is that authority still in existence?

Mr. STEWART. No; that has been nullified.

The CHAIRMAN. Now, when were these purchases made? Were they made at any particular period or throughout the years?

Mr. STEWART. They have been made through, I think, the heaviest amount was made around 1929, 1930, or thereabouts; 1928, '29, or '30, in New Mexico.

The CHAIRMAN. That is, purchases were made largely from the railroad and the State.

Mr. STEWART. Almost exclusively from the railroad company, and subsidiary company of the Frisco Co., called the New Mexico & Arizona Land Co.

Mr. Chairman, I now have a copy, a typed copy, of the Exchange Act of March 3, 1921, which I tried to outline from memory a few minutes ago. Would you care to have this inserted in the record?

The CHAIRMAN. You might read it and insert it in the record.

Mr. STEWART. The act reads as follows:

The Secretary of the Interior is hereby authorized, in his discretion, under rules and regulations to be prescribed by him, to accept reconveyances to the Government of privately owned and State school lands, and relinquishments of valid homestead entries or other filings, including Indian allotment selections, within any township of the public domain in San Juan, McKinley, and Valencia Counties, New Mexico, and to permit lieu selections by those surrendering their rights so that the holdings of any claimant within any township wherein such reconveyances or relinquishments are made may be consolidated and held in solid areas: *Provided*, that the title or claim of any person who refuses to reconvey to the Government shall not be hereby affected.

This is a typewritten copy of an item in the Appropriation Act of 1921, for the Interior Department, containing this legislative item.

The CHAIRMAN. Now, that was a separate act, or was it a rider on an appropriation bill?

Mr. STEWART. It was an item run into an Interior Department appropriation bill.

Senator CHAVEZ. And was it continued the following year?

Mr. STEWART. It was effective until the passage of the Taylor Grazing Act, which stopped the exchange process for public domain, as I understand it.

Senator CHAVEZ. It don't see how it would be effective the following year if it wasn't contained under the appropriation bill then.

Mr. STEWART. It is effective—that is a question of law procedure. I couldn't answer that, Senator.

That about concludes my general observations. I would like to give you the total acreage within the State of Indian lands.

The CHAIRMAN. Very well.

Mr. STEWART. The total acreage is 4,891,198 acres. These figures are taken from the statistical supplement to the Annual Report of the Commissioner of Indian Affairs for the fiscal year ending June 30, 1942.

Senator CHAVEZ. You are not totaling the reservations?

Mr. STEWART. Navajo, Jicarilla, Mescalero, and the Pueblos.

Senator CHAVEZ. How large is that Navajo Reservation as such?

Mr. STEWART. The Navajo here in New Mexico is approximately 2,592,222 acres. That is that big block there, plus the tribal purchases out here.

The CHAIRMAN. What is the total number of acres owned or controlled by the Indians, or the Indian Service for the Indians, in the State of Arizona, regardless of tribe or jurisdiction?

Mr. STEWART. I don't have that, but I can have it for you.

The CHAIRMAN. I meant, the State of New Mexico, not Arizona.

Mr. STEWART. This is the New Mexico acreage, just what I gave.

The CHAIRMAN. Four million plus?

Mr. STEWART. Four million eight hundred and ninety-one thousand, one hundred and ninety-eight.

The CHAIRMAN. That includes reservations and allotments, and everything else.

Senator CHAVEZ. What about the controlled acreages?

Mr. STEWART. That does not include the controlled acreage.

Senator CHAVEZ. Can you give us the controlled acreage?

The CHAIRMAN. Also in my question, I am trying to have you embrace all Indians, every tribe and all tribes.

Mr. STEWART. Within the State of New Mexico? That is the answer as to tribal property ownership.

The CHAIRMAN. Included with that are there any controlled lands, controlled by the Department for the benefit of the Indians?

Mr. STEWART. Well, sir, I would like a little time to work that statement up, I don't have it available.

The CHAIRMAN. I would like very much to have that. Very well.

Mr. STEWART. A general picture, more in detail than I have presented it as to the submarginal land program in the Rio Grande and of the Navajo problem as a whole, is in two documents which I have here which would be extremely helpful later on if they could be inserted in the record.

The CHAIRMAN. Are they voluminous?

Mr. STEWART. I will hand them to you. This is the Navajo, and here is the Pueblo.

The CHAIRMAN. They are quite extensive, and there are quite a number of graphs, I notice. Of course, we can't put those in our record. I think perhaps the purpose would be met, as nearly as we could, comprehensively, by having these become a part of the files of the committee because the graphs cannot be put into the record.

Secretary CHAPMAN. Senator, he says it would not hurt the report in any way by deleting the graphs entirely. If you could let the rest of the material go into the record, I think it would be most helpful as to the continuity of this picture.

The CHAIRMAN. That is a special request, that you ask this to become a part of the record? It will be inserted in the record, but I want it understood that the graphs cannot get in the record.

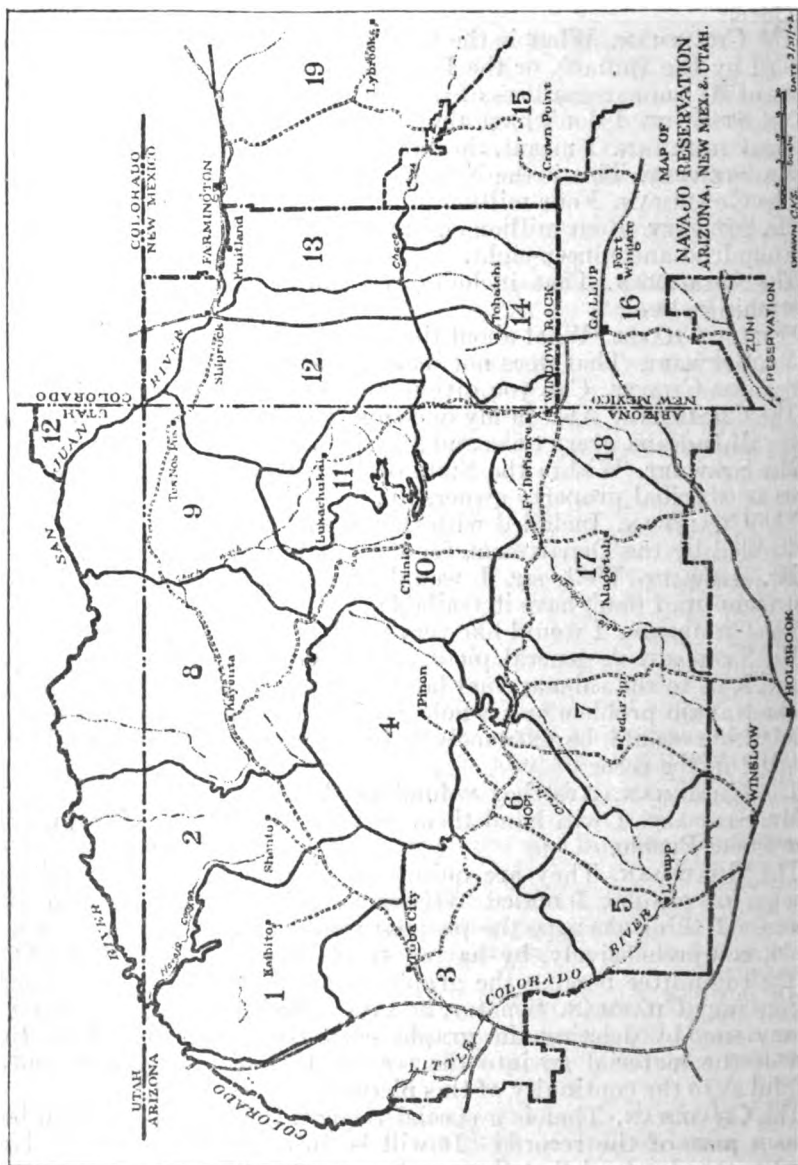

Secretary CHAPMAN. That is right.

The CHAIRMAN. But the instruments themselves will become a part of the files of the committee as well; and we can preserve the graphs so that the committee may have the benefit of these graphs, and have these instruments become available to other interested parties here.

(The following are the documents referred to:)

NAVAJOS AND THE LAND

Window Rock, Ariz., August 1943

THE NAVAJO PROBLEM BELONGS TO ALL THE PEOPLE

"Congress, as a whole, is responsible for the Indian policy and may not conscientiously shift responsibility to delegations from States in which the Indians in question live. Is not the Nation, as such, through its Representatives, responsible for the wards of the Nation? May I not truthfully say some Members of Congress represent constituencies or rather some

active, aggressive constituents who are enemies of the Indians and their welfare? They have responsive Representatives in Congress in such cases; but who represents the Indians? Without a vote, placed under Federal jurisdiction, he is not a part of the State 'constituency'; he is often fought by the constituency and its representatives. The Indian has no representation unless Congress as a whole espouses his cause. Too often, however, the Congress as a body relies implicitly upon the delegation from such States for information, guidance, and action, and such delegations are at times misinformed by interested constituents. I am stating the case as mildly as possible."

These words were uttered almost 30 years ago by one of the clearest thinkers and most able advocates of Navajo rights. He was the Rev. E. Anselm Weber, for many years director of St. Michael's Catholic Mission on the Navajo Reservation. His world and his life have become a legend.

If Father Weber were alive today he might add a significant amendment to his statement. He might have said that while the Indian farmer and herder is often without representation in our democracy he is not the only one in that position. In many areas the white man, and the Spanish American, are also controlled by forces on whom they have little influence.

THIS WAS AN ANCIENT NAVAJO HOMELAND

The Navajo land problem in its modern phase arises out of the events that took place in the 1860's when Congress passed the Homestead Act and the Senate in 1868 ratified a treaty with the Navajos who had been in captivity at Fort Sumner. Under the terms of that treaty the Navajos were given a reservation comprising 3,414,528 acres. The rest of the territory not comprised in the Indian and other reservations was open to entry by non-Indians under the Homestead Act and other public land laws.

The Navajo captives at Fort Sumner who were returned to their country in 1868, numbered about 9,000 souls. At least 5,000 others were not rounded up by Kit Carson and remained in their old locations. For these 14,000 people the treaty reservations of less than $3\frac{1}{2}$ million acres was entirely insufficient. This treaty reservation had never covered more than a minor fraction of the total area habitually and customarily used by the Navajos from time immemorial. When the Navajos returned from Fort Sumner, they returned to the areas in Arizona, Colorado, Utah, and New Mexico on which they had done their floodwater and dry farming and had ranged their livestock. The total area thus occupied by the Navajos covered five times the area of the treaty reservation.

This area outside of the treaty reservation used and occupied by the Navajos was public domain thrown open to homesteading on the assumption that it was "vacant and unoccupied" land owned by the Federal Government. All of the subsequent difficulties have arisen out of the erroneous assumption that, because the land was public domain, it was "vacant and unoccupied." In fact all the Navajo country was used and occupied by Navajos, Hopis, and a limited Spanish-American settlers. This population used the land to gain a livelihood. The livelihood was merely a subsistence living with practically no cash, but it was an ample living as indicated by the rapid increase of the Navajos and Spanish-American population.

The intrusion of non-Indian mining and especially of livestock interests immediately created problems and difficulties. Because it was assumed that the land was "vacant and unoccupied," white interests through the operation of the public land laws established legal claims to areas used for centuries by Navajos and Spanish-Americans. The interests of the Spanish-American settlers under the terms of the treaty of Guadalupe-Hidalgo were protected even to the extent of having the General Land Office send out its surveyors who informed the remote Spanish-American settlers of the danger that their land might be absorbed by the newcomers unless they filed claims under the public land laws to the area they occupied. Hundreds of these small Spanish-American squatters were thus protected in the ownership of their homesteads on the public lands by the initiative of the General Land Office.

Enlargements corrected some early errors, 1878-1907.

The Navajo Indians were partially protected likewise, but by a different procedure. Recognizing the total insufficiency of the original treaty reservation of less than $3\frac{1}{2}$ million acres, at the urgent request of Army officers including

General Scott and General McDonald, Indian Commissioners, missionaries, and others, the Navajo Reservation was enlarged by President Hayes through the Executive orders of October 29, 1878, and of January 6, 1880, to the extent of almost 2,000,000 acres; President Arthur enlarged the Navajo Reservation through the Executive order of May 17, 1884, by approximately 4,800,000 acres. It is significant that the villages inhabited by the 2,200 Hopi Indians were on the open public domain and open to entry under the public land laws until 1884 when President Arthur established the so-called Moqui Reservation.

Subsequently President Cleveland added about 40,000 acres to the reservation by the Executive order of April 24, 1886, and President McKinley on January 8, 1900, added the 425,171 acres of the so-called Leupp district in the southwestern corner of the reservation. President Theodore Roosevelt on November 14, 1901, added almost 1,600,000 to the western part of the reservation and on May 15, 1905, added approximately 67,000 north of the San Juan River in Utah.

On November 9, 1907, President Roosevelt heeded the urgent request of numerous friends of the Navajos, especially the plea of Father Weber of the St. Michaels Mission, and set aside approximately 1,200,000 acres in Apache County, Ariz., about 3,348,000 acres in New Mexico. The addition to the eastern part of the Navajo Reservation in New Mexico had been the original homeland of the Navajos, and more than a thousand Navajo families were occupying and using this area into which non-Indian livestock men were rapidly extending their operations by virtue of the public land laws. The action of President Roosevelt settled the worst Indian land problem in the Southwest. But the livestock operators of New Mexico and Colorado who were anxious to obtain the use of the area as a winter range for their sheep, brought enormous pressure to bear on the congressional Delegate from the Territory and on the White House.

Selfish interests forced a reduction, 1907-11.

They succeeded. Part of the area added to the reservation in New Mexico was restored to the public domain by the Executive order of December 30, 1928. President Taft's order of January 16, 1911, restored to entry the balance of the Navajo lands in New Mexico. The allotments made on the public domain to Navajo Indians were, of course, excepted from these orders throwing the lands back into the public domain. But the taking from the reservation of more than 3,000,000 acres did not satisfy the New Mexico stockmen. Agitation continued for the opening up of the entire Navajo and of other Indian reservations in New Mexico and Arizona after allotting the Indians at the rate of one-quarter section per capita. It was concerning this agitation that Father Weber, of St. Michaels Mission, wrote the statement dated July 25, 1914, heretofore quoted and repeated here in part:

"Congress, as a whole, is responsible for the Indian policy and may not conscientiously shift responsibility to delegations from States in which the Indians in question live. Is not the Nation, as such, through its Representatives, responsible for the wards of the Nation? The Indian has no representation unless Congress as a whole espouses his cause. Too often, however, the Congress as a body relies implicitly upon the delegation from such States for information, guidance, and action, and such delegations are at times misinformed by interested constituents."

Excerpt of an article by Mr. Roosevelt in the Outlook of October 18, 1913.

"Among those at the snake dance was Father Weber, of the Franciscans, who have done much good work on the Navajo Reservation. * * * Father Weber, like every competent judge I met, strongly protested against opening or cutting down the Navajo Reservation. I heartily agree with him. Such an act would be a cruel wrong and would benefit only a few wealthy cattle and sheep men. * * * It is a desert country. It cannot be utilized in small tracts, for in many parts the water is so scanty that hundreds, and in places even thousands, of acres must go to the support of any family. The Indians need it all; they are steadily improving as agriculturists and stock growers; few small settlers could come in even if the reservation were thrown open; the movement to open it, and to ruin the Indians, is merely in the interests of a few needy adventurers and of a few wealthy men who wish to increase their already large fortunes and who have much political influence."

By restoring these 3,000,000 acres of the eastern Navajo Reservation in New Mexico to the public domain the area was reopened to the non-Indian stockmen.

even though the area was fully occupied and stocked by Navajo sheep, goats, cattle, and horses. Another complicating factor was created by the holdings of the Santa Fe Railroad, which had received patent to all odd-numbered sections within the land-grant strip. The railroad lands were located in the area containing the heaviest concentration of Navajo Indian population. On many of these railroad sections Navajo families had made their homes, built their hogans and corrals, and run their sheep for many years. When this pattern was made more complicated by State selections, Indian allotments, and white homestead claims, the confusion reached its climax.

Confusion and disappointment caused by allotting and homesteading.

Numerous efforts were made in the period between 1911 and 1933 to find a remedy for the unsatisfactory conditions, especially those in New Mexico, in the area which had been taken from the reservation by President Taft. Of these actions the report of the Commissioner to the Navajos to the Commissioner of Indian Affairs, dated January 1, 1932, says: "These restorations to the public domain have caused more bitterness, confusion, and ill feeling than any other Executive act relating to Indian matters which we know of affecting this part of the Indian country * * * The area in New Mexico included in the 1907 order * * * was a country lying between the Navajo Reservation as then created on the west and the Jicarilla on the east, which for many years had been used almost exclusively for the Indians and was generally looked upon and almost universally considered to be Indian country.

"Neither on December 30, 1908, nor on January 16, 1911, when all this country in New Mexico, so dearly cherished by the Indians as their own, was taken away from them, was there any move at all to restore to entry the large extent of territory in Arizona included in these same orders * * * although Arizona, with almost exactly the same total area as New Mexico, even then had several times the acreage of Indian reservations as New Mexico had * * * as soon as they were restored large numbers of Indians and non-Indians rushed in there and a confusion which has ever since become worse and worse commenced. The Indians have continued taking allotments throughout the area ever since, and recently homesteads as well, in the hope of controlling the country entirely as they would have controlled it had the orders adding it to the reservation not been revoked, but as soon as it was restored the non-Indians came in, too. * * * This has resulted in an almost impossible situation—one which the Indian Office and other departments of the Government have been doing their best to cope with ever since the restoration orders of December 30, 1908, and January 16, 1911. * * *

"Such men as Father Weber and Gen. Hugh L. Scott interested themselves deeply in this question and put themselves on record in protests to the Government in relation to it. Father Weber, who was for years a dominant influence for good amongst the Navajos, probably knew more about them and their affairs than any white man ever has. He pleaded for the permanent addition of this country to the reservation and was very clear in his opinion that allotting would be an unsatisfactory expedient. No one knew better than he that a 160-acre allotment for an Indian family's livelihood in this desert country was a mere gesture. I understand that Father Weber went to Washington to see President Roosevelt about it, and that the order of 1907 followed this visit of his."

"So, too, with General Scott, whose extraordinary knowledge of Navajo and other Indian affairs is universally conceded. He, as the records show, was equally insistent with Father Weber that unless this country could be definitely and permanently set aside for the Navajos that most unfortunate consequences would surely follow."

Efforts to diminish chaos by consolidating lands

In the effort to bring about a simplification in the ownership pattern in the New Mexico area formerly part of the reservation, Congress in 1921 passed an act authorizing the exchange of privately owned and of State and school lands, of homestead entries and other filings, including Indian allotment selections in San Juan, McKinley, and Valencia Counties in New Mexico for lieu lands on the public domain, thus making possible the segregation and consolidation of private and Indian holdings within the area. This act was designed especially to facilitate the reconveying of the railroad grant land to the United States and the selection by the railroad of other public domain lands so as to consolidate its holdings in solid blocks. No exchanges were made under this act

until 1929. The report mentioned above states that "on October 29, 1931, the railroad filed in the land office at Santa Fe its list of selections No. 06548 under section 2 of the act of March 3, 1921, by which list of selections 134,283.27 acres would be relinquished by the railroad to the Government for the benefit of the Indians, and in exchange therefor 124,670.23 acres of exchange railroad lands have been reconveyed to the United States for the benefit of the Indians since the beginning of the exchange operations.

Exchanges of privately owned lands within the boundaries of Indian reservations for public lands outside of these boundaries were first authorized by a provision in the Indian Appropriation Act approved April 21, 1904, which contained the following language: "That any private land over which an Indian reservation has been extended by Executive order, may be exchanged at the discretion of the Secretary of the Interior and at the expense of the owner thereof and under such rules and regulations as may be prescribed by the Secretary of the Interior, for vacant, nonmineral, nontimbered, surveyed public lands of equal area and value situated in the same State or Territory." This paragraph dealt with the situation created by the enlargement of Indian reservations by Executive order which orders in many instances included private land within the extended boundaries. It is obvious from the wording and the purpose of this legislation that the base lands relinquished by the private owners were to be used for the benefit of the affected Indian tribes. This intention is confirmed by the passage of the act of March 4, 1913, which authorized a limited number of relinquishments of railroad grant lands to Indians occupying such lands and the granting of lieu lands to the railroad from the public domain in the same State. The same intention is shown in the departmental bill introduced in 1930, which authorized the relinquishment and reconveyance of privately owned lands in certain counties in Arizona for the benefit of the Navajo Indians. This bill provided that "any privately owned lands relinquished to the United States under this act shall be held in trust for the Navajo Tribe of Indians." This intention to use the relinquished land for the benefit of the Navajo Tribe was again affirmed in a departmental bill prepared in 1924, which bill among other provisions, extended the boundaries of the Navajo Reservation over a large part of the territory taken from the reservation by President Taft and provided that the exchange provisions of the act of April 21, 1904, should be applicable in this area. Under the 1904 act, of course, the relinquished lands were used for the benefit of the Indian tribes.

The Wilbur withdrawal of July 8, 1931.

As predicted by all authorities, the situation in this area became worse and worse and the objection on the part of the local interests to making additional allotments or public domain homestead selections for the Navajos grew louder. Under the Hoover administration Secretary of the Interior Wilbur and Commissioner of Indian Affairs Rhoads endeavored to bring about what they hoped would be a permanent solution of the problem by again adding the bulk of the area restored to the public domain in 1911, to the reservation by act of Congress. In 1924 a bill was drafted which would have added the bulk of the 1907 additions once more to the reservation, with a provision for the exchange of private lands within the new part of the reservation for public lands on the outside and carrying authority for an appropriation of \$200,000 to buy out private interests within the added area. However, objection from New Mexico prevented any action on this proposal. The allotting process was resumed by the Indian Office after this failure and by decision of the Department of the Interior on June 6, 1931, it was held that qualified Indians could, under the Homestead Act of 1884, take advantage of the enlarged Homestead Act of 1916 and obtain 640-acre grazing homesteads in trust. The Indians proceeded to take advantage of this decision to file homestead claims but at the same time white applicants for homesteads increased in number throughout this area. The resulting conflicts moved Secretary Wilbur on July 8, 1931, to withdraw temporarily from all forms of entry about 4,000,000 acres of which 390,000 acres were in Arizona. This withdrawal precipitated the negotiations which led to the introduction of the Arizona and New Mexico Navajo Reservation boundary extension bills in 1933.

Navajo boundary extension bills of 1934.

On June 6, 1934, the President approved the bill enlarging the boundaries of the Navajo Reservation in Arizona. This bill carried an authorization of \$481,879, reimbursable from tribal funds, for the purchase of certain privately owned lands within the enlarged reservation; it also authorized the exchange of

certain railroad grant lands for lieu lands on the public domain outside of the enlarged reservation. The Arizona boundary extension bill had the approval of all interested parties, including the commissioners of the affected counties, the railroad, the livestock associations, and the property owners. The legislation provided that the lands relinquished to the United States by certain private landowners within the addition to the reservation should be held in trust for the Navajo Indians. The legislation also provided that no further allotments of Indian homesteads should be made on the public domain within the three affected Arizona counties. The purchases and exchanges in Arizona have been completed and a constant source of friction and irritation has been eliminated as a result of the adoption of the boundary extension legislation.

The New Mexico Navajo boundary extension bill, like its twin, had the endorsement of all interests affected by it; the commissioners of the counties, the property owners, the livestock and financial interests had given their consent. The bill passed the Senate and was favorably reported by the House Indian Affairs Committee, but was not called up for action in the House prior to adjournment. In 1935 the Senate, with the support of Senator Cutting of New Mexico, passed a New Mexico Navajo boundary extension bill which was sent to the House for action, but after the death of Senator Cutting his successor caused the bill to be recalled from the House and recommitment to the Senate committee. Extensive hearings were held on this bill in Washington and in New Mexico during 1936, and additional hearings were held in 1937 and 1938, but no action was taken.

Establishment of grazing district No. 7.

During all of this period the application of the regulatory provisions of the Taylor Grazing Act resulted in constantly increasing unregulated use of the 3½ million acres in New Mexico temporarily withdrawn from entry in aid of the boundary extension legislation. Inasmuch as this area had been withdrawn prior to the Taylor Grazing Act withdrawals in October 1934, the Division of Grazing, predecessor of the Grazing Service, did not have the authority to administer the area. Hence the livestock squeezed out of the districts placed under administration tended to concentrate on the unregulated no man's land of the withdrawn area creating a serious overgrazing problem. Alarmed by the incursion of nomadic sheep from Colorado and remote parts of New Mexico and Utah into this withdrawn area, the resident and nonresident customary users requested that the area be placed under administration by the Grazing Service. In 1939 the Commissioner of Indian Affairs joined the Director of Grazing in a recommendation to the Secretary that the withdrawn area be designated as New Mexico grazing district No. 7 and that it be administered by the Grazing Service under special rules. The request of the users for the administration of this area by the Grazing Service was transmitted to the Commissioner of Indian Affairs and the Secretary by Mr. A. D. Ryan, then Deputy Director of the Grazing Service, who pointed out the crying need of the area for administration and regulated use in order to prevent irreparable erosion damage through overstocking and overgrazing.

The Commissioner of Indian Affairs agreed with the Director of Grazing that action to conserve the range within the withdrawn area was necessary. Inasmuch as the Navajo boundary extension legislation was stymied for the time being, the Commissioner and the Director agreed upon a procedure to be recommended to the Secretary for the establishment of district No. 7. The district, containing a gross of about 3½ million acres, contained only 1,034,000 acres of public domain and national-forest lands as against 1,194,000 acres owned and 168,000 acres leased by the Navajo Indians. The Navajo Indians owned and leased 38 percent of the gross area whereas non-Indian livestock operators owned 6 percent, owned and leased a total of 23 percent of the gross area. The Indian population in the withdrawn area was between thirteen and fourteen thousand; the non-Indian population was less than 300.

On July 11, 1939, the Commissioner of Indian Affairs, the Director of Grazing, and the Director of the Division of the Bureau of Investigations joined in a recommendation to the Secretary that he create the New Mexico grazing district No. 7 covering the withdrawn area by modifying the boundaries of New Mexico grazing district No. 2 and the departmental withdrawn order of July 8, 1931. They also recommended that some 235,000 acres relinquished by the Santa Fe Pacific Railroad Co. and reconveyed to the United States be withdrawn by the Secretary and assigned to the Commissioner of Indian Affairs for administration.

The 3 above-mentioned officials joined in the recommendation that the Federal range code be not applied in the new grazing district and that new rules for administration of this district be promulgated by the Secretary. The rules proposed by the 3 officials and approved by the Secretary September 1, 1939, provided for the appointment of a regional grazer to have charge of this important district with its huge human and livestock population and its complicated administrative problems. It should be pointed out that, whereas New Mexico district No. 7 has less than 3 percent of the gross area of land administered by the Grazing Service, it has 8 percent of the total number of licenses and permits issued by the Grazing Service. The rules stressed residence within the district and dependence upon the livestock operations for a livelihood rather than other factors as a prerequisite for the granting of grazing licenses. They provided for an advisory board on which 4 Navajos would represent the 1,496 Indians users and 4 others would be the representatives of the 57 non-Indian users. The approved rules also provided for the appointment of a range conservation committee to assist the regional grazer in the management of the district and in arranging for those technical services which the Grazing Service could not supply.

The administration of district 7 by the Grazing Service has so far caused no important complaints from the users, but this lack of friction is almost entirely due to the administrative necessity of confirming the status quo as it existed at the time of the creation of the district in 1939. Since that time it has been impossible to complete the range surveys and to establish the carrying capacities of the three subdistricts. Until such carrying capacities are established, it is not possible to determine to what extent the various districts are overstocked. It is expected that the range surveys will be completed in the fall of 1943 and that thereafter heavy reductions in the stocking and a redistribution of licenses will have to take place. Such actions will affect both Indian and non-Indian users, and it is entirely probable that the users affected by the redistribution of the grazing privileges will give voice to complaints and objections.

The rules under which the grazing district is being administered are temporary and are issued under the provisions of section 2 of the Taylor Grazing Act.

A discussion of the affairs of grazing district 7 is incomplete without a discussion of the affairs of the Navajo Reservation. Of all the Navajo Reservation problems none is more crucial than those of overpopulation and soil erosion.

Should the non-Indian users in district 7 seek to eliminate any substantial number of the more than 13,000 Indians in the district, the question arises, where can these Indians go? That they cannot be pushed over onto the reservation becomes exceedingly clear from the facts in the following pages. Where they can go, no one has yet effectively suggested.

NAVAJO LANDS ARE DEPLETED

Francis E. Leupp, former Commissioner of Indian Affairs, wrote in one of his reports almost a generation ago:

"The Navajos have learned that thrice blessed is he who has nothing, for from him can nothing be taken away. Denizens of a desert too forbidding to tempt white cupidity, they have escaped pillage because nobody believed the booty would be worth the trouble of robbing them.

"But in spite of the fact that thousands of acres of this reservation have not vegetation enough to founder a humming bird, the reservation as a whole is stocked one-third heavier than the rest of Arizona and New Mexico, resulting in overstocking and overgrazing of those portions of the reservation that are blessed with vegetation, yet the reservation is to be allotted because they want the surplus lands restored to the public domain so they can use them for grazing grounds."

A pastoral people.

The problem confronting the Indian Service in the Navajo area is the support of an overpopulation of Indians upon comparatively unproductive, deteriorated lands.

The Navajos first located in the southwest in what is now the northeastern portion of grazing district 7 and from that point spread west and south. In 1864 migration was halted by the United States Army and as previously stated the Navajos were rounded up, taken to Fort Sumner, N. Mex., and in 1868, were brought back to the Navajo country.

The 1868 treaty reservation of $3\frac{1}{2}$ million acres has been increased from time to time since until the present area of the reservation and outside allotments totals about 16,000,000 acres.

This growth was the result of intense pressure of population; from 1868 to the present the Navajo Tribe has increased from an estimated 10,000 to over 52,000 people (see Population Chart). Since the 1870 density of population in people per square mile has varied between 1.0 and 2.8 with a peak in 1890 (see Density Chart). Since 1890, however, density of population has steadily increased to the present figure of 2.1 persons per square mile. This is more than twice the density found in comparable adjacent white-populated rural areas.

The present rate of increase in Navajo population is 1,200 per year. The birth rate is 36 per thousand, the death rate is 12 per thousand, leaving a survival rate of 24 per thousand, one of the highest for any group in the United States, exceeded only by a group of Negroes in the Southeast.

The Navajos are a group divided from the surrounding areas. Boundaries and the limits of allotment areas are sharp, but more effective are the barriers of language and culture. Less than 3 percent of the adult Navajos speak or understand English and a still smaller percentage are able to read or write. Difficulty of communication and contact is one of the main problems of Indian administration.

The average income of the Navajos is extremely low. Total income amounted to only about \$82 for 1940, a year that might be considered normal (see Income Chart). Income derived directly or indirectly from agriculture totals about \$55, including \$36 from livestock, mostly sheep; \$12 from farming, principally corn and beans; and \$7 from rugs made from wool produced at home. Remaining income is derived from wages and miscellaneous sources, the most important of which are piñon nuts and jewelry.

Income is used almost altogether for current living expenses which total \$73.35. About two-thirds, or \$54, is traded or spent at trading posts, of which about \$13 is for clothing, \$37 for food, and \$4 for farm and household equipment. Almost \$20 worth of corn, beans, meat, etc., produced at home are used at home primarily for food. The remaining \$8.54 of income is used for unrecorded purchases other than at the trading post.

The Navajo country is spectacular.

Well known for picturesque scenery of rolling plains, deep canyons, mountains, highly colored sandstone cliffs and painted deserts, the Navajo lands are beautiful but largely unproductive.

The reservation boundary including both the Navajo and Hopi jurisdictions encloses an area of 23,574 square miles. An additional area of checkerboarded allotted lands lies to the south and east of the reservation within the State of New Mexico.

About 44 percent of the reservation drains into the San Juan River, about 49 percent into the Little Colorado River, and about 7 percent drains directly into the Colorado River. The Navajo occupies about 40 percent of the total drainage area of the San Juan and Little Colorado systems and about one-tenth of the Colorado River watershed.

The surface of the Navajo area includes four principal features: (1) flat, alluvial valleys; (2) broad rolling upland plains; (3) high rugged mesas; and (4) mountains. Most of the Navajo area lies between elevations of 5,000 and 7,000 feet.

There are three distinct climates prevailing within the Navajo: (1) The warm, arid, truly desert climate of the lower elevations occupying over half (55 percent) of the area; (2) the intermediate arid steppe climate of the middle elevations, occupying about one-third (37 percent) of the area; and (3) the cold, subhumid climate of mountainous areas occupying 8 percent of the total (see Climatic Chart).

None of these climates are conducive to high type of agricultural production except where irrigation water is available. Over half the area is unproductive desert with rainfall averaging 8 inches and occurring principally during July, August, and September. High temperatures during summer and subzero weather during winter, high winds, frequent sand storms, high evaporation rates, and frequent, long droughts are characteristic. The steppe climate is only slightly more productive, with average rainfall of slightly more than 12 inches but subject to much the same high winds, sand storms, evaporation, and long droughts. The high mountains may be termed "subhumid" and would be productive agricultural areas were it not for the extremely short growing season. Rainfall averages

22 inches and there is a period of winter snowfall as well as summer storms. The growing season averages about 90 days but frosts often occur during every month in the year.

Droughts are the principal factor limiting all kinds of agriculture. Practically every year there are two 3-month periods without precipitation—during April, May, and June in the spring, and October, November, and December in the fall. Then, in addition, there are frequent longer droughts. Records show that every 3 to 8 years during the past 50 years there have been periods of 20 to 25 months without measurable precipitation. Often these periods are broken by only 1 or 2 months with rainfall only to be followed by another protracted drought.

These droughts are definitely normal occurrences in the Southwest and are not unusual. They obviously have a limiting effect on range forage production, and livestock grazing, storage of water for irrigation, and flood and dry farming.

Soils reflect influences of the climates under which they have developed. Desert soils are high in salts, high in mineral plant foods, low in plant matter, highly erosive, subject to wind erosion, and in general extremely unstable. Steppe soils are similar but not quite so salty, high in mineral plant foods, slightly higher in plant matter, are subject to rapid water erosion but not affected so severely by wind erosion. The subhumid soils are nonalkaline, are highly fertile when of sufficient depth, and are comparatively more stable than desert and steppe soils.

Vegetation also reflects climate. Desert vegetation, principally grasses and browse plants, is sparse, grows very slowly, produces a small margin for grazing use, is easily injured by overgrazing, and requires long periods for recovery after depletion. Steppe vegetation is composed primarily of grasses, sagebrush, and piñon-juniper. It will ordinarily produce more forage than desert but has narrow carrying capacity limitations. The subhumid zone produces ponderosa pine timber, oak, and associated under-story grasses and shrubs. The area is summer range and with proper use yields good forage.

The productivity of Navajo lands varies widely (see Productivity Chart): 11.6 percent is complete waste, 30 percent will carry less than 1 sheep for each 50 acres, 21 percent will carry 1 sheep for each 25 to 50 acres, about 16.7 percent will carry 1 sheep for each 16.7 to 25 acres, and only about 20 percent will carry a sheep on less than 16 acres. Only 0.5 percent is cultivated land over half of which is dry and flood irrigated.

The soil is disappearing rapidly.

The factors of rapid increase in population, lagging expansion in land area and development of irrigation works, predominance of marginal and submarginal lands, uncontrolled and abusive land-use practices, have, during the short space of 75 years since Bosque Redondo, had a severe effect on the Navajo people and upon lands set aside for their subsistence.

Land destruction and economic depletion have proceeded together each complementing and speeding the other. It is highly probable that productivity of land has been reduced by at least 50 percent and the people who had risen to be fairly well-off livestock owners, have now sunk again into a poverty which is continuously becoming worse.

Accelerated erosion, silt production, and vegetative depletion are the direct physical results of overpopulation.

No one can deny that the Navajos have sinned against their lands, but they are not the only ones. An exploitive philosophy was behind settlement of the entire Southwest. To this extent the Navajo may be pardoned: whereas his objective was subsistence and only a meager security, the objective of the white man was (and still is) the realization of profit, the declaration of largest possible dividends on invested capital, some of it foreign.

But whatever the philosophy, the effect upon land has been disastrous. After 75 years we find (by surveys by qualified technicians) that erosion, the most dependable index of abuse, has proceeded until removal of soil by water has injured to greater or less degree every acre of productive land on the Navajo. Up to one-fourth of the top productive soil has been removed from 45 percent of the area (see erosion chart), and between one-fourth and three-fourths of the productive soil has been removed from 23 percent of the area. Areas affected by these two intensities of erosion have been seriously reduced in productivity. In addition, over 75 percent of the topsoil, and in many areas even some of the subsoil, has been removed from 10 percent of the area. This latter condition amounts to virtual destruction and the creation of man-made badlands. Remaining portions of the Navajo are naturally unproductive areas of rough, broken, stony country devoid of or very sparsely covered with vegetation.

Wind erosion is active on all lands that are susceptible, excluding clay soils, geologic areas, and wooded or timbered country. Both removal of soil and accumulation of blown soil material are classified as erosion. Wind erosion is particularly active where dry, sandy desert soils with sparse, short vegetation prevail. Of the susceptible area, approximately one-third has lost up to 25 percent of the productive soil or material has been deposited up to 6 inches deep; another third has lost between 25 and 75 percent of the topsoil, or material has been deposited 6 inches to 1 foot deep; and about one-third of the area has lost over three-fourths of the productive soil or is covered by deposits greater than 1 foot in depth.

Wind action sifts out fertile silts and clays and deposits principally sterile sands in dunes or hummocks; thus deposited material is not a true soil capable of full plant production.

A serious and disturbing characteristic of erosion on the Navajo which is known to technicians is the prevalence of an extremely high rate of current activity (see Erosion Acceleration Chart).

Erosion is at present proceeding at an extremely rapid rate on more than half (54 percent) of the Navajo area. Also erosion is proceeding at a less rapid but still alarming rate within 33 percent of the area, while on only 13 percent of the area (and this portion includes extensive bare rock areas) is erosion proceeding only at what may be termed a moderate rate.

Data reveal that at the time the surveys were made gullies were advancing rapidly through Navajo lands and were becoming wider and deeper where existing already, and that sheet and wind erosion was destroying topsoil and moving the constituent particles (no longer soil) continuously about. Except for whatever achievements in control that have been made during the last 8 years, these conditions still exist.

Another disturbing feature of such advanced and active erosion is that, in addition to destruction of the watershed, the soil materials removed become debris and are blown about or carried away by streams.

Tremendous quantities of silt originate on the Navajo and flow into Lake Meade. These quantities of silt can be estimated with a reasonable degree of accuracy. The results of calculations show that the Navajo is the most critical portion of the Virgin, San Juan, and Little Colorado drainages, which in turn constitute the most critical portion of the Colorado watershed.

The following figures are based on siltation studies carried on at the Navajo Conservation Experiment Station at Mexican Springs, N. Mex., investigations of silt content of floodwaters of many of the major streams of the Navajo by technicians of the Soil Conservation Service and Soil and Moisture Conservation Division of the Navajo Service, and run-off records kept by these agencies and the United States Geological Survey.

There are two recognized major types of silt movement; removal of silt from origin and its deposition on fans, in reservoirs, natural depressions, along channels within the reservation, and transportation of silt off the reservation into the Colorado River where it is carried into Lake Meade. It is estimated that 50 percent of the silt moved is deposited at least temporarily on the reservation and that 50 percent leaves the area and is carried into Boulder Dam.

Silt samples taken from streams over various sections of the Navajo indicate that run-off water from the various climatic zones in this area can be expected to carry silt in the following proportions: arid zone, 45 percent; semiarid, 25 percent, and subhumid, 10 percent (all percentages by volume). Silt samples have been reported on washes in the arid country running as high as 70 percent while the Mexican Springs area (semiarid) has recorded silt content up to 30 percent. The accompanying table (table I) shows a few of the silt samples taken by the Navajo Conservation Experiment Station, the Soil and Moisture Conservation Division of the Navajo Service, and the Soil Conservation Service.

The total silt produced in the arid zone is calculated at 45,855 acre-feet, or 99,861,000 tons; semiarid zone, 17,050 acre-feet, or 37,135,000 tons; and semi-humid zone, 2,040 acre-feet, or 4,444,000 tons. This means that a total of 64,945 acre-feet or 141,440,000 tons of silt is produced annually on the Navajo Reservation (see table II). Assuming that the silt actually transported off the reservation is 50 percent of that produced, the amount entering the Colorado River annually to be transported into Boulder Dam is 32,473 acre-feet, or 70,720,000 tons. It would take 1,414,400 railroad cars, or 18,860 trainloads of 75 cars each, to transport this silt.

The National Resources Board Report, drainage Basin Problems and Programs, 1936, states that 200,000,000 tons of silt are produced annually by the Colorado River watershed. Of this amount 75 percent, or 150,000,000 tons, is delivered by the Virgin, Little Colorado, and San Juan Rivers. These drainage systems on the other hand produce only 10 percent of the water delivered by the Colorado River. Thus the watershed areas of these three rivers is defined as the most critical of the Colorado River drainage.

The Navajo Reservation comprises 36.3 percent, or over one-third of this area, and is in turn the most critical portion of the critical area. The Navajo produces less than 25 percent of the water and approximately 50 percent of the silt delivered by the three watersheds. This means that the Navajo delivers 2.5 percent of the water (one-fortieth) while producing 37.5 percent (over one-third) of the silt which goes into Boulder Dam (see chart I).

It has been found that 80 percent of this silt originates from bank cutting, so that regardless of the accomplishments of proper land use, some revegetative and mechanical control measures will be necessary for relief.

Some idea may be obtained of the rate of soil destruction from the figures shown in table II. About 65,000 acre-feet of silt is moved on the reservation each year. If we assume topsoil to average 12 inches in depth, then the equivalent of 65,000 acres of land are being destroyed on the Navajo each year. From our erosion survey data it is calculated that one-tenth of the Navajo, or 1,630,000 acres, is already virtually destroyed. At the present rate (which is more rapid than at any time in history), it would require about 25 years to destroy this 16,000,000 acres. Also at the present rate we would expect the productive life of the Navajo area to last only 225 years longer.

However, as erosion advances, the rate of erosion increases. Erosion began to be accelerated on a wide scale in the decade following 1890, and has increased in activity since, continuously gaining momentum, and doubtless will continue to gain momentum in the future. Therefore, it is probable that the Navajo would not last as long as 225 years unless conservation measures are effectively applied and made permanent.

Naturally, with the loss of soil on which vegetation is produced, there is an accompanying loss in ability of the land to produce plant growth. This loss cannot be recovered without recovery of soil.

From records of past numbers of stock grazed, accounts of past condition of vegetation, and calculations of the amount of productive soil which has been lost, it is estimated that the carrying capacity of the Navajo area at present cannot be more than half the original capacity. Evidence from available accounts indicate that this deterioration took place most rapidly between 1880 and 1910. If this is true, the resources available for Navajo subsistence have been reduced even faster than trends in population show. The population chart shows the increase in Navajo population in relation to estimated productivity of land in sheep units carrying capacity. It is apparent from this chart that depression for the Navajos set in about 1910 and has been continuous ever since.

Also reflecting this trend is the record of estimated average sheep units carrying capacity available to Navajos for grazing. During the two decades from 1870 to 1890, the Navajos were almost five to six times as wealthy as from 1920 to 1940. With increase in population and supporting resources, the Navajos have become an extremely poverty-ridden group, and the process is still continuing.

Navajo average income only \$82 per capita.

In order to obtain some idea of how the population at present stands in relation to available resources, and where the future is leading, an analysis was made of average subsistence requirements and resources available from which to obtain subsistence. If, at best, the Navajos can only maintain their present level of income of about \$82 per capita annually, and also make conservation and sustained yield use of all lands, their present resources are far inadequate. They can depend upon livestock to continue to carry the equivalent of 14,540 persons (see chart) within the reservation without further depleting the range resource. This is only a little over one-third of the 38,000 Navajos inside the reservation. Present farm land and farm land that can be developed without expense of large irrigation projects can support the equivalent of an additional 11,260 people, not with any degree of security, however, because over half of the land thus available for farming is dry and flood-irrigated.

Of the present population within the reservation this would leave almost 13,000 who must depend on wages, relief, help from neighbors, or must be moved from the reservation or placed on large irrigation projects if and when developed.

This 13,000 overpopulation is increasing at the rate of 1,200 per year, and each year that an adequate solution is delayed, only intensifies the problem and makes ultimate solution more difficult.

The 13,000 Navajos who live outside the reservation are faced with a similar future.

The facts available indicate that the ultimate solution lies in the direction of extensive development and efficient use of irrigated land, stabilization of the livestock industry, introduction and expansion of industrial occupations, conservation operations to assist and speed up soil stabilization and reduce silt flow, increase in land area, special treatment of already critical areas, and education both of Indians, policy makers, and of the public to the problems and responsibilities.

TABLE I.—*Silt samples from Navajo Reservation*

Name of wash	Date	Location	Silt content		Remarks
			Volume	Weight	
Chinle.....	Aug. 4, 1936	7 miles above junction of San Juan.	Percent 47.1	Percent	Estimated flow, 4,000 cubic feet per second, taken by H. F. Johnson, Soil Conservation Service, Soil Section.
Beckasba Bita..	Aug. 1, 1936	At Tuba City, Kayenta road crossing.	6.7	-----	Estimated flow, 110 cubic feet per second—second flow of season.
Laguna.....	Aug. 18, 1936	Kayenta crossing.....	1.08	-----	Small flow 24 hours or more after flood crest.

Total.....	23,574	190,500	64,945	141,440,000

CONCLUSION

This is what we are doing about it.

To meet the needs of the largest Indian tribe in the United States, growing at a rate three times as fast as the white population, to halt the ravages of overgrazing due to overpopulation, to prepare the Navajos for their eventual place in a white world, the Indian Service administers an area as great as all of New England except Maine, operating under difficulties undreamed of in other areas and made tremendously complex by difficulties of language, of terrain, and of ignorance—ignorance as much on the part of Indians as on the part of whites, who have an opportunity to know better.

The functions performed by the Indian Service are more multiform, more varied, and more complex than those performed by any other single governmental agency in the country—perhaps in the world. From the cradle to the grave, and far beyond the grave, Indian Service technicians, educators, and administrators handle a multiplicity of services unequalled elsewhere. Included in these functions are the services performed in white communities by all the local, county, State, and Federal agencies, township boards, county supervisors, city governments, boards of education, county farm agents, and all the intricate mechanisms of State governments. Besides all these there are duties and services, many of them difficult and arduous, which in other communities are performed by insurance companies, banks, and other private agencies.

Among the special wartime activities which indicate the range of Indian Service activities are the duties of rationing, selective service, war employment, scrap collection, and many other items for which the various war agencies look to the Indian Service.

In all the efforts of the Indian Service, during peace and war, there is the primary objective of fitting the Indian to take his place beside the white man, and to this end the Indian has been given preferential treatment in employment and has been advanced very rapidly in the direction of taking over his own affairs. At the time the last tabulation was made over half of the employees of the entire Indian Service were Indians.

In 1934 the Bureau of Indian Affairs recognized the detrimental effects of land destruction on Navajo society and economy and inaugurated a corrective program. Measures of correction and adjustment were directed at the basic causes of the deplorable conditions. A locally autonomous organization known as the Navajo service was formed, and given authority and facilities which, within the limits of funds, were required to meet the acute situation. The organization was built of Indian Service and cooperating bureau personnel and facilities.

A program and organization was formed to carry out the following functions:

1. Land and water use and conservation.
2. Livestock management and improvement.
3. Improvement and expansion of health, education, tribal representation, and other social phases of Navajo life.
4. Development of individual and tribal enterprises and responsibilities.
5. The administration of appropriated funds, property, other equipment, personnel, etc., necessary for the conduct of the whole Navajo program.

Accomplishments during the first 10 years of the adjustment program have been encouraging. In the face of a problem probably second to none in the United States, progress of an encouraging nature has been made in some phases of the work.

A range program has been developed which has reduced livestock on the reservation from a condition of almost 100 percent overstocking to approximately 13 percent overstocking. In 1931 Navajos, on and off the reservation, owned about 1,150,000 sheep units of livestock. In 1942 this figure had been reduced to 750,000 sheep units, only 583,569 of which were within the boundaries of the reservation.

At the same time, improvements in livestock breeding and management have advanced production. The average lamb crop has increased from 50 percent to 85 percent, weaning weights of lambs from 53 pounds to 60 pounds, and wool weights have increased from less than 4 pounds to 6 pounds. Unproductive classes of stock such as poor horses, wethers, old steers, and goats have been greatly reduced, making the proportion of productive ewes nearer what is required for a successful range livestock operation. Despite reductions in numbers of livestock over the last several years, total Navajo income from this source shows steady annual increase.

In connection with range management it has been necessary to provide a great many additional livestock watering sources. As of July 1, 1943, the Indian Service has constructed and is maintaining 283 permanent deep wells, 579 dug wells, and 1,198 reservoirs and charcos for the uses of Navajo stockmen. Large areas formerly waterless are now available for grazing use, but even yet in many areas additional water developments are needed, since many of the waters are now from 5 to 10 miles apart.

An Indian Service Irrigation Division was organized in 1897, but progress in irrigation development has been greatly accelerated in the last 10 years. At the present time on the Navajo Reservation 17,833 acres of irrigated land have been subjugated for Navajo farms. A total of 71,718 acres are possible of development under the present irrigation systems.

As a result of the irrigation developments 2,480 farms have been established which benefit approximately 13,640 Indians. Since farm development is one of the principal means by which additional land base may be established for the Navajos, this phase of the development work is being given a very important place in the program. In the future it will be pushed as rapidly as funds and facilities will permit.

Along with farm-land expansion an effort is being made to improve Navajo efficiency in land use. Through available education and extension facilities Navajo farmers are being taught improved methods of tillage, cultivation, harvesting, storage, and other farm practices. Additional farm crops are being introduced. These are principally food and vitamin-rich vegetable crops.

In 1942 the net agricultural income of Navajos was approximately \$3,821,936. Of this amount \$2,391,994 was cash sales and \$1,626,342 the conservative value placed on farm and livestock products consumed in the home.

In connection with all land-use activities the principles and practices of conservation and maintenance of land fertility are applied whenever and wherever possible. Range and farm practices are made basic measures of conservation. Pasture improvements, water spreading, and other appropriate measures are applied to range lands. Farm lands, irrigation systems, buildings and plants, stock tanks and reservoirs, and roads are protected from flood, erosion, and silting damage insofar as funds and facilities permit.

Together with and as an integral part of the land program, a human development program is being carried on. Education of Navajos toward competency for acceptable and constructive citizenship is of utmost importance. The problems of literacy, health, vocational training, and proper land-use are given real stress and consideration. For this purpose the Navajo Agency operates 8 boarding schools and 47 day schools. Attendance has generally been good, but even so only 30 percent of Navajo children of school age can be reached. Adult education, community and social work are receiving important attention.

Maintenance of the health of the Navajo people is of tremendous importance in the effort to improve economic and social conditions. On the Navajo Reservation 21 doctors working at 9 hospitals and sanatoriums are employed. The principle diseases encountered among the Navajos are dysentery, tuberculosis, trachoma, etc. Emphasis is being placed on services that can be rendered by Public Health nurses.

The Navajo people are essentially law abiding, and crime and misdemeanor among them is very low considering the total population. Despite this fact it is necessary that law and order be administered to correct the causes contributing to the breaking of laws.

Tribal enterprises operating for the benefit of Navajos on a fair competitive basis are encouraged. The Navajo tribe operates a sawmill which is devoting present production of lumber almost wholly for war construction work. Important livestock improvement efforts are being conducted by tribal enterprises. The tribe also operates a small flour mill for processing Indian-raised wheat. Individual industry in rug weaving, jewelry making, tanning, etc., is making important progress under direction of the Navajo Arts and Crafts Guild. Individual Navajos are financed for and encouraged in improved farm and livestock operations.

Records are kept of all vital statistics. Close cooperation is maintained with the United States Employment Service and the various States in the placement of labor—especially at present when there is such a tremendous effort for recruitment of Navajo labor for essential war work. The Navajo tribe has furnished 2,000 men and women in the armed forces and 9,000 men and women in work vital to agriculture and war industry.

In order that such a large and many-sided program may be carried on with any degree of efficiency it is necessary that competent personnel be employed in the various fields of work. It is also necessary to maintain an adequate service and facilitating organization. The organization now in existence includes budgetary, fiscal, legal, regulatory, warehousing, transportation, housing, construction, and personnel sections.

As of July 1, 1943, there were 1,200 employees on the Navajo Reservation. Of this number half were Indian. Three-fourths of all the employees on the reservation are performing educational and medical services.

In a statement such as the foregoing it is human to attempt to present the brightest side of the picture. Records and evidence will demonstrate the real progress that has been made in certain phases of the work, such as (1) adjustment of Navajo livestock to range carrying capacity, (2) improvement in production of livestock, (3) advancements in education and health programs. On the other hand, the record and evidence will show that much remains to be done in all phases of Navajo administration. A full Navajo cooperation and responsibility has yet to be reached. In many sections of the reservation there are local conditions of heavy overstocking, land wastage, and poverty existing. Despite the acute need for more farm land development, irrigated lands that are idle and nonproductive exist. The principal future effort should be, and will be, devoted to better management practices on range land, farm land and with livestock.

Isolated small areas of land on the Navajo Reservation are properly used and have demonstrated conclusively that the Navajos benefit by this practice. These small areas must be expanded. There is need to reach a larger proportion of the Navajo people with more and better health and educational facilities. Many other things could be mentioned as sorely needing work and attention.

JAMES M. STEWART,
General Superintendent, Navajo Agency.

FEDERAL LANDS ADMINISTERED BY UNITED PUEBLOS AGENCY, UNITED STATES INDIAN SERVICE

Albuquerque, August 14, 1943

I. PUEBLO INDIAN LAND IN NEW MEXICO

1. *The Spanish and Mexican Eras.*

The Pueblo Indians have lived in this country since about the time of Christ.¹ Prior to the Spanish invasion in 1540 no written records of land ownership were maintained. With the coming of the Spanish, however, non-Indian settlements were established, and the concept of land ownership and land titles suddenly assumed an importance which heretofore had been lacking.

The Spanish Crown, recognizing that land ownership must be clearly defined if the rights of individuals were to be protected,² made grants of specific areas to Indians³ and to non-Indians. Having established boundaries, the Crown then issued grants giving title to these lands. The Indian titles were vested in the Pueblos.⁴

In 1821 the Mexican Government assumed control of New Mexico. While in theory the Spanish laws which had been in force with reference to property were recognized,⁵ laxity on the part of local officials in enforcing these laws became responsible for much of the land passing out of the hands of the Pueblo Indians and into the hands of the non-Indian population. The effect of the Mexican regime, while of relatively brief duration, was further to complicate an already confused land situation, the correction of which was eventually to devolve upon our own Government.

2. The Early American Era.

When in 1850 New Mexico became a Territory of the United States, the Federal Government recognized the original Spanish grants, as well as the rights to property which had been established during both the Spanish and Mexican regimes. This recognition had been plainly stated in the Treaty of Guadalupe-Hidalgo in 1848. To administer those provisions in the treaty, Congress by the act of July 22, 1854, established the office of Surveyor General for the Territory of New Mexico.⁶ Section VIII of that law provided that the Surveyor General, under instructions given by the Secretary of the Interior, should investigate and make recommendations with a view to confirming all bona fide land claims within the Territory.

Having conducted his investigation, the Surveyor General recommended confirmation of titles to the pueblos; Congress confirmed the Pueblo grants on December 22, 1858;⁷ and on November 1, 1864, the General Land Office issued patents to the Indians.⁸ In these patents the Federal Government relinquished all rights and claims in Pueblo land grant areas with the exception of any valid adverse rights which might exist.

When these Federal patents were issued, no inquiry was made into the validity of adverse rights. Indeed, no attempt was made to find out if any such adverse rights existed and, if so, where and what they were. Thus the exceptions to these patents lacked definition and selectivity based on law and justice, and accordingly perpetuated all the illegal tenure and inequalities which had gradually entered into the land situation since the time of the original Spanish grants, and particularly during the Mexican regime.

It is therefore obvious that even after the patents were issued the Pueblo Indian land problem was far from being solved. Indeed, the situation was complicated by the Supreme Court of the United States. The Indian Intercourse Act of June 30, 1834,⁹ had included the Pueblo Indian within the definition of the Indian tribes with respect to whom unauthorized settlement of tribal lands constituted a Federal offense. However, in 1876¹⁰ the Supreme Court held that they were not Indian tribes within the meaning of this act. Thereupon, many non-Indians settled on Pueblo lands, relying upon this decision as well as upon a series of those of the Supreme Court of the Territory of New Mexico, as evidence that the Pueblo Indians had the power to dispose of their lands and that since there was no United States statute protecting Pueblo lands from settlement by non-Indians, non-Indians were at liberty to establish rights by adverse possession. In 1913, however the Supreme Court reversed itself,¹¹ ruling that Pueblo tribes were entitled to the same protection as other Indian tribes in the United States, thus invalidating all of the settlements of non-Indians on Pueblo lands, with or without grants or deeds from Pueblo tribes. It was between 1876 and 1913 that some 3,000 non-Indian families settled on Pueblo lands. It is easy to see how the reversal created consternation among the non-Indians who possessed land within the exterior boundaries of the Pueblo reservations, unsettling as it did the Indian titles and invalidating the claims of non-Indians who possessed land to which they believed they had title.

It became obvious that careful surveying by competent engineers should be made of the boundaries of all this land before any intelligent action could be taken to solve this complex problem. The old survey corners had been marked with stones, and in many instances the stone markers had been moved from their original positions. No surveys at all had been made of the lands claimed by non-Indians within the exterior boundaries of the Indian grants. The increasingly chaotic condition of the land ownership precipitated an investigation by the Sixty-seventh Congress which had become aware of the fact that the question involved approximately 3,000 non-Indian claimants within the exterior boundaries of Pueblo grants and affected some 12,000 persons in all.

As a first step toward ultimate adjudication, the Office of Indian Affairs in 1913 arranged for Mr. F. E. Joy of the United States General Land Office to survey the exterior boundaries of all the lands claimed by the Pueblos and the non-Indian private claims within the Pueblo tribal lands. Mr. Joy and his associates sur-

vayed the grants and marked the land into sections for the first time in the history of New Mexico.

3. *The Pueblo Lands Act.*

The first legislative effort to alleviate the situation was a bill presented by Senator Holm O. Bursum, of New Mexico. The Bursum bill was aired before two congressional committees in 1921 and was finally killed on the grounds that it failed to provide protection to the Indian and placed upon the Government the burden of disproving the right of private landholders—a complete reversal of the usual procedure in which the burden of proof rests with the claimant.²³ The Snyder bill, which was substantially the Bursum bill revised in an attempt to eliminate some of its most debatable features, likewise failed to pass. A third bill, known as the Jones-Leatherwood bill, was then offered as a counter proposal by adversaries of the Bursum bill, but this, too, failed to obtain the approval of Congress. The crying need for a solution of this vexing problem still remained, and on December 10, 1923, demands were made that a commission be appointed for the purpose of investigating the Pueblo land titles. This motion was approved by Congress on June 7, 1924, and became known as the Pueblo Lands Act.²⁴ The act provided for the creation of a Pueblo lands board. By this act the board was made responsible for investigating, determining, and reporting on the status of all land within the exterior boundaries of lands claimed by the Pueblo Indians. In passing on non-Indian claims, it was provided that all such claims should prove either (a) continuous, exclusive, and adverse possession under color of title since January 6, 1902, with taxes paid, or (b) continuous, exclusive, and adverse possession since March 16, 1889, with taxes paid, but without color of title. The act also provided that the Board should investigate and report on the value of those lands and on water rights adjudicated in non-Indian title. The act further provided that the United States should compensate Indians for their losses of land, water rights, and improvements in cases where their title was extinguished by reason of negligence on the part of the United States to protect such title by seasonable prosecution. With respect to non-Indian claimants, the Secretary of the Interior was required to report his recommendations to Congress concerning losses suffered by those who could not meet the requirements of the Pueblo lands board sufficiently to have the Indian title to their land extinguished, yet who initiated claims in good faith under a deed or grant from a Pueblo prior to January 6, 1912. Section 17 of the Pueblo Lands Act prevented further acquisition under the laws of New Mexico of interest in Pueblo Indian lands, and invalidated any interest subsequently acquired—whether lease, purchase, or claim—unless that interest be approved by the Secretary of the Interior.

Provision was made that, upon the filing of the Board's reports by pueblos, the Attorney General should file in the United States district court a suit to quiet title to the land described as being in Indian title in this report. Individual adverse claimants who were dissatisfied with the Board's rulings could appeal to the United States district court, and further to the United States circuit court of appeals.

The Board began its work in 1925, and conducted hearings at Santa Fe and in each of the individual pueblos. The Board passed individually on title to each of the private claims set forth by the Joy surveys, and any additional claims which had been omitted from those surveys which were made by the Public Survey Office during the period of the Board's deliberations.

The United States issued patents to the non-Indian claimants whose titles had been duly confirmed. In order to demonstrate clear title to holdings within the exterior boundaries of pueblo grant lands, non-Indians must now hold a patent issued by the United States subsequent to final adjudication by the Pueblo Lands Board and the United States district court, or a deed based upon such a patent. The result of these proceedings was that, for the first time since late in the seventeenth century, Pueblo Indians of New Mexico were free from land controversy.

4. *Compensation to Spanish-Americans and Indians for lost lands.*

Despite the success of the Pueblo Lands Act in quieting the title of both Indian and non-Indian landowners, it effected no restitution of those original

²³ Handbook of Federal Indian Law, Felix S. Cohen, Washington: U. S. Government Printing Office, 1942, p. 390.

²⁴ 43 Stat. 636, "An act to quiet title to lands within Pueblo Indian land grants, and for other purposes."

Royal Spanish land grants or of portions of the grants which the Indians had gradually lost during the course of the 400 years embracing successively the Spanish Era, the lax Mexican control, and the period of non-Indian depredations and legal uncertainty following the annexation of this region by the United States. In addition to the Spanish-American settlers who occupied land within the grants where the Indians lived, some Indians had lost entire grants of land. For example, the Jemez, Sia, and Santa Ana Indians believed in good faith that they had a valid claim to the Espiritu Santo Grant, a piece of land of approximately 382,849 acres.¹⁴ Some authorities hold the opinion that some of these claims have legal validity, so that it may be said that at the very least a moral obligation exists.

By an act of Congress on March 3, 1869, the Espiritu Santo land was granted to the heirs of Louis Maria Cabeza de Baca. The Indians were unaware that Congress had taken this action, and 1883 filed suit in the court of private land claims to secure confirmation of their title, which was denied on the basis that the Spanish title had been only a grazing permit. However, in the eighteenth century the Spanish Crown did not give grazing permits and, while the wording of the title was such that it would not measure up to a valid title for the twentieth century, it was similar to other titles of that time.

Besides the loss of this grant, the Acoma and Santo Domingo Indians both claim that their reservations were at one time much larger than they are now, that the descriptions of the boundary corners were vague and the present boundary corners are not those understood by the old people of the tribe.

Such instances of loss of land have their counterpart among other inhabitants of the State of New Mexico. Whereas approximately 7,000,000 acres of land in the form of town and individual grants had been available to the noncommercial population of the State around 1900, somewhat less than 2,000,000 acres was still available to them in 1938.¹⁵ Accordingly, the use of some 5,000,000 acres was lost by the noncommercial residents of the State over a period of less than 40 years.

What the Pueblo Lands Act did do was to recompense the Pueblos for losses of land within their village grant, by providing them with funds with which they might purchase lands to round out and supplement their greatly diminished grants. Such reimbursement moneys are called compensation funds.

These so-called compensation funds now in the United States Treasury represent the unexpended balances of moneys which have been on deposit to the credit of the individual pueblos. It is to be understood that non-Indians were reimbursed on the same basis as the Indians. The money paid to the Indians was deposited with the Treasury, while the Spanish-Americans received their money directly.

As can be readily imagined, with a population heavy in proportion to the productive areas of this semiarid State, new lands have not always been available for purchase by the Pueblos. In recognition of this fact, as well as of the increasing pressure of population and other factors discussed hereinafter, the Government has provided lands for Indian use known as Federal purchase areas. It is with these Federal purchase areas that the following pages deal.

II. LANDS IN THE JURISDICTION OF THE UNITED PUEBLOS AGENCY

1. *The United Pueblos jurisdiction.*

The jurisdiction of the United Pueblos Agency includes 19 Indian pueblos and 8 Navajo Indian settlements, comprising a total population of 14,884. The names of the pueblos are as follows: Acoma, Cochiti, Isleta, Jemez, Laguna, Nambe, Picuris, Pojoaque, Sandia, San Felipe, San Ildefonso, San Juan, Santa Ana, Santa Clara, Santo Domingo, Sia, Taos, Tesuque, Zuni.

It is the Pueblo Indians who have been the principal users of the Federal purchase areas assigned to the administration of the agency. Accordingly, the following pages will deal mainly with them.

The three Navajo Indian areas under the jurisdiction of the United Pueblos Agency are the Canoncito, the Puertocito, and the Ramah Navajo settlements.

In contrast to the Pueblo lands, none of the lands of these three Navajo areas

¹⁴ Pueblo Indian Land Grants, by Herbert O. Brayer, Albuquerque: University of New Mexico Press, 1939, p. 108.

¹⁵ Three Hundred Years of European Settlement in New Mexico—A Study in Two Populations, by Ernest E. Maes, Soil Conservation Service, Section of Human Surveys, 1939, typescript.

is irrigated, there being no available source of water for irrigation purposes. The farming that is done is dry farming.

In considering the land status of these Navajo bands, an important distinction between their situation and that of the Pueblo Indians should be borne in mind. Whereas the Pueblo Indians occupy patented lands and land grants which adjoin one another to form solid reservation areas, the Navajo Indians live on sections of land which are interspersed with sections of public domain and of land patented to or leased for the benefit of non-Indians. The checkerboard appearance of landholdings available to the Navajo Indians makes what little land they do own far less valuable and useful to them. This fact greatly complicates the problems of these peoples for whose welfare the United Pueblos Agency is responsible.

2. *The land-purchase program.*

The history of the "Federal purchase areas" dates back to January 1934 and involves four separate agencies—the Submarginal Lands Board, the Federal Surplus Relief Corporation, the Federal Emergency Relief Administration, and the Resettlement Administration. The Bankhead-Jones Act provided funds for the purchase of one area other than those purchased by these agencies.

The Submarginal Lands Board tentatively approved the purchase of 175,000 acres of land "on, or adjacent to the Pueblo Indian Reservations." In April 1934 the Commissioner of Indian Affairs was requested by the Federal Surplus Relief Corporation to restate the need of the Indian people for additional land, since the Director of that Corporation had agreed in principle to the purchase of land for Indian use of approximately 500,000 acres. The land was not to cost more than \$5 per acre. In a letter dated July 14, 1934, Mr. J. S. Lansill, Director, Land Program, Federal Emergency Relief Administration, notified the Commissioner that \$2,500,000 of the original grant of \$25,000,000 for submarginal land purchases had been reserved for Indian land purchase projects, such land to be used primarily for the benefit of the Indians under the jurisdiction of the Bureau of Indian Affairs, Department of the Interior.

The first lands acquired were actually purchased by the Federal Emergency Relief Administration. This agency was succeeded in 1935 by the Resettlement Administration, which carried out the remainder of the purchases. The titles to the lands purchased by both of those agencies were taken in the name of the United States.

3. *Lands transferred to Spanish-Americans.*

In 1936, after negotiations had been concluded and the purchase areas had been acquired for Indian use, there was considerable demand in New Mexico that some of the purchased lands should be allocated to non-Indian use. On February 20, 1936, the Commissioner of Indian Affairs made the following statement of policy with respect to the purchase areas at that time:

While * * * the express object of the Government in buying these lands was to meet the needs of the Pueblos, the Indian Service recognizes * * * the requirements of the native Spanish-American population are such that they, along with the Indians, must be given privileges on the ranges. * * *

In accordance with that policy, therefore, some of the Federal purchase areas acquired primarily for the Indians were designated for non-Indian use. The decisions as to which areas should be used by Indians and which by non-Indians were made by the Interdepartmental Rio Grande Board,¹⁶ consisting of one representative from each of the following Federal agencies: Grazing Service, Indian Service, General Land Office, and Bureau of Reclamation in the Department of the Interior, and Forest Service, Soil Conservation Service, Bureau of Agricultural Economics, and the Secretary's office in the Department of Agriculture.

The following purchase areas originally intended for Indian use were set aside in whole or in part for use by non-Indians and assigned to the Soil Conservation Service and Forest Service for administration:

Caja del Rio grant
La Majada grant
Ramon Vigil grant¹⁷
Gabaldon grant
Polvadera grant

Sebastian Martin grant¹⁸
South Half Lobato grant
San Jose grant
Espiritu Santo grant¹⁹

¹⁶ The Interdepartmental Rio Grande Board was formed in 1938 for the purpose of solving some of the problems of the Rio Grande watershed in accordance with an interdepartmental memorandum of understanding signed by the Secretary of Agriculture and the Secretary of the Interior on March 17 and March 24, respectively. This Board was an outgrowth of the Rio Grande Advisory Committee formed in 1936.

¹⁷ A part of the Ramon Vigil grant, consisting of 5,914 acres, was placed under Indian Service administration by Executive Order No. 8255, of September 18, 1939.

¹⁸ A part of each of these grants is used by Indians.

In its land administration the United Pueblos Agency has not been unmindful of the needs of the non-Indian elements of the population of surrounding areas, and has done whatever was possible to satisfy these needs without violating its responsibilities to the Indians and its obligations to the Government with reference to proper land use. One means of benefiting the non-Indians is through the execution of exchange of use agreements.

An exchange of use agreement may effect a consolidation of range lands mutually beneficial to Indian and non-Indian livestock operators. In all cases equitable exchanges agreeable to both the administration and non-Indian operators have been transacted.¹⁹

In some instances, consolidation of land being impracticable because of inconvenient water distribution, topography, and other physical features, permits have been issued for grazing of non-Indian livestock in common with that of Indians.

In addition to seasonal or year-long use permits, a demand arises for non-Indian herds to cross Indian-used land to reach seasonal ranges and shipping points. Permits are granted for this purpose, the fee charged being in accordance with existing Federal regulations.

4. Lands managed by the Indians of the United Pueblos Agency.

Eight purchase areas have been placed under the administration of the United Pueblos Agency of the Indian Service—one-half of the number of original grants purchased primarily for Indian use. These are shown on table No. 1, together with the date and authority upon which they were transferred to Indian Service administration and the status of the lands of which each area is composed.

The Indians not only have the use of the lands purchased for their benefit but also use lands of different status within the exterior boundaries of these eight areas—public domain, State land, privately owned land, Indian homesteads, Indian allotments, and land purchased with rehabilitation funds.

¹⁹ Canoncito Area: (1) John J. Alonzo and Levantanio Sarracino, (2) Herrera Brothers, (3) Benedicto Marquez and Vicente Vallejos, (4) Sam R. Angell, successor to Louis Hifeld Co., (5) L-Bar Cattle Co.

Acoma Purchase Area: (1) Jeff Coney.

Zia-Santa Ana Purchase Area and San Ysidro grant: (1) Frank Bond & Son, (2) Joe M. Garcia, (3) Sisto Martinez.

TABLE No. 1.—*Location, acreage, and method of acquisition of lands outside of the Indian reservations administered by the United Pueblos Agency*

Total	221,090.56	86,249.09	44,070.66	114,673.33	20,810.83	49,342.20	16,079.80	90,734.80

¹ Used by Indians.

² Used jointly by Indians and non-Indians.

Of the above areas, the following are used jointly by Indians and non-Indians through means of permits and exchange of use agreements: Acoma, Canoncito, San Ysidro-Zia-Santa Ana, and Zuni.

During the past few years it has become increasingly necessary to protect the lands in the jurisdiction. This has been due to the enhanced value and appearance of such lands as a result of the installation of additional range facilities, scientific range management, and improved condition of both range and livestock. To the casual observer who might lack knowledge of the methods and objectives of the range management plan, including as it does rotational and seasonal use of lands, the improved appearance of these lands—particularly in contrast to some of the surrounding areas where good range management does not obtain—might give the false impression that the range was not being utilized to its maximum capacity. On the contrary, maximum use of the ranges has been made.

It is impossible to comply with the many requests for leases which come from Indians and non-Indians alike because there is not enough land to satisfy everyone who desires additional range.

Some Federal lands in the jurisdiction are administered by the Indian Service, others by the Grazing Service. The cost has been found to be less when they have been administered by the former. The reason for the difference in costs lies in the fact that in the case of Indian Service administration the Indians themselves assume the larger part of the burden of managing their own lands, while under the Taylor Grazing Act the administration plus the actual management of the public lands is done by the personnel or the Advisory Boards of the Grazing Service. The Indian Service assumes only an advisory and supervisory capacity with regard to public lands used by the Indians. The supervision is sufficient to see that the use of lands is in accordance with Range Management plans and the carrying capacity established by the Range Division of the United Pueblos Agency. One permit is issued to a pueblo as a whole, the pueblo officials determining the needs of the individuals and issuing permits accordingly.

The basis on which permits are issued differs as between the Grazing Service and the pueblo officials. The Grazing Service issues permits on the basis of land, water, and prior use, no consideration being given to the needs of the people, except for the free use clause which includes only domestic animals. The Indians, on the other hand, do not issue permits on this basis alone. Beside giving consideration to water, land, and prior use, they also consider the needs of the applicants.

Hand in hand with the assumption on the part of the Indian of the management of Federal purchase areas provided for his use, he also assumes the responsibility of maintaining the fences and water developments on them without cost to the Federal Government. A figure representing the dollar value of maintenance work performed by the Indians on previously existing installations would be difficult to determine. However, an inspection of these ranges show that improvements on purchase areas have been satisfactorily maintained to date, despite the unavailability of Federal funds for this purpose.

As an example of the unsuitability as applied to an indigenous population of the Federal range code in an unmodified state, let us take the 1,000 Navajos under the jurisdiction of the United Pueblos Agency. These Navajo Indians live in Canoncito, Puertocito, and Ramah. Since none of the lands belonging to these Indians are irrigated, they depend for their living upon the precarious method of dry farming and the more dependable return from their livestock operations. Since such operations are the only certain means of food and cash, range lands are of the utmost importance to the Navajo as well as to the Spanish-American operators. Their range lands fall within the Grazing Service district No. 7. They have some patented land and obtain permits on public domain. Special rules were made for district No. 7 modifying Federal range code of August 31, 1938, in order to provide for the needs of both Indians and non-Indians in the area. Had the Navajo Indians been forced to ask for permits under the unmodified Federal range code of August 31, 1938, they would have received few permits.

Although, as the records show, the Navajo Indians have been using the lands since the middle of the last century, they did not have extensive prior water

rights as defined by the Federal range code, which would have been necessary to put them in class I of regular licensees. Other cattle owners, who have used the land more recently and who had more money to develop water, do come under class I. Since the Navajo Indians keep little stock which would be classified as "domestic" under the range code, the Federal range code permits for free use would not have been possible.

Had these Navajo Indians, first settlers of the land they use, been compelled to ask for permits under the Federal range code, they would be turned out from the land used by their forefathers. Their patented lands on eroded acres, lacking irrigation and incapable of supporting life, would be useless. The Navajos would now be starving.

The Federal range code of district No. 7 is better for the Indians than the code used in other districts, but the most successful and least expensive manner of operating range is to let the Indians manage it themselves.

III. FEDERAL LAND ADMINISTRATION BY UNITED PUEBLOS AGENCY

1. *The Indian range lands.*

The physical condition of the Government-owned areas administered by the United Pueblos Agency of the Indian Service has greatly improved under the present system of use. There has been a marked return of the more palatable species of forage, and erosion has been greatly curtailed. The productivity of the land has increased through the inauguration of proper range management practices. This is shown by an increase of 3,862 sheep units year long in the carrying capacity of the grants since they have been used by the Indians. (See table No. 2.)

Range improvements have been made. (See table No. 3.) Some 273 miles of fencing have been put up; 5 springs developed; 10 stock tanks, 16 wells, 4 trails, 6 corrals, and about \$16,000 worth of erosion-control installations have been made. The Government purchase areas support approximately 40,143 sheep units year long. (See table No. 2. The Indians use 29,920 units. These have been of great value as demonstration areas. On the basis of 200 head of sheep constituting a subsistence herd, these grants will support 200 families, or about 1,000 people.

Simultaneously with the acquisition of these areas, an educational program was put into effect to teach the Indians proper range and livestock management.

TABLE No. 2.—*Comparative carrying capacities of purchase areas, in terms of sheep units, yearlong*

Area	Date of transfer to Indian Service	Carrying capacity when transferred	Carrying capacity July 1, 1943	Increase in carrying capacity between date of transfer to Indian Service and July 1, 1943

¹ Well costs include windmills, storage tanks, stock-watering facilities.² Erosion control includes earth, rock and brush diversion and spreader dams, furrows, seeding and planting, and fencing of areas for exclusion from range use and demonstration purposes.

An example of the results of this program is provided by what has been accomplished at Acoma and Laguna during the past 5 years. Whereas range stabilization has demanded a reduction in the total number of stock, nonetheless the total weight of meat and wool produced now equals or exceeds the production in past years. The results are as follows:

Results of reduction program, Laguna and Acoma

Percent increase 1938-42.....	38

The years 1938 and 1942 are comparable in that they were both average years so far as climatic conditions are concerned.

Moreover, a livestock improvement program has been integrated with the plan for grazing on Government purchase areas. In response to this program the Indians have almost entirely substituted registered bulls for grade bulls, and they have purchased a sufficient number of rams to mate with over half of the ewes. A cooperative plan of marketing wool and livestock has followed. Livestock and wool are pooled, classified, advertised and sold by auction to the highest bidder. Basically, the program has aimed at showing the Indians how to maintain and improve incomes from land resources.

The need for grazing land is so great that the maximum number of livestock that the ranges will support is now being maintained. Practically all livestock of low productivity—such as, surplus horses, aged steers and wethers—have been removed from the ranges. Only thrifty and profitable livestock are kept.

The pueblo ranges, exclusive of the Government purchase areas, are so closely dependent on the Government purchase areas that any loss of the latter will seriously jeopardize the former.

In July of 1942 a study was made by the interagency range survey committee of the forage conditions of the Antonio Sedillo grant. This committee consisted of representatives from the Agricultural Adjustment Administration regional and State offices, regional and State grazing service offices, regional Forest Service office, range development section of the General Land Office; Southwestern Forest and Range Experiment Station, Tuscon, Ariz.; regional Soil Conservation Service office, and regional Indian Service office. An excerpt from a letter dated July 23, 1942, from the chairman of this committee to the Superintendent of the United Pueblos Agency states:

"On July 17, at my request the interagency range survey committee proceeded to the Antonio Sedillo for the purpose of making a range use check on that grant. I am very much pleased to state that the result of this check, in spite of the fact that the range had been used 17 days more than intended, showed a slight underutilization, or proper use at this time * * * I wish to commend your range supervisor on the good work being done on this area."

In order to promote proper land use, to protect federally owned lands and to insure maximum benefits consistent with good land usage, the United Pueblos Agency has expended a total of \$181,682.75 on purchase areas during the time when these lands have been under its administration. Prior to this period, many of these lands were not used for grazing purposes because of the absence of water facilities, inaccessibility due to lack of trails or the degree to which erosion had impaired or isolated them. And, for this very reason, adjacent and more favorable lands were overgrazed to an extent which endangered their continued use by destroying the vegetative cover which protects them against the forces of erosion. During the time these lands have been under the administration of the United Pueblos Agency, such misuse has been corrected by bringing about a more even distribution of stock through the development of range improvements.

Efforts have likewise been made to promote equitable land use by giving all members of the tribes equal access to range facilities. The total carrying capacity of the range has at the same time been observed.

2. Increase in per capita income.

The steady increase in population among the Pueblos (see table No. 4), since it is not accompanied by a corresponding increase in available resources, has meant that the benefits of land development must constantly be spread among a greater number of persons. This in effect reduces the per capita rate of increase in income.

¹ Not available for 1932.

The total income from all sources for the Pueblo Indians in the jurisdiction has increased from \$767,977 in 1933 to \$1,514,682 in 1942, and the per capita income has increased from \$66 to \$110 (over 66 percent despite a population increase of 19 percent during a corresponding period).

Assuming the average family to consist of five members, the average family income, including wild products and produce raised and consumed, would amount to \$550 on the basis of a per capita income of \$110. This figure would appear to be far from excessive. It is, in fact, somewhat less than the per capita income from farm and livestock operations for the State of New Mexico, which stood at approximately \$140 for 1940 on the basis of farm income and population figures for that year.²⁰

3. Limitation imposed by lack of natural resources.

One of the factors limiting a rise in the income level of the Pueblo Indians is illustrated in table No. 5, which lists the amount of grazing and agricultural lands available to each pueblo. The average for agricultural land is but slightly more than 1½ acres per person. The grazing land acreages would, at first glance, appear to be substantial; but in New Mexico, because of its semiarid climate and large expanses of barren and rocky soil, from 60 to 80 acres are required to support one cow throughout the entire year—a fact which it is important to bear in mind when considering the land holdings and land needs of inhabitants of this area.

²⁰ The World Almanac, New York: New York World-Telegram, 1941, pp. 609, 502.

¹ Barren and waste tribal, Federal, and leased lands not included.² Includes permit from Soil Conservation Service on Espiritu Santo grant (estimated at 34,553 acres).³ Permit from Forest Service.⁴ Grazing permit from Soil Conservation Service on Sebastian Martin grant.⁵ Includes permit from Soil Conservation Service on Espiritu Santo grant (estimated at 39,862 acres).⁶ Dry.⁷ Ramah-Navajo area: Includes barren and waste land.**4. Net gain to the Indians.**

The gains which have been made as a result of the purchase of lands for Indian use with Compensation and Resettlement Administration funds may be listed

under two heads: (1) improvement of the lands themselves and (2) betterment of the people who use them. Under the first may be included the conversion of poor, submarginal lands into productive, properly used, and ecologically improved areas through erosion control, construction of range facilities, and the introduction of range management plans. The second category includes a raising of the social and economic status of the people to whom these lands have been made available.

There is no standard yardstick by which to measure social gains. Such gains include among others the increase of self-respect deriving from an opportunity to earn a living. Economic gain, however, may be expressed in dollars. As has been stated, the per capita income from all sources of the Indians under the jurisdiction of the United Pueblos Agency has nearly doubled over a period of 9 years, rising from \$767,977 in 1933 to \$1,514,682 in 1942—a net gain of \$746,705. In the course of this gain, income from agriculture has doubled and income from stockraising has increased 140 percent. Divided by a figure representing the total Pueblo and Navajo population of the jurisdiction, this net gain amounts to an increase of \$50 in the annual income of each individual.

Secretary CHAPMAN. We have some copies of the graphs that I think would be helpful to the continuity.

The CHAIRMAN. You may proceed as you see fit.

Judge SETH. I want to make it clear, Senator, that the reports—none of the reports or graphs or anything have been submitted to anyone.

Secretary CHAPMAN. That is right.

The CHAIRMAN. Try to make them available to everyone as promptly as possible. These that the committee have here will be available to you for use at any time during the hearing. That is about as far as we are able to go.

Mr. STEWART. I might mention, Mr. Chairman, these graphs were completed at the last minute. We haven't had them ourselves very long. We do have copies of them that will be available to anybody that wants them, in miniature size.

The CHAIRMAN. These graphs you are about to display to the committee, are they also in these exhibits you have filed with the committee?

Mr. STEWART. Yes, sir; taken from it.

The first graph is entitled "Navajo area is twice as crowded as adjacent rural areas." This refers to the reservation, not district 7.

The reservation, in Arizona and New Mexico and Utah covers, is in the neighborhood of a little over 15,000,000 acres. A good deal of it unsurveyed; but it is reasonably estimated to cover a little over 15,000,000 acres.

The CHAIRMAN. In two States?

Mr. STEWART. Three States—Arizona, New Mexico, and Utah. Within the Navajo Reservation is another tribe of Indians.

The CHAIRMAN. What was that last statement again?

Mr. STEWART. There is another tribe of Indians, not within the Navajo Reservation but within the Navajo area, but still within the outer boundaries of the Navajo general reservation. That is the Hopi Tribe of Indians, living almost in the heart of the Navajo country. They total some 3,500 population. We have there a superintendent, with headquarters at Keam's Canyon, who has administrative jurisdiction of those particular Indians.

Altogether, this approximate 15,000,000 acres is not entirely usable by Navajos. I think it is important to bear that in mind.

This figure here, this column here, will probably cause wonder, that the persons per square mile in 1880 were 2.8, and suddenly, in 1890, it dropped, then gradually increased. That is explained by the fact that the area of the reservation in 1880 was at its lowest, in terms of acreage. Originally, the reservation was created by a treaty with the Navajo Tribe, approved in 1868 by the Senate. That treaty area totaled some three and a half million acres, a good deal, or almost half, of which was in New Mexico, and the other in Arizona. It straddled what is now the present Arizona-New Mexico State boundary line. By subsequent Executive orders and acts of Congress, that treaty area was probably the best land in that particular locality, and still is. It is a high, timbered plateau country; good timber on it, but, strangely, no reproduction. It gradually slopes down into fair grazing land. I mention that, because the subsequent additions to the reservation, by Congress and by Executive order, as they were progressively made, they became progressively poorer, until, on the west side, for miles and miles, the range over there is as bare as this floor. It is nothing but volcanic formation and cinder piles and lava beds.

The CHAIRMAN. Where does that land, that you have just mentioned, lie with reference to Albuquerque and Gallup?

Mr. STEWART. That land lies from Gallup—it would be approximately 200 miles east of Flagstaff, and 85 miles north from Flagstaff.

Senator CHAVEZ. Down there close to the Colorado River?

Mr. STEWART. Down close to the Colorado River.

The CHAIRMAN. I was trying to place it, in my mind, with reference to our trip from Arizona, and to Gallup, and to Albuquerque; to locate it as best I could in my mind.

Mr. STEWART. Well, there is a bad stretch north of Winslow; nothing but sand dunes, barren lands. That part of the reservation north of Winslow and the Loop Country, as we call it, is totally worthless, parts of it.

Senator CHAVEZ. That is in Arizona; but the particular one you had in mind was directly west of—I mean, east of—Boulder City, on the Arizona side, along the Colorado?

Mr. STEWART. It is on the east side of the Colorado; yes, sir.

The CHAIRMAN. Is that the territory embraced within a recreational area?

Mr. STEWART. No sir. The total population of the Navajo people, as I mentioned before, is 52,000 people. A little over 12,000 of that population is off the reservation, in New Mexico, in grazing district 7. The reservation population, of approximately 40,000 people, is on an area that, careful studies have disclosed, will not support in the live-stock business a population of over 35,000 people.

The CHAIRMAN. Thirty-five thousand you say?

Mr. STEWART. Yes, sir. We have an excess population on the reservation. The economic problem at the moment is well taken care of because of the enormous amount of war work off the reservation. We have over 9,300 Navajo Indians working in war industries, of one sort or another, off the reservation. Some are section hands, here along the Santa Fe, and some are working in the fields in California and the mines, and so on; and over 2,000 Navajos in the armed services. When the war is over, and these people come back from the war industries,

we are going to have a very serious economic problem on the reservation, extremely serious, and one, at the moment, that we do not see a solution for.

I am reminded of similar problems that existed—I would like to point out one particular instance where Indians were without a land base. There is a place in California, in the northern part, I am not sure of the name of the little town, but I will get that for the record. The Indians there were living on the town dump. I have seen that in many places. My apprehension, at times, is that some of these Navajo people without any means of a livelihood on the reservation will inevitably drift to the railroad towns along the Santa Fe.

Senator CHAVEZ. What is wrong with that?

Mr. STEWART. And live in shacks, on the city dumps.

Senator CHAVEZ. Well, I know some Navajos who are working for the Santa Fe, and doing mighty well.

Mr. STEWART. That is true. The Navajos can find work today. But, after the war, we have no assurance that will continue.

Senator CHAVEZ. Get down to population. You said there were 12,000 Navajos outside of the reservation in New Mexico. How many Navajos are within the reservation, in New Mexico?

Mr. STEWART. Close to 40,000.

Senator CHAVEZ. In New Mexico?

Mr. STEWART. I haven't broken that down.

Senator CHAVEZ. The major portion of the Navajos are in the Arizona side. Isn't that correct?

Mr. STEWART. I would say so; yes, sir.

The CHAIRMAN. You can get that for us during the noon recess. That is a matter that seems to stand in abeyance.

Mr. STEWART. Which is that?

The CHAIRMAN. The question by Senator Chavez.

Mr. STEWART. Yes; I'd like to get those figures for the Senator.

This chart here is on a reservation basis and not district 7. Thirty-seven percent of the entire Navajo reservation is semidesert.

The CHAIRMAN. What?

Mr. STEWART. Semidesert. The rainfall in that particular percentage averages 9 to 12 inches per year.

Senator CHAVEZ. We are still referring to the Arizona side.

Mr. STEWART. No; the New Mexico-Arizona-Utah reservation area. I am so accustomed to speaking in terms of a reservation area that I can't get my mind on the straight break-down.

Senator CHAVEZ. We happen to know the New Mexico end of the reservation, and that is not semidesert at all.

Mr. STEWART. Oh, yes.

Senator CHAVEZ. No.

Congressman ANDERSON. What are those rainfall figures?

Mr. STEWART. That percent of the reservation, 9 to 12 inches of rainfall. On the desert part, the barren wastes, it is 5 to 8 inches—55 percent. Up on the plateau, subhumid country, it is 13 to 20 inches, where we have our timber.

This is a chart indicating district 7 utilization. It represents Indian lands, number of livestock of the Indians, or Indian population, and the yellow represents the non-Indian. The Indian use

of the land in the district—the Indian controls 1,262,057 acres. The non-Indian controls 513,943 acres.

Senator CHAVEZ. Can you give us dates on that control?

Mr. STEWART. This is up to date.

Senator CHAVEZ. How long have you been controlling it, according to those figures, since the formation of district 7?

Mr. STEWART. I think that is—Harry says it is—all the way through.

The Indian population, in terms of those dependent on existing livestock licenses, that is, the total families, 7,480. The number of Indian licensees is 1,496. The average Navajo family of five would give you the figure of 7,480 as dependent on the 1,496 Navajo livestock operators.

The white non-Indian operators in the district total in number 285. The number of licenses in the district for non-Indians is a total of 57; for the Indians, 1,496. The average number of sheep, covering all licenses, there, are 794. The average size of the non-Indian herd is 794 sheep units, and the average for the Indian is 96. That is of the class A.

The class 2 licenses; the average Indian flock in that group is 310 for the Indian, and 1,080 for the non-Indian. These charts are reproduced in miniature, and are proposed for the record.

The Navajos make their living in this manner: 44 percent livestock operation, 14 percent farming, 30 percent wage economy, 9 percent through rug weaving, and 3 percent through miscellaneous jewelry, pinon nuts, and so on.

A good deal of the topsoil, the good soil of the reservation, has gone, through misuse. On the Navajo Reservation, up to one-fourth of the productive soil is gone.

The CHAIRMAN. Will you please dwell on that just a little? You say that is in the reservation?

Mr. STEWART. Yes, sir.

The CHAIRMAN. You say it is through misuse. How does that come about when the reservation was under the Department's regulations all of these years?

Mr. STEWART. In 1931 there were approximately 1,200,000 head of livestock on the reservation.

The CHAIRMAN. Would you say it was overgrazed?

Mr. STEWART. Yes, indeed, I am leading up to that.

The CHAIRMAN. You are speaking now of the reservation proper?

Mr. STEWART. Of the reservation; yes, sir. At the present time, through a process of reduction, a process of improvement, too, but a reduction program, the livestock on the reservation is in the neighborhood of 580,000; more than 100 percent reduction. In aid of that rehabilitation of the range, it has been necessary to carry forward that livestock reduction program. It certainly has not been popular with the Navajo people; it is still unpopular, and it never will be popular.

The CHAIRMAN. I must have misunderstood you there. Will you give me the figures as to what the livestock was in former years, and what it is now?

Mr. STEWART. Mr. Cooper, our range and livestock man, is probably better qualified to answer that than I am.

**STATEMENT OF JOHN M. COOPER, NAVAJO INDIAN AGENCY,
WINDOW ROCK, ARIZ.**

Mr. COOPER. Mr. Chairman, the figure quoted by Mr. Stewart a moment ago of approximately 1,250,000¹ head of livestock—

The CHAIRMAN. On the reservation?

Mr. COOPER. Included the reservation and outside of the reservation. That was Navajo-owned livestock. Now, the records were taken from the Bureau of Animal Industry Indian records in 1930 and 1931.

The CHAIRMAN. Let's get that down, 1,000,000 how many?

Mr. COOPER. Approximately 1,250,000.¹

The CHAIRMAN. You say that is on and off the reservation?

Mr. COOPER. On and off.

The CHAIRMAN. In the territory generally, then?

Mr. COOPER. Yes.

The CHAIRMAN. Now, you have reduced it to 580,000?

Mr. COOPER. The 580,000 figure includes only the reservation. In an attempt to reconcile that and get a reservation figure for 1930 and 1931, which was impossible to get with the record at that time, the figure has been arrived at—that is, approximate—that the reservation in those days was supporting approximately 800,000—the reservation alone. Now, that reduction in numbers of units that has taken place since that time would be from approximately 800,000 down to the 580,000.

The CHAIRMAN. In that, have you reduced on the reservation proper?

Mr. COOPER. To date the carrying capacity of the reservation is determined by reconnaissance surveys of the range forage. They indicate it will carry approximately 580,000 sheep units of livestock.

The CHAIRMAN. I am trying to get at how your reduction had been worked. Did you reduce it on the reservation?

Mr. COOPER. Yes, sir.

The CHAIRMAN. From about eight-hundred-odd thousand to 580,000?

Mr. COOPER. Yes, sir.

The CHAIRMAN. Did you reduce it on the outside range accordingly?

Mr. COOPER. Proportional reduction probably wouldn't be shown—maybe Mr. Naylor has the figures on it.

The CHAIRMAN. In other words, have you increased on the outside range while you have reduced on the reservation? What is the answer to that?

Mr. COOPER. Mr. Chairman, I would say to that that the reduction has been proportionately greater on the reservation because of the fact that administrative authorities had controlled the reservation lands and regulations could be put into effect on the reservation that did not apply off.

The CHAIRMAN. That is what I was trying for a moment ago when I asked Mr. Stewart why it was that the reservation had been so overgrazed while it was under regulation and control of the Department at all times in the years past. Why was it permitted to be so overgrazed? I don't know that you have any answer to it, but I see a condition. I don't know that it signifies anything in particular, except-

¹ Verified figures, furnished later by Mr. Cooper, gave the number of sheep units as 1,178,000, including what is now the Hopi Reservation. He stated that the present number, based on 1942 counts, is 750,000 sheep units.

ing that it signifies in years past you permitted the reservation to be overgrazed and then reached out for other lands outside the reservation, and you have continued that policy ever since.

At least, that is the way I am impressed by the whole thing. Now, I would like to have you disabuse my mind of that thought.

Judge SETH. Might I ask Mr. Cooper a question?

Haven't a lot of the stock been moved from the reservation to district 7?

Mr. COOPER. I would say that—I would like to be checked on this by people that might know more than I—while there has been some movement both ways, both in and out, there has been no intention, to my knowledge, no intentional movement of livestock from the reservation outside, unless it was an individual Indian.

Judge SETH. Don't the dipping records show a large increase in Navajo stock on district 7?

Mr. COOPER. If I might, for a few minutes, check the records for several years, perhaps we could give you the exact figures on that.

Senator CHAVEZ. I wish you would get them for us.

The CHAIRMAN. Very well, and please let us be reminded of that by someone.

Congressman ANDERSON. I want to ask Mr. Cooper this question: In this reduction from 800,000 on the reservation to 580,000 since 1930. how much of it happened in 1934 and '35 during the slaughtering program of the F. E. R. A.?

Mr. COOPER. If I remember correctly, the main part of the reduction has taken place since 1936. There was approximately 100,000 sheep units of goats, we moved in 1934 and '35 under the F. E. R. A. slaughtering program.

Congressman ANDERSON. Sheep units of goats? I don't understand that.

Mr. COOPER. One goat is the equivalent to one sheep in terms of sheep units.

Congressman ANDERSON. No sheep were slaughtered?

Mr. COOPER. The main emphasis on that F. E. R. A. program was on goats. Would you check with that statement, Mr. Stewart?

Mr. STEWART. Yes.

Mr. COOPER. The main emphasis was on goats.

Congressman ANDERSON. Were there no sheep slaughtered?

Mr. COOPER. I wouldn't be prepared to say there were no sheep slaughtered on that program, but the amount was relatively small. I don't know if there is anyone here who could answer that question.

Congressman ANDERSON. Could you put it in the record?

Mr. STEWART. Mr. Anderson, I believe that the material that the chairman and yourself are seeking is already in that report of the subcommittee of the Senate committee, and we can dig it out and submit it again to this committee for this record. I am quite sure it is in there, the whole history of this stock-reduction program was taken up at those hearings.

Congressman ANDERSON. Having been connected with this sheep slaughtering program from the F. E. R. A. side I was interested in that testimony.

Mr. STEWART. If it is agreeable to you, we will do that.

The CHAIRMAN. Very well.

(The data indicated were furnished the committee, as follows:)

DEPARTMENT OF THE INTERIOR,
OFFICE OF INDIAN AFFAIRS,
Albuquerque, N. Mex., September 10, 1943.

Memorandum to: Mr. Haskell, special investigator, McCarran committee.
Subject: Navajo Dipping and Federal Emergency Relief Administration Purchases of Sheep and Goats.

At Mr. Stewart's direction, the following figures are submitted for information of the committee:

Sheep and goat slaughter under Federal Emergency Relief Administration in 1934

Sheep purchased-----	50,000
Goats purchased-----	148,344
Total-----	198,344

These figures were included in the report of the 1936 hearings before the subcommittee of the Committee on Indian Affairs, United States Senate, part 34, Navajo Boundary and Pueblos in New Mexico, page 17806. Figures on the 1933 and 1935 reductions are also included in this report.

Dipping records of sheep and goats, 1930-36, inclusive

	1930	1931	1932	1933	1934	1935	1936
Sheep-----	574,821	631,427	575,913	544,726	502,619	548,579	459,285
Goats-----	186,768	196,945	173,585	164,999	147,427	92,222	73,600
Total-----	761,589	828,372	749,498	709,725	650,046	640,801	532,885

All figures represent Navajo ownership, both on and off the reservation plus the Hopi. Since figures used were taken from dipping records, and since many wats dipped both Navajo and Hopi stock, it has not been possible to separate the two in these early records.

Respectfully,

JOHN M. COOPER,
*Director, Range and Livestock Division,
Navajo Service, Bureau of Indian Affairs.*

Mr. STEWART. I would like to say, Senator McCarran, at the time of the reservation stock reduction program that Mr. Cooper mentioned, that was extended out into what is now district 7, to the Indians in there. They were forced to reduce their stock. I think that is an important point to make because it was a mistake. The Commissioner of Indian Affairs at Farmington, during those other hearings, publicly acknowledged that as being a mistake, to force those people who were off the reservation, those Navajo people competing with non-Indian livestock operators. He admitted that it had been an administrative mistake to force those Navajos to reduce their stock over in that area. Do you recall that, Senator Chavez?

Senator CHAVEZ. I don't recall that particular testimony, but I know the Indians didn't like it.

Mr. STEWART. Admittedly it was a bad administrative action.

The CHAIRMAN. Was that in 1936?

Mr. STEWART. I don't know, Senator. The hearings were held in 1936. The reduction was previous to that.

The CHAIRMAN. The reduction program was something along in 1935 or 1936?

Mr. STEWART. I think so; yes.

The CHAIRMAN. Very well, Mr. Stewart.

Mr. STEWART. I am going to call on Mr. Cooper to discuss these other charts because they relate to livestock, and I am not qualified to talk on livestock.

The CHAIRMAN. Before you proceed to that, you have concluded up to the present point your discussion. It is now approximately 12 o'clock.

(Off the record discussion.)

Mr. COOPER. A moment ago Mr. Stewart mentioned the fact that a great portion of the Navajo Reservation was arid, and some waste-lands. This particular chart here is based on range reconnaissance surveys that were made in 1935 and 1936 according to the same procedure that the Forest Service and other agencies used in range reconnaissance. That total reconnaissance indicated that, on 30 percent of the Navajo Reservation, from 50 to 250 acres were required to maintain a sheep yearlong. On 21 percent of the reservation, 25 to 50 acres were required to maintain a sheep yearlong. On slightly over 16 percent of the reservation, from 16.7 to 25 acres were required to maintain a sheep. On 11.4 percent of the area, from 12½ to 16.7 acres were required; and on 5.6 percent of the total reservation area, only 10 to 12½ acres were required. The largest carrying capacity is found on 2.7 percent of the reservation area, where it required less than 10 acres to maintain a sheep yearlong. Pardon me, on 1.1 percent of the reservation it has a slightly higher carrying capacity, 7.1 to 8.2 acres; and only one-half of 1 percent of the reservation is cultivated; and 11.6 percent of the reservation was true waste lands and had no carrying capacity whatever.

Now, this particular chart has been entitled "Stock improvements means increased Navajo living." By "stock improvements" we mean not only improvement in type of stock owned by the Navajos, but improvement in the management of that stock on the ranges. This red column, in all cases, refers to conditions in the Navajo sheep industry existing in 1930, '31, and '32. It is an average for the figures of that period.

The CHAIRMAN. Does the term "sheep" embrace goats?

Mr. COOPER. No; this is solely sheep, Senator McCarran, and this includes not only the reservation, but the Navajo ownership outside of the reservation. For instance ownership in the early period of sheep alone, both on and off the reservation, was 594,000 head. During the period 1933, 1934, and 1935, that ownership was reduced to 525,000 head. It was further reduced in 1936 and 1937 to 466,000 head. Now, the reduction continued, until in 1942, the Navajos on and off the reservation owned 433,204 head of sheep, according to the best counts, and this, by the way, is based on an accurate dipping count.

That same period in total numbers of lambs weaned, there was a high point in the thirties, 317,209. In the period 1933, '34, and '35, that was reduced considerably. However, in spite of the decrease in numbers of sheep, the number of lambs weaned has consistently increased until it reached a high point in 1942.

This next section refers to lamb weights. Pretty much the same thing shows here; that, despite the decrease in number, the total weight of all lambs marketed has increased until it reached a high point from 1940 to 1942.

The CHAIRMAN. Is that a proper picture of reservation results; in other words, is that on the reservation?

Mr. COOPER. On and off the reservation.

The CHAIRMAN. On and off?

Mr. COOPER. On and off.

The same thing shows here, with the total weight of wool.

Now, the thing that seems that this record of sheep production shows is, first, that during the period where numbers were reduced, it was nonproductive stock that was eliminated. That included wethers, old ewes, 4-, 5-, and 6-year-old steers, and horses that had ceased to be of value to the Navajos. In addition, by the elimination of what we might call surplus nonproductive stock, the feed that they had customarily been eating was made available for the production stock. In addition to that, was the fact that, for a good number of years, there has been a real effort, to both an individual effort on the part of the Indians, and as a program of the Indian Service, to provide better livestock for the Navajo Indians. I think that the increase in total production here reflects a combined effect of those three causes.

This particular chart tells the same story in a slightly different way. The number of ewes is shown by the dotted line, and the number of lambs by the solid line. Besides the fact that the trend was downward in the number of ewes over the year, the general trend of lamb production either maintained itself, or shortly increased, here during the period of 1941 and 1942.

The CHAIRMAN. Does that mean lamb production to market or lamb production to weaning?

Mr. COOPER. That means lamb production to weaning, Sir, because so many of the lambs produced are consumed by the Navajos.

The CHAIRMAN. Do they sell their lambs?

Mr. COOPER. For feeder purposes approximately an average over that period would indicate 200,000 head of feeder lambs here per year. Last year was a high point on feeder lambs, and, if I am not too far off, I believe the figure was 219,000 last year for feeder lambs. They go largely to the Colorado and the Kansas feed lots.

This merely illustrates the trend in lamb production, in percentages of mature used. In the year for 1930, based on the mature use, both on and off the reservation, there was about a 70 percent lamb crop. In 1932 is a low point, reflecting the terrible winter they have in this country, in 1931 and 1932. The low point was again in 1935, and possibly could be attributed to drought conditions. However, since that time the trend has been steadily upward, and, as a final statement, the reduction in mature use on the reservation since 1936 has been rather small. The reduction effort has been concentrated on horses, those nonproducing stock; and a great many cattle have been removed from the reservation since 1936.

The CHAIRMAN. Now, referring back to the period when there was a killing-off of the goats, was there an increased number of sheep following that?

Mr. COOPER. I would have to analyze some old records we have here before venturing an opinion on that. I don't believe that I would be able to answer that now.

The CHAIRMAN. Did they go to cattle or go to sheep from the goats?

Mr. COOPER. The trend is to sheep; and, in some instances and places,

where the range conditions are particularly suited to cattle production, this trend to get rid of cattle is disturbing, because, in many cases, it seems that the Navajo economy would be better off if he had more cattle and less sheep. However, they have a real love for sheep, and it is hard for them to sacrifice sheep.

The CHAIRMAN. Well, they went to sheep when the program was to kill off the goats. That is true, isn't it?

Mr. COOPER. I think that would probably be true. Instead of sacrificing their sheep, they sacrificed goats, if I remember correctly. At some of the hearings that were conducted before tribal delegates in 1933, '34, and '35, all of the emphasis was placed on the getting rid of surplus goats. I don't recall, offhand, the number on the reservation at that time; but it was a tremendous proportion. It might be interesting to note today that there are only slightly over 50,000 goats on the reservation today, as against those on the reservation—as against about 350,000 sheep, and slightly over 10,000 cattle, and in the neighborhood of 30,000 to 35,000 horses. That is, within the reservation boundaries.

Mr. LEE. Mr. Chairman, can I ask Mr. Cooper a question? I realize you weren't there at the time this happened, but the Secretary testified at the hearing before the Senate that it was a mistake to kill the goats at the time they killed the Indians' goats. When they did that they took away the only milk supply they had for the children; and afterward they admitted it was a very serious mistake. From my knowledge, I personally believe they did not transfer from goats to sheep but tried to build back their goats, so as to get food and milk from the goats.

Mr. COOPER. That might possibly be true, Mr. Lee. However, my statement was based on a fact, a trend today, on Navajo ownership permits that have been issued to these people. They feel their permits are important, and they are anxious to keep their permits full. Normally, the present trend is to sacrifice anything for sheep.

Senator CHAVEZ. What do they clip, Mr. Cooper? How much of a clip do they get from the Navajo sheep?

Mr. COOPER. That is shown here; the average for the last 2 or 3 years has been right at 6 pounds, Senator Chavez, and the total clip in 1942 was 2,616,000 pounds. One of the reasons, I believe, why the goats have, in some instances, been sacrificed is the fact that wool weaving, as well as wool for the market, assumed tremendously important proportions in Navajo life. Figures that would be applicable in about 1938 indicated that about 25 percent of all Navajo wool was retained and used for the weaving of blankets and rugs, on the reservation, and didn't go into commercial channels.

Mr. STEWART. Mr. Chairman, that concludes our general remarks.

The CHAIRMAN. Very well. Are there any questions?

Judge SETH. Might I ask Mr. Stewart some questions?

The CHAIRMAN. Very well, go ahead.

Judge SETH. Taking up this land area of 4,891,000 acres; just what does that include?

Mr. STEWART. That includes all tribal land holdings within the State.

Judge SETH. By that you mean reservations?

Mr. STEWART. Reservations; yes, sir.

Judge SETH. And lands purchased by the Indians?

Mr. STEWART. Purchased by the tribe.

Judge SETH. From tribal funds?

Mr. STEWART. That's right.

Judge SETH. That does not include those purchases by the Soil Conservation Service, and others, which are set apart for Indians?

Mr. STEWART. That is correct, it does not.

Judge SETH. It includes the technical reservations, plus land purchased from tribal funds?

Mr. STEWART. That is correct.

The CHAIRMAN. Does it include individual allotments?

Mr. STEWART. Not on the public domain.

Judge SETH. Are there individual allotments within the Navajo reservation?

Mr. STEWART. Not as a general rule. There were half a dozen or more made to some Hopi Indians, way over around Tuba City, in the west, many years ago.

Judge SETH. Those were allotments entirely outside the reservation?

Mr. STEWART. That is correct.

Judge SETH. How old does an Indian have to be to get an allotment?

Mr. STEWART. Of course, he can't get an allotment now. They passed the Taylor Grazing Act. My recollection of the law and regulations provided that an Indian who was the head of a family, living off the reservation, could select an allotment for himself and his minor children.

Judge SETH. In other words, the allotment privilege, no matter how it was exercised, extended to the Indians, from the old people down to the infants just born. Isn't that true?

The CHAIRMAN. Let me get that clear. He could select an allotment if he was the head of a family, for himself and the minor children. That is your answer?

Mr. STEWART. Yes, sir.

The CHAIRMAN. So he selects an allotment for himself and for each of the minor children.

Mr. STEWART. That is correct; yes.

Judge SETH. And for his wife?

Mr. STEWART. I am not clear on that point of the wife. That is why I omitted reference to it. I don't think he had a right to select for the wife; but I have the regulations, and we will dig it out.

Judge SETH. What I mean is, the homestead wasn't limited, like on the non-Indians, only one to the family. Isn't that right?

Mr. STEWART. That is correct.

Judge SETH. But the allotments could cover the 10 or 11 children?

Mr. STEWART. Yes, sir, if they were minor children.

The CHAIRMAN. For the record, please, how much land is in an allotment?

Mr. STEWART. 160 acres.

Judge SETH. And the Indians on the reservation receive allotments off the reservation?

Mr. STEWART. If they did they were certainly not entitled to them. I don't know.

Judge SETH. Aren't they, for that matter, migratory?

Mr. STEWART. I am told on reliable authority there hasn't been any large migration of Navajos off the reservation into this New Mexico area.

Judge SETH. Were these allotments suggested to the Indians, or did the Indians ask for them?

Mr. STEWART. Both.

Judge SETH. And, in the main, they were urged on them by the Indian officials. Isn't that true?

Mr. STEWART. That is right; yes.

Judge SETH. Urged it to go out in what is now district 7, and take an allotment?

Mr. STEWART. That is correct.

Judge SETH. Whether they asked for them or not?

Mr. STEWART. Yes.

Judge SETH. In a great many instances they never saw their allotments, did they?

Mr. STEWART. I couldn't answer that; but I imagine that is true, in some instances.

Judge SETH. And they didn't know where they were?

Mr. STEWART. Possibly.

Judge SETH. Did they have to put any improvements on these allotments?

Mr. STEWART. No.

Judge SETH. On homesteads they had to put up a hogan at least?

Mr. STEWART. Yes.

Judge SETH. And live there for some time?

Mr. STEWART. Yes.

Judge SETH. Outside of district 7, what is the proportion between Indian homesteads and Indian allotments?

Mr. STEWART. Oh, the number of allotments is preponderant. The number of Indian homesteads is comparatively small.

Judge SETH. There are 10 times the number of allotments as compared to homesteads; more than that?

Mr. STEWART. Yes.

Judge SETH. What did the Indians do with their allotments when they got them?

Mr. STEWART. Some lived on them. It might be better if one of our district supervisors, who lives out in the district in this area we are talking about, lives close with the Indians, could give us some observations as to just what has happened as to occupancy of these Indian allotments.

The CHAIRMAN. Let's see, there, now.

Mr. STEWART. I couldn't answer that, because I don't know.

The CHAIRMAN. You have been in charge of the Land Division, haven't you, Mr. Stewart?

Mr. STEWART. Yes, sir.

The CHAIRMAN. For how long?

Mr. STEWART. In charge of the Land Division beginning in 1933 until May 1942.

The CHAIRMAN. What were your duties?

Mr. STEWART. My duties were to handle and direct all land acquisition work; to handle and direct the administrative work, in connection with the preparation of cases for consideration of the Court of Claims,

to the Attorney General, pursuant to jurisdictional acts; administratively handling the leasing of Indian land for oil, gas, and metal-liferous mining; and matters of miscellaneous work relating to allotted Indian reservations, for problems would come up affecting tribal land allotments. That, in general, was the scope.

Judge SETH. Did the Indians have to sign, or mark some document requesting that selection of the allotment?

Mr. STEWART. Ordinarily, yes; if he did not, then the allotting agent would do the work for him.

Judge SETH. In other words, there were allotments made without the Indian signing anything?

Mr. STEWART. Oh, yes; not only on public domain but on Indian reservations where they were allotted.

Judge SETH. In district 7 that is true?

Mr. STEWART. That is true; yes, sir.

Judge SETH. Who selected the area that should be allotted; I mean, to any particular Indian?

Mr. STEWART. I think the fact is there were Indians living out there—it is indicated that that should be the area.

Judge SETH. But the individual—who selected it?

Mr. STEWART. Many times the Indian; many times the allotting agent himself.

Judge SETH. Most times it was the allotting agent?

Mr. STEWART. I couldn't answer that question.

Judge SETH. Now, about how much area was given up by the Santa Fe, in district 7, Mr. Stewart?

The CHAIRMAN. Would you kindly remove that other chart, there, while the interrogation is going on with reference to district 7? I think it probably would be better.

Mr. STEWART (indicating). In this particular exchange area here, I expect you mean?

Judge SETH. That is what I mean, all exchange in district 7.

Mr. STEWART. Under the 1921 act the railroad company relinquished 228,230.85 acres of land.

Judge SETH. And how big an area of allotments did the Indians give up in the select areas?

Mr. STEWART. Thirty-two thousand acres.

Judge SETH. In other words, there was about 190,000 acres of relinquished land over and above what the Indians gave up. Is that correct?

Mr. STEWART. That's right.

Judge SETH. And is that the area you are getting the opinion on, that the Indian Service has claimed?

Mr. STEWART. That is the area.

Judge SETH. Has that ever been turned over, in any manner, to the administration of the authorities of district 7?

Mr. STEWART. That is under the administration of the district authorities; but in the rules setting up the district, it is set up as Indian base, if that is the correct expression to use.

Judge SETH. You couldn't give a non-Indian permit on that land, could you, under your holdings?

Mr. STEWART. I don't know. Mr. Naylor could answer that.

Judge SETH. Has that ever been done?

Mr. NAYLOR. In a few cases; yes; we have.

Judge SETH. In the main it has been preserved entirely for the Indians?

Mr. NAYLOR. Oh, yes; and, when we have, it has been with the understanding that the individual white man had sufficient space to take care of his stock in every case.

The CHAIRMAN. When the Indians relinquished the allotments, at the time of the other relinquishment, how was the Indian relinquishment brought about?

Mr. STEWART. Through personal approach of an employee of the Indian Service.

The CHAIRMAN. And did the Indian sign the relinquishment, or was it, as in the other instance, signed by someone else for him?

Mr. STEWART. All these were required to be signed. According to law, could not sign away his vested right.

Mr. F. W. LaROUCHE. Could I ask a question?

The CHAIRMAN. What is your name for the record?

Mr. LaROUCHE. F. W. LaRouche.

The CHAIRMAN. What is your official position, if any?

Mr. LaROUCHE. I am a field representative of the Office of Indian Affairs. I have been studying this question.

The CHAIRMAN. To whom do you wish to propound the question?

Mr. LaROUCHE. Perhaps I had better say that I want to make a brief statement, which possibly might shed some light. It was in the matter of allotments, Senator McCarran, I think, in part; and I think the impression might be created that these allotments to the Indians was a bewildered sort of proposition. On the record it sounds that way.

The CHAIRMAN. Have you personal knowledge of that?

Mr. LaROUCHE. No; I have read this statement. I want to ask Mr. Stewart if it wasn't true that the Indian allotments were made after a large section of that part of the reservation had been withdrawn; and whether or not that was not a very poor substitute, administratively, for a situation that could not be relieved.

The CHAIRMAN. Just a minute. I want to get that straight.

Mr. LaROUCHE. I don't pretend to be an authority.

Senator CHAVEZ. The Indian allotment was started in New Mexico. The congressional delegation, years ago, objected to the Executive orders increasing the Navajo Reservation. So, in order to get away from what they could not do through legislation, they started the Indian-allotment business, during the period when Mr. Stacker was superintendent, over there at Crown Point.

Mr. STEWART. I would like to answer Mr. LaRouche, and comment on Senator Chavez' observations, if I may.

Senator, approximately 1908, what was proposed as an addition to the reservation a few years ago, this area in here, was reserved by Theodore Roosevelt, by Executive order, from all forms of disposal, pending allotting of Indians within the area. Allotments were made a few years later, after the withdrawal. The Executive order was canceled, and allotments were made after that cancelation, up to 1929. Now, does that answer the general question?

The CHAIRMAN. Yes; if there is any question.

Judge SETH. The same manner was followed in making those allotments. Has any been made since 1929?

Mr. STEWART. Not that I know of.

Judge SETH. But a lot of them were made in 1927, '28, and '29?

Mr. STEWART. There may have been some lieu selections, for those who gave up their allotments to the railroad company, since that time. I would consider those new allotments.

Judge SETH. The act preventing any extension of any Indian reservation, except by act of Congress, was enacted in 1918, was it not?

Mr. STEWART. That is correct.

Judge SETH. After that hearing, to which Senator Chavez referred, and ascertaining the general attitude at that time, this allotment campaign started. Isn't that a fact?

The CHAIRMAN. What is the answer?

Mr. STEWART. Allotments are not extensions of the reservations, but a granting of a right to an individual with a vested right.

Judge SETH. The question was, Didn't the allotment campaign start shortly after the asserting of the attitude Senator Chavez referred to? They couldn't get the act of Congress, and, therefore, you started the allotments. Isn't that true?

Mr. STEWART. Well, the allotment program, as I recollect it, was virtually emphasized around 1925, and deeded up and carried forward, until 1929.

Judge SETH. That is when 99 percent of the allotments were made?

Mr. STEWART. Pretty much the bulk of them.

Judge SETH. Now, are you prepared to testify concerning the organization of district 7, or is some other Indian Service—

Mr. STEWART. No; I certainly would not be qualified.

Judge SETH. When was it established?

Mr. J. H. LEECH, Grazing Service, Salt Lake City, Utah. We could answer that, Senator.

The CHAIRMAN. I think that will follow, unless you want the answer right now.

Judge SETH. All I want is a chance to examine somebody connected with the Indian Service.

The CHAIRMAN. Well, let someone from the Grazing Service answer the question.

Mr. LEECH. It was established on September 1, 1939.

Judge SETH. You participated in its formation, did you not, Mr. Stewart?

Mr. STEWART. No; I did not.

Judge SETH. Where were you at the time?

Mr. STEWART. In Washington and in the field, in and out, on work.

Judge SETH. Will there be someone that can tell us about the formation of it?

The CHAIRMAN. The Grazing Service will tell you. They were to follow Mr. Stewart.

Senator CHAVEZ. But, Mr. Stewart, in carrying out your duties as Chief of the Land Division of the Indian Bureau, you certainly had something to do with the formation of district 7.

Mr. STEWART. No; I was called into a conference, where it was being discussed, in Washington, by representatives of the Grazing Service, a representative of the Indian Office, and the Navajo superintendent, and had discussed with me, at that time, land status in the district.

As far as formulating any part of the rules, I had nothing to do with it.

Judge SETH. Do you know whether any public hearings were held out here, with respect to the formation?

Mr. STEWART. That I do not know.

Judge SETH. Do you know whether any hearing was held on the rules and regulations; or were they just handed out?

Mr. STEWART. I do not believe there were public hearings. I don't know; I don't believe there were.

Judge SETH. Mr. Stewart, coming to the population figures you have given, that figure of 12,934, that included all the men, women, and children in district 7. Your second figure, did that include Indians working in Gallup?

Mr. STEWART. I presume it did; yes.

Judge SETH. There are a couple of thousand, probably, down there, aren't there?

Mr. STEWART. Yes.

Judge SETH. And did it include—it included all those that you thought lived on the reservation, at some time or other, didn't it?

Mr. STEWART. No, no; all those that I thought lived on the reservation?

Judge SETH. You thought that was their real home, where they would come back to?

Mr. STEWART. I don't quite get that question.

Judge SETH. I mean, if a man was away working, did you count him as one of the inhabitants of this district?

Mr. STEWART. Oh, yes; yes.

Judge SETH. And the population of 285; is that all the non-Indian population there is in the district?

Mr. STEWART. No; if you want to include your urban population—

Judge SETH. Gallup is in the district, isn't it?

Mr. STEWART. Your urban people, your urban population do not depend upon the range,

Judge SETH. The people that are living in little places like Thoreau, were they included?

Mr. STEWART. Not at all, two-hundred-odd people are those dependent primarily in operation of livestock.

Judge SETH. Might not people living in Gallup be dependent on livestock?

Mr. STEWART. Through the medium of exchange.

Judge SETH. The sheep growers or cattle growers live in Gallup.

Mr. STEWART. Oh, I understand; yes, of course.

Judge SETH. Don't the great bulk of them live in these little towns?

Mr. STEWART. The bulk of the urban population, no.

Judge SETH. You mean a lot of people using the range live in the town and are not counted?

Mr. STEWART. Some of them, but just a few.

Judge SETH. Half of them?

Mr. STEWART. Well—

Judge SETH. Some of them live in Albuquerque that have sheep or cattle out there, don't they?

Mr. STEWART. Yes.

Judge SETH. You included all the Indians working in the towns?

Mr. STEWART. In and out.

Judge SETH. But you did not include any non-Indian population except those actually out there in the sticks?

Mr. STEWART. That is right.

Judge SETH. Do you mean, by talking about this 187,000 acres purchased by the Indians on a reimbursement basis—I may have misunderstood you, but what did you mean by that?

Mr. STEWART. Well, the act, which is defunct now, authorized an appropriation of so much money, gratuity funds of the Federal Treasury which would be reimbursed to the Treasury from tribal funds.

Judge SETH. In other words, the Government loaned the money to be reimbursed, from oil royalties, and things of that kind?

Mr. STEWART. Yes.

The CHAIRMAN. And that money was to be devoted to the purchase of additional lands?

Mr. STEWART. That is correct.

Judge SETH. Those furnishing the money by which they are buying land at this time?

Mr. STEWART. Well, where are the purchases being made?

Judge SETH. Are there any? You should know.

Mr. STEWART. Well, as far as the Navajo service is concerned, there aren't any purchases being made. But as to the Navajo group at Ramah, which is under the jurisdiction of the Pueblo Agency, that is another matter, and that is the point I believe you have in mind. Therefore, the representatives of the Pueblo Agency are here and should speak on that point.

Judge SETH. This fund, has the Government been reimbursed? Did they have sufficient money from the tribal fund to pay for this land, this 180,000 acres? Has that been paid for or do they still owe the Government for it?

Mr. STEWART. I assume that it has. I don't know.

Judge SETH. Now, you wouldn't be in a position to know why this little area down here at the bottom, a hundred miles from any other portion of this district 7, was included in it, would you?

Mr. STEWART. Yes, I would.

Judge SETH. Why?

Mr. STEWART. For the simple reason it was subject to the July 8, 1931, withdrawal.

Judge SETH. In other words, district 7 was supposed to coincide with that 1931 withdrawal?

Mr. STEWART. To a certain extent, where it was desirable to not include some of the withdrawal area in district 7, but to include it in already existing districts, that was done.

Judge SETH. Why wasn't it put in district 2 or some place?

Mr. STEWART. I have no idea.

Judge SETH. Are there some Indians down there?

Mr. STEWART. Oh, yes.

Judge SETH. You have a board in district 7, don't you, the regular board? How can they administer that area a hundred miles away from—and it is probably 250 miles from Gallup by ordinary travel route, isn't it?

Mr. STEWART. Yes; I should say it was.

Judge SETH. How can they administer it?

Mr. STEWART. Harry, how can they?

Mr. NAYLOR. I don't know.

Mr. STEWART. I don't see how they can.

Judge SETH. Why was it put in the district?

Mr. STEWART. That is something I don't know.

Judge SETH. There are other grazing districts besides 7.

Senator CHAVEZ. There is a grazing district right around that area.

Judge SETH. District 2 surrounds it, doesn't it, Mr. Stewart?

Mr. STEWART. I do not know.

The CHAIRMAN. Was that territory, last referred to by the interrogatory, included in the proposed legislation that failed in passage?

Mr. STEWART. Yes.

The CHAIRMAN. Was all of the territory depicted on the map now before you included in the legislation that failed in passage?

Mr. STEWART. All except north of this black line, excluding this area in here.

The CHAIRMAN. And that was railroad?

Mr. STEWART. Yes; everything within this outer black line, excluding the railroad land, clear on through here; everything in this black line area, that black line area, and that lower black line area.

Senator CHAVEZ. This area is contained on district 7 now, and you would have obtained it if the legislation had been approved by Congress?

Mr. STEWART. That is correct.

Senator CHAVEZ. So you got it anyway.

The CHAIRMAN. Your campaign for allotments was largely centered in the area embraced within the bill which failed of passage?

Mr. STEWART. That is correct.

The CHAIRMAN. And the campaign for setting up allotments started shortly after the bill failed of passage?

Mr. STEWART. No, sir; the campaign took place before that time, before the bill was introduced, Senator. The impetus of this whole campaign of making allotments took place between the years 1925 and 1929. The bill was introduced subsequent to that time.

Judge SETH. But the withdrawal was there?

Mr. STEWART. The withdrawal was made in 1931; based on that withdrawal the legislation was drafted.

Judge SETH. Wasn't the withdrawal made in 1908?

Mr. STEWART. The first withdrawal, under Theodore Roosevelt.

Judge SETH. But all that land, the time the allotments were made, was withdrawn from disposal under the public land laws generally, wasn't it?

Mr. STEWART. No, sir. Any land prior to the passage of the Taylor Grazing Act that was public domain did not have to be withdrawn for allotment purposes. It was available, undisposed of public domain, unreserved. It was subject to allotment to a qualified Indian, whether he be Navajo, Laguna, Apache, or what not.

The CHAIRMAN. Did the allotment campaign, so-called, take on its activity after the Executive order of Theodore Roosevelt, which was a temporary withdrawal?

Mr. STEWART. After its cancelation, yes.

The CHAIRMAN. After its cancelation?

Mr. STEWART. That's right.

The CHAIRMAN. It did not take form as a campaign during the time the Executive order was in existence?

Mr. STEWART. Yes, indeed it did, but the record indicates that the cancelation of that withdrawal was because it was believed that the oil structures in the so-called Hospah structure, as we know it today, the oil structure, and therefore the order should be canceled and the structure, so to speak, be developed under the public-land laws. But there was a campaign of allotments made during the short life of the withdrawal, Senator.

The CHAIRMAN. And that continued after the cancelation?

Mr. STEWART. That is correct.

The CHAIRMAN. And that is a campaign that was directed, wasn't it?

Mr. STEWART. Certainly.

Judge SETH. Now, when was that Executive order canceled or withdrawn?

Mr. STEWART. I would have to guess, and I would rather not do that. I could get that information. It was about a few years after it was created.

Judge SETH. Now, you are unable to give us any figures on the increase of Indian sheep in district 7 in the past few years, are you not?

Mr. STEWART. I would not know.

Judge SETH. And who would know?

Mr. STEWART. I think, jointly, Mr. Cooper and Mr. Naylor would know.

Judge SETH. Didn't the Government advance money to the Indians with which to purchase sheep at some stage of the relief campaign?

Mr. STEWART. I don't know whether there was any money. There was sheep put out to them on the reimbursement basis.

Judge SETH. About how many, do you know?

Mr. STEWART. I believe a total not to exceed 10,000.

Mr. COOPER. 9,380.

Mr. STEWART. 9,380.

Judge SETH. Was that at a time when you were trying to exterminate the goats?

Mr. STEWART. That was subsequent to that time, I believe; and it was to help rectify that administrative mistake, making those people to reduce living off the reservation.

Judge SETH. Do you know whether that nine-thousand-some-odd head went on district 7?

Mr. STEWART. I believe it did.

The CHAIRMAN. One question there, Judge, if you please, before it passes out of my memory.

You were asked the question, Mr. Stewart, as to whether the money that was advanced for the purchase of land, 180,000 acres, or thereabouts, had been repaid to the Government. I did not catch your answer.

Mr. STEWART. My answer was, Senator, that I didn't know.

The CHAIRMAN. Does anyone here have a record who could enlighten the committee on that?

Mr. STEWART. I might mention, Senator, that took place quite some time ago, and the only source of that information, I believe, would be the General Accounting Office in Washington. I don't know as the Indian Office would have it.

The CHAIRMAN. It would look as though the Indian Office should have it. Is there anyone here in the Indian Office who has information on that subject? The investigator will be advised to run that matter down for the record.

(The following information on this matter was received from the Indian Service:)

UNITED STATES DEPARTMENT OF THE INTERIOR,
OFFICE OF INDIAN AFFAIRS,
Chicago 54, Ill., November 3, 1943.

Mr. E. S. HASKELL,

*Special Investigator, United States Senate Public Lands Committee,
Care of Nevada Reporting Service, Reno, Nev.*

DEAR MR. HASKELL: Reference is made to a letter of September 27 from J. M. Stewart, general superintendent of the Navajo service, relating to certain information desired by the McCarran committee, pertaining to the purchase of land for the Navajo Indians. We also have a copy of your letter of October 15, to Mr. Stewart, advising that what the committee wanted to know was, "How much, if any, of the \$1,200,000 advanced for the purchase of approximately 180,000 acres has been repaid to the Government?"

The appropriation item contained in the Second Deficiency Act of fiscal year 1923, approved May 29, 1928 (45 Stat. 899,900), reads as follows:

"* * * Purchase of land for Navajo Indians: For purchase of additional land and water rights for the use and benefit of Indians of the Navajo Tribe (at a total cost not to exceed \$1,200,000, which is hereby authorized), title to which shall be taken in the name of the United States in trust for the Navajo Tribe, fiscal years 1928 and 1929, \$200,000, payable from funds on deposit in the Treasury of the United States to the credit of the Navajo Tribe: *Provided*, That in purchasing such lands title may be taken, in the discretion of the Secretary of the Interior, for the surface only. * * *

Under this authorization a total of \$675,000 was appropriated, of which \$532,077.85 was expended. All of this \$532,077.85 was tribal money. The amount reimbursable to the Treasury is \$100,000, which was appropriated by the act of February 14, 1931 (46 Stat. 1122), under an item reading in part as follows:

"For purchase of additional land and water rights for the use and benefit of Indians of the Navajo Tribe as authorized to be acquired by the act of May 29, 1928 (45 Stat., p. 899), \$100,000, reimbursable * * *."

All of this particular appropriation was expended. No part of it has been repaid as yet.

Sincerely yours,

WALTER V. WOFHILKE,
Assistant to the Commissioner.

Judge SETH. I have one question for the gentleman back there. When were those sheep purchased, what year?

Mr. COOPER. They were purchased in the years 1936, 1937, and 1938.

Mr. STEWART. I would like to give you the date of the cancelation order. President Taft, by order of January 16, 1911, restored to equity the balance of these Roosevelt withdrawals.

Judge SETH. The boundaries of district 7 look sort of irregular. Is there any basis for the lines, other than the fact that the land was originally included in that withdrawn area?

Mr. STEWART. No; that is all the reason I know.

Judge SETH. And do you know any reason why it wasn't put in the surrounding districts?

Mr. STEWART. Only in general terms, that the problem here was a special problem.

Judge SETH. Wasn't it, in fact, that the Indian Service desired to retain control of the district?

Mr. STEWART. No.

Judge SETH. Was the district set up with the regular board of advisers, do you know?

Mr. STEWART. Yes.

Judge SETH. And superimposed on that is another board. Do you know of whom they consist?

Mr. STEWART. That is a range conservation committee.

Judge SETH. They consist entirely of Indian Service and Soil Conservation Soil officials, do they not?

Mr. STEWART. No; originally they were composed of Indian Service representatives, Soil Conservation Service representatives, Division of Investigation, General Land Office. Since the original composition of that board, due to the war and other causes, we have been without a board. Just recently, it has been recreated, you might say; until there is merely the Indian Service, the Grazing Service, and the General Land Office, represented on that board.

Judge SETH: That board, that super board, was composed entirely of Government representatives, was it not?

Mr. STEWART. I believe so; yes.

Judge SETH. And by the rules, given express authority to override recommendations of the advisory board?

Mr. STEWART. Let's take a look at the rules.

Judge SETH. Can you produce those?

The CHAIRMAN. Mr. Leech, have you those rules?

Mr. LEECH. Yes, sir; we have them, Senator. Director Rutledge will discuss those, when he goes on for the Grazing Service.

The CHAIRMAN. Do you care for them now?

Judge SETH. I just want to be sure to get them in the record.

Turn to these graphs that you prepared here, Mr. Stewart. As I understand it, all these charts except one, relates to Navajo conditions generally. Is that correct?

Mr. STEWART. Which one is that, that doesn't relate to Navajos?

Judge SETH. This one.

Mr. STEWART. That relates to Navajo conditions.

Judge SETH. But this is limited to district 7, and all the others relate to Navajo conditions generally. Isn't that true?

Mr. STEWART. That is a fair statement; yes.

Judge SETH. You have a number of permits; is that on there somewhere?

Mr. STEWART. Yes; licenses.

Judge SETH. That number is 1496?

Mr. STEWART. That's right.

Judge SETH. Aren't a large number of those licenses for one or two head of horses, or something like that?

Mr. STEWART. I don't think so.

Judge SETH. Well, the average is 96. Is that right?

Mr. STEWART. I can't answer that. Mr. Naylor is the grazier out there.

The CHAIRMAN. What is your answer, Mr. Naylor?

Mr. NAYLOR. The answer is on the chart; 96, I believe.

Judge SETH. But that includes all Indian permits, large and small, doesn't it?

Mr. NAYLOR. That is right.

Judge SETH. And are the cattle and sheep figured on the usual 5-point basis?

Mr. NAYLOR. That is what I understand.

Judge SETH. And have you anywhere a statement of the number of Indian permits that would be less than 25 head out of a total; could that be ascertained?

Mr. NAYLOR. I think so. I don't have it, but I believe we can ascertain it.

Judge SETH. What I am driving at is to ascertain, if possible, whether in that total number of permits there are not a large number of very small permittees.

Senator CHAVEZ. What did you answer?

Mr. STEWART. We will look up that information. We want it to go in accurately.

Judge SETH. Isn't it a fact, Mr. Stewart, that permits are issued to Indians on somewhat a similar basis as the allotments; that is, to the minor children?

Mr. STEWART. That I don't know. I have nothing to do with the administration of the business. Mr. Naylor is the grazier.

Judge SETH. You don't know whether that is true or not?

Mr. STEWART. I do not know.

Judge SETH. Do you know whether permits are issued to Indians who have never been in the sheep business?

Mr. STEWART. No, I couldn't answer that question.

Judge SETH. You don't know whether they are induced to take a permit along the same lines as the allotments or not?

Mr. STEWART. We are not encouraging that; never advocated that. My understanding is that a certain year—you might say the focal point after which the owner had to have stock in the district in order to get a license—I believe that year was 1937 or '38.

The CHAIRMAN. Then the rule for the base period that applies in other districts does not apply in this district. Is that true?

Mr. STEWART. I don't know.

Mr. LEECH. That is correct, Senator.

The CHAIRMAN. That is correct.

Judge SETH. Are there special rules as to their qualifications throughout this district?

Mr. LEECH. I believe when Director Rutledge discusses the regulations, he will answer all those questions.

Judge SETH. Do different rules apply to Indians and non-Indians?

The CHAIRMAN. I would like to have that answered now.

Mr. R. H. RUTLEDGE (director of grazing, Salt Lake City, Utah). He is asking a man here who doesn't know anything about these things. I'll try to tell him, when the time comes, how to get this in an orderly way.

Senator CHAVEZ. If Mr. Rutledge can answer it now I'd like to have the answer now at this point of the record.

Mr. RUTLEDGE. I would like to cover this as it should come up. It is difficult to get the whole picture by picking out questions—

Senator CHAVEZ. This is not a hard question to answer, about whether there are different rules for the non-Indians.

Mr. RUTLEDGE. There are no different rules. The same rules apply to the non-Indians that apply to the Indians.

Judge SETH. Mr. Stewart, I would like to go back, with the committee's permission, to the general testimony with which you opened

as to these—we will need the big map, I think the one behind this one.

The CHAIRMAN. It is now 5 minutes of the hour. We will take a recess until 2 o'clock.

(Recess until 2 p. m.)

AFTERNOON SESSION

The CHAIRMAN. You may proceed, Judge.

Judge SETH. Senator, may I request that this opinion, referred to this morning, that is being gotten, with respect to the Santa Fe Railroad lands that have been relinquished, be made a part of this record?

The CHAIRMAN. Yes; the opinion is not available now, I understand.

Mr. L. O. GRAHAM. No.

The CHAIRMAN. About how soon will it be?

Secretary CHAPMAN. Senator, that probably won't be available for at least another 10 days.

The CHAIRMAN. It will go in the record whenever it is available.¹

Secretary CHAPMAN. Yes, sir.

The CHAIRMAN. Before you proceed, we have got to have a little more quiet here. It is a little difficult for us to hear.

Now, to those who were not here this morning, it is the desire of the committee that each one register by signing a card and giving his post office address and his official position, if any, or his business. All who have not signed cards will please sign them as they are being passed out. That is the only way we have of recording the attendance here; and to those who are not registered at the meeting, we will be unable to afford copies of the testimony when it is printed. These records are transcribed and printed. Those who come here and are interested, and register, will receive a printed copy of the proceedings.

You may proceed, Judge.

Judge SETH. Mr. Stewart, south of Gallup, and outside this district, a so-called resettlement purchase, Two Wells—that is a resettlement purchase?

Mr. STEWART. It is within the district. It was one of the submarginal land projects.

Judge SETH. Will you indicate approximately where it is, on the map? Is it about 6 to 8 miles south of Gallup?

Mr. STEWART. I would say so.

Judge SETH. About how big an area was that, Mr. Stewart?

Mr. STEWART. The total acreage purchased in the so-called Gallup-Two Wells submarginal project, 65,986.44 acres.

Judge SETH. And there is another one down here, Ramah; farther south. Is that true?

Mr. STEWART. That is called, I think, the Zuni project.

Judge SETH. That is smaller, is it not?

Mr. STEWART. Smaller, yes.

Judge SETH. What funds were used in that purchase?

Mr. STEWART. I believe the same source of funds, the Emergency Relief money.

¹ At the hearing before the subcommittee in Denver, Colo., on November 15, 1943, the Assistant Secretary of the Interior was interrogated by the chairman with respect to the solicitor's opinion in question. Assistant Solicitor L. O. Graham replied to the chairman that no opinion had yet been rendered nor was it known when one would be forthcoming. He stated that: "It is still a matter of study."

Judge SETH. No Indian funds used?

Mr. STEWART. I don't recollect any, I am not sure.

Judge SETH. It was purchased like these land grants were purchased?

Mr. STEWART. That is right.

Judge SETH. Was it turned over to the Indian Service for administration, or to the grazing district?

Mr. STEWART. The Gallup-Two Wells, as such, I believe, was turned over to the Indian Service for administration.

Judge SETH. And the other?

Mr. STEWART. The Zuni, too.

Judge SETH. They were like the railroad lands; the Indian Service reserved control of them for Indian use, exclusively. Is that true?

Mr. STEWART. Well, they weren't like the railroad lands, but the net effect of the administrative, yes, is the same.

Judge SETH. Now, Mr. Stewart, could you give me an idea of how much money has been spent on the Navajo Reservation in the way of development of water and improvements for the range since this relief—so-called relief—program started?

Mr. STEWART. Not at the moment, but I can get it.

Judge SETH. It runs into the millions, does it not?

Mr. STEWART. Yes.

Judge SETH. And is the improvement in condition of sheep and weight of lambs, as shown by your data, due to that, in your opinion?

Mr. STEWART. Partially.

Judge SETH. How much range has been developed, would you say, by this expenditure?

Mr. STEWART. I don't quite understand your point. How much has been developed—

Judge SETH. How much has it been improved?

Mr. STEWART. I would say the entire range has been improved by this program of conservation of the range, and the livestock and the livestock reduction program, and the livestock improvement program, all integrated.

Judge SETH. Are there areas in district 7 that the Soil Conservation Service have closed to grazing?

Mr. STEWART. I couldn't answer that question; I don't know.

Judge SETH. How much was spent on the improvements at Window Rock?

Mr. STEWART. Do you mean the structural improvement?

Judge SETH. Yes sir.

Mr. STEWART. The original construction of the Government agency at Window Rock involved a total of \$1,030,968.22. Since that was completed, additional construction has taken place, totaling approximately—I don't have the exact figures, but these are approximate—\$53,135.57; a total of \$1,084,121.79.

Judge SETH. Was an airport constructed there?

Mr. STEWART. There was an airport constructed there.

Judge SETH. Is that included in that total?

Mr. STEWART. No; that was at Window Rock, about a mile distant from Window Rock.

The CHAIRMAN. The Government put in the airport?

Mr. STEWART. Yes; the Government did put in the airport. I can give you the cost of that, if you wish. There is a small hangar there,

\$456.50, and there is a large hangar there, which included the combining of the small hangar, costing \$1,937.88—a total of \$2,394.38 for the work.

The CHAIRMAN. For the airport itself?

Mr. STEWART. Yes, sir.

The CHAIRMAN. And the landing area?

Mr. STEWART. For the hangar and the clearing of the sagebrush. The cost of that was not very severe. It was wiping out the sagebrush with a scraper.

Judge SETH. Do you think that was all spent on the airport, or anything connected with it?

Mr. STEWART. I am sure of it.

Judge SETH. Were there any other expenditures near Window Rock that you did not include in your other total?

Mr. STEWART. Not that I know of.

Judge SETH. Now, what funds were used to construct the buildings at Window Rock?

Mr. STEWART. Public Works Administration.

Judge SETH. They came from Soil Conservation funds used—

Mr. STEWART. Not that I know of.

Judge SETH. They all came from the same source?

Mr. STEWART. P. W. A.

Judge SETH. And you think \$1,300,000 is the total cost?

Mr. STEWART. Yes.

Judge SETH. How could that money have been used to better advantage in improving range conditions?

Mr. STEWART. Well, that money couldn't have been used to better advantage administratively, if that is what you are pointing at. More money could have been used to advantage to improve range conditions.

Judge SETH. This money came from the same appropriation that was used in the improving of range conditions, didn't it?

Mr. STEWART. I don't think so; P. W. A.

Judge SETH. How many employees are there on the Navajo Reservation and on this district 7, that are paid by the Indian Service?

Mr. STEWART. The total number of employees on the Navajo jurisdiction, which includes the reservation and the outlying districts in district 7, total 1,569. Now, of that total, 523 are what I'd term "administrative," in terms of participating in the administrative activities on the over-all work. Of that total, and what I term "human-relations personnel," in that they give a service to the Indians, as removed from administration, in terms of health and education, doctors, nurses, teachers and assistants, 1,046 are in that category. Now, of the total employed, the number of Indian employees in the administrative group is 385, and in the human-relations-personnel group is 658. Of the grand total of 1,569, 541 are intermittent, not regular employees, but irregular from time to time. I might go on further and say that the ratio of the administrative personnel to the Navajo population is approximately one to a hundred.

The CHAIRMAN. That is on the reservation?

Mr. STEWART. Including off reservation, too, Senator.

The CHAIRMAN. Off reservation, as you put it, applying to district 7?

Mr. STEWART. That is correct, this applies to both.

The CHAIRMAN. Do you include in that those who are employed by the Grazing Service, or any other service?

Mr. STEWART. Include in that the services of personnel that is being utilized by the Grazing Service.

The CHAIRMAN. They are paid by the Indian Service?

Mr. STEWART. That is right.

The CHAIRMAN. In addition to that, there are some who are employed by the Grazing Service?

Mr. STEWART. That is correct.

The CHAIRMAN. How many?

Mr. NAYLOR. Thirty regular personnel, administrative work.

The CHAIRMAN. How many of the number of the 1,500 are Indians?

Mr. STEWART. One thousand and forty-three; and 921 of that number are Navajo Indians.

Judge SETH. Now, I believe you said, for administrative purposes alone, there is one employee to every hundred Indians?

Mr. STEWART. Approximately.

Judge SETH. Men, women, and children?

Mr. STEWART. Approximately.

Judge SETH. In other words, 1 administrative employee to about every 15 families?

Mr. STEWART. Every 20 families.

Judge SETH. And the total number of employees is about 1 to 35 Indians, is it not?

Mr. STEWART. That would be about right; yes.

Judge SETH. That would be one to every seven families?

Mr. STEWART. Yes.

Judge SETH. A year or two ago wasn't the number considerably larger, Mr. Stewart?

Mr. STEWART. That is true, because there was a large Civilian Conservation program going forward on the reservation, with the consequent employment of Indians in connection with that, working under white supervision.

Judge SETH. But the Indian Service was not paying them; they were paid from other funds, were they not?

Mr. STEWART. That's right.

Judge SETH. A large number, a year or two ago, of people actually paid from Indian Service funds, were there not?

Mr. STEWART. Not a great deal more; no. There were some.

Judge SETH. Mr. Stewart, when one of these allottees dies, his allotment, I believe you said, goes to his heirs, does it not?

Mr. STEWART. In accordance with the law of distribution, in the particular State wherein the allotment is located.

Judge SETH. If one of the minor children dies, his allotment would go to his parents, wouldn't it?

Mr. STEWART. In accordance with the State law, whichever it may be.

Judge SETH. And this may end in a man having several allotments, at different places?

Mr. STEWART. Yes.

Judge SETH. In making these allotments for the Indians, was it the policy to take only a quarter section out of each of the even-numbered sections that didn't belong to the railroad?

Mr. STEWART. No; the policy was, as far as practicable, to allot in solid tracts.

Judge SETH. Under a great many allotments, through that area, were only a quarter section of a section allotted?

Mr. STEWART. I wouldn't say preponderantly so, no.

Judge SETH. A great many of them; isn't that the case?

Mr. STEWART. Yes.

The CHAIRMAN. I don't quite understand that, Judge.

Judge SETH. Well, every section two, for instance, the railroad, has the odd-numbered sections; instead of allotting the whole section two to an Indian, they allot, for instance, the northeast quarter, and then jump over to section four and allot that, instead of allotting the whole section. Then you have a condition with the Indian where, instead of 160 acres, he controls 640—if there was any control.

You don't think that was done, Mr. Stewart?

Mr. STEWART. No; that was not the policy. My recollection was they were told to allot in continuous tracts, so far as practicable.

The CHAIRMAN. Give me that again, please.

Mr. STEWART. Allotting agents were told to allot a family group in as contiguous a group of tracts as possible, a full section vacant, take care of the head of a family and three children.

The CHAIRMAN. A full section?

Mr. STEWART. Yes.

The CHAIRMAN. So the head of a family and three children would take 640 acres.

Mr. STEWART. Correct.

Judge SETH. Mr. Stewart, was any investigation ever made by the Indian Service to determine whether any of these allotments were illegal?

Mr. STEWART. I think the procedure that was necessarily followed, in connection with public-domain allotments, might be interesting. Allotting agents were sent out by the Indian Office to locate Indian applicants on such lands as they might select, or as the allotting agent might select. Those, in turn, had to clear, through the then register of the local General Land Office for clear listing as to conflict, and as to whether or not they had been made in accordance with the law, as to whether the lands were mineral or not. They were, in turn, checked, subsequently, by the Geological Survey. Preliminary to the approval of the allotment application by the Secretary of the Interior, all public-domain allotments, in turn, had to clear through the adjudicating section of the General Land Office in Washington itself, to see that they had met with the requirements of the law and the regulations for their approval.

Now, to answer specifically your question, I do not know of any investigation of the Indian Bureau, or any other bureau, as to the validity of those allotments.

Judge SETH. Now, the Indian living on the reservation proper was not entitled to an allotment. Is that right?

Mr. STEWART. He was not.

Judge SETH. Any investigation made to check up on that end of it?

Mr. STEWART. Well, the sort of review which I just outlined would disclose whether or not he was a reservation Indian or an off-reservation Indian.

Judge SETH. Now, would the Geological Survey know that?

Mr. STEWART. They were only concerned with whether the lands were mineral in character.

Judge SETH. How would the General Land Office know it?

Mr. STEWART. They had field agents.

Judge SETH. Did they send them out there?

Mr. STEWART. I assume they did.

Judge SETH. The Indian Service knew actually, didn't it?

Mr. STEWART. What?

Judge SETH. Where these Indians lived.

Mr. STEWART. Definitely.

Judge SETH. There never was any check made as to the validity of these allotments, in that respect?

Mr. STEWART. Well, the certificate of an allotting agent, given under oath; and he would certify this or that Indian was not a reservation resident.

Judge SETH. Now, Mr. Stewart, I would like to go, briefly, back to this opening part of your testimony. You stated, I believe, that there was a total of 851,339 acres purchased under this program started by this Rio Grande Valley board. Is that right?

Mr. STEWART. Well, that is true, as to the Rio Grande Valley-Pueblo group, not including, as you mentioned, the Gallup-Two Wells, and the small Zuñi project.

Judge SETH. You don't mean, by any means, that the total purchase of lands made in the State by the various governmental agencies—

Mr. STEWART. No; I only mean that was the total that was purchased in Indian demonstration projects; not by other agencies of the Government.

Judge SETH. Do you know whether or not it included the Ojo del Espiritu Santo grant?

Mr. STEWART. Yes.

Judge SETH. And the Ignacio Chavez grant?

Mr. STEWART. I'm not sure.

Judge SETH. The Bernabe Montano grant?

Mr. STEWART. Yes.

Judge SETH. The Lobato grant?

Mr. STEWART. The south half of the Lobato.

Judge SETH. Not the north half?

Mr. STEWART. That's right.

Judge SETH. And the grant up there beyond the Lobato?

Mr. STEWART. The La Madera?

Judge SETH. That's right.

Mr. STEWART. It was in the total program.

Judge SETH. The land purchases, under that program, were probably nearer a million and a half than the 851,000 you referred to, were they not?

Mr. STEWART. No; I don't know that I have the data. That was collected here at the agency, which I read from this morning.

Judge SETH. There was some which the Indians had nothing to do with, weren't there?

Mr. STEWART. Aren't we getting confused? The total acreage purchased by the Resettlement Administration, for simplicity, included what we termed Indian demonstration projects, which was the figure I gave you this morning.

Judge SETH. You don't attempt to include areas not in the Indian demonstration projects?

Mr. STEWART. That's right.

Judge SETH. Of that, the Indians chose four-hundred-and-thirty-four-thousand-and-some-odd acres?

Mr. STEWART. That's right.

Judge SETH. That does not include the area south of Gallup?

Senator CHAVEZ. Gallup, Twin Lakes?

Mr. STEWART. No; I omitted those two this morning, I omitted to refer to them, through an oversight.

Judge SETH. It doesn't include the area they are using, that the Santa Fe has relinquished?

Mr. STEWART. No.

Senator CHAVEZ. And the Mills project, up near Harding County?

Mr. STEWART. No.

Judge SETH. Does it include that area up around Taos Junction, Serbiena?

Mr. STEWART. I don't think so.

Judge SETH. Does it include the grants down here at Socorro, at Bosque del Apache, the fish and game?

Senator CHAVEZ. The Biological Survey?

Mr. STEWART. No; these are purely Indian projects.

Judge SETH. Now, that board; first there was a committee appointed, and that committee recommended the appointment of a board of eight. Is that what you testified?

Mr. STEWART. You're getting into something I don't know anything about. Mr. Adams would have to answer, on either the board or the committee.

Judge SETH. Was there any representative on that board, other than employees of the various governmental agencies involved?

Mr. STEWART. Subject to correction by Mr. Adams, my reply would be "No."

Judge SETH. Might I ask Mr. Adams to answer, Senator?

The CHAIRMAN. Very well.

Judge SETH. Is Mr. Adams present?

The CHAIRMAN. Will you come forward, Mr. Adams, please?

Judge SETH. You are the same Mr. Adams that testified here this morning, briefly?

STATEMENT OF JOHN A. ADAMS, UNITED STATES FOREST SERVICE, ALBUQUERQUE, N. MEX.

Mr. ADAMS. That is correct.

Judge SETH. Now, Mr. Adams, what was the principal duty of this Rio Grande Interdepartmental Board?

Mr. ADAMS. It might be well to start from the time the committee was set up; don't confuse the committee and the board.

The committee was a fact-finding organization to analyze, gather, and project the economic and social, as well as the resource conditions, in the upper Rio Grande Valley, and make certain recommendations to the Secretary.

Judge SETH. Then the board derived from that, did it not?

Mr. ADAMS. Yes; that's correct. The recommendation of the committee; they thought that, in view of the critical conditions in the

valley, that is, the upper Rio Grande, the area from the north boundary of the State to the Elephant Butte Reservoir, that a permanent board should be appointed, in order to point up and coordinate the program of the various Federal agencies operating in the watershed.

Judge SETH. Was there any representation on that board, other than employees of the various governmental agencies?

Mr. ADAMS. No.

Judge SETH. Didn't that board undertake to adopt policies applicable to non-Indians as well as Indians, in the area?

Mr. ADAMS. Absolutely; there was no line drawn at all.

Judge SETH. In other word, it was to cover the entire population?

Mr. ADAMS. That is correct, the rural population.

Judge SETH. Was any representation of the people to be affected on the board, at all?

Mr. ADAMS. Yes. The proposal, as outlined to the Secretary, contained in the recommendations of the committee, indicated that State, county and other public agencies and people would be consulted.

Judge SETH. They were not given a membership on the board or committee.

Mr. ADAMS. That is correct.

Judge SETH. In other words, these two departments, through their employees, were undertaking to determine the fate and living conditions of a large part of the population of this State. Is that true?

Mr. ADAMS. I wouldn't say exactly that. I would say they were taking the facts, as they found them from the investigations of the various agencies, correlating them, and pointing out possible courses of action to the Federal agencies. We had only advisory and recommendatory powers.

Judge SETH. Well, the people who were to be affected were not the governmental agencies, were they?

Mr. ADAMS. That's correct, no.

Judge SETH. And the people, whether Indians, Spanish-Americans, or Americans, were not represented on the board at all?

Mr. ADAMS. That is correct.

Judge SETH. Didn't this stem from that committee; this so-called subsistence proposition, Mr. Adams?

Mr. ADAMS. I don't believe I understand you.

Judge SETH. Well, I mean the proposition of cutting down the big commercial outfits, and dividing them up among the small ones. Didn't that originate in that committee?

Mr. ADAMS. I wouldn't say so, no. I might give you a little background on that, if I might, on that point.

Judge SETH. Yes.

Mr. ADAMS. At the time the committee was proposed, by Secretary Wallace and Secretary of the Interior Ickes, the thought was, according to the information they had on hand, that a large proportion of the natural resources were not, at the present, time used for the benefit of the rural, noncommercial operators; and that, accordingly, with the large Federal relief rolls we had to contend with, it was felt that if more of the basic resources could be made available to the small rural people, that, in turn, it was felt that, with a redistribution of the basic resources, that the livelihood of these rural people could be raised, and, in turn, the relief load, which was very heavy, on Federal Government, State, and county, could be alleviated.

Judge SETH. How was the status of these people to be raised, Mr. Adams?

Mr. ADAMS. By allowing them more of the natural range resources; by giving them more irrigated land.

Judge SETH. How could they be given more natural range resources without taking it away from existing users?

Mr. ADAMS. Of course, that cannot be done. We do know that, originally, the Spanish-Americans had these large grants, as you know all over this State; that, one by one, these grants have gone into commercial ownership.

Judge SETH. Now, they have gone into the Government ownership.

Mr. ADAMS. And now the Government has acquired them. It was felt that, with the acquisition of some of the now water logged land in the Rio Grande Conservation District, some of that land would be made available to them.

Judge SETH. Well, you felt that the Forest Service had control of the National Forests grazing, is that correct?

Mr. ADAMS. Yes.

Judge SETH. And the Grazing Service was in control of the public land grazing?

Mr. ADAMS. They did, in part, at that time.

Judge SETH. And the Soil Conservation Service, or some other service, was to buy up these grants. Is that right?

Mr. ADAMS. These grants were purchased prior to the board or the committee.

Judge SETH. They were already purchased?

Mr. ADAMS. That is correct.

Judge SETH. And the idea was that these three departments having control of the public lands, the forest, and these recently acquired lands, would dictate the use of the private land in the neighborhood. Isn't that true?

Mr. ADAMS. No; I wouldn't say so. We were concerned with Federally-owned lands, not privately-owned lands.

Judge SETH. The federally-owned lands controlled the situation, didn't they?

Mr. ADAMS. I wouldn't say so.

Judge SETH. All summer grazing was on the forest, wasn't it?

Mr. ADAMS. Except for the larger grants; a good many large grants that have—

Judge SETH. Between the Forest Service and the grants, all summer range was under that board's control?

Mr. ADAMS. I wouldn't say under the board's control, because they have only an advisory power.

Judge SETH. Well, under control of the agencies represented on the board?

Mr. ADAMS. That is probably correct, yes.

Judge SETH. Wasn't it a deliberate plan, through that board, to dictate the use of all the lands in this area involved?

Mr. ADAMS. No; I wouldn't say that. I would say this, rather, that the board, through its membership from the various Federal land and administration agencies, would endeavor to project a program which would mutually benefit, to a large extent, our low-income group.

Judge SETH. And how about the so-called commercial range users: what was to happen to them?

Mr. ADAMS. Well, I might go back a little bit in history, or else just plain human nature. We know that the Spanish-American and the Indian are strictly nonacquisitive, and we know that the Anglo is acquisitive. Accordingly, it was felt that the Anglo could take care of himself.

Judge SETH. In other words, it was your intention to split up the big outfits and give them to the little fellow?

Mr. ADAMS. No.

Judge SETH. Hasn't that been the deliberate policy of the Forest Service, in these northern forests?

Mr. ADAMS. I would say not, no.

Judge SETH. You know that a lot of the land is in private ownership, and its value depended on the summer use of these ranges on the grants and in the forests. Isn't that right?

Mr. ADAMS. That is correct, yes.

Judge SETH. And didn't this committee intend, through that control, to dictate to the whole country as to what usage should be made?

Mr. ADAMS. No; I wouldn't say so, for the simple reason that—take our national forests, for instance, that abut, or are contiguous to, the watershed or part of those ranges. Those are fully stocked. A large proportion of the users are small users. That set-up was not to be disturbed. It was felt that the Forest Service had gone as far as possible in distributing the grazing privileges.

Judge SETH. What did this board propose as the number of sheep a man could graze?

Mr. ADAMS. The board, as such, discussed various sized economic units, and above—I don't know that you can say that any set figure was ever arrived at, because there was such a variety of opinion.

Judge SETH. About what was arrived at, Mr. Adams.

Mr. ADAMS. Well, for instance, take the sheep and goats as a unit, they figured what I would call class A, or I guess the Grazing Service calls class 1, up to 300 head.

Judge SETH. That was considered a sort of economic unit?

Mr. ADAMS. No; that was considered a part of their economic set-up. Remember that the rural people here, taking Spanish-Americans and Indians, 50 percent of their livelihood comes from agriculture. Only 14 percent comes from livestock. The rest of it comes from wage and relief.

Judge SETH. Where did you get that figure, only 14 percent from livestock?

Mr. ADAMS. That was taken from some 10,000 individual schedules, from Indians and Spanish-Americans and Anglos.

Judge SETH. Apart from relief, what percentage would that have been?

Mr. ADAMS. Apart from relief?

Judge SETH. Yes.

Mr. ADAMS. Let me look at my figures here. About 86 percent.

Judge SETH. Then, apart from the relief set-up, they were deriving about half their livelihood, more than half, from livestock. Is that right?

Mr. ADAMS. No; 50 percent from agriculture, 14 percent from livestock.

Judge SETH. Where does that 86 percent come in?

Mr. ADAMS. And the rest is wage. Then that left 14 percent for relief.

Judge SETH. Now, cattle, I suppose, would be figured on the basis of 60 head.

Mr. ADAMS. Well, at that time we were figuring on a conservation rate of four sheep to one cow.

Judge SETH. And is that the limit that was proposed to be imposed on this upper Rio Grande area?

Mr. ADAMS. No, that is what we would say was the lower limit. The upper limit on cattle was 150 head, and the sheep limit was 800 head.

Judge SETH. Was that figured on a basis of that amount or, rather, was it attempted to be figured out on the theory of giving the man enough cattle, or sheep with what he had, to give him an existence; is that what you figured?

Mr. ADAMS. That is correct.

Judge SETH. And was the idea to bring everybody down to that?

Mr. ADAMS. Oh, no; oh, no.

Judge SETH. Did you know Mr. Shevky on that board?

Mr. ADAMS. Yes.

Judge SETH. Whom did he represent?

Mr. ADAMS. Soil Conservation Service.

Judge SETH. Where is he now?

Mr. ADAMS. I would not know.

Judge SETH. He was a Communist, wasn't he?

Mr. ADAMS. I believe that is what the F. B. I. says.

Judge SETH. He was not a citizen of the United States, was he?

Mr. ADAMS. That is correct.

Judge SETH. No one knows where he is at the present time?

Mr. ADAMS. I don't know.

Judge SETH. He was there representing all this land acquisition we have been discussing?

Mr. ADAMS. No.

Judge SETH. He was representing the Soil Conservation Service?

Mr. ADAMS. He was supposed to be an economist.

The CHAIRMAN. A what?

Mr. ADAMS. An economist; but he had nothing to do with the acquisition program.

Judge SETH. By whom was he employed?

Mr. ADAMS. Mr. Calkins.

Judge SETH. Is that board still functioning?

Mr. ADAMS. The board at the present time, as I would say, is in a state of suspended animation.

Judge SETH. That is all, Mr. Adams.

That's all we have. We have no further questions of Mr. Stewart.

The CHAIRMAN. Does anyone else care to interrogate either Mr. Stewart or Mr. Adams? Are there any questions from those in the audience?

Is there any other witness you care to present, Mr. Secretary?

Secretary CHAPMAN. I thought you wanted something on the grazing districts.

The CHAIRMAN. I thought maybe you had something else.

Now, Mr. Rutledge, you may proceed.

**STATEMENT OF R. H. RUTLEDGE, DIRECTOR OF THE UNITED STATES
GRAZING SERVICE, SALT LAKE CITY, UTAH**

Mr. RUTLEDGE. I will try to make a brief statement. My name is R. H. Rutledge. I am Director of the Grazing Service in the Interior Department. I took that job late in 1938, and one of the first trips that I made to the West from Washington was to New Mexico. That was probably in March or April of 1939, and I made a trip over this district 7, going north across it and then back south again. I noted the condition of the range very carefully and contacted the other agencies in New Mexico who were dealing with similar problems.

Mr. Chairman, as we approach this, we are approaching not only district 7 but we are approaching, as was indicated here in the last questioning of the last witness, an immense problem on human relations and human lives. I found—these figures are rough—36,000 Indians scattered around here in the State of New Mexico, and 71,000 Spanish-Americans in this general vicinity along here who might have an interest in the range possibly. I found the Forest Service, the Soil Conservation Service, the Indian Service, and, to some extent, the Grazing Service, involved in these big questions of conservation of the natural resources of the range and in the question of how certain groups of people that I have mentioned were going to make a living. We cannot dodge that question here.

The area that is now district 7 was within the inside boundaries, so to speak, of old district 2 of New Mexico. If I get my numbers wrong, some of these boys will correct me.

The CHAIRMAN. District 2 of what?

Mr. RUTLEDGE. The Grazing Service in New Mexico.

I will present a little map here which shows district 2 as embracing that entire country. That can be submitted, if you want it.

Senator CHAVEZ. Was that prepared at the time that district 7 was included in district 2?

Mr. RUTLEDGE. While district 7 was within district 2, within the exterior boundaries. It was very evident to me on that trip and in my discussion with other men, that some action was necessary to bring more order and more system in the range management of that territory.

The piece that is now called district 7, of about 3,000,000 acres of land more or less, was under withdrawal pending establishment of the Indian reservation, the withdrawal we have been talking about. But it was a hole in the doughnut, right in the middle of district 2, and after it was in there, the Grazing Service found they had no authority to administer lands standing under that kind of withdrawal.

The CHAIRMAN. About what year was that?

Mr. RUTLEDGE. Well, this was determined before I took hold. I'll have to start with 1939. The area, now district 7, under that withdrawal was a no-man's land, and as other parts of the State were put under the administration of the Grazing Service, the unqualified operators, both Indian and white, were heading into district 7 because that was a no-man's country and under no administration. As a result, conditions were bad.

Well, I took what I had learned back to Washington, and there was a lot of discussion with the Indian Service and the Grazing Service,

and we decided by discussion which was largely with Mr. Woehlke, of the Indian Service, and Jim Stewart may have been in on some of the conferences and other men were in on the other conferences—we decided that we had better put that under administration. I think the Secretary was also in on those considerations. The only way to put it under administration was to lift the withdrawal which I have mentioned and create a grazing district.

To me the thing was just a job to do. I had no particular interest in this, that, or the other. But here was a piece of land that needed care and I was, in effect, asked to do it and I was willing to undertake it. I'll admit that I had in the back of my head this thing which I had never seen tried out, the probability of handling Indians and non-Indians on the same area under similar regulations, or the same regulations.

I don't know too much about the Indian question, although I have lived among them all my life. I don't know much about it, but I was willing to undertake to put—to place a large group of Indians and a group of whites together and see if I could work the thing out and have them live happily.

The district was formed by proclamation of the Secretary, or order of the Secretary. No special meetings were held because the legal State meetings had been held and then local State meetings to put up the grazing district. This was just a piece inside of a grazing district. It might have been better to have held meetings and go through that procedure, but it looked like action was necessary. In considering it, I felt, and the Indian Service men felt, that different rules were necessary on that particular piece of ground from those in effect on the ordinary grazing district. That is not a new idea, nor is it a novel idea. I have special rules, different rules in various districts in order to fit the various conditions which we find. I could mention one in Colorado which has a lower limit below which no livestock man will be reduced of 30 head or 35 head. The one we just finished discussing in Washington, in the State of Utah, is another peculiar piece of ground with a peculiar set of circumstances, and we had to adapt ourselves to what we found and what we had to do. So this is no novel or new departure.

Some question has been raised about the placing of these isolated units down at the bottom of the map in district 7. You start fundamentally there with the fact that those were covered by the withdrawal that has been discussed and the limits of district 7 were just made to coincide, in general with that withdrawal. Now, that is not an unusual departure. We have many grazing districts that are in two, three, or four units because of topography or certain conditions. Another reason that we felt we needed different rules or a set of reasons are some of those that have been brought out this morning. That map that you see there is absolutely a nightmare as to land ownership and status. Any one group of men can't any more straighten it out than I can, in any reasonable time. That is a great big job there, a lot of it is legal, trying to determine which lands belong to the Indians and why, and which lands belong to the whites and why, and all of those things you have discussed here this morning. You didn't get anywhere on it.

This is all a maze of legal and administrative land juggling. In addition, the Indians had, as I got it this morning, 300,000 acres of purchased land in there, and they had 150,000 acres of leased land in there, and they had these undetermined allotments in there. You just couldn't get it all straightened out and proceed as we do with a normal non-Indian settlement where the land status is all a matter of record in the Land Office, and you can go and find out who owns which piece of land.

Another thing which puzzled me in this was the indefiniteness of the Indians. They were scattered throughout there. And I don't think anybody knew who had run there 5 or 10 years before, or could have found out. So we set up the special rules. The departure from the regular rules, the departure is not very great. Instead of using a 5-year priority period, we just said those who ran in 1938. That is as far as we dared go back with our limited force to try to find out anything about it. We straightened up on distance from the area, and we said that people who own land within or contiguous to the district land who ran in 1938 would be considered for permits.

The CHAIRMAN. Was the base period in the territory surrounding this district 7 the same as other districts?

Mr. RUTLEDGE. The same as it is everywhere else. On the old district, the 5 years before June 28, 1934, I think was applicable on that district.

Another thing that got in there—that is, it didn't get in there, but which I think is misinterpreted—we said in starting out to issue temporary licenses or permits or whatever they are called, that we would first issue the full number that would run in 1938 of those people that had 150 sheep or less, then the second class—call it the A class, which goes over that and worked on that basis. Another thing which worked into that and a thing to which there has been some objections, was that in those rules we provided for a conservation committee of 3 or 4 men—I think it has varied. On that committee we had a member of the Soil Conservation Service, a member of the Indian Service, I believe a member of the Reclamation Service at some time—probably that is no longer in. We also had a member of the Grazing Service, and I think a member of the Forest Service has acted and is today, all acting in an advisory capacity.

Judge SETH. There was a Division of Investigation, wasn't there?

Mr. RUTLEDGE. Division of Investigation, in addition to the others.

Now, the reason I felt we should have that advisory committee, is that, as I told you, and as has been brought out here, all these other agencies were working on this big, complicated problem. We were making range surveys. The Soil Conservation would make one and then we would make one and somebody else would make one, and they would make studies of various kinds. The purpose of that conservation committee is to correlate those things, and avoid duplication of work, and assure a similar approach to similar problems. That was in the first write-up of the rules.

Some things occurred which we didn't like, and on a certain date that was modified. That is the way it stands now.

The rules and regulations read as follows:

The range conservation committee is authorized to assist the regional grazier in the administration of the district, to establish proper cooperative relations with other interested Federal agencies, to review the recommendations of the

district advisers, and to perform such other duties relating to the management of the district as the Secretary of the Interior may direct.

Now, those men are purely and simply advisory and helpers to the grazier in charge in doing his job. In relation to the Forest Service and all these other people—I have mentioned the Forest Service a time or two in this. I think it is the fact that some Forest Service lands are still in the district. I hope the Forest Service men will correct me if I am wrong. As this land stands today within district 7, there are privately controlled non-Indian lands, 925,000 acres. The Indian-controlled lands, 1,275,000 acres; Federal range, that is, the Grazing Service range, 962,000 acres; national forest lands, 18,000 acres, national monument lands, 21,000 acres. Then inside national forests—and this gets into some of these grants, and I am not going to try to untangle it—there appears to be another 16,000 acres administered by the Forest Service and the Indian Service, and I think these other areas I mentioned here as being in the national forests are actually administered by the Forest Service, along with the Indian Service or somebody else.

We are all working together on it, anyway. Now, we were a complicated family trying to do a dirty job of family washing, and we needed somebody we could go to as a board to keep us together if we got to fighting as we do sometimes.

Now, I think that is my statement, Mr. Chairman.

The CHAIRMAN. This advisory board was an advisory board superior in its powers; is that right?

Mr. RUTLEDGE. Superior in its powers to whom?

The CHAIRMAN. Superior—I don't mean the advisory board, I mean this conservation committee.

Mr. RUTLEDGE. No; it is not superior to anybody; it's just a group of advisers. I go to them and ask them about this and that and the regional grazier when he wants to—

The CHAIRMAN. How are they set up?

Mr. RUTLEDGE. Kind of getting together loosely; Mr. Woehlke or somebody in the Indian Service asks who I want on the board and puts up his candidate, asks the Soil Conservation Service who they want on the board, and we all go around and agree that there are three or four men available here. They are just appointed that way. I don't think they have a secretarial appointment.

The CHAIRMAN. Does the advisory board ever make findings on the problems submitted to them?

Mr. RUTLEDGE. The advisory boards?

The CHAIRMAN. I mean this conservation committee.

Mr. RUTLEDGE. No; to my knowledge they have never taken it upon themselves to dictate or direct what should be done, or to make any decision which would in any way embarrass the administrative force. We have gotten together and said something like this: "We will make the range reconnaissance of this certain piece of land in a grazing district." The Soil Conservation will make a similar range reconnaissance on adjoining land and maybe the Forest Service will make one on theirs, and we throw it together and have a solid block. That is the kind of problem we have tried to handle.

The CHAIRMAN. I am at a loss to see the functions that they perform over and above what the advisory board performs or could perform.

Mr. RUTLEDGE. Did not what I say, then, register? The advisory board is in no position to issue instructions or work up a range survey program; the advisory board is on the Grazing Service land. They don't extend into the Forest Service land or the Soil Conservation Service land. But when we have a joint body like that we have to have contact with those certain individuals or authorities in other agencies and this just puts a little local decentralized group out here who can take those things and do them without our having to do them in Washington or some other place.

The CHAIRMAN. You may inquire.

Judge SETH. Are you through, Senator?

Senator CHAVEZ. Before you proceed, Mr. Seth, I would like to question Mr. Rutledge.

Mr. Rutledge, I was very much interested in your statement with reference to the interest taken by the interdepartmental committee in the economic situation or condition of people affected in either district 7 or along the valley. Can you make a short statement to the committee with reference to the situation of the people affected by district 7 along the Rio Puerco?

Mr. RUTLEDGE. I am afraid that I am not closely familiar with it. Senator; not familiar enough to do it.

Senator CHAVEZ. The people from Rio Puerco, do they take advantage of district 7? They are trying to get some grazing areas.

Mr. RUTLEDGE. Mr. Naylor might have some applications from people over there, but district 7 is too far to affect it very much.

Senator CHAVEZ. Thank you.

Mr. LEE. I would like to correct that statement. District 7 is on the watershed of the Rio Puerco and joins the people who live in the Casa Salazar district.

Senator CHAVEZ. Well, we can proceed after you get through.

Mr. RUTLEDGE. I will try to answer your question this way, Senator. That I think the same kind of interest exists on the part of the small Spanish-Americans along there that exists on the other side for the Indians. We have a question of how many people are going to—

Senator CHAVEZ. It seems around here that the Indians are doing all the eating, and the people on the Rio Puerco aren't getting anything.

Judge SETH. Mr. Rutledge, is there any objection to putting a copy of the regulations applying to district 7 into the record?

Mr. RUTLEDGE. I would be very glad to. I have a copy here. Would you like a copy?

Judge SETH. I don't know whether mine is old or new.

(The document referred to is as follows:)

RULES FOR THE ADMINISTRATION OF NEW MEXICO GRAZING DISTRICT AND UNDER THE ACT OF JUNE 28, 1934 (48 STAT. 1269), AS AMENDED BY THE ACT OF JUNE 26, 1936 (49 STAT. 1976), AND THE ACT OF JULY 14, 1939 (PUBLIC, NO. 173, SEVENTY-SIXTH CONGRESS)

SEC. 1. *Basic Policy and Plan of Administration.*

Par. a. New Mexico Grazing District 7 will be administered to conserve and protect the Federally owned and Federally controlled lands, to promote the proper use of privately owned or controlled lands and waters and to provide for the orderly use and occupancy of the Federally owned lands within the district by those dependent upon them.

Par. b. No grazing on Federally owned or controlled lands in the district will be permitted without a license. Temporary licenses will be issued by the regional

grazier to applicants who qualify for grazing privileges. Such licenses will be revocable for the violation of any of the terms thereof.

SEC. 2. Regional Grazier, District Advisory Board and Range Conservation Committee.

Par. a. Authority for Establishment of District Advisory Board; Number of Members; Qualification; Functions.—The district will be administered by a regional grazier. Pursuant to the act approved July 14, 1939 (Public, No. 173, 76th Congress), there shall be a district advisory board consisting of local stockmen and a wildlife representative. The wildlife representative will be appointed by the Secretary of the Interior. The names of the district advisers shall be recommended to the Secretary of the Interior through an election conducted in the manner hereinafter provided.

Par. b. Functions and Duties of District Advisers.—The district advisers shall advise or make recommendations on the following matters:

(1) Applications for grazing licenses or permits, provided no district adviser shall participate in any advice or recommendation concerning licenses or permits in which he is directly or indirectly interested.

(2) The carrying capacity of the range and seasons of use.

(3) Rules for the administration of the district and modification of the boundaries thereof.

(4) Any other matters affecting the administration of the Taylor Grazing Act within the district concerning which the Secretary of the Interior may request the opinion of the advisers.

Par. c. Organization and Meetings of District Advisers.—The district advisory board shall meet at district headquarters within 30 days after the appointment of a majority of its members. It shall organize by electing from its membership a chairman and a secretary. Additional meetings shall be held at the call of the regional grazier.

Par. d. Range Conservation Committee: Members; Organization; Duties and Functions.—The range conservation committee is authorized to assist the regional grazier in the administration of the district, to establish proper cooperative relations with other interested Federal agencies, to review the recommendations of the district advisers and to perform such other duties relating to the management of the district as the Secretary of the Interior may direct. It shall consist of a representative of the Indian Service, nominated by the Commissioner of Indian Affairs, a representative of the Division of Grazing, nominated by the Director of Grazing, a representative of the Division of Investigations, nominated by the Director of that division, and a representative of the Soil Conservation Service, Department of Agriculture, proposed by the chief of that service. The members of the range conservation committee after appointment by the Secretary of the Interior shall meet at district headquarters at least once a month and as often as business may require at the call of the chairman who shall be the representative of the Indian Office.

The duties of the range conservation committee shall be—

(1) To arrange for cooperative range, economic, conservation, agronomic, engineering, and other surveys necessary for the proper and effective use and administration of the federally owned and controlled lands in the district and to formulate range management and conservation plans based on these surveys.

(2) To formulate and negotiate cooperative field agreements between the interested Federal agencies for the making of such surveys and for the execution of the conservation and range management plans authorized in the preceding paragraph.

(3) To review the recommendations of the district advisory board concerning applications for grazing licenses and permits prior to action by the regional grazier on such applications.

(4) To review the recommendations of the district advisory board on modifications of the rules and of the district boundaries and to present its findings of fact and advice concerning those matters to the Director of Grazing or the Secretary of the Interior.

(5) To interpret the economic and dependency surveys and to recommend to the Secretary of the Interior such protective, maximum and other limits as will facilitate the conservative use of Federally owned and controlled lands by the largest number of qualified users.

SEC. 3. Qualifications of Applicants; Water facilities; Representation of Users.—Temporary grazing privileges on the Federally owned lands within the district will be restricted to applicants who own livestock which made substantial

grazing use of the Federally owned land within the district during the year immediately preceding January 1, 1939, and who also own, lawfully lease or validly occupy land within or contiguous to the district, or who own or lawfully control water facilities within the district, provided such ownership or control of land or water was established or initiated on or before January 1, 1939. Water developments made by or for Navajo Indians on Federally owned or controlled lands shall be considered Navajo-owned water facilities. The Commissioner of Indian Affairs or his duly authorized representative may represent individual Navajos or groups of Navajo Indians in all district matters. Indian homestead and allotment selections shall be considered as the completion of rights initiated prior to January 1, 1939.

SEC. 4. Issuance of Licenses.—Temporary licenses will be issued by the regional grazier on recommendation of the district advisory board and, with the advice of the range conservation committee, to qualified applicants in the following order:

Class 1. For livestock not in excess of 150 sheep, or the equivalent thereof, owned by a qualified applicant residing within or contiguous to the district who is entirely or preponderantly dependent on this livestock for his livelihood: one horse, one cow, or five goats to be considered the equivalent of five sheep.

Class 2. For livestock in excess of 150 sheep, or the equivalent thereof, owned by a resident qualified applicant who is primarily dependent on the Federally owned and controlled range within the district for the operation of his livestock enterprise and who is primarily dependent on this livestock for his livelihood. No applicant in this class shall be given a temporary license for livestock in excess of the maximum number he owned and grazed within the district during the year 1938.

Class 3. For the livestock of all other qualified applicants dependent on Federally owned range within the district in the conduct of their livestock operations. The regional grazier, with the advice of the range conservation committee, shall make such temporary allocations of grazing privileges on the remaining Federally owned range as will enable the largest number of qualified applicants to conduct their livestock operations in accordance with the proper use of the range.

SEC. 5. Cooperative Surveys.—With the assistance of the range conservation committee and the cooperation of other Federal agencies the regional grazier will undertake range conservation, economic and such other surveys as may be necessary to determine the proper division of the district into administrative units, the carrying capacity of each unit, proper seasons of use, the economic position and relation dependency of users, the service value of water facilities for each unit, and all other information necessary for the proper administration of the district and for the formulation of additional rules to be recommended to the Secretary of the Interior for promulgation.

SEC. 6. Procedure in Applications; Hearings and Appeals.

Par. a. Consideration of Application; Recommendations; Service of Notice.—An application for a grazing license or permit will first be considered by the advisory board, which will classify the application and transmit its recommendations to the range conservation committee. If the regional grazier finds that the recommendations of the district advisory board and of the range conservation committee are proper, he will so notify the applicant by ordinary mail. If the recommendations are to any extent adverse, notice thereof will be served on the applicant by the regional grazier or his representative or by registered letter sent to the address given by the applicant in his application. Such notice will name a place and date not less than ten days thereafter, when protests against the recommendations will be heard.

Par. b. Place and Date for Hearing before Examiner on Appeal; Notice.—Upon the filing of the appeal and specifications of error, the regional grazier will notify the Director of the Division of Grazing, who will designate an examiner. The examiner will name a place within or near the district at which a hearing will be held. Any party or parties who would be directly affected by the decision in the appeal may file a request for permission to be heard in the appeal and shall be known and designated as an intervener. The examiner will then advise the regional grazier of the date of hearing, which will be not less than ten days after the date of the filing of the appeal, and the regional grazier thereupon will notify the applicant and all intervenors then of record of the time and place of hearing, which will be held by one of such representatives of the Division of Grazing as may have been designated by the Director to conduct hearings.

Such representative, however, shall be one other than the regional grazier from whose decision the appeal is taken. For the purpose of the hearing, such representative of the Division of Grazing shall be known and designated as an examiner.

Par. c. Authority of Examiner.—The examiner is vested with general authority to conduct the hearing in an orderly and judicial manner, including authority to subpoena witnesses and to administer oaths, to call and question witnesses and to make findings of fact and a decision.

Par. d. Conduct of Hearing Before Examiner.—The appellant, the regional grazier, and recognized interveners will stipulate as far as possible all material facts and the issue or issues involved. The examiner will state any other issues on which he may wish to have evidence presented and issues which clearly appear to be unnecessary to a proper disposition of the case will be excluded, provided that the party asserting such an issue may state briefly for the record the substance of the proof which otherwise would be offered in support of the issue. The regional grazier, or his representative, will then state the grounds of the decision from which the appeal has been taken, together with such explanation as may be deemed necessary, and may call and examine witnesses on the issues involved. Upon the conclusion of this testimony the appellant shall present his case, following which recognized interveners may present evidence if such a presentation appears to the examiner to be necessary for a proper disposition of the matters in controversy. All oral testimony shall be under oath, and witnesses will be subject to cross-examination by any party. The examiner will himself question any witness whenever it appears necessary. Documentary evidence will be received by the examiner and made a part of the record, if pertinent to any issue, or may be entered by stipulation. Objections to evidence will be ruled upon by the examiner and exceptions duly noted, and such exceptions will be considered upon an appeal from the decision of the examiner. In noting an exception to a ruling sustaining an objection to the admission of evidence, the party affected may insert in the record, as a tender of proof, a summary written statement of the substance of the excluded evidence. The examiner will summarily stop examination and exclude testimony which is obviously irrelevant and immaterial.

Par. e. Witness Fees.—Under the subpoena issued a witness will be entitled to a witness fee of \$1.50 per day, plus \$0.05 per mile for miles actually traveled from his home to the place of hearing and return. Witnesses who attend hearings so far removed from their residences as to prohibit return thereto from day to day are allowed a per diem of \$3.00 for expenses of subsistence for each day of actual attendance and for each day necessarily occupied in traveling to attend hearings and return home. The allowances for witness fees, mileage, and subsistence are prescribed by the act of April 26, 1926 (44 Stat. 323), as modified and amended by the Economy Act of June 30, 1932 (47 Stat. 413), and the act of May 15, 1936 (49 Stat. 1331). Under the act of January 31, 1903 (32 Stat. 790), providing for issuance of the subpoena, a witness cannot be compelled to appear outside of his own county, and if he does so appear, can claim mileage in but one county, this is, the county of his residence. Claims for witness fees and mileage will be presented on Form No. 1-327, properly certified by the regional grazier and submitted in the usual way for payment.

Par. f. Findings of Fact and Decision by Examiner; Notice; Submittal to the Director of Grazing.—Within ten days following the conclusion of the hearing the examiner will make findings of fact and render a decision. A copy of the decision shall be sent by registered mail to the applicant and all interveners. The decision shall not prejudice the right of any party affected to be furnished with a copy of the transcript of testimony, as provided in the next paragraph. If the examiner so desires, he may submit his decision to the Director of Grazing for consideration prior to its promulgation. Upon approval by the Director such decision shall constitute the decision of the Division of Grazing.

Par. g. Notice of Appeal; Furnishing Copies of Record.—Within ten days after the receipt of a decision of the examiner any party desiring to appeal to the Director of Grazing shall file a written appeal and may request a copy of the transcript of testimony. Copies of the transcript will be furnished to the appellant and to the interveners, at a charge of 5 cents per folio, except that upon sufficient showing to the examiner, supported by an affidavit, that an appellant or intervener is financially unable to pay such fee, a copy will be furnished him without charge. Notice of appeal and request for a copy of the transcript shall be filed in the office of the Chief Examiner, Division of Grazing, Department of the Interior, Salt Lake City, Utah.

Par. h. Decision in Effect Pending Appeal.—Pending an appeal to the examiner and his decision thereon, the decision of the regional grazier shall be in full force and effect. Pending an appeal to the Director and determination thereof, the decision of the examiner shall be in full force and effect. Pending an appeal from the Director to the Secretary of the Interior and determination thereof, the decision of the Director shall be in full force and effect. Any action taken by the regional grazier pursuant to the examiner's or Director's decision shall be subject to modification or revocation by the Secretary upon an appeal from the decision of the Director.

Par. i. Appeals to the Secretary of the Interior.—An appeal from the decision of the Director of Grazing to the Secretary of the Interior shall be filed, together with any brief desired in support thereof, within thirty days after date of receipt of the Director's decision, in the office of the Chief Examiner, Division of Grazing, Department of the Interior, Salt Lake City, Utah. The appeal in other respects shall be made in accordance with the Rules of Practice of the Department of the Interior in effect at the time such appeal is taken.

Sec. 7. Until further notice no fees for grazing will be charged.

Sec. 8. General Rules of the Range.

Par. a. Acts Prohibited.—The following acts are prohibited on the federally owned lands in this district:

(1) Grazing livestock upon or driving livestock across such lands, including stock driveways, without an appropriate license or permit.

(2) Grazing livestock upon or driving livestock across such lands, including stock driveways, in violation of the terms of a license or a permit, either by exceeding the number of livestock permitted, or by allowing livestock to be on such lands in an area or at a time different from that designated, or in any other manner.

(3) Allowing livestock to drift and to graze on such lands, including stock driveways, without a license or permit.

(4) Construction or maintaining any kind of improvements, structures, fences, or enclosures on such lands, including stock driveways, without authority of law or a permit.

(5) Destroying, molesting, disturbing, or injuring property used or acquired for use by the United States in the administration of the district, including stock driveways, or improvements constructed or maintained under section 4 of the act.

(6) Cutting or removing vegetative cover, brush, woodland growth or timber for any purpose, except as authorized by law.

Par. b. Rules of Fair Range Practice.—The following rules of fair range practice shall be complied with by all licensees and permittees;

(1) The provisions of statutory law of the State of New Mexico with reference to the numbered kind of bulls permitted, the branding of livestock, and sanitary requirements, are hereby incorporated as a part of these rules.

(2) A crossing permittee shall follow the route prescribed in the crossing permit at an average rate of not less than five miles per day for sheep or goats, and ten miles per day for cattle or horses.

Sec. 9. Procedure for Enforcement of Rules and Regulations.

Par. a. Service of Notice; Report of Violations.—Whenever it appears that there has been any willful violation of any provision of the act or of these rules, the regional grazier shall cause the alleged violator to be served with written notice, which shall set forth the act or acts constituting such violation and in which reference shall be made to the provision or provisions of the act or of these rules alleged to have been violated. Such notice may be served in person or by registered mail and the affidavit of the person making personal service or the registry receipt shall be preserved. Any violation of the act or of these rules shall be reported immediately to the Division of Investigations, Department of the Interior.

Par. b. Unlawful Grazing on Federally Owned Lands; Removal of Livestock; Impoundment; Liability.—Whenever the charge consists of unlawfully grazing livestock on the Federally owned or controlled lands in the district, the notice served on the alleged violator will order him to remove the livestock or to cause them to be removed immediately or within such reasonable time as may be specified. If the alleged violator fails to comply with the notice the regional grazier shall forthwith issue a written order addressed to any grazier or other person designated by him, directing such person to remove the livestock from the area in which they are unlawfully grazing. Proper care will be exercised in such removal, which will be accomplished in the following manner:

(1) If the owner of the livestock has a license or permit which is then effective in any area, the number of livestock for which such license or permit has been issued will be removed to such area. Any livestock not covered by the license or permit will be removed either to land controlled by the licensee or permittee or will be impounded, in the manner hereinafter provided.

(2) If the owner of the livestock has no license or permit, then in effect but controls land within or near the district, the livestock will be removed to such land.

(3) If in emergency the foregoing procedure is impossible or impracticable, or if resort by the United States to the particular local statutory procedure for the exercise of its right as a proprietor is impracticable, ineffective, or will entail delay, or if for any reason whatever the adequate protection of its property requires that the livestock be removed immediately from the Federally owned or controlled lands in the district, the regional grazier may order that the livestock be impounded. Written notice of the impoundment will be given to the owner or any other interested person, if known. Such notice will assert a lien in favor of the United States for a certain amount of damages incurred and the reasonable expense of driving, handling, and feeding from the time of impoundment. Such notice shall be given also by posting in at least three conspicuous public places within the county in which the livestock were found unlawfully grazing. Upon payment of the amounts claimed the lien will be released and the livestock delivered to the owner or other person showing a right to their possession. In the event that payment of such amounts to discharge the lien is not made, then it shall be foreclosed in accordance with the law of the State of New Mexico.

Neither the removal of livestock from unlawful grazing nor the foreclosure of a lien by the United States will relieve the alleged violator of civil liability for damages, except to the extent that its claim may have been satisfied through a foreclosure, and in neither case will the alleged violator be relieved of criminal prosecution.

Par. c. Amicable Settlement of Civil Cases.—Any offer of settlement for damage to Federally owned lands in the district or to other property of the United States resulting from an alleged violation of any provision of the Act or to these rules shall be transmitted by the regional grazier, with his recommendation, to the Department for consideration. An offer of settlement will not constitute satisfaction of civil liability for the damage involved until finally accepted by the United States and will in no event relieve the violator of criminal prosecution.

Par. d. Disciplinary Action for Violations.—The regional grazier is authorized to reduce or revoke a grazing license or crossing permit or to deny renewal thereof for a clearly established violation of the terms or conditions of the license or permit or for a violation of any of the provisions of these rules. Before any license or permit is reduced or revoked, or removal thereof denied, because of such a violation, however, the regional grazier shall cause the licensee or permittee to be served with a written notice which shall set forth the act or acts constituting the violation and the amount of damage resulting therefrom. Such notice also shall refer to the terms or conditions of the license or permit or to the provision or provisions of these rules alleged to have been violated. The notice shall cite the licensee or permittee to appear before an examiner of the Division of Grazing at a designated time and place to show cause why his license or permit should not be reduced or revoked and satisfaction of damages made. The notice may be served in person or by registered mail and the affidavit of the person making personal service or the registry receipt shall be preserved.

The hearing before the examiner upon the order to show cause will be conducted in so far as practicable in the same manner as other hearings before an examiner. The licensee or permittee may appear in his own behalf or by counsel. The evidence shall be confined to the commission of the acts charged and the amount of damage due the United States. If upon the hearing of the order to show cause the violation with which the licensee or permittee is charged is established to the satisfaction of the examiner, he will make a finding of the amount of damages, in writing, and will direct the regional grazier to reduce or revoke the license or the permit, as the facts may warrant, provided that if the licensee or permittee makes an offer of settlement which appears reasonable and satisfactory to the examiner, he will, except in cases of flagrant or repeated violations, withhold such direction and will order the regional grazier to transmit such offer of settlement to the Department for consideration.

Upon the failure of the person served in the notice to appear at the time and place designated in the notice, and in the absence of a good and sufficient show-

ing to the examiner of the reason for his failure to appear, the examiner may direct the regional grazer to reduce or revoke the license or permit, as the violations charged in the notice and the amount of damages alleged may warrant.

No license or permit shall be issued or renewed until payment of any amounts found by the examiner to be due the United States as damages under this section has been offered, and until payment of any amounts due as grazing fees has been made.

The decision of the examiner on any matters in this section shall be final unless an appeal is taken within ten days to the Director of Grazing, whose decision likewise shall be final unless an appeal is taken within 30 days to the Secretary of the Interior. Pending an appeal and final determination thereof the decision of the examiner or of the Director of Grazing, as the case may be, shall remain in full force and effect. Appeals to either the Director of Grazing or the Secretary of the Interior shall be filed in the office of the Chief Examiner, Division of Grazing, Department of the Interior, Salt Lake City, Utah.

Sec. 10. Construction and Maintenance of Improvements on the Federally Owned Lands in the District.

Par. a. Statutory Authorization.—Section 4 of the act provides:

"Fences, wells, reservoirs, and other improvements necessary to the care and management of the permitted livestock may be constructed on the public lands within such grazing districts under permit issued by the authority of the Secretary, or under such cooperative arrangement as the Secretary may approve. Permittees shall be required by the Secretary of the Interior to comply with the provisions of law of the State within which the grazing district is located with respect to the cost and maintenance of partition fences. No permit shall be issued which shall entitle the permittee to the use of such improvements constructed and owned by a prior occupant until the applicant has paid to such prior occupant the reasonable value of such improvements to be determined under rules and regulations of the Secretary of the Interior. The decision of the Secretary in such cases is to be final and conclusive."

Par. b. Applicants for Permits and Cooperative Agreements; Qualifications.—An applicant for a permit or for a cooperative agreement or an arrangement to construct and maintain improvements of the character described in section 4 of the act, or to use and maintain improvements of such character constructed and owned by a prior occupant, on the federally owned lands, if an individual, must be a citizen of the United States or must have declared his intention to become such. If an association, its members must possess like qualifications.

Par. c. Applications; Form and Contents; Filing.—Applications for such permits, cooperative agreements or arrangements shall set forth the location of such improvements by legal subdivision of the public land survey, the necessity, use, cost, and description of such improvements, item by item, shall designate the time and manner of their construction, the period of use, the method of operation, protection, repair, removal, or other disposition, and shall include any other pertinent information. If an application concerns the use and maintenance of improvements constructed and owned by a prior occupant under permit issued by the authority of the Secretary, it shall include also an itemized showing of their reasonable value at the time of filing the application and either evidence that the applicant has paid this amount to the prior occupant and has obtained title to the improvements free of all encumbrances or a clear and concise explanation of the reasons for a lack of such agreement between the applicant and the prior occupant. When necessary properly to explain the improvements and matters connected therewith, the application shall be accompanied by a sketch of the improvements and specifications and a map showing their location in the grazing district. All applications shall be made on forms provided by the Division of Grazing, with such modifications as may be necessary, and shall be filed in triplicate with the regional grazer, who will submit them to the range conservation committee for consideration and recommendation.

Par. d. Applications for Construction of Improvements; Consideration; Appeals.—When an application concerning the construction of improvements is filed, the regional grazer will, after the recommendation of the range conservation committee, act on the application and such action shall be final unless the applicant appeals to the Director of Grazing within 15 days following receipt of notice. The decision of the Director of Grazing on such application shall be final unless the applicant appeals to the Secretary of the Interior within 30 days. In the latter event, the decision of the Secretary shall be final.

Par. e. Applications for Use of Improvements Owned by Prior Occupant; Procedure Upon Failure to Agree.—An application to use and maintain im-

improvements constructed and owned by a prior occupant, under permit issued by the authority of the Secretary, if accompanied by the evidence of ownership provided for in paragraph c of this section, shall be considered in the same manner as an application for the construction of improvements. Upon the filing of such an application showing that the applicant and the prior occupant have not agreed on the value of the improvements, the regional grazier will immediately, at the applicant's expense, cause the prior occupant to be served either personally or by registered mail with a notice of the filing of the application and any accompanying papers and an order to show cause within 30 days why the improvements should not be determined to be of the value alleged by the applicant. Upon such a showing or, if the prior occupant applies within 30 days from the date of service for a hearing, in the light of such evidence as the applicant and the prior occupant may desire to present in such hearing, the regional grazier will determine the present reasonable value of the improvements. Such determination shall be final unless an appeal is taken within 15 days to the Director of Grazing, whose decision in the matter likewise shall be final unless an appeal is taken within 30 days to the Secretary of the Interior. In the latter event, the decision of the Secretary shall be final. Upon the failure of the prior occupant to show cause or to apply within 30 days for a hearing, the reasonable value of the improvements will be determined by the regional grazier, provided that in the event of such default by the prior occupant the value determined shall not be less than the amount alleged by the applicant in his application and the decision of the regional grazier in such cases shall be final. In any case when a decision has become final, payment by the applicant to the prior occupant of the amount determined and a showing that the improvements are free of all encumbrances shall be a condition precedent to favorable action on the application.

Par. f. Approval of Application.—Upon the approval of an application concerning the construction or use and maintenance of any improvements on the federally owned lands in the district by the issuance of a permit or the approval of a cooperative agreement or other arrangement, the applicant may construct the improvements or use the improvements constructed and owned by the prior occupant, as the case may be.

SEC. 11. District Advisory Board; Elections; Appointment; Removal.

Par. a. The establishment of an advisory board of local stockmen is authorized by the Act approved July 14, 1939 (Public No. 173, 76th Congress). For New Mexico Grazing District 7 the number of district advisers will be fixed by the regional grazier on recommendation of the range conservation committee, but shall be not less than six nor more than 12. On recommendation of the range conservation committee the regional grazier may establish voting precincts corresponding to the number of district advisers to be elected. All district advisers shall be elected in the manner hereinafter provided, and they shall be electors qualified to vote at the election. A candidate for adviser shall qualify in the precinct in the same manner as in the district.

Par. b. Elections—Time and Place of Holding; Notice.—An election of district advisers will be held within 90 days after the publication in the Federal Register of the order establishing the district, and annually thereafter. The regional grazier will designate a voting place within each precinct. Notice of the time and place or places of holding an election will be given by publication in one newspaper of general circulation in the district, by posting in the office of the regional grazier and in the office of each district grazier and by such posting in such other public places as may be necessary to give the matter proper publicity. No election, however, shall be held to be invalid by reason of failure to give any of the foregoing notices unless it shall be made to appear that there was a failure to give substantial notice.

Par. c. Elections—Qualifications of Electors.—At the first election after the establishment of this district only qualified applicants for grazing licenses or permits in this district shall be eligible to vote. The regional grazier, with the assistance of the range conservation committee, shall compile a list of qualified applicants for each precinct and post such list at the precinct voting place on the day of the election. At any subsequent election only licensees or permittees shall be entitled to vote. A minor may vote if otherwise qualified, provided that upon request by his natural or legal guardian his ballot may be cast by the guardian in the name of the minor. The judges at any election will be furnished by the representative of the Division of Grazing in charge with a list of all electors entitled to vote in the precinct and district. No one whose name does not appear on such list shall be allowed to vote, provided that any one

claiming to have been wrongfully omitted from the list may have his name placed thereon upon submitting two qualified electors' sworn statements of facts qualifying him as an elector. Only one vote may be cast by the holder or holders of any one grazing license or permit, or by a qualified elector.

Par. d. Nominations; Methods of Voting.—Within 45 days from the publication of these rules in the Federal Register the regional grazer and the range conservation committee will recommend to the Secretary of the Interior amendments to these rules prescribing the method of and procedure for the nomination of candidates and the election of district advisers.

Par. e. Appointment by Secretary of the Interior; Oath and Term of Office; Removal; Vacancies.—No person elected as a district adviser may assume office until he has been appointed by the Secretary of the Interior and has taken an oath of office. Persons appointed as district advisers following the first election after the organization of a grazing district shall be divided into three classes by lot by the regional grazer. Those in class 1 shall hold office for one year, those in class 2 for two years and those in class 3 for three years, and until their successors are elected and have qualified. Thereafter at each election the class whose term has expired shall be recommended by election for a term of three years. The Secretary of the Interior may remove any district adviser from office for failure to discharge his duties or for the good of the service. Upon a vacancy occurring in the office of a district adviser by reason of resignation, removal or otherwise, the range conservation committee will recommend to the Secretary of the Interior the name of a person to fill the vacancy and such recommendation, together with that of the regional grazer, shall be transmitted by him to the Secretary for consideration. A person appointed by the Secretary to fill a vacancy shall hold office until the next regular election, when a successor shall be elected to serve for the remainder of the unexpired term, if any, of the member causing the vacancy.

Par. f. Meetings; Organization.—The district advisory board shall meet at any time and place within the district designated by the regional grazer or his authorized representative. At the first meeting of the board after an election, it shall organize by electing one of its members as chairman and such other officers from its membership as it may deem necessary. Meetings of the district advisory board shall be open to the public except that, with the approval of the representative of the Division of Grazing present, it may meet in executive session in considering applications for licenses or permits or any other business.

SEC. 12. Penal Provision.—By section 2 of the Taylor Grazing Act any willful violation of the provisions of the act or of the rules thereunder, after actual notice thereof, is punishable by a fine of not more than \$500.

SEC. 13. Amendments; Emergency.—The above rules are temporary and are subject to amendment or revocation by the Secretary of the Interior at any time. They are promulgated without reference to the district advisory board because of the existence of an emergency due to the misuse of the range within the district.

(Signed) R. H. RUTLEDGE,
Director of Grazing.

I concur:

(Signed) JOHN HORRICK,
(Acting) Commissioner of Indian Affairs.

I concur:

(Signed) D. H. ROSTER, Jr.,
(Acting) Director, Division of Investigations.

Approved: September 1, 1939.

(Sgd.) HAROLD L. ICKES,
Secretary of the Interior.

AMENDMENT OF SECTION 11, PARAGRAPHS C AND D OF THE RULES FOR THE ADMINISTRATION OF NEW MEXICO GRAZING DISTRICT NO. 7 UNDER THE ACT OF JUNE 28, 1934 (48 STAT. 1269), AS AMENDED BY THE ACT OF JUNE 26, 1936 (49 STAT. 1976), AND THE ACT OF JULY 14, 1939 (PUB. NO. 173, 76TH CONG.)

Pursuant to the provisions of the Taylor Grazing Act of June 28, 1934 (48 Stat. 1269), as amended by the act of June 26, 1936 (49 Stat. 1976), and the act of July 14, 1939 (Pub. No. 173, 76th Cong.), paragraphs c and d of section 11 of the Rules for the Administration of New Mexico Grazing District No. 7, approved September 1, 1939, are amended to read as follows:

"SECTION 11, Par. c. Elections; Qualifications of Electors.—At the first election after the establishment of this district, the electors will be those range users who, within two years prior to the establishment of this district, were regularly accustomed to using the Federally owned and controlled lands within said district for the grazing of their livestock. The regional grazer, with the assistance of the range conservation committee, shall compile a list of such range users for each precinct and post such list at the precinct voting place on the day of the election. At any subsequent election only licensees or permittees shall be entitled to vote. A minor may vote if otherwise qualified, provided that, upon request by his natural or legal guardian, his ballot may be cast by the guardian in the name of the minor. The judges at any election will be furnished by the representative of the Grazing Service in charge with a list of known electors entitled to vote in the precinct and district. No one whose names does not appear on such list shall be allowed to vote, provided that any one claiming to have been wrongfully omitted from the list may have his name placed thereon by the judges of election with the approval of the regional grazer or his representative. At the first election only one vote may be cast by the holder or holders of any one grazing license or permit, or by a qualified elector.

"SECTION 11, Par. d. Nominations; Indian and non-Indian Advisers; Methods of Voting.—From each of the voting precincts established by the regional grazer two (2) advisers shall be elected, one adviser to be elected by and to represent the Indian range users of the precinct, and the other adviser to be elected by and to represent the non-Indian range users of the precinct. The representative of the Grazing Service in charge of the election will choose two (2) Indian range users and two (2) non-Indian range users to act as election judges. The Indian and non-Indian electors present will hold separate caucuses and each will place in nomination not to exceed three (3) candidates to represent their group. Voting shall be by ballots cast personally by qualified electors and proxies will not be recognized. All voting shall be by colored ballots, each candidate being represented by a separate color. The ballots for Indian candidates shall be deposited in a ballot box separate from the ballot box for the deposit of ballots for non-Indian candidates. No elector shall receive a ballot until he has registered by signing or making his mark opposite his name on the list of persons entitled to vote. Before receiving his ballot, any elector may be challenged by any other elector qualified to vote in the district and thereupon the judges, or any of them, may require the elector challenged to answer such questions concerning his qualifications as a voter as may be deemed necessary. Upon his failure or refusal to answer such questions satisfactorily, he shall not be permitted to register or receive a ballot. Each candidate may designate any qualified elector to remain within the polling places during the casting and counting of votes and the declaration of the results thereof, and such person may act as a challenger. Before any elector shall be permitted to deposit his ballot in the ballot box, the judges shall write "voted" opposite his signature on the registration list. Polling places shall remain open on the day of the election from 2:00 p. m. to 5:00 p. m., or until those present at 5:00 p. m. shall have voted. Upon the closing of the polls the judges shall open the ballot boxes and count the votes. In case of a tie vote, a choice by lot shall be made by the judges in the presence of the tie candidates or of at least one representative designated by each such candidate for such purpose. As soon as the ballots have been counted, the judge shall make out a certificate of return under their hands stating the number of votes cast, and, in both words and figures, the number of votes received by each candidate. The certificate, together with the ballots and the registration list of voters, shall be enclosed and sealed and forthwith delivered to the representative of the Grazing Service in charge of the election."

(Sgd.) R. H. RUTLEDGE,
Director of Grazing.

I concur:

(Sgd.) WILLIAM ZIMMERMAN, Jr.,
Asst. Commissioner of Indian Affairs.

I concur:

(Sgd.) B. B. SMITH,
Director, Division of Investigation.

Approved:

Secretary of the Interior.

AMENDMENT OF SECTION 2, PARAGRAPH d. OF RULES FOR THE ADMINISTRATION OF NEW MEXICO GRAZING DISTRICT 7 UNDER THE ACT OF JUNE 28, 1934 (48 STAT. 1269), AS AMENDED BY THE ACT OF JUNE 26, 1936 (49 STAT. 1976), AND THE ACT OF JULY 14, 1939 (PUB., NO. 173-76TH CONGRESS), APPROVED SEPTEMBER 1, 1939

Pursuant to the provisions of the act of June 28, 1934 (48 Stat. 1269), as amended by the act of June 26, 1936 (49 Stat. 1976), and the act of July 14, 1939 (Pub., No. 173, 76th Cong.), the first paragraph of section 2, paragraph d, of the Rules for the Administration of New Mexico Grazing District No. 7, approved September 1, 1939, is amended to read as follows:

"Range Conservation Committee; Members; Organization; Duties and Functions.—The range conservation committee is authorized to assist the regional grazer in the administration of the district, to establish proper cooperative relations with other interested Federal agencies, to review the recommendations of the district advisers and to perform such other duties relating to the management of the district as the Secretary of the Interior may direct. It shall consist of a representative of the Indian Service, nominated by the Commissioner of Indian Affairs; a representative of the Grazing Service, nominated by the Director of Grazing; a representative of the Division of Investigations, nominated by the Director of that Division, and a representative of the Soil Conservation Service, Department of Agriculture, proposed by the Chief of that Service. The members of the range conservation committee after appointment by the Secretary of the Interior shall meet at the district headquarters when called in the discretion of the chairman after consultation with the regional grazer."

(Sgd.) JULIAN TERRETT,
Acting Director of Grazing.

July 17, 1940.

I concur:

(Sgd.) JOHN COLLIER,
Commissioner of Indian Affairs.

I concur:

(Sgd.) R. B. SMITH,
Director, Division of Investigations.

July 22, 1940.

Approved: July 24, 1940.

(Sgd.) W. C. MENDENHALL,
Acting Under Secretary.

AMENDMENT OF SECTION 2, PARAGRAPH D, OF THE RULES FOR THE ADMINISTRATION OF NEW MEXICO GRAZING DISTRICT NO. 7 UNDER THE ACT OF JUNE 28, 1934 (48 STAT. 1269), AS AMENDED BY THE ACT OF JUNE 26, 1936 (49 STAT. 1979), AND THE ACT OF JULY 14, 1939 (PUB. NO. 173, 76TH CONG.)

Pursuant to the provisions of the Taylor Grazing Act of June 28, 1934 (48 Stat. 1269), as amended by the act of June 26, 1936 (49 Stat. 1976), and the act of July 14, 1939 (Pub. No. 173, 76th Cong.), paragraph d of section 2 of the Rules for the Administration of New Mexico Grazing District No. 7, approved on September 1, 1939 (4 F. R. 3965), is amended to read as follows:

SECTION 2, PAR. d. Range Conservation Committee: Members; organization; duties and functions.—The range conservation committee is authorized to assist the regional grazer in the administration of the district, to establish proper cooperative relations with other interested Federal agencies, to review the recommendations of the district advisers and to perform such other duties relating to the management of the district as the Secretary of the Interior may direct. It shall consist of a representative of the Office of Indian Affairs, nominated by the Commissioner of Indian Affairs; a representative of the General Land Office, nominated by the Commissioner; and a representative of the Grazing Service, nominated by the Director of Grazing. The members of the range conservation committee after appointment by the Secretary of the Interior shall meet at district headquarters at least once a month and as often as business may require at the call of the chairman, who shall be the representative of the Office of Indian Affairs.

The duties of the range conservation committee shall be:

(1) To arrange for cooperative range, economic, conservation, agronomic, engineering, and other surveys necessary for the proper and effective use and admin-

istration of the Federally owned and controlled lands in the district and to formulate range management and conservation plans based on these surveys.

(2) To formulate and negotiate cooperative field agreements between the interested Federal agencies for the making of such surveys and for the execution of the conservation and range-management plans authorized in the preceding paragraph.

(3) To review the recommendations of the district advisory board concerning applications for grazing licenses and permits prior to action by the regional grazer on such applications.

(4) To review the recommendation of the district advisory board on modifications of the rules and of the district boundaries and to present its findings of fact and advice concerning these matters to the Director of Grazing or the Secretary of the Interior.

(5) To Interpret the economic and dependency surveys and to recommend to the Secretary of the Interior such protective, maximum, and other limits as will facilitate the conservative use of Federally owned and controlled lands by the largest number of qualified users.

(Sgd.) ARCHIE D. RYAN,
Acting Director of Grazing.

January 19, 1943.

I concur:

JOHN COLLIER,
Commissioner of Indian Affairs.

January 20, 1943.

FRED W. JOHNSON,
Commissioner, General Land Office.

January 30, 1943.

Approved: February 10, 1943.

ABE FORTAS,
Under Secretary.

Mr. RUTLEDGE. Senator Chavez, unless he wants to question me right now, I would like to make a little statement concerning the questions that were asked Johnny Adams.

The fundamental Grazing Service policy is to try to stabilize the livestock business as we find it, and there is no distribution policy in effect.

The CHAIRMAN. Pardon me, Mr. Rutledge, we will pause here for a 10-minute recess.

(Recess until 4:10 p. m.)

The CHAIRMAN. The meeting will come to order. Mr. Rutledge, you may proceed.

Mr. RUTLEDGE. A while ago when I told you about the unqualified people who were running on district 7, I intended to add that, when the area was put under administration, about 55,000 head of livestock were eliminated belonging to unqualified people. About half of them were unqualified whites, and about half of them were unqualified Indians, so we got rid of that much stock on there.

Could I complete the statement I was trying to make when you took a recess?

The CHAIRMAN. Certainly, Mr. Rutledge.

Mr. RUTLEDGE. The Grazing Service is trying to stabilize the livestock business as we find it, and we have no distribution or redistribution policy or procedure. In a meeting of this kind, and in the points that come up, I am always glad to get the discussion on these various phases because we have to meet these situations of the smaller owners who do not have what they think they should have. I think we might as well face the question squarely, and discuss it or argue it or battle it out any way that we need to.

The CHAIRMAN. You may interrogate, Mr. Seth.

Judge SETH. This 55,000 head of stock that was put off, how many people were involved in that, do you figure?

Mr. RUTLEDGE. Well, I have a complete list of the people, with the number that were put off.

Judge SETH. Who determined they were not qualified?

Mr. RUTLEDGE. The regional grazier, Mr. Naylor, with the advisory board.

Judge SETH. Did the Advisory Board pass on these cases; are you sure of it?

Mr. RUTLEDGE. I couldn't say they passed on all of them.

Judge SETH. Did they pass on any of them?

Mr. RUTLEDGE. They had their meetings and did what was necessary—I'll have to let them——

Judge SETH. Do you know whether they were put off without a hearing or not?

Mr. RUTLEDGE. No; I don't know.

Judge SETH. When was this district created, Mr. Rutledge? I have forgotten.

Mr. RUTLEDGE. September 1, 1939, was the first regulations that were put out. I don't know what the date of the order is.

Judge SETH. And you stated it was established without any public hearing in the State.

Mr. RUTLEDGE. On this specific area, that's right.

Judge SETH. And without notice to anyone?

Mr. RUTLEDGE. Well, I'm not going to let you put words in my mouth. I told you this whole thing was established as Grazing District 2, by proper hearings in the State, and proper local hearings.

Judge SETH. But in this new district, that was separated from the old district 2, without even the board of district 2 knowing it; isn't that a fact?

Mr. RUTLEDGE. That's right.

Judge SETH. And these rules and regulations—was any hearing held in respect to them?

Mr. RUTLEDGE. No, sir.

Judge SETH. Now, Mr. Rutledge, in this copy you furnished me it states, with reference to this range conservation committee, consisting of representatives of the Interior Department:

The duties of the range conservation committee shall be—

And then drop down to (3)—

to review the recommendations of the district advisory board concerning applications for grazing licenses and permits prior to action by the regional grazier on such applications.

(4) To review the recommendations of the district advisory board on modifications of the rules and of the district boundaries and to present its findings of facts and advice concerning these matters to the Director of Grazing or the Secretary of the Interior.

That gives them an absolute power of review of the actions of the regular advisory board, does it not?

Mr. RUTLEDGE. Well, it depends on the technical interpretation you are putting on the word "review."

Judge SETH. Well, it means, after the regular advisory board acts, this super board can review their action. Isn't that the plain language of that regulation?

Mr. RUTLEDGE. They can review it, yes; but in the actual working out, I don't think they have ever made any suggestions.

Judge SETH. Isn't it a fact that, on their recommendations, actions of the advisory board have been overruled and ignored?

Mr. RUTLEDGE. Not to my knowledge.

Judge SETH. You haven't been out here all the time, have you?

Mr. RUTLEDGE. No, I haven't.

May I ask you a question? Is that a fact?

Judge SETH. So I am informed; yes, sir.

Mr. RUTLEDGE. All right.

Judge SETH. We will put on a witness who will cover that.

Now, when we come over here to "issuance of licenses" it says:

Temporary licenses will be issued by the regional grazer on recommendation of the district advisory board and, with the advice of the range conservation committee, to qualified applicants in the following order:

Class 1: For livestock not in excess of 150 sheep, or the equivalent thereof, owned by a qualified applicant residing within or contiguous to the district who is entirely or preponderantly dependent on this livestock for his livelihood; one horse, one cow, or five goats to be considered the equivalent of five sheep.

That means that the owners of 150 sheep or less were given the preference; isn't that the fact?

Mr. RUTLEDGE. In the first approach to it; yes.

Judge SETH. And didn't that mean necessarily, in view of the fact that that gave a preference to Indians?

Mr. RUTLEDGE. Are you asking me the question?

Judge SETH. Yes, sir.

Mr. RUTLEDGE. I don't know whether it did or not.

Judge SETH. You stated this morning that the rules applied alike to both Indians and non-Indians.

Mr. RUTLEDGE. Yes, sir.

Judge SETH. Didn't that regulation itself put in these grazing regulations give a preference to the owner of 150 sheep or less? Didn't that necessarily give a preference to large numbers of Indians holding allotments?

Mr. RUTLEDGE. Well, it would give the person with 150 sheep or less the first right on the range; that is right.

Judge SETH. Weren't they 99 out of 100 Indians?

Mr. RUTLEDGE. I don't know.

Judge SETH. Tell me this: Are permits given to these minor children of allottees, the Indians, who have gotten allotments? Were they given grazing permits?

STATEMENT OF H. W. NAYLOR, REGIONAL GRAZIER, DISTRICT 7, UNITED STATES GRAZING SERVICE, GALLUP, N. MEX.

Mr. NAYLOR. Just to the heads of the families, as far as we could judge by the application.

Judge SETH. Isn't it a fact that minor Indians have allotments in that area?

Mr. NAYLOR. Yes; they have allotments.

Judge SETH. I mean, permits.

Mr. NAYLOR. Not that I know of; there may be some.

The CHAIRMAN. Well, Mr. Naylor, you are the grazier in charge of district 7, are you not?

Mr. NAYLOR. Yes.

The CHAIRMAN. Would there be any permit in there that you wouldn't know about?

Mr. NAYLOR. No.

The CHAIRMAN. Well, you say, "Not that I know of." You also say, "There may be some."

Mr. NAYLOR. If the application comes in and doesn't state he was a minor, he might have made application and said he owned so many sheep or so many cattle, and he might have been a minor, as far as the records were concerned; but we don't know that they would come in that way.

Senator CHAVEZ. Wouldn't you check whether or not they were minors?

Mr. NAYLOR. I wouldn't know how to check them.

Senator CHAVEZ. You just take the form.

Mr. NAYLOR. Just the application.

Judge SETH. The application has no place to state the age, does it?

Mr. NAYLOR. No.

Judge SETH. How do they sign them?

Mr. NAYLOR. Sometimes with their names, and sometimes with a check mark and their fingerprint. That is usually the custom.

Judge SETH. There is usually nothing on the face of the applications to disclose whether they are 2 years old or 200, is there?

Mr. NAYLOR. No.

The CHAIRMAN. How would you know, Mr. Naylor, under that system—I'm a little at a loss to know how you would determine whether they were eligible to a permit or not.

Mr. NAYLOR. The answers to the questions in the application.

The CHAIRMAN. You take the application at face value, do you?

Mr. NAYLOR. Ordinarily, yes.

Senator CHAVEZ. Do you do that with the whites, too?

Mr. NAYLOR. Yes.

Mr. RUTLEDGE. Do you ask the whites how old they are?

Mr. NAYLOR. No.

Senator CHAVEZ. You generally see them, though, do you not? When Kelsey Pressley or Mr. Berryhill goes down to make their application, you know who they are, don't you?

Mr. NAYLOR. With so many Indians, and the district supervisors taking the applications—they are acquainted with the Indians. Of course, I depend on their judgment, whether they are of the right age or the head of the family.

The CHAIRMAN. "District supervisors," that is, the Indian Service employees?

Mr. NAYLOR. That is right.

Judge SETH. Is this district divided up into areas with Indian employees in charge of it; is that what you mean?

Mr. NAYLOR. Yes.

Judge SETH. And the members of the regular advisory board certainly are familiar with the non-Indians who make applications there, are they not?

Mr. NAYLOR. I think so.

Judge SETH. They know who they are, and their ages, and everything?

Mr. NAYLOR. Yes.

Judge SETH. Mr. Rutledge, you make a remark, in connection with the establishment of this district, about the trouble arising from the indefiniteness of the Indians. What did you mean by that?

Mr. RUTLEDGE. Well, I think I mean just what you are talking about with Mr. Naylor. As I understand it, it is rather difficult to get a complete list of the Indians, and all those Indian names, and to get out there, with the limited force we have, and know all about each one.

Judge SETH. You knew that these allotments are being made on the basis of grazing permits in that district, are they not?

Mr. RUTLEDGE. I think they are.

Judge SETH. Did you know this indefiniteness arises because the Indian possibly doesn't know where his allotment was?

Mr. RUTLEDGE. No; I have no reference to that at all. I have reference to the fact that a lot of these allotments—maybe I'm using the wrong term—aren't settled yet. They haven't received title, in what we would say in our language. There is a lot of that land in an indefinite status.

Judge SETH. Is any of this railroad land; I mean, land that the Santa Fe has relinquished and that the Indian Service has taken charge of: is that being used as a basis for grazing permits?

Mr. NAYLOR. To a certain extent; yes.

Judge SETH. This opinion, then, that is forthcoming might set up a good deal of that; is that right?

Mr. NAYLOR. It could.

Senator CHAVEZ. Who did you ask the opinion of—the Solicitor of the Department?

Mr. NAYLOR. No; that is my own opinion.

Senator CHAVEZ. Someone testified this morning that they had requested an opinion from someone.

Assistant Secretary CHAPMAN. Request from the Indian Office in Chicago, to the Solicitor's office for an opinion on that.

Judge SETH. Isn't it a fact, Mr. Rutledge, in many instances an Indian is given a permit, his wife is given a permit, and several members of his family are given permits?

Mr. RUTLEDGE. I don't know whether it is or not.

Judge SETH. Who checked up on the ownership of the sheep, during the year 1939, I believe you said.

Mr. RUTLEDGE. 1938. Mr. Naylor and his assistants.

The CHAIRMAN. Perhaps Mr. Naylor could answer the question just before the last.

Mr. NAYLOR. What was the question?

The CHAIRMAN. Judge, do you care to ask the question?

Judge SETH. Isn't it true, in many instances, that the head of the family and the wife and the minor children are each given permits?

Mr. NAYLOR. I couldn't say that it is. We, the grazing advisory board and myself, pass on them the best we can with the information we can get; and I think that is true with the district supervisors, when they take applications. They get all the information they can, but

you must remember that there is a very small percentage of those people who speak the language. It has to be done through an interpreter, and I expect it's pretty hard to do.

Judge SETH. Mr. Rutledge, aren't conditions in the Cabezón area, formerly district 2, in some ways similar to this district 7?

Mr. RUTLEDGE. You've got me confused with your Spanish names.

Judge SETH. Immediately east of the Río Puerco area.

Mr. RUTLEDGE. What is your question now?

Judge SETH. Aren't the complications there comparable with those on this district 7?

Mr. RUTLEDGE. There are complications in the Río Puerco, if that is the term you used—I can't pronounce these names.

Judge SETH. And that is handled by district 1, with special rules applicable to the area; is it not?

Mr. RUTLEDGE. District 1 of the Grazing Service?

Judge SETH. Yes.

Mr. RUTLEDGE. I think district 1 of the Grazing Service is all handled under the regular code rules.

Judge SETH. That area is at least in district 1; is it not? Isn't that true?

Mr. LITER E. SPENCE (regional grazer, Grazing Service, New Mexico). That's handled under the Grazing Service rules.

Judge SETH. Aren't there other districts in the United States where there are complications along these lines?

Mr. RUTLEDGE. All kinds of complications.

Judge SETH. Where was this separated from the regular district 2 at that time and set up in a special district?

Mr. RUTLEDGE. Do you want me to go over all that I said before?

Judge SETH. I'm asking you a point-blank question: Was it an attempt to evade the congressional edict that no additions to Indian reservations should be made except through an act of Congress?

Mr. RUTLEDGE. No evasion involved to me. I was asked to handle the job.

Judge SETH. Who asked you?

Mr. RUTLEDGE. The Indian Service.

Judge SETH. The Indian Service?

Mr. RUTLEDGE. Yes.

Judge SETH. And you are the author of these regulations, or at least approved them?

Mr. RUTLEDGE. Yes; my name is on them.

Judge SETH. Didn't you think they were giving the advantage to the Indians?

Mr. RUTLEDGE. I don't think so.

Judge SETH. There were no small owners in there, non-Indian, that would get within that 150 preference?

Mr. RUTLEDGE. Well, I can't answer that.

Mr. NAYLOR. Yes, there were 16, I believe, non-Indians in '42 that had grazing licenses under the 150.

Judge SETH. How many Indians?

Mr. NAYLOR. 1,295.

Judge SETH. That's just about a hundred to one.

The CHAIRMAN. Were there at the time of setting up of district 7, or just prior thereto, users on that domain who had much more than 150 head, who were eliminated by the rule of 150 head?

Mr. NAYLOR. No, none that was eliminated, that had a legitimate right in there, that had lower than that.

The CHAIRMAN. You seem to dwell on the word "legitimate." Were there users of that domain that became district 7 who were eliminated because they had more than 150 head?

Mr. NAYLOR. No; none for that reason.

The CHAIRMAN. Were they reduced to 150 head?

Mr. NAYLOR. No.

The CHAIRMAN. So I take it from that there were none eliminated, at all because none grazing in there had more than 150 head. Is that correct?

Mr. NAYLOR. That is right.

Senator CHAVEZ. Where did the 55,000 head eliminated come from?

Mr. NAYLOR. There was an estimate of numbers using prior to putting it under administration—I wouldn't vouch for those figures being exactly correct. They are merely what I could find out from inquiry, and those that the advisory board and myself had to turn down because they didn't qualify for a license.

The CHAIRMAN. What was the percentage of elimination between the races?

Mr. NAYLOR. Well, there were 97 Indian operators, as we have it here, and 43 non-Indian operators.

The CHAIRMAN. Eliminated?

Mr. NAYLOR. Yes.

The CHAIRMAN. Did those 97 and 43, respectively, own or control the 55,000 that were eliminated?

Mr. NAYLOR. As far as we know.

The CHAIRMAN. Then they must have been larger in their herds than the 150.

Mr. NAYLOR. Most of them were large herds that had come in from the outside after the other grazing districts were created.

Senator CHAVEZ. Out of the 55,000 that were eliminated, how many belonged to whites and how many to Indians?

Mr. NAYLOR. The number of stock, do you mean?

Senator CHAVEZ. Yes.

Mr. NAYLOR. I believe we have it here. This is the Indian operators, 369 cattle, 469 horses, 22,262 sheep and 1,417 goats; and the non-Indian operators, 43 of those. They represented 3,724 cattle, 194 horses, 26,965 sheep, and 58 goats.

Mr. LEECH. Mr. Chairman, we have available a list of those names and the numbers and a comment as to why they were rejected or eliminated. We would be very glad to file that with the committee.

The CHAIRMAN. I think that should be filed. Is it too voluminous to go into the record? If it is, we will put it on file with the committee.

Mr. LEECH. It is five pages.

The CHAIRMAN. Is that a tabulation? I think it could stay on file with the committee, and we could put it in the record later if it is required. It will be available for anyone who wishes to use it.

The tabulation is as follows:

Number of stock removed from Chaco District (7)

Name	Allotment	Stock withdrawn				Reason for withdrawal	Date
		Cattle	Horses	Sheep	Goats		
Alexander, D. L.	Star Lake	85	5	0	0	No public domain available	Dec. 3, 1941

Summary showing total number of Indian and non-Indian stock eliminated from Chaco district (7)

		Numbers of stock eliminated				Total stock unit yearling
		Cattle	Horses	Sheep	Goats	
Indian operators.....	97	360	469	22,262	1,417	27,900
Non-Indian operators.....	43	3,724	194	26,965	58	46,613
Total.....	140	4,083	663	49,227	1,475	74,482

Judge SETH. Where did that stock go, Mr. Naylor?

Mr. NAYLOR. I'm not prepared to say.

Judge SETH. Where did the Indian stock go? Does anyone here know?

The CHAIRMAN. Can the Indian Service answer that?

Mr. STEWART. I am unable to answer that, Mr. Chairman.

Judge SETH. Do you know a man named "Arviso"? An Indian?

Mr. NAYLOR. Yes.

Judge SETH. He was eliminated, wasn't he?

Mr. NAYLOR. I couldn't tell you off hand what action was taken in his case.

The CHAIRMAN. Well, there is your list. Can you consult your list?

Mr. LEECH. The name does not appear on this tabulation, Senator.

Judge SETH. Didn't he have about 500 head pushed off onto district 1?

Mr. NAYLOR. Not that I know of.

Mr. LEE. Mr. Chairman, I think Mr. Naylor knows the case. The Arviso boys from Tohachi, which you put off the reservation, they went into then district 7. You put them out of district 7 and now they are in district 1. I think he knows the case all right.

Congressman ANDERSON. Of what value is the list you are going to file with the committee if the Arviso case isn't on it? You say you have a list of those eliminated in the district. That name isn't on the list.

Mr. NAYLOR. This came up after the creation of district 7. It is a more recent case.

Congressman ANDERSON. What is the list?

Mr. NAYLOR. It was made out in 1940.

Congressman ANDERSON. Well, is the list a true list of those people who have been eliminated from the district, or isn't it?

Mr. NAYLOR. It's the best we could get at that time.

Congressman ANDERSON. Well, is anything except an accurate list any good?

Mr. NAYLOR. That is your question.

Mr. LEECH. I believe, Mr. Congressman, since this list has been had, other cases have come up resulting in rejections or eliminations, and would have to be tabulated and added to this list.

Senator CHAVEZ. What good does it do to eliminate out of the reservation onto district 7, and then to district 1? You are giving someone else over there a right to 500 sheep at the same time you are putting them out.

Mr. LEECH. I agree with you.

Judge SETH. Five hundred cattle, it was.

Mr. LEECH. I agree with you, Senator, there wouldn't be any.

Judge SETH. The regulations, Mr. Rutledge, provided that the water improvements on Navajo lands should be considered a compliance by the Indians.

Mr. RUTLEDGE. Right.

Judge SETH. That is your regulation, section 3.

Senator CHAVEZ. He said "right."

Mr. RUTLEDGE. That is how I answered you.

Judge SETH. That privilege was not extended to non-Indian users; was it?

Mr. RUTLEDGE. I don't think so.

Judge SETH. Even if they could get onto one of these grants that adjoin there, the water developments made by the Government on one of those grants would not help any; would it?

Mr. RUTLEDGE. Maybe not.

Judge SETH. And incomplete homesteads and allotments selections were considered as completion of rights, so far as Indians were concerned; were they not? Was that privilege extended to the non-Indians?

Mr. RUTLEDGE. An incompleated non-Indian homestead is, always.

Judge SETH. They have no allotments, of course.

Mr. RUTLEDGE. What is that?

Judge SETH. The non-Indians had no allotments.

Mr. RUTLEDGE. No; I suppose not; but a white may have an incompleated homestead in any grazing district, and that is considered base property. The principle is in there.

Judge SETH. But are permits issued to Indians now by reason of acquisition of sheep?

Mr. RUTLEDGE. I don't know. Mr. Naylor will have to answer that.

Mr. NAYLOR. No; unless it is in class 1. In some instances, up until 1934, we allowed a small increase to class 1's. That was before we were sure of our carrying capacity, or had not as much information as we do now.

Judge SETH. Well, they have been allowed at the present time; up to the present time these Indians with less than 150 have been allowed permits?

Mr. NAYLOR. Yes.

Judge SETH. These people that went off, went off because of the area taken up by the 150 or less owners; isn't that a fact?

Mr. NAYLOR. Well, it was the stock that was already there; yes.

Judge SETH. The big ones had to go because the little ones could go up to 150?

Mr. NAYLOR. No; not altogether. I wouldn't say that was true, because all class 2 men who had base property and past use showed they had been running the range in the area; they were considered by the grazing advisory board and applied for licenses.

Judge SETH. But the great bulk of the range from which you eliminated these 55,000 head was taken up by these 150 head class A or class 1 permittees; were they not?

Mr. NAYLOR. Yes; the large percent of it, I would say.

Judge SETH. And 95 percent of those were Indians?

Mr. NAYLOR. Yes; that is right.

Judge SETH. That is all.

Mr. **RUTLEDGE**. Senator, I would like to ask him a question.

Judge **SETH**. Yes, sir.

Mr. **RUTLEDGE**. Just to be sure there is no misunderstanding, did you intimate that we were allowing the Indians below 150 head **all** to come up to 150 head?

Judge **SETH**. Yes, sir; that is what I understand you are doing.

Mr. **RUTLEDGE**. Well, I can't read it in these regulations.

Judge **SETH**. That may be, but that is our understanding of exactly what is being done.

Mr. **RUTLEDGE**. What you are getting is grocery-store talk, talked by a lot of people, and it doesn't stand, it is just argument.

Judge **SETH**. Well, we have members of the advisory board quoted to that effect. Mr. Rutledge, have you been granting, increasing, those fellows to 150 head?

STATEMENT OF KELSEY PRESLEY, CHAIRMAN OF ADVISORY BOARD, GRAZING DISTRICT NO. 7, GALLUP, N. MEX.

Mr. **KELSEY PRESLEY**. I am chairman of the advisory board in district 7. In almost every instance, we have done that and we have done it because the conservation committee came back and told us that that was what they meant for us to do. Now, I will say this: That since Mr. Stewart has taken over as chairman of the conservation committee—we have never met with him but one time, and that was discussed at that time, and I don't recall just what we did do about it. Several things were brought up. Mr. Stewart took them under advisement and just what the final outcome was, I don't know. If the committee has ever met more than that one time, I don't know when it was.

Mr. **RUTLEDGE**. I have a very expressive letter on that question, addressed to Mr. Naylor some time ago. It has been 6 months or a year ago.

Mr. **NAYLOR**. That letter was presented to the grazing advisory board members.

The **CHAIRMAN**. What was the tenor of that letter?

Mr. **RUTLEDGE**. Saying that the regulations did not guarantee a man under 150 a right to come up to 150.

The **CHAIRMAN**. Now, we have—I am just expressing the vision that I have from listening here today—we have yourself as the head of the Grazing Service. We have Mr. Naylor in charge of this grazing district No. 7. We have the advisory board over district No. 7, connected with Mr. Naylor, and we have the conservation board. Now, Mr. Presley said that the conservation board stated to the advisory board that that was the policy, those who were running less than 150 to come up to 150 when, as, and if they could, as I gather the expression.

Mr. **PRESLEY**. That is right.

The **CHAIRMAN**. That is the story as it reaches my comprehension.

Mr. **PRESLEY**. I will state further, if you will go to look over those applications you will find a great number of them that have been allowed that, and it will show on the applications. Because they were under 150, they were allowed to increase, and some of those have bought those sheep off of those people that were reducing their herds on the reservation.

The CHAIRMAN. Right at that point, Mr. Presley, who controls the management of district No. 7? Is it the advisory board, is it the conservation board, or is it the local grazier?

Mr. PRESLEY. That is what I would like to find out.

The CHAIRMAN. Well, you are chairman of the board.

Mr. PRESLEY. When we passed on these applications we have always done the very best we could to give everyone what we thought were their just rights; and then the conservation board came back and said that all these people under 150 head would be allowed to build up to 150. So, when we got that order we went ahead and did just that.

The CHAIRMAN. I take it from that, if that be a general custom, I think it is a proper assumption to take from that that the conservation board was the master mind of the situation, is that it?

Mr. PRESLEY. That is exactly the way I take it, too.

The CHAIRMAN. All right. We can go on from there.

Mr. PRESLEY. Mr. Stewart has taken over as chairman of that board. I haven't heard much of his policies; I don't know just what he will do. I will say another thing, that these range supervisors, under the agreement with the Grazing Service and the Indian Service, they are supposed to devote 75 percent of their time to Grazing Service matters. I don't believe from what observations I have made that they ever devoted 25 percent of their time, and whenever one of them wants to quit or take a vacation he doesn't say anything to the regional grazier or the advisory board or anybody else. He just takes off, and you never know whether he's on the job or whether he isn't on the job.

Senator CHAVEZ. Now, let's get that straight, Kelsey; Mr. Stewart is superintendent of the Navajo Indian Reservation.

Mr. PRESLEY. That's right.

Senator CHAVEZ. He is also chairman of the conservation board.

Mr. PRESLEY. He was the last time I heard of the board.

Senator CHAVEZ. And these supervisors that go around supposedly administering the district, are also employees of the Indian Bureau; is that right?

Mr. PRESLEY. That is right.

The CHAIRMAN. I am trying to discover, Mr. Rutledge, just where you fit in the premises.

Mr. RUTLEDGE. I am sitting in the saddle. I think that when an advisory board admits a thing like that they are admitting something. We had better get together on it.

Did you give them a copy of my letter?

Mr. NAYLOR. I did.

Mr. RUTLEDGE. Have you got orders on that conservation committee, written orders? I am trying to find out what has been going on there.

Congressman ANDERSON. Who told you to raise it; what person?

Mr. PRESLEY. That came from Mr. Fryer.

I'll say that Mr. Stewart has not met with us only one time, I say, a year.

Mr. STEWART. May I make a statement, please, on a couple of these points?

The CHAIRMAN. Yes, indeed.

Mr. STEWART. The committee on conservation is the authority that is created pursuant to these rules. At the time of my assuming this

chairmanship a year ago, the committee as such had largely disintegrated because of the war conditions. As Kelsey says, we met once, and the subject matters that we discussed were not, in my opinion, subject to a ruling by the conservation committee. They are policies that reach far beyond, as I saw it, the authority of this committee. They reach into a decision by Washington, rather than by this local committee. Consequently, they were referred to Washington, and, as Mr. Rutledge indicated, he got an adverse report as to whether or not all of the class 1 operators, the 150 or less operators, should be built up to 150.

Now, then, I believe he said he had not heard of what policy I have. I have no policy. The committee will have the policy. As to the passing upon applications that have already been passed upon by the advisory board, I have gone to Mr. Naylor and told him that now that several years have elapsed wherein the chaotic situation has been somewhat remedied, that to me as a member of that board and as chairman of that committee, rather, it is utter nonsense for that committee to examine into and pass upon these applications for licenses.

The CHAIRMAN. You are referring now to the conservation committee?

Mr. STEWART. That's right.

Now, in my opinion, the conservation committee should be concerned only with the large over-all welfare of the area and of the people, the matters of stock water development, matters of tribal benefits, matters of post-war range improvements. I think that is our field, and not the field—it is not our field to infringe upon the present activities of the local advisory board.

The CHAIRMAN. Thank you, Mr. Stewart. That, if I am not mistaken, is a statement of policy, isn't it?

Mr. STEWART. It is my opinion, sir.

The CHAIRMAN. Yes; that, however, I gather has come in since you assumed the chairmanship of that board and also the superintendency of the reservation.

Mr. STEWART. Officially we want that reaffirmed in Washington.

The CHAIRMAN. What reaffirmed?

Mr. STEWART. That statement I have just made.

The CHAIRMAN. In other words, it is your preliminary policy.

Mr. STEWART. Correct.

The CHAIRMAN. Has that policy been addressed to the chief grazier, Mr. Rutledge?

Mr. STEWART. No, sir; we have just got a committee organized. As I mentioned before, it had disintegrated, and we have streamlined the committee to this extent: Instead of more than three or four members, we just have three, Mr. Naylor, myself, and a representative of the General Land Office, to compose that committee. Mr. Adams is in an advisory consulting capacity, not in an executive capacity, or with a right of vote.

The CHAIRMAN. Mr. Stewart, I want you to clear this for me, please. How does the General Land Office come into the picture?

Mr. STEWART. They have a range conservationist on their staff in Santa Fe, and he can give us valuable technical information in an advisory capacity.

It is my plan to submit this modification of the present rules, insofar as the committee is concerned, to Mr. Rutledge, with the recommenda-

tion that he submit it to Washington, to the Washington office, for approval.

Now, then, to get on to the supervisors. We have three in district 7 in certain areas—to avoid confusion I will not refer to them as districts, because we are all confused on them as districts—but there are three located strategically within district 7. They are on the Indian Service pay roll. They have an enormous Indian population to administer. They have Red Cross activities that pass through them, the dependency and benefits, and matters of general administration of law and order. All those things are partly associated with them. In addition to that, as Kelsey mentioned, when they take leave, they do not leave unauthorized. I want to make that very clear. These supervisors must and do get approval of any proposed leave from the job through the Navajo Agency, which in turn consults with Mr. Naylor as to whether it is agreeable with him.

Mr. PRESLEY. According to this agreement, those supervisors are supposed to devote 75 percent of their time to the Grazing Service. Now, I should think, under that agreement, if they were going to take as much as 60 days' leave, which some of them have done, that the regional grazer should be advised of such facts. It has not been done in some cases.

Mr. STEWART. I would like to say that since I have assumed this job out there that I have limited annual leave to 3 weeks for any one person except in emergencies.

Now, then, as to the 75 percent contribution of time, I would like to go a little bit further and say that dual personnel control in every line of endeavor is unsuccessful. The Indian Service and the Grazing Service cannot have successful, and maintain and operate, personnel that is subject to the direction of one or the other. In my humble opinion, the Grazing Service should have personnel over in that district sufficient to handle all grazing matters, and the Indian Service should have personnel in that district to handle Indian matters. Since the war our clerks are interpreters and our range riders and Indian assistants have been lost to us. We have very few of the district supervisors who have clerks. I don't know of any of them in the district who have a regular interpreter. So you see, we are up against a shortage of personnel and a shortage of funds. It would be our wish, if we could, to supply the district with a hundred percent service.

Mr. RUTLEDGE. Mr. Chairman, this is just one of these cases of hard times. You heard Mr. Naylor say he had three people, including himself, trying to handle that district, trying to get what help we can from the Indian Service, and they have kindly offered to do all they can. I know how Naylor has been after me all this time for more help of his own, and the truth is, that the money is not forthcoming.

Senator CHAVEZ. You would agree with Mr. Stewart, if it were possible and you had the personnel, all the supervisors should be under your control instead of the Indian Service?

Mr. PRESLEY. Mr. Chairman, that is the point I started to bring out. I am not an orator like Mr. Stewart; I bring it out in my rough way of talking. That is one of the points. I'm not condemning the range riders and supervisors. They are just as fine fellows as you could meet anywhere. But they cannot work for two departments and do what they should do. And another thing that is a great draw-back, at times

we will go out on the range and spend several days maybe, with Indians and non-Indians, getting together on the use of that particular range, and get everybody agreed as to what we will do and satisfaction among the users of that particular part of the range, and then go back into the office. By that time the Indian Department has changed supervisors; maybe they have fired him or he has quit or something else. We get a new man and he comes out and it takes him about a year to get acquainted with the country, to get out away from the highway and get back without getting lost. By that time we have to go over the whole thing again. In almost every district we have there has been from four to five different supervisors since the time this district was set up. Isn't that right, Mr. Stewart?

Mr. STEWART. That is right. That is explained by the fact that they are underpaid. You can't keep good men unless you pay for good services.

Mr. W. A. BERRYHILL. One point I want to bring out, I own and control 21,000 acres of land. I have not been able to find out from these authorities what my carrying capacity is. Mr. Naylor himself accepted my carrying capacity at 15 head; another man set it at 8. I have been there for 25 years, and I don't know what it is.

Mr. RUTLEDGE. I don't want to leave the Si Fryer matter stand as it is. I understand these gentlemen to say Si Fryer told them to bring everybody up to 150 head.

Mr. PRESLEY. That is right.

Mr. RUTLEDGE. How long ago was that?

Mr. PRESLEY. When we had our meeting last year; when we were passing on the applications, I believe it was for 1942.

Mr. RUTLEDGE. Mr. Fryer has been off the job for about a year, hasn't he?

Mr. STEWART. Sixteen months.

Mr. PRESLEY. It might have been.

Mr. RUTLEDGE. I understood about that situation, that a board would take action on that kind of basis, and nobody can read that regulation—

Congressman ANDERSON. Could Mr. Stewart deny or confirm what was said a moment ago as to the fact that the people were allowed to build their herds up to 150, and they bought sheep that were being disposed of from the Navajo Reservation in the reduction program?

Mr. STEWART. The first part of your question, Mr. Congressman, I cannot answer, but Mr. Naylor could. The second part, as to the movement of sheep off the reservation, Mr. John Cooper would be in a position to answer that.

Congressman ANDERSON. It is the tying of the two things together that is important. If you are reducing in one range and building up in another you are not accomplishing very much.

Mr. STEWART. I didn't understand that.

Congressman ANDERSON. Well, he says—

Mr. PRESLEY. I would like to state further for the record some of the reports of the dipping and counts this year. They show that the Indians have increased as much as a hundred percent; and I positively know that a good many sheep and cattle have come off the reservation. I can take you out and show you the herds right now, if you want to go over there and see them.

Congressman ANDERSON. Could we have Mr. Cooper's comments?

The CHAIRMAN. All right, Mr. Cooper.

Mr. JOHN COOPER. Well, Mr. Chairman—

Mr. PRESLEY. Before Mr. Cooper answers I would like to make a statement to the effect that every non-Indian in district 7 does not want to deprive the Indians of anything that is legally theirs. But we do want to keep what we think belongs to us and in any instance where an Indian is a legitimate stock raiser and user of the public range, we want him to have exactly what is coming to him, just the same as we want what is coming to us. We are not trying to take anything from the Indian anywhere that rightfully belongs to him. I have been in that one place 25 years, and I have never had an argument with an Indian over the range around the district. I try to keep off what they claim is theirs and they try to keep off mine, but I have had a good many arguments with some Indian officials that come out from Washington or some other place and don't know anything about the circumstances.

Mr. RUTLEDGE. Well, Mr. Presley, I think that you have been overly liberal with the Indians, if you have been raising them up to 150 head.

Congressman ANDERSON. How about it, Mr. Cooper?

**STATEMENT OF JOHN M. COOPER, NAVAJO AGENCY,
WINDOW ROCK, ARIZ.**

Mr. COOPER. Mr. Chairman, may I go back a little way and try to answer Mr. Lee's question this morning? That leads up to this specific question about the movement of livestock off the reservation onto district 7?

The CHAIRMAN. Yes; that is all right. I would like to have this 150 businesses straightened out as to whether or not there has been a movement off the reservation to augment these herds that were under 150 when the permit was allowed. Will you answer that first, please?

Mr. COOPER. I would like to state in that connection that I am responsible and directed by the superintendent to take care of range and livestock matters on the reservation, and Mr. Naylor or some other person in the Grazing Service would have to answer that last question, because I do not have that information.

The CHAIRMAN. Don't you know, in your capacity as manager, under the statement you have made whether or not there has been a reduction of herds in the reservation and whether or not there has been a movement off of the reservation to some point outside?

Mr. COOPER. I suspect there has been considerable movement off the reservation.

The CHAIRMAN. You're not going to put that on a suspicion. You can't tell this committee that you, in your official capacity—I think you know. You might as well be frank and candid with us.

Mr. COOPER. I am frank, Mr. Chairman. I have no specific knowledge of cases. I would like to have the Grazing Service answer for specific cases off the reservation, if I might.

Judge SETH. Would they know where the stock came from?

Mr. COOPER. Would you, Mr. Naylor?

Mr. NAYLOR. No; I have no absolute proof.

The CHAIRMAN. Get these two ends together. You know there has been an augmenting of herds outside in district 7.

Mr. NAYLOR. I think so, but I have no absolute proof.

The CHAIRMAN. Now, you don't know whether there has been a reduction of herds on the inside of the reservation, is that it?

Mr. COOPER. There has been reduction on the inside of the reservation; yes, sir.

The CHAIRMAN. Well, all right.

I do say this: I do want to impress that this committee comes in here, and sits day and night, with the idea of getting at facts. We believe that you gentlemen who are in the service, in various departments, have the facts; and to say, "I suspect" or "I guess" or "I don't know," is not fair to this committee. That is about all I have to say on that. That's about all I have to say on the subject. I think fairness should prevail. If you look for fairness from others I think this matter should be cleared up, for Mr. Rutledge's advantage, if for no other purpose; and I think it ought to be cleared up for this committee. You may proceed.

Congressman ANDERSON. Mr. Stewart said you would be able to answer that question. How did he get off of it? Why did you expect that, Mr. Stewart?

Mr. COOPER. I would like to state, in the district in question, it is district 14 of the Navajo Reservation, immediately adjacent, is it not, to district 7? That is what you had reference to, is it not, Mr. Presley?

Mr. PRESLEY. Well, I had reference to the stock coming off the reservation. I don't know what district on the reservation they come from.

Mr. COOPER. That is district 14, immediately adjacent to the Crown Point area.

Mr. PRESLEY. That is where most of them come from.

Mr. COOPER. In that district they are operating under what we call special permits, in addition to regular permits, and that allows those people to retain on the reservation all of their livestock that they had ownership of in 1937.

Mr. PRESLEY. Whenever you go through, I'll answer you.

Mr. COOPER. That is up to 350 sheep units of livestock. In 1930 we were dependent on the Bureau of Animal Industry dipping records for stock numbers in the so-called Crown Point, or Eastern, area, which roughly coincides with grazing district No. 7, with the exception that it does not include the Puertecito and Canyoncito areas. At that time there were dipped 113,808 sheep and goats in the Crown Point area. That is according to the Bureau of Animal Industry records.

Now, those records do not include additional cattle and horses that might have been owned by those people. Skipping to 1934, there were 92,009 sheep and goats recorded in that Crown Point area. Now, the Grazing Division, Mr. Naylor's office, may have figures showing ownership prior to 1941. The first complete record that we have since 1934 is in 1941, after this area was administered by the Grazing Division. I believe these figures were furnished by Mr. Naylor's office. That showed there were 93,574 sheep and goats on district 7, exclusive of the Canyoncito and Puertecito areas.

Now, I would like to ask the chairman, if I may be privileged, to say that, because of that extremely small over-all increase since 1934, that was my reason for making the statement that I did not know a specific instance of large movements, which I don't. Maybe I should, but I don't, Mr. Chairman.

The CHAIRMAN. Very well.

Mr. PRESLEY. Now, the permits he is speaking of, along the reservation line, where they are permitted to run on the reservation part of the time and off the reservation part of the time, that is not the ones I am talking about at all. We investigated those cases pretty thoroughly and they are all right. What I am talking about are the sheep and cattle that come off of the reservation. In most instances the people are running them without even showing on their permit. A lot of them do show on their permit the increase; but a lot of them are not shown at all. The flocks are out there, and there is nothing done about it.

The CHAIRMAN. All right. I think we might go back now.

Very well, Judge Seth, you may proceed, or, if Mr. Rutledge has any further statement, he may make it.

Judge SETH. We have nothing further of Mr. Rutledge, but I would like to ask Mr. Stewart: Did I understand you to say that you recommend the elimination of these review features of this conservation board of district 7?

Mr. STEWART. On the applications.

Judge SETH. How about the rules and regulations?

Mr. STEWART. That is policy, and I think we should have something to say about that.

Judge SETH. I believe this is the committee's copy. I think it is highly important, Senator, to get in your proceedings the rules and regulations.

Mr. RUTLEDGE. I would like to say, on this point, that I would be glad to approve the move, and trim that conservation committee right down to what they can do, or I am going to trim them clear out. I'm not so hot for it.

The CHAIRMAN. Are there any questions? Is there anyone who would care to propound a question to Mr. Rutledge?

Mr. ADAMS. I want to make clear that while I have been appointed an advisory member of this committee, I have never had any opportunity for meeting with them or taking any action. I wanted to have the record on that.

Mr. RUTLEDGE. I think you all see the problem these men are facing, with Naylor with three people and three part-time Indian supervisors; and when you think of the size of that country—

The CHAIRMAN. How many Indian supervisors did you have last year, Mr. Naylor?

Mr. NAYLOR. Three, and four part of the time.

Mr. RUTLEDGE. And the difficulty, even with the names of those Indian applicants—the confusion—the thing is an almost impossible job, that we are trying to put up to these boys, to get a detailed record of what every Indian is doing from one year to another. We will try, but it is a big job.

The CHAIRMAN. Are there any further questions?

Senator CHAVEZ. I would like to have Mr. Hovey, Mr. Chairman. He comes from district 7.

Mr. BERRYHILL. I want to know who has the right to set carrying capacity on my individual land. They tell me I can't have a permit, and I want to know who's authority I go by. I have nothing to say in the matter, myself; but first one fellow comes along and sets it at 15

head, and then Carr comes along and tells me I can't carry but 8 head. I want to know those authorities for that.

Congressman ANDERSON. Who told you?

Mr. BERRYHILL. The Grazing Department, Mr. Naylor, is the first man that classified it. Then the Department wrote me a letter and told me to set it at 8 head. Originally it was set at 15 head, and they said my permit would be issued according to 8 head. My land has been fenced for many years, protected. Yet I am set up on the same basis—

Mr. RUTLEDGE. I can answer, as far as I am concerned. His job is to set that carrying capacity with you members of the board.

Mr. NAYLOR. May I answer that question? We now have a range examiner that is working in that part of the country, and we hope within the next 2 or 3 months to have the carrying capacity of the entire district, and Mr. Berryhill's will be in that.

Mr. PRESLEY. Mr. Chairman, one other thing I would like to bring out here, to show why district 7 is not operating any better than it is, and that is the fact that the Secretary of the Interior issued an order withdrawing all of the so-called railroad exchange for the sole benefit of the Indians.

Now, I suppose you all know what that exchange land is. If you don't, there is an example I can give you. For instance, if the railroad company owned section 1, in a certain township, and they wanted to give that up, or relinquish it back to the Government, and take a lieu selection in another township, and they selected, we will say, section 4, which is a public-domain section, so far as any of us can determine, the law would determine that section that was given up as a public-domain section. Then, suppose that the railroad company gave up section 3 over here in this same township, and took section 6 over in another township, which was an Indian allotment. The Indian, of course, would have to relinquish that allotment before the railroad company could collect it, and then that Indian would be entitled to a lieu selection in some other township, and I believe that Mr. Stewart stated this morning that the Indians gave up something like 23,400 acres of land, of allotments, and took lieu selections in other townships, or was supposed to take lieu selections. Then the railroad company relinquished something like two-hundred-some-odd thousand.

If the Indians selected all of their allotments, which they have done, with the exception of about 10 sections, the Indians are still gaining, under this order, approximately 200,000 acres of land for grazing purposes. But that still doesn't help the administration of the district, because, for an illustration, one particular Indian—and there is quite a number of others in the same category—has lived on a section of land that was owned by the railroad company. No one objected to him living there for a great many years. He developed water on that section; the only permanent water in that district. Now, that Indian gave up an allotment he didn't want, some miles south of this section he was living on, and wanted to select this railroad section he had developed water on, as his lieu allotment. Since the railroad company had relinquished it back to the Government, under this withdrawal order of the Secretary of the Interior, this Indian cannot be allowed that section of land, because it is withdrawn from any form of settlement pending legislation of some kind. That is one case. There are

a number of others just like that. In a few instances it affects non-Indians the same as it does Indians. I contend that the district will never properly function as long as an order of that kind exists. Then we have the land south of Gallup, known as the Two Wells, resettlement or submarginal, that was discussed here this morning. As I understand that, that land was purchased with Resettlement money, and later turned over to the Indian Department for administration. Some of that land, the department that purchased it paid as much as \$8,000 or better for a quarter section. Some of it had good improvements in the way of houses, corrals, barns, and fences. Most all of that is destroyed now, or damaged in a good many ways.

Then the Department, under their agreement, turned this land over to the Grazing Service for administration. There are a good many small farmers and stock raisers, quite a number of people down there that have homesteads equal to an Indian allotment, with three, four, or five head of cows, who have made application to the Grazing Service for permits on the open public domain, and some on this Resettlement land. But those applications, in most every instance, have been turned down, because the resettlement land was turned over for the sole use of the Indians, in lots of instances. This land is located where the Indians can't use it; they have no water. They can't give it to the non-Indians, on account of its being held exclusively for the Indians. I think that something should be done to at least preserve the improvements and such like on this land. I think they gave something like \$309,000 or better for this land, and as grazing land it would be worth about \$2 an acre; so there is going to be a terrible loss there, to someone, somewhere, if these places are not taken care of.

Now, a good deal of this land is good farming land. People having farms right along by the side of it are making good money farming. I don't know the exact figures, but some of the men that I talked to last week told me that this past spring when planting time came they tried to get possession of some of those farms that were fenced, and had been ploughed up, and it was good for farming. They made applications to the Grazing Service for permits to farm those pieces of land, and the Grazing Service couldn't do anything, only refer them back to the Indian Department. And the Indian Department, so I have been told, agreed to lease some of this farm land to these farmers for 10 cents an acre, and the farmers agreed to pay that. Before any contracts were signed, or anything, the Indian Department, or whoever had charge of it, came back and said, instead of 10 cents an acre, "we want 25 percent of everything you raise on it;" and it went on, back and forth, all summer. Consequently, there are many acres of good farming land that are laying idle all summer out there. Something should be done about that, to relieve those farmers down there, non-Indians as well as Indians, in a lot of those cases.

CONGRESSMAN ANDERSON. Senator, at any time, was this land that he speaks of, this Resettlement land that had been turned over exclusively, has it been determined that the money appropriated was exclusively for Indians, or was it for both Indians and whites?

THE CHAIRMAN. Well, I don't recall anything in the appropriation, nor in the movement, that directed that the land should be turned over to anyone. I thought it remained under the Soil Conservation con-

trol. But it would appear, from statements made here, that the Secretary of the Interior had issued an order directing that the land taken over by the Soil Conservation, or any submarginal land activity, should be held for the Indians.

Governor DEMPSEY. Most of that land was not Soil Conservation purchased. It was purchased under Resettlement; Rural Rehabilitation; 800,000 acres got into the hands of the Indian Service and they split it some way.

Congressman ANDERSON. Is there any specific provision in the law, money appropriated to purchase this land, and saying it was to be used only for Indians?

Governor DEMPSEY. No sir.

Congressman ANDERSON. How does it get that way?

Mr. STEWART. That was an administrative decision.

Congressman ANDERSON. Of whom?

Mr. STEWART. Of the President, by issuance of an Executive order: administrative decision made through the office of the Resettlement Administration, Department of Agriculture, and the Secretary of the Interior's office. The money, as you say, was not earmarked for Indian acquisition. The determination that these should be Indian projects was an administrative policy determination, by the agency charged with the expenditure of the funds.

Commenting on what Mr. Presley says, a good deal of what he says is true. The latter part is especially true, unfortunately. The matter of listing those bean lands—that is about all they are good for down there—

Mr. PRESLEY. Well, it is mostly corn and beans.

Mr. STEWART. It was agreed to lease them at a nominal figure, 10 cents per acre. Then, for some reason, this part of the crop raised was thrown in as a consideration. When I learned of that, I stopped it. It was an unfortunate thing, and what he says is correct. The land should—when the land is not used or needed by the Indians—it should be leased, in my opinion.

The CHAIRMAN. Where did that one-fourth of the crop raised, where did that come from?

Mr. STEWART. That came out of the Navajo Agency.

The CHAIRMAN. During your administration?

Mr. STEWART. Yes, sir.

The CHAIRMAN. Was it your orders?

Mr. STEWART. No, sir.

The CHAIRMAN. Whose order was it?

Mr. STEWART. My assistant's.

The CHAIRMAN. Who was your assistant?

Mr. STEWART. Mr. Trent.

The CHAIRMAN. Is he here?

Mr. STEWART. No, sir; he is over at the Agency.

The CHAIRMAN. Did you know of the order when it was issued?

Mr. STEWART. No; not until I got back. I was in conference at Phoenix at that time.

Mr. PRESLEY. Mr. Chairman, there is another thing that would help the administration of district 7. There is quite a good many school sections or land scattered among the Indians that belong to the State of New Mexico that are completely surrounded by Indians, but are

non-Indian. If that land happens to be vacant, they can lease that section and move in there, and then cause the Indians a great deal of trouble by grazing over the line or something to that effect. If those sections were exchanged for other sections, around where the non-Indians are located, that would simplify these things quite a bit. But so far every proposed exchange that I know of has been blocked by the Indian Department.

The law provides that you can make these exchanges; but you have to have the approval of the Grazing Service and the Indian Department, and, I don't know, quite a lot of other departments. For illustration, I went to the State land office and told them that if they would give up three sections, over in this Indian land, and take three sections laying between some of my land, south of my ranch, that I would lease that land, and they would be taking it out from where the Indians are. Those three sections that I proposed for exchange are three sections that I have used continuously for 25 years, and no one else has grazed on them. The regional grazier, Mr. Naylor, agreed to that, and Mr. Fryer agreed to it, but not in writing. He just told us in a meeting out there it should be done, and thought it would be all right. After I got the O. K. of these different departments, I went to Santa Fe and talked with the land office, and they made application for this exchange. Then someone from the Indian Department wrote a letter to the effect that if I was allowed that land that it would move Indians out of the country and that there is no place for them to go and such like. There has never been an Indian on those three sections. There is quite a lot of the exchanges like that that could be made that would simplify matters considerably.

The CHAIRMAN. Who wrote that letter?

Mr. PRESLEY. Well, I believe Mr. Brophy wrote that letter. If he is here, you might find out. He is with the Indian Department.

Senator CHAVEZ. Can you tell us how much State land is within district 7?

Mr. PRESLEY. No; maybe Mr. Naylor can.

Judge SETH. Mr. Wood is here. He might have it.

STATEMENT OF CLAUDE E. WOOD, GRAZING AND TIMBER DEPARTMENT, STATE LAND OFFICE, SANTA FE, N. MEX.

Mr. CLAUDE WOOD (State land office, Santa Fe, N. Mex.). Something like 350,000 acres.

The CHAIRMAN. Will you state your name for the record?

Mr. WOOD. Claude Wood, of the State land office. That is just an approximate number.

Senator CHAVEZ. Well, you could exchange some of this land for land along the Rio Puerco. Some of those poor people up there could get along too.

Mr. WOOD. May I make a statement here in regard to this particular exchange? I went to Gallup and talked to Mr. Presley and Mr. Naylor. We worked this out with the idea in mind of making several exchanges, so as to correct the land pattern, consolidate State lands, so that we would have no difficulty in leasing them and helping the situation in general. After we had worked the situation out, we made our application through the Land Office. About a year later

we received a letter from the Commissioner of the Land Office, in Washington, to the effect that our application had been rejected. He gave us several reasons. One was that we would be depriving some of the Indians of the land that they hold under allotments, by making this selection. We have affidavits in our records to show that Mr. Presley has used that land continuously, and developed water on part of it, since 1922, and there have been no Indians on the land.

They also listed as one of their reasons for rejecting our application the fact that there was a withdrawal, made in 1931, I believe, in aid of certain legislation, which prohibited us from selecting this land, because it was covered by a withdrawal.

I would like to say that they objected to the base lands that we were using, on the ground that they were too far away from the land we were selecting. However, under such exchange as the Taylor Grazing Act, they select or exchange lands, rather, as long as they are in the same district.

Senator CHAVEZ. Now, Mr. Wood, I am going to ask you a question. Isn't it a fact that the State land office of the State of New Mexico has a lot of difficulty in leasing the State lands when they are surrounded by Indian allotments?

Mr. WOOD. We did have quite some difficulty, for a while, Senator Chavez, I believe about 1937. Up until then we had practically all of our land in that area vacant, and received no revenue from it.

Senator CHAVEZ. But, as long as you would not lease, the surrounding neighbors use it free of charge?

Mr. WOOD. Used it free of charge. We took the matter up with the Indian Service, and now most of that land is leased. However, I have a recent letter where they wish to drop certain sections. I haven't had time yet to go into the matter to see where they are located, or to see what the condition is surrounding those sections; but the State is at a decided disadvantage in handling this land, because we have sections 2, 16, 32, and 36, rural, in townships, isolated sections. It is our desire to make exchange, but the only one we ever got through is one that the Indian Service wanted through. That was to their own advantage.

Congressman ANDERSON. I wonder if Mr. Havell, of the General Land Office, would like to comment on that statement.

**STATEMENT OF THOMAS C. HAVELL, GENERAL LAND OFFICE,
WASHINGTON, D. C.**

Mr. HAVELL. No, Congressman, excepting that section 8 of the Taylor Grazing Act—

Congressman ANDERSON. I'm speaking of that part seeking to deprive the Indian of his allotment.

Mr. HAVELL. I'm not familiar with that case at all. I would say under section 8 of the Taylor Grazing Act there is a provision that no State shall select public lands in a grazing district, in furtherance of any exchange, unless the lands offered by the State, in exchange, lie within such grazing district. That has been pointed out. Now, the selected lands, lying in a reasonably compact body, must be so located as not to interfere with the administration or value of the remaining lands.

Senator CHAVEZ. How are they going to interfere, when they are within the district? All of these lands are within district 7.

Mr. HAVELL. That is a matter which the Grazing Service has to consider, as to whether or not to interfere there. There may be a location that would interfere with the blocking out of the range that would be in strategic position that would not be advisable, from a grazing standpoint, to have the lands pass out of the Federal ownership.

Mr. WOOD. May I say, in handling these applications for exchange, that before we file an application with the Land Office we go to the Grazing Service, or any other agency involved, if we know of the agency that is involved, and work the application out with them, and have an agreement as to the location of the lands to be selected, and its base land, before we file our application. The Grazing Service has passed on this application and approved it. We have a letter in our files to show that. I can furnish the committee that letter, if they would like a copy of it.

Mr. HAVELL. I might say, Mr. Chairman, more recently there has been an administrative order that provides for a preliminary consideration of the State exchange. The preliminary consideration is given by the representative of the Grazing Service and a representative of the General Land Office, so that these difficulties that have been experienced in the past could be obviated; because there would be a getting together, in a preliminary way, of the three agencies that would be interested in working out the exchange.

Senator CHAVEZ. Mr. Lee, I would like to ask you a question. Do you know the acute situation, as far as grazing lands along the Rio Puerco?

STATEMENT OF FLOYD W. LEE, PRESIDENT, NEW MEXICO WOOL GROWERS' ASSOCIATION, SAN MATEO, N. MEX.

Mr. LEE. Yes; I think I do.

Senator CHAVEZ. That is east of district 7. If some of these exchanges could be brought about, so lands could be obtained along that area, to relieve the situation—

Mr. LEE. I think some relief could be had for the condition that exists there.

Senator CHAVEZ. I would like to have you explain to the committee something about the grazing situation directly adjoining district 7.

Mr. LEE. This grazing district is one of a complicated picture, the same as in district 7. We have the Indian Pueblos, a few Navajos, our own native settlements, that have been there for hundreds of years. We have also, inside the forest lands—in fact we have 17 different governmental agencies who own lands inside of grazing district No. 1, and manage it.

The CHAIRMAN. Seventeen?

Mr. LEE. Seventeen different governmental agencies within that district.

The CHAIRMAN. Enumerate them.

Mr. LEE. The Indian Service, both the Pueblo and the Navajo Service. We have the State land office. We have the Taylor Grazing Service. We have the Farm Security Administration, the Federal Power Site Administration. We have the War Department, and the Soil Conservation Service, which is broken up into about three dif-

ferent heads, which they have purchased in different ways. We have the General Land Office, the Forest Service, the Apache Indian Reservation. I can name and give them to you—I can name 17 different governmental agencies. Offhand, it is a little difficult to remember them even, in these times. In that particular area, in the upper Rio Puerco, we have several small settlements of people, Cabezon, Guadalupe, San Luis, Cuba, La Ventana, in fact there are 7 small districts. The Government, through its purchase agencies, has purchased the lands surrounding that particular area. They do it a great deal like the Germans do a blitzkrieg; they get on one side and then on the other and they squeeze out those that are in between.

On the Cabezon, on the upper Rio Puerco district, they purchased the Espiritu Santo Grant and gave that partly to the Indians. After much squabbling and work on the part of the people who live in that district, they were finally given some permits. Those permits were in that particular area. The fence of the Espiritu Santo Grant runs in the town of Cabezon. There is a five-wire fence, with posts 15 feet apart, and two stakes between each post, right along the edge of the town. It took the grazing off of that land completely, and allowed those people's cattle to die there. We finally protested, and opened the gates, and they moved their cattle in there. The land was not being used, and the grass was that high. Well, they called out the United States Marshal and put those people out, and then put them under several different agencies, such as the Forest agency. I believe they furnished trucks to haul feed to those cattle. At the time I was there I counted 50 head of dead cattle, from the site where I was standing. The relief had come too late; most of the cattle had then starved to death.

We have incidents now, right in our particular area, as to its congestion. As I stated this morning, the Arviso boys, who are Navajo Indians, are very prosperous boys. They built their herds up, at Tohachi, on the Indian reservation, and were shoved out of the reservation into district 7, and tried to get along there and lease whatever land they could, because they had been put out of their own home. Now their cattle are down in district 1, right in this congested area, where a man with 11 children made an application to put one milk cow on that Espiritu Santo Grant, and he was refused.

The area, in that particular area, it was necessary to move the largest operators in there, which were Frank Bond & Co. We had to move them out completely, to make room for the native people who are there. That has been consumed entirely by the free-use people.

The CHAIRMAN. What agency has control there?

Mr. LEE. As I say, in that particular area you have the Soil Conservation Service, which believes in practically no grazing. You have the Taylor Grazing Service, which believes—and I may state to the committee a rule of thumb in New Mexico, and it will prove out through the grazing of practically every grazing board in the State; it is proved by our State agricultural college—a rule of thumb is that the carrying capacity of a range is in exact relation to the rainfall. If you have 1 inch of rainfall per section, the carrying capacity of that land is one head per section. If your rainfall is 10 inches, your carrying capacity is 10 animal units. We figure 5 sheep to 1 cow, as a unit. That is the customary rate. Four to one is what Mr. Adams said

they used in the upper Rio Grande. Most practical livestock men use 7 to 1, because a sheep takes about 7 times as much weight, or sheep walking on the ground are one-seventh of the weight of a cow walking on the ground. However, 5 is the accepted number. We figure that, in that particular country, your rainfall is 12 inches and the carrying capacity is about 12 head per section. If you will refer to General Kearney's report—he was a topographical engineer—when he came into New Mexico in 1846, and you refer also to the botanical expedition that came into New Mexico in 1848, pretty near a hundred years ago, you will find that condition is almost exactly today as it was when General Kearney came in a hundred years ago. Those are the reports of the War Department. The Rio Puerco was the same. Lieutenant Herbert tried to cross the Rio Puerco, over here, and he had to go up as high as the Rio Salado because the banks were so high; then he had to cross down through the Sebayeta area and down into Laguna.

I'd like to state, Mr. Chairman, that this grazing district has a great many small holders in it. That is tremendous use, and there has never been an appeal from the decision of that board to reach the Secretary. I can go into it in further detail, but the hour is late and, if that answers the Senator's question, we'll have a later witness to show what the utilization of those lands have been.

Senator CHAVEZ. I wanted you to explain to the committee, as you have, how acute the situation is in that particular area. These towns have been practically surrounded by fences, and there is nowhere to go.

What do you think about the exchange of State lands for Federal lands, with reference to this particular area,

Mr. LEE. That would assist; but the main trouble in that area is the different Government agencies who are unwilling to cooperate. We have one man, Jacobo Herrera, a "partida" contractor—you might say share cropper, but we don't like the term, because it is not the same—in which our board took it up with Congressman Anderson, to go in, and he will know the facts of the case. He had sheep on shares from Frank Bond & Co., and when the grazing board moved Frank Bond & Co. out of the area, naturally he had to reduce his flock. This man had built his herd up to approximately 500 head. When they were moved out of the area he took his share of the sheep and kept them. That man has two sons in the United States Army, one in Sicily today, and the other, I think, is in England. He can correct me on that if I am wrong. His sheep are now divided; the Forest Service permits him 250 head on the forest, and the other 250 are up there by the Jicarilla Apache Reservation. His boys have gone to war, and he can't put the two bands of sheep together; and on the summer range on the western slope of that forest there hasn't been any livestock in a good many years. We contend that if that land is worth anything, it is worth it in time of war, now, to produce—and have those people, not to try a social program on it, when those boys are over at the war.

We have another man there, Epifanio Gutierrez, who also has two sons in the war. They divided his sheep up. I may be a little wrong on my figures, but the witnesses will correct them when I am wrong. I think he has his sheep in two different bands, one of 300 and the other of 300, and he is unable to herd them.

Jacobo Herrera has 4 herders to herd 500 sheep. You can figure how long a man can stay in the business and hire 4 herders to herd 500

sheep, just because two Government agencies will not put their heads together and solve the problem. It certainly is not what those two boys are fighting for in Sicily, to come home and find the family gone, and their people gone. I am very doubtful about that. That is the way I feel about that area.

The CHAIRMAN. Is there anything further, Judge Seth?

Judge SETH. Not right now.

Senator CHAVEZ. Mr. Hovey, would you like to make a little statement?

**STATEMENT OF BERNARDINO PERRY HOVEY,
BERNALILLO, N. MEX.**

Mr. HOVEY. Mr. Chairman and members of this committee I come from a place where people are called the forgotten people of the United States of America. We have lived there for years and years. It began with my grandfather who was born in 1825. He died in 1887, and he left four children, without a day of schooling.

I, for one, didn't have the opportunity to learn anything. Most of the school I have today—I had 24 months of school, and that has been all the school, and I am proud of it, too.

We made our living, my folks did, for years and years, until this administration came along, buying all the land surrounding Cabezon area, Espiritu Santo grant, for the purpose of the Indian use; bought it somewhere in 1935 and there was no stock in there until we broke into it. I was called before the United States attorney, Mr. Ribert, to explain on that. They had already written warning to everyone who had put their cattle in that grant.

Before going into the grant, I called all and every agency that I thought had anything to say or to do with this grant. But finally, on January 7, the day of 1938, we drove our cattle in there and they brought me over here, and finally there was a release by money granted to those people to buy feed with. The Forest Service and the Indian Service helped us through the Rio Grande board at that time. Then, later on, two or three agencies went along on the west side of the Puerco, put up the line of what they called the proposed boundary line for the Navajo Indian Reservation; just a strip of land there between 6 and 9 miles wide and 30 miles long, for better than a thousand families. The majority of those are Spanish-American people, but good citizens, I do believe, and I am proud to say it because they have got our boys in the armed forces. I, at one time, happened to be a soldier. That was in 1918.

I would like to show to the committee that the Grazing Service have tried time and again to help and assist this people. Here is a man, he is here in this room, that was born and he is 58 years of age. He has no right to graze one cow after the first of the year, except as domestic-use animals.

Dear friends and members of this committee, if that is not true, I would like to get all and everyone to go with me and prove it over the land whereof I am talking. I ask for you to excuse the mistakes I made in talking.

Senator CHAVEZ. What do you think of the exchange of State land for some land along the area that you speak of? Would that help the situation any?

Mr. HOVEY. If that is privately controlled land that is to come, as I believe it will come, it will help in increasing the capacity of the lands there. The Grazing Service, to which I am a member of the advisory board of district No. 1, called the San Jacinto district—the capacity there we have figured 10 head per section. Inside of the Espiritu grant, a patch of land composed of 113,000 acres, a little over two cows in this section can graze.

The CHAIRMAN. Who fixes that?

Mr. HOVEY. One man, I believe, I understand.

The CHAIRMAN. Who?

Mr. HOVEY. The Soil Conservation Service. Who he may be, I don't know.

Judge SETH. Mr. Hovey, the Espiritu Santo grant was used by your people before the Government bought it, was it not?

Mr. HOVEY. As far as I know. My mother was born in the middle of this spot. We had a grant in 1874. At that time my mother said they were grazing it.

Judge SETH. While the Bonds owned it, they allowed the people to use it?

Mr. HOVEY. Yes.

Judge SETH. And they paid a small rent?

Mr. HOVEY. Some; some paid some to go on the grant.

Judge SETH. And in the Ignacio Chavez grant, west of that area?

Mr. HOVEY. The same way. Narciso Francis has had the lease for years and years, and the people up in Casa Salazar used it to run their stock there; some trespass, some permits.

Judge SETH. These various villages you speak of, Cabezon and La Jara, are up and down the Rio Puerco Valley, are they not?

Mr. HOVEY. Yes.

Judge SETH. And the Espiritu Santo grant is bounded on the west by—

Mr. HOVEY. On the east by the Rio Puerco.

Judge SETH. The east or the west?

Mr. HOVEY. On the east of the Rio Grande.

Senator CHAVEZ. He means the grant is east of the Rio Puerco.

Judge SETH. Then the west boundary is the Rio Puerco, is it not?

Mr. HOVEY. Yes, sir.

Judge SETH. That is the land all around some of these towns you have been speaking of?

Mr. HOVEY. Yes.

Judge SETH. As I understand it, the Soil Conservation Service has fenced up both grants, right there?

Mr. HOVEY. Yes, sir.

Judge SETH. With a picket fence, almost?

Mr. HOVEY. Yes, sir.

Judge SETH. And they won't let you on there with a higher rate than about two and one-half cows to the section?

Mr. HOVEY. More or less; yes, sir.

Judge SETH. That is about 275 acres to the cow?

Mr. HOVEY. I'm afraid that is correct, maybe.

Judge SETH. And the grass, you people in the villages can see right over the fence, the grass that high. Is that correct?

Mr. HOVEY. Correct.

Judge SETH. You have quit using it since they took it over?

Mr. HOVEY. We have used it since 1938 that we broke in. I called every agency, as I said awhile ago, and I was turned down. Finally people got together and opened the gates and called at that time a fellow by the name of Ted Spar, who was in charge of the grant. He gave me a list of names to whom I should call, and I had a conference with them. There were nine. They went on down to the gates—nevertheless we turned our cattle in there.

Judge SETH. Who determines who is to go on that grant to graze, Mr. Hovey?

Mr. HOVEY. To begin with, as far as I understand, it was bought by the Indians for Indian use.

Judge SETH. You wouldn't know that?

Mr. HOVEY. I would not.

Judge SETH. Wasn't it bought with Soil Conservation money, or relief money?

Mr. HOVEY. Well, I don't know, Judge. I think that was explained out there.

Judge SETH. Anybody that gets on it; what I am driving at, to whom does he make application?

Mr. HOVEY. Well, we make an application with Mr. R. L. Strong.

Judge SETH. Where is he?

Mr. HOVEY. In the audience, here, in the hall.

Judge SETH. Are his headquarters here in Albuquerque?

Mr. HOVEY. Yes, sir.

Judge SETH. And is there any appeal from his decision, that you know of?

Mr. HOVEY. Not that I know of.

Judge SETH. Is any hearing held on the rights of the parties to graze on it?

Mr. HOVEY. If there is any I haven't heard.

Judge SETH. Mr. Strong, as far as you know, has the final say in the matter; is that right?

Mr. HOVEY. That is what I understand.

Judge SETH. How about the Ignacio Chavez grant?

Mr. HOVEY. The same way.

Senator CHAVEZ. Is anyone using the Ignacio Chavez grant now?

Mr. HOVEY. Yes, sir; there are some people from Guadaloupe and Casa Salazar.

Senator CHAVEZ. And they're allowed 2½ per acre or per section?

Mr. HOVEY. Two and a half animals per section. That is what we have been able to figure.

Judge SETH. Those grants are the same?

Mr. HOVEY. And the upper Cuba, the Soil Conservation Service bought quite a number of sections out there, and they are in just as bad shape as the Cabezon and the Guadaloupe and the Casa Salazar people are.

Judge SETH. That purchase is up west of Cuba; public lands homesteaded, and later bought by the Soil Conservation Service?

Mr. HOVEY. Well, it was homesteaded, and they sold out to the Soil Conservation.

Judge SETH. That is operated on practically the same basis?

Mr. HOVEY. The same way.

Judge SETH. And they make application to Mr. Strong?

Mr. HOVEY. Yes.

Judge SETH. And they don't get it, usually?

Mr. HOVEY. Well, sometimes, and sometimes we don't.

Judge SETH. And is there any review division that you know of, any right to appeal from Mr. Strong's decision?

Mr. HOVEY. They wouldn't pay us any attention. If we go to Mr.—I think it is Mr. Naylor, the head man of the Soil Conservation Service—

Senator CHAVEZ. He's speaking of J. V. Taylor.

Mr. HOVEY. I think so. He refers us back to Mr. Strong.

Mr. WOOD. May I ask Mr. Hovey a question?

The CHAIRMAN. Very well.

Mr. WOOD. Mr. Hovey, supposing these land grants over there, not being used and properly serviced, were released to you people by the State, if the State owned them. Do you think that would help any?

Mr. HOVEY. Yes, I think it will.

Judge SETH. Mr. Hovey, to your knowledge, wasn't that country—didn't it support a considerable number of sheep in the earlier days?

Mr. HOVEY. Yes, sir.

Judge SETH. Can you give us an idea of the numbers that used to run in there?

Mr. HOVEY. At one time Juan Dominguez used to run about 8,000 head of sheep. That was at San Luis, 4 miles from Cabezon. The foreman, head of the family, had from 150 to 500 head of sheep in that community. Then coming down to Cabezon, R. F. Heller—I think most of you fellows knew him—he used to run about 4,000 head of sheep and about 500 head of cattle. Some of the people had cattle from Heller on shares, making a living out that way, and the rest of the people there had 40 or 50 or a 100 head of cattle.

Judge SETH. Now, Mr. Lee spoke of an area in there, between these grants, of 9 to 12 miles wide. Is that principally Taylor grazing land?

Mr. HOVEY. That is it.

Judge SETH. I believe you stated you are on that board?

Mr. HOVEY. Yes, sir.

Judge SETH. Now, that area of Taylor land is in there, you stated, and is entirely used up by people entitled to free use; is that the situation?

Mr. HOVEY. It is the situation.

Judge SETH. When they moved Bonds out of that area, was the railroad land relinquished?

Mr. HOVEY. Yes, sir; there was an exchange made.

Judge SETH. Is that being administered by the Taylor Grazing Act people?

Mr. HOVEY. Yes, sir.

Judge SETH. That is the land they gave up?

Mr. HOVEY. Yes, sir.

Judge SETH. That is not like it is on district 7, not held for Indians or anybody?

Mr. HOVEY. No, sir.

Judge SETH. The people of Cabezon use it?

Mr. HOVEY. Yes, sir.

Judge SETH. It is used up by the free use?

Mr. HOVEY. And there is one Indian, if I am right, by the name of Arviso, that was mentioned here a while ago. He bought some rights in there, and we gave him a permit, according to what he had there.

Judge SETH. How many does he get?

Mr. HOVEY. I don't remember; I can't recall.

Judge SETH. It is a small permit, is it?

Mr. HOVEY. Yes; he is a Navajo Indian.

Judge SETH. The area between the two grants there, along the Rio Puerco, the public land, free use takes it all; is that right?

Mr. HOVEY. The biggest part; yes.

Judge SETH. When you get up further north, around Cuba, this area they purchased is west of the Puerco; is it west of Cuba?

Mr. HOVEY. West of Cuba; yes, sir.

Judge SETH. Is there much Taylor grazing land up there?

Mr. HOVEY. Not very much.

Judge SETH. Is that used up by free use?

Mr. HOVEY. Well, what there is, the biggest part; yes, sir. But the Grazing Service and the Soil Conservation made a deal to handle it, because the Soil Conservation has more land there than what there is public domain. So the Soil Conservation is handling that small piece in the upper end there.

Judge SETH. They are small pieces, with more land surrounding them?

Mr. HOVEY. That is right.

Judge SETH. Well, is there any Taylor Grazing Act land open there through which these people, the Cabazon, La Jara, and Cuba people, would get any relief?

Mr. HOVEY. Yes; there is; for the La Jara and Cuba people; more or less about 8 townships of land that is only used by the Jicarilla Apache Reservation.

Judge SETH. That is not subject to the Taylor Grazing Act? What I mean, has your board any public lands which these people along the Rio Puerco could get relief?

Mr. HOVEY. No, sir; everything is taken up.

Judge SETH. These 8 townships you refer to are part of the Jicarilla Apache Reservation?

Mr. HOVEY. Yes, sir.

Judge SETH. They were made shortly before Congress stopped the extension?

Mr. HOVEY. I couldn't say.

Judge SETH. It was formerly leased to you people?

Mr. HOVEY. Yes.

Judge SETH. Leased recently?

Mr. HOVEY. No, sir. Since they passed that order in 1934 they have leased it to no one.

Senator CHAVEZ. There are just two classes of land that you can't lease, Indian land and national parks.

Judge SETH. You are familiar with conditions along the Jicarilla Apache Reservation?

Mr. HOVEY. I rode to Farmington on the bus.

Judge SETH. Do you know anything about whether the Apaches own sheep on Jicarilla Apache?

Mr. HOVEY. I have been in that land the past two winters trying to buy some cattle, in the fall and sometimes in the spring, and there is not a hoof belonging to the Apache Indians.

Judge SETH. In those eight townships?

Mr. HOVEY. In those eight townships.

Mr. RUTLEDGE. Could I ask the gentleman a question? I was unable to follow you through on these different pieces of land.

Are you getting along pretty well with the Grazing Service?

Mr. HOVEY. Yes, sir. I personally haven't got a thing to say, and we haven't had a protest going up as far as I know. They iron those troubles out with the people the best they can, and it seems that we can get along with them.

The CHAIRMAN. Is Mr. Furman in the room? Will you come forward, please? Are you the gentleman that has charge of this land that is under discussion? Will you please come forward so that the reporter can hear your answers?

Mr. HOVEY. Another thing, Mr. Chairman, there are some people living north of the Rio Grande, across the river from Rio Puerco, in a little village that is called Cile, that have used that land for years and years, in which I have some patents or deeds in my pocket. There is a patch of land right west of this little village that the Indians put an application for, that public domain there, because they have a section of State land right on the middle of that area; and there are some people here that will testify that they haven't used that since they acquired the permit.

The CHAIRMAN. That is, the Indian Service hasn't used it?

Mr. HOVEY. That is right; until this spring. These people came up to me and talked to me about this certain piece of land, and I took it up with Mr. Dismuke, from the Indian Service department. He said, "No; we have got it fenced, and we are going to use it." So I said, "Have you used it in the past?" He said, "No; but we are going to use it in the future. We are going to put up a bunch of sheep to lamb."

So I told the boys that they couldn't do a thing, they were going to use it. Some of the boys said, "If they do go in there they will go out in 10 days," and I suppose they are pretty good guessers. They went in there and stayed 8 or 10 days, and then out they go; bing! Those people like to get a permit on that certain piece of land, for their domestic-use animals, milk cows, and a couple of horses to graze on that land, right on the village; oh, I would say about a mile or half a mile between what the Grazing Service has held as right-of-way, if I am not mistaken.

The CHAIRMAN. Are there any further questions? Is that all your statement, Mr. Hovey?

Mr. HOVEY. Yes, sir. Thank you.

The CHAIRMAN. We are going to take a recess until 8 o'clock this evening. The meeting stands at recess until 8 o'clock this evening. (Recess until 8:30 p. m.)

EVENING SESSION

The CHAIRMAN. Judge Seth, did you care to proceed?

Judge SETH. Senator, the Soil Conservation man took the stand just as we recessed. I wonder if it wouldn't be advisable to finish up

with district 7 before hearing what the Soil Conservation has to say.

The CHAIRMAN. I understood you were ready to proceed with district 7. I didn't understand what the Soil Conservation has to do with district 7. I called the Soil Conservation representative, of my own initiative, to meet the statements that were being made then on the stand. It might be more orderly—my investigator says it is more orderly to proceed with district 7.

Judge SETH. We would like to have the Soil Conservation man testify all right, but, unless it relates to district 7, I wish we could get that out of our systems.

The CHAIRMAN. That is what I thought. I think perhaps it would not relate entirely to district 7. Perhaps we had better proceed unless you insist on some other order.

Judge SETH. Has the Indian or Grazing Service anything further they want to put on, on district 7?

The CHAIRMAN. I would like to ask a question or two of someone in the Indian Service.

Testimony was given here this morning, I think by Mr. Stewart, about an incident whereby orders of somebody in the Indian Service there was an extermination of the goats. When did that take place?

Mr. STEWART. Mr. Chairman, I believe someone else made that statement. I wonder if Mr. Cooper did?

The CHAIRMAN. Someone made the statement. I think it was you, Mr. Stewart, who said it was admitted that it was a grave mistake.

Mr. STEWART. Oh, yes, yes; it was not confined to goats largely, but over in district 7, way back when the Navajo stock-reduction program was inaugurated, I believe in 1934, the reduction program was extended to those Indians off the reservation in district 7. That extension of the reduction program was an administrative mistake. That is correct; that is what I said.

The CHAIRMAN. Who brought it about?

Mr. STEWART. The Indian Office.

The CHAIRMAN. Whose orders?

Mr. STEWART. The Commissioner of Indian Affairs.

The CHAIRMAN. And what was the result?

Mr. STEWART. It imposed a hardship on those Navajo Indians in district 7.

The CHAIRMAN. Not only imposed a hardship, but it imposed a high percentage of infant mortality, didn't it?

Mr. STEWART. Not to my knowledge. I don't think so.

The CHAIRMAN. I have been so advised.

Mr. STEWART. I think that is such a serious statement that perhaps the evidence should be brought forward, Mr. Chairman, but I do not think it has a foundation of facts.

The CHAIRMAN. The goats were the only source of milk for the Indians; isn't that so?

Mr. STEWART. To some extent. Many Indians do not have milk goats.

The CHAIRMAN. And the goats are also a source of certain cheese that the Indians make?

Mr. STEWART. Not to my knowledge.

The CHAIRMAN. Not to your knowledge?

Mr. STEWART. No, sir.

The CHAIRMAN. Very well. My understanding was that it was done against the protest, the serious protest, of the Indians, and that it was later admitted to be a serious mistake.

Mr. STEWART. That is true, but I think the hardship was economic rather than health.

The CHAIRMAN. It was also financial, wasn't it?

Mr. STEWART. Yes, sir.

The CHAIRMAN. Very well. That is all I have to inquire about on that.

Now, Judge, I think you are going to have to proceed.

Judge SETH. Is the Government through? If so, I will put on some witnesses.

The CHAIRMAN. I take it that the Government is through.

Assistant Secretary CHAPMAN. We might want a chance to discuss it as it goes along, to answer some questions.

The CHAIRMAN. That is all right, certainly.

STATEMENT OF KELSEY PRESLEY, GALLUP, N. MEX.

Mr. PRESLEY. My name is Kelsey Presley, Gallup, N. Mex.

Judge SETH. Mr. Presley has already made some statements here, and I don't intend to cover that same ground.

The CHAIRMAN. Very well.

Judge SETH. You are the chairman of the advisory board of district 7. Is that correct?

Mr. PRESLEY. That is correct.

Judge SETH. How long have you held that place?

Mr. PRESLEY. Ever since the creation of the district.

Judge SETH. You were on the board of district 2-A, I believe it was, that was the predecessor of what is now district 7?

Mr. PRESLEY. Yes, sir; I was elected as a member of the advisory board of district 2-A when the district was first created.

Judge SETH. You have been on the advisory board of that district, or district 7, ever since?

Mr. PRESLEY. I was on the board of 2-A until 1 day I received a letter stating that district 7 had been created, and I was no longer in 2-A; and that there would be an election held to elect advisory board members for district 7. At that election I was elected to the district 7 board.

Judge SETH. Did you know anything about the creation of district 7 until you got that letter?

Mr. PRESLEY. I did not; no, sir.

Judge SETH. You have owned a ranch in that district for 25 years, haven't you?

Mr. PRESLEY. A little more than 25 years.

Judge SETH. And you were a member of the then existing district, a member of the board?

Mr. PRESLEY. Of 2-A; yes, sir.

Judge SETH. And the matter was never discussed with you at all?

Mr. PRESLEY. It never was.

Judge SETH. Were these regulations ever discussed with you, or handed to you?

Mr. PRESLEY. They were handed to me, as already printed, and said that was the regulations for rules that were set up for the district.

Judge SETH. And no discussion was had with you as a member of the board.

Mr. PRESLEY. No, none whatever.

Judge SETH. Mr. Chairman, there has been a lot of discussion of increasing the Indians up to 150 head.

Mr. PRESLEY, have you got the letter or other things by which you were directed to do that?

Mr. PRESLEY. That letter was written by Mr. Woehlke, and is in the minutes of the conservation committee for August 8, 1941.

Judge SETH. Have you gotten that information by telephone. since this afternoon?

Mr. PRESLEY. Since this afternoon, yes.

Judge SETH. Who is Mr. Woehlke?

Mr. PRESLEY. The assistant, I believe, to the Indian Commissioner.

Judge SETH. Was he a member of that Rio Grande interdepartmental board?

Mr. PRESLEY. I don't know whether he was a member—you mean the conservation board of that district?

Judge SETH. No, I mean this Rio Grande board.

Mr. PRESLEY. I don't know anything about that.

Judge SETH. Was he a member of the conservation board?

Mr. PRESLEY. I wouldn't say whether he was or not, but he seemed to be the one, the boss. He signed this letter, and we followed his instructions..

The CHAIRMAN. What is his official position with the Department, please?

Mr. STEWART. Mr. Woehlke is assistant to the Commissioner of Indian Affairs.

Judge SETH. He signed that letter as secretary of the conservation board?

Mr. PRESLEY. Well, the letter is signed. I don't know whether he signed it or not, but his name is signed to it.

Judge SETH. Can you give us some specific instances of the effects of that goat extermination?

Mr. PRESLEY. Well, I hadn't given it much thought, but since the argument came up here, in the last few minutes, I recall that one particular Indian that lived over west of my ranch came over and said he had a sick baby, and they had killed off all their goats, and they didn't have any milk. I furnished milk for the family, free of charge, for 5 or 6 months to keep that baby alive. There was also another Indian there that had tuberculosis, and he lived almost entirely on goat's milk, and I furnished him milk for about a year and a half, until he finally died from TB, free of charge.

Judge SETH. Had he had goats?

Mr. PRESLEY. He does have now; the one that had the baby. A lot of those Indians have gone back to raising goats again. There is a lot of goats in that country.

Judge SETH. This area south of Gallup, the Two Wells resettlement area, does the grazing board administer that at all?

Mr. PRESLEY. Under the agreement with the Indian department, they are supposed to.

Judge SETH. But do you?

Mr. PRESLEY. Well, we haven't yet.

Judge SETH. Now, what do you know about the increase of stock in grazing district 7, in the past year of two?

Mr. PRESLEY. Well, I know that they have increased it quite a lot. I know of several instances where the Indians have either purchased, or taken, sheep and cattle on shares, that came off of the reservation. Whether that is on record or not, I wouldn't say. But I can show anyone the herds that wants to come out there and look them over.

Judge SETH. Have you ever talked with the Indians about it?

Mr. PRESLEY. Quite a number of them.

Judge SETH. Did they tell you that?

Mr. PRESLEY. They have told me that, because it works a hardship on the Indians that are legitimate users of that particular part of the range. When the other Indian increases his herd, why he naturally has to graze off of some of his neighbors, and that is why they have complained of those things.

Judge SETH. Do you believe that increase, by moving sheep from the reservation proper, has been quite extensive?

Mr. PRESLEY. I really believe it has; and I believe, if the Department would check into it, they would find there has been considerably more of it than any of us even guessed.

Judge SETH. Now, you made a statement this morning. Is there any further statement you care to make about district 7?

Mr. PRESLEY. Well, I believe that I have covered almost everything. I think one of the most important things is this withdrawal order prohibiting the use of that railroad exchange. That not only works a hardship on the non-Indians, but also on the Indians themselves. I have discussed that quite a bit with Mr. Stewart, and he said he had sent it in to Washington, or taken it under advisement, or something. I never did hear any more about it.

Judge SETH. They're simply holding the land that the Santa Fe surrendered.

Mr. PRESLEY. That is right. Something was brought out here this afternoon; something over 200,000 acres which should be in the public domain.

Judge SETH. You hold you ranch how, Mr. Presley?

Mr. PRESLEY. Well, I have some deeded land, and some land leased from the State; the State land, and a small permit under the Taylor Grazing Act.

Judge SETH. Have they threatened to cancel your permit?

Mr. PRESLEY. I had a letter last year stating that I must have my stock off of the public range by October 31. But later they seemed to overlook that, and there never was anything more said about it.

Judge SETH. What reason did they give, Mr. Presley?

Mr. PRESLEY. I don't recall what the reason was.

Judge SETH. You didn't move them, anyhow?

Mr. PRESLEY. No, I couldn't.

Judge SETH. How big a permit have you on the district?

Mr. PRESLEY. I think for about 150 head, or something like that.

Judge SETH. Of cattle?

Mr. PRESLEY. Cattle, yes, sir. But I have cut my cattle from—I used to run about 400 head there, and sheep in addition to that. Now for the cut down; it's cut down to about one-third, and I am trying to get along.

Judge SETH. I believe that is all we want to ask.

Mr. STEWART. Mr. Chairman, may I ask the witness some questions?

The CHAIRMAN. Certainly.

Mr. STEWART. Mr. Presley, at the time of this episode of the Navajo dying from tuberculosis, from the alleged shortage of milk, and the other case, did you report that situation to the Indian agent, at that time, at Crown Point?

Mr. PRESLEY. I didn't report that particular case, I don't believe; but I had another Indian there that had appendicitis, and I took him over to Crown Point, and the doctor there—I forget who was in charge—said he couldn't do anything for him. He didn't know just what was wrong with him, and after he was there 3 or 4 days he finally decided on an appendicitis operation. But it was too late, and he died the next day; so I figured it wouldn't be any use to report the other case.

Mr. STEWART. In regard to the observation that stock has been moved off of the reservation into district 7, if the advisory board passes upon an application, relative to an Indian obtaining a license and the number of stock that Indian is to run, then does it make any difference where that stock comes from?

Mr. PRESLEY. Yes; it makes a difference. The Indian is like anyone else, he is supposed to have been in the stock business, and be a legitimate user of the public range. I don't believe, though, that most of this increase will show until next year, when the applications are made again.

Mr. STEWART. My point is that the board passes upon each case, and sees, in effect, that this Navajo Indian is entitled to run so many head of stock, upon his application; and that is based upon consideration of his rights to run that number of stock. Therefore, what does it matter where that stock comes from?

Mr. PRESLEY. Well, as long as he doesn't go over what he should be allowed, considering his base land and water, why, it doesn't matter. But then if he is given a permit for, we will say, 150 sheep, and he is running 300, it makes a big difference.

Mr. STEWART. That is it.

Mr. PRESLEY. That is what I think has happened.

Mr. STEWART. That is the problem of the advisory board, is it not?

Mr. PRESLEY. Well, I don't know. It is a problem of whoever counts the sheep or cattle, whether it is the advisory board, or the range rider, or the range supervisor, or whoever that is. It is their problem.

Mr. STEWART. Thank you.

Mr. PRESLEY. As I said, I don't believe that increase will show up, much, until next year's licenses come in.

Mr. RUTLEDGE. I would like to ask some questions.

The CHAIRMAN. All right, Mr. Rutledge.

Mr. RUTLEDGE. You say this letter from Mr. Woehlke instructs you to increase Indian sheepmen up to 150 head?

Mr. PRESLEY. That was the way I got it. The letter is in the minutes. If you produce the minutes we can get the exact words.

Mr. RUTLEDGE. I should like to have a copy of that letter filed with the committee. If not, I would like to have it filed with me.

The CHAIRMAN. Well, we'll have it filed with the committee and with you, also. I want it in the record.

(The letter referred to was submitted the following day by Mr. Rutledge, and appears on page 3279 of the record.)

Mr. RUTLEDGE. Could you help us out by naming some of these Indians who have brought sheep from the reservation and placed them on district 7?

Mr. PRESLEY. The Indians from the reservation don't bring the sheep out and run them themselves. They bring them out and turn them over to some other Indian to run, and I don't know that I can recall the names of any of them offhand, but I can show you where the sheep and cattle are running. I know where the herds are.

Mr. RUTLEDGE. How large is your ranch, your range that you are on?

Mr. PRESLEY. Well, it was cut down. Now it isn't very large. I used to range over about a township and a half, and now I am cut down to about a half a township.

Mr. RUTLEDGE. How much Taylor Grazing Act land is in your range?

Mr. PRESLEY. Well, that is hard to determine. As I say, I used to use about 25 or 30 sections, but the way our permits call now, it is just run in a community allotment. It doesn't set aside any amount for any certain person in there; so you can't tell what you have got, 1 section or 10 sections, or what.

The CHAIRMAN. Are the minutes here, Mr. Naylor?

Mr. NAYLOR. I believe I have them. I was just looking for it.

Mr. PRESLEY. Well, under this exchange law that was passed in 1921, I believe, allowing the exchange of privately owned land and Indian allotments, to consolidate—some to consolidate the railroad land and some to consolidate the Indian holdings, but it all amounts to the same—why the railroad land was given up, or deeded back to the United States Government, or relinquished, or whatever you want to call it—some 200 and—how many thousand?

Mr. STEWART. Two hundred thousand.

Mr. PRESLEY. Well, it was about 240,000 acres; but of that amount the Indians gave up, according to Mr. Stewart's figures a while ago, 23,400 acres of Indian allotments. Therefore, they were entitled to take that many acres, in lieu of what they had given up. That leaves 200,000 acres of so-called railroad exchange that should be in the public domain, according to the way everyone has interpreted the law that I have heard discuss it. Under the Executive order of the Secretary of the Interior, that 200,000 acres is set aside for the sole benefit of the Navajo Indians, to be used in determining their base, or number of stock that they run. We contend that that 200,000 acres is public domain, and should be administered solely by the Grazing Service. When that is done it will simplify matters considerably.

The CHAIRMAN. That is the question that I understand is up for interpretation.

Assistant Secretary CHAPMAN. That is right.,

Mr. PRESLEY. I am going to—I heard Mr. Collier, himself, discuss that, at one of the senatorial hearings, and the way he put it, as I recall, was that in Arizona they passed an exchange law, and in that law it stated that all land relinquished back to the Government would be held for the sole use of the Navajo Indians, pending legislation in

regard to enlargement of the reservation. But in New Mexico the law did not state that this land should be held for the benefit of the Indians.

Now, you will find that, if you have a record of the congressional hearing that was held in 1930, at Crown Point, I believe. Mr. Collier, himself before he became Commissioner of Indian Affairs, goes into that quite a bit and describes the whole thing. He didn't think that; he thought our Senators kind of put something over on the Indian Department there, because they didn't write into the law that that should be held for the Indians; and, as I stated earlier this morning, that is one of the handicaps in working out this land exchange, because under that withdrawal order we can't even allow an Indian to select one of those sections as a lieu allotment for one that he has given up. In many instances, the Indians themselves have lived on these odd sections that the railroad relinquished back to the Government, and have been living on them for many years, have developed water on them, and are entitled to them. But under that ruling they can't have it.

Does that explain it, Mr. Rutledge?

Mr. RUTLEDGE. Yes, sir. I don't know whether I understand it. I will have to get the case.

Mr. PRESLEY. Well, I have studied this law, and been on all the senatorial hearings, and read everything I could find on it, and I have formed my own opinion, and that is it. I have talked to a lot of lawyers that should know what they are talking about, and that is their interpretation of it; and I can't see it any other way.

The CHAIRMAN. All right.

Is there anything further? If not, that is all.

Judge SETH. Let me ask one question. We haven't brought out the matter of grazing fees charged for grazing on district 7. Are there any grazing fees charged on district 7?

Mr. PRESLEY. No, sir; none whatever.

Judge SETH. The trouble is supposed to take the place of the fees.

The CHAIRMAN. The what?

Judge SETH. The trouble is supposed to take the place of the fees.

Mr. PRESLEY. Another thing I would like to state here, while we are talking about district 7, every year—if I am wrong on this Mr. Naylor or Mr. Rutledge can correct me—for the past 4 years there has been a certain amount of money set aside for range improvement to be spent in the district. So far, unless it is right recently, there never has been a dollar of that money spent where a non-Indian could get any benefit of it. Every bit of it is spent for the sole benefit of the Indians.

Senator CHAVEZ. If they don't collect any fees you can't have any money.

Mr. PRESLEY. That money is set aside from some other appropriation. Maybe Mr. Naylor can state where it comes from. I know they have got the money and are doing the work.

Senator CHAVEZ. The law specifically points out how the money is going to be distributed. McKinley County is entitled to the money; 50 percent of it goes to the county in which the land is located.

Mr. NAYLOR. That isn't the kind of money. This is soil and moisture money. We set up a camp near Crown Point and made water developments.

Senator CHAVEZ. According to the law, you are supposed to charge a fee for the public land.

Mr. NAYLOR. Not according to the rules of district 7.

Senator CHAVEZ. I don't know anything about the rules. The law provides that out of the \$1, 50 cents is to the State in which the county is located, 25 cents to the general fund, and 25 cents is to the land.

Mr. NAYLOR. No fee is charged.

Senator CHAVEZ. Why not, when the law says there should be?

Mr. NAYLOR. The rule says there should be no charge made until further notice.

Senator CHAVEZ. The rule is contrary to the law, because the law specifically says you have to pay. You don't run the white man anything for nothing in districts 1, 2, and 3, do you?

Mr. NAYLOR. Not that I know of.

Mr. PRESLEY. Anyway, this money is being spent for improvements. I don't know where it comes from, but none of it goes where the white man can get any benefit out of it.

The CHAIRMAN. Is there anything further?

Mr. RUTLEDGE. I don't like to let this stand as it is. In any new district we don't charge for the first year.

Senator CHAVEZ. When was this district organized?

Mr. RUTLEDGE. More than a year ago.

Then I want to make clear, I don't like the witnesses dodging that money question. Mr. Naylor has said specifically that money is for soil and moisture.

Mr. PRESLEY. That is what we want to know, what fund it comes from. We don't know. The people in district 7 don't know. We know it is being spent, and we would like to know. That is why we are bringing it out now. If it is legitimate, all right, fine and dandy; if it isn't we want it divided around like it should be.

Mr. RUTLEDGE. That is soil and moisture conservation money, Mr. Presley, appropriated for that purpose, with no reference to your grazing fees at all.

The CHAIRMAN. But it is being appropriated on a grazing district, for the improvement of the district, as I understand it.

Mr. RUTLEDGE. Yes, sir.

The CHAIRMAN. Well, he states it is being used, but it isn't being used where it will do any good for the non-Indian users.

Mr. PRESLEY. What I would like to see, and everyone else, is kind of divide it equally, at least partly. Maybe I am wrong, maybe it is appropriated especially for the Indians.

Mr. NAYLOR. I believe, Senator, if you will allow me, I can explain. At the present time, after we had developed the water we could reach from that camp, which is, as Mr. Presley says, mostly in the Indian territory—

Mr. PRESLEY. All of it.

Mr. NAYLOR. Yes, it is all. But it is either on exchange land, or something of that kind; but for the last several months we have moved the camp, and are working in the north end, up there where there is public domain, that is shown by that map of district 7.

Assistant Secretary CHAPMAN. Mr. Naylor, what agency is administering the disposition of that money?

Mr. NAYLOR. The Grazing Service.

Assistant Secretary CHAPMAN. Do you know anything about the background of the rules that permit the Indians to have the land free, without paying any fees for it? Do you know anything about that, Mr. Rutledge? Why was that?

Mr. RUTLEDGE. Unless we just decided we wouldn't charge them, I think the law says the Secretary may charge—

Senator CHAVEZ. I think the law says the Secretary shall charge.

Assistant Secretary CHAPMAN. That applies to both white and Indians, does it not?

Mr. RUTLEDGE. No.

Assistant Secretary CHAPMAN. In that district?

Mr. RUTLEDGE. Well, ask him. Are you paying a grazing fee?

Mr. PRESLEY. No, it applies to white and Indians alike.

The CHAIRMAN. No one is paying any grazing fees in that district. That is the way the record stands now. Neither whites nor Indians or anyone else.

Senator CHAVEZ. And the counties affected, what counties are affected? San Juan, McKinley, Valencia, and part of Sandoval.

Mr. PRESLEY. I don't know whether district 7 goes into Sandoval at all, or not.

Senator CHAVEZ. And the State loses whatever share they would have gotten if they had charged a fee?

Mr. PRESLEY. That's right.

Mr. RUTLEDGE. Mr. Chairman, I have always felt that a collection of fees is not the primary object of the Grazing Service, and that we should not collect fees until we are able to deliver something for it.

The CHAIRMAN. That is true. I have always contended for that.

Mr. RUTLEDGE. The first time I ever heard of anybody kicking about not paying fees.

Judge SETH. May I ask one question that I overlooked? Mr. Presley, do you know anything about the policy of the Navajo administration on the reservation, with reference to predatory animals and the effect on lands outside?

Mr. PRESLEY. No, sir; I don't know anything about that at all.

The CHAIRMAN. That brings up a subject on which several people have made inquiries today, as to whether the subject would be considered by this committee.

There are those who are interested in the subject of wildlife, and I have stated we would take that subject up the last day of the hearing, which we believe will be Thursday.

Mr. LEECH. Mr. Chairman, in connection with the fee question in district 7, some of the background of that, in drafting the regulations, was due to the uncertainty of the State use of quite a bit of the land, and the unknown carrying capacity, and the studies that were to be made to determine those carrying capacities. I think that is one of the main reasons that we do not charge for the district.

The CHAIRMAN. Under the existing history, it stands like this, as I view the record made here this afternoon: That while allotments are made, or rather permits are issued, for 150 or under, some of those who are holding those permits are running larger numbers than the permits contemplate; so that, if fees are charged at all, I am wondering upon what basis fees would be charged. It looks to me like it is a district that has—if it has any regulation at all, it has not showed up here in the record yet.

To be very frank with you—

Mr. LEECH. I think we should have more people to work on it, on these trespass cases, Senator.

The CHAIRMAN. Well, I might say in that regard, that the Grazing Service started out with a very small number of employees. It has been doubling and redoubling every year. The appropriation has been made one year after another, almost doubled every year. So, if you haven't enough, I don't know whose fault it is.

You may proceed.

Judge SETH. I believe that is all we have.

Mr. Berryhill, would you like to make a statement?

STATEMENT OF W. A. BERRYHILL, PREWITT, N. MEX.

Mr. BERRYHILL. In regard to the prairie dog program, killing prairie dogs, the Indian Department refused to cooperate in exterminating in certain townships where they held half the land; didn't reach any agreement. The dogs wasn't killed, like in this township we killed them; but over here they didn't kill them; they just come back, that's all. Now, I don't know who was the daddy of that, but that's what happened.

Senator CHAVEZ. Didn't that happen to the coyotes, too?

Mr. BERRYHILL. I don't know as to whether the coyotes run on the Indian territory or not.

Judge SETH. Mr. Lee, I think, is familiar with that coyote situation.

Mr. FLOYD LEE. The Indian Service does not permit the Biological Survey trappers and hunters to go on the reservation and trap coyotes.

Senator CHAVEZ. In other words, there is an artificial line, and on one side—

Mr. LEE. The coyote don't know the artificial line. He comes over to our side.

STATEMENT OF EDWARD SARGENT, CHAMA, N. MEX.

Judge SETH. Mr. Sargent, would you please make a statement? Will you please state your name for the record, and then go ahead and tell us what you know?

Mr. SARGENT. My name is Edward Sargent.

The CHAIRMAN. Where do you live?

Mr. SARGENT. Chama, N. Mex., in the northern part.

The CHAIRMAN. What is your line of business?

Mr. SARGENT. Livestock business.

The CHAIRMAN. What class of livestock, cattle or sheep?

Mr. SARGENT. Sheep and cattle, also.

The CHAIRMAN. Are you a permittee on district 7?

Mr. SARGENT. No, sir.

Judge SETH. He has his ranch right in the middle, surrounded by the district, but not a part of it. That is the situation.

Mr. SARGENT. That is right; I run on land that belongs to the Santa Fe railroad.

The CHAIRMAN. Within the district?

Mr. SARGENT. Yes, sir.

Judge SETH. Tell us what you know about sheep being brought in by Indians from the main reservation, Mr. Sargent.

Mr. SARGENT. Why, in the last 5 years, in the north end of the district, that is, from the Pueblo all up toward the Divide, there has been several bands of sheep come in off the reservation and delivered to Indians that did not have sheep prior to that time.

Judge SETH. What do you mean by several bands?

Mr. SARGENT. I would say several Indians; small bands of two and three hundred head. I believe 2 years ago there was 800 head brought in there and distributed among the Indians. I got that from Mr. Jim Councilman.

The CHAIRMAN. Some agency brought in the sheep and distributed them among the Indians?

Mr. SARGENT. Yes, sir.

The CHAIRMAN. Can someone give us some light on that? Mr. Stewart?

Mr. STEWART. Yes, sir.

The CHAIRMAN. What is the story on that?

Mr. STEWART. Mr. Chairman, we have no record of sheep being brought in there since 1938.

The CHAIRMAN. When were the sheep brought in, to your knowledge?

Mr. SARGENT. It may have been prior to 1938. I thought it was '38 or '39. I know one Indian at the pueblo, Sam Claw, who got 150 sheep. I especially know that.

Mr. STEWART. There was some sheep issued to Navajo Indians over in that area prior to the creation of district 7, formally.

Mr. SARGENT. No; this was after the creation of district 7.

Mr. STEWART. It was created in 1939, as I understand. Is that correct?

Mr. RUTLEDGE. Yes.

Mr. STEWART. It is my understanding these were so-called "reimbursable sheep," issued by the Indian Service to some Indians over in that district, up to 1938; but we have no record of any issued afterward.

The CHAIRMAN. Is there anything else? Are there any questions?

Mr. RUTLEDGE. This witness positively said these sheep were brought in before 1939, Mr. Chairman.

Mr. SARGENT. I may have been mistaken about that. I know positively Sam Claw got some sheep.

The CHAIRMAN. You don't know when?

Mr. SARGENT. I can't remember. Sam Claw—I think Mr. Naylor knows about it, maybe.

The CHAIRMAN. Mr. Naylor, do you know anything about this?

Mr. STEWART. Mr. Hunter is here, the district supervisor in that area for the Indian Service. He can explain that transaction probably better than I can.

Mr. CLYDE HUNTER, Nageezi, N. Mex.: These sheep Sam Claw got in 1941 were sheep that were repossessed, that is, reimbursable sheep, repossessed from the other Indians, and reissued to him. They were not added to the district; just taken from other Indians, who were gradually declining and not taking care of the stock; and, to protect the interest in the sheep, they were repossessed and reissued to Sam Claw.

The CHAIRMAN. Let's understand that. Sheep have been running in the district, but have been run by other Indians?

Mr. HUNTER. Yes, sir.

The CHAIRMAN. The other Indians were either not taking care of them properly, or not paying up as they should?

Mr. HUNTER. Yes, sir.

The CHAIRMAN. Therefore, the sheep were repossessed and turned over to this—what was the name, Sam Claw?

Mr. HUNTER. Sam Claw; yes, sir.

Senator CHAVEZ. Do you know of any other instances where sheep were transferred that way, Mr. Sargent?

Mr. HUNTER. Yes, sir; there was the case of Clarence Sol. There were about five or six cases in 1931 where that happened.

Senator CHAVEZ. 1941?

Mr. HUNTER. 1941; yes, sir.

The CHAIRMAN. That did not add to the number of sheep on the district?

Mr. HUNTER. No, sir; it couldn't.

Mr. HOVEY. Do you know anything about sheep involved between Jose Mestas, a Navajo Indian at Cabezon, and a man by the name of Graham, from that same place, a merchant?

Mr. HUNTER. I am not familiar with that case. The district doesn't go below the San Juan County line.

Mr. SARGENT. Where did the sheep come from, originally?

Mr. HUNTER. Originally—reimbursable sheep, put in 1936, 1937, and 1938.

Mr. SARGENT. Well, where did these originate?

Mr. HUNTER. In 1936 they were taken from the reservation. After that I am not sure where they got them.

The CHAIRMAN. Now, is it true that there was a program of distributing sheep by the Department, or Government, to Indians on the district, on district 7?

Mr. STEWART. Yes; that's correct.

The CHAIRMAN. Was that while it was district 2-A, or after it became district 7?

Mr. STEWART. I don't know when it was district 2. When was it district 2?

Mr. LEE. It was in district 2 from March 27, 1935, to September 1, 1939.

The CHAIRMAN. All right. Now, let's have the date of this time when reimbursable sheep were distributed to the Indians running on his district, at least this territory that is now within the district.

Mr. STEWART. Up to 1938; yes, sir.

The CHAIRMAN. Where were those sheep secured, when they were distributed?

Mr. STEWART. Well, Mr. Hunter indicated some of them came from the reservation, and some did not, from some outside source. Of course, at the time this—what is now district 7, although it was within the exterior line of district 2, district 2, insofar as what is now district 7, was not operable, because of the outstanding July 8, 1931, withdrawal of the public-domain land within the area.

The CHAIRMAN. In other words, district 2 having been withdrawn, you were not running stock in there?

Mr. STEWART. That part of it.

The CHAIRMAN. Is that right?

Mr. STEWART. Well, district 2, insofar as it lay outside of the July 3, 1931, withdrawal, we were not running stock in there. But we were issuing stock within this withdrawal area, which was within the exterior line of district 2. But district 2 could not operate over that area.

The CHAIRMAN. "Within the withdrawn area" is nearly comparable with district 7?

Mr. STEWART. That is right.

The CHAIRMAN. So sheep were taken out of the reservation—

Mr. STEWART. Some were, yes.

The CHAIRMAN. Do you know of any other places from whence they were taken? Does anyone know of any other place from whence sheep were taken, other than the reservation? Surely the man who had charge of the economy and the stock set-up for the reservation would know whether sheep were distributed from any other source than the reservation.

Mr. STEWART. I might say in regard to that point that Mr. Cooper came with me, in this particular work, a year ago this month.

The CHAIRMAN. Who was there before him?

Mr. STEWART. I do not know who was in charge.

Mr. COOPER. I think this goes back to Mr. Holman.

Mr. STEWART. He is not here?

Mr. COOPER. No, sir.

The CHAIRMAN. The way the record stands now is that the sheep were taken out of the reservation and put out on district 7. That was less on the reservation, undoubtedly, and an increase on district 7, undoubtedly. That is the way the record stands now, unless you can improve it.

Judge SETH. That is all, Mr. Sargent.

Mr. BOND, do you want to make a statement?

The CHAIRMAN. State your name and place of residence, and business.

STATEMENT OF E. A. BOND, RAMAH, N. MEX.

Mr. BOND. My name is E. A. Bond, Ramah, N. Mex.

The CHAIRMAN. Your business is stock raising?

Mr. BOND. I run cattle, and a little Indian trading post.

The CHAIRMAN. Where do you run your cattle?

Mr. BOND. South of Ramah, on district 7.

The CHAIRMAN. Very well, Judge.

Judge SETH. Go ahead and make your statement, Mr. Bond.

Mr. BOND. Well, in the first place, when district No. 7 was created, it was created with Mr. Milstead—I don't know what his initials are, other than "Milstead"—he was put in as supervisor of the Indians on the Ramah area, and we tried, through his being supervisor, to get blocked up. But we was unable to do it, because he wasn't in there too long; and then, after he was transferred some place else, they put in S. M. McGee. He was there a short time, and then the same thing come up, trying to block up that country for the white people and Indians. And he was transferred, and Mr. Holliday was put in as supervisor, or over the Ramah area; and he didn't remain there long enough to work out an exchange. He was transferred, and E. Z. Vogt was put in as the supervisor for the area, and I think—

The CHAIRMAN. Can I bring that thing a little closer to you there—

Mr. BOND. And Mr. Vogt, together with Mr. Petersen—I think Mr. Petersen came out and spent somewhere in the neighborhood of a week trying to make some exchange. I think they did agree upon an exchange with Crawford and Manning, and that was all; and through his efforts, that is, Mr. Petersen, they were unable to do anything about it. Mr. Vogt passed away and now we have got Mr. Bob McNew. He is—I don't know whether it is supervisor, or stockman, or range rider, or what his official title is, but he's out there now, and he has made up an exchange with all the white settlers in that district. We all signed those papers, and what has become of them, why, nobody knows.

The CHAIRMAN. What was in the papers, in general terms?

Mr. BOND. Exchanging some of the lands that we had leased for some of the lands the Indian Service had leased. That would block us up, together, so we wouldn't be running over Indian lands.

We have the lower end of—well, it is in Valencia County—we have one township down there that was exchanged, like some of this other land that has been mentioned here today. I don't know whether it was New Mexico or Arizona, or whether it was the Santa Fe Railroad Co., made an exchange, on one township, with some of these landowners. So then we have three places, I believe, in that area that is now in the Zuni Reservation, that was bought with this resettlement money, like a lot of other things we have been talking about here this afternoon, and also this morning.

As far as the white people and the Indian people getting along, I think they have got along fine. I was born in Ramah, 53 years old, and I have slept in Indian hogans, and the Indians have slept in my house, and we have got along fine. The only trouble we have is these officials who are sent out to represent the Indian Office. They're the ones that create the trouble, not the Indians, and not us.

The CHAIRMAN. What is that, now?

Mr. BOND. It is the officials that are sent out by the Indian Service that cause the troubles, not the Indians or the white settlers.

Judge SETH. How long has that land-exchange business of yours been pending?

Mr. BOND. Somewhere in the neighborhood of 4 years.

Judge SETH. Four years?

Senator CHAVEZ. Well, they're about to tire you out.

Mr. BOND. At least there have been five agents, or supervisors, that have been in, since this exchange was brought up, to try to make some exchange. It may not have been 4 years, but it is quite a while.

Judge SETH. That is all.

The CHAIRMAN. Are there any questions?

Mr. LEECH. May I ask a question?

The CHAIRMAN. Yes.

Mr. LEECH. This exchange that you speak of, was that just an exchange of use of certain lands that would be worked out, or was it an exchange of title to property?

Mr. BOND. The one that we have been trying to exchange with the Indian Service?

Mr. LEECH. Yes.

Mr. BOND. Just uses.

Mr. LEECH. Just an exchange of use?

Mr. BOND. Yes.

Mr. LEECH. Mr. Naylor, can you tell us anything about that?

Mr. NAYLOR. Not very much, only we have tried to get some exchange to block the Indians and non-Indians in the Ramah country. I understand there have been a good many applications signed, but they have never come to my office, so I couldn't tell you anything about it.

Mr. LEECH. This is an exchange of use for forage. Could you tell us why you had all those changes in personnel in that unit?

Mr. NAYLOR. No; I couldn't tell you.

Mr. STEWART. Mr. Chairman, I would like to answer Mr. Leech's question as to changes in personnel. That is a real problem, and has been now for the past 2 years, at least, and before that.

The wages or salary paid these employees are not very high, and since the war they are leaving us very frequently to take employment at war industries at higher wages.

Senator CHAVEZ. What do the supervisors get?

Mr. STEWART. It all depends; some were getting from \$1,800 a year, to \$2,600, depending on the responsibility, the area served, the number of people, and the property involved, and so on.

Senator CHAVEZ. Are these classified under civil-service regulations?

Mr. STEWART. Yes, sir.

Senator CHAVEZ. Where do you get personnel, generally?

Mr. STEWART. Through the Civil Service Commission.

Senator CHAVEZ. Do they have to belong to some locality?

Mr. STEWART. They have to have certification through the Civil Service office, usually, at Denver, I believe, or San Francisco, depending on what side of the reservation we are involved.

Senator CHAVEZ. Is that a good system? Can the Civil Service know what kind of personnel you need down there?

Mr. STEWART. I believe they have some way or alternative of selecting by background, qualifications, and training.

Senator CHAVEZ. Do they ever see any of the range land before they get out there to supervise the administration of the work?

Mr. STEWART. Perhaps some do not; I grant that.

The CHAIRMAN. Very well.

Judge SETH. I think that is all we care to present on district 7.

The CHAIRMAN. Are there any questions?

Mr. BERRYHILL. Didn't you tell me that the stockmen advised you to exchange water use with the Indian Department, where you had water you could use? I mean, you had water where they could use it, and they had water where you could use it? Didn't they advise you that could not be done?

Mr. BOND. Exchanging of water?

Mr. BERRYHILL. Yes; exchanging your water for their water, that is, where their water was situated in your range?

Mr. BOND. I don't remember making that statement, but I will say this, that we have asked for the right to water in certain tanks on the public domain, but we haven't been able to get it.

The CHAIRMAN. What was the last part of your answer?

Mr. BOND. We have asked to get a permit to water in a certain tank that is built on the public domain. That has not been granted.

Mr. BERRYHILL. Did you offer to let them water at your water for that exchange right?

Mr. BOND. No; I have offered to let them water at my place.

Mr. BERRYHILL. Maybe it was your son I talked to, instead of you. I had in mind it was you, but that information was brought to me.

Mr. LEECH. I would like to know from the witness if he made this application to Mr. Naylor, or to whom he did make it. That is, for the use of this tank on the public domain.

Mr. BOND. I made it to Mr. Naylor in person.

Mr. LEECH. Can you tell us anything about that?

Mr. NAYLOR. No; I don't remember any application.

Mr. BOND. It was not in writing, but in person.

Mr. NAYLOR. It might have been. I don't remember.

The CHAIRMAN. How long ago was that?

Mr. BOND. About a year ago.

The CHAIRMAN. All right. Are there any further questions?

Mr. LEECH. We will have Mr. Naylor look into that immediately, Senator.

Judge SETH. We have nothing further on district 7, Senator.

The CHAIRMAN. Very well; that is all on district 7.

Senator CHAVEZ. What about Mr. Branson?

The CHAIRMAN. Is there anyone in the audience who cares to discuss matters pertaining to district No. 7? Is there anyone in the audience interested who cares to present any statement with reference to district No. 7?

Mr. STEWART. Mr. Chairman, there is a group of Navajo Indians in town, and I understand they want to be heard through a spokesman. That spokesman, however, is not here. Would it be permissible to have him heard tomorrow when he gets here?

The CHAIRMAN. All right.

Mr. Branson, I promised you that you could be heard, and I want to keep my promise now.

STATEMENT OF J. F. BRANSON, THOREAU, N. MEX.

Mr. BRANSON. One question that came up that Mr. Naylor, Mr. Stewart, and the secretary couldn't answer, and the question was asked by Mr. Leech.

The CHAIRMAN. Just one?

Mr. BRANSON. Yes; and I wish to answer, for the reason they couldn't answer because it was none of their business.

The CHAIRMAN. Take your time and make your statement, Mr. Branson.

Mr. BRANSON. Well, Mr. Lee asked—sprung the question of—well it seems he was charging the Department here of permitting livestock to be moved off of the Indian reservation, through grazing district No. 7, without any authority and in violation of the laws, rules, and regulations governing the Taylor Grazing Act.

I could give you one case of it. There was a certain Indian trader first before I do that, I'll have to give some other explanations.

I have a little ranch in 14 north, 13 west, and it consists mainly of four homesteads that was patented. Three of them were patented 51 years ago, at a time when the Indians were supposed to be on the reservation. It was fully 16 years before any Indian allotments

were made off of the Navajo Reservation. That is the history that I have of it. On one of these homesteads a Navajo Indian had built his home—on one of my homesteads on which I was paying the taxes, and have paid it for years.

The CHAIRMAN. Is it a patented homestead?

Mr. BRANSON. A patented homestead, patented under the homestead laws.

Now, you might ask me why that Indian happened to be on that homestead, and the only answer I have to give you is this, because it was the best place he could find to go, according to his idea, and according to my idea. It suited me fine.

There was an Indian trader, living on the Indian reservation, came to me, and he said, "Branson, I want a place; some place where I can hold my livestock for a few weeks until I can ship." Now, this Indian trader had purchased Indian livestock; livestock that was raised by the Indians on the Navajo Reservation. We agreed on the price, and he wrote me his check, and I told him what I could do. I took him over to the Indian—first I took him out on the range and I showed him a good place to hold his sheep, out about a couple of miles from the water, and then I took him over to the Indian house. I told the Indian what we were doing. Now, I says, I suggested to him that he move his sheep and hold his sheep on some land that is owned by the United States Government that they hold in trust for the Navajo Indians.

He followed my suggestion; the trader went ahead and followed, he acted a gentleman about it; and the Indian acted a gentleman. He shipped his sheep, and went back on the reservation and did some more trading. The next year he did the same thing.

Now, as far as I am concerned, I was doing my duty as an American citizen. Those Indians knew more about their business than Secretary Ickes down in Washington, or John Collier either, and I think as much as Mr. Stewart knows about it. Those Navajo Indians have lived in this country for centuries, and we got along with them fine until they started a "new deal" on us—I will call it that—here a few years ago, when they undertook to put us in a reservation, taking—well we couldn't afford to go inside the reservation with the Indian Office down in Washington trying to run it for us. That is the way it started, about 10 years ago, when they decided to make an Indian reservation out of the land south of the present reservation and east of it.

About 13 years ago the Department—after the Navajo Indians struck oil upon the reservation, and were beginning to bring in some wells—there was a meeting in Gallup of representatives from Washington asking the livestock men of McKinley County to assist them in using that money to buy some lands for the Indians, and some water rights. There was 10 livestock men signed that petition. That was about 14 or 15 years ago. They took about—I think it carried a million dollars for them to buy lands with. They bought the lands; and in 1932 they bought all of the railroad lands that did not touch every section between the reservation and the Santa Fe Railroad, except the sections of land that the Santa Fe Railroad runs through.

Now, the land—understand that I am speaking of that they bought—it was owned at that time by the New Mexico-Arizona Land Co. The New Mexico-Arizona Land Co. has purchased this land from the Santa Fe-Pacific Railroad, and resold it. Now, if there is

any question, as far as I am concerned, I did my duty as an American citizen. The Navajo Indians, this Navajo Indian who acted a gentleman about it, and so did the trader. Now, I am telling you this for your information, for the reason that these gentlemen couldn't answer the question because it was a piece of business that did not concern them.

The CHAIRMAN. All right, sir, thank you very much.

Mr. BRANSON. If there is any questions, Mr. Lee or anyone else wants to ask me about that particular case, or Mr. Stewart?

The CHAIRMAN. All right, thank you.

Mr. BRANSON. I am quite sure that Mr. Naylor here could give you some further information on it, if you want to ask him.

The CHAIRMAN. I think so, too.

Mr. PRESLEY. Mr. Chairman, there is one other thing that I would like to bring out that I haven't mentioned.

Last week we had a meeting in Gallup of the Northwest New Mexico Hereford Breeders Association, which is an association of stockmen of that district, and all of these things that were brought out here by myself and Mr. Berryhill were discussed at that meeting. The members of that association elected Mr. Berryhill and myself to come down here and act as spokesmen for them, because most of them don't have the gasoline or the tires to come. What I have said here, this evening, concerns everyone in the district. I am not just speaking on my own account.

Mr. BERRYHILL. I would like to answer that, that I have also been a member of the land committee in that district.

The CHAIRMAN. All right, is there anything further?

Is Mrs. Henderson here? Mrs. Henderson, if you wish to come forward, I understand that you have to go away and that you want to be heard today. Is Miss Henderson with you?

Very well, perhaps one of you can testify for both. Miss Henderson, do you care to testify? You may take your time and tell us the story you want to tell.

Mrs. HENDERSON. Well, we have had difficulty in finding out how they allot the land.

The CHAIRMAN. First of all, what is your name?

Mrs. HENDERSON. Mrs. V. M. Henderson and Miss Volney Henderson.

The CHAIRMAN. Where do you live?

Mrs. HENDERSON. At Datil, N. Mex.

The CHAIRMAN. You are in the stock business?

Mrs. HENDERSON. Yes, a little bit.

The CHAIRMAN. Very well, go on and tell us your story.

JOINT STATEMENT OF MRS. V. M. HENDERSON AND MISS VOLNEY HENDERSON, DATIL, N. MEX.

Mrs. HENDERSON. We have really had a lot of trouble with learning from the Grazing Department just what is an allotment between our neighbors and ourselves, and they don't stick to any one rule. When you get one worked out, they'll have another, and you work that out with them and you can't use that, they'll have another one, and it all goes back to the other. We have never been able to know how they allotted land.

The CHAIRMAN. How many rules have you known about?

Miss HENDERSON. Four or five, or more.

Mrs. HENDERSON. When one won't fit us they get another worked out, and if you can't use that logically, they use another one.

The CHAIRMAN. What seems to have been the question you wanted answered?

Mrs. HENDERSON. We would like to know the method, principle, and basis on which they allot the land between the neighbors.

The CHAIRMAN. Who did you talk to?

Miss HENDERSON. We have talked to quite a number of the officials of the Grazing Service in regard to this.

The CHAIRMAN. Did you ever talk to Mr. Naylor or Mr. Pierson?

Miss HENDERSON. We talked to Mr. Naylor and Mr. Pierson, Mr. Rutledge at one time, Mr. Cavanaugh, Mr. Kerr, quite a number of times, and Mr. Leech and Mr. Pierson.

The CHAIRMAN. Did you talk to Mr. Leech?

Mrs. HENDERSON. There has been so much competition we haven't been able to understand it. No one would say what we wanted to know. We thought we might ask the regional grazier and maybe he could make you understand it better than he can make me understand it.

The CHAIRMAN. Is the regional grazier here?

Mrs. HENDERSON. I think he is.

The CHAIRMAN. Will you kindly explain to the lady; give her an answer?

Mrs. HENDERSON. Can I ask him a question?

The CHAIRMAN. Yes.

Your name is what, sir?

Mr. LITER SPENCE, regional grazier. I am Liter Spence, the regional grazier in that area.

The CHAIRMAN. Now you may ask Mr. Spence what you want.

Mrs. HENDERSON. In our region there is not much land involved, or public domain. There are four wells there, and all this land that we grazed on before the law went into effect was filed-on land. I think there is two or three sections, maybe two forties or something, there that was public domain, and all the other sections was filed-on land, under control of the filers, and we were all what you would call trespassers, were not prevented in use of this land.

Then, after the law went into effect, one by one, at different dates, these sections reverted back to public domain. Now, I want you to clarify, if you will, just by what method you divide between those four wells.

The CHAIRMAN. I suppose you want to know how you get a right to graze livestock on the public domain under the Taylor Grazing Act?

Mrs. HENDERSON. Yes.

Miss HENDERSON. Let us know the circumstances.

Mr. SPENCE. May I go back a little further in this case? An original application for grazing privileges was made by Mrs. Henderson for 75 head, and that was granted. Since then it has varied from about 113 head, I think is the present number, and they have consistently run about 78 to 80 head, with nonuse for the difference.

Miss HENDERSON. May I ask a question? What do you mean by 113?

Mr. SPENCE. That is the number that the advisory board recommended and the Grazing Service concurred in.

Miss HENDERSON. May I explain that?

The advisory board has set up in our region that 15 head of cattle could be grazed on a section. That is impossible. Recently, in 1942, the member of the range department, I presume, came out, Mr. Adair, and checked our range. He declared that those five and a quarter sections of land would graze 52 head of cattle, if we did not feed them, and 70 head if we did feed.

Mr. SPENCE. The point that I wanted to make is that their numbers that were running during the priority period have been satisfied.

Now, I would like to have this understood, Mr. Chairman, there have been two or three regional graziers that have preceded me on this, and as Miss Henderson and Mrs. Henderson have indicated, there have been many that have been on this case. At their request last year, in the spring, I went out and reviewed their case with them. I indicated to them that I could not find anything in the record, which I had to use, since the case has been pending since 1937, that would warrant me modifying any action that had been taken; and I have recommended that they follow the regular procedure and carry it through an appeal. It has not been their wish to take it to appeal for reasons which they feel are good and sufficient.

The CHAIRMAN. Let me get it clear. They made application for 75 head in the first instance?

Mr. SPENCE. Yes, sir.

The CHAIRMAN. That was granted?

Mr. SPENCE. Yes, sir.

The CHAIRMAN. Is that an all-year permit?

Mr. SPENCE. All-year.

The CHAIRMAN. Then did they apply for a greater number?

Mr. SPENCE. Yes.

The CHAIRMAN. Was that granted?

Mr. SPENCE. Two short of the numbers applied for.

The CHAIRMAN. What did they apply for, if you recall?

Mr. SPENCE. One hundred and twenty-five head.

The CHAIRMAN. And they were granted 113?

Miss HENDERSON. That is where the situation comes in again. Mr. Spence, I realize, hasn't been here and doesn't know as much about the case as those that have preceded him. I am very familiar with it, and so are my parents, and there have been discrepancies and inconsistencies and contradictions in the case that make it impossible for you to arrive at anything definite.

Now, the number of cattle asked for was the number of cattle run before the Taylor Grazing Act went into effect, but this is land—note that was in there at the time that it was under homestead filings, not what you call public domain or Federal range. It was under homestead filings. It returned after the act, practically all of it. Maybe there might be as many as two, three, or four forties not filed on, but all of the rest of it was filed-on land; and when it returned, up until the time this region was set up in 1937, we ran a total of 125 head of cattle, as a maximum, you understand; all the time, but that was the maximum number. When I talked to Mr. Cavanaugh, at one time, he asked me how many cattle we had run at that time, and I told him a total of 125 head of cattle, at one time or another. He

has said I should always put in application for that number, for the land that I am asking for in regard to our water right, and so that is why we always asked for 125 head of cattle.

You understand, when the region was set up they asked how many cattle were run on the land before the Taylor Grazing Act went into effect.

What we are trying to arrive at, there are many factors and factors that the Grazing Service bring up. At first they told us one rule worked, and we worked it out on that basis; and then they said No, it wasn't that rule. Then I worked it out on the next rule they gave me and no, that wouldn't do. Then it has gone down to four different rules, and all of them are different, each time. Each time I have worked it out to our benefit, and it has been wrong; that is, we feel that we haven't been properly helped, haven't been given enough Federal range.

Mrs. HENDERSON. They haven't given us enough land, they've given us more cattle, which shortens the land.

Miss HENDERSON. You understand 15 head of cattle would give us less Federal range, but that region will not carry 15 head of cattle. The Grazing Service——

The CHAIRMAN. What you want is an extension of the range. Is that it?

Miss HENDERSON. If we are entitled to it, from what they have told us. The rules, as I explained, as they were explained to us—from what we understand, we feel that we have not been given a proper amount of Federal range in that. What we want to arrive at, anyone from the Grazing Service will tell us exactly how they go about allotting land on these four prior wells of about nine sections of land in one little spot.

The CHAIRMAN. The water is the base there?

Mr. SPENCE. Yes, sir.

The CHAIRMAN. They have water?

Mr. SPENCE. They have water.

The CHAIRMAN. To carry them as base property for 125 head?

Mr. SPENCE. Yes.

Miss HENDERSON. Yes.

Mr. SPENCE. One hundred and thirteen is what the board has given them.

The CHAIRMAN. Would you be satisfied if you got what you applied for, 125?

Miss HENDERSON. That is what we are entitled to; it is not a matter of satisfaction. We're trying to find out what is justifiable in this case, what is right, and what is not right, and——

The CHAIRMAN. Well, the number that you ran there before the Taylor Grazing Act came into effect; what number did you run there?

Miss HENDERSON. Sixty head of cattle.

The CHAIRMAN. Then you have had at times, 125 cattle?

Mrs. HENDERSON. That was land they had nothing to do with.

Miss HENDERSON. They have told us the number of cattle grazed before the act, and the number of cattle that was grazed after the act, would be a different thing, because the lands are not the same, so they have explained to us. The land in there—the 5-year period preceding the act was based for the number of cattle that you could run in that

5-year period; but it was not public domain. It has nothing to do with—

Mrs. HENDERSON. It had nothing to do with what came back before the law.

Miss HENDERSON. What we are trying to arrive at is just exactly how would this land be allotted under those conditions? There are four prior wells. They were wells in here before the act; but the land is land that all reverted to the Federal range after the act.

Mrs. HENDERSON. None of them are entitled to the use of it because the Government had nothing to do with the land until after the law went into effect.

The CHAIRMAN. My understanding is that there was some homestead filing in there. Is that correct?

Mr. SPENCE. That is correct.

The CHAIRMAN. That reverted to the open public domain after the act went into effect. Is that correct?

Mr. SPENCE. That is correct.

The CHAIRMAN. And they ran their cattle on the homesteads prior to the act?

Miss HENDERSON. Yes.

Mr. SPENCE. Well, there is a question there of whether or not some of their neighbors may have had a verbal understanding with the applicant for the homestead to run his stock on there, even though others may have run on there. There is a point on that.

Mrs. HENDERSON. Well, they have nothing—this was controlled land that the Government didn't have anything to do with when it was returned. Whatever verbal or anything else had been agreed on, it ended.

The CHAIRMAN. That was all out?

Mrs. HENDERSON. All out.

The CHAIRMAN. That is right, whatever agreement was had as to the homestead, that died with the homestead.

Mrs. HENDERSON. Yes; when it reverted.

Miss HENDERSON. Well, that wouldn't affect the situation there; it is strictly a matter of location and water, and distance from that water. How is that land allotted on that situation?

The CHAIRMAN. Well, I don't believe I can answer you right now.

Mr. SPENCE. Mr. Chairman, my own position in this is, as I have expressed it, there have been—I don't know how many, a dozen or more men that have been on that case. I expressed myself a minute ago. I couldn't find anything that would justify a change in the action, and I think that, to say to them, the thing to do would be to carry to an appeal and straighten that out. That would clear it all up, if there is something to be straightened out.

Senator CHAVEZ. How many of your decisions are reversed when they go up on appeals, generally?

Mr. SPENCE. I haven't had any, Senator.

Mrs. HENDERSON. I think there is enough people to adjudicate that and save us the burden and expense of a hearing. Now, the burden and expense—

The CHAIRMAN. Where is your dissatisfaction, Mrs. Henderson? You applied for 125, and you got 113. The difference between 113 and 125; is that what you are dissatisfied with?

Mrs. HENDERSON. We're not allowed enough land; they have given you more cattle, so you don't have to have as much land to feed your—

Miss HENDERSON. Now, this 113, there is another point in that. At the time of the set-up, in 1937, we owned only two sections of patented land, and we were given three and a quarter sections and 20 acres, to be exact, in the allotment. That makes five and a quarter sections and 20 acres. That is all that is concerned. Since then we have purchased two more patented sections, and added to this two patented sections—that could have nothing to do whatever with the original set-up; so it comes back to five and a quarter sections of land, 15 head to the section. You see, on their records, they corrected it recently, and it is 109 that is given now.

Senator CHAVEZ. Let's see if I understand you, Mrs. Henderson. They allowed you 113 head of cattle, but did not give you enough range to take care of that?

Miss HENDERSON. One hundred and thirteen is not the amount they allowed. They corrected that to 109, which was an incorrect statement on their part.

Senator CHAVEZ. Still, that is the problem that faces you. They allowed you so many head of cattle, but did not allow you sufficient land, according to your views, to take care of 109 head of cattle?

Miss HENDERSON. That is, the 125, if they go by the total number. Of course, you understand, we realize in this region that the amount of Federal range is so small that the 4 neighbors would not be able to be satisfied by their full amount, but in a proportionate order.

Mrs. HENDERSON. That is what we want to see. What is the proposal?

Miss HENDERSON. What we want to arrive at is the rule. We have been told by the Grazing Service and the advisory board members there is a 3-mile distance in there; our water is entitled to reach out 3 miles over the land.

The CHAIRMAN. How about that?

Mr. SPENCE. That is one of those guides we use when it can be applied. But in the case of congestion, and heavy competition for a small amount of range, any one rule or combination of rules—

Miss HENDERSON. I hate to contradict Mr. Spence, but it has been applied in that region by our neighbors and in our own case. That is on a section of land—

The CHAIRMAN. Is that true, that you apply one rule to the neighbors, and a different one to them?

Mr. SPENCE. I think not in spirit, Senator. By that I mean that we cannot apply any hard and fast rule anywhere. Certainly there are times when we can't, and times when we can. We have worked these things out, and this congested area has been worked out by an agreement, which is in effect, and which there is a controversy over.

The CHAIRMAN. An agreement between the parties using the range?

Mr. SPENCE. Yes, sir.

Mrs. HENDERSON. I want to get this advice before they go into this other than he would like to bring up.

The CHAIRMAN. What is that?

Miss HENDERSON. This signing up, the land agreements he has reference to.

The CHAIRMAN. You want to get this straightened out first?

Miss HENDERSON. Because this will bring out certain things that have gone on that are not right in the situation, entirely. For instance, now, at the beginning in 1937 we received a notice from the advisory board and the Grazing Service that stated we had been placed in class 2, as a class 2 application, and had been denied Federal range because of insufficient range; and that the other waters would get the first choice of the land. We contested this, and won out; and in public the advisory board and Grazing Service have thrashed this out a number of times, and have voted openly that we had the priority.

The CHAIRMAN. For how many?

Miss HENDERSON. Priority for 60 head. If they were holding just a matter of priority; that is, that the water was developed before the act went into effect; that is what we have reference to, a well priority. Then, in secret, they do something different, and declare that we don't have a priority.

Mrs. HENDERSON. We don't know what it is.

Miss HENDERSON. We cannot fight that situation. They say it is on hearsay; and yet they won't produce any evidence of hearsay. As I understand hearsay, you can't condemn anybody; anyway, that is not evidence. You ask them what hearsay is, and you can't get them to say what hearsay is.

The CHAIRMAN. My understanding is that you have a record here, made by your advisory board.

Mr. SPENCE. Their water is recognized as prior water at present.

The CHAIRMAN. Publicly and privately, and every other way?

Miss HENDERSON. Mother talked with Mr. Spence and Mr. Painter, one day of last week, I guess, and Mr. Spence and Mr. Painter, or Mr. Painter, I believe it was, the one doing the talking, said they did not believe—is that correct—Mr. Painter did not believe that we had prior water, and that is why they were holding back on the land.

The CHAIRMAN. You say now that you have a priority?

Miss HENDERSON. This is the way it seems to be done; in public they will vote you a priority, and then they'll go back and bring out this "nigger in the wood pile," or whatever it is, and take it way from you. Then you thrash it out—

The CHAIRMAN. Mr. Spence has said here in public, and on the record, that you have a priority.

Miss HENDERSON. All right, if we have a priority; now, if that is definitely established, it has been established by Mr. Carpenter and Mr. Cavanaugh.

Mrs. HENDERSON. We have got that, so we don't have to trouble any more.

Miss HENDERSON. Then we want to know how the land is to be divided among these four wells, among the applicants.

Mrs. HENDERSON. On equality.

The CHAIRMAN. Well, we got one part of it answered, can you answer the other?

Senator CHAVEZ. Are the wells alike?

Miss HENDERSON. Yes.

Senator CHAVEZ. Do they all have priority?

Miss HENDERSON. Yes.

Mr. SPENCE. There has been a question, Mr. Chairman, from the very beginning, as I gather from the record, that there was some

question in some, or possibly all, of the waters having been prior. But the advisory board and the Grazing Service have decided that they had prior water, and have had their privileges accordingly. But there is doubt expressed in the record, as I found it, that there was some question, at the time, over not only theirs, but others.

THE CHAIRMAN. Now, I think maybe we can settle it. We have settled it. They have the priority.

Mr. SPENCE. That is correct.

THE CHAIRMAN. It seems to me the rest of it ought to be worked out. Aren't you satisfied now with your priority declared publicly?

Mrs. HENDERSON. How are they going to divide it? Nothing to keep it from dividing with us any more than dividing with others. They are evading it, and they don't divide with us. There is congestion and conflict, there is nothing, just like all the rest. What they do is draw a circle three miles, and overlap a part of that with our neighbor. You put a cross line; that is what they told us. I talked to Mr. Gozie, and he says they denied that, but he says that is the way it was set up when he was in there, but they are not giving it to us. They don't give it to us.

THE CHAIRMAN. You have a permit for 109 head, don't you?

Miss HENDERSON. We have a permit for 109 head, but I can't run 109 head of cattle on $7\frac{1}{4}$ sections of land. That is where the difficulty comes in. They are declaring 15 head of cattle to the section, and it won't run that many. That makes it appear that you have received the number of cattle you should have to fulfill your demands, do you see, but really you have not. Now, may I ask one question—

Senator CHAVEZ. How many head of cattle can you run on it?

Miss HENDERSON. According to Mr. Adair, of the Grazing Service Department, 52 head of cattle on the $5\frac{1}{4}$ sections of land; 70 head if we feed.

Senator CHAVEZ. So you have rights to graze 109, but the land allotted will only take care of 52 under one condition, and if you feed them, so many more?

Miss HENDERSON. Seventy head.

Senator CHAVEZ. That is your trouble.

THE CHAIRMAN. You want more land?

Mrs. HENDERSON. Well, they are not—there is a whole lot to it that has to be straightened out first, before they might mix it up again.

THE CHAIRMAN. Is there any more land to be had?

Mrs. HENDERSON. But our neighbor, with no more land than we have, is not entitled to any more than we have.

Miss HENDERSON. We feel our contesting neighbors have received more land, according to what we understand, than they should have. In other words, our well would not have drawn this water, would have drawn this land, if properly carried out under the 3-mile rules.

Mrs. HENDERSON. In our area, how far can you reach out to divide the land?

THE CHAIRMAN. How do your neighbors compare, in numbers, to yours?

Mrs. HENDERSON. Well, I don't know exactly what you mean.

Miss HENDERSON. The number of cattle; is that what you mean?

Mrs. HENDERSON. Oh, our neighbors, Mr. Sellers, he has got 150 or 200 head, and has bought more land. We have too; but what we used was the 3-mile limit, with all our neighbors established. They

denied that; I told him today they denied it. Now he says yes; he says that is the way it was established in that area, each one could extend 3 miles. Then, when they overlap they draw the line between, and this one gets this side, and this one gets that. But we didn't get it that way.

The CHAIRMAN. Didn't you get your 3 miles?

MISS HENDERSON. Not in that way; no.

Mrs. HENDERSON. We didn't get it like they measured it. Our neighbors testified the same thing. That is the way they was measured. That is the way it was done for them.

The CHAIRMAN. Can you give us any more light on this?

Mr. SPENCE. No, sir; because the details of those early adjudications are not in the record. That is all I have to go by, Mr. Chairman.

Mrs. HENDERSON. All of our neighbors, that is the way some of them had to fight to get that, after it was used that way; and then they wouldn't give it to them. They had to go in and fight it.

The CHAIRMAN. You don't feel like taking an appeal?

Mrs. HENDERSON. I'll tell you why not. We tried it, and it involved a great deal of expense and work, and then we don't know. We went to see Mr. Fred Wilson. Well, in the beginning we thought that we could wrangle it out with them, and get them to do the thing right. We went to see one of the land men, who said they resent lawyers, and for us to try to wrangle it out with them, so we tried for a long time. Finally we went to Mr. Wilson, and he says, "I will investigate it thoroughly." So, for a month, for months, he talked to Mr. Leech, and different ones, you know; and so, at the end, he said this, he said: "It would cost you \$500 to take your case. It would take me 4 or 5 days to examine witnesses," and we would have to pay for the witnesses. But, he said: "I won't take your case, because you have antagonized the board, and there is no chance for you to win." He said: "I don't say you are not in the right, but there would be no use, because you would stand no chance."

The CHAIRMAN. I don't see anything, so far, that indicates you have antagonized anyone. It seems to me Mr. Spence is unusually frank about it. It looks as though he has made quite a study of it. He may not have been able to decide the way you want to decide it.

Mrs. HENDERSON. He hasn't been here very long. He doesn't know too much about it; he hasn't been here very long.

The CHAIRMAN. The trouble is, we have to deal with him. He is on the job now.

Mrs. HENDERSON. He has a lot to learn about our case, yet.

The CHAIRMAN. Yes, he has; I guess that's right.

Mrs. HENDERSON. I'll tell you one thing; now, then, the trouble is this, it is not like civil court; it is a big job to prove anything. You can't hardly prove it when you bring it up and show it. They won't believe it, and it would be hard to prove; but they allotted land to our neighbors who water, and he didn't even own the water. We found that out 5 months afterward and took it up with them, and they didn't know what to say right then. After they saw him they fixed it up and he is running in common with a man, and I can prove he couldn't run in common. The other man didn't have a head of cattle and the land and everything, and the water; and there was no running in common. Nothing shows that they were running in common. That man still has that half section of land, and they won't do anything about it.

When you have a case like that, you have got to get a lot of witnesses, and it is a long ways. It isn't like a civil court. If you fight it in a civil court, why the wrongdoers generally have to pay the cost of the witnesses, and all like that.

The CHAIRMAN. Sometimes.

Mrs. HENDERSON. If you put it in, but here you've got to bear all the burden; and the board, they allot land there, but they know you have got to fight it. They give it to Jim or to Seth and they know you have got to fight it, and 9 times out of 10 you won't. You will drop it, because it is a burden to have to hire a lawyer or like that. Some of them go through with it, but if they win—but the board don't have to, they can do any wrong they want to, and so can the regional grazier, and the Government pays all their expenses. But the little contestant has to pay this all; and even if he takes it through a fight, he has to pay it all. So a lot of them quit and lose.

Miss HENDERSON. Whenever they set a matter, it has to go that way, regardless of whether it is right or wrong. Several board members we spoke to told us it is true. You might prove that it isn't right, or that it is, but it has to go that way regardless. I can name those two officials we spoke to from the Advisory Board, Mr. Birmingham and Mr. Wooster. It makes no difference, if they set a thing it is just set. You can bring up all the proof in the world, positive proof, and if they want it to go that way, it goes that way, regardless of what proof you bring in. It seems that our word is never accepted. Our opponents come in and make a statement and it goes that way.

Mrs. HENDERSON. I've been trying to get the regional grazier to examine in the code or the cases; it says it is the duty of the regional grazier, when there is a complaint put in, to investigate and determine the facts. Which one is telling the truth.

The CHAIRMAN. Well, he says that he has. He says he has investigated, and he has determined the facts, because he has not records before him that caused him to change the decision.

Mrs. HENDERSON. Well, I told him this, I says, at the time of the allotment of section No. 9, it is land rated to a spring, and half of No. 9 allotted to it; that the owner of the spring was not the one the land was allotted to. I says, "Now, I don't ask you to believe me, but you can look at it on the record." I also told him this morning I could prove to him there was no running in common, or nothing, to justify this allotment; but it stays just that way. Then he says get up from these fields and appeal. I says, "I don't want to hire a lawyer. I don't want to get up without a lawyer, because they will fix you so you can't go anywhere anyhow."

Miss HENDERSON. I don't like to disagree with Mr. Spence, but he has not investigated the entire matter. He looked over and investigated a water out there, but we claim a separate water. That is all it amounts to.

Mrs. HENDERSON. A man has bought this spring, and come back, and they are letting him keep it. At the time of the allotment, the other fellow was the one to get it. The other fellow didn't own it. I have been trying to get him to adjudicate that, rather than my having to go into it here, as I tell him, at too much expense.

The CHAIRMAN. I understand he has adjudicated it, within his ability and within the scope—

Mrs. HENDERSON. Why is he letting that man keep that land?

The CHAIRMAN. I don't know that I can answer you. But the law gives you every protection. In other words, you can formulate an appeal. You don't need a lawyer. You have got a bright daughter, there, who could formulate an appeal in an hour or so, as far as the appeal is concerned. It is not a formal proceeding.

Mrs. HENDERSON. This man—is this just? At the time of the allotment the man who the land was allotted to didn't own the water.

The CHAIRMAN. They have found the contrary, probably.

Mrs. HENDERSON. No; he is the owner of that water now, but at the time of the allotment he wasn't.

The CHAIRMAN. How did he get it now?

Mrs. HENDERSON. He bought it; but then I say, that ours was ours at the time of the allotment, not afterward.

Miss HENDERSON. This is the situation in regard to that one particular matter: At the time of the allotment there was section 9 reverted to Federal range. Our water was the only full-time water that came within distance of this, that would be entitled to have it.

Mr. RUTLEDGE. Mr. Chairman, I don't want to interrupt. One of these ladies was in Washington to talk to me about this.

Mrs. HENDERSON. I wish he would wait until we get through here.

Mr. RUTLEDGE. I sent Mr. Cavanaugh from Washington, as fair a man as I've ever been acquainted with. He went on the ground, and he did not change the decision. Mr. Leech has been on the ground in the case a number of times, and has investigated it very carefully. I suppose the other regional grazier before Mr. Spence has tried, and Mr. Spence has now tried, and I see no way that these ladies can be satisfied, except for them to file an appeal, which as you say, doesn't need a lawyer, and will not cost them a great deal. Let's get the thing settled.

Miss HENDERSON. Mr. Cavanaugh had already been on the ground, Mr. Rutledge, when we saw you. You gave us about 10 minutes of your precious time, and you were not in the least concerned, or interested, in any way, whatsoever, with our case. You walked over and turned it over to somebody else. We were there with the idea of trying to get it from you. He had been on the ground before that, but you did not send him afterward.

Mr. RUTLEDGE. I don't see—

Mrs. HENDERSON. You are not interested in the little fellow, anyway, I'll tell you that.

The CHAIRMAN. Let me tell you something. I made an announcement this morning, and I have violated the rule that we set up in this committee a long time ago, in this case, as I have in some other cases. It would be utterly impossible for this committee to hear individual cases. What is more, we haven't the power, nor the right, to review and sit as a court of last resort, in an individual case. We have heard individual cases where the individual cases develop a policy.

You have here, in this case, clearly and distinctly an individual case. It applies to you specifically, and to no one else. Now, the law comes in and protects you. In other words, you have the right to appeal, and as far as \$500 or \$5, or anything else, you don't have to pay anything, scarcely, for an appeal. You can make up the appeal in an hour, and present it. It will be heard and determined, and then you

have gone to the end. If this committee were to say tonight that the decision made by your board should be reversed, the board could thumb its nose at us, because we have no jurisdiction to change that decision.

Miss HENDERSON. We realize that. What we were trying to do was to get some questions answered.

Another question I would like to ask in regard to this, and that is, if Viejo Spring, a part-time water, comes within reach of the land, but in part-time water, admitted part-time, by the Grazing Service. Later they declared that it could have land without a backing water. That backing water also comes within the same distance of the land as the spring, which is the only one that can rate the land. Now, what I mean, Mr. Seller's well is over 3 miles from section 9. Our well takes in practically all of section 9. He could not apply, did not apply, or, if he did, he was turned down on his home well, because section 9 was beyond the 3-mile limit. Then he fixed up this little spring, which will not water one cow a year, and we can prove it, and we protested it at the time of the allotment. But it was accepted as a full-time water, and they stated to us it was close to the water and it would rate half a section of No. 9.

Senator CHAVEZ. Why don't you set out all those facts and make the appeal?

Mrs. HENDERSON. Who to?

Senator CHAVEZ. To the one that the law says you should appeal to.

Mrs. HENDERSON. We know the board is not going to—

Mr. SPENCE. Make the appeal to the Grazing Service.

Mrs. HENDERSON. They're not going to do anything for you. If there were somewhere else—we done tried them.

Mr. SPENCE. Mrs. Henderson filed her appeal to the regional grazier, and it was forwarded to the director's office to schedule the hearing. The hearings officer holds the appeal apart from the regional office.

The CHAIRMAN. What was the answer to it?

Mr. SPENCE. Mr. Chairman, I am not in a position to discuss an isolated detail in there.

Miss HENDERSON. That is what we do, try to get a clarification and understanding. We go to see them and the next time they won't answer you, as it has been. We are seriously trying to find out about this water, water which cannot rate as beyond the 3-mile limit, the spring, which is a part-time water, and they have declared we cannot get the land, but then they say that the spring and the water that back it must be within the 3-mile limit.

The CHAIRMAN. My answer is still—

Mr. SPENCE. Senator, you cannot isolate any one point and make a statement, nor can you remember all the details of a case that are involved.

The CHAIRMAN. If we were to hear this all night we couldn't decide it. I don't know what we would do, because we haven't any power to decide it.

Mrs. HENDERSON. It just isn't right. The board and the graziers are not doing right, and I could prove it if I could get somebody to prove it. What is the use of trying to prove it to them? When you appeal, just like the hearing, they put it in No. 2, so what is the use of a hearing? What is the use of having a hearing, under them?

The CHAIRMAN. You have an individual investigator come out on the ground to examine facts with reference to your appeal. If he took the appeal—

Mrs. HENDERSON. Where would he come from?

The CHAIRMAN. I don't know who it would be. I have no way of knowing.

Mrs. HENDERSON. Well, if I can get it in any way; only through that method, that is a solid block. It's a solid block from Mr. Rutledge on down. It is a solid block; he backs the board, no matter whether they are wrong or right, and they back him.

The CHAIRMAN. You have lost faith in humanity.

Mrs. HENDERSON. I've lost faith in this. I've had experience enough to know there is no use.

The CHAIRMAN. I wish I had the power to decide it, but we have not.

Mrs. HENDERSON. It's too bad there is nothing to relieve being wronged while the board upon the Grazing Service—the little fellow is being taken advantage of by the board and the Grazing Service, and there isn't an investigation that would help that kind of an investigation out.

Senator CHAVEZ. If you make that appeal, there will be an investigation.

Mrs. HENDERSON. I want to appeal it to somebody that wouldn't treat me wrong. There is no use appealing anything to the grazier, no use appealing to—

Senator CHAVEZ. Under the law, that is the only place you can appeal to, Mrs. Henderson.

Mrs. HENDERSON. Well, there ought to be some relief to it on the outside.

Miss HENDERSON. I understand, what this committee is for is to find out how the Grazing Service and advisory boards are handling the grazing matters. Is that correct?

The CHAIRMAN. Yes; that is right.

Miss HENDERSON. In our experience, we have found that the advisory board members do not treat you with just the nicest attitude always. For instance, when my father went to see Mr. Gozie, before he knew anything about this matter, how to get the land or anything, he wanted to talk to him, and he was greeted by, "How do you know you are going to get any land?" On another occasion he went to August Seiss and spoke to him, and he said, "Go see some of the other boys." Recently, at a meeting at which the Grazing Service requested we come, Mother, in her effort to try to find out what the rules are, and whether they are justifiable, asked—

Mrs. HENDERSON. He is not in our district. I thought he might be interested and would tell me. He says, "Factors." I said, "How do you divide this land?" He said, "On factors." I said, "What are factors?" He said, "Hills and gullies and fences." And I said, "How do you mean?" He says, "What are you trying to do, trying to put me on the spot?" Well, would you know anything about that?

Miss HENDERSON. It seems that if the advisory board and the Grazing Service were held more responsible in what they do, they wouldn't be so quick to just hand a piece of land over to somebody because they want him to have it.

The CHAIRMAN. The advisory board is held responsible.

Miss HENDERSON. Well, ours doesn't seem to be. We have gone to them time and time again.

The CHAIRMAN. They are held responsible by those who elect them in the respective districts.

Mrs. HENDERSON. They elect themselves. Now, people haven't got time to go there and vote and get themselves put up, and then to vote on it.

Mr. SPENCE. Mr. Chairman, perhaps we can say to Mrs. Henderson that the Secretary can overrule the Director, or any of the rest of the staff. That is the ultimate end of an appeal, if she wishes to carry it that far.

Miss HENDERSON. But he goes by what you all have to say, doesn't he?

Mrs. HENDERSON. I believe the Grazier examines these things, and the burden of the hearing is put on us, and he can adjudicate.

The CHAIRMAN. Well, there is a fellow by the name of Ickes that doesn't go as anybody says.

Lady, I am sorry, this committee has no power to change the rule that is set down in the way of adjudication of your rights. If we had the power I scarcely see how we could sit here and adjudicate a condition out in the field.

Mrs. HENDERSON. Well, that is it; if you will come out in the field we'll show you what it is. We'll show you that we have been treated wrong, and any other people will show you the same thing. But when we show them, if we show this Grazing Department and the Board that is wrong—suppose I tell you a man don't own some land here, and you have given him, you have rated some land and given it to him, and I tell you that he doesn't own it, and you don't even go to see, and you don't change. Now, what are you going to do with that condition? It ought to be relieved some way, because a lot of little fellows, like me, finally drop it. We held on longer than some of them. There was a whole lot of them treated just like we were. We got some friends over there, and they took some land from him, he said, but he saw it was going to make it cost him more than it was worth. This board has got nothing to lose, and, Mr. Spence, they are all paid, of course. The Government pays; the Government and us have to pay.

The CHAIRMAN. How far is this place from here?

Miss HENDERSON. One hundred and fifty miles.

The CHAIRMAN. Are you going that way, Mr. Rutledge?

Mr. RUTLEDGE. No, sir.

Mrs. HENDERSON. I would show you on the ground. That is what I say, you come up and tell them, and they don't want to believe it, because it doesn't fix it like they want it, and they don't want to change it. You just show them, but they don't want to be convinced, and you can't do anything with them.

The CHAIRMAN. Well, that settles it.

Mrs. HENDERSON. Is the Government going to allow people in office, that way, to treat the little fellow like that?

The CHAIRMAN. No; the Government—the law has fixed a way for you to get full justification in every particular.

Mrs. HENDERSON. I'd be afraid for it to go through their hands. That is the truth; I know I would.

The CHAIRMAN. The law provides a way for you to go clear to the Secretary of the Interior.

Miss HENDERSON. If you go by a hearing, it takes a good attorney to bring out the points.

The CHAIRMAN. It doesn't take a good attorney, nor a bad attorney; it doesn't take anyone. All you have to do is present your appeal in the most simple form of statement, and there will be an investigator go out there, and there will be a record made of the whole proceedings, all the facts in the case that you want to present, just as it is here. You can take it clear through to the Secretary of the Interior.

Mrs. HENDERSON. Where does he come from, this investigator?

The CHAIRMAN. Where does he come from?

Mrs. HENDERSON. Yes.

The CHAIRMAN. It is not a question of where he comes from; it's a question of where he goes to.

I think we have given all the time we can possibly give to you. I wish I could give you more. I wish I could decide for you. The machinery is set up, however, and this committee has no power whatever on the premises.

Miss HENDERSON. I thought this would show you how the lands were being administered under the board's system. There seems that there ought to be somebody who would represent the little man.

Mrs. HENDERSON. The little fellow is getting cheated.

The CHAIRMAN. Perhaps they are, but don't you see that it is a single case. Isn't that plain to you?

Miss HENDERSON. There are lots of others in our neighborhood that are small ranchers and would have gone on with their cases but it was too expensive and there was no one on the board to represent them, to help them out, and there is no representation for them at all in any way.

Mr. RUTLEDGE. Could I ask a question?

The CHAIRMAN. Oh, yes.

Mr. RUTLEDGE. One of your neighbors has 150 head of cattle?

Miss HENDERSON. He probably has more than that. He bought a lot of land.

Mr. RUTLEDGE. What is the other neighbor?

Miss HENDERSON. Mr. Cloud.

Mr. RUTLEDGE. What does he have?

Miss HENDERSON. He claimed to have 100 head of cattle. About 60 was what he was supposed to have.

Mr. RUTLEDGE. What were the others? You named about four, I believe.

Miss HENDERSON. Mr. Sellers claimed 100. I don't know what Mr. Sanchez claimed, but he must have at least 300.

Mr. RUTLEDGE. There are three in there of very much the same size.

Miss HENDERSON. But the truth of it is Mr. Sellers ran about 35 head of cattle, Mr. Cloud 60 head, and we ran 60 head. Mr. Sanchez ran in the neighborhood, I expect, of 300 head.

The CHAIRMAN. I am sorry, but we can't give you any more time.

Mrs. HENDERSON. Well, the way I look at it, it is a solid block from way up there down to here, and nothing can be done about it. That is the reason I am not going to vote for Mr. Roosevelt.

The CHAIRMAN. I am sorry, madam, I tried to find a way out for you.

Mrs. HENDERSON. Well, you have to go through the enemy line.

The CHAIRMAN. You don't have to get through the enemy line.

Mrs. HENDERSON. If we did go up with the appeal, we would have to get witnesses and the like.

The CHAIRMAN. Well, why don't you try?

Mrs. HENDERSON. I have done tried every angle in the world; like a friend of mine, I have tried every angle. Anyhow I don't think that it's any use.

Senator CHAVEZ. There are more poor people than rich people. You can vote them out.

Mrs. HENDERSON. We're not able to vote. The poor people can't make these trips, go over there to vote. It costs to vote for them.

Senator CHAVEZ. Mrs. Henderson, I think the advice of the chairman is good. You try to make that appeal.

Mrs. HENDERSON. I don't want to have to go to the board.

The CHAIRMAN. You don't have to go to the board. It has passed the board—

Mrs. HENDERSON. Nor to the Grazing Department?

Mr. LEECH. We can assure you it won't cost any money. The record doesn't cost a thing.

Mrs. HENDERSON. The board members ought to be penalized in some way so they would be very careful how they treat these little fellows. Not all the board members are honest. I don't know whether there is any that are honest or not. I don't think so.

The CHAIRMAN. Is there anything more to come up this evening?

Mr. STEWART. Mr. Chairman, I have been thinking about what Mr. Presley said concerning that Navajo taken to the Crown Point hospital, and, through perhaps the wrong diagnosis, he was later operated on for appendicitis and died. If he would give me the name of that Navajo, I would like to look into the hospital records and have your permission to write to the investigator with the record as to what I find.

The CHAIRMAN. Well, it's all right if you want to. I was at a loss to know what its pertinency was to the whole situation.

Mr. STEWART. I would like to look into that particular case, if I could get the name of that individual.

The CHAIRMAN. It's all right. I don't think it is germane to the hearings, at all.

Now, we have reached a sag in our proceedings here. Is there anything more to come up right now on this district 7 matter?

Mr. NAYLOR. There was a request for the letter from Mr. Woehlke.

Judge SETH. I thought Mr. Naylor had the minutes.

Mr. LEECH. Mr. Naylor tells me he looked through the minutes he had with him and didn't find it. Do you have it, Mr. Dixon? That is the letter of August 8, 1941, from Mr. Woehlke.

The CHAIRMAN. Telling them to increase the small allotments up to 150. That is what Mr. Presley, who testified, said. The letter was to go into the record. Now, if the letter exists, let's have it, and if it doesn't exist, let's find out.

We are about to take a recess until tomorrow morning. We will have to proceed along a little faster than we did this evening.

The committee stands at recess until 9:30 tomorrow morning.

(Recess until 9:30 a. m., Wednesday, September 8, 1943.)

ADMINISTRATION AND USE OF PUBLIC LANDS

WEDNESDAY, SEPTEMBER 8, 1943

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE,
ON PUBLIC LANDS AND SURVEYS,
Albuquerque, N. Mex.

The CHAIRMAN. The meeting will come to order.

Are there any matters further to be presented on district 7?

Mr. LEE. I have a list of the 17 Government agencies that I would like to file with the committee.

(The list is as follows:)

Grazing Service.
Forest Experimental Range.
Federal Power and Light.
Soil Conservation Service.
Bureau of Reclamation.
War Department.
Farm Security Administration.
Indian Service.
Agricultural Adjustment Administration.

Resettlement Administration.
General Land Office.
Fish and Wildlife Service.
National Park Service.
State Game and Fish Commission.
State Park.
National Monument.
State Land Office.

Mr. STEWART. Mr. Chairman, there are some Navajo people here from different parts of district 7 and, if it is agreeable, they would like to be heard after lunch.

The CHAIRMAN. Very well.

Is Mr. L. B. Moore here? Mr. Moore, will you come forward, please?

Mr. Moore, we understand from the report made to our committee by our investigator, that you have an individual case, and what you want is an independent investigator, is that correct?

Mr. MOORE. That is correct.

The CHAIRMAN. Who is the grazier in that area?

Mr. SPENCE. I am, Senator.

The CHAIRMAN. Have you come into this case?

Mr. SPENCE. I have reviewed the case, but I am not fully familiar with the details.

The CHAIRMAN. Well, this is another individual case and it is impossible for this committee to take up these individual cases with you, where they request an outside investigator and want a hearing. It does impress the chairman of the committee that such might be made available and that it would probably go a long ways toward ironing out some of these impressions that individuals have as to the local officials.

I have no desire to inject myself into the modus operandi for these cases, but it does seem to me that you could cut across lines, get away

from heartache. When they call or ask for an individual investigator, I think it would save you and the committee and everybody else a lot of trouble. That is only a suggestion I have. I don't know whether it is a good one in this case, in view of the fact that the local grazier is not familiar with the case.

Mr. LEECH. Mr. Chairman, we will be very glad to make such an investigation from the office of the Director, and also collaborate with somebody from Secretary Chapman's office in this case.

The CHAIRMAN. It seems to me that answers the question.

I want to be frank with you, last night the record made here, and the scene presented has not rested very well on the chairman. I don't like to leave the matter in that condition, and I wonder if they couldn't have a similar arrangement with reference to the Henderson case.

Mr. LEECH. I talked with them last evening, Senator, and told them I would be glad to go thoroughly into the case again and have it thoroughly investigated. Mr. Hamblin met with them this morning to further talk the matter over, but we will give it the proper attention.

The CHAIRMAN. May I suggest, and I hope the suggestion will be taken in the spirit in which it is intended, if they were to know the record and what the facts are and the reasons for the determination, perhaps that would iron out some of the suspicions and one thing and another that arise.

Pardon my suggestion; I don't think it is in place. It is simply a thought. I think that will fix everything up for you, Mr. Moore.

Mr. MOORE. Yes.

The CHAIRMAN. The gentleman in charge of the Grazing Service will arrange the date and arrange everything for you. That relieves my mind of a lot of worry pertaining to the Henderson case that was on here last night.

Is Mr. Arthur Bibo here? I understand that he has a counsel in this case.

Mr. WILLIAM T. O'SULLIVAN. Not his counsel, Mr. Chairman, I am acting rather as his ears. He is deaf.

The CHAIRMAN. Will you state your name, please?

Mr. O'SULLIVAN. William T. O'Sullivan of Albuquerque.

The CHAIRMAN. You may aid him in any way that you see fit.

STATEMENT OF ARTHUR BIBO, CUBERO, N. MEX.

Mr. BIBO. I came here to deal with an issue regarding Taylor Grazing District No. 2.

The CHAIRMAN. Is the grazier here?

Mr. LEECH. Yes, sir.

Mr. BIBO. Mainly it concerns the so-called South Acoma purchase area, originally in the district but now is out.

My name is Arthur Bibo; I am 44 years old. I was born down here in New Mexico, and I operate a ranch at Cubero, 60 miles west of here. The home ranch is there. I have operated there and lived there for the past 32 years.

In bringing up this issue I have to more or less explain to you what I have in mind, that you may clearly understand that I am not trying to bring this issue before you, any personal grievances I have against the Office of Indian Affairs, or the Indian Service. I did not

come here to antagonize any governmental agency or officials or employees.

I have had the opportunity to place before the Undersecretary of the Interior a request asking for the transfer of jurisdiction from the Office of Indian Affairs back to the Department of Taylor Grazing certain areas of this 11-township area, which the Office of Indian Affairs prefers to refer to as the South Acoma purchase area. This is my first appearance, first opportunity to make a public utterance. I have not been in public mainly because I don't hear well. There is no objection in my coming, but I haven't been able to hear a word of your statements made yesterday, which would have helped me greatly. But I did understand you rather recently had, Mr. Chairman, a letter that was sent in here, mailed to Senator Hatch, because you felt that someone was trying to intimidate your appearance here, or your committee.

I would like to know if I quoted that properly? The reason I bring that up is this, I want you to understand my statements have to be limited here, and I want to make this report as short as I possibly can. I, too, can state that you are fortunate.

For the past 2 or 3 or 4 years it has been the policy of the Office of Indian Affairs, or the Indian Service, or other Government officials, to try to intimidate me by things they have written, things they have said, and things they have done, by their actions. I may not be quite as brave as you are, in order to make a statement, but at the same time I felt possibly I am too dumb to be intimidated. I have not been frightened one bit by their attitude, and I am coming here to present this case. I realize that I have to show to you and your committee, and you will look it over eventually, the proper respect, and I have to show these Government employees, or officials, the respect that is due them.

I had in mind coming here and telling you in the only words I have, whether hard and ugly or not, just the issue, because it isn't merely a transfer of jurisdiction. As far as the management is concerned of this area, it has reached a broader scope than that. In other words, I feel that no departmental order will ever settle this issue, and there is a very sorry circumstance has come up there which has made it very disagreeable for non-Indian settlers in that particular area, and though I mentioned some of the facts that happened there to bring forth this issue, I want you to understand that if I blame them it pertains to the Indian Service's attitude toward me. I am only mentioning them insofar as they pertain to the issue at large; as far as they affect all the non-Indian settlers. If I am allowed to express it properly, I think you will see there is a broader issue involved and that some definite solution of this situation has to be arrived at. I feel that it will be up to you and to your committee to solve that situation, for it is as broad an issue as you have dealt with, yesterday with the No. 7 district.

I could not hear one word of the testimony, either for or against.

Now, as I review this issue, I first tried to see if there was some law passed by Congress which gave this Indian Service, or the Office of Indian Affairs, the right to acquire additional lands and add them to reservations in our particular locality. As was shown on those maps, all the yellow areas added onto the Navajos, the particular area being Acoma Pueblo and Laguna Pueblo.

I am no lawyer, I have had very little experience in looking it up. I had to get someone to get the information for me. I have a little information here with reference to the two codes. I would like to read those to you and then proceed to tell you what I have to say about this issue.

The CHAIRMAN. May we have the district designated on the map. Mr. Leech?

Mr. STEWART. This gives a very good picture of the area that the gentleman referred to [indicating]; this shaded area is the so-called 11 townships. This is the Acoma Reservation; and this dark-shaded is the so-called 11-township area this gentleman refers to.

Mr. O'SULLIVAN. At this point, Mr. Chairman, we have a colored photograph made and supplied by the Soil Conservation Service, known as the land status map of New Mexico, and brought up to date as of February 1941. Since then considerable additions, I understand, have been made to Indian lands. This shows very definitely that the land referred to by Mr. Stewart south of the Acoma Pueblo, which is on the large map shown in brown as compared to the yellow of the pueblo here on the S. C. S.'s map, is also shown in yellow, indicating that it is all Indian land. I ask that that be received into evidence for filing with the committee.

The CHAIRMAN. Let's have a little explanation here. The pueblo lands are in yellow on the big map and here on this map?

Mr. O'SULLIVAN. Solid yellow.

The CHAIRMAN. Where are the lands in question here on this map?

Mr. O'SULLIVAN. That is the cross-barred yellow, immediately south of the reservation itself.

The CHAIRMAN. Then there is a small cross-barred square just above the pueblo. Is that a part of it?

Mr. O'SULLIVAN. Anything in yellow there, Mr. Chairman, is Indian land.

The CHAIRMAN. There is a cross-bar yellow and the solid yellow?

Mr. O'SULLIVAN. That is the original reservation. The cross-barred yellow is acquired land for addition to the reservation, in fact, but not in name.

The CHAIRMAN. Now, where is the land in question, depicted on the big map?

Mr. O'SULLIVAN. Immediately south of the solid yellow on the big map.

The CHAIRMAN. How is it depicted here?

Mr. O'SULLIVAN. In cross-barred yellow immediately south.

Mr. BIBO. The codes that I refer to, Mr. Chairman, United States Code, title 43, section 150, public land laws, enacted on June 30, 1919. It reads as follows:

No public lands of the United States shall be withdrawn by Executive order, proclamation, or otherwise, for use as an Indian reservation, except by an act of Congress.

The other code I refer to is United States Code, title 25, section 211, the Indian land laws, enacted May 25, 1918:

No Indian reservation can be created, nor shall any addition be made to one heretofore created within the limits of the State of New Mexico and Arizona, except by an act of Congress.

So far as referring to these two codes, or acts, I tried to figure out how it came about that the Office of Indian Affairs for these Pueblos

have acquired all this additional land surrounding this reservation, if there has been no legislation passed repealing those two codes. I am not as familiar with those issues as you are. It brought to my mind, trying to figure out, then, possibly, that there was some part of the 1934 Indian law that in some way, something in those laws, possibly, nullified those two acts.

The CHAIRMAN. Mr. Havell, do you care to answer that?

Mr. HAVELL. No, Mr. Chairman, I am not familiar with that phase of the law. That is Indian law, not public-land law.

Mr. STEWART. I would like to make a comment on the Acoma 11-township area. It is one of those so-called submarginal project areas. Lands purchased by the submarginal land program were turned over to the administration of the Indian Service, by one of the several Executive orders which I mentioned yesterday, and which I am to furnish the committee for the record.¹

Interspersed among these checkerboard railroad lands, and others that were purchased, was, and still is, public domain.

This gentleman here quoted certain acts of Congress which contained prohibitory language as to the addition of public domain and others to Indian reservations within the State of New Mexico and the State of Arizona. The public domain within these 11 townships was administratively turned over to the Commissioner of Indian Affairs for administration under authority of section 4 of the act of March 3, 1927. The statute reference to that, I believe is 44 Statutes, page 1347. That section 4 provides that in effect—this is subject to correction after reading of the statute—that no further additions or changes in the boundaries of existing reservations heretofore made by treaty, Executive order, proclamation, shall be made except with the consent of Congress, provided, however, that this prohibition shall not apply to temporary withdrawals by the Secretary of the Interior.

Now, then, these public-domain lands within these 11 townships were withdrawn pursuant to that authority, pending legislation proposed to add a portion of the 11-township area permanently to the Acoma Reservation.

The CHAIRMAN. Was any act offered to Congress carrying out the proposal?

Mr. STEWART. No, sir.

The CHAIRMAN. There never has been one offered to Congress?

Mr. STEWART. That is correct.

The CHAIRMAN. And the only act that has been offered to Congress bearing on lands within the State of New Mexico was rejected by Congress, and that had to do with the lands in what is now known as district 7?

Mr. STEWART. The Navajo proposed extension; that is correct.

Senator CHAVEZ. There was another act submitted by the Indian Service to Congress, in addition to the Pueblo, the Red River district at Taos County, that never became a law either.

Mr. STEWART. That is correct.

The CHAIRMAN. Mr. O'Sullivan.

Mr. O'SULLIVAN. I would like to ask Mr. Stewart if he could give us some idea as to the extent of the temporary power to withdraw. I understand that that power was exercised 5 or 6 years ago for the sole

¹ Copies of the Executive orders are inserted earlier in this record.

purpose of protecting the land pending the enactment of legislation which has never been enacted. How long is "temporary"?

The CHAIRMAN. That reminds me of the incident of the two colored fellows after the World War who were working at Brest, in France, and one said, "I am getting tired of this. I want to go home. I only went into this thing for the duration of the war, and the war am over, and I want to go home." The other fellow said, "Yes, the war am over, all right, but that there duration, that am still going on!"

Mr. STEWART. I think the chairman has really given the answer to the question.

Senator CHAVEZ. Now, Mr. Stewart, in your position, or the position of the Service, I should say, at the moment, is that until you do get legislation the purchase made south of the Acoma Pueblo withdrawal is only of a temporary nature?

Mr. STEWART. Yes, sir.

The CHAIRMAN. Well, now, let's go back a little into Mr. Stewart's explanation. These lands in brown, you call them by a certain name?

Mr. STEWART. The 11 townships.

The CHAIRMAN. The 11 townships; so, for convenience, we may designate it as the 11-township withdrawal. Now, they were purchased under the submarginal-land program?

Mr. STEWART. Yes, sir.

The CHAIRMAN. Will you cite the statute, please, that provides that lands acquired under the submarginal program were to pass to Indian jurisdiction, or were to be held aside for the use of the Indians, or were to be turned over to the Indians, or anything to that effect?

Mr. STEWART. I submitted for the record yesterday the authority of the submarginal-land program to set up Indian demonstration projects, and cited in one of these exhibits the authority of the President to designate the use for which such lands could be designated. It is in that authority which was conferred on the President to so designate. Mr. Chairman. It is in the record there somewhere.

The CHAIRMAN. Yes; I recall that. You read into that statute, then, the power of the President to designate these lands as Indian project lands?

Mr. STEWART. Yes, sir.

The CHAIRMAN. Notwithstanding the fact that you have specific statutes that prohibit the extension of reservations?

Mr. STEWART. Yes, sir.

Senator CHAVEZ. And that those statutes refer to Executive orders?

Mr. STEWART. That is correct. Of course, those statutes have for their base the utilization of public domain additions. These were purchased by the United States. There is a line of differentiation there.

The CHAIRMAN. Very well.

Now, it is probably impossible for the witness to have heard the colloquy, so he will be without that information as he proceeds with his discussion. That is regrettable, because I would like to have him understand what we are talking about, but I don't know any other way to get it to him.

Mr. BIBO. Mr. Chairman, in proceeding, if I should repeat some issue mentioned now, you will have to stop me. I couldn't hear one word of it.

I would like to put up a map here, drawn up by the Soil Conservation Service Office, copy of photographs taken of that area, drawn to scale. I can better explain the issue. The issue insofar as it pertains to my operations and the other Indian settlers in that territory—

Mr. O'SULLIVAN. That is the so-called South Acoma Purchase Area management prepared by the Soil Conservation Service.

The CHAIRMAN. What is that designation?

Mr. O'SULLIVAN. The new Indian name they have given the 11-township area, the Indian name, "South Acoma Purchase Area." The reservation is here [indicating], and these are the 11 townships.

Mr. BIBO. In other words, to explain this issue, I have to explain it on this map. This is the 11-township area referred to. Now, the Indian Service prefers to call it the South Acoma Purchase Area. These two townships here are south of the original Acoma grant set aside by Executive order for this Acoma Pueblo, prior to the purchase of railroad land with Resettlement money, included in these 11 townships.

The CHAIRMAN. When were those two townships set aside?

Mr. BIBO. I think it was in 1932, or thereabouts. These two townships were set aside by Executive order.

The CHAIRMAN. That was before the purchase?

Mr. BIBO. Before the purchase of this area. That was to relieve the congested condition that was in the pueblo. It did not solve the situation; so in the purchase of this land here, this additional area was acquired. As I understand it, a study was made, a survey was made of it, in order to see how much of it could be acquired for Indian use, taking into consideration patented lands owned by the settlers, and the locations that were there, non-Indians.

The CHAIRMAN. How were those two townships set aside, by Executive order?

Mr. STEWART. Right in here those were set aside by an Executive order, considerably earlier than 1932, quite a lot earlier.

The CHAIRMAN. How do you reconcile that with the statute prohibiting the making of Executive orders?

Mr. STEWART. I believe they were set aside prior to that statute. We will get the record on that.

The CHAIRMAN. What do you know about this, Mr. O'Sullivan?

Mr. O'SULLIVAN. We have not been able to find from the record what the dates were of the Executive orders.

Mr. BIBO. When the Government took over this land, took over the management of it and created the Rio Grande Interdepartmental Committee, that committee was organized to handle this particular area, when it was put under the jurisdiction of the Grazing Service in district 2. Am I correct there?

The CHAIRMAN. State that again.

Mr. BIBO. When this Rio Grande Interdepartmental Board was created to manage the 11-township area, that was at the particular time that area was put under the jurisdiction of the Taylor grazing office. In other words, it was in Taylor Grazing District No. 2. Am I right there? That the management was under the interdepartmental committee?

Mr. LEECH. Yes; I believe that it was eliminated from the grazing district, grazing district 2.

Mr. O'SULLIVAN. Not eliminated from district 2, until December 23, 1938. Prior to that it was part of grazing district 2, but managed by the interdepartmental committee.

Mr. JOHN ADAMS. Mr. Chairman, might I make a statement? At the time the various Indian purchases were made in the Rio Grande watershed, the final disposition of the various purchase areas was placed before the committee, who made recommendations to the two Secretaries.

The CHAIRMAN. What committee?

Mr. ADAMS. The Rio Grande committee.

Mr. CHAIRMAN. Now, you say at the time that the Indian purchases were made—

Mr. ADAMS. That is correct.

The CHAIRMAN. Was that, with reference to the area we are now discussing, Indian or submarginal?

Mr. ADAMS. Properly speaking, that was a submarginal purchase.

The CHAIRMAN. You call it an Indian purchase, it was really purchased for the Indians, but it was called submarginal, is that right?

Mr. ADAMS. As I recall, the original recommendations were for the rehabilitation and aid of the Indians.

Now, in 1937 the Rio Grande committee made certain recommendations, and as it refers to this particular area, 11 townships, I might read the recommendations:

That the authority of the Office of Indian Affairs to maintain, administer, and develop the projects and grants listed in section 1 of these recommendations, except the so-called Sacred Area of the Ramon Vigil, and except the Isleta purchased lands, be delegated, by agreement between the two agencies concerned, to the Soil Conservation Service of the Department of Agriculture during the period of rehabilitation, until the Indian Service is in a position to take over the administration and development of these areas with its own personnel and funds.

The administration of these areas shall have for its purpose the conservation of soil, water, forage, and timber resources for the benefit of the Indians entitled to use them.

I would like to place a copy of these recommendations with the committee.

(The matter referred to is as follows:)

OCTOBER 27, 1937.

INTERDEPARTMENTAL RIO GRANDE COMMITTEE—RECOMMENDATIONS FOR TRANSFER OF JURISDICTION, ALLOCATIONS OF USE-RIGHTS AND ADMINISTRATION OF RESETTLEMENT ADMINISTRATION'S INDIAN LAND-PURCHASE PROJECTS IN NEW MEXICO

The report and the recommendations of the Interdepartmental Rio Grande Committee propose a unified Federal land-use adjustment program for the upper Rio Grande watershed. The proposed program is based on the necessity of providing conservative management for the entire watershed in order to protect and restore the basic resources of soil and water, and of making accessible to the noncommercial rural population a larger share of all productive resources.

In the subjoined recommendations the Committee is applying the principles underlying its report to the allocation of jurisdiction and administration of certain grazing areas in the watershed recently acquired by the United States. An effort has been made so to dispose of the jurisdiction and administration of these grazing areas that such disposition will fit into the pattern of the land-use program outlined in the Committee's report.

The areas in question were Indian land-purchase projects undertaken by authority of and with funds provided by the National Industrial Recovery Act and the Emergency Relief Appropriation Act of 1935 for the "prevention of

the misuse of land by erosion or other causes and a restoration of land productivity," and the "rehabilitation of Indian population by acquisition of lands to enable them to make appropriate and constructively planned use of combined land areas in units suited to their needs." These projects were taken over and in large part completed by the Resettlement Administration. Upon the transfer of the Resettlement Administration to the Department of Agriculture jurisdiction over these projects became vested in the Secretary of Agriculture who later delegated his authority to the Farm Security Administration.

The insistent local demand for the allocation of these grazing lands to non-Indian residents arose out of the extreme shortage of range available to the livestock of the rural noncommercial population of the upper Rio Grande basin, a shortage fully rescribed in the Committee's report. The Pueblo Indians form part of this undersupplied noncommercial rural population. The erosion-control and Indian rehabilitation program resulted in placing, in round numbers, 750,000 acres of depleted and eroding grazing land under option. Of this amount, the purchase of 701,100 acres was completed September 30, 1937.

In the allocation of temporary use-rights to these depleted grazing areas, the Commissioner of Indian Affairs agreed with the Soil Conservation Service and the Resettlement Administration that, in addition to the urgent requirement of controlling soil erosion and rehabilitating Indian economy, the pressing needs of the non-Indian subsistence population should be given consideration pending the execution of a broad watershed-control and range-readjustment program. Such a broad program is recommended in the report of this Committee.

Negotiations between the interested Federal and State agencies culminated early in 1936 in the following allocations of temporary use rights:

For exclusive Indian use: Bernabe Montano grant, Borrego grant, Espiritu Santo grant, and Isleta purchases.

For exclusive non-Indian use: South half of Lobato grant and San José grant.

For partial Indian use, surplus grazing capacity to non-Indians: Sebastian Martin grant, Caja del Rio grant, Ramon Vigil grant, and La Majada grant.

Unassigned in original allocation agreement: Sia-Santa Ana purchase project exclusive of the Borrego grant, Laguna purchase project exclusive of the Montano grant, Acoma purchase project, and Polvadera grant.

By agreement between the Indian Service, the Soil Conservation Service, and the Resettlement Administration, the Soil Conservation Service undertook the physical rehabilitation, with the assistance of the Indian emergency conservation work organization, and the administration of the following purchase projects during the rehabilitation period: Bernabe Montana grant, Borrego grant, Espiritu Santo grant, south half of the Lobato grant, Sebastian Martin grant, Ramon Vigil grant, Caja del Rio grant, and La Majada grant.

These grants are at present administered by the Soil Conservation Service. This Service has developed management plans for these areas and has allocated use rights to the adjacent non-Indian population on the basis of demonstrated need and to certain pueblos in accordance with the agreement previously mentioned.

No conservation or administrative work has been done on either the San Jose or the San Ysidro grants. The purchase of the Polvadera grant has not been completed as of this date. The Sia-Santa Ana, the Laguna, and the Acoma purchase projects contain within their exterior boundaries considerable bodies of public domain withdrawn either for Indian-use adjustments or under the applicable provisions of the Taylor Grazing Act; they also contain tracts of State and of privately owned patented land. On the Laguna and Acoma purchase projects the Interdepartmental Rio Grande Committee in May and June of this year made certain temporary allocations of grazing privileges while the Indian Service and later, the Farm Security Administration administered parts of these areas, but as yet no effort has been made to place these areas under actual conservative management.

Administration of the Gabaldon grant was delegated by the Resettlement Administration to the Forest Service under an agreement between the Indian Service and the Resettlement Administration dated January 19, 1937.

RECOMMENDATIONS

The committee finds that the allocation of temporary grazing privileges under the agreement of May 1936 between the Indian Service, the Resettlement Administration, and the Soil Conservation Service and the introduction of con-

servative management have on the whole, been in furtherance of the purposes of these projects as these purposes are quoted above.

The committee therefore recommends that in the main the original allocations of use rights be confirmed by the following actions:

1. That the Secretary of Agriculture recommend to the President that the jurisdiction of the Bernabe Montano, the Borrego, the Espiritu Santo, and the San Ysidro grants, the Isleta purchased lands, and the so-called sacred area within the Ramon Vigil grant be vested by Executive order in the Secretary of the Interior for the Office of Indian Affairs.

2. That the jurisdiction of the Caja del Rio, of La Majada, Ramon Vigil, south half of Lobato, the Sebastian Martin, and of the San Jose grant remain with the Secretary of Agriculture pending action by the proposed upper Rio Grande Board on the final assignment of jurisdiction and use.

3. That the authority of the Office of Indian Affairs to maintain, administer, and develop the projects and grants listed in section 1 of these recommendations except the so-called sacred area of the Ramon Vigil and except the Isleta purchased lands, be delegated, by agreement between the two agencies concerned, to the Soil Conservation Service of the Department of Agriculture during the period of rehabilitation until the Indian Service is in a position to take over the administration and development of these areas with its own personnel and funds. The administration of these areas shall have for its purpose the conservation of soil, water, forage, and timber resources for the benefit of the Indians entitled to use them.

4. That the present authority of the Farm Security Administration to maintain, administer, and develop the projects and grants described in section 2 of these recommendations, and of the Polvadera grant when its purchase is completed, be transferred to the Soil Conservation Service for the benefit of the subsistence population adjacent to these areas, pending final allocation of jurisdiction and use on recommendation of the upper Rio Grande Board proposed in the report of this Committee. Pending such final allocation the existing Indian use of these grants shall be maintained.

5. That the Secretary of Agriculture recommend to the President the transfer of jurisdiction of the lands acquired by the United States in the Laguna, the Acoma, and the Sia-Santa Ana projects to the Secretary of the Interior for the Office of Indian Affairs for the use and benefit of Indians and of the resident non-Indian subsistence population; that the Secretary of the Interior transfer jurisdiction of the public domain in the projects to the Office of Indian Affairs for the benefit and use of Indians and of the resident non-Indian subsistence population; that the Department of Agriculture and the Department of the Interior, through their appropriate bureaus, simplify the still complex ownership pattern in these projects by consolidating feasible areas through the purchase or exchange of the remaining non-Federal lands for the use of Pueblo Indians and of the Canonicito group of Navajos, the disposition of the remaining parts of the projects containing unconsolidated areas of mixed use and ownership status to be made on recommendation of the proposed Rio Grande board.

6. That the authority of the Office of Indian Affairs to maintain, administer, and develop the projects and grants listed in section 5 of these recommendations be delegated to the Soil Conservation Service of the Department of Agriculture during the period of rehabilitation until the Indian Service is in a position to take over the administration and development of these areas with its own personnel and funds. The administration of these areas shall have for its purpose the conservation of soil, water, forage, and woodland resources for the benefit of the subsistence population entitled to use them.

7. That the Office of Indian Affairs agree to relinquish, upon recommendation of the proposed upper Rio Grande Board, grazing use on the Espiritu Santo grant permitted to the livestock of the Laguna Indians, which grazing use may thereafter be allocated to resident non-Indians who have agreed to the conservative management of the private, leased, or other lands used by them in their noncommercial livestock operations; this transfer of Laguna grazing use on the Espiritu Santo grant to be contingent on the provision of additional range with equivalent grazing capacity for the Laguna livestock closer to the Laguna Reservation. The lands acquired under the existing purchase program for the benefit of the Lagunas and Acomas shall not be used to provide the equivalent grazing capacity mentioned in the preceding sentence.

II

In applying the principles underlying its report to the allocation of jurisdiction and use rights of the Indian purchase areas in the Rio Grande watershed, the Committee emphasizes the necessity of transforming programs of land acquisition for the specialized requirements of various Federal agencies into an integrated Federal-State program designed to bring about conservative management of the watershed as a whole and economic readjustments for the benefit of the entire rural subsistence population.

Realizing the vital necessity of launching such an integrated Federal-State program, the Office of Indian Affairs has agreed to a waiver of its claim to the jurisdiction and use of certain parts of the Indian purchase areas. This waiver on the part of the Office of Indian Affairs is contingent upon the approval and vigorous prosecution of the recommended Federal-State land-use adjustment program.

In addition to the Indian purchase program other Federal agencies have recently acquired land for special purposes within the watershed. The Committee recommends that the multiple uses of such recently acquired areas be given due consideration and that these areas also be considered available for the purposes of the broader watershed adjustment program. One of these recently acquired areas, the Taos land-use adjustment project of the Resettlement Administration, should be given early consideration by the proposed Rio Grande Board concerning its administration and use.

The proposed Board should also give early consideration to the delineation of a purchase program of such scale that it can be undertaken immediately by the Bureau of Agricultural Economics in the Department of Agriculture under title III of the Bankhead-Jones Farm Tenant Act and which will be designed to place in Federal ownership those areas most critical from the standpoint of erosion damage, and which are not now being used exclusively by the subsistence populations, but are greatly needed by them. The Committee believes that the purchase of certain non-Federal lands west and north of the Espiritu Santo grant and in Cuba Valley are of primary significance from these points of view and should be given first priority in a projected purchase program.

There are throughout the critical areas of the watershed scattered an isolated portions of the public domain outside of any existing grazing district and without management or control of any kind. In the aggregate these scattered tracts constitute a considerable acreage of great importance to the rural subsistence population in the maintenance of its domestic livestock. In its report the committee recommends the creation of one or more grazing districts under the provisions of the Taylor Grazing Act by the Secretary of the Interior, with special rules and regulations governing their administration and use. The preservation, protection, and proper use of this scattered public domain within the framework of the proposed Federal-State watershed program requires joint action by Federal agencies in two departments.

III

For the guidance of the Federal agencies concerned with the task of the management of lands within the upper Rio Grande watershed and the guidance of the proposed Upper Rio Grande Board, the committee submits the following considerations:

A. Future reconsideration of the distribution of range privileges within the upper Rio Grande area should go hand in hand with the development of a unified program of range management, which, beginning with the most critical areas of use, will ultimately embrace the whole watershed.

B. The present condition of range resources and the conditions surrounding the use of those resources point to the necessity of drastic reduction in the numbers of livestock dependent on the range lands within this area.

C. A complicating feature of this situation is the large concentration of domestic livestock within many critical areas of use. Since the major function of this livestock is to supply the indispensable services of transportation, farm power and food, minimum grazing requirements of domestic stock must be satisfied by any means consistent with the conservative use of all lands within any given area.

D. Pending the bringing about of the conditions which would make reductions in the total number of livestock possible, no expansion in the livestock ownership of any income group can be encouraged.

Based on these considerations the committee further recommends the following broad principles of procedure for the guidance of the proposed Upper Rio Grande Board:

1. That for each area of population concentration the grazing requirements of which are to be considered, an area of management should be delineated.

2. That surveys designed to determine the total livelihood of each subsistence family be the source of basic data for determining grazing requirements of the subsistence population.

3. That the use of all federally owned or controlled lands within each area of management be examined in order to ascertain their availability to the subsistence population and to determine the conditions requisite for making such availability possible.

4. That subsistence families in each area of management be given a relative ranking on the basis of need, all subsistence families being subject to the same principle of classification without reference to ethnic grouping and that the subsistence family be the unit of allocation of use of grazing lands.

5. That minimum and maximum levels of livelihood be set up as guides for the allocation of grazing privileges among the subsistence families; that these upper and lower limits be established with due regard to the levels of livelihood actually obtaining among the subsistence population rather than with regard to levels related to the commercial economies of other areas and populations.

The Interdepartmental Rio Grande Committee:

JOHN A. ADAMS, *Forest Service.*

M. M. KELSO, *Farm Security Administration.*

A. D. RYAN, *Division of Grazing.*

ESHEEF SHEVKY, *Soil Conservation Service.*

WALTER V. WOHLKE, *Chairman, Indian Service.*

The CHAIRMAN. Very well.

Mr. ADAMS. I would also like to insert at this time a copy of the outlining of the functions and purposes of the Interdepartmental Rio Grande Board, if I may, because I think it would give you a better understanding.

(The matter referred to is as follows:)

SEPTEMBER 7, 1943.

STATEMENT FOR THE SENATE PUBLIC LANDS SUBCOMMITTEE

The Interdepartmental Rio Grande Board was created by joint action of the Secretary of Agriculture and the Secretary of the Interior in March 1938. It is composed of representatives of the Bureau of Agricultural Economics, the Soil Conservation Service, the Farm Security Administration, and the Forest Service, of the Department of Agriculture; the Indian Service, the Grazing Service, the General Land Office, and the Bureau of Reclamation, of the Department of the Interior. The Board also includes representatives of the office of the two Secretaries.

REPORT OF THE INTERDEPARTMENTAL RIO GRANDE COMMITTEE

Prior to the creation of the Board the two Secretaries created the Interdepartmental Rio Grande Committee and charged that committee with two major tasks: (1) A study and evaluation of the possibility of bringing about proper land use in the Rio Grande watershed, and (2) the development of ways and means of enlarging the agricultural opportunities of the rural population of the area.

The Committee spent a little less than a year collecting the necessary data and making analyses designed to illuminate the specific nature of the problems in the area. It reported back to the two Secretaries concerning the problems in the Rio Grande watershed and its dependent population in the following terms:

"The drainage area of the upper Rio Grande, reaching from Fort Quitman in Texas to the sources of the river in central Colorado, is one of the major western watersheds. It is also one of the oldest areas of settled human habitation in the United States. In a large part of this watershed the aboriginal

Indian population has practiced irrigated agriculture for at least a thousand years. Three hundred years ago the influx of Spanish-American colonists from Mexico began. A century ago Anglo-American settlers began to join the resident native population."

COMPETITION—OVERUSE—ERODED RANGE AND BOTTOM LANDS

The Committee report described the resulting redistribution of the land resources as the newcomers acquired great herds of livestock whose use of the range extended to areas never before employed by the stock of the native population as well as to range already occupied to capacity by them. The resulting overuse and misuse of the grazing lands throughout the watershed has depleted the productive vegetative covering and has accelerated erosion, a process which has in turn diminished the quantity and reduced the productivity of the area's basic resource, the fertile irrigated bottom lands along the water courses. Again the Committee reports " * * * that part of the watershed lying within the State of New Mexico from the upper end of Elephant Butte Reservoir to the boundary of the State of Colorado has reached a critical stage, both in the spectacular destruction of its soil resources through erosion, and in the precarious economic condition of the native rural population, which in this area numbers more than 90,000."

"The basic support of the native rural population is derived from irrigated agricultural land. The second most important source of income prior to the depression was the sale of surplus seasonal labor outside of the watershed. The income derived from livestock, while indispensable, was of secondary importance. The use of the grazing resources of the watershed opened to the native rural population has been drastically diminished by the control over the bulk of this resource by commercial livestock interests. The range area remaining available to the native village population has been seriously depleted, in several instances practically destroyed, by long continued overuse, and this overuse has been accentuated during the past year by the application of conservation measures on other parts of the grazing area."

"The inventory of the grazing resources made by the Committee indicates that, with the exception of the national forests, the range, both public and private is, in its totality, severely depleted, with progressive damage by erosion, and is now overstocked to an extent which necessitates a drastic reduction in the number of livestock if the range is to be saved and the damage to the irrigated agricultural lands is to be maintained."

The Committee indicated that any feasible and practicable redistribution of grazing privileges for the benefit of small subsistence users on the Federal ranges based on accepted methods of transferring use rights would offer a solution for only a minor portion of the total problems.

"The only large scale opportunity for broadening the base of irrigated farm land lies in the middle Rio Grande conservancy district, a quasi municipal district, organized in 1925, to protect the cities, towns and utilities of the district against flood damage and to reclaim some 70,000 waterlogged or dry acres through the construction of drainage and storage works."

IMMEDIATE CONDITIONS WHICH LED TO THE ESTABLISHMENT OF THE INTERDEPARTMENTAL RIO GRANDE BOARD

Physical conditions.

Some idea of the social and economic conditions which caused the two Secretaries to request that the Rio Grande watershed be given such thorough study and the reasons which compelled the investigating committee to make such seemingly drastic recommendations may be gained in the following statement from the committee's report on Present Conditions:

"The condition of the native rural population of the upper Rio Grande watershed entered the acute phase calling for Federal relief soon after the full force of the depression made itself felt. Long before this, the condition of almost half of the watershed's range and woodland had entered the critical phase of actual destruction of land, with another third approaching this stage."

"The bed of the Rio Grande is, in general, filling, and filling at different rates at different locations. From numerous profiles measured, it appears that from the Angostura Diversion Works to the San Antonio highway bridge, the mean rate of filling over the last 3 years is something like three-tenths of a foot per year. If one-fourth of a foot a year is the quantity of silt deposited per annum,

and if the average width of the channel is arbitrarily set at 660 feet for a distance of 124 miles, the deposition would be 2,480 acre-feet of silt or 4,001,000 cubic yards.

"The effect of this watershed destruction became vividly obvious in the San Marcial area during the flash floods of May and June 1937. During preceding floods, especially during those of 1912 and 1929, the dropping of the Rio Grande's excessive silt and sand load had destroyed hundreds of acres of irrigated land cultivated since 1681. In 1910 the San Marcial district had 1,650 inhabitants in July 1937, after the last destructive floods, less than 300 remained, and they were nearly all on relief."

Economic conditions.

"The precarious economic condition of the rural population throughout the area is revealed by an examination of its basic livelihood during the year 1936."

"Out of a total livelihood equivalent to \$10,000,000, approximately \$5,000,000 was derived from cultivated land in the area of primary concern. Wages and other cash income accounted for approximately \$2,000,000. An estimated income of \$1,500,000 was derived from sheep, cattle, and goats numbering approximately 150,000 in terms of cattle units grazed yearlong on the range."

"Livelihood obtained from these 3 sources equaled \$8,500,000. This amount divided among the 15,000 Spanish-American and Pueblo Indian families in the rural area equals an average livelihood of \$560 for each family. Thus the relief income of \$1,300,000 exclusive of rehabilitation loans received by the population during the year 1936 has served only to bring the average livelihood to the low level represented by \$650. The meagerness of this livelihood is made the more evident when it is considered that income is unevenly distributed in the villages and the pueblos as elsewhere. One-third of all families in these communities have incomes of less than \$300, relief included; two-thirds of the families do not reach an average income \$600, relief included. The conditions created by the meagerness of livelihood and the uneven distribution of that livelihood are alleviated only by the availability of fuel and of adequate shelter at practically no cash cost and by those elements of stability and security inherent in the social and economic organization of village and pueblo."

"As matters now stand, none of the four basic factors entering into the total livelihood of this population can suffer a reduction without grave hardships resulting from such a change. Yet a study of employment opportunities available to the native rural population indicates that only a total income of approximately \$1,300,000 may be expected from this source during the coming term of years.

"The income of \$1,500,000 derived from livestock represents an indispensable minimum. Yet the domestic livestock and flocks of sheep and goats and herds of cattle on which this income rests is continuing to be restricted in the area of greatest depletion and destructive use within the watershed.

THE FEDERAL INTEREST

"The Federal Government controls one-half of the land in the upper Rio Grande watershed. It is directly responsible for the welfare of an Indian population of 9,000. It has supplied, through the Reconstruction Finance Corporation and through the Indian Service, more than \$7,000,000 for the construction of the drainage, levee, and storage system of the middle Rio Grande conservancy district. It has financed the Elephant Butte irrigation system through the Reclamation Service, the still outstanding Federal investment in this enterprise amounting to approximately \$10,100,000. The Federal Government has contributed the bulk of the cost of the primary highway system in the watershed. In the 2 years of 1935 and 1936 it has contributed \$3,600,000 for the relief expenditures in prospect. It is a fact that the present economy of the watershed rests predominantly on a foundation of Federal financing and contributions. It is also a fact that the manner in which the resources of the watershed are now used and distributed is endangering the huge Federal investment and will make a continuous drain on the Federal Treasury inevitable unless drastic remedial action is taken."

ORGANIZATION, COMPOSITION, RESPONSIBILITIES, AND PURPOSE OF THE BOARD

In order to carry out their recommendations, the committee suggested the creation of the Interdepartmental Rio Grande Board to function as a continuous

planning and coordinating body. By assignment of existing personnel from the member agencies, a staff of an executive officer, an assistant, one clerk and one stenographer was created in January 1939. Through these few individuals who carry out and extend the work of the agencies from which they are assigned, there has been established a cooperative undertaking which provides a channel for carrying out the recommendations of the Board. From time to time the agencies may send representatives to work with this staff in the development of a particular program in a particular area peculiar to that agency's interests.

This Board is vested with advisory powers only. It is directed to develop ways and means of attaining the objectives laid down by the two secretaries and to advise the secretaries and heads of member agencies as to the application of such methods within the framework of the activity of existing agencies in the area.

AREAS OF PRIORITY FOR BOARD ATTENTION

The Board singled out two critical areas for immediate attention—the Cuba-Rio Puerco area and the middle Rio Grande conservancy district.

Cuba-Rio Puerco area.

The Cuba-Rio Puerco area includes the drainage basin of the Rio Puerco from a point a few miles below the junction of the Arroyo Chico and the Puerco to its headwaters. This area lies primarily in Sandoval and McKinley Counties. It is an extremely critical area from the point of view of the condition of the land resources and the condition of the resident population.

Through the land-utilization program of the Soil Conservation Service, a program of submarginal land purchase has been inaugurated and is nearing completion. When this program is complete, it will be possible to place the entire area under unified land management and to make available to the resident population much-needed additional range resources. A portion of the area is now in a grazing district under management of the Grazing Service, but adequate administration will require the collaboration of the Soil Conservation Service, the Forest Service, and the Indian Service, as well as the Grazing Service in a unified scheme of administration through which the aims of all may be realized.

All but one of a number of irrigation diversion dams on the main stream of the Puerco have failed through the rapid deterioration of the watershed lands and the consequent cutting of the main channel of the Puerco. The Department of Agriculture, under its flood-control program, is now making surveys of the area with a view to developing plans for flood and sediment control. Flood flows which cause sediment damage originate in the headwaters of the Rio Puerco. As a part of this program, it is contemplated that several silt-retention dams can be built which will raise the stream bed to its former level. These dams will be doubly beneficial inasmuch as they will control flood damage to the Rio Grande by removing silt, will improve irrigation water for the Socorro Valley and will make possible the cultivation of now abandoned farms in the Puerco where water rights still exist.

Middle Rio Grande Conservancy District.

The other area in which the board concentrated its initial efforts was the middle Rio Grande conservancy district. When the Interdepartmental Rio Grande Committee—that is, the predecessor of the Rio Grande Board—made its report to the two Secretaries recommending a program for the watershed, it stressed the need of adjustment in the affairs of the district as one of the most urgent problems of the entire area. The committee also observed that the district offered the only large-scale opportunity for enlarging the irrigated land resource.

Accordingly, the Board organized, through several of its member agencies, a land classification survey of the lands in the district, a survey of the economic condition of the land users, and a study of the aggradation of the main channel of the Rio Grande.

The findings of the several surveys now in progress will yield data concerning the amount of additional land that is susceptible of cultivation and some idea of the capacity of all lands in the district to bear assessments. The material is to be made available to various interested Federal and local agencies and is specifically designed to facilitate the development and execution of a comprehensive rehabilitation plan for the entire district.

In the Middle Rio Grande Conservancy District expected benefits have not accrued as planned. A considerable amount of land under the conservancy plan was to be drained and made fit for cultivation, but still has a water table higher

than that which will permit successful farming operations. At the present time, approximately 30 percent of the lands have a depth to water table of less than 4 feet during some time of the year.

In the payment of O. and M. charges, State and county taxes, and assessments on principal and interest, fully 70 percent of the agricultural lands in the district are delinquent and have been for several years. About half of the lands now bearing charges are not subjugated. These constitute some of the problems of adjustment that beset the district.

The broad outlines of a rehabilitation plan have been drafted by the Reconstruction Finance Corporation and the Middle Rio Grande Conservancy District Board. This plan is designed to postpone conservancy assessments and thus give relief to present land users on undeveloped land which is not susceptible of cultivation but which now carries construction assessments. It is also designed to bring other undeveloped lands into productive use. The Reconstruction Finance Corporation has made some \$585,000 available for the execution of this plan. The removal of nonproductive land from tax assessment will reduce many cash charges now levied on individual operators. However, it remains to be seen whether the farmers have the capacity to pay the present charges even on productive lands. It is still more questionable whether they can pay off their delinquent assessments and at the same time carry current assessments on these lands. So far, wholesale dispossession of the resident population has been forestalled. The need for further adjustments is apparent.

In its report to the two secretaries, the Rio Grande Committee suggested the colonization of newly developed cultivated lands within the district by noncommercial farmers from critical areas elsewhere in the watershed. This suggestion was predicated on the assumption that considerable new acreage could be developed within the district. Preliminary information from surveys now in progress indicates only a relatively small additional acreage can be successfully developed. Inasmuch as the economic condition of the present users of the district is precarious owing to inadequate size of holdings, such new acreage as can be developed will undoubtedly be devoted to present users whose holdings are too small.

OTHER BOARD ACTIVITIES

Among other activities of the Board are these:

(1) Sponsorship and supervision of a land use capability survey in the so-called Fence Lake area in Valencia, Catron, and McKinley Counties.

(2) Constant liaison with county and community planning committees to receive land use planning recommendations and develop programs of action in response to these recommendations wherever practicable.

(3) Cooperation with Taos County project—sponsored by University of New Mexico.

(4) Collaboration with New Mexico tax assessment survey in the development of information from which the relative productivity of agricultural and grazing lands for taxation purposes, can be determined.

Incidentally, the Board, through its member agencies, is cooperating with the State government to obtain greater security of tenure for native people threatened with loss of their agricultural and grazing resources through foreclosure and sale of tax titles. The State government has been quite cooperative in this respect, and in several areas adjustments are being made which will result in securing for the local people permanent title to agricultural and grazing lands on an equitable basis of taxation with improved facilities for subsistence.

SUMMARY OF BOARD FUNCTIONS

In brief, the Interdepartmental Rio Grande Board is a cooperative undertaking of the Department of the Interior and the Department of Agriculture designed to facilitate coordination of Federal programs. Its existence proceeds from the assumption that unity of purpose and economy of effort can best be achieved by the development of an advisory mechanism within the framework of existing agencies. Its effectiveness lies in its persuasive powers and in its capacity to visualize the problems and the remedial measures of the area from a unified point of view. It has no administrative functions, but rather acts as a clearing house for the participating Federal agencies which detail to it such personnel as may be needed.

JOHN A. ADAMS,
Secretary, Interdepartmental Rio Grande Board.

Mr. O'SULLIVAN. Mr. Adams, there was testimony of the creation of the conservation committees, which were to have authority to advise various agencies, but which were apparently to have no actual responsibility. Was this Interdepartmental Board, which you mention, one of those irresponsible committees, who only advised?

Mr. ADAMS. By "irresponsible," what do you mean?

Mr. O'SULLIVAN. One of these committees without responsibility. Is that what it was?

Mr. ADAMS. I always object to that. The Rio Grande Board made a careful study of the situation in the Rio Grande watershed. They developed that data, from which they made certain recommendations to be used by the Federal agencies operating in the watershed.

The CHAIRMAN. What were you responsible for?

Mr. ADAMS. Responsible for the integration and coordination of the Federal program in the watershed.

The CHAIRMAN. And you carried that responsibility out?

Mr. ADAMS. Yes, sir; I believe we did.

The CHAIRMAN. What was the result?

Mr. ADAMS. The result, to cover it actually, what was actually accomplished was the division of the various land purchase areas among the Spanish-Americans and Indians, and also the Anglos. That included some 800,000 acres of which the economic and social problem was very complex.

Further, through the recommendations of the Interdepartmental Board, they secured for the Rio Grande Conservancy District \$500,000 for the relief of the people in this district. We further instituted and followed up the purchase program in the Rio Puerco area, in order to make available, to those Spanish-Americans particularly, land in order to enlarge their economic base. I think we can consider that as a fair statement of the outstanding record of the Board.

Mr. O'SULLIVAN. Mr. Chairman, the chairman of that committee was Walter V. Woehlke, of the Indian Service.

Mr. ADAMS. That is correct.

Mr. O'SULLIVAN. Have you, perhaps, in that list of recommendations which you mention, any of the recommendations filed with the Rio Grande office of the Soil Conservation Service on November 22, 1938? I am giving the date, because I have not the original, but the recommendations in substance were as follows:

That the United States Indian Service undertake to obtain jurisdiction and administrative control of the public domain in this area, by February 15, 1939.

Did you recommend that?

Mr. ADAMS. What area are you talking about?

Mr. O'SULLIVAN. The Acoma purchase project.

Mr. ADAMS. Without consulting the files of the Board, I cannot tell you exactly, but I would be very glad to get that letter.

Mr. O'SULLIVAN. I am referring to a recommendation signed by Walter V. Woehlke and Hugh G. Calkins, vice chairman, filed in the Rio Grande office of the Soil Conservation Service on November 22, 1938.

The CHAIRMAN. Again, will you give us that language, just a sentence or so?

Mr. O'SULLIVAN. It was recommended by the Rio Grande Board, with respect to the Acoma purchase project, that the United States

Indian Service undertake to obtain jurisdiction and administrative control of the public domain in this area by February 15, 1939.

Next, it is recommended that M. Major, one of the lessees, or holders there, be forced—I believe I am quoting the language of the recommendation—be forced to turn over State lands, or be sued for trespassing.

Also, that the United States Indian Service exchange State lands in township 6 N., 7 west, now pending in the General Land Office, and pay off Seis and Wilson in township 6 N., 7 west, and finally that the Inter-Rio Grande Board create a management area in that portion not feasible for Indian use; that unified management projects should be based on the purchase of the interests of the large non-resident commercial operators using the area, plus the purchase of the holdings of those homesteads who, in the judgment of the Board, will be unable to establish an economic unit and are desirous of selling out.

Mr. ADAMS. Will you re-read one sentence there in which you state that the Board will do what?

Mr. O'SULLIVAN. The Board will set up a management—

It is recommended that the Rio Grande Interdepartmental Board create a management area in that portion of the south Acoma purchase project which is not feasible for Indian use.

Mr. ADAMS. I might make one observation there. The Board did not, has not ever had the authority to set up. It might recommend to the Soil Conservation Service, but, I think, in order to clarify this particular issue, I will get that letter and have it before you this afternoon.

Mr. O'SULLIVAN. That is the point I intended to make at the beginning, this Interdepartmental Board, then, had authority only to recommend and to advise; no authority whatever to execute or to manage, with responsibility?

Mr. ADAMS. That is correct. No, the administrative authority rests with the administrative bureaus operating in the watershed.

The CHAIRMAN. Very well, now the witness wants to proceed.

Mr. BIBO. I presume Mr. Adams explained to you what the creation of the Board was for. I would like to tell you what they did out there.

The CHAIRMAN. He tried to.

Mr. BIBO. Then, I will try to explain to you what they did out there.

This map will clearly show you the Soil Conservation's careful survey, utilization survey, the carrying capacity of all the sections, and how the area was to be blocked out. Now, this dark portion, here, shows a natural barrier, a steep bluff which makes this upper country, units 3 and 4 on Seboyeta and Putney Mesa, a practical single unit, which the Soil Conservation surveys showed could be used as a summer range for the Acoma pueblo.

This lower country, down here on the west, units 5 and 6, of which unit 6 is absolute waste land, a lava flow, shows where the majority of the non-Indian settlers were located. Most of it is privately owned lands; it was when the Government purchased that land.

I was operating with a Mexican boy by the name of Ted Armijo from the Putney Mesa, and we leased from the New Mexico-Arizona

Land Co., at the time they were preparing to make this transfer or sale to the Government. We had three school sections leased, and we were using the public domain in the same manner everyone was using it at that particular time.

As the Government took over the management of this area, under the Rio Grande Departmental Board, I naturally had to approach them as to how they would honor us in that country. I took the situation up before I made my application, and I must explain to you one incident that happened. This happened the year prior to their management of the area; that was 1936. My lease expired in 1935. Was it 1938 when they took over management of that area, or 1937?

Mr. COOPER. 1937.

Mr. BFO. Oh; then in 1936 I asked Mr. Cabeen of the New Mexico-Arizona Land Co., when I went to renew my leases in the area which I had from them, whether he would renew these leases on the basis that he knew some future sale was pending with the Government. I have a letter here that I can show you for evidence, if you would care to have it, that he said it was a policy of that company to renew the leases of a party prior to transferring them to anyone else, everything else being equal. I have a letter requesting me to make applications for the use of those sections; but, at the same time, he had some additional sections on top that he would like to lease to me, too, if I was interested in them.

I found out I couldn't very well handle these, because someone else had leases on the school sections. So I refused the additional ones, and went into the office to renew my leases on the five and a fraction sections I had from them. They gave me to understand he had given two sections I had under lease from him to another party for his last year's use, prior to the Government taking over the use of the lands.

In other words, he didn't live up to the statement of his letter. So, instead of leasing the other three and a half sections that were left to me, I decided to operate the last year there with my partner, on the school section only, that we had leased, because we had water; and we would wait to see how the Government would handle the proposition.

Mr. Cabeen, with good business judgment, wanted to get the lease out of that area for the last year; so he gave another operator an opportunity to lease those particular sections for the last year. Then he came up with the proposition where the Board had to handle it. I went into the Board and asked them if they were going to honor Mr. Armijo and myself, as long as we had prior use of that area; or whether they would consider that other operator also, because he had leases from the New Mexico-Arizona Land Co. for the last year.

They said, "No, it is the policy of the Government to issue leases to those who had prior use of the range." This other party was in just 1 year, 1936.

The CHAIRMAN. Who were you talking to?

Mr. BFO. I was talking to Mr. Ralph Charles, representing the Resettlement organization, in his capacity with that Board; and I understood, he told me if I made an application that he would not pass on it, that the Board would have to pass on it. You understand that the Board was the Indian Service, Resettlement, Forest Service, Taylor Grazing Service, and Soil Conservation Service. There were five departments on that Board. So I said, should this other lessee make application for a lease, come in there with me, because he operated the

sheep, I would not contest his lease, but would have to share the region with him. But I preferred to share it alone, because Armijo and myself operated cattle, and there was only a little country to work in, a small area approximately 16 sections, including all the land, public domain, Grazing Service land.

Mr. Charles took the matter up, when I made my application, with the Board, and I told them if I had to share it with this other lessee I would; but I would prefer to use it alone; but I would leave it up to the judgment of the Board. They sent me an application, which I filled out, and gave me a lease for 55 head of cattle, 25 head of horses. In other words, we reduced our operations, to comply with the Government handling this area. I sent them a check, and they received it, and accepted it.

A few days later, this party understood that I had leased the land, and he contested my right to operate in that country with this man Armijo. He gave this Rio Grande board certain information that caused Mr. Adams to write me a letter, for that Board, stating that they had additional information before them which showed that I did not, Armijo and I did not, have continuous use of that range; and if we could not show cause, within 10 days, that our stock must be taken off of Government range. So I had to appear before the Rio Grande Board and state this issue again, to all of them. I explained to them, and I explained it to their satisfaction. I did have prior use. They brought other issues up which were strictly personal. They were brought up and showed that my contact with certain Mexican boys down there whose character, as far as handling was concerned, were such that I was not deserving of a lease in this area. I think I proved to them otherwise; and they wrote me back a letter stating that I was entitled—stating the fact that I was entitled to continue to operate there with Armijo. Then they added this weak statement—but at the same time they felt that this other operator should get some consideration, and they let him up on top of me, up in there in a smaller area, with a herd of sheep, 500 head, for 2 months. That was their principle of handling the situation.

When I found that out I thought there was only one thing to do. I was approached by Mr. Dismuke—Mr. Chairman, if I should mention any names here, I want you to feel that I have no personal antagonism, but I am trying to explain the issue.

THE CHAIRMAN. All right.

Mr. BIBO. Dismuke, and other employees of the Indian Service and the Soil Conservation Service gave me to understand it was the policy of this Board to eventually block out all this top country, so it could be used for Indian use alone; and they would appreciate it if I would consider relinquishing what I had in that area. When the issue of the lease came up, and I saw the manner in which they were handling it, I thought it the wisest policy to leave that country. I made only one statement, and that was to Dr. Aberle, originally. The minute they could, they sent a Government appraiser out there to appraise the improvements we had on the State school section. That is all we wanted; to relinquish our holdings in that area; and they did, and our improvements on these three school sections were appraised at \$1,000, \$500 to Armijo and \$500 to me. The rest of that area which

we are accustomed to using, we relinquished, free of charge, feeling we were cooperating with this program.

When that issue was brought up before me, I was given to understand, definitely, that this congested area down here in unit 5, privately owned land, was a problem. They felt they could not solve that problem, non-Indian use on this area, on the basis they felt they would leave this area alone. I turned over what I had on the north end, after those other settlers had sold out, to give them an opportunity to completely block out this area.

Mr. Chairman, I want you to understand that, after I signed all the papers necessary to make this relinquishment of the three school sections, all I was getting out of it, I found out I was paid off with funds not appropriated for that purpose. In other words, the man that paid me off told me funds were appropriated for another purpose, but were used to pay me off.

Mr. O'SULLIVAN. For what other purpose were the funds to be used?

Mr. BIBO. Well, I'll tell you just what they told me.

The CHAIRMAN. Who was the man?

Mr. BIBO. Dr. Aberle's assistant was the one that approached me on this issue, Joseph Barnett. He told me they were funds appropriated for the building of privies in the Zuni Pueblo, that fund. They used that money to pay me off.

That brought up the issue which I wanted to bring before you today. We were given to understand that units 5 and 6 would be left in non-Indian use. But it was not meant to be so. I find that out now, although I lived up to their methods of best solving the situation to handle it for these Indians. I would like to leave here as a record, a memorandum of the survey which mentions all of these rights. You may take my statement, or you can get a copy of the original, out of the files of the Soil Conservation Service Office.

Mr. O'SULLIVAN. In particular, Mr. Chairman, we would like to read into the record so much of it as relates to what seems to confirm the general arrangement in that area. That unit 5, which is the lower valley [indicating], beneath the natural barrier, beneath the brush piles, beneath the fences which the Indian Service built along the mesa edge, was to be for non-Indian use. This is a recommendation signed by H. J. Helm, acting chief of range management, and countersigned by Dewey Dismuke, the chief agricultural aide of the Soil Conservation Service, now an Indian Service employee, and approved by E. R. Smith, district manager of the Soil Conservation Service, dated March 22, 1938:

Due to the concentration of livestock owned by non-Indians in this area—
referring to the Valley—

there is not sufficient range available for even local needs, and it is doubtful if there would be any possibility of acquiring more than a few of the privately owned holdings above referred to if such would be desirable.

Furthermore, it would be extremely difficult to drive livestock from the above-mentioned mesas to the area below, because of the rough nature of the lower country and the nearly impassable rim of the mesa.

Further, it is doubted if the Indians would accept such a plan, because of the great distance from their pueblos.

This is a copy of the entire letter, which we offer for filing.

(The letter is as follows:)

RIO GRANDE DISTRICT,
Albuquerque, N. Mex., March 22, 1938.

MEMORANDUM

To: Rio Grande Files.

From: H. J. Helm and Dewey Dismuke.

Subject: Acoma purchase area use (South Acoma and Laguna).

On Friday, March 18, the undersigned, accompanied by Mr. E. R. Smith, made an inspection trip over the Acoma purchase project, LI-NM-8, generally termed the South Acoma and Laguna purchase area or the 11-township area, for the purpose of determining, if possible, what land could be used to the best advantage by Indian livestock, giving consideration to non-Indian holdings within the area. For range management purposes the area has been subdivided into six units (see accompanying map) on natural boundaries for the most part, the only exception being the south boundary of the Walter Marmon tract which follows section lines.

The following information from the status and grazing map is substantiated by the field inspection:

The northwest corner and part of the entire west side lies in the lava bed country. (See map, subunit No. 6.) This comprises 30,329 acres or 12.2 percent of the entire area and is absolutely worthless from the standpoint of livestock use or of any other use, for that matter.

The area adjacent to the lava beds on the east and below the Black-Putney-Cebolleta mesa rim (see map, subunit No. 5) is traversed by the Grants-Tres Lagunas Road along which there are a number of homesteads and other privately owned tracts, the southern portion being used by Juan Iriart's livestock. Due to the concentration of livestock owned by non-Indians in this area, there is not sufficient range available for even local needs, and it is doubtful if there would be any possibility of acquiring more than a few of the privately owned holdings above referred to if such would be desirable. Furthermore, it would be extremely difficult to drive livestock from the above-mentioned mesas to the area below (i. e. west) because of the rough nature of the lower country and the nearly impassable rim of the mesa. Further, it is doubted if the Indians would accept such a plan because of the great distance from their pueblos. Also, he it noted, subunit No. 4 is primarily summer range, and subunit No. 5 is winter range. It is necessary for the Indians to return to the reservation lands for shipping, and a plan making it possible for use of the reservation lands as winter range appears to be the most feasible. Subunit No. 5 covers 60,350 acres, with a carrying capacity of 672 cattle yearlong or 24.2 percent of the total area of the purchase and 20 percent of the carrying capacity.

If the foregoing argument carries weight it would seem to exclude both subunits No. 5 and No. 6 or 36.4 percent of the total area and 20 percent of the carrying capacity from consideration for Indian use.

On the east side the Walter Marmon allotment of 20 sections covers 12,770 acres with a carrying capacity of 220 cattle yearlong or 5.0 percent of the total area and 6.5 percent of the carrying capacity. (Walter Marmon is a Laguna Indian who runs stock outside the reservation.) Under present conditions of use this subunit is not available to any additional Indian livestock. So far as is known there has been no plan proposed or other suggestion made than to allow Mr. Marmon to use subunit No. 1 individually. (Marmon owns several tracts of deeded land and holds State leases on other tracts upon which water has been developed.)

Due south of the Marmon tract is subunit No. 2 covering 35,684 acres with a carrying capacity of 381 cattle yearlong or 14.3 percent of the total area and 11.3 percent of the total carrying capacity. This subunit is used exclusively by Seis and Wilson livestock and is only one portion of the entire Seis and Wilson ranch holdings which extend to the east and south of the withdrawal boundary. The area mentioned is below the rim of a large mesa to the west. The Seis and Wilson range formerly extended west 6 miles to the west range line of T. 6 N., R. 7 W. It is understood that an agreement has been reached between the interdepartmental committee and Seis and Wilson whereby the latter will give up the use of their lands on the mesa, providing they are not molested or encroached upon on their lands below the mesa within the withdrawal area. (See map, subunit No. 2.)

Thus, on the east side there is 19.4 percent of the total area and 17.8 percent of the total carrying capacity that will be impossible to be used by Indian livestock (communal) until such time as other arrangements are made.

Totaling those areas on both east and west sides that are not available for Indian use, there are 139,133 acres, or 55.8 percent of the total surface acreage with a carrying capacity of 1,273 cattle yearlong or 37.8 percent of the total carrying capacity.

Subunits No. 3 and No. 4 on the top of the various mesas, which more or less run together, constitute the area which furnishes practicable use for Indian livestock. These total 110,420 acres or 44.3 percent of the total acreage with a carrying capacity of 2,099 cattle yearlong or 62.2 percent of the total carrying capacity. In this area there are still a few tracts used by non-Indians, principally the Blas Romero, Arthur Bibo, Sidney Gottlieb, and two individual Acoma Indians (Bautisto Rey and Lorenzo Vallo). Plans have been developed and options secured on some of these holdings, and it is recommended that immediate steps be taken to clear the entire situation. The Malcolm Major lands in the south portion of subunits No. 3 and No. 4 have been optioned, and it is expected that this transaction will be cleared within a short time. Assuming the above-mentioned exceptions can be purchased or otherwise made available for Indian use, it is reasonable to assume that the two subunits, No. 3 and No. 4, with a carrying capacity of 10,500 sheep yearlong, will be available for Indian use, wholly or in part, this coming season (1938). Since it is desirable to afford as much protection as possible to the Acoma and Laguna lands, by making available subunits No. 3 and No. 4 for summer use, livestock in sufficient numbers could be removed from reservations proper to make possible substantial relief to the reservation lands. It is recommended that the use be divided equally between the Acoma and Laguna Indians; that is, 5,250 sheep each on a yearlong basis. Any seasonal fraction may be adjusted accordingly.

The bulk of the range recommended for Indian use has serious infestation of pinque, and it is very doubtful if it would be possible to stock to the full capacity with sheep which are not accustomed to this range without severe loss resulting. The practical use, insofar as sheep are concerned, appears to be for a 4-month summer period beginning about July 1. Summer use seems to be practicable for either class of livestock; however, cattle could be admitted at a later date when the range is sufficiently fenced and watered for a 6-month grazing period. Extreme caution is recommended if complete stocking or seasonal use, other than that above mentioned, is contemplated, because of the poison hazard due to the pinque.

Immediate steps should be taken to fence the boundary, beginning at the northeast corner of T. 7 N., R. 6 W., thence south two townships, west six townships, thence north one township, thence east to the Malpais rim, beginning again at the Malpais rim on the northeast corner of T. 8 N., R. 10 W., thence east to the Acoma boundary.

It is pointed out again that concerted action should obtain in the matter of expediting clearing of inside holdings within subunits No. 3 and No. 4, since these two subunits present very few obstacles and the only immediate relief for the Acoma and Laguna Reservations. These two subunits are reasonably usable by the Acoma and Laguna Indians insofar as water is concerned, provided the alienated holdings are secured and provision is made for driveway for Laguna livestock to cross from the reservation onto their allotment on this purchase area.

H. J. HELM,
Acting Chief of Range Management.
DEWEY DISMUKE,
Chief Agricultural Aide.

Approved:

E. R. SMITH,
District Manager.

The CHAIRMAN. Very well, you may proceed.

Mr. BIBO. Mr. Chairman, in understanding that locality you must realize that units Nos. 3 and 4, which we have just relinquished, that is left to the total use of these Indians; it constitutes 62 percent of the carrying capacity of the total township area; while this area down below the bluff, which is units 5 and 6, including the lava bed, which has

no carrying capacity at all, is only 20 percent of the carrying capacity of the entire area.

In other words, we have relinquished; we feel we have cooperated with them to give them the use of the largest area possible. And the one that is the most distant and contains the most patented land—because there are approximately 10,000 acres of patented land in this area today—is to be left for our use, non-Indian use. But they did not intend originally to carry out that program. I can prove it to you by telegram that Mr. Calkins sent to E. R. Smith, head of the Soil Conservation Service office here.

It reads as follows:

E. R. SMITH,

*United States Soil Conservation,
Albuquerque, N. Mex.*

Letter from group of people, presumably in 11 township area, to Chavez, says Soil Conservation Service men approached them regarding purchase of lands, also agreements for work. Assume report not well founded, however, believe we should be cautious to avoid suggestion of land purchases. Will send copy of letter.

CALKINS.

In other words, here they have sent men out into the area to block the area off. They give me to understand they would be left alone after I give up the area.

The CHAIRMAN. Let me catch that, and see if I can see what you mean. I don't like to put the wrong interpretation on your language. What you want the committee to understand, by the reading of that telegram, if I catch it right, is that at the very time that they were telling you and others that this valley land under the rim was to be held for non-Indian use, they were, as you construe that telegram, making arrangements to make acquisition in that territory for Indian use. Is that what you want the committee to understand?

Mr. O'SULLIVAN. I believe it is, Mr. Chairman.

Senator CHAVEZ. May I say, Senator McCarran, my office received many letters from people telling me of being approached for the purchase of land within the lower valley there.

Mr. O'SULLIVAN. He has here the reply, or a copy of it, by Mr. E. R. Smith to Mr. Calkins, dated February 1, the day after the arrival of the telegram just read, which confirms the fact that not only were they purchasing land in the lower valley, but they were being very cautious and devious and circuitous about it.

The CHAIRMAN. Who was Mr. Calkins?

Mr. O'SULLIVAN. At that time he was with the Soil Conservation Service in Washington.

The letter reads as follows:

ALBUQUERQUE, N. MEX., February 1, 1939.

Mr. HUGH G. CALKINS,

Care of Col. Samuel Goodacre, Soil Conservation Service,

Washington, D. C.

DEAR HUGH: Reference is made to your telegram of January 31, 1939, copy of which is enclosed, together with copy of memo concerning the administration of the Acoma purchase area, signed by Mr. Wochlke and yourself. The memo in question should, I believe, explain why, after all, the report from Chavez is actually well founded.

In reconstructing the history of the memo, I discovered that on the day on which it was prepared I happened to be called away, and asked Herb Stewart and Dewey Dismuke to represent me. Accordingly, when the memo arrived

from your office I routed copies of it to both Harley Helm and Bernie Bell, asking that they confer with Dewey Dismuke and Stewart prior to taking action indicated in paragraph 5.

Mr. O'SULLIVAN. That was the last paragraph that I questioned Mr. Adams about.

I am assured by Dewey Dismuke that the greatest care was observed in making the contacts which were made, and our activity was represented by bringing earlier records to date.

Mr. O'SULLIVAN (continuing). We construed that by implying that the persons approached were given to understand, not that a prospective purchase was in view, but that they were attempting to bring previous ownership to date.

You realize Symington of the Indian Land Division had already, many months before, made contacts with all of the residents of the 11 T. A. and we had, in the early days of our acquaintance with it made additional contacts and, of course, following the lead of the memo, we made still more contacts. As a matter of fact, I feel that I can assure you our approach in every case to a resident of the 11 T. A. has been as discreet as it could possibly be. Whatever harm has been done, is done, for this particular activity stopped about 3 weeks ago. The quality of the information that was obtained by our range man working with a representative of the Conservation Economics Section is good, it seems to me, and should furnish the Rio Grande International Board with what it wants to know.

It may be that this district has been out of order in the activity which has been pursued, and in any case, it looks as though I am to blame. On the other hand, in urging the proper sections into action, I saw to it that they consulted the district representative at the original meeting so that the proper background could be supplied. I do hope that no great embarrassment will have been caused the Service or yourself in this matter.

(Signed) E. R. SMITH.

As we see that, it clearly indicates, I believe, a subrosa project to purchase individual holdings.

Senator CHAVEZ. Contrary to information given Mr. Bibb and other landholders at the time?

Mr. O'SULLIVAN. Yes, Senator.

The **CHAIRMAN.** Very well, you may proceed, Mr. Bibb.

Mr. Bibb. Mr. Chairman, when that situation arose all these underhanded deals were going through to acquire this lower country. I was out of the picture, I was eliminated, and I left this country; but at the same time, I have been familiar for years with the holdings of this lower country, which I understood was to be left to non-Indian use. It so happened that in what is known as the Seboyeta Canyon, right in here in unit 5, there are certain privately owned holdings which controlled the use of that area.

In the matter of land pattern, under our existing laws, the party that owned that land passed away, and the heirs that inherited this land have told me they would lease me this area, when I approached them for its use. There were two school sections in that country that an operator in the southern portion of this area had, but had no use for, because under his operations, after this transfer of jurisdiction on the 23d day of December 1938, which transferred the management over to the Office of Indian Affairs—I presume that was done so they could further approach these men, and block out that area in better fashion. I decided I would try to relocate, after being out of the game 2 or 3 years, and use this country, which I was under the impression was for non-Indian use.

It was then that I found out this transfer of jurisdiction was made. I was under the impression that it would be impossible for them to reach some agreeable understanding with the Indian Service, because their very object in transferring showed me that they had no intention of honoring non-Indian settlers down below.

In other words, I sized it up, at the moment that the Rio Grande Interdepartmental Board was a big force. In other words, the Office of Indian Affairs has the management of the area, all the time, obtained by a cooperation of Walter Woehlke and between him and Hugh Calkins, who held the post at the head of the Soil Conservation Service, which is supposed to be with the Department of Agriculture. In other words, they worked hand in hand, as these letters show, to help block out that area.

I had an issue to bring up in order to operate there. I went to a person, who I felt was best posted to advise me as to the proper thing to do, before I leased these lands which these people offered me; and I can tell you frankly that there was very poor management at that area. As I approached that country to use it, there was only one operator in there, and he was living on part of this privately owned land, which I was to lease. He had no lease; and still the United States Indian Service had granted him a permit for 80 head of cattle, and then reduced that to 42, in order to permit him to operate in that area, and keep this larger operator out, who originally had used the country. They set a line, which is supposed to be the dividing line between these operations. When I found out I could lease this area, there was only one way to go about it. I wrote to the Department of Interior, the Office of the Under Secretary of the Interior. Our present Governor Dempsey was the Under-Secretary at the time. I asked for this transfer.

Mr. O SULLIVAN. He means he asked for a retransfer of jurisdiction over units 5 and 6, which are adjoining Grazing District 2, from the Indian Service, where it now was, back to the Grazing Service, so it could be administered properly under the provisions of the Taylor Grazing Act.

Mr. BINO. I received a reply from the Under Secretary of the Interior, and I could tell by the contents of the letter that he could not have written that letter. In other words, possibly the pressure of business caused him to refer that to some other Under Secretary. There are certain points brought out in this letter from Under Secretary Dempsey, if you would care to have it read. I would prefer to have my attorney read it for you.

Mr. O'SULLIVAN. I would like to read one point. This makes it clear that the transfer of jurisdiction from the Indian Service back to the Grazing Service, and the reunification of units 5 and 6 with Grazing District No. 2, was not feasible, according to the letter, because the Indian Service objected to the transfer. In other words, it didn't seem to be a question of right, wrong, propriety, or anything else. It was the whim or the will of the Indian Service alone which guided the decision.

Mr. STEWART. Mr. Chairman, could we have the full letter read?

The CHAIRMAN. Yes; I don't see why not.

Mr. O'SULLIVAN. [reading].

UNITED STATES DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, April 2, 1942.

Mr. ARTHUR BIBO,
Los Cerritos Ranch, Cubero, N. Mex.

MY DEAR MR. BIBO: Your letter of February 16 proposed the transfer of jurisdiction from the Office of Indian Affairs to the Grazing Service over an area of grazing lands now under the administration of the United Pueblos Agency in New Mexico. The townships or fractional parts of townships referred to in the proposal are: T. 6 N., Rs. 10 and 11 W.; T. 7 N., Rs. 9 and 10 W.; T. 8 N., Rs. 9 and 10 W., New Mexico principal meridian.

The transfer of jurisdiction, if consummated, would place these lands, by modification of present boundaries, within New Mexico grazing districts Nos. 1 and 2.

The regional grazer at Albuquerque, N. Mex., has investigated this proposal and has discussed the matter with the administrative officials of the United Pueblos Agency, and that agency has objected to the transfer for the reasons that a portion of the area according to its records is used by the Indians for farming purposes and the north sector is used by the Indians for seasonal grazing. It was also brought out in the discussion that the south sector at the present time is used exclusively by a non-Indian, John Iriart. Also this area is planned for future Indian use, and the only reason it has not been used by the Indians is that it has been overgrazed in the past.

In view of the objections raised to the proposed transfer, it is not believed advisable at this time to take action toward transferring jurisdiction over the land.

Sincerely yours,

JOHN J. DEMPSEY, *Under Secretary.*

Mr. Bibo was advised that that letter prepared by and written for Mr. Dempsey by Walter V. Woehlke of the Indian Service.

Senator CHAVEZ. But, it was signed by Mr. Dempsey?

Mr. O'SULLIVAN. Yes.

Mr. BIBO. It didn't take me long to make up my mind who I thought could have written that letter. From the experience that I had in the area, the people that were interested in it, I made up my mind that Walter Woehlke wrote the letter. I would like to ask the Indian Service Officer here, those who know, whether I am right. I don't want to be quoting anybody wrong.

Senator CHAVEZ. Well, I don't know, but I know Walter Woehlke is a sharp man. He might have written it.

Mr. STEWART. I couldn't answer that.

Senator CHAVEZ. They wouldn't have that information.

Mr. BIBO. When Mr. Dempsey resigned as Under Secretary of the Interior, as you know, to become Governor here in this State, Mr. Abe Fortas was the next Under Secretary. So, instead of taking the matter up at the same point, I decided, by being advised properly, that I should take the issue up with our Honorable Congressman, Clinton Anderson, which I did; and Mr. Anderson in turn took this issue up with Abe Fortas.

I have a copy of a letter from Abe Fortas to Mr. Anderson, which clearly explains the attitude of the Office of Indian Affairs, and not the Under Secretary of Interior. I take it that Walter Woehlke also wrote this letter.

Mr. O'SULLIVAN. I believe there can be no question about that. I have seen a copy of that letter forwarded to the Grazing Service

for inclusion in their files and that copy bears in the lower left hand corner, the initials "WVW".

Mr. STEWART. Can't we hear those letters?

Senator CHAVEZ. The explanation of why we can't agree with them—

Mr. O'SULLIVAN. They accuse Mr. Bibb and others of being what they please to call large commercial nonresident operators. This land cannot be transferred, because it is to be utilized for additional grazing areas.

They say that in the bulk of this area, in which the Office of Indian Affairs control the ex-railroad lands and the public domain turned over to the Commissioner of Indian Affairs for administration, the private interests, including those of Malcolm S. Major and Seis & Wilson were bought out, and confirming the recommendation of the interdepartmental committee, as brought out here today during the testimony of Mr. Adams. They say that the purchase operation could not be completed for lack of funds within the area described by Mr. Bibb.

Secretary CHAPMAN. May I suggest; if Secretary Fortas' letter is to be quoted, we would like to have it read in full?

The CHAIRMAN. Very well, I think that is only fair.

Mr. O'SULLIVAN. The letter is dated July 29, 1942, and it reads as follows:

UNITED STATES DEPARTMENT OF THE INTERIOR,
Washington, July 29, 1942.

HON. CLINTON P. ANDERSON,
House of Representatives.

MY DEAR MR. ANDERSON: On July 14 you sent me a copy of a letter addressed by Mr. Arthur Bibb, of Cubero, N. Mex., dated May 29, 1942, to the then Under Secretary of the Department of the Interior. You state that Mr. Bibb has not had a reply to his letter in which he suggests the transfer of jurisdiction of certain lands in Valencia County, N. Mex., from the office of Indian Affairs to the Grazing Service of the Department of the Interior. Under Secretary Dempsey replied to the initial proposal of Mr. Bibb in this same matter, advising Mr. Bibb that such a transfer to jurisdiction of the lands in question was not advisable. Subsequent to this decision, Mr. Bibb discussed the matter with Under Secretary Dempsey in Santa Fe and thereafter wrote the letter of May 29, which Under Secretary Dempsey failed to answer prior to his resignation. However, on his last day in office Under Secretary Dempsey consulted the Commissioner of Indian Affairs and was advised that the attitude of the Office of Indian Affairs in this proposal to transfer jurisdiction was unchanged.

In his letter of May 29, Mr. Bibb suggests that certain parts of the Indian Office Acoma land-purchase project, designated as LI-NM-8 of the land program's submarginal purchase project, be transferred from the Commissioner of Indian Affairs to the Grazing Service for administration. He refers especially to all of T. 6 N., R. 11 W., T. 8 N., R. 10 W., and portions of T. 6 N., R. 10 W., 7 N., R. 10 W., and 8 N., R. 9 W. This area adjoins the southwest corner of the Acoma Indian Reservation. It constitutes part of the withdrawal from all forms of entry of some 32 townships for the purpose of aiding in important land-use adjustments between Indian and non-Indian users. Within this withdrawn area the Indian Service in cooperation with the land program and later its successor, the Resettlement Administration, bought 150,687 acres from the New Mexico and Arizona Land Co., this railroad land being acquired for Indian use. The board of directors of the New Mexico and Arizona Land Co., at a meeting held October 3, 1934, passed a resolution saying: "From negotiations with the Land Division of the Bureau of Indian Affairs, it appeared likely that the Government would be willing to purchase for 1.50 per acre the surface rights to 150,687.14 acres in this company's Valencia tract, in connection with the submarginal land-acquisition program of the Government, the said land to be utilized for additional grazing areas for the Laguna and Acoma Indian Reservations which adjoin the Valencia tract."

In the 6 townships mentioned by Mr. Bibo, there are 67,328 acres of this railroad land bought for the use of the Acoma Indians. There are also less than 50,000 acres of public domain withdrawn from entry and turned over to the Commissioner of Indian Affairs for administration. In addition there are less than 8,000 acres of fee-patented land owned by non-Indians.

It was the intention of the Interior Department to acquire not only the 150,000 acres of railroad land but also all of the fee-patented lands in this purchase project area and to induce the State to exchange its school sections for other sections of public domain outside of the purchase project area. In addition to the 150,000 acres of railroad land the Department through the land program and later the Resettlement Administration purchased the patented lands, the improvements on the public domain, and the leases of State lands of 13 individual owners, but lack of funds prevented the Department from completing the purchase of the remaining private lands and interests in part of the project area. There are approximately 15 private owners remaining in the project area and more than half of these owners have repeatedly petitioned the Department and the New Mexico congressional delegation to provide funds with which to acquire their interests. These petitioners have all been the smaller livestock operators, principally homesteaders who took up their claims 10 and 12 years ago.

In addition to these resident homesteaders, there are operating in this area the nonresident large operators who signed the Bibo letter of May 29. The 20 homesteaders in this purchase-project area were constantly in conflict over range rights and water with the large nonresident operators, principally Juan Iriart and the Mirabel estate. These larger commercial operators, including Mr. Bibo, had preempted the grazing rights on the public domain in this area and had most of the railroad land and the State lands under lease, leaving the homesteaders without any range rights except on their own homestead lands.

In the bulk of the area in which the Office of Indian Affairs controlled the ex-railroad lands and the public domain turned over to the Commissioner of Indian Affairs for administration, the private interests, including those of Malcolm S. Major, and Seis and Wilson were bought out. But the purchase operation could not be completed for lack of funds. Within the area described by Mr. Bibo there remain to this day the several large nonresident operators who endorsed Mr. Bibo, and some 8 or 10 homesteaders. The large operators, principally Jean Iriart and the Mirabel estate, are using the ex-railroad lands and the public domain within the area withdrawn for Indian use, but they have been compelled under the regulations of the Indian Service to desist from overgrazing, to make proper seasonal use of the public lands assigned to them, and their grazing operations in the area have been reduced in order to make available to the homesteaders a sufficient amount of range on the public domain lands to enable these small operators to make a subsistence living. If the Federal Range Code were applied to this area and if the advisory board of which Mr. Floyd W. Lee is the chairman were given the right to allocate grazing privileges in this purchase project area, it is extremely doubtful whether any of the homesteaders could qualify for more than a few head of domestic free-use stock.

Mr. LEE. May I correct that statement right there, that it would not come under any board. And I would like to announce that the press has announced that Italy has surrendered. [Applause.]

Mr. O'SULLIVAN (reading) :

It is the intention of the Department to complete the acquisition of patented lands and to complete the exchanges with the State in the Acoma purchase project area as soon as funds are available. In the meantime, the best interests of the larger number of people resident within the area will be served by continued administration of the area by the Commissioner of Indian Affairs.

It may interest you to know that there are just being completed arrangements to transfer administration of approximately 15 townships lying to the east and to the west of the Acoma purchase area from the Commissioner of Indian Affairs to the Director of the Grazing Service. Within this area about to be transferred administratively to the Grazing Service, no purchases of railroad land were made by the Indian Office or the Resettlement Administration.

An additional copy of this letter is enclosed for your convenience.

Sincerely yours,

ABE FORTAS, *Under Secretary.*

Rather than attempt to comment upon any of the statements made in the letter of Mr. Fortas, which we still say was prepared for him by Mr. Woehlke, we wish to offer at this point Congressman Anderson's masterly reply to this letter:

AUGUST 20, 1942.

HON. ABE FORTAS,

*Under Secretary of the Interior,
Interior Building, Washington, D. C.*

DEAR MR. FORTAS: I have received your letter of July 29, 1942, in answer to copy of a letter which I sent you written by Mr. Arthur Bibb, of Cubero, N. Mex. to the former Under Secretary of the Department of the Interior. This has to do with the proposed transfer of jurisdiction of certain lands in Valencia County, N. Mex., from the jurisdiction of the Office of Indian Affairs to the Grazing Service.

Since my return to New Mexico I have had an opportunity to discuss with local people the matters contained in your letter of July 29, 1942, which indicated there might be some basis for your checking the source of the information on which your letter is based. Although your letter states that a lack of funds was the principal reason for not completing the land acquisition program, I am informed that certain individuals in this area did not desire and still do not desire to sell their lands to the Federal Government. It would appear therefore, that there is a strong possibility of a certain amount of this area remaining in private ownership, and in view of the present attitude of the Congress opposing the removal of privately controlled lands from the tax rolls, there appears to be little or no possibility of rectifying this situation even though funds were provided for further acquisition.

In the fourth paragraph of your letter you refer to a conflict of interests between large and small ranchers. Upon checking into this situation it has come to my attention that this conflict pertains principally to the original purchase project rather than the area proposed for transfer. I would also like to point out in the fourth paragraph of your letter your reference to the fact that more than one-half of the remaining 15 private land owners in the area have repeatedly petitioned the New Mexico congressional delegation to acquire their interests. I, personally, have no knowledge of such a petition having been filed. At least, it did not reach me.

Further in reference to the fourth paragraph of your letter if I am correct in my interpretation of your reference to "benefitting the resident operator," it would appear that a person not having residence in this somewhat limited scope of country would, according to Indian Service policies, not be entitled to any grazing privileges. I am quite familiar with ranch and livestock practices here in New Mexico, and know that it is common practice in a ranching country for the ranchers not to maintain actual residence on a ranch since they prefer the advantage to be had in living in a near-by town for the purpose of being near schools and other conveniences for the family. To limit the grazing rights to an applicant who happens to make his residence within the boundaries of this area seems to me somewhat discriminatory.

Might I suggest that you make inquiry of the Taylor grazing people as to resulting effects of application of the Federal Range Code to this country?

From my observation over the State of New Mexico, I am inclined to believe that administration under the Taylor Grazing Act is meeting with general approval of the stockmen. I believe your indirect accusation that justice would not prevail if the advisory board of which Mr. Floyd W. Lee is chairman, were given the right to allocate grazing privileges in these cases, is hardly justifiable. I have known Floyd Lee personally for many years and consider him an outstanding and reliable citizen and feel that there would be no discrimination against small operators by virtue of his serving in an advisory capacity to the Grazing Service. It is my understanding that the advisory board is only vested with power to make recommendations to Grazing Service officials.

Also, I find that the greater portion of the area would fall within New Mexico grazing district No. 2, and the advisory board chairman of this district is likewise a personal acquaintance of mine, Mr. August Seis, in whom I have the utmost confidence. Mr. Seis has been in business in Isleta for many years and has a real and sympathetic understanding of Indian problems. I, therefore, have reason to believe that that portion of the area which would come under the

jurisdiction of Mr. Seis' board would be judiciously handled with respect to the allotting of grazing rights.

The Acoma Indians being the principal beneficiaries of an 11-township purchase program should now have sufficient range lands that this relatively small acreage could, without any detrimental effects to the Indians, go to people proposing this transfer.

That the greatest good to the greatest number will come only under Indian Service jurisdiction might be questioned in view of the fact that the Indian Service grazing permits, according to my understanding, are issued annually at the discretion of the superintendent, with no assurance that the holder of the permit can expect that continued use which is necessary in a successful business enterprise; whereas, under the Taylor Grazing Act, there is the principle of stability of livestock enterprises by virtue of the issuance of permits covering a 10 year period.

While the area involved is relatively insignificant, the entire matter seems to involve a principle which, I believe, should be the subject of serious consideration by the Indian Department, and that is the propriety of the Commissioner of Indian Affairs undertaking the administration of lands primarily suitable for non-Indian grazing when within the same Department there has been established by law (the Taylor Grazing Act) an agency to handle and regulate public land for grazing.

You will understand that I am not trying to be critical of the Administration of either the Indian Service or the Grazing Service. I like them both, but as a person who has lived rather close to the land utilization problems of New Mexico, I thought you might be interested in having my appraisal of this situation, which is quite different from that in your letter. I would be very much interested in having your comments on the points I have raised.

With best personal regards, I am,

Sincerely yours,

(Signed) CLINTON P. ANDERSON.

The CHAIRMAN. All right.

Mr. BIBO. Now, when I made these leases in this area, sent in my request for this transfer, nothing was done about it. I had to face the issue; the Office of Indian Affairs, or the Pueblo Agency here, had administration of this area. So I thought the proper thing to do was approach them and ask them for a lease pending the settlement of this issue which was before the Under Secretary of Interior, and nothing was done about it.

When I approached those Indian officers here in town they give me to understand that they would consider it, and a day or two after I made the application—I filled it out in full and showed them the area I wanted to use, the approximate number of stock I wanted to run on there. Mr. Ted Formhals, representing Dr. Aberle, came out to my ranch and stopped in my brother's store, tore off a piece of wrapping paper and on it wrote, "Tell Artie we can't even consider his application." That is the kind of business administration I had to contend with in order to get a lease.

Then the next issue came up to me as to whether I had a right to get in the canyon and use it or not, according to the Taylor grazing law. I figured the natural pattern, the natural set-up, that all of the public domain and the land purchased by the Government for the Indians is dependent on this particular privately owned land for the existence of livestock in that canyon, and as long as I had that privately owned land and the school sections leased, I went on there for the past 2 years. I still haven't been able to pay rental to the Government on it, because my application has not been considered. And it has brought forth the same issue that those people to the south of me have. They have a lease with the Indian Service on a year-to-year basis. Their

land pattern is the same, all of the permanent water developed in that area is on privately owned land. If this transfer doesn't go through the Government still can't use the land, because there is no water. The Government land is dependent on privately owned holdings.

I am asking for transfer of jurisdiction for those of us who still continue to use it. I was asking something within reason. At the same time, I want you to understand this top area—whether the Indian Service resents my making this statement or not, or the cattlemen resent it—I want to see the Acoma Indians retain every bit of that upper area. There is only one section in there that interferes with this. I own it. If this transfer goes through, so those of us can continue to operate down there, I will give the Government of the United States, for the Acoma Indians, that section I have, and whatever rights it has, under the Taylor grazing, to the surrounding sections, for an area in lieu down below the bluff.

I came here not to take any land away from the Indians. I came here to ask for a transfer in jurisdiction from the Office of Indian Affairs to the Taylor Grazing Administration of this area. That will not solve the situation. It takes something greater than that; some sort of legislation to settle this issue. We may as well face that issue the way it presents itself here today.

I feel that all of this privately owned land, down below here, if it is the will of the people, through our Representatives in Congress, that the Indians should have it; may as well go about it in a proper judicial fashion, condemn our land and force us out of it. We will get out, and they can have it all; and it all can be yellow, instead of the top area. But if we have a right to continue, I think we have to leave it up to your judgment how it best can be handled so that the proper legislation goes through to take the Resettlement land out of the hands of the Office of Indian Affairs, so that all this lower country, in units 5 and 6, will be left to the jurisdiction of the Taylor Grazing Service.

Mr. O'SULLIVAN. Mr. Bibb is attempting to impress the committee with the fact that, even though there should be entered a departmental order, transferring jurisdiction of this area, units 5 and 6, back to the Grazing Service, yet the Indian Service would still control, for the benefit and use of the Indians, the odd-numbered railroad sections in here, which have been bought with Resettlement funds, and turned over to the Indian Service for the Indians. A mere departmental order, transferring jurisdiction back to the Taylor Grazing Administration, would still result in conflict of the Grazing Service and the Indian Service on the subject of administration.

Senator CHAVEZ. According to the law quoted this morning, the purchases were made for the United States Government, and there is some conflict and difference of opinion as to whether or not authority was vested in someone to transfer those purchases for the particular Indian use.

Mr. STEWART. Mr. Chairman, may I interrupt for a moment?

This proposal which Mr. Bibb has made is new, and has considerable merit, the proposal of turning over, as I understand, the lands below the Rim.

Mr. O'SULLIVAN. Turning over the Indian lands to the Grazing Service.

Mr. STEWART. I think we should investigate it, and view it with favor.

Mr. O'SULLIVAN. Well, that proposal has been on record, with the Department, since 1939.

Senator CHAVEZ. I think that is perfectly all right, for the Indian Service to say that. If it is going to be carried out, to stick, there will have to be legislation.

Mr. STEWART. Well, I believe the same authority that turned over the Resettlement Administration lands to the Indian Service is sufficient to turn over that to the Grazing Service.

Senator CHAVEZ. Well, I wouldn't trust them.

Mr. STEWART. I don't want to interrupt the continuity of Mr. Bibo's presentation.

Mr. O'SULLIVAN. He is finished, except, as I anticipated he would do, but didn't, to conclude with the statement that, under our free democratic system of government, the only way the people can take privately owned land away from other people is by judicial condemnation. If that is what the people of the United States want, let the Congress say that is their intent, and let us have judicial condemnation, and a brave and fearless facing of the issue. That means we'll have to drive out non-Indians from the land we turn over to the Indians. But let us cease going about it with underhanded purchase methods, from one Department, and transfer to another Department, with funds that come from God knows where.

Mr. LEE. Mr. Chairman, Mr. Bibo is deaf. Congressman Anderson showed me a letter last week that he had written to Mr. Fortas who had agreed to make an investigation of that land. He said he would be in this territory. That was pretty near 6 months ago. Congressman Anderson wired his office here just 10 days ago, and asked what had happened to that personal investigation on Mr. Bibo's problem. They haven't done a single thing about it for him.

Because he is deaf, I am just asking that, because Congressman Anderson is not here, right now, to tell what he has done. He insisted on an investigation, and got a promise of it, and it never came about.

Secretary CHAPMAN. Mr. Chairman, that investigation is now under way.

Mr. LEE. Well, that investigation must have started today. Congressman Anderson didn't know of it yet.

Secretary CHAPMAN. Congressman Anderson doesn't know about it.

Senator CHAVEZ. Who is making the investigation?

Secretary CHAPMAN. I don't know which one——

Senator CHAVEZ. What bureau?

Secretary CHAPMAN. Not the Indian Bureau.

Senator CHAVEZ. Is it an independent investigator?

Secretary CHAPMAN. Entirely so.

The CHAIRMAN. I am afraid we are breaking in here. I want Mr. Bibo to conclude his statement. I think that would be a little more orderly.

Mr. BIBO. I have finished it.

Mr. STEWART. To clear the record, reference was made to Mr. Ralph Charles as being a member of the Advisory Board. My understanding of the implication was that, perhaps, he was a representative of the Federal Government, or agency, on that Board.

Senator CHAVEZ. I think I understood the testimony to be that Mr. Charles represents some member of the Board.

Mr. STEWART. I thought he represented the State Land Bank Board on this. I wanted to get that clear. He was not a Federal representative.

Mr. ADAMS. Might I make a correction there? Mr. Charles, at that time, was an employee of the Resettlement Administration. He had no connection with the Board.

Mr. STEWART. Mr. Barnett, who is referred to as having made statements concerning—conflicting statements as to sources of funds and their uses, is now in the armed service. We can get a statement from him, if it is desirable for the record.

(The two following letters written by Joseph Y. Barnett are inserted in the record at the special request of Assistant Secretary Chapman. The letter from Arthur Bibb is added to complete the record:)

MONTFORD POINT CAMP, CAMP LEJEUNE,
New River, N. C., October 3, 1943.

HON. OSCAR L. CHAPMAN,
Assistant Secretary, Department of the Interior,
Washington, D. C.

MY DEAR SECRETARY: I understand that at a meeting of a subcommittee of the Senate Committee on Public Lands and Surveys, held in Albuquerque, N. Mex. September 7, 8, and 9, 1943, Mr. Arthur Bibb, Cubero, N. Mex., made a statement that may require a reply.

Mr. Bibb is reported to have said that I told him that the payment he received from the Indian Service for improvements on certain lands came from funds not authorized for that purpose.

I should be grateful if you informed the subcommittee that I recall negotiating with Mr. Bibb for the purchase of his improvements, but that I did not make such a statement to him.

Sincerely yours,

JOSEPH Y. BARNETT,
First Lieutenant, United States Marine Corps Reserve.

MONTFORD POINT CAMP, CAMP LEJEUNE,
New River, N. C., October 3, 1943.

MR. ARTHUR BIBB,
Cubero, N. Mex.

DEAR MR. BIBB: A friend of mine has sent me word that at a recent meeting of a Senate subcommittee in Albuquerque you made the statement that at one time I had told you that the money you received for the improvements on State-owned lands you relinquished to the Indian Service came from funds not authorized for that purpose. I assume the improvements referred to were those I negotiated for when I worked for United Pueblos Agency.

It is possible that you have been misquoted; in that case, a note from you will settle the incident. On the other hand, if you did make such a statement, I will appreciate your sending a correction to the subcommittee and advising me accordingly.

I did not nor could I have made such a statement. If the money you received had not been authorized for that purpose, it would have been impossible for me or anyone else to have arranged for the purchase. Not only would I not have undertaken to deal with you, but Indian Service officials superior to me both in the field and in Washington could not have approved the transaction.

Since you must realize this, it is difficult for me to understand why you should have made such an inaccurate remark.

I am now standing by for orders to a new station. This circumstance compels me to send the enclosed note to the Department of the Interior before you have had a chance to reply to this letter. I hope, however, that you will understand the necessity for immediate action and for what may seem to be my poor manners, and that on your part you will do everything you can to correct the record.

Sincerely yours,

JOSEPH Y. BARNETT,
First Lieutenant, United States Marine Corps Reserve.

LOS CERRITOS RANCH,
Cubero, N. Mex., October 15, 1943.

Senator McCARRAN,

United States Senate, Washington, D. C.

DEAR SENATOR McCARRAN: Herewith am mailing copies of two letters I just received from Joseph Y. Barnett, who was the party I mentioned at the recent Senate subcommittee hearing in Albuquerque, N. Mex., that had informed me that funds used in paying me for improvements on certain State lands by the Indian Service came from funds not authorized for that purpose.

His letter to me is self-explanatory. I wish you to know that not only do I not intend answering his letter, but that I can make the same statement I made before your committee under oath if need be.

I assume that the friend he refers to is possibly Dr. S. D. Aberle, superintendent of the United Pueblos Agency in Albuquerque, N. Mex. To me, one of two things is very apparent; either he has been asked to request me to retract my statement to save the prestige of the Indian Service, or he has been intimidated in some way; the latter seems most probable.

I am mailing Mr. Haskell copies of these letters and will also mail him a copy of the statements I am signing before the investigators sent out in the field by the Assistant Secretary of the Interior, Mr. Oscar Chapman, as soon as I have them which will probably be in a day or so.

Very truly yours,

ARTHUR BIBO.

Mr. STEWART. Now, then, as to the two letters from Under Secretary Fortas and Under Secretary Dempsey, regardless of who prepared them, they are statements of policy of the Department, the Indian Service notwithstanding. Under Secretary Fortas' letter, which was so detailed, is actually the policy that the Indian Service would have to follow until it is changed. And, according to Mr. Bibo's proposal—I would think that when this investigation is completed and I have talk with representatives here of the Pueblo Agency—there is considerable merit in that proposal. It lends itself to fair and favorable action.

The CHAIRMAN. Very well. Are there any other statements on this matter?

Judge Seth, do you wish to proceed?

Judge SETH. Yes; I think the Soil Conservation representative was about to testify.

The CHAIRMAN. Let's proceed as rapidly as we can, gentlemen, the time is rather short at best.

You have heard the statements made here yesterday and today, and the committee would be very glad to have you make any explanation or statements that you see fit, bearing on the general subject.

You are the representative of the Soil Conservation Service, is that correct?

Mr. ALAN F. FURMAN. Yes, Mr. Chairman.

The CHAIRMAN. Who is the head of that Department, locally.

Mr. FURMAN. Mr. Luker is the regional conservator. He is in the room. I have been designated as spokesman for the Service at these hearings.

The CHAIRMAN. The designation will be recognized, and you may proceed.

**STATEMENT OF ALAN F. FURMAN, SOIL CONSERVATION SERVICE
ALBUQUERQUE, N. MEX.**

Mr. FURMAN. My name is Alan F. Furman. I am in charge of the federally owned land administered by the Soil Conservation Service in region 6, which takes in New Mexico, Arizona, Utah, and Colorado.

The CHAIRMAN. How long have you been engaged in this line of work, Mr. Furman?

Mr. FURMAN. I have been engaged in the management of federally owned land for about 6 years.

The CHAIRMAN. In what departments, or under what conditions?

Mr. FURMAN. I was in the Washington office for 3 or 4 years.

The CHAIRMAN. What department?

Mr. FURMAN. Beginning with the Federal Land Bank, and subsequently with the Resettlement Administration, the Bureau of Agricultural Economics, and finally with the Soil Conservation Service. Previous to that I was in the H. O. L. C. I have been in the West about 12 years.

The CHAIRMAN. Prior to that you lived in the East?

Mr. FURMAN. I have lived in New England and Florida, the Middle West, Nebraska, Texas, and I am very familiar with the belt known as the Great Plains, having worked and covered all of that area from Montana south to the Mexican border.

I heard the statements made yesterday by Mr. Lee and Mr. Hovey with reference to the area which the Soil Conservation Service designates as the Cuba-Rio Puerco land utilization project. We have pinned to the large map up here for your consideration the project area which was designated by the Secretary of Agriculture in 1938 in accordance with discussions of the watershed problem in that area in which the much talked of Interdepartmental Rio Grande Board had a part.

A very intensive survey of the so-called Middle Rio Grande Valley showed that the Cuba-Rio Puerco, or the Rio Puerco itself, was the largest contributor of silt on the entire middle valley, was the largest contributor of silt to the Elephant Butte Reservoir, that the watershed on the Puerco at that particular point is a permanent critical area; and all of the agencies concerned who had to do with the land policy in the Middle Valley agreed that something had to be done about that area.

Now, I want to go back just a minute and deal with the land purchases.

The CHAIRMAN. Let me interrogate there. You made the statement that something had to be done. To meet what condition?

Mr. FURMAN. To meet a very serious erosion condition, Senator. The Cuba-Rio Puerco is the largest contributor of silt in the entire Rio Grande drainage, resulting in raising the river bed about 5 feet at a great many points, flooding irrigated lands, and destroying the efficiency of the Elephant Butte Reservoir, and contributing to adjusting the economy in this Rio Grande area.

The only land in the Cuba-Rio Puerto project which has to do with these older purchases made by the predecessors of the Resettlement Administration, which was the old Land Program, spoken of here as

the Espiritu Santo grant, is shown in yellow on the southeast corner of the map. It contains 113,141 acres. It was purchased by the Land Program—previously referred to and otherwise known as the Land Policy Section of the triple A, in about 1935—and was designated not long afterward for administration by the Indian Service.

However, in 1938 and 1939 this critical condition, of which I spoke a few minutes ago, began to be recognized, and it was decided that this entire area shown on this map should be designated as a project area, to be placed under the jurisdiction of the Secretary of Agriculture. A purchase program was initiated there and funds provided under title 3 of the Bankhead-Jones Act, and to this amount was added the Espiritu Santo grant, which was transferred from the Indian Service by Executive order.

I have had a number of Executive orders here. As I said, the Espiritu Santo grant was transferred to the Department of Agriculture by Executive Order 8697, giving the administration of that grant to the Secretary of Agriculture. That rounded out the government of the lands under the jurisdiction of the Department of Agriculture, and the total amount, including this Espiritu Santo grant, is 264,254 acres.

The CHAIRMAN. Why is this called a grant? Is it one of the grants that came with the Territory when we acquired it?

Mr. FURMAN. Previous to 1846 it was a grant, one of the old grants which, I presume, may have been granted by Spain.

The CHAIRMAN. And it was granted recognition under the terms of the treaty?

Mr. FURMAN. Yes.

The land administered by our Service, as you know, is located in about three blocks, the Chavez grant, the Espiritu Santo grant, and some of the other lands, purchased with title 3 of the Bankhead-Jones Act, in the northern part. The Bankhead-Jones Act, title 3, provides for the purchase of submarginal land, and submarginal areas were selected in which land should be purchased.

It has been the policy of the Department, and of the Soil Conservation Service, to build up many inadequate operating units by the addition of grazing privileges on lands so acquired.

The CHAIRMAN. I don't know whether this is a proper place to ask this question, but I have tried for a long time to have someone tell me in understandable terms what is submarginal land?

Mr. FURMAN. Land which, under an average expenditure, will not yield an average return. You spend a dollar an acre on marginal land and it will give you a reasonable profit, theoretically. If you spend a dollar an acre on submarginal land it will return you 85 cents, in words of one syllable.

The condition that existed in the Cuba-Rio Puerco project, however, was concerned not only with the land itself but, in addition, the populace. It was very much overcrowded; too few acres; too few blades of grass per family; and that condition, added to the fact that the area was being seriously overused, made, as you see, a serious total over-all situation.

Well, as I was saying a moment ago, it has been the policy of this Service to build up inadequate units by the addition of grazing privi-

leges on acquired lands. We have followed this policy on the Cuba-Rio Puerco project, and, I believe, if my memory serves me correctly, that the average permit, the average size of the permits which we are issuing in that area is for about 12 head, or animal units, of livestock. There are 3 or 4 permits that run 40, 50, or 60 head each; but the average is about 12 head.

The CHAIRMAN. To what unit of land is this 12-head permit?

Mr. FURMAN. An average of 12 animal units to the permittee per family.

Now, I am going to take up I might add, in passing, that it is also the policy of the Service that permittees should pay for what they get a fair economic rate. We have not been permitting free use in the Cuba-Rio Puerco area. There are perhaps a few miscellaneous portions which we have not been able to locate; but, in general, free use is not permitted in the Rio-Puerco area, or anywhere else in the United States under the land-utilization projects.

The CHAIRMAN. What are the fees, as a rule?

Mr. FURMAN. The fees have quite a range. Referring to the map on which the red areas are located—the red areas over in the northern part of the State—we have a fee of 28 or 30 cents per animal unit month that we have figured through careful investigation of the fair economic value of the grass.

Senator CHAVEZ. Is that around the Mills project?

Mr. FURMAN. Yes; Senator, that is right. In the grants-land project, which is up near the Española-Santa Fe area, our fee is now 12 cents per animal unit month. We consider not only the value of the range, the economic value of the range to a stockman, but what other agencies and other landowners are charged. We also have taken into consideration the ability of the permittee to pay in that particular area. The fees in the Cuba-Rio Puerco project are 5 cents per A. U. M., the lowest fees in the State or region. A great deal of land is interspersed with Grazing Service land in that project, or other parts; and we believed that it was sound interdepartmental policy to charge the same fees, to avoid confusion among the permittees, particularly under our range improvement, until it has been completed on this project; until we can actually show that the grass is worth more to the stockmen.

Now, I want to take up the question of the carrying capacity, known as the rate of stocking, of this project. The Soil Conservation Service is sincerely interested in the welfare of these subsistent populations within the boundaries of that project. It is our intent that they should have the use of every blade of grass which can be made available for their use. It is needed. There are about 84,000 subsistent families in that valley, depending on grass. I believe the figure is 108,000—I would like to correct myself—depending on this graze, and with the small quantity of grass they can be given today, permits for 150 head. The records show there are still 13,000 dependent families who have no grass whatever, and are forced off the land, and are dependent upon odd jobs. It would be our aim, if we could, to see every one of these families get some grazing land to use. Unfortunately, it is absolutely impossible for us to provide graze enough for those in the Cuba-Rio Puerco area itself, let alone any other areas in the valley. I make that statement to show our intent in this matter.

Senator CHAVEZ. May I interrupt you, please? I believe that I understand fully the statements that you are making, and I want to thank you for being able to acquaint the committee with the conditions as they are; and I do not mind saying publicly what I say privately, that the Soil Conservation Service and the Farm Security Administration are two of the agencies of the Federal Government that have really taken a little interest for the fellow who needs help.

Mr. FURMAN. Thank you, sir.

In attempting to distribute grazing privileges on federally owned land administered by the Soil Conservation Service on this project we have thought that the soundest position to take was that lands must be used soundly, in accordance with their ability to produce, and down through generations. We see that if these lands are continued, if the use is continued as it has been used in the past, that diminishing returns will result. The topsoil will go down the Rio Grande, and there will be nothing left for future generations.

Therefore, following out the policy of this Service, we have made careful, intensive, range surveys of the area, and have determined to the best of our ability, through scientific determination, just what those lands will carry so that the vigor of the forage will be restored and will be maintained, and so that they will be able to support future generations, and will not be wasted by the present generations.

In doing this, our findings, after these surveys were made, were disappointing to this Service, as well as to the users of the land. The carrying capacities were shown to be surprisingly low, less there than we had hoped. We were able to permit less use than we had hoped. However, we have stuck to our firm belief that that was the best long-time policy, and we have gone down the line and maintained the carrying capacity that we sincerely thought was best.

The CHAIRMAN. Let me ask you this, please, this same principle, to some extent, that is, the conservation of the open public domain and its preservation and upbuilding for future generations is a part, and is, indeed, the spirit of the Grazing Service. It is likewise the spirit of the Forest Service.

Now, where do you differ from those two Services?

Mr. FURMAN. I might go back a bit and say that the Forest Service has been recognized for a good many years as having had the first land in New Mexico on the watershed where grazing was adequately controlled. I might say the land in the Cuba-Rio Puerco project, in the north end, the scattered tracts, are lands interspersed with the Grazing Service, which has approximately the same rate of stocking as the Soil Conservation Service land. The Soil Conservation Service, I believe, made the range surveys on the Federal range originally, and made the information available to the Grazing Service. Is that right?

Mr. J. L. LANTOW. Yes; that is right.

The CHAIRMAN. Does the Soil Conservation act as an assistant to, or an adviser to, the Grazing Service or the Forest Service?

Mr. FURMAN. I hesitate to speak for the Grazing Service. But I think we may go so far as to say that we have made available to the Grazing Service some of our range studies. If any member of the Grazing Service has a contrary opinion, I wish he would please state so.

The CHAIRMAN. What I am really getting at is this: I am trying to distinguish the necessity for the functions of your Department, as distinguished from the functions of the Grazing Service and the Forest Service. In other words, is it an overlapping service? Do you carry on the same line of study and work, or do you do a separate and distinct work?

Mr. FURMAN. I think that can be answered as follows: The Soil Conservation Service has the lands administered by the Soil Conservation Service throughout the United States, as well as those in this discussion. Those lands are located in problem areas, where low-income subsistence groups have been located; where the operating units have been so small that they have been forced into incorrect land use; where delinquent taxes have become a real problem; where the population has been impoverished through dust storms, through improper use of land, and other reasons of related nature.

In other words, we are working in submarginal problem areas, where the majority of the operators have been in the low income group. Does that answer your question? That is our field.

The CHAIRMAN. Well, it does distinguish your field, in a way.

Mr. FURMAN. I would like to make it clear. If you wish me to go further into the matter, I will try to.

The CHAIRMAN. No, no, that is all right.

Mr. FURMAN. Going back to your preceding question, I think that, perhaps, the Soil Conservation Service is a little more zealous in watching local seasonable conditions, and a little more ready to initiate cuts in the rate of stocking, than some of the other bureaus.

Now, we think, we believe sincerely, that we are doing that for the benefit of the land and the people, who are using it over a long-time basis.

Now, I want to call, at this time, with your permission, on Mr. Lantow, who is the Chief of our Range Division, in our regional office, for any remarks that he wishes to make, perhaps of a more general nature, in connection with the establishment of the carrying capacities, or perhaps to philosophize a little on the safe use of vegetation.

Senator CHAVEZ. Mr. Furman, before you proceed with the other gentleman, could you give the committee a little information as to the land purchases along the Rio Puerco, the Ojo de Espiritu Santo? We had testimony as to the uses to be allowed to the permittees on the Ojo de Espiritu, and they seem to feel that they could graze more animal units in that area than what they have been permitted.

Mr. FURMAN. Senator, I was about to lead up to that, through another witness that I have here.

Senator CHAVEZ. No; that is all right. If someone else is going to give us that information, it is all right.

Mr. FURMAN. We have, of course, the actual figures, by sections and photographs, to establish our points. Is it all right for Mr. Lantow to take over for a few minutes?

The CHAIRMAN. Certainly.

STATEMENT OF J. L. LANTOW, RANGE DIVISION, SOIL CONSERVATION SERVICE, ALBUQUERQUE, N. MEX.

Mr. LANTOW. I think Mr. Furman has covered pretty well the policy that we have tried to follow. I might say, in starting, with our carrying capacity, it has been through surveys, using the surveys that have been best established by other agencies before we came into the field.

The CHAIRMAN. What do you mean by "surveys" in that respect?

Mr. LANTOW. Taking the amount of vegetation, the kind of vegetation on the ground, and trying to balance it up into carrying capacity. After that is started, observation is made of the range, yearly, to see in what condition it is, and seeing whether or not it is being handled to meet the objects that were set out originally to obtain. There has not been any intention of holding a carrying capacity that looks like it is out of line. For instance, if it is under-used it should be raised, if it is over-used, it should be lowered, if you are trying to meet the objectives. While it has not been in all cases followed up to now—having the personnel go over an area—it is our desire as quickly as we can have men available qualified to check up on such use.

The CHAIRMAN. Let me ask you a general question there. If a range shows, or a territory shows, soil erosion, and the streams running off carry a high percentage of silt, as has been mentioned here, what, in the judgment of your Department, is best; to eliminate grazing entirely, and thus to let the territory grow up completely, or to allow a reasonable degree of grazing?

Would it not be better to eliminate grazing entirely, and thus to prevent erosion that comes from the action of grazing?

Mr. LANTOW. Grazing lands can be used, Senator, without detriment. There are very few places, probably, where they need to be totally excluded. It might be necessary in watersheds above the towns. I have in mind, from your questions—I believe it is Globe, Ariz., where the condition became so critical that the people themselves felt it was justifiable, and asked to adjust it above the watershed from which came the water supply of the town.

Ordinarily the range can be used, if not over-used. We have tried to use as the guide, the vegetation, in condition to give maximum protection. When it is lowered, it is detrimental, both to the consumer—

The CHAIRMAN. Is it detrimental to completely eliminate grazing?

Mr. LANTOW. I am trying to get your question. I don't know as grazing is necessary, but I wouldn't call it detrimental. You can keep the vigor up—there are some things, such as the graze not being used beyond the proper degree. Grazing is probably helpful to certain vegetation.

The CHAIRMAN. I am trying to visualize what the full extent of your doctrine or theory is. In other words, to fully vegetate a district would it be best to eliminate all sources of the destruction of the vegetation?

Mr. LANTOW. Well, destruction would probably be right. If you used it to that degree to which it does not penalize the production of

vegetation, use it to that extent, and you would probably get the greatest production of your plants and, generally, handle the erosion problem at the same time. I think that was borne out by most of the stockmen in stocking their range.

The CHAIRMAN. You don't believe that the entire elimination of grazing is the best method?

Mr. LANTOW. I wouldn't call it necessary.

The CHAIRMAN. I am saying the best method?

Mr. LANTOW. No; I wouldn't say it was.

Senator CHAVEZ. That is making out the point that a certain degree of the use of the vegetation would help; for instance, berries, if you pick the berries you are liable to have some more. If you pick the plants—

Mr. LANTOW. Mr. Chairman, I think we all agree that something should not be overused. The stickler always come in, where is that degree? So far, nobody has ever been able to design a measurement that will take the place of judgment, experience, probably, and training; and there is that question that will always probably prevail. It prevails among many of us, but we do try to use the best information we have from agricultural colleges and experiments carried on by the Government agencies that are impartial, and many of the things they use, such as the frequency problem of any vegetation that is grazed, and also the closeness with which it is grazed.

There is one thing that is important in the Southwest, and that is the water problem which is generally the limiting factor in production. We have evaporation, in the ranges, from 60 to 85 inches. When we only get 8 inches, and still can produce grass, it is quite a feat. One of the reasons we can do it, is that we leave enough cover on the land, and do not eat it all off. You have better penetration of the water into the soil, and that will help produce that grass, and also help prevent evaporation, to be wasted into the air. Those things, I think, are scientifically sound, and have been proven. That is the reason we add a little more grass than probably they think is necessary. Probably they think it is going to waste. Actually, we come down to the scientific point, and it is not a wastage, it is actually a help in production. I think that has been observed generally through the stockmen.

I believe that I have no more general remarks to make, unless you would like to ask me something.

Senator CHAVEZ. Have you jurisdiction over the land purchases that have been made in New Mexico?

Mr. LANTOW. No, sir; I have been—I don't know whether the word is "consultant," but it is advisory on how to manage, and we are called upon to cite the degree of use of the vegetation.

Senator CHAVEZ. Are you acquainted with the land purchases in New Mexico, along the Rio Puerco area?

Mr. LANTOW. Acquainted? Yes.

Senator CHAVEZ. Are you acquainted with the Espiritu?

Mr. LANTOW. Yes.

Senator CHAVEZ. Have you studied that?

Mr. LANTOW. Yes.

Senator CHAVEZ. You are making improvements?

Mr. LANTOW. Absolutely. I would like to mention that the cover of the vegetation, in some of these places, would probably have a

good stand of grass—the grasses of some of these might have changed as to the composition they have had in other years. You do not always get the growth of what you expect. It is not what covers the ground, it is the heat. That is the value to use. I do know, on the Espiritu there have been changes in vegetation, as to the amount and the type of vegetation; and, since it has been taken out, it is in remarkably good shape, although there is not as much grass there, as I have stated.

Senator CHAVEZ. You have heard the testimony of Mr. Hovey to the effect that the grass was rather high?

Mr. LANTOW. It will be brought up, probably, by Mr. Strong. He is better acquainted there than I, because of my working over four States.

Senator CHAVEZ. Can you tell the committee now the number of land grants that were purchased, and are now under the control of the Soil Conservation Service in the State?

Mr. LANTOW. I would have to refer that to Mr. Furman.

Senator CHAVEZ. We would like to get that in this particular part of the record. Can you tell us, Mr. Furman?

Mr. FURMAN. Yes, indeed. In addition to the Espiritu Santo grant, and the Ignacio Chavez grant, which are a part of the Rio-Puerco project, we also administer a project known as the Northern New Mexico grant, lands composed of the Caja Del Rio, la Majada, the south half of the Labato-Polvadera, and the Sebastian Martin.

Senator CHAVEZ. What about the Ramon Vigil?

Mr. FURMAN. That was transferred to the United States Forest Service.

Senator CHAVEZ. What about the Mills project?

Mr. FURMAN. That is under the administration of the Soil Conservation Service, about 74,000 acres. It is not a grant, however, you understand.

Senator CHAVEZ. But I am including all of the land, including the grants. What about the Palvadera?

Mr. FURMAN. I have named that as being part of the New Mexico grant lands.

Senator CHAVEZ. What about Taos Junction?

Mr. FURMAN. That has been transferred to the Forest Service. I have a list here of the lands.

Senator CHAVEZ. I think they gave that to me.

Mr. FURMAN. There is also the land in Union County, N. Mex., as we said before, 56,000 acres of land of which the top soil was blown out of there in the dust-bowl period; and a very small area down in Eddy County, the southeast corner of the State.

For the record, if it is the place to insert it at this time, the Service is administering 657,152 acres in New Mexico.

Judge SETH. Is that the total administered by your Service?

Mr. FURMAN. That is the total in——

Judge SETH. That includes the grants and all other tracts purchased?

Mr. FURMAN. That is right.

The CHAIRMAN. Are there any questions from anyone here?

Mr. CHAVEZ. Mr. Seth, would you care to ask some questions?

Judge SETH. I would like to wait until they all get through.

Mr. LANTOW. I might say, Senator, that we do have some pictures taken at many places at distances from water, and intervals of—I have forgotten the exact intervals—that show the height of the grass in April; and we have also taken some of the parts of the range that could not be watered.

Senator CHAVEZ. Are those recent photographs?

Mr. LANTOW. Before the rains started in this last April. I suggested some time ago that they be taken, and they will be available to you probably later.

The CHAIRMAN. Are the amounts of rainfall quite uniform in this section, year after year, or have there been years in which the rainfall has been greater, and others in which it was less?

Mr. LANTOW. That is right, Senator; there is quite a variation.

The CHAIRMAN. Regardless of how well you may preserve the surface, or attempt to produce cover, still, after all, you have to depend on the rainfall, largely, do you not?

Mr. LANTOW. You cannot handle the rainfall, but you can handle the degree of use, which is the factor you have at hand.

The CHAIRMAN. In other words, if it didn't rain for a period of years your whole effort would be largely lost, wouldn't it?

Mr. LANTOW. It should not be, if you don't go ahead and penalize the vegetation to add to what will be done by the climatic conditions.

The CHAIRMAN. On the other hand, if it did rain sufficiently to produce vegetation, with your climatic condition here, your efforts of soil conservation would not be necessarily so great?

Mr. LANTOW. We find that the heavier grazed areas, the better production areas, they have this problem of not enough feed, as well as down in the lower bracket of rainfall. We have tried, in the fall of the year, in this year-long grazing area, to advise and help stimulate the holding of enough grass at that time, by the reduction, if necessary, to see that we can well carry over the winter and into the summer. So, if you are not caught in such bad shape, and that has been done, I believe there is no other way in the Southwest to handle that. Your best bet is to bet on the grass you have, instead of what you think you are going to get.

Mr. FURMAN. In this respect, I would like to answer Mr. Hovey later on, when he asked me questions, if he intends to—he can correct me if I am wrong—but I repeat that I suspect part of his remarks, and perhaps a part of Mr. Lee's remarks, may have been induced, partially at least, through the fact that the Soil Conservation Service did cut, and otherwise reduce the rate of stocking on the Espiritu Santo grant last fall, about November 1942.

The reason as to why that cut was made will be given you, together with supporting evidence, by Mr. Strong and by Mr. Swanson, both of whom are familiar with all the details. But I want to say at this time, in opening up this matter, that it was given very serious consideration by the Soil Conservation Service.

We had a meeting which was attended by everyone concerned. We realized what it would mean, and we realized there would be repercussions of a character that we could not foresee. We realized that people would resent it, and realized it would probably be brought to the attention of the McCarran investigating committee. We realized that it would be the subject of congressional correspondence, and I

say to you, in spite of all of that, we thought it was the thing to do, in accordance with our honest conviction, and we did it.

I am going to ask Mr. Strong if he will elaborate on this matter, and any other matters. He is the district conservationist.

The CHAIRMAN. Will you give your name and official position for the record?

STATEMENT OF R. L. STRONG, DISTRICT CONSERVATIONIST, SOIL CONSERVATION SERVICE

Mr. STRONG. My name is R. L. Strong, district conservationist for the Soil Conservation Service, located in Albuquerque, N. Mex., and I am directly in charge, under the supervision of the State office and the regional office, and have the responsibility of the administration of the Cuba-Rio Puerco land-use project, along with other duties as a district conservationist, which pertains to some additional districts in that area.

The CHAIRMAN. How long have you been so engaged?

Mr. STRONG. Since the fall of—I entered the service of the Soil Conservation Service in 1935.

The CHAIRMAN. Prior to that what was your business?

Mr. STRONG. The county agricultural agent, employed by the State of New Mexico, since 1917.

Senator CHAVEZ. From what section of the State, Mr. Strong?

Mr. STRONG. I started services in the adjoining county of Torrance, in the Estancia Valley; served there approximately 2 years. Then I went back to the ranching game with my brother, and got caught in the depression in 1921, and eliminated from that game. I have never been able to accumulate sufficient funds to get back in.

In 1922 I went to Harding County, N. Mex., where we have both ranching and farming operations, and served there for 6½ years. After that I transferred to Raton, N. Mex., since it offered a better opportunity for schooling, and a better salary; and from there to Colfax County, N. Mex., which, I think, has no superior in livestock production in the State of New Mexico, in regards to counties. I served there for 7 years; and at that time I transferred to the Soil Conservation Service; and I have been here in Albuquerque.

Are there any further questions?

The CHAIRMAN. That is all. You may proceed.

Mr. STRONG. When the Ojo de Espiritu Santo grant was under the administration of the Indian Service, it was this area in which I was doing planning work, and I was responsible for assisting in making the plans of improvements, and the management of the Ojo Espiritu Santo grant, under the direction of the district manager, Mr. E. R. Smith. After the purchase program came into effect in 1939 I still was in charge of the planning for that area, as well as the additional lands that were purchased; and in 1941 was director of the management of that. I was made what was called then the project manager for the Cuba-Rio Puerco land-utilization project in 1941. Since that time I have had the responsibility of the field work of the Cuba-Rio Puerco project.

Like our friend, Mr. Rutledge, who sat here yesterday, I was given a job, and I did my very best to do that job as thoroughly and as prac-

tically as I possibly could. My interests were with the whole people. I have done everything I possibly could to assist them in working out their problems. I have cooperated to the full extent with the Grazing Service, and have attended practically every one of their board meetings, where grazing matters were discussed. We have worked harmoniously, throughout the last 3 or 4 years, in making our permits correlate with theirs, so that the users of that area would get the fullest and the benefit would go to those people who were entitled to it. We have never had any difficulty whatever with the Grazing Service in making those decisions.

Over most of the area marked in yellow there the Soil Conservation Service has issued the permits. We have an agreement with the Grazing Service, whereby the isolated tracts, in this southern portion of what we originally called unit A of the Cuba-Rio Puerco project is administered by the Grazing Service, because they have the bulk of the land in that area.

Then, in this northern area, we have considerable land, and there we work together with the Grazing Service in this northern area here. They have used the carrying capacity, as established by the Soil Conservation Service, in issuing their permits. The Soil Conservation Service has tried to act as a buffer, and give to the people the additional grazing needed for their livestock.

In this area, of course, we have the grazing in the two largest grants here, under the direct supervision of the Soil Conservation Service.

The CHAIRMAN. Now, are those two yellow districts, depicted in yellow there; are they in a grazing district?

Mr. STRONG. All of this area is in the San Ysidro Grazing District. I think it is No. 1, or surrounded by that, and the Grazing Service, as I said, have considerable land holdings within the boundaries of the original project.

The CHAIRMAN. So you have an established grazing district, established in accordance with law, managed by the Grazing Service, and at the same time managed by the Soil Conservation Service?

Mr. STRONG. The Soil Conservation Service is administering the lands which they have purchased, and which is under the program, as has been stated by Mr. Furman.

The CHAIRMAN. Well, I say, you have the two agencies administering in that district, the Grazing Service and the Soil Conservation Service?

Mr. STRONG. True, true. We have Soil Conservation Service; it has direct responsibility in rehabilitating those lands which have been purchased by the Soil Conservation Service; and, as Mr. Furman has expressed it, we probably have a little closer supervision, and a little more intense supervision, of those areas than is possible by the Grazing Service.

The CHAIRMAN. Isn't it the function of the Grazing Service to rehabilitate lands that are being overgrazed?

Mr. STRONG. They are doing that satisfactorily, in a large percentage of cases, and Mr. Rutledge so expressed that yesterday.

The CHAIRMAN. You may proceed.

Mr. LEECH. I just wanted to have the record clear on the two large areas in yellow. They are not part of the grazing district.

The CHAIRMAN. Well, I put that direct question to the witness a moment ago, and I got the answer that they were in a grazing district.

Mr. STRONG. I said they were surrounded by a grazing district.

The CHAIRMAN. Very well, I misunderstood you. They are within the boundaries of a grazing district?

Mr. STRONG. Within the boundaries of a grazing district.

The CHAIRMAN. Administered solely by the Soil Conservation Service?

Mr. STRONG. Yes, sir.

The CHAIRMAN. But these other lands, interspersed, up in the upper part of the map, the white parts are administered by the Soil Conservation Service in a district that is also administered by the Grazing Service?

Mr. STRONG. Yes, sir.

The CHAIRMAN. I have just this one comment to make, and I make it now, that you may shoot at it as you like.

We are going to take a recess pretty soon.

After 11 years' service on the Appropriation Committee of the United States Senate, I am convinced of one thing, that the day is going to come when an overlapping of services, each pulling upon the Federal Treasury, and all pulling upon the taxpayers of this country; the overlapping is going to have to be merged into one agency that will do the work, and do it efficiently. [Applause.]

I don't say this for any applause. It is a very serious question.

I can see the problems here. They are intricate, and they are multiple. They are many. But there is an overlapping of administration, and overlapping of authority, and an overlapping of responsibility, and everyone of them, probably, is pointed at the same ultimate, worthy end. But the taxpayers of the United States are paying the burden of all of them. It has got to come to an administration that is much more economical than what we are going through. Something has to be done. I don't think that requires that you defend your position. You are set up under the law. I don't know that there is any great responsibility; it is one responsibility somewhere that must be answered, and answered emphatically. Those who serve now are serving legitimately.

Mr. FURMAN. May I say a word on that point?

The CHAIRMAN. Yes, sir.

Mr. FURMAN. It is largely a repetition of what I said before. We don't think that the Soil Conservation Service should administer Federal lands in the majority of locations in the United States. We do have a very well prepared survey, made in 1936, showing that there were a definite number of problem areas in the country, where circumstances have caused the break-down of the entire economic system, speaking of agricultural economics. It was in those places that these projects were established, and it was for the reason that those places existed that the Bankhead-Jones Act was passed, I believe.

The CHAIRMAN. We are now about to take a recess for the noon hour. The committee will recess until 2 o'clock.

(Recess was taken until 2 p. m.)

AFTERNOON SESSION

The CHAIRMAN. The meeting will come to order. You may proceed.

Mr. FURMAN. I am going to ask Mr. Strong to continue with a discussion of exactly how rates of stocking are determined on the Cuba-

Rio Puerco project, and to ask him to present to the committee the actual figures showing the rates of stocking on the project. I only want to say one sentence before turning the microphone over to Mr. Strong, and that is that Mr. Lantow has called my attention to the fact that many of you may have gotten the impression that the Soil Conservation Service activities are confined solely to the handling of submarginal land or federally owned land. Of course, that is by no means so. The administration of Federal land formed a very small portion of the activities of the Soil Conservation Service. This Service cooperates with, and establishes carrying capacities in, a great many areas in New Mexico, including privately owned land, and in some instances, other federally owned lands. I wanted to insert that for the record.

Mr. Strong, will you go ahead and tell us, please, how you arrived at the carrying capacities on the Cuba-Rio Puerco project, bearing in mind what was said yesterday in that respect?

Mr. STRONG. Mr. Senator and friends, in establishing the carrying capacity for the lands purchased by the Government the following factors were taken into consideration, as has been explained by Mr. Lantow: The type of forage, the amount of forage on the land, and from that was deduced the amount of stock that could be carried on a particular piece of land. I want to state, this is not building in any way, as has been brought out here, because of the fact that earlier checks are made of the use that is being made of the graze in this particular area, and from that the rate of stock for each subsequent year is established.

Yesterday the intimation was made here that on the Ojo Espiritu Santo grant the carrying capacity established by the Soil Conservation Service, or stocking rate, was two animal units per section. Never has it been stocked anywhere that low. The 1942 stocking rate was 5.7 animal units. Now, a large portion of that range was a little better than 6 animal units, even though that particular area was poorly watered, and we realized that there was grass there that would not be used. There are portions of that grant that are of a very low carrying capacity, and the figure set for the carrying capacity on those is 2.9 animal units per section. That comprises, of the 114,000 acres on the grant, 47,000 acres, a little over one-third of the total amount.

The CHAIRMAN. I don't quite understand you. Just a moment ago you stated that the estimate of two and a fraction animal units per section was not true, that it was never less than 6.

Mr. STRONG. I said 5.7 was the stocking rate a year ago, and portions of that grant, I said, were around 6 animal units.

The CHAIRMAN. Then you don't contradict the statement of the witness yesterday?

Mr. STRONG. When he said the total stocked rate of 6 animal units! Well, it's 5.7.

The CHAIRMAN. My recollection of his testimony is there was part of that that ran as low as two and a fraction. That is my recollection. I could be in error, too.

Mr. STRONG. And he stated that the Chavez was stocked at the same rate.

Senator CHAVEZ. There are some portions of the Ojo Espiritu Santo that are rated at 2.9; that is, 47,000 acres?

Mr. STRONG. Forty-seven thousand acres.

Also, the statement was made that the Ignacio Chavez grant—the stocking rate on that is exactly 7 animal units per section, as a total; and on the scattered land in the north and western portion of that area the sections vary. The average up there is somewhere around 10. Some of those sections have a carrying capacity of as much as 14 and 15 animal units per section.

This is determined through a range survey, and based on the Soil Conservation Service survey. It has a certain amount of grass to allot to livestock people or growers in that particular area. In the fall of 1940 we took our first applications for grazing, and the applications totaled far more than the number of stock that we could accommodate on the land that the Soil Conservation Service had charge of. It had been determined, through establishing a set of rules and regulations, that residents of that area who had been former users of those lands would be given a permit for the number of stock that they ran during the base period of 1938, '39, and '40.

Senator CHAVEZ. Right there, did the Jemez Indians ever use the Ojo Espiritu Santo Grant, prior to the time that the Government purchased it?

Mr. STRONG. I cannot answer that, Senator.

Mr. LEE. I think I can answer that.

Mr. HOVEY. I have worked in that grant since 1910. My house is about a hundred feet from the Puerco, and the Rio Puerco is the boundary line of the west side of the grant. There never was an Indian allowed to graze in that grant.

Senator CHAVEZ. Now, in order to clear the record, you decided on a policy that in some particular instances you could let the prior users—you could let the land involved be used by the prior users. Is that correct?

Mr. STRONG. Yes.

Senator CHAVEZ. You yourself do not know whether or not the Indians of Jemez ever used this particular grant?

Mr. STRONG. Senator Chavez, I had no choice in the matter.

Senator CHAVEZ. Well, I'm trying to get the record straight, here, following your testimony. As far as you know, or anyone else knows, the Jemez Indians had not used the Ojo Espiritu Santo Grant prior to the purchase by the Federal Government?

Mr. STRONG. That is right.

Senator CHAVEZ. They are using it now, though?

Mr. STRONG. Yes, sir. I wanted to qualify, prior to the exchange that was made by the Ojo Espiritu Santo Grant and the Antonio Sedillo Grant, by Executive order, the stocking of 400 animal units was reserved for the use of the Indian Pueblos of Jemez and Zia.

Senator CHAVEZ. Prior to the granting, or the purchasing, of the Antonio Sedillo Grant they were in there?

Mr. STRONG. That is right.

Senator CHAVEZ. How far is it from the northern or the western boundary land from the Pueblo to the boundary line of the Jemez Pueblo?

Mr. STRONG. Adjoining the Espiritu Santo on the east, the Pueblo is some 10 or 12 miles to the south, part of their land coming up to within 5 or 6 miles of the southeast corner of the Espiritu Santo Grant.

Senator CHAVEZ. You stated that you could not help it. Why couldn't you help it?

Mr. STRONG. Because the Executive order set aside 400 animal units for use of those Pueblo people.

The CHAIRMAN. An Executive order from where?

Mr. STRONG. From Washington.

The CHAIRMAN. An Executive order?

Mr. FURMAN. I think Mr. Strong means it was a Secretarial agreement, between the Secretary of the Interior and the Secretary of Agriculture, dated 1939. I could produce a copy of that for the record, before the committee leaves the city, I believe, if they so wish.

The CHAIRMAN. All right.

Senator CHAVEZ. They decided if this agreement as to how the land should be used, irrespective of the fact that you have a policy that prior users could use that purchased land?

Mr. STRONG. Not irrespective; that was turned over to us, and we established the use of the lands that were turned over to us. This was returned to us with that reservation, Senator Chavez.

Senator CHAVEZ. Yes; but prior to that?

Mr. STRONG. We had not established the rules and regulations until after this transfer was made back.

Senator CHAVEZ. The transfer was made 2 or 3 years after you purchased the Ojo Espiritu Santo Grant?

Mr. STRONG. I don't know the date, but it was made in 1941.

Senator CHAVEZ. Then is when you purchased the Antonio Sedillo?

Mr. STRONG. It was a couple of years before that, it was in 1939, but that is when the exchange was made.

Senator CHAVEZ. All right, you may proceed.

Mr. STRONG. I had reached the point where we had stated that the carrying capacity, and the amount of grass this Soil Conservation Service had to issue permits on, was for a certain number of animals, and that our applications far exceeded that number, and using the base period that was established, we issued permits to the individuals in that area covering the entire amount of grass that we had available; after which a hearing was called at the Ojo Espiritu Santo grant, in one of the buildings of the former C. C. C. camp there, to listen to protests, at which time an effort was made to adjudicate any errors that might have been made.

Mr. HOVEY. Mr. Strong, who were called to those protest meetings there?

Mr. STRONG. We had something like—I don't remember, but somewhere over half the permittees in that area were present at that meeting. Everybody was there; everybody was given the information, and circulars were sent out telling them they had this opportunity for making their protests, at the time that the number of stock they were to be issued a permit for was given to them. Those circulars were sent out stating the number of stock, and telling them to come to the protest meeting.

Mr. HOVEY. Some of them did come?

Mr. STRONG. A large percentage. I don't know the exact number. I can go back to my diary and verify the number.

The CHAIRMAN. All right.

Mr. STRONG. That is about all we have to say in that respect. We have done the very best we could, in taking care of those people who made application for grazing permits and who may have been prior users on the area.

In the fall of 1941 our range utilization survey showed that we could increase the stocking on that grant a slight amount. That fall we allowed a number of the smaller users in that area to retain their heifer calves, in order to replace some of the old cows that they have in their herds. In the summer of 1942 we had an extreme drought in that area, and none of the stock tanks on the grant caught any water, on which we were dependent for the proper grazing of a large portion of that grant. When the time came to issue our permits, in October, which are effective on November 1, I asked that a careful check be made of the number of stock that could be carried through the winter months on that grant. Our range supervisor made a survey, and came in with the recommendation that the livestock on that grant would need to be cut 200 animal units. I protested it, knowing that I was going to have a repercussion, and I protested, against my better judgment; but I wanted to be sure that it was right. As a result of that, the several officials of the regional office went with us to make a recheck, or to check up on the figures that were being given us, so as to be sure we were right. Mr. Lantow and Mr. Furman have explained how that is done. The cut was made, and I think the results have substantiated the wisdom of that cut.

This spring, for the first time, we had cattle dying on the grant, because they were poor. The starvation was not so much from the lack of feed as it was from the lack of proper water. When the hot weather came on, the permanent waters that were available in that area were unsuitable for the use of livestock. As a result we had livestock dying, and the cattle were poorer this spring than they have been any time since they were placed on the grant.

Mr. HOVEY. Was there any way to prevent the starvation of cattle on the Puerco, getting water dams into the Puerco, as the people that used that land before you used to do?

Mr. STRONG. We realize that is one method. At the present time, we are limited on our work crew that we are able to employ with the funds. We have been doing that very thing.

Mr. HOVEY. Isn't it true, that 6 miles from the west boundary there is grass as old as 5 years that has gathered?

Mr. STRONG. Not as old as 5 years.

The **CHAIRMAN.** Well, then, 4½ years.

Mr. STRONG. Probably when the stock tanks in that area, that served that area only, dried up, in 1941; therefore, it was largely the 1942 growth that was left.

Mr. HOVEY. Isn't it true, there is a spring by the name of Ojo de Tio Pula that a cow can swim in? We requested you to open that water hole up.

Mr. STRONG. That has been used, Mr. Hovey, since 1942; early in 1942; continuous use; and the stock was in there during all of this past winter.

Mr. HOVEY. We didn't have no rain whatever this winter; no snow whatever. Didn't you offer a permit to Jesus Montoya? Jesus

Maria Montoya was offered a permit within the grant, on lands at this spring, through this drought. There is no grass growing in that country in the wintertime, although Mr. Strong just stated that a few cattle starved to death on account of not so much the grass, but the water; and Jose Agapito Garcia was offered the land within the grant—

Senator CHAVEZ. There within the area?

Mr. HOVEY. Jesus Maria Montoya is right there to produce the evidence.

Mr. STRONG. That was to be brought out in my discussion.

The CHAIRMAN. All right.

Mr. STRONG. What Mr. Hovey has testified is true. I have just stated that this range survey, made last fall, took into consideration the water that was available for use of livestock on that grant, which they could reach. I admitted we had some grass that had not been used; that had grown during the 1942 growing season. We realized that this grass was there. This spring we had pressure brought upon us, by the sheepmen mentioned by Mr. Hovey, in addition to the two that he mentioned who run this sheep, together with Mr. Transito Mirabal of San Luis, who has his own band of sheep and those of his brother, Benito Mirabal. It was offered to him, also, on the condition that they haul the water to water these sheep out into the area where the grass was. There was some of the best grass I ever saw for lambing purposes on that grant. It had not had a hoof of cattle on it for over a year.

The CHAIRMAN. Right there, will you pause, please?

(Off-the-record discussion.)

Mr. STRONG. The New Mexico cattlemen here know very well that there are many, many areas in New Mexico that have extremely good graze on them because of the distance it lies from water, and therefore is unusable by livestock.

Mr. HOVEY. Could I correct some of his own statements there, if it is possible, before this committee?

The CHAIRMAN. That is a little bit out of order. Time is a great element with us here. Perhaps it would be saving time if it was corrected as you go along, and contradictions entered as you go along. Ordinarily that is a very poor way of doing it. Do you prefer to go without interruption, Mr. Strong?

Mr. STRONG. I don't care, it is immaterial to me, Senator.

The CHAIRMAN. I think, perhaps, if you ask the question, or make a correction, after the conclusion of his statement, we may save time.

Mr. STRONG. I stated we offered this to these individuals, and offered them the water tanks in which to haul their water, and the water tanks in which to store the water in the field. What more could we do? The grass was there. We are not denying that. But it was not available for the stock that was on the Ojo Espiritu Santo grant last year. The cattle in particular, unless water was hauled to them. The permittees could have done the same thing, had they been willing to have that done.

I think that ends the statement on the reduction, and, so far as I know, it explains pretty well the principle that we used in the stocking of our grants. We have expended the money, as fast as it has been made available to us, for the development of waters on the land that

we have purchased. We have done everything possible that we can, in that respect. It is impracticable to drill wells in the Ojo Espiritu Santo grant. Geologists have told us that the water that we could secure, after drilling to great depth, is not suitable for the use of livestock, because of the minerals that it contains. In fact, a well that was drilled across from Mr. Hovey's house, on the grant there, but we have been unable to make use of that area because we can hardly get the livestock to stay there. A few of them will stay during the winter months. Last year the herd was moved over there two or three different times, and all but about 25 or 30 of the stock there left and went back to the springs, where the area was seriously overgrazed.

The CHAIRMAN. You may inquire now.

Mr. HOVEY. With your permission, I would like to go over to this big map and show the committee and the people our story. Although I cannot handle the story on a high plane, I will do my best to protect the Spanish Mexicans. Most of the American people call us Mexicans, but we are proud to be one of them, because my mother came from Spanish descent.

Here is the Ojo Espiritu Santo grant [indicating]. Here comes the Rio Puerco. Right about here, where I live, there is people right in along the Puerco here, and here is a divide that we call La Ceja, for 2 or 3 miles to the top, and to the first lake, we would say, 4 miles, Myote Lake, that dry lake. That lake is dry. The grass this winter was that high [indicating]. You might call it from 2 to 2½ feet.

The CHAIRMAN. How high was that?

Mr. HOVEY. From 2 to 2½ feet. And there is plenty of water along the Puerco; the people can testify to that effect; plenty of water and grass on the Puerco to come down and run the stock on there. We have done that from year to year, outside of the springs down below.

He said about the carrying capacity of the grant. I would like to ask this, the number of acreage, and the number of livestock that we people gather and put in corrals, where the range riders counted head by head, one by one; not in figures or on papers, what cattle goes out of the corral is what counts, not what the people say, I suppose. I might be wrong.

Mr. STRONG. Well, Mr. Hovey, the cattle stocking of the Ojo Espiritu Santo Grant in 1942 was 1,010 head. We have issued permits for 1,032, but several of those individuals went in there and took out a cow for milking, or for selling, as the necessity arose, with the result that the average figure for the year, the final figure, was 1,010 head on 113,141 acres, or an average of 5.7 animal units per section.

Mr. HOVEY (indicating). This is the highway that the gentlemen from this highway east, I don't know how many cattle there is that belongs to the Indians, but there is a fence somewhere around here, more or less, I couldn't say exactly, where the San Luis people has a permit on here for 65 head. I invite anyone to go out there and see if he could find 10 head in that little patch, going by the road, or over the top of the hills and down below where the Cabezon and the Guadalupe people and San Ysidro people have. We gathered them last July and we only counted 376 head going out of the gate of the corral.

The CHAIRMAN. How many?

Mr. HOVEY. It was 365 or 367—I don't remember exactly, but it was not quite 400. We brought every batch down below, including

the Guadalupe and the Casa Salazar and others—had some sheep in this rough part of this land up here. How many there were, I couldn't say, but we have run them from one end to the other.

Senator CHAVEZ. The point you are trying to make is that there are not many cattle there?

Mr. HOVEY. That is right; that the land can carry——

Senator CHAVEZ. Do you mean to state to the committee there are not as many head of cattle there as the Soil Conservation Service say there are?

Mr. HOVEY. Absolutely; haven't been able to count them from the corral because we worked—the Cabezón people go to the corral to see how many cattle they find there, they come in for gathering, and there might be some; I couldn't swear to that; but we haven't seen them.

Senator CHAVEZ. What methods do you have, Mr. Strong, in order to determine the number of animals within a certain area?

Mr. STRONG. We are rather fortunate in having, Senator Chavez, employed on that grant a range administrator, or range rider, by the name of Cass Goodner, who makes it his duty to check the livestock grazing the lands of the Soil Conservation Service, not only on the Espíritu Santo Grant, but over the entire L. U. project, with the assistance of one range rider.

In 1942 the Soil Conservation Service constructed corrals for the purpose of working and assisting these people in working their stock on the grant. There are some 50 or 60 permittees, and it is a large task to sort the cattle and to brand them and to prepare them for sale, so we constructed these corrals there, and that was the method that was used this year in checking the number of stock on the grant.

Senator CHAVEZ. Do you keep track of the branded calves?

Mr. STRONG. No; nothing under 6 months of age is counted. That is, the older stock that are the permitted ones.

Senator CHAVEZ. That way do you obtain the figures, 1,010?

Mr. STRONG. 1,010 were the figures of the stocking for 1942; yes, sir. As I stated a while ago, we made a reduction of 200 head last year, because of the scarcity of grass, particularly in the area that could be used by livestock.

Mr. HOVEY. The Soil Conservation Bureau went ahead and bought this Montoya Grant, a small piece of land some of the people are farming. We have been trying to acquire these, or something, for a long period of time, say, 4 or 5 years, something like that; haven't been able to. Nevertheless we are using it for farming.

Now we come down here on the Ignacio Chavez Grant. I think somebody here can tell us how many head of cattle there is. I'm not sure but there are something like forty-seven or forty-nine thousand acres.

Mr. STRONG. Forty-five thousand and nine hundred and something.

Mr. HOVEY. Right close to what I have in mind, anyhow, and he told some of the boys that were here night before last, and also Mr. Haskell, that the ranger told the boys to drive the cattle to the top of the mountain, what they call the Mesa Chivato. But it is 65, if I am not mistaken, down below to the top of the mountain, and over here, I couldn't say how many cattle there are, or whether they have any permits at all.

Besides that, there are some people from San Mateo who have this place; these places just bounding through the Ignacio Chavez Grant.

It seems to me they are not citizens, because they are not allowed to go into that grant, to which we have used that grant for years and years, on leases and permits from the fellow that had leased from the grant for many years, Serefina Jaramillo, that is his name, that is one of the fellows, Anastacio Marquez, Benedicto Marquez, Mario Lazaro, over there. Those people are right close to that place, without any permits whatever, hardly, just a small patch of land with their little herd of cattle; permit on top of the forest, don't know what kind of—

Senator CHAVEZ. Mr. Strong, in keeping with your policy of allowing people who had used the purchased property prior to the purchase, why aren't these boys adjoining that grant—why aren't they given a chance to get a permit for a few head of cattle?

Mr. STRONG. Because of the establishment of the boundaries by the two Secretaries, the Secretary of Agriculture and the Secretary of Interior, on all of the projects that we have to administer—I will ask Mr. Furman to correct me if I make a misstatement here—they have established the rule of insofar as the people within the boundaries of an area needed the grass, it was given to them, up to certain limits. Then, if there was a surplus of grass in that area, it was distributed among those that were adjacent to the boundaries of the project as set up, and any livestock that would be permitted in those areas outside would necessitate the reduction of an equal number of stock from the permits of those on the inside.

Senator CHAVEZ. Where are the permittees now on the Ignacio Chavez Grant?

Mr. STRONG. They are residents of Casa Salazar, Guadalupe, and sheepmen from the vicinity of Cabezon and San Luis.

Senator CHAVEZ. Those are all outside the grant?

Mr. STRONG. They live outside of the grant, but within the project as set up.

Senator CHAVEZ. So, irrespective of how far the user of the land might be, if he is within the project, as set up by Washington, he is allowed to get permits; but the man who lives right across an artificial line, and had used the line prior to that for a hundred years, he can't have it?

Mr. STRONG. The information that we have did not show that these individuals, during the base period, had this under permit. It was mostly in trespass there; used to be; but that is not the basis on which it was established. As I said, it was the boundaries that were made there.

Senator CHAVEZ. Personally, I think the Secretary of the Interior and the Secretary of Agriculture are certainly wrong.

Mr. STRONG. May I ask Mr. Furman to amplify on that statement?

Mr. FURMAN. I don't blame Senator Chavez for making the statement that it looks like an injustice. However, if land resources within a given area, established by a Secretary of the Department, are insufficient to meet the needs of the people within the area, it just boils down to a question of taking it away from the people inside the area to give it to the people outside.

Senator CHAVEZ. But, according to the testimony of Mr. Strong, people from Cabezon and Casa Salazar use it. They are certainly not within the grant.

Mr. FURMAN. No, there is no one within the grant, Senator. The people using it are living on adjoining properties, not too far away;

all inside of the project area. As I say, it is an arbitrary situation, wherein, if we give privileges on the grant to those living outside the project, and south of the grant, those privileges must be taken away from others who are living inside of the grant and who need them. We'll say, just as badly as those outside.

The CHAIRMAN. Do you wish to ask a question, sir?

STATEMENT OF MIKE MICHAEL, SAN MATEO, N. MEX.

Mr. MIKE MICHAEL (San Mateo, N. Mex.) I am talking for these men. We made the protest to the effect, at the time the Soil Conservation Service was taken over—the grant—that we had to have a permit on this grant. We were permittees; we had a lease from Narcisso Francis. I had a permit for 150 head; Mr. Sarafino Jaramillo, that I know, had another permit. I don't remember the amount. I presented the permits to Mr. Stewart, there at the office, and also to Mr. Strong, and receipts to the effect of the permit, and they state we never had a permit, were in trespass. I fenced the south side of that grant, about 7 miles. The grant was not even fenced. Our homesteads are right there, adjoining the grant. We have been over at the office several times trying to get a permit, and we have been unsuccessful.

Senator CHAVEZ. Who did you have a permit from, prior to the purchase?

Mr. MICHAEL. Narcisso Francis.

Senator CHAVEZ. Who is he? How well do you know him?

Mr. MICHAEL. He was a stockman for many years, and had a lease on this grant prior to the purchase by the Soil Conservation. He ran about 20,000 head of sheep; went out of the business several years ago.

Senator CHAVEZ. Who did he have the lease from?

Mr. MICHAEL. I don't know; from some company I don't know, in Canada or England or some place. I don't know.

Senator CHAVEZ. Anyway, you leased it from the lessee?

Mr. MICHAEL. Yes.

Senator CHAVEZ. How many years prior to the time of the purchase did you have a lease within the grant?

Mr. MICHAEL. I don't remember. I think it is 4 or 5 years.

Senator CHAVEZ. How long have you lived around this Ignacio country?

Mr. MICHAEL. Twenty-six years.

Senator CHAVEZ. You knew the people in the surrounding villages; you know the boys?

Mr. MICHAEL. Yes, sir; Mr. Marques was using that grant previous to when I have.

Senator CHAVEZ. And their fathers have been using that grant?

Mr. MICHAEL. Absolutely.

Senator CHAVEZ. Is Mr. Francis related to you?

Mr. MICHAEL. Yes.

Mr. LEE. Here is Mr. Jaramillo, whom we have mentioned.

The CHAIRMAN. All right, Mr. Jaramillo, have you any statement to make?

**STATEMENT OF SERAFIN JARAMILLO, AS INTERPRETED BY
SENATOR CHAVEZ**

Mr. JARAMILLO. I used that grant for 25 years prior to the time of purchase.

Senator CHAVEZ. When were you born?

Mr. JARAMILLO. I am 60 years of age; I was born in Seboyeta.

Senator CHAVEZ. Is Seboyeta within the immediate vicinity of the land grant?

Mr. JARAMILLO. I have had a ranch within a mile of the western boundary of the Chavez Land grant for 25 years prior to the purchase of the land grant; prior to its purchase by the Federal Government.

Senator CHAVEZ. Have you a permit from Narcisso Francis to use that?

Mr. JARAMILLO. Yes.

Senator CHAVEZ. For how many years?

Mr. JARAMILLO. I have paid Narcisso Francis, on the lease, for 20 years prior to the purchase.

Mr. FURMAN. May I say a word more on this matter? The Soil Conservation Service appreciates the fact that there are a great many deserving small ranchers in that area who definitely need more land. We sympathize with their predicament; and we wish to make the abstract statement that we believe that the two or three gentlemen who have just testified have brought out the fact that more land resources are needed in that area for subsistence operators.

Senator CHAVEZ. May I ask you a question at that point? What do you think, generally, without stating the policy of the Soil Conservation Service, but from your observation of the needs of the people in this area that we are talking about; what would you think of an exchange of State lands for some other land within that area, so those poor people could get a tract of land to live on?

Mr. FURMAN. From a purely abstract standpoint, I think it would be a very meritorious move to accomplish such a transfer or exchange.

Senator CHAVEZ. Humanity itself would be awarded; don't you think so, Mr. Furman?

Mr. FURMAN. I think the intensive and extensive survey made in the middle valley of the Rio Grande would bear out that opinion, without question.

Senator, this subject being discussed from an academic standpoint makes it look as though we certainly were doing a rank injustice to Mr. Hovey's compadres here. But you realize, when it comes down to the actual distribution of use and privileges, that the people inside the project have an average of 12 head, now, per man; and if we include these others, by saying we will recognize an adjustment area south of the project, we will reduce existing permittees down to 6 head, and no one is benefited.

Senator CHAVEZ. That is why I am asking your opinion as to acquiring more land, by exchange of State lands that are within district 7, and getting some land along the area, so everyone might have at least 2 cows.

Mr. FURMAN. Perhaps someone will think of that in connection with post-war programs.

Congressman FERNANDEZ. Mr. Furman, the established policy was to permit the former users of that land to continue using it. Was it ever called to the attention of the two Secretaries of the Department of the Interior and Department of Agriculture that the setting of this line would violate that policy? Has that been called to their attention?

Mr. FURMAN. Yes, it has. We took that up. The case was presented about a year ago, wasn't it, Mr. Strong?

Mr. STRONG. Two years ago.

Mr. FURMAN. And it was called to the attention of our Washington representatives; the last time, 3 or 4 months ago, I think in April 1943.

Congressman FERNANDEZ. What do you mean by the Washington representatives?

Mr. FURMAN. The representatives of our Washington office of the Soil Conservation Service.

Let me read you the policy on this, if you will. It is not exactly as you may be thinking of it.

Senator CHAVEZ. The way we understood it, you stated it.

Mr. LEE. Mr. Chairman, may I ask if that grant was placed on the same carrying capacity as the land adjoining it, in private ownership, under the Taylor grazing law, in which one Federal agency has set the carrying capacity, which is 10 head per section? What would those two grants carry? How many livestock would they carry? Would it not accommodate all the people living in the area for the surplus they are so badly in need of? May I ask that question? Couldn't that be helped by changing the carrying capacity to what another agency has agreed on?

Mr. STRONG. We do not know the number of sections in each grant. We will have to take a little while to figure that. I can give you that in a short while.

Mr. LEE. Have you got somebody that can figure it, or do you want me to help you? What I meant, I don't know whether you have any assistants there with those papers.

Mr. STRONG. Mr. Chairman, confirming the statements made by Mr. Michael and Mr. Jaramillo, the information that they gave us, I, as the district conservationist, submitted to the State office. Then it was submitted to the regional office and the regional office submitted that to Washington.

Senator CHAVEZ. What recommendations did you make?

Mr. STRONG. I stated the facts that I had there, and showed that, if we permitted it, these individuals would of necessity reduce the stock on the inside of the area. Not only in that immediate area in question, but all around the project area, we have the same thing. If these two or three individuals there it might not be serious, but if it were extended all the way around, then it would make the reduction extremely serious, because there are other users in that area.

Congressman FERNANDEZ. If the people, all the way around, were using it before, it would be perfectly proper, would it not, in accordance with your policy, as I understand it?

Mr. STRONG. They were coming in from distant areas, Mr. Fernandez.

Congressman FERNANDEZ. Well, if they used it before and were contiguous to it; is that the situation? That is the way I understand it.

Mr. STRONG. I appreciate the fact they were users of it and if it be the will of the people that the reduction be made to cover those individuals, it will have to be done.

Senator CHAVEZ. Here is the idea; you have a certain policy; these people have been using the area all around and it only takes care of so many head of cattle. Why should one particular fellow get 12 head and the other be allowed to starve? I know you haven't as much land as you would like to give them; but I feel sure of that.

Mr. LEE. You testified that there were 1,000 head on that grant in round numbers, and the carrying capacity was 5 to a section on the outside. It is figured by other Government agencies that the carrying capacity is 10; so if you go up to that, it would be 2,000 on the grant; and it would take care of these people in the congested area on the one grant without counting the Ignacio Chavez Grant.

Mr. HOVEY. That is what the people on the area are asking.

Mr. STRONG. Mr. Lee, I believe sincerely that if the carrying capacity of the Espiritu Santo Grant were raised to 10 units, that we could completely finish wrecking an area that was in terrible condition at the time it was taken over by the Soil Conservation Service.

Mr. LEE. Mr. Strong, may I say that I know there is no one in the Service more sincere in their beliefs than you are, and no one tries harder to accomplish it. The only difference is that the people on their side are of a different judgment from what you people on that side have. But to boil it down to a simple proposition, grass is exactly, as most of these people can understand it, like your lawn in your front yard. If you mow it, it spreads and you have a beautiful lawn. If you don't mow your lawn it all grows too high, and the roots are way up high, and the first drought or freeze that comes, your lawn goes to pieces. The only people that have a good lawn are the people who intelligently mow it and keep it in shape. Now, that applies to the ranch business. I don't hold myself up as an example, but I am the neighbor of these people; we are considerably over 10, and we are still able to function.

Now, the problem is whether your judgment is correct or whether our judgment is correct. I don't think the gentlemen here are doubting the sincerity in any way that you have, Mr. Strong. You have worked with them, and you speak the language, and you know them. It is a question of opinion here that we are arguing about.

Mr. STRONG. That is a difference in opinion that we have, Mr. Lee. I have helped to run a very good ranch myself, and I have a brother that is a rancher on a ranch on which we were raised. I was over there in 1938, after they had gone through the 4 years of serious drought, and there were sections upon sections of that area on which there was not a living spear of palatable grass. When I was there in thirty-eight, I wouldn't have known the area had not been raised there and knew every hill and every foot of it. We had a pasture there that we reserved for winter use. Naturally that allowed the grass to make a growth during the growing season and thereby established a good root system. My brother, 2 years prior to 1938, had grazed that little pasture, which was reserved for winter pasture, rather heavily, because the grass had disappeared, and completely, on the other side.

Senator CHAVEZ. We know the devastating effect of overgrazing, but here you allow those people to have 5½ cows per section, or what-

ever it is Mr. Lee testified. He testified that he had joined the area, in the immediate neighborhood, and they are using 10; the Grazing Service is allowing 10.

Couldn't it be that they know a little something about their grazing business? There is an example right here, without going into a discussion of the devastating effects of the grazing.

Mr. STRONG. The Grazing Service people varied in checking the survey that we made. We have here a memorandum from them approving them only in a portion of the area in question. They asked me that the requirements be reduced from 12 forage acres to 10, which increased it one-sixth on a portion of that land. In fact they are using most of the figures that we have established; but I have expressed it to this committee that we have here an area that has many, many thousands of acres in it that are very poor range, extremely poor. There are shales, steep hillsides, they are extremely gullied, they are eroded to where it is impractical to use them. Therefore, the carrying capacity on the Espiritu Santo grant is, in my opinion, about as it should be this year. May I say, I cannot state for certain, but I think we will restore the cut that was made on that grant, because of the fact that the stock watering tanks, which they have developed there, are full of water, and the area that was ungrazed last year will be fully grazed this year. How much that increase will be, will be determined through a check, and it will probably be at this time we will have increased substantially the per-section capacity.

Senator CHAVEZ. In the meantime, what is going to happen to the people west of the Ignacio Chavez Grant?

Mr. STRONG. In the meanwhile, what is going to happen to them? The permits will be issued in the fall of this year. Until something has changed the rules, I cannot consider them.

Congressman FERNANDEZ. On that question, I think the committee ought to have the reply of the two Secretaries, when the matter was called to their attention.

The CHAIRMAN. Is that available?

Mr. FURMAN. No; we haven't any reply, Mr. Fernandez.

The CHAIRMAN. It has been stated that the two Secretaries fixed the boundary, and fixed the regulations. How did they do it, by correspondence?

Mr. FURMAN. Perhaps I misunderstood the question.

Congressman FERNANDEZ. No; I think you understand the question. I asked you if you had called it to the attention of the two Secretaries, the fact that the establishment of that line and the strict rules violated the policy, and you said that it had been called to their attention. I want to know what they did about it.

Mr. FURMAN. Why, I said before, that I called it to the attention of our Washington office, that there were prior users of that grant who were not getting use privileges at that time, because they are not operating inside of the project area; and the answer was, as we stated in part before, that, in some projects, land resources are sufficient to satisfy the needs of people operating within the project and to satisfy the needs of people in adjacent areas, in which cases people in adjacent areas are receiving grazing permits. In this case the land resources within the project are not sufficient to satisfy the needs of the people within the project. Therefore, how can we expect to give resources

to people outside the project? Even in spite of the fact that they were—

Senator CHAVEZ. Well, I will ask you the question, irrespective of that idea, what is going to happen to the people that are outside of the artificial line that was made by someone in Washington?

Mr. FURMAN. The only reply I could make, at this moment, is that the only way in which they could be given privileges by the Soil Conservation Service would be by a pro rata reduction in the permits of permittees operating inside the project. I do not think that is justified.

Senator CHAVEZ. Why don't you suggest to the powers that be in Washington to increase that project, to enlarge it?

Mr. FURMAN. That, Senator, was suggested up until 2 years ago, several times, but during the last 2 years the land purchase program has practically ceased to exist, as authorized under title 3 of the Bankhead-Jones Act. Absolutely no acquisition money was appropriated this year.

Senator CHAVEZ. But there are some State lands, and also Federal lands, within the area, within a short distance of the area. Isn't that correct?

Mr. FURMAN. I am not—

Senator CHAVEZ. Isn't there Taylor grazing land within a short distance of that area?

Mr. FURMAN. There is Federal land within and all around the area, both grazing district No. 7 and grazing district No. 1, under jurisdiction of the Grazing Service.

Congressman FERNANDEZ. Wouldn't your policy be carried out by permitting those who had priority, prior use, the use of the land, with a pro rata reduction to all, instead of cutting these outside and leaving those inside with a higher percentage?

Mr. FURMAN. That could be done.

Mr. LEE. All live outside; none of them are inside.

Mr. FURMAN. However, you see, Mr. Fernandez, that our existing permittees, we stated, were getting 12 head each, now; and to reduce them substantially would certainly leave them in a comparatively hopeless position. Would we be very far ahead in doing so?

Senator CHAVEZ. So, there is only one other method, to increase the carrying capacity—

Mr. LEE. Can I ask the Forest Service, that joins that particular Ignacio Chavez Grant, what they figure their carrying capacity is?

Mr. WOODHEAD. Mr. Chairman, I can't answer that question as to the Mount Taylor area, but I can give you an idea. We employ whatever value it may be with the whole Santa Fe forest.

Mr. LEE. This is the Mount Taylor forest.

Mr. WOODHEAD. I don't have that figure.

Mr. LEE. Mr. Adams could give it. He has been supervisor of that forest for many years. We want the rate of the carrying capacity on the north end of the forest, on the Mount Taylor.

Mr. ADAMS. I couldn't say; I wouldn't want to venture a statement on that.

Mr. LEE. Could you get us the record of what it is?

Mr. ADAMS. Yes.

Mr. LEE. I can tell you what it is—

Mr. FRED ARTHUR (U. S. Forest Service). I can tell you what it is. I have given considerable attention to it.

Mr. O'SULLIVAN. This 1,010 animal units, permitted on the Ojo Espiritu Santo Grant, includes the 200 units allotted, by agreement, between the two secretaries for the Jemez Indians. Is that correct?

Mr. STRONG. Yes sir; and 200 animal units allowed to the area permittees.

Mr. O'SULLIVAN. And the total is 1,010?

Mr. STRONG. Yes, sir.

Mr. O'SULLIVAN. It has been stated here this afternoon that prior to the acquisition of the Ojo Espiritu Santo Grant, by the Soil Conservation Service and Department of Interior, no Jemez Indians were using that grant.

Mr. STRONG. To my knowledge, that is true.

Mr. O'SULLIVAN. Can you explain why the two secretaries, in their solicitude for the Indians, deprived the adjoining non-Indians of 400 head for that area?

Mr. STRONG. I couldn't discuss that. That is a set-up in Washington. As I have said, I had no choice in the matter.

May I add to the record here—

STATEMENT OF LEE S. EVANS, MARQUEZ, N. MEX.

I join this grant on the south, and I am like Floyd Lee, in that we could run more stuff on it than they are allowing on their grant. He and I keep up the Production Credit, of the Farm Credit Administration, it all being Federal, such as paying interest on taxes. If we didn't carry more cattle than they carry on that, they would take our outfit away from us tomorrow. That county cannot carry very much of a burden, and why can't that area carry more stuff than it has?

Mr. STRONG. I agree with Mr. Lee. I don't know what his carrying capacity is, but on that mountain, where we adjoined them, our carrying capacity is established by our range survey as 18 head of cattle per section yearlong. Those are our figures.

Mr. LEE. But they are not on there.

Mr. STRONG. Mr. Lee, we have not been able to make use of it because of the lack of water. I finished developing the Ojo de los Indios Spring, on the line up there, in cooperation with the Forest Service, so I get the overflow in the hope of making use of a part of that. We built three large stock tanks there and developed another spring under the rim in another canyon there at tremendous expense, because of the fact that we had to build trails in there to do that, in the hope of making use of that. That will be taken into consideration as soon as we can make use of it, to put those stock up there; but they have had to come right out because of the lack of water.

Judge SETH. Mr. Strong, is there any procedure in your Department for appeals from your local decisions; or are your decisions out there final?

Mr. STRONG. Yes, sir; we have a set-up in our regulations. The decision is made in the issuing office, which happens to be mine at the present time, to the regional office and from there to the Washington office, to the Secretary of Agriculture and up to the President.

Judge SETH. Does that appeal involve both the carrying capacity and the land?

Mr. STRONG. Anything in that respect.

Judge SETH. It also takes into consideration the need of the applicants, does it?

Mr. STRONG. Yes, sir. If he is not satisfied with his permit as issued to him he may make that appeal the same as—I think almost in conformance with the Grazing Service method.

Senator CHAVEZ. Has any local decision been reversed by the Washington authorities?

Mr. STRONG. We only had one case appealed all the way to Washington, and it was not reversed; it was substantiated.

Senator CHAVEZ. It was sustained.

The CHAIRMAN. All right.

Mr. FURMAN. This invitation is hereby extended to the committee, and those interested, to visit the Espiritu Santo grant in person, to view the characteristics of the land, as compared to adjoining land, and the present condition of the grants.

The CHAIRMAN. How is the moonlight out there? If we can see it by moonlight, maybe we'll get a chance to go.

Mr. FURMAN. We would like to have you come up and see the character of this poorer range that we are talking about.

The CHAIRMAN. We would like very much to do that. Our investigator went over it some time ago.

Mr. HOVEY. Now, I am going to bring the matter that most of the people might not believe, but it is so. I am going to bring the matter of a man that lives at Guadaloupe, is located about here [indicating], more or less; I couldn't say exactly, but it is inside the grant. The whole town of Guadaloupe is in that portion of the land there.

The CHAIRMAN. Inside the grant?

Mr. HOVEY. Yes, sir; got title from the court by possession.

Judge SETH. That is in the Ignacio Chavez?

Mr. HOVEY. Yes, sir; this man is the father of 10 or 11 children; a pretty good producer, all right. I made an observation to Mr. Strong, might say a different story, but he himself went up to Santa Fe, and Judge Seth will verify my statement. He was denied 1 milk cow—with 11 children, 2 or 3 horses. He was allowed the 3 horses. Yes; I was told by Mr. Griego, a fellow member of the advisory board, district No. 1, that Ricardo Tafoya told him he would have to take his horses out of the permit. Is that right? And also he ranges his horses inside of that grant, domestic-use animals.

That will conclude my poor speech and my poor English. I am run out.

Mr. STRONG. I recognized the case in question, when Mr. Lee mentioned it yesterday, about one man not being given a permit for a cow. Mr. Ricardo Tafoya's application was made for three horses, and no cow was ever mentioned in the application. After we had made our reduction, in 1943, Mr. Tafoya came and made a verbal application to allow him to be given a permit for his cow. Having refused a large number of individuals that made application for one and two additional animals, or new permits, that year, we were forced, through total policy, to deny Mr. Tafoya his permit. His permit for three horses was issued. If he has been given instructions to remove his horses, it is through some trespass case or something that he is doing that is violating the rules in the area. I do not know of that at the present time.

The CHAIRMAN. That is one place where red tape runs riot, isn't it, when a man is deprived the right; a man with a family is deprived of the right to have one milk cow adjacent to his home? If that isn't fraying the red tape, then I don't know what it is.

Mr. STRONG. I will say this, and Mr. Goodner, the range supervisor, can verify it, Mr. Goodner told Mr. Tafoya, on the side, that he would not require him to remove his cow if it were placed on there.

Senator CHAVEZ. That was extremely tolerant of him. Why should it be done on the side? Why shouldn't a little common sense be used?

Mr. STRONG. Senator Chavez, I don't know the exact number; we reduced a large number of small permittees on there, and refused to accept new applications from numerous individuals for one or two animals.

Senator CHAVEZ. That is what is going to ruin the country; too much Washington and rules, instead of common sense and humanity.

Mr. STRONG. If he had been taken, I would have had to do it in any number of other cases.

Senator CHAVEZ. It is possible you made the same mistake as the Indian Bureau, when they took the goats away from the Navajo Indians.

Mr. STRONG. He happens to be working for the Soil Conservation Service, at the present time. I doubt very much that he has been required to remove his horses from the grant.

Mr. HOVEY. Mr. Chairman, I don't think that the Soil Conservation Service need to know anything about this milk cow, because that is bought with money loaned by the Farm Security, in order to give a chance to start this little children.

Senator CHAVEZ. In other words, one agency of the Federal Government advances the money to some poor man, so he can go buy a cow and feed his children, and the other agency of the Government says, "You can't graze that cow."

Mr. HOVEY. That is exactly what happens. Another thing, before he gets away, there is a man in there, Juan Romero, presented a letter here from the Division of Grazing. After the first of the year he will not have a permit with the Grazing Division, because there is no land available; and after the first he has got to sell. He was born there 58 years ago, and his father lived there, oh, 50 years, and we feel that the carrying capacity of those Soil Conservation lands are not lands intended for such.

The CHAIRMAN. Very well, you may proceed.

Mr. STRONG. Substantiating the condition of the Ojo Espiritu Santo grant in and adjacent to the waters we had available for the livestock last year, we have drawn up a map showing the areas of low-carrying capacity, where the waters were located; and a number of pictures that were taken in April 1943, when there yet remained 2 or 3 months before we could expect the new grass to be available for livestock, substantiating the statements that I have made. That, I would like to present to the committee, not to go into the record, but for their files.

The CHAIRMAN. Very well, thank you very much.

(The documents and photographs referred to were received and placed on file with the committee.)

Mr. STRONG. We have nothing further to add, unless someone wants to ask questions.

STATEMENT OF JESUS MARIA MONTOYA, CUBA, N. MEX.

Mr. MONTOYA. My name—I don't talk very good English, but I will tell you in Spanish, if you will permit me, and I will ask Senator Chavez to talk for me.

(As interpreted by Senator Chavez.)

He told you here, awhile ago, that he gave me a permit to graze. Plenty of water; yes. You see, the gas was rationed, we do not have much opportunity to carry that water 4 miles, without the road; and the water that they offered to us was alkali water, no good at all. I know it. I have been there along with my sheep for 25 or 30 years, and when I told him I could not water, I could water my sheep in the Rio Puerco. He could give me a place to get down, and come back by the same way. He told me I couldn't do it; if I didn't like that water, and like that range, I could go some other place for my sheep.

Mr. Hovey here is the guy that gave me the place. I don't get along very good; I don't have much water or much feed.

Senator CHAVEZ. How many are you running

Mr. MONTOYA. Me and my partner are running 1,000.

Senator CHAVEZ. The water, you say the Soil Conservation gave you, was how far from your place?

Mr. MONTOYA. Four miles from the place.

Senator CHAVEZ. Is there a road from your place?

Mr. MONTOYA. No.

Senator CHAVEZ. How would you take the water up there?

Mr. MONTOYA. Well, I have to build the road, if the way he told me; I could build it and water up there.

Senator CHAVEZ. Have you a truck?

Mr. MONTOYA. I got a truck, a good truck.

Senator CHAVEZ. Did you have gasoline?

Mr. MONTOYA. No, sir. Enough gas to come down to Albuquerque. I don't make my trip very well. Sometime it is tough when I am working and there is another—

Senator CHAVEZ. You say they won't let you use the Rio Puerco to water your sheep?

Mr. MONTOYA. No.

Senator CHAVEZ. Why?

Mr. MONTOYA. I don't know why.

Senator CHAVEZ. Was it adjoining your land?

Mr. MONTOYA. No, sir; that is, the place he offered me. I don't have water on my place, and the answer of Mr. Strong was that if I don't like that place I could find another range. That is what he told me, all the time that we ask him, and that is the way he answered me. Have a place over there, joining the Navajo; I have four sections there. Indians go over there and see I graze there all summer; that is, Indians will graze one part of my permit, there, and I have to stay in my own allotment. And if Mr. Strong or somebody else don't believe it, he can go and see it. We have no road up there.

That is all, I guess, thank you.

The CHAIRMAN. Are there any questions?

Mr. STRONG. I want to modify, in the main. Mr. Montoya has stated the facts, except that we did offer him the opportunity of

getting water from the spring on Ojo Espiritu Santo, where it was in pipes, and hose is available for filling the tanks. It is on a graded road, all the way from the spring to the place where he was to be placed.

Mr. MONTONA. No; he offered me that spring, and afterward Mr. Hovey offered me his spring.

Mr. STRONG. He wanted to know the closest place to get in there. This well is across from Mr. Hovey's, 3 or 4 miles from the area. The permittee declined, because he said the water was not suitable there. Then he was later offered the use of the Ojo de los Indios Spring, that was mentioned, with Mr. Garcia, his partner, and, in an interview I had with him, prior to discussing the matter with Mr. Montona—

Mr. MONTONA. Those people, you see, from San Luis and Cabezón, they have big communities there, and that community allows just one cow or one horse, and don't allow nobody to graze in there, just outside. I have a place over there at Arroyo Chio, and I thought I might get a chance to get in there; but I couldn't.

The CHAIRMAN. Well, I think we have covered the subject.

Senator CHAVEZ. I know that situation.

Judge SETH. I have some questions I would like to ask, if there are any more of these people out there from the Cabezón area. I would like to have a chance to question them.

Senator CHAVEZ. I believe they know the situation. We all realize that the situation is extremely acute; but about all we can find out about it—

Mr. STRONG. I think something might throw a light on this subject. There are 7 communities, as was mentioned yesterday, that are using that L. U. area there, the towns of Casa Salazar, Guadalupe, Cabezón, San Luis, La Ventana, Cuba, La Jara, and San Ysidro. In those communities we have 572 family groups, of which 444 groups own 3,648 cattle, 23,364 sheep, 2,466 goats, and 714 horses. That was in 1938.

Senator CHAVEZ. Can you give us the total population of the family groups?

Mr. STRONG. The total population in there, 2,722. That is the population living within the boundaries of that Cuba-Rio Puerco L. U. project, exclusive of 56 Navajo Indian family groups that were found in there, by a survey.

Mr. HOVEY. Mr. Strong, was that in 1938?

Mr. STRONG. Yes, sir.

Mr. HOVEY. How many have gone, on account of they are broke, and have lost everything they had, some in California, some in Arizona, and some in Colorado?

Mr. STRONG. I might say that is a—

Mr. HOVEY. I have three first cousins in California, a brother-in-law and a brother just about to go away, because they can't get a permit, in order to stay and make a living.

Mr. STRONG. I appreciate the trouble that they are having; and a number of them have had to leave. I doubt if, when the average is somewhere around 12—the permits we have, have a large number for only 4 or 5. Of necessity, they cannot make a living there. We do not

have the grass to give them, to increase them, so they can get a unit on which they can make a living.

The CHAIRMAN. All right, are there any questions?

Judge SETH. There is no place in the record—does it show, all in one place, the total of these various land acquisitions in New Mexico? I got this from Mr. Haskell, it was furnished me by Mr. Haskell, and I think that Mr. Furman will state that the totals represented here, of 1,300,102 acres, are substantially correct. Is that right?

The CHAIRMAN. Our investigator advises the chairman that the instrument was compiled by the Soil Conservation Service, at his request.

Mr. FURMAN. About a year ago, Mr. Haskell?

Mr. HASKELL. Yes, sir.

Mr. FURMAN. I notice that the Cuba-Rio Puerco project figure, here, is not as we figure it, because the Antonio Sedillo grant is not shown as on the Rio Puerco project, whereas, you know, that grant was exchanged with the Department of the Interior for this Espiritu Santo grant. So, the total shown here of 235,000 acres for the Puerco project, should be 264,000; and the Antonio Sedillo grant should be shown separately. I also notice these figures are close too, but do not agree with the figures. These are accepted operational acreages.

The CHAIRMAN. I understand those discrepancies are explained in the footnote.

Mr. FURMAN. They are substantially correct, but do not agree with the deeds, exactly.

Judge SETH. The total acquisition of land, which the Soil Conservation Service and its predecessors had, totals 1,300,102, and cost \$3,021,000. Is that substantially correct?

Mr. FURMAN. Not including the Antonio Sedillo grant.

Mr. Chairman, I would like to submit for the record, our tabulation of acreages, and project designations, of lands administered by this Service in New Mexico.

Judge SETH. May we submit this for the record?

The CHAIRMAN. It will go in the record.

(The tabulation is as follows:)

Table showing project number, project name, tracts, acreage, and dollars cost of land covered by accepted option and present administering agency

¹ Projects financed by funds provided from Federal Emergency Relief Administration-Resettlement Administration appropriations.

² Projects financed by both title III of Bankhead-Jones Act and Federal Emergency Relief Administration appropriations.

³ An exchange of administration between the Office of Indian Affairs and the Soil Conservation Service has been perfected whereby the administration of the Espiritu Santo Grant purchased under project LI-NM-9 is transferred to the Soil Conservation Service in exchange for the Antonio Sedillo Grant acquired as site I of the Cuba-Rio Puerto Project NM-LU-22. The acreage of the Antonio Sedillo Grant is 86,204 and the Espiritu Santo is 113,141. Indian use on the Espiritu Santo to compensate for the difference in acreage between grants has been allowed.

Mr. FURMAN. Also, in order to establish the facts that the Cuba-Rio Puerco situation is acute—the population pressure on land resources I am talking about is acute—I want to submit this tabulation, for the record, which shows the number of permittees on these projects, and showing that, of the permits assigned on the Cuba-Rio Puerco, nearly all of the permittees fall in the from 1 to 50 animal unit group, showing each of their permits as very small. I would also like to add this one sentence, that there seems to be a matter for scientific determination as to what the exact carrying capacity of the lands up there may be, from year to year. There are differences of opinion. Different qualified persons might come out with some other figures; and there are those, I presume, who would raise the carrying capacity considerably, if they had the opportunity to do so. However, I still want to point out that it is my firm conviction that if the carrying capacity of that particular grant, of 113,000 acres, were raised considerably, that the raise would still prove to be a drop in the bucket, as compared to the needs of the population in that area.

(The tabulation is as follows:)

Summary of Grazing Permits Issued on LU Projects in Arizona, Colorado, New Mexico and Utah—Permits

¹ Zia Indians, 1; Jemez Indians, 1.

Senator CHAVEZ. The only difficulty is in establishing figures, and so forth, you cannot raise any cows. Mr. Lee raises cows there, Evans raises cows, and the rest of these folks, they have sheep. Shouldn't that be taken into consideration? The man who actually plants the grain, shouldn't he be taken into consideration, his experience, to determine the capacity?

Mr. FURMAN. Yes; but to make out a point in a little different manner, I don't see how the raising of the carrying capacity of that, even to quite an extent, would solve our problem up there. It would help, but it would be a drop in the bucket. That would be the extent of it.

Judge SETH. Mr. Furman, this figure of 1,300,000 acres does not include the lands, the railroad sections, that were testified about yesterday, purchased for the Indians by tribal funds. They are not on here at all, are they?

Mr. FURMAN. That list is the same one you submitted a moment ago?

Judge SETH. Yes.

Mr. FURMAN. According to the best of my knowledge and belief, it does not include lands purchased with Indian tribal funds.

Judge SETH. Mr. Stewart testified yesterday there were some 190,000-odd acres purchased with Navajo tribal funds. That would raise the total to one million and a half, of privately owned land purchased by the United States, or the Indians with their own money.

Mr. FURMAN. Apparently.

Judge SETH. That map up there, showing the areas administered by the Soil Conservation Service, up in the extreme northeast corner, near the Oklahoma Panhandle, what does that represent?

Mr. FURMAN. That is known as the Union County land utilization project.

Judge SETH. Does that contain approximately 58,000 acres?

Mr. FURMAN. It does.

Judge SETH. What do you do with it?

Mr. FURMAN. It is under permit to stockmen.

Judge SETH. And the land south, mainly in Harding and partly in Colfax, and Mora; is that what is known as the Mills project?

Mr. FURMAN. It is.

Judge SETH. This contains about 74,648 acres?

Mr. FURMAN. That is correct.

Judge SETH. Now, is that used by local stockmen?

Mr. FURMAN. It is.

Judge SETH. Now, Mr. Furman, do you have a system, up there, whereby if a man leases any of that Mills project he has to submit to the jurisdiction of the Soil Conservation Service as to that portion of the ranch that is entirely outside the project?

Mr. FURMAN. Our rules and regulations, or our criterion, provide that a limit shall be set upon the agricultural operations of the permittee with the project, or agricultural operations which form a part of his project operations; but not in connection with operations which are entirely separate from his project operations.

Judge SETH. Does "agricultural operations" include cattle?

Mr. FURMAN. Agricultural operations does or does not include cattle.

Judge SETH. If a man, then, leased four sections on that Mills project, and his ranch of 50-odd other sections outside adjoined it, he would have to submit to your estimated carrying capacity on his entire ranch. Is that true?

Mr. FURMAN. Well, let's see now. I want to be meticulous on this point. You say, if an operator had a large ranch outside of our project—

Judge SETH. Adjoining it.

Mr. FURMAN. And he leased base property within our project boundaries and received a permit, your assumption is—

Judge SETH. Yes.

Mr. FURMAN. Would we control carrying capacity on his land outside of the project?

Judge SETH. That's right.

Mr. FURMAN. Well, Judge, the answer to that is this: if the operator had a large ranch outside of the project I would not grant him a permit because he would exceed our project limit.

Judge SETH. Well, say it was a small one.

Mr. FURMAN. The land outside the project, comparatively small operation, was used; what is going to be used is a part of the operation inside the project, if it is close enough to be used, and we would establish, and require, that he conform to a reasonable use of his land.

Judge SETH. If your estimate of the carrying capacity on the Mills project was 10 or 12 per section, and outside they were regularly carrying 20 and 22, you would still insist on his complying to your 10 or 12. Is that right?

Mr. FURMAN. I am going to refer that question to the Range Division. That is a technical problem which I would like to consult our Range Division on. Is Mr. Dickens here?

STATEMENT OF J. S. DICKENS, DISTRICT CONSERVATIONIST, MILLS PROJECT

Mr. DICKENS. My name is J. S. Dickens. I am district conservationist on the Mills project.

Senator CHAVEZ. When was that classification made by the Civil Service? How old are you?

Mr. DICKENS. Thirty-four years old.

Senator CHAVEZ. Where did you get your training?

Mr. DICKENS. I have attended school, for the past 10 years, in New Mexico, and I have been for the past 8 years in the Soil Conservation Service.

Senator CHAVEZ. Have you been connected with the Soil Conservation Service in New Mexico?

Mr. DICKENS. Yes, sir.

Mr. FURMAN. Would you mind restating your question, Judge Seth?

Judge SETH. The question is this, on that Mills project, if a man got a permit for the use of part of the land on the project, and had an adjoining ranch outside, would you compel him to submit, on his own land, to your estimate of the carrying capacity?

Mr. DICKENS. That is right.

Judge SETH. You would do that?

Mr. DICKENS. Yes, sir.

Judge SETH. If the carrying capacity regularly outside was 22, and inside from 10 to 12, you would force him to reduce his whole ranch to your 10 or 12 per head?

Mr. DICKENS. If his ranch showed it would only carry 10 or 12 head, he would be asked to reduce to that figure; yes, sir; if our range survey showed it.

Judge SETH. Does that same rule apply to the Union County proposition up there, too?

Mr. FURMAN. Why, yes; the Union project, and all the projects, are under the same general policy. Mr. Decker should be here in the audience. Perhaps he could answer from the floor whether that is being applied on his project the same as in Mr. Dickens'. I will make the statement that it is supposed to be, if it isn't.

Judge SETH. Well, that's all I want. That is a regular rule.

Do you know what you paid for that land up there in the Mill project? Your figures are correct here, I imagine, of \$297,000; about \$4 an acre?

Mr. FURMAN. I believe I may have that information here.

Judge SETH. In that list you furnished the investigator of the committee; it is right there.

Mr. FURMAN. If that is in the list furnished to Mr. Haskell last year, that was prepared by our office, not by my office, and it is substantially correct.

Judge SETH. How was that land acquired?

Mr. FURMAN. Through regularly established procedure, which is quite voluminous and detailed and complex, I assure you. First the land is appraised, and then it is optioned.

Judge SETH. Do you remember the MacDaniel tract up there?

Mr. FURMAN. I do not, I'm afraid. Mr. Dickens would not, either, because he has only been there a year or less.

Judge SETH. Do you know anything about going in and outbidding the adjoining property owners that wanted the land?

Mr. FURMAN. I never heard of such a thing.

Judge SETH. Well, take the Espiritu Santo grant of 113,000 acres; do you know what was paid for that?

Mr. FURMAN. I do not, because it is included in this tabulation with the L. U., and—

Judge SETH. It's probably \$2.50 an acre, wasn't it?

Mr. FURMAN. May I ask whether any Soil Conservation employee here in this audience knows approximately what was paid for it?

Mr. STRONG. It was \$2.50 an acre.

Mr. FURMAN. \$2.50 an acre, Mr. Strong says.

Judge SETH. Have you any record showing how much money has been spent on it since you got it?

Mr. FURMAN. We could compile a record, Judge, showing approximately how much has been spent since we assumed jurisdiction of the area.

Judge SETH. Who had control of it before you did, the Indian Service?

Mr. FURMAN. It was transferred to the Soil Conservation Service from the Indian Service, by Executive order, in 1941.

Judge SETH. Was the Indian Service spending much money on it, prior to that time?

Mr. FURMAN. I have absolutely no knowledge of that.

Judge SETH. Have you any idea how much you have spent, in the last 2 years on it?

Mr. FURMAN. I could give you a wild estimate on that.

Mr. STRONG. I cannot give it to you, but I surmise it is something under \$4,000.

Judge SETH. Altogether?

Mr. STRONG. In the last 2 years that we have spent; yes, sir.

Judge SETH. Who built the fence and did all that work?

Mr. STRONG. That was done by the Indian Service; and I might qualify here that there were two C. C. C. camps on that area, Soil Conservation camps, in the early days of the program.

Judge SETH. And your \$4,000 relates to your own departmental funds?

Mr. STRONG. Yes, sir.

Judge SETH. That does not include salaries or wages of the people, that is only for permanent improvements?

Mr. STRONG. Yes, sir.

Judge SETH. There has been a good deal of travel, back and forth, between Albuquerque and the grant, hasn't there?

Mr. STRONG. Yes, sir.

Judge SETH. Now, the improvements you say were all made by the Indian Service?

Mr. STRONG. Not all. In the last 2 years there have been minor improvements put in. There were two wells, and we developed two or three springs.

Judge SETH. How about the Indians? What money did they spend?

Mr. STRONG. That was the C. C. C. camp money; that was through the work program established by the Government several years ago.

Judge SETH. That ran into thousands of dollars, didn't it?

Mr. STRONG. Probably; yes.

Judge SETH. Would you say as much as a half million dollars has been spent on it since you got it?

Mr. STRONG. I cannot say, but I wouldn't be surprised if you aren't somewhere near the figure.

Judge SETH. It's probably greater than that, isn't it?

Mr. STRONG. No greater; I wouldn't say that.

Judge SETH. Now, about the Ignacio Chavez grant; how much has been spent on that?

Mr. STRONG. Well, sir, we only spent—probably these figures are rough—about \$1,700 or \$1,800.

Judge SETH. That is your appropriation. Did they have a C. C. C. camp down there?

Mr. STRONG. No, sir; that is the total we put in.

Judge SETH. Did the Indians ever have that?

Mr. STRONG. No, sir.

Judge SETH. What was the cost of the corral you built on the Espiritu Santo?

Mr. STRONG. I am not sure, but I think it runs somewhere around \$600. I could get those figures for you absolutely, if you require them.

Judge SETH. How many employees are on the Espiritu Santo grant?

Mr. STRONG. Are you referring to a labor crew or administrative personnel?

Judge SETH. Both.

Mr. STRONG. The administrative personnel for the Espiritu Santo Grant is one individual and myself, the two of us. I am part time. I have that and all the other activities that I have.

Judge SETH. You say those, then, are the ones that devote their whole time out there?

Mr. STRONG. Mr. Gardner is the only one that devotes his whole time to the Espiritu Santo Grant, administrative personnel. We

have small labor crews that vary anywhere from 8 to 12 or 15 men in doing the development work which we have done out there.

Judge SETH. And that does not include the people who have made these range surveys in the past, at all, does it?

Mr. STRONG. No, sir.

Judge SETH. They were quite extensive?

Mr. STRONG. In recent years we have only been—probably the rangemen were put in a week or so at a time on there.

Judge SETH. In earlier years, who had control of it, when these surveys were made down there?

Mr. STRONG. The Soil Conservation Service made the original surveys.

Judge SETH. How long ago was that?

Mr. STRONG. I don't know, it was a long time before I came in.

Judge SETH. You have no record of that?

Your estimates of carrying capacity are almost irreconcilable. lower than the other governmental agencies on adjoining land. Isn't that a fact?

Mr. STRONG. No, sir.

Judge SETH. Isn't that true?

Mr. STRONG. If you take blocks of land as a whole, yes; but there are certain sections where our carrying capacities are greater than those established by the Grazing Service.

Judge SETH. Well, you take Espiritu Santo grant as a whole, your estimate on that is much less than the adjoining public and forest land?

Mr. STRONG. I do not know what the Forest Service land-carrying capacity is. That is a higher elevation, where the rainfall is greater, and it may have a higher capacity.

Judge SETH. But it is less than the Grazing Service?

Mr. STRONG. Yes; the biggest portion of their land. They do have certain allotments, I know, in there, on which they have an established grazing capacity of eight head.

The CHAIRMAN. That is all, Judge?

Judge SETH. That is all for this witness.

Mr. FURMAN. I have a very brief summary I would like to make, Mr. Chairman.

The CHAIRMAN. All right.

Mr. FURMAN. I have here a little book of only 118 small pages entitled "Man and Resources in the Middle Rio Grande Valley."

It was written by three people; the leading name is Allen G. Harper, who was formerly executive officer of the much discussed Interdepartmental Rio Grande Board, written, I believe, after his incumbency on the Board. It is a very fine description of the problems in the middle Rio Grande watershed. It describes the extent of the different races, racial groups, and their demands upon their resources, and it gives you a very clear inside into why these situations, such as the Rio Puerco project, do exist and are very real. I'm going to personally make a copy of this book available to the committee. I haven't an extra copy of it and this is the departmental copy, but I'm going to send

Mr. Haskell a copy; and may I make an appeal that the committee make a particular effort to read this book as very illuminating and very fine material?

That is all I have to say.

Mr. LEE. If you want to go to Russia, just read that book. He even went as far as to take moving pictures, out there, and he came up to my ranch and took a big moving picture of a sign "No Trespass"; and the Soil Conservation Service is spreading that all over South America, and all over this country, to show that people are prohibited from entering, and showing that we are destroying free enterprise. They also did it with the name "Fernandez Co." and also did it with the Frank Bond interests. I think it is well that you read that book and see what is going on, when the Government of the United States comes out and takes moving pictures of people showing them destroying other people. I think it's time something is done about it.

Mr. FURMAN. I have no such intent in asking the committee to read his book. I think it speaks for itself.

Mr. LEE. Wasn't it written partly by a Soil Conservation Service employee, Mr. Furman?

Mr. FURMAN. The material in this book is gathered from every survey, I think, that has been made on this valley since the Government started to work here, by all bureaus. I notice this bibliography of the description of the material includes surveys from all bureaus, and quite impartially. I have no purpose in introducing the thought of any political movement or anything of that kind to this group. I think this is an instructive book and I recommend it solely on that basis. It gives you an inside in the problems of this valley, and that is my sole purpose in mentioning it.

Judge SETH. Mr. Furman, your office also handles the operations of the Soil Conservation Service on privately owned lands, does it not?

Mr. FURMAN. My office does not; no, sir, Judge. It is the Soil Conservation Service as a whole, the Soil Conservation Service broad program does.

Judge SETH. Are you familiar with their operations in New Mexico?

Mr. FURMAN. To a limited extent.

Judge SETH. They set up these local soil-conservation districts?

Mr. FURMAN. Of course the people vote in the district and the Soil Conservation Service only cooperates in respect to technical cooperation and advisory capacity.

Judge SETH. For instance, such equipment and work as is done on these districts?

Mr. FURMAN. Only in part. The Soil Conservation Service has had, and does have, a limited amount of heavy equipment. I will illustrate by saying our equipment consists of draglines, which groups, small groups, of course, are unable to purchase by themselves.

Judge SETH. Have you any idea of how much money is spent annually in that branch of the work in New Mexico?

Mr. FURMAN. I'm going to have to—no; I can't answer that, but there are any Soil Conservation Service personnel here in this room who would want to answer that question?

**STATEMENT OF C. LUKER, REGIONAL CONSERVATOR, SOIL
CONSERVATION SERVICE, ALBUQUERQUE, N. MEX.**

Mr. C. LUKER, Soil Conservation Service, Albuquerque, N. Mex. Very limited amounts of equipment are bought for the simple reason that available supplies of equipment have not been on the market for purchase.

Judge SETH. How much money is spent annually in the State would you say, for salaries and other work of that kind.

Mr. LUKER. On a regional basis is the only way I can quote it. I would have to get the figures for you by States, if you want that for the record.

Judge SETH. New Mexico is all I am interested in.

Mr. LUKER. It would run something like \$350,000.

Judge SETH. That would be the total; wouldn't it run over a million dollars?

The CHAIRMAN. How much of that is in equipment now on the land?

Mr. LUKER. That amount of money?

The CHAIRMAN. Yes.

Mr. LUKER. The amount of money that I mentioned, then, is exclusive of equipment. There are no funds set aside for equipment purchases this year. All the equipment that we have is old equipment.

The CHAIRMAN. How much have you expended on equipment for this State since you came into operation here in New Mexico?

Mr. LUKER. I would have to run that down. I couldn't answer that question without a tabulation of the figures on it.

The CHAIRMAN. Well, have you had charge of that work for the State?

Mr. LUKER. Well, I have had charge of a portion of the work in this State for a number of years, but not all of it is for a great length of time.

The CHAIRMAN. Have you an inventory of your equipment and its cost or value?

Mr. LUKER. Yes, sir; we have that.

The CHAIRMAN. Where is it?

Mr. LUKER. In the regional office.

The CHAIRMAN. Here in Albuquerque?

Mr. LUKER. Here in Albuquerque.

The CHAIRMAN. I think it would be well if we had it.

Judge SETH. Couldn't you include the expenditures during the past 3 or 4 years?

The CHAIRMAN. Give us a break-down of the expenditures during the past 3 or 4 years.

Mr. LUKER. All expenditures of this State, for what period?

Judge SETH. The last 3 or 4 years, including administrative expenses, and what portions are administrative.

The CHAIRMAN. That will call for a break-down. Is there anything else?

(The following statement was furnished the committee by Mr. Luker:)

Statement covering estimated direct expenditures by the Soil Conservation Service in New Mexico for the years 1941 to 1944, inclusive

941:

Expenditures:

Public, 46 funds in area offices.....	¹ \$122, 000
Public, 46 funds in unit offices.....	430, 000
Total public, 46 funds.....	552, 000
Expenditures, land utilization funds (management \$43,000; development \$20,000).....	63, 000
<hr/>	
Above funds largely expended on—	
Rio Grande watershed project.....acres..	18, 000, 000
8 soil conservation districts.....do.....	9, 467, 805
7 land utilization projects.....do.....	626, 438

942:

Expenditures:

Public, 46 funds in area offices.....	¹ 120, 000
Public, 46 funds in unit offices.....	545, 000
Total public, 46 funds.....	665, 000
Expenditures, land-utilization funds (management \$36,000; development \$29,300).....	65, 300
<hr/>	
Above funds largely expended on—	
Rio Grande watershed project.....acres..	18, 000, 000
19 soil-conservation districts.....do.....	19, 302, 613
8 land-utilization projects.....do.....	655, 404

943:

Expenditures:

Public, 46 funds in State office.....	² 38, 000
Public, 46 funds in unit offices.....	597, 000
Total public, 46 funds.....	635, 000
Expenditures land-utilization funds (management \$26,300; development \$39,700).....	66, 000
<hr/>	
Above funds largely expended on—	
Rio Grande watershed project.....acres..	18, 000, 000
33 soil-conservation districts.....do.....	26, 603, 142
8 land-utilization projects.....do.....	655, 404

944:

Expenditures:

Public, 46 funds in State office.....	² 30, 500
Public, 46 funds in unit offices.....	477, 500
Total, Public, 46 funds.....	508, 000
Proposed expenditures of land-utilization funds (management \$25,800; development \$35,900).....	61, 700
<hr/>	
Above funds to be largely expended on—	
Rio Grande watershed project.....acres..	18, 000, 000
39 soil-conservation districts.....do.....	30, 218, 517
8 land-utilization projects.....do.....	655, 404

¹ 70 percent of area office expenditures may be classed as administrative and 30 percent as technical.

² State office expenditures may all be classed as administrative.

Prior to the reorganization, which took place on July 1, 1942, operations in New Mexico were supervised by two regions, one headquartered in Amarillo and one headquartered in Albuquerque. The type of organization for both regions consisted of area offices, which ministered unit offices embracing soil-conservation districts, demonstration projects, Civilian Conservation Corps camps, and land-utilization projects. Information on expenditures for the eastern tier of counties in New Mexico, which came under the Amarillo office, is not available in this office and it has been necessary to estimate these figures. Following the reorganization, administration in New Mexico was

handled out of the State instead of the area offices, and the entire State was placed under the new region headquarters in Albuquerque.

The above statement represents our best estimate of direct expenditures by the Soil Conservation Service in New Mexico during the period 1941 to 1942 inclusive.

CYRIL LUKER, *Regional Conservator*.

Judge SETH. Senator, please, we would like to put Mr. A. D. Brownfield on to make a statement.

The CHAIRMAN. Before you do that we will take a recess for 1 minutes.

(Recess until 3:50 p. m.)

The CHAIRMAN. All right, Judge, proceed with your witness.

Judge SETH. Very well, Mr. Brownfield.

Judge SETH. Will you please state your name?

Mr. BROWNFIELD. A. D. Brownfield, occupation is ranching.

Judge SETH. Where do you live?

Mr. BROWNFIELD. I live on my ranch near Deming, N. Mex.

The CHAIRMAN. Before you break into that, Judge, I apologize, but Mr. Rutledge brought to my attention that he has now from the files of the Department the letter that was in question here yesterday, presumably coming from Washington, with reference to the enlargement of the herds from small numbers to 150. Mr. Rutledge, you may present that letter, and such other documents as belong with it, and any explanation that you see fit to make.

Judge SETH. The letter testified about was from the Interdepartmental Board.

The CHAIRMAN. No; from Mr. Woehlke.

STATEMENT OF R. H. RUTLEDGE, DIRECTOR OF GRAZING, GRAZING SERVICE, SALT LAKE CITY, UTAH

Mr. RUTLEDGE. Mr. Chairman, I will make this very short and submit these documents to you.

On August 18, 1941, Mr. Woehlke wrote to Mr. Fryer, who was then superintendent of the Navajo Reservation at Winter Rock. I will not read all the letter, but this is what Mr. Woehlke said in effect to Mr. Fryer:

Won't you take up with the Range Conservation Committee the question of amending the rules that the very small, noncommercial operators be given a chance to expand their livestock holdings to the 150-sheep-unit limit.

And that is the question—that somebody take it up with the board. The advisory board apparently acted on that. There are two resolutions here; one is the advisory board on the 14th of August 1942. That was a year later, and in that, they disapproved the suggestion of Mr. Woehlke. Rather confusingly, on August 18, 1941, the advisory board met and said they had read the letter from Woehlke and would consider it, and said they would go at it. It was agreed that the rules for district 7 needed clarification and possibly some amendments. As to Mr. Woehlke's statement that class 1 applicants be allowed to increase up to the 150-head limit, this matter was discussed on June 16, during the last meeting, and a policy was adopted to allow class 1 to increase up to 150-sheep-unit limit, when the range was available. That resolution, the board approved Mr. Woehlke's suggestion.

Then the other resolution is the 14th day of August 1942, and the board turned down Mr. Woehlke's suggestion.

My part in this was that it just came to my attention in August of 1942 and on August 15 I wired Mr. Naylor as follows:

Chaco rules mean simply that at the time the original licenses were issued anyone otherwise qualified but qualifying for 150 head or less should receive permit for his full number. Nothing in the rules to justify any theory that everyone should be allowed to build up to 150 head. Last line on page 1 of your letter of August 5 indicates clearly that Woehlke also recognizes that only by a revision of the rules could the right be given to all to build up to 150 head.

I don't know whether anybody has increased to 150 head under this or not, but it clarifies the point that Woehlke raised the question, and the board has taken the position on it; but I don't know what action they took, and I want to call your attention to the fact that my wire stepped on it hard.

The CHAIRMAN. Those files can go in the record.

(The letter, minutes, and resolutions submitted are as follows:)

ALBUQUERQUE, N. MEX., August 18, 1941.

Mr. E. R. FRYER,

*Chairman, Range Conservation Committee,
New Mexico Grazing District No. 7,*

Window Rock, Ariz.

DEAR MR. FRYER: The grazing rules for district No. 7, as promulgated by the Secretary, were in skeleton form and temporary. They were intentionally broad and general in their terms so as to give the widest possible latitude in the initial application of these rules to the administrative officers. The rules were to be amplified when the amendment and amplifications could be based on the facts produced by these surveys.

I believe that enough facts have been accumulated by this time to make feasible and necessary certain amplifications and amendments to the existing rules, and I believe that the Range Conservation Committee might well start at an early date to recommend such changes to the Director of the Grazing Service and the Secretary.

Mr. Ryan will remember that, when the present rules were in the making, there was embodied in them the principle that the principal recipients of grazing privileges on the public domain should be the small, resident, noncommercial livestock operator. That principle was stated in the preamble to the rules and was embodied in the rules themselves. It seems to me that the time has come when more direct and specific application of this principle in district No. 7 is necessary. Won't you take up with the Range Conservation Committee the question of so amending the rules that the very small, noncommercial operators be given a chance to expand their livestock holdings to the 150-sheep unit limit and that this desirable expansion of the very small herds be made possible by a reduction in the grazing privileges extended to the owners of commercial operations whenever the needs of the range make such reduction in the commercial herds necessary? In other words, it seems to be most desirable at the present time to give these small, noncommercial owners a chance to enlarge and that the additional grazing privileges on public lands which they might require for this expansion should be taken from the commercial operators if such taking is necessary in the interest of conservation.

Sincerely yours,

WALTER V. WOELKE,
Assistant to the Commissioner.

MINUTES OF THE CHACO DISTRICT (SEVEN) ADVISORY BOARD MEETING

The meeting of the Chaco District (No. 7) Advisory Board convened at 9 a. m. on August 18, 1941, at the regional grazier's office at Gallup, N. Mex., with the following board members present: Tom Elkins, Glen Swire, Clarence Tso, and Keith Begay.

As Kelsey Presley, chairman, could not be present it was agreed that Glen Swire should act as chairman.

All grazing applications received since the last meeting were reviewed and our recommendations were made to the regional grazier.

A letter from Mr. Walter Woehlke, assistant to the commissioner, was read and considered.

It was agreed that the rules for district No. 7 needed clarification and possibly some amendments.

As Mr. Woehlke's statement that class 1 applicants should be allowed to increase up to the 150-head limit—this matter was discussed on June 16 during the last meeting and a policy adopted to allow class 1 to increase up to the 150-sheep units limit when range was available or when our information was so limited we were uncertain of the number being grazed and of the actual carrying capacity of the range.

Glen Swire, Clarence Tso, Keith Begay, and Chairman Presley met with the Range Conservation Committee on August 20 and certain recommendations were made that met with the approval of the board.

Meeting adjourned on August 20 at 4:30 p. m.

TOM ELKINS,

Secretary of the Chaco District (No. 7) Advisory Board.

RESOLUTION No. 3

To whom it may concern:

Whereas the district advisory board of New Mexico Chaco District No. 7 have carefully read the rules of the Grazing Service of said district; that in said rules we find no place where it is compulsory to increase the number of class 1 licensee up to 150 sheep units unless the priority of use of this applicant was equal to that number during his 1938 priority of use. But said board during their former meetings have considered the smaller operator in cases where he has owned less than the 150 sheep units and there was sufficient room in the area where he lived to graze more, they have allowed him to increase. This has been done during the grazing season of 1940 and 1941, because of the lack of definite information as to actual ownership.

We believe that the actual ownership of numbers of livestock in 1938 would fully stock the range of this district; therefore be it

Resolved, That New Mexico Chaco Grazing District No. 7 go on record as recommending the freezing of licenses to the actual 1938 ownership except in such areas where there is additional room a class 1 licensee may increase his number only to the carrying capacity of the range, but not to the detriment of the class 2 licensee; further be it

Resolved, That a copy of this resolution be sent to superintendent of the Navajo Reservation and the Director of Grazing.

Dated this 14th day of August 1942.

KELSEY PRESLEY.

TOM ELKINS.

GLEN SWIRE.

Judge SETH. Mr. Brownfield, have you held in the past, or do you hold now, any official position with the cattle association?

STATEMENT OF A. D. BROWNFIELD, FIRST VICE PRESIDENT, AMERICAN NATIONAL LIVESTOCK ASSOCIATION, DEMING, N. MEX.

Mr. BROWNFIELD. I am first vice president of the American National Livestock Association, headquartered in Denver, Colo.

Judge SETH. Were you president of the State association?

Mr. BROWNFIELD. Past president of the New Mexico Cattle Growers Association.

Judge SETH. Are you on any board of the national association at this time, or the local association?

Mr. BROWNFIELD. I am chairman of the legislative committee of the national association.

Judge SETH. You have a statement to make, and I wish you would go ahead and make it, with the Senator's approval, and without my questioning you.

Mr. BROWNFIELD. Gentlemen and members of the committee, I am prepared to comment briefly on all of the bills that you have on your program.

The CHAIRMAN. Very well, you may proceed.

Mr. BROWNFIELD. Before beginning on the bills, I might deviate at some length on this soil-conservation matter that immediately preceded me coming before you. Speaking primarily for the users of the land and the taxpayers, we take the view that conservation, the principle of conservation of our land is very, very sound. At this particular time the expense involved we consider does not justify the continuing of the practice. We feel that you gentlemen of this committee should guard very carefully the appropriations that should come to you, or that would permit the continuance of extravagance or any kind of expense on lands that could otherwise be dispensed with.

As to the general policy of the Soil Conservation Service purchasing lands, or any other agency of the Federal Government purchasing lands, we strenuously object. First, because it interferes with the tax base. Second, because in making such purchases in classifying the land as submarginal in order to make the purchase, it is more or less arbitrary within the minds of you who administer and manage this agency.

I have in mind a small area down in the southwestern part of New Mexico which was bought, as we are informed, and classified as submarginal. The ranch unit—our ranch unit is dependent upon this area and were kept in business primarily because of this tract of land, because the surrounding and immediately adjacent land, according to our interpretation as users of the land, were by far more submarginal than the tract of land purchased. In other words, it was almost in the center of the drainage area, a submarginal tract of land, and our objection to the policy of the Soil Conservation Service is that there apparently is an arbitrary ruling by the administrators as to what constitutes submarginal land.

I desire also to point out, gentlemen, that by an act of Congress, I think the Soil Conservation and the Domestic Allotment Act, the Secretary of Agriculture was given the authority to invade the legislatures of the many States, if I may be permitted to use the word, and have certain legislation passed that would thereby permit soil-conservation districts to be set up in any State that might pass such legislation. In one respect it decentralizes control, in that the administrators, some of them, are duly elected from the users of the soil and the owners in the districts of the lands that may be in the district, yet the Secretary of Agriculture holds the dominating hand. He has on that board a representative, and if any help is secured at all it comes through appropriations guided by the Secretary of Agriculture. His powers are more or less unlimited by this board that is subject at all times to the Secretary of Agriculture or his representatives.

These bills have passed in many, many of our States, in more than three-fourths of them, I presume. There are some in the midst of us who can give you the exact number of States in which this legislation has passed. The main point which I wish to point out to the committee is the fact that by congressional legislation you have permitted a creature to be set up that you might term a "grand-

child." It has grown and grown and it has been known to become more powerful, gentlemen, than the Congress that created it, or more powerful than its own "granddaddy."

These so-termed elected representatives of our soil-conservation districts may, if they choose to exercise the power and their influence, get other owners of land to vote nonuse regulations, and make it so severe it would put out many ranch owners, or put out many operators of farm land.

That, gentlemen, we consider un-American, and we feel that Congress should right it. The agency created thereby is superimposing itself upon all types of lands, so much so that it can dominate the manner in which the land is handled or managed by any other Federal agency or any State agency or any private owner.

We feel, gentlemen of the committee, that you should very carefully compare these expenses involved in the management by all agencies of the various Federal lands while they are handling and managing. An economic reform in many instances is needed, but a complete social and economic reform that could and would, according to some of the ideas that permeated down to this land management and land planning scheme, that would level off the institution of private ownership down to where we would all be on an equal basis. That must be condemned and fought by we who enjoy the freedom of self-enterprise.

Back to the critical areas that have been described in our State, namely, up in the northwestern part in the Indian agencies, in the special district No. 7, it is our opinion that the only way to correct that situation is for you gentlemen of the committee to lend your influence and efforts toward getting a fair and equitable exchange between the General Land Office, the State land office, and other agencies involved, that block up or take out of those areas the State lands and get them so placed that the economics of those critical areas could be aided. The Soil Conservation Service, as well as many other agencies, has bought many thousands of acres, many millions of acres, not only in our State but in many other States, and we desire to point out to you that, as we understand the situation, the Soil Conservation, however much good it has done—we are not condemning it, we are for it. But we think it should devote its time and effort to soil-conservation methods and needs when there is sufficient money for the Congress to appropriate; and that the grazing management should be removed into the hands of an agency that is handling Federal land under a law that has been dictated to and passed by Congress, namely, the Grazing Service. We think that you would right many wrongs. We feel absolutely sure that you would aid in stabilizing our industry, and in stabilizing individual ranch units that are much needed.

Now, as to these other proposed bills, I will name them by their numbers, as I come to them.

S. 31: This bill would give the advisory boards of the Grazing Service a controlling voice in any change proposed in the fee payable for grazing livestock. Since the boards are elected by the qualified users of the range and, after elected and accepted or appointed by the Secretary of the Interior, who has the authority to administer the Taylor grazing lands, their recommendations in such matters can be

of inestimable value to the economy of the livestock industry and the proper adjudication by the Secretary in all matters pertaining to grazing. This principle of participation by local residents in the management of Federal grazing land is a sound policy, and one that should be encouraged and expanded, and we think this bill should be passed.

The CHAIRMAN. I might say, in that connection, with that bill that the history of the Taylor Grazing Act reflects that the Taylor Grazing Act was never set up as a revenue measure. It was set up as an economic measure for the purpose of stabilizing the stock-raising industry, and a better economic use of the open public range. Where it is necessary to charge fees for the use of the open public range, those who use it are more interested in the range and its welfare and condition than anyone else; and it appeared to the author of that bill that the advisory board, which constitutes the representatives of the licensed users would be in a commendable position to know what charge was a proper economic charge for the use of the range. That is what gave rise to the introduction of that bill.

Mr. BROWNFIELD. S. 1152: This is a bill to provide for the conservation of wildlife on the public lands and reservations of the United States. With apologies to our very efficient and very able, esteemed chairman of this committee, may we say that New Mexico as a very cooperative fish and game commission and game warden provided for and created by the act of the State Legislature which has controlled the wildlife in our State for years. This bill would place the control in an agency of the Federal Government having jurisdiction of said land, and we see no reason to change the present set-up.

Further, the land status in New Mexico is such that one holding a license to hunt would have no way of knowing where Government lands, private, or State lands were. In other words, to keep within the law, much confusion would be the result. Our conclusion is that it would not serve the best interests of the citizens of New Mexico.

The CHAIRMAN. I hope that you may be here tomorrow, because we have designated tomorrow as the time at which certain interested parties would have an opportunity to discuss 1152, as a group.

Mr. BROWNFIELD. S. 1139, relating to placer-mining claims where deposits of phosphate, sodium, potassium, oil, oil shale, or gas, are on the public domain. As we understand this bill, it is more or less of a clean-up bill for understanding placer-mining claims for deposits of phosphate, sodium, potassium, oil, oil shale, and gas on public lands. Notice of extension of such claims must be filed within 6 months and if not the claim becomes null and void.

We see no reason to oppose this bill and perhaps its passage will not be objected to. In other words, much good might come out of the passage of the bill.

The CHAIRMAN. Let me say that in Arizona that bill was discussed somewhat at length, and it was discussed, not only from the standpoint of its legislative position, but also from the standpoint of abuses that had grown into the stock-raising industry by the stock-raising industry itself, to use their own expression, whereby in the midst of a district set up under the Taylor Grazing Act, certain stock grazers would acquire or otherwise gain access to mining claims,

placer-mining claims or lode-mining claims, as the case might be, and would set up a stock-raising industry in itself independent of the jurisdiction of the Taylor Grazing Act, and independent of the economy of the particular district. It was discussed quite at length and when you receive a copy of the hearings conducted in Arizona at Fredonia and at Phoenix, I think you will find a very interesting discussion along that line. It is a problem that the western public-range States will have to deal with sooner or later.

MR. BROWNFIELD. For the sake of brevity, I haven't injected the discussions of these bills or attempted to leave it open for those who might be interested to enter into the discussion.

S. 978, related to certain lands released to the United States by carriers, the railroads, pursuant to section 321 of the Transportation Act of 1940. Any objection to this bill, in our opinion, could only be on the grounds that the withdrawal of said lands from the tax rolls may materially affect the tax structure. New Mexico, we are informed, has around 40,179 acres of such lands not within the exterior boundary areas of any reservation. Its passage, no doubt, would aid the State and the State school fund more than at present. Such lands located within the exterior boundaries of any withdrawal or reservation could be expected to be administered by the agency administering other Federal lands within that area. So, we think that no harm is likely to happen to the economy of the ranch units using such lands.

H. R. 2197: This is a bill to provide for the acquisition of lands for grazing purposes. We are informed this bill has been reported with amendments, and these amendments are not known to us. However, we enter a formal objection to the bill because by such purchase, taxable land is thereby removed from the tax roll. If this purchase was on the recommendation of the advisory board of the district in which the board was elected, then perhaps the citizens could feel that if it became a law, the loss of the land from the tax roll might possibly be made up from some other sources.

There is need for a Federal law covering grazing in the national forests. This law specifically provides for local economy in each national forest, similar to boards now functioning under the Taylor Grazing Act; and among other things, should provide that the administrator could not take range from one permittee and give it to someone else, or some other permittee. There is a revision of the old Johnson bill known as S. 1030, which, I believe, our honorable Senator McCarran has had quite a bit to do with. This revision, perhaps, came out of his office. We hope that it did. This bill practically covers the present policies announced by the Forest Service. We think if this bill could be introduced and passed that it would provide the proper safety of forest permittees. It does not weaken the authority of the Forest Service in the conservation program. This bill allows for reforestation, recreation, wildlife conservation, mining, public watershed protection, public water storage, flood control, and any and all recognized and necessary controls. It provides for local advisory boards and takes from the administrator of the forest the right to deny any permittee who has complied with the regulations promulgated by the Secretary, and who owns commensurate property or other facilities the renewal of his permit or to

reduce the number permitted except for certain stated reasons. This right of renewal, if the Forest Service used it for grazing, puts stability in the industry, and the permittees should be legally protected on the whole system of distribution. Until Congress authorizes it, there is nothing to keep the forest officials from putting into effect another policy of distribution.

There can be no objection to the forest officials reducing the number of permitted livestock on that given area for proper protection to the land. But to reduce this number, once the correct carrying capacity has been determined, because a permittee sells out or dies or otherwise disposes of his commensurate right property or livestock, should be discontinued. So long as this policy exists there can be no harmony or genuine cooperation in the use of the forest, and the ranch set-up cannot enjoy the proper financial backing in times of distress.

There is a proposed substitute for this Johnson bill, S. 1030, by the Forest Service. Copies of both of these bills are offered for the record. I have them in my hands.

If this substitute bill should pass, we would get legalized the status of an advisory board system and some advantages such as counsel on the modification of the term, the denial of a renewal of, or a reduction in, a grazing permit, or the establishment, or modification of, an individual or community allotment, and on the issuance of regulations or instructions relating to the use of National Forest grazing lands, seasons of use, grazing capacity of such lands, and other matters pertaining to grazing, all of which is incorporated in the bill we seek to have passed, known as S. 1030. The old policy of distribution, which has so long kept the industry suspended to a possible change in policy, and which has kept out stability, would not be eliminated.

The Johnson bill, S. 1030, offers this protection to the livestock industry, and is sought by most users who are not afraid to express themselves. By again comparing this to the Taylor Grazing Act set-up, may I say it has become to be considered by the ranch users as a land protection and a land use statute, not one to protect the livestock. This has done more to stabilize the livestock industry than any act passed by Congress, to our knowledge.

The act operates in this way: For the man who is in need of financing, the land is allotted, and he has exclusive control to fence and develop and handle as suits his convenience, so long as he keeps within the determined carrying capacity, by the Grazing Service. He can even mortgage his private holdings that carries the right to graze the land within that allotment. So fixed has that become, not as a permanent injunctive right granted to us by the Congress, nor specifically denied, yet, in actual practice, the very fact that you are free to use your land as you use your own, and the transfer is not from individual to individual and not on your livestock, but it is tied to your commensurate right property, and thereby transferred by sale and deed of conveyance on your private land, or transferred through mortgage or otherwise, it has increased the financing of that ranch unit. So much so that the users of the forest land now recognize that fact to an extent that they are seeking similar legislation.

I believe, gentlemen of the committee, Mr. Mollin, the executive secretary of the American National Livestock Association, is with us, and that association is in a position to speak, through him, for more

than a hundred affiliated State organizations, as well as thousands of users of the forest. If it is permissible, I should like to ask that he make a few remarks.

The CHAIRMAN. Are there any questions?

Mr. RUTLEDGE. Senator McCarran, are we going to take time to discuss those various bills now? It doesn't seem to me we can.

The CHAIRMAN. They have been discussed in times past. For instance, that much talked of bill with reference to stabilization of the forest, Mr. Kneipp made a lengthy statement on it, and has made a statement at other times on it, and made a recent statement in our Arizona hearing. I think other statements have been made. I think you made a statement yourself, bearing on most of these bills, at times past. I doubt very much, unless you desire to make a statement now, whether or not the time would be well spent; but you may if you wish.

Mr. RUTLEDGE. May I ask Mr. Brownfield a question or two?

He raised a question in my mind, which had not occurred to me, and which I would like to have clarified a little.

These Soil Conservation districts are prevalent throughout the West, throughout the 10 States in which the Grazing Service operates. I understood Mr. Brownfield to say, through the establishment of these districts, the Forest Service—maybe he did not name them, but I applied it to ourselves, that the Grazing Service might, or could, or possibly would lose control of the range through the operation of the Soil Conservation district. I thought he intimated that the Forest Service might, also, but I am asking only for the Grazing Service. If he could elaborate on that, or tell me what he has in mind there, I will appreciate it. How can they take jurisdiction away from the Grazing Service?

Mr. BROWNFIELD. Whether I did or did not, I meant to say that it was quite possible; for those locally created Soil Conservation districts can set up and cover most of the States of the United States, to dominate all types of land, whether controlled by the Grazing Service, the Forest Service, or any other agency, State or Federal.

Mr. RUTLEDGE. Would you care to tell me how they could get hold of the Grazing Service land, or dominate it?

Mr. BROWNFIELD. As I understand, just now there is a working agreement, I have been told there is such in existence, between the Soil Conservation set-ups and these Federal agencies such as the Forest and Grazing Service. The point I wish to register here is that, if the Secretary of Agriculture, through the board that controls, wishes to take over the management of all of those lands, it can be done by voting land use regulations, by the individual land owners, and thus they will take over and control by law all agency controlled lands. That is all subject to the way that I know it, but we fear it here in New Mexico, because that seems to be a tendency, to reform our ideology of government by land planning and managing.

Mr. RUTLEDGE. You have answered my question.

Senator CHAVEZ. May I ask the gentleman a question?

The CHAIRMAN. Certainly.

Senator CHAVEZ. Do I understand, Mr. Brownfield, that, just because such an act as the Taylor grazing bill was enacted by the Congress that the Federal Government should not take into consideration, or be interested in, other parts of the population that might be affected by land use?

Mr. BROWNFIELD. I am afraid you misunderstood me. I mean to say, Senator, that the very fact that the Congress has given us—

Senator CHAVEZ. Don't say "us."

Mr. BROWNFIELD. Gave the users of the land at the time the law was passed, who were found in the livestock business, the right to use those lands. As it has been interpreted, it was passed to set up anyone in the livestock business, to protect those in the business at the time the law was passed.

Senator CHAVEZ. You heard the testimony that there are hundreds of poverty-stricken people in the State of New Mexico. Is it your idea that, because the grazing law was passed, those people should not have been taken into consideration, and should have been protected by the grazing law, and were not?

Mr. BROWNFIELD. Not at all. What I am saying now is we need it, the assistance of Congress, now; and the support of the United States, and their efforts to help work out a plan that will protect those people. My suggestion was that we remove the State lands that are now within district 7, or within the agency and within the forest, and the land which surrounds those boards, that they may lease the land direct from the State, or that they may turn—

Senator CHAVEZ. I think I may be in agreement. I evidently wasn't here at the time you made the statement. I am sorry.

Mr. BROWNFIELD. We may go further, we may turn over to an agency that is under the control—that has been set up by Congress—these lands that have been purchased by other agencies, that have denied the right of use to those people, so that proper allotments can be worked out to protect them.

Mr. KNEIPP. Mr. Chairman, in response to Mr. Brownfield's statement and Senator Chavez' query, I would like to ask Mr. Brownfield whether it is not true that S. 1030 would prevent any administrative agency of the United States from reducing the permits of the large permittees on an occupied range in order that a small permittee might be increased in numbers, or new permittees admitted?

Mr. BROWNFIELD. We are not thinking in terms of the individual. We are thinking in terms of the proper use of the land.

Mr. KNEIPP. I just asked you a question.

Mr. BROWNFIELD. I am not thinking in terms of the maximum upper limit or the extreme lower limit. We are trying to get legislation that will force the administrators of the forests to recognize permits based upon commensurate property solely; and that when your Service determined the carrying capacity that carrying capacity be left flexible. In times of drought you may reduce it, but not reduce it on one ranch but on the whole forest area, not necessarily that a man be reduced because he happens to hold a permit and happens to die or sells out.

Mr. KNEIPP. I don't think that is responsive. I asked you a specific question. Would not S. 1030, or the new bill now being circulated in mimeographed form and called the stock growers bill, specifically prevent a Federal administrator from reducing the permit of one permittee in order to adjust the range for a small permittee or to admit a new permittee?

Mr. BROWNFIELD. After that specific permittee has complied with the rules and regulations laid down and prescribed by your Chief Forester, or the Secretary, then it would prevent—

Mr. KNEIPP. In other words, the bill says no permittee who has observed the rules of the Department of Agriculture shall have his permit reduced, except for certain prescribed reasons, which do not include the provision of range to the small permittee or a new permittee.

Mr. BROWNFIELD. Don't forget, the regulations and reasons are left to the discretion of the Secretary. Once he prescribes them, and the permittees are left up to them, they are fixed to the property, not the individual and the livestock.

Mr. KNEIPP. This bill says that the Secretary of Agriculture, for instance, shall not reduce the permit of any man who has complied with the regulations governing the use and occupancy of the land for grazing purposes, except for three, I think, specified reasons; and none of those reasons include any provision whatever for the grant of an increase to a small permittee, or the grant of a new permit to a qualified applicant. Isn't that true?

Mr. BROWNFIELD. Exactly what we are trying to get down, recognition of the commensurate property, not the individual.

Senator CHAVEZ. Do you mean the commensurate property would have preference, even as against the human needs and desires of the people?

Mr. BROWNFIELD. He might not own real estate, he may have had prior use.

Senator CHAVEZ. In other words, your water well would have more interest than the mother of three children?

Mr. BROWNFIELD. The users of that water well unmistakably would get the prior use.

Senator CHAVEZ. I just wanted to understand it.

Mr. BROWNFIELD. That is what brings on the stability, Senator.

Senator CHAVEZ. We want to stabilize, not starve them to death. You won't give them anything to graze.

Mr. BROWNFIELD. I disagree with you. We are trying to help them.

Senator CHAVEZ. Well, we both want to help them, but probably the methods differ.

The CHAIRMAN. Mr. Mollin, as secretary of the American National Livestock Association, you may make such statement as you see fit.

STATEMENT OF F. E. MOLLIN, EXECUTIVE SECRETARY, AMERICAN NATIONAL LIVESTOCK ASSOCIATION, DENVER, COLO.

Mr. MOLLIN. My name is F. E. Mollin, of Denver. I would like to ask if the gentleman who interrogated Mr. Brownfield is a member of the Forest Service?

The CHAIRMAN. That is Mr. Kneipp of the Forest Service.

Mr. KNEIPP. Yes; I thought you were well acquainted with me.

Mr. MOLLIN. The reason I asked, the bill carries out the present policy of the Forest Service, and I wondered if you were not in sympathy with that policy.

Mr. KNEIPP. The bill carries out a policy established in response to certain conditions and certain representations, which has been in effect for a number of years, specifically, I think, since about 1936. That is true. The objection to the bill is in making it a permanent and inflexible rule.

The stockmen have asked that Congress enunciate a policy. In drafting the bill, they have not proposed a bill which constitutes a policy, but a bill which constitutes a rule of law. The bill in which the Forest Service has participated, is a bill which pronounces a policy, but makes it possible for the agencies of the Government to adapt that policy to whatever new conditions might subsequently arise.

Mr. MOLLIN. Mr. Chairman, I have attended livestock meetings, I think, in every State in the West since this matter has been at issue. The great majority of the growers have approved the Johnson bill. Resolutions approving it have been adopted, I think, by every State cattle and sheep growers association in the west.

Senator CHAVEZ. What about the unorganized groups, that represent men head of cattle. What do they say about it?

Mr. MOLLIN. I don't know, Senator, but I do think you have to approach the problem a good deal as you did in the Taylor bill. There isn't enough forest land, or any other kind of land, to go around. You have to get stability in some fashion. The only way to do it is to establish a rule of law based on the commensurate property holdings. That will work this problem out.

Now, the Forest Service had to abandon the policy of distribution, which they had carried on for a great many years, because it was unworkable. They admitted themselves it was unworkable. Now, the crux of this whole matter, Senator, is, who is going to determine the policy of operating the forest lands, is it the Forest Service that is going to determine the policy, or is Congress going to determine the policy? Now, this bill does lay down, temporarily, a policy.

Senator CHAVEZ. I would call it a proposed policy, for the moment anyway.

Mr. MOLLIN. We don't want a new Secretary of Agriculture, tomorrow morning to say, "I am going to change that policy, upset the livestock industry, and start again on a policy of distribution." Mr. Granger, one of Mr. Kneipp's associates, in the meeting at Gunnison, Colo., made the statement that he thought they ought to have that right of distribution, that they might need to invoke it again at any time. He didn't specify any time. That is the attitude of the Forest Service; they want to make the policy. I say they should administer the policy, and Congress should make the policy.

Senator CHAVEZ. It wouldn't make it a policy, to apply to one particular group, because they happen to be organized. You should make it a policy everyone connected with the industry can enjoy. I think that is the duty of Congress.

Mr. MOLLIN. The Forest Service has been in operation for almost 40 years, has been considering rights of the applicants all this time, issued new permits, and the records show that trying to set up these little fellows in business does not make them successful livestock operators.

Senator CHAVEZ. It is not a question of success you are thinking about, unless it is the success in the matter of dollars and cents and income and taxes. I am thinking of the successful feeding of people, such as we have heard about; those are the boys without neckties that haven't got a place to—

Mr. MOLLIN. They have had the hearty cooperation of the Forest Service for almost 40 years, in working out this policy. The Forest

Service finally had to abandon it because it wouldn't work. They found it wouldn't work or else they wouldn't have abandoned that policy. No one forced them to abandon it. Now they want the right to go back and do the other thing again; and this bill seeks to prevent that.

I'll say further, I have sat in meetings where officials of the Forest Service have used every effort in their disposal to defeat the enactment of every resolution against this bill. I have sat in an advisory meeting where the Forest Service member was secretary of the board. I was asked to discuss this bill, which I did. This representative of the Forest Service vigorously opposed me. There were two or three other members of the Forest Service in the room. A motion was made to endorse the bill, and without even a second to that motion. Later the chairman of the general resolutions committee came to me and asked if I would like to have a resolution introduced in the committee. I said, "No, I don't want to participate here in this organization." After I had gone back to the convention, the resolutions committee took upon itself to pass such a resolution, and it was passed without a dissenting voice on the floor of the convention. The next morning the gentleman who happened to be sitting beside me at the advisory board meeting, came up to me and said, "I'm sure glad you passed that resolution. I didn't dare get up in the presence of Forest officials and second the motion to endorse the bill."

I say, if you will pass that bill with its second object of giving the advisory boards legal status, they'll feel more independent, and you'll get better results in the operation of the districts than you do now when the advisory boards feel under obligation to the Forest Service officials.

Senator CHAVEZ. I happen to know many of the members of the boards here in New Mexico.

Mr. MOLLIN. Forest Service advisory boards?

Senator CHAVEZ. Forest advisory boards and the Taylor grazing boards. I am giving you, for what it is worth, the bulk of the complaints I have heard from the small herders, the fellow that has a few. He is unable to go to election of these advisory boards. He is not complaining about it, because that is the way it is done; but he is unable to ride 40 miles to go to the election district and vote. As a general rule, the little fellow is not represented. Is that correct?

Mr. MOLLIN. All types of men are represented in the meetings. I attend general State conventions. Small herders and small operators are there, just as the larger operators. Of course you understand. Senator, the 15 years I have been the secretary for the American National there has been a big shift, there are many less big operators; the industry is being whittled up and made into smaller units. There has been a great shift in the way we get our support, which used to be largely from the big operators, and it is now largely from the smaller operators. We have just a handful of big, old-time operators left to pay substantial sums of money. I don't think it is correct to say that the small operator doesn't have a voice as to the workings of the State organizations, and as to the workings of the advisory boards. I don't know. But I do know there are an increasingly small number of the big operators on the Taylor grazing advisory boards. If you pass this forest bill, I think the Forest Service advisory boards will

take a more independent view than they have now, and will function more.

Now, Mr. Chairman, I would like to say a word about a subject you touched upon when you questioned one of the witnesses as to the effect of nonuse, or limited used, which was best. I think that is an important subject; and I think, when the committee gets down to cases to determine what you are going to do about all these overlapping agencies, you will have to give more attention to that problem of how many experts do we need to determine the carrying capacity of all these ranges out here.

I agree entirely with what Mr. Lee said about this use of lands. If you clip the grass you insure its spread and growth, and when you leave it idle you do just the opposite.

Some 10 years ago the Forest Service was responsible for the issuance of a book that was commonly known as the Green Book, and more officially as Senate Document 199. That book set the pace for all the exaggerated statements about all the grazing that has been made ever since. I made quite a detailed study of the situation, to prepare something in the nature of an answer to some of the charges in that book. That answer was contained in a booklet entitled "If and When It Rains." I published 20,000 copies of it, and distributed it all over the country. I found some very interesting things, as a result of correspondence and personal contact with men all over the West and who have been out here a lifetime, and knew more about, and have forgotten more about, conditions here in the West than some of these boys, with the best of intentions, who are just out of college, will ever know.

For instance, on the great western plains area, it was the use of those lands that developed the range. The natural dominant growth, that runs for thousands of acres, was bunch grass, and the use of that land transformed it to a short-grass country. I went to an old timer down in Midland, Tex. He was there in about 1882, and he told me that when he came to that country it was bunch grass and dirt, and now it is a solid turf country, as many of you stockmen know who have been there. We have the mesquite and the buffalo grass and the grama grass now, in place of the bunch grass that dominated that area down in the north of Texas, which is perhaps one of the finest cattle countries in the world. The old timers will tell you that the type of grass in that country, and the grazing, is much better than it was when they went there in the early 1880's.

Up in Oklahoma they have a great many preserves on the Wichita National Forest. They have a herd of buffalo there, and on the south slope of that area, a few years ago, when I was there, the short grasses still prevailed where the buffalo range most of the time and graze. You get back away from that area where they stay most of the time, and you find a good deal of it has gone back to bunch grass. I had another illustration of the grazing in North Dakota recently. They had a serious drouth there, that started in 1933, and they had to practically remove their herds from the forest. Two men who were cousins operate side by side in that area. One is well to do and the other is not well to do. When the drouth was over the man with plenty of money immediately restocked the range to full capacity, and the other man has slowly restocked the range out of his own products, offspring from the herd. He told me himself this summer that his

cousin, who had restocked his range, had a fine, solid range now, with the best grass in that country, while his range, understocked for years, is full of weeds and other kind of grass, not nearly as good feed, and it has not the carrying capacity of the good range.

I have been on the Federal experiment station in Montana. They have some fenced plots. When I was there a few years ago they had these plots fenced out for years, and the manager of the station told me that he admitted that the grass in those fenced areas, that had nothing on it for years, was no better, if it was as good, as the land outside of those fenced plots which had been moderately grazed. In 1934, when we had this serious drought, I recall that some expert from Washington came out here in the West, and you remember all the talk about the Dust Bowl and the pictures they took of that land down in southeastern Colorado. Well, that land has been there from time immemorial, and that was the land they photographed. You have probably heard of the skull they moved around as a prop to help out in the pictures. That expert went into Wyoming and took an ordinary magnifying glass and examined some of the range areas in there, and pronounced 75 percent of that grass dead beyond recovery. The next year it rained in those same areas, and they were cutting hay in the valleys of that pasture, with cattle grazing in the pasture.

All this talk about overgrazing, everybody overgrazing all the time, makes me tired. They overdo it to death; and it's just a wonder, in my mind, that the grass does as well as it does, with so many damn experts around.

I think that this committee has a great responsibility. The livestock industry is looking to it to do away with a lot of those overlapping agencies who are arbitrary and secret in their dealings. But more than that, I think, out of these hearings ought to come something that they have never had in this country, and that is a public-land policy, a policy that will prevent this buying of land all over the country by a dozen different governmental agencies. Nobody knows what is going on. No single agency, or single person knows the extent of the alarming enormity of it. When you get the officials together, to see what is going on in these Western States, you uncover some startling things. I do know, if you come out with a public-land policy, recommendations for legislation that will put it into effect. • that you will get the support of the entire western livestock industry. I thank you.

The CHAIRMAN. Very well; thank you.

Is there anyone else who cares to be heard at this time?

(The following is inserted at this point by request of the New Mexico Cattle Growers Association:)

Mr. CHAIRMAN: Regarding this proposed forest bill which was familiar to us in the past as the Johnson bill, or S. 1030, we are confronted with the situation of the Forest Service opposing the enactment into legislation of that part of the bill which would recognize commensurate property and prior use as the basis for allocating grazing permits on the national forests.

Instead, they contend that the bill must make provision for, to use their own wording, "an equitable distribution of the grazing privilege among those found by the Secretary of Agriculture to be most in need of the privilege."

In my humble opinion this would be liable to a wide interpretation and might inevitably lead to a distribution policy or a policy of limiting grazing permits to a subsistence basis which would nullify the purpose of the proposed bill, namely, stability of that part of the livestock business which was in any way dependent of the use of grazing in the national forests.

The Forest Service conducted an economic survey several years ago, and since that time cuts for distribution have been practically discontinued and forest officials have told us they have no intention of going back to a policy of distribution, yet they do not want to be deprived legally of that privilege should they or their successors desire to do so.

If a man owed me a sum of money and I asked him to sign a note and he refused but stated he intended to pay me, certainly no one could blame me for wondering if he was acting in good faith. Further, if I had the note and my creditors knew I had it, that certainly would be an asset in my operations, and thus tend toward stability.

The primary objectives of the act under which the forests were set up were the conservation of timber and the protection of watersheds. Nothing in the act itself gave anyone the authority to say who should be entitled to grazing privileges. The ranges were already occupied by livestock and permits were granted by the Forest Service on the basis of prior use and commensurate property.

The Congress has definitely expressed its ideas about distribution of grazing on the Federal lands in the Taylor Act and tied in the use of grazing in the grazing districts with prior use and the ownership of commensurate property. We do not see how they could be consistent if they refused to do the same for the forest permittees, especially in those areas which are primarily grazing lands, have no commercial timber and under the enabling act could only be justified as forest areas for the protection of watersheds which, certainly is also a function of the Grazing Service as established by the Taylor Act.

That is about all I have to say. You will remember the other night a lady asked Senator McCarran where Secretary Ickes came from. The Senator replied that he did not know where he came from or where he was going. The livestock producers using grazing lands on the national forests do not know who will be the next Secretary of Agriculture, or where he is going, but we would like to stay where we are, under a legal status and not under rules and regulations coming out of Washington.

GEORGE A. GODFREY,
*Chairman, Forest Committee,
New Mexico Cattle Growers Association.*

RESOLUTION No. 4—STABILITY ON NATIONAL FORESTS

Whereas stability of use is vitally important to livestock operators holding grazing permits on national forests; and

Whereas a policy of cuts for distribution on subsistence permits have proved economically unsound and, we feel, contrary to the American way and the spirit of free enterprise: Therefore be it

Resolved, That we petition the Congress of the United States to enact legislation giving legal status to forest advisory boards and limiting the issuance of grazing permits to those who have prior use and commensurate property and that cuts in grazing permits be discontinued except for purposes of conservation or to care for domestic livestock of owners of contiguous ranch property.

Attest: This is a true copy of resolution No. 4 adopted unanimously by the New Mexico Cattle Growers Association in executive board meeting, Albuquerque, N. Mex., September 27, 1943.

HORACE H. HENING, *Secretary.*

STATEMENT OF RUPERT F. ASPLUND, DIRECTOR, TAXPAYERS ASSOCIATION OF NEW MEXICO

Mr. ASPLUND. My name is Rupert F. Asplund, and I am the director of the Taxpayers Association of New Mexico. I may also state that I am a member of the public domain policies committee of the United States Chamber of Commerce, and, Mr. Chairman, if you haven't seen this publication of the chamber, you probably will have them before you at some time in the hearing. May I add this to your library?

The CHAIRMAN. I would be very glad to have it, I assure you. Thank you.

Mr. ASPLUND. I understand that there has been acquired by the Federal Government something between a million and a million and a half acres of land that has, heretofore, been on the tax rolls of the State. Our tax rate in New Mexico is fairly uniform, at about $2\frac{1}{2}$ percent, so you can figure that for every million acres, or for every million dollars taken off the tax roll, we lose \$25,000, depending on the assessable value of that land which may, in my judgment, vary from \$1 to \$2 an acre.

While this does not affect the State at large, the withdrawals from the tax rolls in certain counties are a very serious matter. We will refer to Harding County, which has a total valuation of \$3,200,000. The withdrawal of \$125,000 from the tax rolls of that county is a very serious matter. In the case of Sandoval County, which has great withdrawals, and losses, from the tax rolls, it will affect their local budget to a substantial degree.

Now, it has been said that the purchase of these lands has resulted in the payment of a large amount of delinquent taxes. That is true. However, that does not necessarily mean that those taxes would have been lost to the State or to the local county, because we have a self-operating delinquent tax law, which, in the course of 2 years, places those lands, on which taxes are delinquent, vested in the State, and they would soon return to the tax roll, under such conditions. Now, it is true, I might say, that even in the case of the large amount of public lands now in some of these counties, that has resulted in perhaps only 20 or 25 percent of the lands remaining in private hands. We do get a compensation in the grant for Federal roads. But that concession does not affect in any way or help the finances of the local communities.

I have said that a million dollars' worth of land taken off the tax rolls would result in the total loss of \$25,000. Of course, I suppose that for every million acres of grazing land, or million dollars' worth of grazing land, there possibly is as much as a million dollars' worth of improvements, cattle purchases on those lands, and there would be a resulting loss to the State and to our school revenues in the loss that would accrue from excise taxes. The amount, of course, has to be more or less estimated, but I am showing at the present time, I am attempting to show, the ways in which the withdrawal of the acquisition, the withdrawal from the tax rolls, would result in loss to the State in taxes.

There is another feature about the withdrawal of lands, without compensation for taxes and losses. As an illustration, in Harding County there has been \$125,000, perhaps, of taxable property—there are those from Harding County who can give more accurate figures for the loss of \$125,000 or \$150,000 in taxable property, which has been taken out from under the security of the bonds of that county, and from the security of the school districts affected. The same would be true in other counties.

Mr. Chairman, I have just attempted to give you some idea about where the loss to the State and the local subdivisions would come.

The CHAIRMAN. Are there any questions? Thank you very much.

Judge SETH. Mr. Chairman, I have one gentleman here; could I put him on before you adjourn?

The CHAIRMAN. Very well.

STATEMENT OF F. N. SISNEROS, HERNANDEZ, N. MEX.

The CHAIRMAN. You may state your name and residence.

Mr. SISNEROS. F. N. Sisneros, Hernandez, N. Mex.

Judge SETH. You live at Hernandez?

Mr. SISNEROS. Yes.

Judge SETH. You have been in the stock business all your life?

Mr. SISNEROS. Yes, sir; since I was a little kid.

Judge SETH. Where is your summer range, Mr. Sisneros?

Mr. SISNEROS. My summer range is on the Carson National Forest.

Judge SETH. Is that up north of Santa Fe?

Mr. SISNEROS. Yes; the Carson Forest.

Judge SETH. And your winter range, where is that?

Mr. SISNEROS. Winter range is east of the Sebastian Martin grant.

Judge SETH. In getting from your summer range to your winter range, do you have to cross lands under the control of the Soil Conservation Service?

Mr. SISNEROS. Yes, sir; I do. I have to cross the Sebastian Martin grant and on State land for about three quarters of—south half of the Lobato grant and the north half of the Lobato grant.

Judge SETH. What do they charge you for crossing?

Mr. SISNEROS. In crossing it is 2 cents a head per cow, or half a cent per head sheep per day and, in addition to that, if I happen not to get over the land in the same day and have to stay overnight, I have to pay the fee for a full-day period the next day.

Judge SETH. Is that over the Lobato grant?

Mr. SISNEROS. Well, that is the Sebastian Martin, it doesn't apply that way because it is only three quarters of a mile across it.

Judge SETH. On the Sebastian Martin grant from the highway to Santa Fe and Taos to your summer range, what is the distance across?

Mr. SISNEROS. On the Sebastian Martin range?

Judge SETH. Yes.

Mr. SISNEROS. Three quarters to a mile.

Judge SETH. When you cross over that with your sheep do you cross a road?

Mr. SISNEROS. Yes, it is an old road that we have used there for years and years to go up to the hills; not always that, but it makes more hard and difficult for me on that operation is that my cattle stay on the winter range, and they generally get around to finding a gate down, either on the grant fence or in the Indian grant fence, and they get into it down on the grant, and they are thrown out into the road. When I get there, I find that cow or cows, and I am disrupted from the rangers in that vicinity, that I have to get a permit to cross that cow. I have to go up to the headquarters, which is, from that crossing, about 7 miles, and I have to get over there and get a permit. If it is a cow, I have to pay 2 cents a head for it, and go to the post office, after I get my permit, and get a money order for that cow.

The CHAIRMAN. For what?

Mr. SISNEROS. For that cow. If I have to drive the cow across that stretch of land, I have to go and get a permit, and the permit is issued—I have to go to the post office and get a money order for 2 cents per head, or one head if it is only that much.

The CHAIRMAN. Can you get a money order for 2 cents?

Mr. SISNEROS. I generally, to avoid that I would much rather hire a truck, around at the neighbors, and put the cow on the truck and cross the three quarters of a mile that way, than ride up and get a permit for that.

Judge SETH. They won't take the cash, will they?

Mr. SISNEROS. No, they won't take cash. The men have beer—they are pretty good friends of mine, and they certainly can take cash. They say it has to be a money order on the United States Treasury for that purpose.

Judge SETH. If one of your cows gets out, you have to put it back, you have to buy a money order for the 2 cents and send it to them?

Mr. SISNEROS. That's right. I'd much rather get one of the neighbors to get his truck, if I don't happen to have mine, and put it on the truck, and get it across that stretch of land.

Judge SETH. They don't charge you if you have got it on a truck?

Mr. SISNEROS. Don't charge for getting across on that road in a truck or wagon.

Judge SETH. But that stretch of three quarters of a mile, when you take your sheep in there, you have to pay a half a cent?

Mr. SISNEROS. I have to pay the half cent per head in driving across, and don't let them scatter or stay there.

Judge SETH. You have to keep them moving?

Mr. SISNEROS. I have to keep them moving, for my permit.

Judge SETH. You have to get a money order for those, too?

Mr. SISNEROS. Yes, I have to get a permit, and after the permit is issued, then I have to go and get a money order.

Judge SETH. Does it use up lots of gasoline looking up the ranger and going to the post office?

Mr. SISNEROS. I generally, in order to get across that stretch of land, I have to drive from my house to that headquarters, and it is around 17 miles round trip, before I start moving my sheep. But in a lot of cases I have to move my sheep all of a sudden, and I have to go up to the headquarters, and the ranger is not there. Although I am grateful to some of these rangers that have been there, they have let me proceed when I don't find them; but I find it pretty risky for them to allow me for that, because if I forget and I get caught crossing without a permit, I would be penalized for it.

Judge SETH. You pay Taylor grazing fees on your winter range, do you not?

Mr. SISNEROS. Yes; I do.

Judge SETH. And forest fees on parts of your summer range?

Mr. SISNEROS. No, sir; I don't pay forest fees on summer range, because it is my own private land over there.

One question I would like to mention a little bit, I owned two homesteads there, 160 acres each one, and I have tried my best for every way possible to get a permit, even though I run on one of my places, 560 head vacancy right around my places, but they don't allow it to me. This year, fortunately, I happened to make a deal with a rancher over there, and exchanged my cattle permit, 5 cattle permit, for a summer permit for my sheep. But it happened it was thrown into a spot where there is a lot of poison weed, and within 24 hours I lost 72 head.

Judge SETH. Then you are paying grazing fees on your winter range, and you have to pay them to the Grazing Service?

Mr. SISNEROS. Yes, sir; I pay them to the Grazing Service.

Judge SETH. Then you have to pay the Soil Conservation Service to get from the main highway, three quarters of a mile, to it?

Mr. SISNEROS. Yes, sir; I have to pay; and going out to the summer range, it is pretty hard to put little lambs on the road; but I generally go at the south side of the Lobato grant, because I either put them on the highway or get a 2-day permit, because I can't make it in a day without traveling like on the highway. If I get to stay inside, and don't get over the same night, I have to pay for another day, which I never get any use of it. Or I have to put them on the highway and get them across. I have to travel those little lambs for about 9 miles before I can get any place to spread out, and then I get out on a privately owned land. Mr. Greenlee owns out there, and is a manager there, and he is very cooperative with the livestock management. I asked him for a permit and he said, "Go and get in there and stay there tonight or the next day, if you want to." It doesn't hurt much to get across with a little bunch of sheep; never charged me anything.

Then I get to the north half of the Lobato ranch, and in order to get the sheep on the highway, is a fee administered by the Soil Conservation Service; now is turning over to the F. S. A. Before I close, I would like to mention that several times coming off the mountain I like to put them on the highway, so I would not have to pay a half cent per head, because I wouldn't get in any use of them. I tried the manager over there and he wouldn't let me put them on the highway without paying a bunch of cattle, 26 head of cattle I own—he wouldn't let me put them on the highway without paying fees. He said one or two head might get off the highway and trample on the grant land, and he makes me get a permit for it.

Now, that has been fenced, and since it has been fenced, it is all right, I can put them on the highway now.

Judge SETH. Is there anything further, Mr. Sisneros?

Mr. SISNEROS. That is all I have to state now.

The CHAIRMAN. Are there any questions? Very well sir, thank you.

We are doomed for another night session. I can see plainly that, in order to cover the matters that have been presented to the investigator of the committee, it is going to be necessary to hold a night session, so we will now recess until 8 o'clock, and reconvene at 8 o'clock this evening.

(Recess was taken until 8 p. m.)

EVENING SESSION

The CHAIRMAN. The meeting will come to order.

We were to hear the people who have matters to present to the committee with reference to the acquisition by military agencies of public land and private range in the State. Those who care to be heard on that subject may come forward.

Judge SETH. Mr. A. B. Cox would like to be heard first on a proposed new bombing range in southern New Mexico.

The CHAIRMAN. Are any of the officers here who have to do with the acquisition of the bombing range?

Judge SETH. Captain Snyder is over here, Mr. Chairman.

The CHAIRMAN. Is there anyone else, Captain?

Captain SNYDER. No, sir.

Judge SETH. I was mistaken in calling it a bombing range. It's a gunnery range.

The CHAIRMAN. Well, it makes no difference, it is an acquisition of ground for military activity.

Judge SETH. Will you please state your name?

STATEMENT OF A. B. COX, OTERO COUNTY, N. MEX.

Mr. Cox. My name is A. B. Cox, and I live at Otero, N. Mex.

Judge SETH. What is your business?

Mr. Cox. Cattle raising.

Judge SETH. How long have you been in it?

Mr. Cox. Born and reared on a cattle ranch in New Mexico.

Judge SETH. How long have you lived in that country?

Mr. Cox. All my life.

Judge SETH. Now, will you tell the Senator about this proposed new bombing range, its size, and the effect it would have on grazing conditions in your country?

Mr. Cox. On the 15th of July past, or about that date, some Army men, a Maj. Gerald Hart, of Dallas, principally, came to my home in Otero County and said that he had been sent by the Army to feel some of us boys out and determine whether or not we would cooperate with the Army on an aerial gunnery, an air-to-air operation. Major Hart said that he would come back the following day, if I would get some other neighbors to come in and hear his request. The following day nine of us interested in the area sat with Major Hart and one civilian engineer, Mr. John Praker, I believe, also from Dallas. Major Hart principally wanted to know whether or not we ranchers could go along with the Army on a co-use basis. The first day he was there, catching me unawares, I had to state that I had never thought of the proposition, and did not try to answer him anything on the first day.

He came back the following day and met with nine of us ranch neighbors affected, and we all felt very positive that we could not operate successfully on a co-use basis.

The CHAIRMAN. What did he mean by the full-use basis?

Mr. Cox. A co-use basis.

The CHAIRMAN. What did he mean by that?

Mr. Cox. That the Army Air Force use the air on an air-to-air basis; that they would tow targets and shoot at these targets from the air; that they would have practically—that the Army would have practically no land use, other than a few officers to see that our property, livestock, and property were not abused.

The CHAIRMAN. All right, then what happened?

Mr. Cox. We told Major Hart that we were very positive that we could not operate successfully on those terms. We are in an arid territory with no live waters, and by live waters I mean no springs nor streams of any description, in the 30-by-60-mile area. Our watering is done mostly by deep wells, or earthen tanks, built by the allottees in the area. Our water has always been, in our area, one of our hardest propositions and one of our biggest worries.

We visited for some 3 hours, and Major Hart went on, and we have never had anything definite on it since. But we had quite a number

of—Major Hart naturally asked why we could not operate on a co-use basis, and we have a number of reasons why we feel very positive that a co-use basis would not work successfully.

The CHAIRMAN. Have you heard anything more from it, since Major Hart's last visit?

Mr. Cox. Yes, sir; two different ones of us have had telephone calls, telegrams, and some letters from different departments of the Army. Some of the letters and telegrams we have in our possession; but the Army, none of the Army men, have been back to our range or our homes since that day.

Mr. LEE. Mr. Chairman, may I ask the witness a question?

The CHAIRMAN. Certainly, Mr. Lee.

Mr. LEE. Isn't that co-use that you stay on the ranch 2 days, and then they use it the rest of the week? You work Saturday and Sunday, say, or holidays, and stay off the ranch completely, and leave your wells and stock alone, for the 5 days.

Mr. Cox. That's right; yes, sir, Mr. Lee. The Army proposes to use it, they suggested, 5 days per week, and we be allowed to come in 2 days, possibly Saturday and Sunday. That was their suggestion, and we were to do up our work for the week.

Judge SETH. Is that practical, in your opinion, Mr. Cox?

Mr. Cox. As I told Major Hart, if he could teach us boys from southern New Mexico to operate on a 2-day week, instead of a 7-day week, he would be doing us a great favor; but I felt very positive that it could not be done.

Judge SETH. Why?

Mr. Cox. Our watering proposition, primarily, is our big worry. Our wells are deep, and through the summer months, or through the hot months, we generally pump day and night, 24 hours per day, 7 days per week, through the hot months. Generally, the entire summer and late spring or early fall, we do that.

Judge SETH. And how do you pump?

Mr. Cox. We usually—through those months, the wind is slow, or there is practically no wind, and we run engines, gasoline engines with pumps, pumping anywhere from 300 to 1,200 feet.

Judge SETH. And what would be the effect if anything went wrong during that 5-day period?

Mr. Cox. If anything went wrong early in the 5-day period, and we were away, it would mean the loss of many livestock. Occasionally some of the better wells carry from 300 to 500 cattle, or that equivalent in sheep, through the entire summer months.

Judge SETH. Where is this area located, Mr. Cox, this 30 by 60 miles?

Mr. Cox. This area is in southeast Otero County of this State, just north of the New Mexico-Texas State line.

Judge SETH. Is any of it in Texas?

Mr. Cox. None of it is in Texas.

Judge SETH. What is the south line of the proposed area?

Mr. Cox. The Texas-New Mexico boundary.

Judge SETH. Is the land in Texas any different than that in New Mexico?

Mr. Cox. The land immediately adjoining in Texas, part of it is similar, and part of it is, I am sure, inferior to ours.

Judge SETH. How many ranch operations would be affected by their bombing range?

Mr. Cox. Some 38 ranch allotments. By allotments, I mean allotments designated by the Federal Grazing Service.

Judge SETH. How many livestock?

Mr. Cox. Approximately 50,000 livestock would be affected.

The CHAIRMAN. Cattle or sheep?

Mr. Cox. A mixture of cattle and sheep, principally cattle.

Judge SETH. And you talked about the deep wells. What do you mean by deep wells.

Mr. Cox. The deepest well in the area, I believe, is 1,160 feet, and they range from that depth down to possibly 300; 250 to 300 feet for the shallower wells.

Judge SETH. What does it cost to drill and equip a well that deep down, in that country?

Mr. Cox. For the 1,160-foot well, I would say the cost would be, for the drilling and complete equipment and ready to water livestock, it would run in the neighborhood of \$12,000, and possibly more.

Judge SETH. Mr. Cox, if you had to move off, or these men had to move off and give up their headquarters, how far away is the nearest place they could live?

Mr. Cox. The nearest towns of any size to any of us will average 70 miles from the area.

Judge SETH. That would mean, then, a trip of 70 miles each way, every week, to look after the cattle?

Mr. Cox. That's right; yes, sir; the families moving in to El Paso, which is 70 miles from headquarters; Alamogordo, which is 70 miles from my headquarters; or Carlsbad, which is 65 miles from the nearest headquarters affected.

Judge SETH. Does this area lie immediately north of the Texas border, west of the El Paso and Southwestern Railway?

Mr. Cox. East.

Judge SETH. East of the El Paso-Southwestern Railway, and west of the Guadalupe Mountains?

Mr. Cox. Not quite to the top of the mountains, not quite to the top.

Judge SETH. What is the effect of bullets, spent and otherwise, on the cattle grazing on the range?

Mr. Cox. We can only feel that the 50-caliber bullets that, we understand, they are to use—we can only feel that those bullets are bound to kill livestock.

Judge SETH. Do you use steel tanks for storage of water down in that country?

Mr. Cox. Yes, sir, generally; or I believe all the time we use the steel rim tanks for the reserve water.

Judge SETH. What effect would those 50-caliber bullets have on those, if they were to hit them?

Mr. Cox. Well, it wouldn't absolutely ruin the tanks for future use. It would take the water out of them for the time they could be repaired.

Judge SETH. Now, have you any information with respect to the Alamogordo bombing range? Where is that located?

Mr. Cox. The Alamogordo bombing range is west of us. The nearest boundary is some 15 or 20 miles west of the nearest boundary of the proposed new aerial gunnery range.

Judge SETH. That contains about a million and a half acres, does it not?

Mr. Cox. I believe something of that size. I am sure it is something near that size; yes, sir.

Judge SETH. What is your information as to whether that is completely used, or not, at the present time?

Mr. Cox. The best information we can get from the citizens of Alamogordo and the surrounding territory, some ranchers with whom we have talked, it seems that that bombing range is not being used nearly to capacity. Now, that is only a guess, with some of us, or thoughts of the citizens that live in or near Alamogordo.

The CHAIRMAN. These letters that you received from the Army, from what officer did they come, from what headquarters?

Mr. Cox. These letters are from different officers, Army officers in Washington, D. C. Mr. Frank Bryant, who is at the table, has those letters. One is from a General Smith, and Mr. Bryant has those letters. If you would like to have some of them, he has the letters with him.

Judge SETH. Is it your opinion, Mr. Cox, that the cattle business can be operated under the conditions you stated, with any degree of success?

Mr. Cox. In our dry territory, we are very positive that it could not be done with any success.

Senator CHAVEZ. I am extremely sorry, Mr. Cox, but I was delayed unavoidably, and I did not hear the first part of your statement. Did you state to the committee the number of stock that would be affected?

Mr. Cox. Yes, sir.

Senator CHAVEZ. Will you please state it again?

Mr. Cox. The number would be some 50,000 head of livestock. That would include, I believe, livestock, cattle and sheep and goats, but no horses. There are quite a number of horses in there, but I did not use those numbers. Most of us yet haven't started eating horses.

Senator CHAVEZ. And the goats that you refer to are fleece goats and Angoras, are they not?

Mr. Cox. Generally Angora goats.

Judge SETH. Will you state for Senator Chavez's benefit the number of ranches that might be affected?

Mr. Cox. According to Federal Grazing Service figures, there are some 38 ranches affected. It is a 30- by 60-mile area, 1,800 sections.

The CHAIRMAN. I would like to see some of those letters.

Was your statement in detail, to those who called on you; and your correspondence with others, similar to the statement you have just made for the committee?

STATEMENT OF FRANK BRYANT, EL PASO, TEX.

Mr. FRANK BRYANT (El Paso, Tex.). There is a telegram we fixed up there and sent to a number of people, and had Senator Chavez send it out.

Senator CHAVEZ. Yes; I got that.

The CHAIRMAN. Without taking time to read the telegram, have you gone into detail as to the nature, and manner of conducting live-stock business on this particular range, such as you have here? Have you detailed that it is necessary to have a continuous pumping, and the nature of the work that you utilize in watering your cattle, and so forth?

Mr. COX. With Major Hart; yes, sir.

Mr. BRYANT. And also with Colonel Neyland. I think I have that letter from Colonel Neyland.

(The telegram and letter referred to are as follows:)

EL PASO, TEX., July 28, 1943.

The Honorable MARVIN JONES,

War Food Production Board, Agricultural Department,

Washington, D. C.:

My attention has been called to fact that Land Procurement Division, War Department, Dallas office, has forwarded to Washington plans for new aircraft gunnery range 30 miles north by 60 miles east from New Mexico-Texas line in Otero County, N. Mex. Large delegation of citizens from area affected met with me in El Paso today. They will all be put out of business, which affects the grazing of 40,000 head of livestock. Will interfere greatly with food production, besides creating tremendous hardship in a material way. War Department has already taken over antiaircraft range from El Paso to Alamogordo and bombing range north of Alamogordo, which covers an area totaling approximately 5,000 square miles. This very large area, if properly apportioned in its use should be sufficient for all of the three Air Corps units. The many ranchers affected want to cooperate in the war effort and feel that in producing cattle, which are so essential now, they are doing their utmost, but would protest the plan of taking over their land at this time. What is needed is better coordination and efficiency by the different divisions of the War Department in the utilization of the lands already in their possession and which would not interfere further in food-producing lands. The matter is serious from the food-production stand point. The loss of the homes of the many ranchers is bad enough but the loss of food is worse. Will appreciate your contacting proper Air Corps authorities for a reinvestigation of the whole matter before making final determination. Answer Albuquerque office.

DENNIS CHAVEZ,
United States Senator.

July 28, 1943.

DEAR MR. PETTY: Will you see that the same wire as attached hereto goes to all of the following—as well as the Honorable Marvin Jones? Many thanks:

Gen. George Marshall, Chief of Staff, War Department, Washington, D. C.;

Lt. Gen. Henry H. Arnold, Chief of Air Corps, War Department, Washington, D. C.;

Gen. Reibold, Chief of Army Engineers, War Department, Washington, D. C.;

Col. John J. O'Brien, Chief, Real Estate Branch, Corps of Engineers, Washington, D. C.

FLORENCE FOSKETT.

WAR DEPARTMENT,
OFFICE OF THE DIVISION ENGINEER,
SOUTHWESTERN DIVISION,
Dallas, Tex., August 4, 1943.

Mr. FRANK R. BRYANT,

Manager, Walbridge Ranch Co., El Paso, Tex.

DEAR SIR: Your letter of July 31, 1943, outlining your objections to the establishment of the proposed aerial gunnery range in southeastern New Mexico and the difficulty of utilizing the range jointly for grazing purposes, has been received and is appreciated.

Your position and views in this matter have been given careful consideration. The question of establishment of the range is now before higher authority and to date, this office has no information relative to a decision having been reached.

You may be assured that all factors involved will be given due consideration in reaching a decision.

Very truly yours,

R. R. NEYLAND,
*Colonel, Corps of Engineers,
Division Engineer.*

SENATOR CHAVEZ. May I say, Mr. Chairman, in response to this wire sent out of El Paso, Tex., after representations made to me by the people affected in Otero County, in El Paso, Tex., around the 14th of July a group of 25 or 30 of them came to see me. After that I addressed the original telegram to Mr. Marvin Jones of the Food Production Board, and copies of the same telegram were addressed to Gen. George Marshall, to General Arnold, to the Army engineers, and to Mr. O'Brien. The answer from General Arnold was prepared by General Smith who happened to be, at the moment, in charge of the particular affair. The text of the answer was that the matter would be gone into carefully by the different agencies of the Government affected by any final determination before it was made. Later on I received a letter verifying the telegram from General Smith, which was submitted to Mr. Goddard, I believe. Was he the gentleman who represented you folks up here at El Paso?

Mr. BRYANT. That was Mr. McGregor.

Senator CHAVEZ. Well, I don't know whether you have a copy of that letter which I sent to Mr. McGregor.

Mr. BRYANT. I think not. I am not sure whether I have that letter or not, but in that letter he referred to the fact that this had been acceptable to at least 60 percent of the operators in the territory, and we were never contacted. I never saw an engineer, and there were only 9 members out of these 38 ranchers that were affected, who were represented at that preliminary conference with Major Hart and his engineers.

The CHAIRMAN. Someone paid 60 percent of those in the territory were ready to cooperate?

Mr. BRYANT. Yes; Mr. Smith, in his letter, said 60 percent were ready to cooperate.

The CHAIRMAN. That is Smith of what department?

Senator CHAVEZ. Either General Arnold's or General Marshall's, I am not positive which one.

Mr. BRYANT. And McGregor replied to that letter, and called his attention to the fact that there were only 9 out of 38 members that were there, and none of them thought that it was a feasible idea.

(The letters referred to are as follows:)

AUGUST 7, 1943.

HON. DENNIS CHAVEZ,
Albuquerque, N. Mex.

DEAR SENATOR CHAVEZ: This is in further reply to your telegram of July 28 concerning the acquisition of land in Otero County, N. Mex., for an aircraft gunnery range.

As you were advised by telegram on July 30, your request for the reinvestigation of the matter was placed before the War Department authorities responsible for the final decision.

I have just been advised by the Army Air Forces that that branch has recently completed an investigation of an area in southern New Mexico, part of which lies in Otero County, and I understand that appraisals of this area also have been completed by the Office of the Chief of Engineers. This area is under consideration for use by the Army Air Forces as an air-to-air gunnery range for the training of personnel stationed at El Paso and Pyote, Tex., and at Clovis, N. Mex.

There is no question that if this area were taken from its present grazing use a serious reduction in livestock would result. However, even if it is ultimately approved for acquisition the Air Forces state that it has been determined through a very detailed investigation, and through a meeting attended by over sixty percent of the cattlemen concerned, that the gunnery activities can be carried on over the area without the removal of a single head of livestock. Air Forces experience on other ranches has demonstrated that the danger to cattle on a range used for air-to-air gunnery is insignificant. Consequently the present policy of the Army Air Forces requires that the cattle be permitted to remain on the land, and that the commanding officer of an installation concerned make definite arrangements with the cattlemen through coordination with the Department of Interior for an occasional cessation of firing to permit personnel to enter the area and give whatever care is necessary to the cattle.

It has been emphasized to me that the need for the immediate acquisition of this range is very great, but assurances also have been given me that the cattlemen will be put out of business and no reduction in food production will be caused.

While it is essential that residents be moved from the land, the Corps of Engineers state that a generous allowance can be made to the residents at an unusually small cost to the United States, which indicates that a dislocation of homesteads is extremely small for an area of this size.

I am indeed sorry not to be able to reply more favorably but trust the foregoing will clarify the factors involved and serve as an adequate response to your inquiry.

Sincerely yours,

EDWARD W. SMITH,
Brigadier General, General Staff Corps,
Deputy Chief, Legislative and Liaison Division.

AUGUST 25, 1943.

Hon. DENNIS CHAVEZ,
Albuquerque, N. Mex.

DEAR SENATOR CHAVEZ: We are in receipt of a copy of the letter you mailed to the El Paso Chamber of Commerce, addressed to yourself, from Brig. Gen. Edward W. Smith, Deputy Chief, Legislative and Liaison Division, dated August 7, 1943, relative to your telegram, sent from here, protesting the acquisition of additional cattle range land, by the Army, in Otero County.

We want to take exception and call your attention to some very grave misstatements made in that letter. The General states, in paragraph 4 of his letter, "that the Army Air Forces have determined through a very detailed investigation and through a meeting attended by over 60 percent of the cattlemen concerned, that the gunnery activities can be carried on over the area without the removal of a single head of livestock."

Now, first, the only meeting ever called by any branch of the Army known to us, relative to the acquisition of our ranches, was a group of nine ranches from the affected area, who met with Colonel Hart from the Army Procurement, Dallas office, Division at A. B. Cox's ranch the first part of July who by no means could be called 60 percent of the cattlemen affected. Now, second, at this meeting Colonel Hart somewhat vaguely explained the Army's desires and plans, and I can assure you definitely that every ranchman there protested the plan of co-use of their ranches with the Army Forces, whereby their livestock be permitted to roam the ranges unattended while the Army Forces are firing live ammunition over their heads or possibly at them. This plan has been tried in other parts of Otero County and has proved a complete failure from the livestock standpoint. I have reference to Bill McNew's experiences at Oro Grande, who gave the plan a thorough trial for about one year, at the end of which time he was forced to remove his remaining cattle from the area, being short a large percent of his original number; with no recourse against the Army for damages sustained.

Quite a large number of us are planning to attend the Senate Land Committee hearings, at Albuquerque, on September 7, at which time we hope you will be in Albuquerque and will be agreeable to giving us your help and advice in presenting our case before the committee.

Again thanking you for your assistance, we are,

Yours very truly,

OTERO COUNTY RANCHES COMMITTEE,
By MALCOLM MCGREGOR.

The CHAIRMAN. What do you know about that? Are there those in the district who think it is a feasible idea?

Mr. COX. No, sir; there isn't a man that has agreed that the operation can be successfully carried on.

Mr. BRYANT. Those gunnery planes shoot a large number of bullets every minute. You know when they shoot at those different targets, those bullets have got to come down.

The CHAIRMAN. Most of them, anyway.

Mr. BRYANT. Well, at least one of our men put that up to them, asking if an occasional bullet wouldn't come down, wouldn't those bullets come down, and the colonel said occasionally they might come down and cause trouble. Our fellow said, "What about the other 365, wouldn't they come down also?", and that was it. But we have never felt that the reports of any conferences that we have had have been correctly reported. They have assumed that, because we wanted to be polite and not be rough about it, we were agreeing with them.

Senator CHAVEZ. You wanted to cooperate as far as possible?

Mr. BRYANT. We do want to cooperate; but we feel that they have about 5,000 square miles of already appropriated land in and around El Paso, and we feel, or have felt all along, that they can use that 5,000 square miles, or part of it, probably, part of the time, and co-ordinate this effort so as not to take other really productive land out of use.

The CHAIRMAN. Captain, do you know anything about this?

Captain SNYDER. No, sir. My end of this, Mr. Chairman, is acquisition after all of this planning is completed.

The CHAIRMAN. Would you mind stating your name and rank for the record?

Captain SNYDER. Floyd T. Snyder, captain, Corps of Engineers, head, division real estate suboffice, Albuquerque, N. Mex.

The CHAIRMAN. You know nothing of this movement?

Captain SNYDER. I heard it discussed, yes, sir; but I know nothing of the planning. I understand—I talked to Washington today about it, and the Chief of the Air Corps Office said it's now being considered, and is now under study. However, it has been cut down in size.

Senator CHAVEZ. That was the advice that I received from General Arnold's office, in response to the original telegram, to the effect that the matter would be considered further before final determination was made.

Captain SNYDER. That is the information I received today, sir.

The CHAIRMAN. Is there anything more?

Judge SETH. Mr. Cox, will you refer to this memorandum of your's and give some additional reasons as to why this 2-day a week business wouldn't work?

Mr. COX. In this dry area in New Mexico we have practically all practiced the feeding of supplements to our livestock through the spring and winter and early summer months. If we are going to feed these supplements, it is very necessary that the feeding be done every day, and not 2 days out of 7.

The CHAIRMAN. How do you feed supplementally?

Mr. COX. Cottonseed cake. We go up there and use a pick-up truck and spread it over the range to the livestock wherever we find them,

to keep the livestock as much as possible from walking long distances to get the feed. That is the general practice.

We also mentioned the 24-hour-per-day pumping, which lasts, generally, from May through July. That is generally. Occasionally, quite often, we have to pump when there is no wind, a lack of wind, through the other months. We occasionally have to pump for a week at a time, continuously.

We have another problem of the calving of young heifers, and the lambing of the young ewes. We have to be with them, or lose quite a percentage. I feel sure that we will have a loss of 20 to 25 percent in the calving or the lambing of the young heifers and ewes unless we are with them.

On these windmill or mill-repair jobs, they generally take from 7 to 10 days to make the repairs. We feel very positive that we could not start a well or repair job on a 640-foot well, which is the one that I have on my own place, and that is an average depth for the wells in the area—I at one time worked 22 days continuously, 22 days from daylight until dark, before I had my well back into pumping order. On the basis that the Army has asked us to cooperate, it would be impossible for us to keep the livestock alive while we were working on the well 2 days, and having to lay off the other 5 days, and then come back and resume our well work on the following week, and on a 22-day job, as I had once, and I am sure the other ranchers, a number of them have had as much as that, and occasionally more, on a well job. It would be just a long-drawn-out proposition, and before we got water for those livestock they'd probably all die on us.

Then there are pipe lines and water lines of different types. There are, I believe, a hundred miles of pipe lines within the area that need thawing out or repair occasionally. Those pipe-line repair jobs often take 2 or 2½ weeks at a time. When your tanks freeze, which is not often, but when they freeze over or they are frozen over, unless we are there to break the ice and open up the water, we have to do that in order to water the livestock. Again, oftentimes, they stay frozen for a week or 10 days.

Senator CHAVEZ. If the pipe lines were damaged by the activities that are supposed to take place if the Army takes charge of the area, and if the tanks were damaged, would you be able to repair them at all? Would you be able to get material?

Mr. Cox. We generally are mechanics enough that we can fix them. We usually keep a little extra piping on hand, and most of them, fortunately, have a little extra pipe line and extra pipe on hand since before the material shortage came up. As far as we are from the towns or the railroads—it is 70 miles to our nearest shipping points, or my individual shipping points are 70 miles away—we almost always have plenty of pipe or necessary repair equipment on hand.

The CHAIRMAN. How much of the time, ordinarily, do you spend on the range or in the field?

Mr. Cox. Generally we are on the range, or most of us stay on the job every day, 7 days a week, and we carry that out through almost the entire year, especially with the manpower shortage that we have nowadays. I'm now operating a ranch, I have 1,400 livestock, which are mostly cattle, practically all cattle, on my place and I am operating the place without one hired man. I am operating it by myself. I

was very fortunate when I was ready to come in here to Albuquerque, that I had a good shower on Saturday before I left home, and on Monday. It gave me a little water in the mud holes and water holes around, so that I felt safe to come to Albuquerque and stay through this meeting. Had I not had that, I would have felt very guilty leaving for 3 days and running in here for the meeting and getting on back.

Senator CHAVEZ. I want to ask another question with reference to the geography and the location of the area affected by the proposal. You are right on the Texas line, are you not?

Mr. Cox. Yes, sir.

Senator CHAVEZ. I mean, the area borders on Texas?

Mr. Cox. It borders on the Texas-New Mexico line.

Senator CHAVEZ. What is there south of the artificial boundary line on the Texas side?

Mr. Cox. There is similar territory to that that we are using.

Senator CHAVEZ. How far is that from Biggs Field, the center that is supposed to be used in this area?

Mr. Cox. It would be some closer to Biggs Field than our New Mexico area.

Senator CHAVEZ. There's plenty of land within the Texas side south of the New Mexico border available for Army uses at Biggs Field, is there not?

Mr. Cox. That is our belief; yes, sir.

Senator CHAVEZ. Well, you know, I think you know, the country.

Mr. Cox. The country is there; yes.

Senator CHAVEZ. The country is typical, almost identical, to the New Mexican side of the border, isn't it?

Mr. Cox. Very similar.

Judge SETH. Have you heard anything indicating an effort on the part of El Paso to wish this over on to New Mexico?

Mr. Cox. That has been one of the thorns in our side, so to speak, has been that our neighboring Congressman has endeavored to extend Biggs Field into New Mexico and into El Paso County.

Judge SETH. If you moved to Alamogordo or Carlsbad, are there housing facilities available in those towns?

Mr. Cox. No; there is no housing facilities in any of the towns or cities that we would have to move into.

Judge SETH. They are all crowded by Army operations, are they not?

Mr. Cox. That is right; yes, sir.

Judge SETH. Now, how about the schools, are there schools out in that area?

Mr. Cox. We have two schools in the area, two county schools accommodating 25 children.

Judge SETH. They, of course, would have to be closed?

Mr. Cox. They would have to be closed.

Judge SETH. Do you know about the school facilities in Carlsbad and Alamogordo, whether they are crowded?

Mr. Cox. I couldn't answer that question.

Judge SETH. I believe that is all.

The CHAIRMAN. Are there any questions from anyone?

Senator CHAVEZ. I have no more questions.

The CHAIRMAN. All right; thank you, Mr. Cox.

Judge SETH. May we offer, for the record, a letter from Mr. Harold Hurd, an attorney at law at Roswell, objecting to this on behalf of the Flying H ranch in that area?

The CHAIRMAN. You may.

(The letter referred to, and accompanying correspondence, are as follows:)

ROS WELL, N. MEX. August 25, 1941.

HON. CARL A. HATCH,
Clovis, N. Mex.

DEAR SENATOR HATCH: I am advised through the press that there will be a meeting in Albuquerque of some House committee on September 6, 7, and 8 with reference to a further withdrawal of Government lands west of the Sacramento Mountains in Otero County.

For many years I have represented the Hendricks Co.'s livestock interest operating the Flying H ranch.

This company purchased what is known as the Little America ranch lying west of the mountains covering approximately 100 sections, or about 64,000 acres. One of this 32,000 acres is under State lease and some patented land, the ranch being situated in township 23, ranges 15 and 16 east, and township 24 south of range 16 east. This was purchased in March 1941.

The ranch is stocked with 750 mother cows and 200 registered heifers and 200 yearling steers and heifers and will support an estimate of approximately 5,000 pounds of beef per section per year, and this, as I figure it, is a total production of around 9,000,000 pounds per annum.

You will also understand and know, from Alamogordo to Carrizozo there is already a bombing range, and I cannot understand why they want to add to this range from Alamogordo south to the Texas line taking in a piece of country approximately 170 miles, that is it is about 54 miles from Alamogordo to Carrizozo and it is about 115 miles through the area they expect to take south from Alamogordo, and about 30 miles wide.

I cannot see anything reasonable in taking this amount of country for a bombing range, based upon what they are doing in this country, taking a section here and there for a target, and if there is any other purpose for it I cannot see it.

The Hendricks Co. and others in this section want to do what they can to win the war, but I do not believe an effort to win the war would warrant the destruction of property and the facts in this case.

It further occurs to me, in closing, that the taking of this property without compensation is a clear violation of the constitutional rights and is destructive of legitimate efforts to win the war in producing beef for the armed and civilian population.

Yours very truly,

HAROLD HURD.

[Radiogram]

WASHINGTON, D. C. July 30.

C. N. BASSETT,
El Paso Tex.:

Re tel dated July 30 protesting the proposed acquisition by the War Department of land for gunnery range 30 miles north by 60 miles east from New Mexico State line. The subject acquisition, if approved, will be authorized on a course basis and it will not be necessary to remove any livestock from this area.

ROBINS.

Acting Chief of Engineers.

WAR DEPARTMENT,
OFFICE OF THE DIVISION ENGINEER,
SOUTHWESTERN DIVISION,
Dallas, Tex., September 25, 1942.

HON. CLINTON P. ANDERSON,
House of Representatives, Washington, D. C.

MY DEAR MR. ANDERSON: Before attempting to make a reply to your letter of September 11, 1942, I caused a special study to be made of the property in which you expressed so much interest.

I am advised that no directive to acquire this land has been issued by the War Department, although it has been, I understand, approved for use as an aerial gunnery range by the commanding general, Army Air Forces.

According to Grazing Service records, the carrying capacity of the range involved is 14,000 head of cattle, but the records indicate that at present there are only approximately 12,000 head of cattle on this range.

Approximately 81 percent of the subject area is public domain, about 7 percent is owned in fee, and the balance is State land.

The investigation made by this office indicates that the suggested area across the border in Texas is not feasible as this area includes numerous gas lines, is crossed by a main air line and a main highway.

This proposed method of acquisition appears to this office to be just and fair since it will be on the basis of some type of lease or suspension of leases under which agreement the Government would pay the operators a fair return on the value of their property. The exact method of payment has not as yet been determined, I am advised, and probably will not be determined until such time as a decision is reached that this land is necessary for the purposes suggested.

For your information, the area is tentatively known as the Guadalupe Mountain aerial gunnery range.

If there is any further information that this office can provide be assured that it will do so at any time on your request.

Very truly yours,

S. L. SCOTT,
*Colonel, Corps of Engineers,
Division Engineer.*

WAR DEPARTMENT,
HEADQUARTERS OF THE ARMY AIR FORCES,
Washington, July 31, 1943.

Mr. C. N. BASSETT,
Ranchers Committee, El Paso, Tex.

DEAR SIR: Your telegram of July 26, 1943, to the Chief of Staff, relative to the plans of the Army Air Forces for acquiring an air-to-air gunnery range in southern New Mexico has been referred to this headquarters.

The War Department is well aware of the necessity of permitting grazing activities to proceed with minimum interruption. As a consequence, whenever a military necessity exists for the acquisition of land, every effort is exerted to select land of the lowest value and, if possible, to arrange the use of the land in such a way as to permit continuation of grazing.

Consideration is being given to the acquisition of an air-to-air gunnery range in New Mexico and these considerations are being given proper weight. It is planned by this headquarters, in the event that the acquisition of such a range is ultimately approved, to require the military use of the land to be coordinated with the grazing activities. It is not intended that any cattle need be removed from the land and, consequently, there will be no need to reduce the number of cattle grazing in the area.

It is noted that reference is made to the Alamogordo range, and it is suggested in your telegram that this range is sufficiently large to provide adequate facilities for all Army airfields in that general vicinity. Unfortunately, it is not possible to disclose figures showing the number of planes using the Alamogordo range. Likewise, it is not possible to describe the manner in which ranges are used in order to produce well-trained aircraft personnel. You are assured, however, that the Alamogordo range and all other large Army Air Forces ranges are used to a maximum degree. The training program has reached a point whereby this additional range in the New Mexico area is a definite military necessity and there is no possible alternative.

It is the desire of this headquarters to impress upon you the fact that if this range is acquired, all possible cooperation will be extended to the ranchers so that schedules for firing and for supervising the grazing of the cattle will be worked out.

Very truly yours,

J. C. SHIVELY,
*Colonel, Air Corps, Buildings and Grounds Section Office, Assistant Chief
Air Staff, Material, Maintenance and Distribution.*

AUGUST 2, 1933

Col. JOHN J. O'BRIEN,
Chief, Engineers' Corps,
Real Estate Branch, Washington, D. C.

DEAR SIR: Supplementing our telegram of July 20, in reference to the proposed aerial gunnery range which would affect our ranch, we want to state our views, for your consideration.

Our contention, with reference to the Government's proposed plan of operation is that it will not work. The livestock will not be content. With gunnery practice going on, the fences will either wash out or be broken by stampeding cattle, and in the case of sheep, the coyotes will quickly eat us up without constant attention.

One has only to look at the condition of the ranches which already have been taken over within the past year and a half, and which were, prior to this taking over, well kept up and efficient units, in order to see with his own eyes what has taken place. We know of one rancher near Oro Grande, N. Mex., who thought he could operate on this basis and left his cattle on the ranch, looking after them part time. After a year of such operation, he was able to gather only approximately one-half of his cattle, and realizing that it was certain extinction of his entire herd, he rented another pasture and took all the living animals he could find, on to this, leaving his own ranch to the mercy of the Army. He talked to Army officials here about some compensation for his losses and was told that if he could prove that these animals were lost as a result of Army practice, he could make his claim and it would be acted on in due course.

We know of another rancher, only a part of whose ranch is within a reservation. On this part of the ranch he had a windmill, with wooden tower, a gasoline pump house, engine and pump jack, for use at times when the wind doesn't blow. On his visiting this place, on one of the days on which he was allowed to return, he found the pump house and windmill destroyed by fire and his cattle out of water. On complaining to authorities he, also, was told that it would be necessary for him to submit evidence as to the manner in which this was done, and that his claim would then be presented for approval.

We feel that the pressing of this matter, along the lines that have been presented to us by your representatives, will, slowly but surely, put us out of business, at great loss and with no recourse.

This is a matter not to be lightly considered, even though theoretically it may look feasible from your side.

If part-time operation is all that is necessary, we suggest that on the big reservations already set aside, and which are not being fully used, you could use part time for bombing and the other part time for gun practice, either by dividing them up on alternate days or letting one unit use the range early in the day and the other unit later in the day.

If it is considered unsafe for the 30 or 35 ranchers who will lose their homes, it is a foregone conclusion that animals will be disturbed.

Again, we thank you for your consideration, and hope you will put our side of the facts in the case to the proper authorities before final decision is reached.

Yours very truly,

Treasurer and Manager, Walbridge Ranch Co.

Judge SETH. Mr. Bryant, do you want to testify?

The CHAIRMAN. I am somewhat concerned about the statement that 60 percent of the people in the area were in favor of it. I hope that has been thoroughly checked by you, Mr. Cox, and by you others.

Mr. Cox. I believe, if Mr. Bryant will look through his file a little better, I feel very positive Mr. McGregor, another one of our men interested in the area, has been keeping the file that Mr. Bryant has. It was impossible for Mr. McGregor to be at this meeting, and I believe that Mr. Bryant has overlooked the letter which was addressed to Senator Chavez, a copy of which Senator Chavez referred to.

The CHAIRMAN. About how many people live in the area that would be covered by this range?

Mr. Cox. About 240 people.

The CHAIRMAN. Of the 240, how many have you actually seen and talked to whom you can say positively are against this?

Mr. Cox. I have talked to every family head or ranch head. Some are single men, of course, but addressing them as the heads of the ranches, I have talked to every man or woman who is at the head of the allotments.

Senator CHAVEZ. Isn't it a fact that the largest family within the area, the most-known family name is Lewis?

Mr. Cox. That is right.

Senator CHAVEZ. Have you ever heard of a single Lewis that was in favor of it?

Mr. Cox. Absolutely not in favor of it.

Senator CHAVEZ. And they are pretty thick around the area, are they not?

Mr. Cox. They have been thick in that area for some 40 or 45 years. There are some in the audience that are 40 years and older that were born within the area. Here is one of the gentlemen.

Judge SETH. State your name to the committee, please.

STATEMENT OF DINMAN LEWIS, OTERO COUNTY, N. MEX.

Mr. DINMAN LEWIS, Otero County, N. Mex. Yes, sir; I was raised right in that country, and I have been there all my life.

Judge SETH. How old are you?

Mr. LEWIS. I am 39 years old. I am the youngest one of the family that moved to that country, and there is quite a family. Each one has been married off and raised a big family of his own.

The CHAIRMAN. What do you know about the general feeling in the territory with reference to this?

Mr. LEWIS. We don't think that they really need it, and we think they need what we produce worse than they need it.

The CHAIRMAN. That isn't the question. The question is, Is it going to interrupt your industry so that the industry may be impaired or destroyed? The question whether they need it is not for your judgment, but for somebody else's. The question of whether they would do irreparable injury to your industry—that is a serious question in which you are really interested now.

Mr. LEWIS. I don't really know where we go to if we should have to move. I don't know whether we could find a place to rent, and I think we would have to stay there to take care of the cattle.

The CHAIRMAN. That is conceded to be impossible if this practice went into effect. Your family and your folks would have to move out of the territory. If you don't have to move the cattle, that would be one thing. They intimate that it would not be necessary to remove the livestock, but that the human beings would have to move out. Now, you have heard Mr. Cox state the conditions, that it is necessary to pump every day and that 2 or 3 days' failure to pump might seriously impair the herd, and you might lose your livestock. Is that true?

Mr. LEWIS. Yes, sir; and another thing is the way gasoline and rubber is, and the wear and tear of our cars; that is quite an objection.

The CHAIRMAN. What I am interested in is this: Somewhere in the correspondence here, or somewhere here this evening, I've heard or

read a statement wherein it was said that 60 percent of all those in the district favored it. Now, if that were true it would be a serious proposition, but if it isn't, that is another thing. Do you know of anyone over there who favors it?

Mr. LEWIS. What do you mean by "favors it"? Favoring us leaving there?

The CHAIRMAN. No; permitting the gunnery practice to go on under a co-use basis.

Mr. LEWIS. Sixty percent of them? I believe Mr. Cox is right, 60 percent of them feels like we should stay there.

Mr. BRYANT. You think you can't operate with the bullets going or overhead?

Mr. LEWIS. That is right.

Senator CHAVEZ. Have you discussed this matter with your neighbors?

Mr. LEWIS. Yes, sir.

Senator CHAVEZ. Not only your neighbors, but your brothers; have you discussed this matter with them?

Mr. LEWIS. Yes, sir.

Senator CHAVEZ. Have you found a single one that was in favor of it?

Mr. LEWIS. No, sir.

The CHAIRMAN. The thought that I have just expressed to Senator Chavez was that on the showing made here it might be of some value if the committee joined in a telegram on the matter. I wanted the showing made so completely and so positively and so unanimously, if that be the truth, that the committee could, with good grace, send a wire right from the ground here, setting out our views as to whether or not the matter is feasible. That was a thought, and no conclusion at all. But we thought perhaps it might be of some value, because by the time this transcript is out and the hearings are considered by the full committee, it is going to be too late. If anything is going to be done it should be done now. The real truth of the matter is that if another event like today—the surrender of Italy—takes place, there won't be any danger; you would not be troubled with any bombing range. [Applause.]

Senator CHAVEZ. Now, Mr. Lewis, let's get down to cases. Would you say that you knew every stockman within the area?

Mr. LEWIS. Yes, sir.

Senator CHAVEZ. How many would you say are affected in the area?

Mr. LEWIS. Every one of us.

Senator CHAVEZ. How many would that be in numbers?

Mr. LEWIS. Well, that is somewhere around 35 families.

Senator CHAVEZ. All right; would you tell this committee that you are acquainted with the average one of those 35 families?

Mr. LEWIS. I am.

Senator CHAVEZ. Would you tell this committee that you have discussed this matter with the average one of those families?

Mr. LEWIS. Yes, sir.

Senator CHAVEZ. Would you tell this committee that a single one of those families is in favor of this matter?

Mr. LEWIS. Not a one.

Senator CHAVEZ. Who else is here from that area?

The CHAIRMAN. Is there anyone else here from that area?

(The following members of the audience stood up, in response to the chairman's request: J. F. Akers, Cienega, N. Mex.; Wilson Bennett, Alamogordo, N. Mex.; Bryrie Duggan, Box 486, El Paso, Tex.; Clement Hendricks, Flying H, N. Mex.; Elmer Hepler, Carlsbad, N. Mex.; Sam Hughes, Carlsbad, N. Mex.; Alton Jones, Alamogordo, N. Mex.; V. M. Lee, Alamogordo, N. Mex.; O. M. Lee, Jr., Alamogordo, N. Mex.; Martin Jones, Cienega, N. Mex.; Martin Lewis, Salt Flat, Tex.; D. F. Lewis, Salt Flat, Tex.; Jack McArron, Cienega, N. Mex.; J. McGregor, El Paso, Tex.; R. H. Thomas, Carlsbad, N. Mex.; J. B. Runyan, Pinon, N. Mex.; John Prather, Alamogordo, N. Mex.; W. T. Wimberley, Alamogordo, N. Mex.; Thos. W. Jones, address not given; and Richard Lewis, address not given.

Senator CHAVEZ. I am going to ask a general question of this group of men. Are you all acquainted with the neighbors in the area in Otero County?

RESPONSE FROM THE FLOOR. Yes.

Senator CHAVEZ. How long has the average one of you lived there?

RESPONSE FROM THE FLOOR. Twenty-five years.

Senator CHAVEZ. And you all have families.

RESPONSE FROM THE FLOOR. Yes.

Senator CHAVEZ. Would you say you have talked with your neighbors about the subject matter?

RESPONSE FROM THE FLOOR. Yes, sir.

Senator CHAVEZ. Now, tell the chairman and the committee here now whether or not your neighbors that you have discussed the question with, are in favor of the proposal.

RESPONSE FROM THE FLOOR. They are not.

The CHAIRMAN. The jury is discharged.

Mr. J. S. McCALL, Carlsbad, N. Mex. Mr. Cox, if you were forced to move out of that area, what disposition would you make of your livestock?

Mr. Cox. I haven't quite come to that solution. I hoped that I would not have to come to that.

Mr. McCALL. Could you rent a pasture?

Mr. Cox. Not at the present date, I could not, because there hasn't been rain anywhere within the adjoining territory within a hundred miles. I don't believe there is a ranch within a hundred-mile radius of the area that any of us could move any appreciable number of livestock to.

Mr. McCALL. If you were forced to sell, it would be the equivalent for a forced sale, would it not?

Mr. Cox. Yes, sir.

The CHAIRMAN. With no market?

Mr. Cox. With no market; right.

Judge SETH. Aren't a good many of the people in that country indebted?

Mr. Cox. I believe not at this time; no, sir.

Judge SETH. But some of them are, are they not?

Mr. Cox. Some are, and some are not.

Judge SETH. Do you believe you could finance with any land agency on that 2-day-a-week proposition?

Mr. Cox. Very positive we could not. One of the things that our loan companies and the banks are very strict about is our operations, our watering, and our general improvements, and our ability to stay on the ranch most of the time.

Judge SETH. And to look after it.

Senator CHAVEZ. I might be able to give you some information on that indebtedness. You can take this for what it is worth. The meeting of the poorest people in Otero County, in El Paso, I noticed there were several bankers from that city deeply interested in it.

Judge SETH. Mr. Cox, is there anything further you want to add?

Mr. Cox. I just wondered if any more of the gentlemen from our area, if the committee would give us a little more time, would any of you gentlemen want to say something of importance that I have left out?

The CHAIRMAN. If there is anyone that takes issue with any of your statements, he may make a statement. Otherwise, we'll consider that they all agreed with your statements.

If it is understood, I don't know any other way to understand it.

Senator CHAVEZ. May I make this suggestion, that every one of the gentlemen who stood up from the area affected, should give their names to the clerk over here for the record, as appearing to substantiate the testimony of Mr. Cox.

The CHAIRMAN. Yes; that is quite important.

Very well, now, again with the thought that delay means a lot to you here, Senator Chavez will formulate a telegram this evening, explaining the position of the committee on this, and as chairman of the committee I will sign that telegram transmit it to the authorities in Washington, with the hope that it may be considered and you might be relieved of further anxiety. [Applause.]

Judge SETH. There is a gentleman here from Harding County, whom I would like to dispose of.

The CHAIRMAN. Very well.

STATEMENT OF M. W. BURKES, MILLS, N. MEX.

Judge SETH. Will you state your name, address, and occupation?

Mr. BURKES. M. W. Burkes. I live in Harding County, and I am stock farming there.

Judge SETH. Are you familiar with what they call the Mills resettlement area under the Soil Conservation Service?

Mr. BURKES. Yes, sir.

Judge SETH. Do you live in the neighborhood of it?

Mr. BURKES. Yes, sir.

Judge SETH. Do you have a permit on it?

Mr. BURKES. Yes, sir.

Judge SETH. Have you owned land outside?

Mr. BURKES. No, sir; not during the time that I have owned land inside.

Judge SETH. You mean you had a permit inside?

Mr. BURKES. That is right.

Judge SETH. What is the condition of that resettlement area as compared with the surrounding land, Mr. Burkes?

Mr. BURKES. In what way do you have in mind?

Judge SETH. Is it better or worse for grazing purposes?

Mr. BURKES. I would say that since the land has been taken over by the Government there has been an improvement, but not to a large extent.

Judge SETH. What is the principal value of it; what is it good for?

Mr. BURKES. Grazing.

Judge SETH. What is the attitude of yourself and other people over there as to what disposition should be made of it, Mr. Burkes?

Mr. BURKES. Some time ago there was a petition circulated among the permittees of this area. There was approximately 30 within the area, and out of the 30 there were 27 signed a petition to sell the land.

Judge SETH. In other words, you believe it should be sold after appraisal of what it is worth?

Mr. BURKES. I believe it should be sold or returned to—if an exchange could be worked out with the State in some manner. My reason for feeling this way is, we have a maximum limit there of 250 animal units. It is the limit, and if we get above that we have to give up our Government land accordingly, and we there in the project feel that we are American citizens. We are buying bonds, and we feel that we should be treated as the folks adjoining.

Judge SETH. And you think you should be able to run as many cattle per section as the people outside?

Mr. BURKES. Well, yes; I do. I feel that way. I feel that the area—however, I don't have too much complaint in that way. If I am right on this, we are running around 12 head now over the project, and I think it would carry 15 to 17 head.

Judge SETH. How much do the people outside run on an average, do you know?

Mr. BURKES. Well, it would be a guess on my part, but I would say around 18 to 20 head.

Judge SETH. That is per section?

Mr. BURKES. Per section; yes, sir.

Judge SETH. That is generally a good grazing country up there, isn't it?

Mr. BURKES. We think so.

Judge SETH. And how many employees does that 70,000 acres have; do you know, Mr. Burkes?

Mr. BURKES. Well, at the present time—well, that is hard to say; but before the war started now, they had two employees that worked there at the resettlement project office all the time. Then their district conservationist spent a part of his time there. But since that time, since the war started, they haven't put in so much time there.

The CHAIRMAN. Are they still there?

Mr. BURKES. No; they are not. They have discharged them.

Judge SETH. How many are there now?

Mr. BURKES. Well, this is operated from Mosquero, and the district conservationist, I believe that is his title, he comes up, I believe, 2 or 3 days a week.

Judge SETH. Is there anything further you want to state with reference to the matter, Mr. Burkes?

The CHAIRMAN. How is the outside range as compared with the range inside? Are you better or worse?

Mr. BURKES. Well, I'd say, Senator, they are not as good, but we are not carrying the stuff. In 1936 to 1937, these carrying capacities were set just after the drought of 1934, and I believe I am correct in this, that those carrying capacities have been raised on an average of around 10 to 12 percent since that time.

The CHAIRMAN. Well, the outside range may not be as good as yours because it's carrying too much. How about that?

Mr. BURKES. Well, of course, that would have something to do with it, sure.

The CHAIRMAN. You don't think you're carrying all that you could carry?

Mr. BURKES. I think we can get the same results that are being gotten off of the range and carry 15 to 20 percent more cattle.

The CHAIRMAN. All right.

Senator CHAVEZ. That is a good cattle country, as a general rule, is it not?

Mr. BURKES. It is.

Senator CHAVEZ. As a matter of fact, it is considered by the agricultural authorities as possibly the best cattle country in the entire State?

Mr. BURKES. Yes sir; northern New Mexico; I think that is right.

Senator CHAVEZ. Commencing from your area, down to the Texas line, down to the Alvariso, is that correct?

Mr. BURKES. Yes, I think that's right.

Judge SETH. We will call Mr. Roy S. Case.

STATEMENT OF ROY S. CASE, MILLS, N. MEX.

Judge SETH. State your name and residence.

Mr. CASE. Roy S. Case, Mills, N. Mex.

Judge SETH. What is your business, Mr. Case?

Mr. CASE. Mostly raising cattle, farming a little.

Judge SETH. Where is your ranch?

Mr. CASE. It is 4 miles west of Mills.

Judge SETH. Have you a permit on the Mills Resettlement place?

Mr. CASE. Yes, sir.

Judge SETH. And you have land outside?

Mr. CASE. I do not now.

Judge SETH. What do you know about the comparison between grazing on the area and outside?

Mr. CASE. Well, I know we are not allowed to run quite as many cattle as they do on the outside.

Judge SETH. And is there a maximum limit in that area?

Mr. CASE. There is.

Judge SETH. What is it?

Mr. CASE. 250.

Judge SETH. What happens if you exceed it?

Mr. CASE. Well, you are not eligible to hold your Government permit.

Judge SETH. Now that 250 is the limit on ownership, rather than grazing on the resettlement area, isn't it?

Mr. CASE. Yes, sir.

Judge SETH. In other words, if you own more than 250 head of cattle, you can't come in?

Mr. CASE. They tell me that I don't need any of it, if I have 250 head of cattle.

Judge SETH. And no matter what you may graze inside the area, if you own more than 250, you can't get a permit?

Mr. CASE. No, sir.

Judge SETH. How does the range inside compare with that outside, Mr. Case?

Mr. CASE. Well, it all looks pretty good right now.

Judge SETH. Both inside and out?

Mr. CASE. Yes, sir. Naturally, we have a lot more grass inside, for the simple reason we don't run the stuff on it that they do on the outside.

Judge SETH. What do you run on the inside on an average?

Mr. CASE. My unit runs around 12 head per section.

Judge SETH. What are they running on the outside?

Mr. CASE. Some of them tell me around from 18 to 20, I know.

Judge SETH. Are they producing cattle in good shape?

Mr. CASE. It just looks to me as good as mine.

Judge SETH. What is your opinion, and the opinion of the people generally, as to the disposition that should be made of this 70,000 acres, Mr. Case?

Mr. CASE. Well, it seems like they—if I understand your question right, they want to get out from under those restrictions. They would do most anything to get loose from those restrictions.

Judge SETH. Do they want the property disposed of by the Government?

Mr. CASE. I think so, the way they talk to me.

Judge SETH. They want to get it back and run it on their own. Is that it?

Mr. CASE. Sure.

Judge SETH. That is all.

Senator CHAVEZ. Have you discussed the matter of a repurchase, by private enterprise or by the State government, with the county officials, with reference to the property being placed back on the tax rolls?

Mr. CASE. Yes; I have.

Senator CHAVEZ. What is the consensus of opinion of the officials with reference to that?

Mr. CASE. They think it should be.

Senator CHAVEZ. Placed back on the tax rolls?

Mr. CASE. Placed back on the tax rolls.

STATEMENT OF T. J. HEIMANN, MOSQUERO, N. MEX.

Judge SETH. Will you please state your name?

Mr. HEIMANN. T. J. Heimann, Mosquero, N. Mex., stockman, farmer, and duly elected representative of the people of Harding and Union Counties.

Judge SETH. Mr. Heimann, have you discussed that Mills resettlement project with the county officers of your county?

Mr. HEIMANN. I have.

Judge SETH. Have you a statement here signed by the three county commissioners and the assessor, with respect to that property?

Mr. HEIMANN. Yes, sir.

Judge SETH. May we offer it into the record?

The CHAIRMAN. What is it?

Judge SETH. They favor that it be put back on the tax rolls, in some way or another. The county desperately is in need of money. The taxes would produce in the neighborhood of \$1,800 to \$2,000 a year for the tax rolls, and the county, as Senator Chavez knows, is on the verge all the time.

The CHAIRMAN. Very well, it may be inserted in the record.

(The document is as follows:)

RESPECTFULLY SUBMITTED TO THE SENATE SUBCOMMITTEE ON PUBLIC LANDS AND SURVEYS, CONDUCTING HEARINGS AT ALBUQUERQUE, N. MEX., SEPTEMBER 7, 8, AND 9, 1943, UNDER AUTHORITY OF SENATE RESOLUTION 241, SEVENTY-SIXTH CONGRESS

In presenting our case in the matter of the Mills land-utilization project let us review a letter from Dr. H. H. Bennett, head of the Soil Conservation Service, to Governor Dempsey and give our answer to several of his statements. (Copy attached.)

He states the area in question was taken up by an influx of homesteaders, which is correct. Homesteaders are composed of a large percent of people who are by nature somewhat of a roaming disposition and usually in any country after a certain period a good portion of them leave for possibly greener pasture, especially if the going gets tough. In this case it was time for this to happen and the adverse conditions gave them the excuse. We think by close study it will be borne out that the same thing happened all over our county and other like counties, whether the Government bought them out or not.

Dr. Bennett makes a comparison of total taxes for our county for 1935 with 1941 and says that with the 66,841 acres bought and taken out that the taxes levied are slightly higher in 1941 than 1935 and that the financial situation was not impaired by the purchase of this land. Before the Government purchased this land there was a slight margin of valuation over what had to be to maintain the county. The financial situation is impaired to this extent, that we now have no margin over what is actually necessary to maintain a county. In fact we are very slightly under the line. It is an uneasy position when there is nothing to take care of the time when conditions are not so good. The present expenses to run the county are now lower than any county perhaps in the State and the mill levy is just as high as it can legally be made and the county is having considerable trouble to meet the rising cost of operation, as a higher levy can't be made. There has been a few thousand other acres purchased by the Government, also, for game uses and this county can't stand any more such purchases and exist as a county.

Dr. Bennett mentions that \$5,700 of delinquent taxes were paid into the county treasury. We can't see where this statement gives the Government credit for anything as the tax delinquent situation existed all over the county and it is almost entirely cleared and the county has its money. The tax delinquent condition was no worse in this area than in any other of the county. Dr. Bennett states that the county will have received \$3,500 from this land for the years 1939 to 1942, inclusive. Figuring the same period this 66,841 acres would have paid the county \$15,786.96, instead of \$3,500, leaving a net gain to the county, \$12,286.96. The average by the year would be \$875 from the Government. The taxes each year from this land in private ownership would have been \$3,599.76 per year, averagely speaking, on land alone. The personal property would have been considerable more, also.

Our observation is that nature has done far more to revegitate and restore this area than any other factor. In other regions of this same country that the Government did not enter at all has been restored just as outstandingly as this one. The people adjust themselves to the changes that have to be made and we think, by the example of surrounding areas that if the Government had not purchased this land that it would be restored approximately as good as it is. The whole

county has recovered and prospered in the same proportion as in this area without the Government purchasing any land.

One other point is the cost of maintaining this project. We would have no way of getting the figures but by seeing the activity and people involved. We venture to say that the cost of maintenance is considerably more than the revenue. It is a heavy drain on the taxpayers of this country that could be eliminated and some recovery made of the original investment.

The people who live and own their own land in this area are very much handicapped as they can't make any expansion of their operations and are in a somewhat uncertain position. Twenty-seven of thirty-one have signed a request to have this land sold to private owners and the same proportion of the balance of the people in the county feel the same way.

In event this land is returned to private ownership, we recommend that the present permittees be given prior rights in the proposed repurchase of their present land permits.

FRANK HEIMANN,
Chairman, County Commissioner.
TELL BRADLEY,
County Commissioner.
ABRAM CASADOS,
County Commissioner.
L. R. CROSTHWAIT,
Assessor.

Senator CHAVEZ. Mr. Heimann, before we leave that, isn't it a fact that there are some bonds outstanding, school bonds outstanding, against this area at the time of the purchase?

Mr. HEIMANN. That is my understanding, that they have never been paid off.

I might also add that they have a wonderful school system, a gymnasium built in the town of Mills, or what there is left of the town of Mills, out of those bonds.

Just a moment, I have here, also, a statement from the Harding County Lions Club. This represents most of the business people of Harding County, scattered throughout the entire county, and, with your permission, I would like to read a few lines, and have it inserted as a matter of record.

ROY, N. MEX., September 2, 1943.

PUBLIC LANDS COMMITTEE OF THE UNITED STATES SENATE IN SPECIAL ASSEMBLY
AT ALBUQUERQUE, SEPTEMBER 7-8-9:

The Harding County Lions Club petitions the Public Lands Committee of the United States Senate to introduce a bill to amend title III of the Bankhead-Jones Farm Tenant Act, providing for sale of lands in the Mills land-use project to private owners.

HARDING COUNTY LIONS CLUB,
RAYMOND L. WESTFALL,
Secretary-Treasurer.

STATEMENT OF ALBERT K. MITCHELL, HARDING COUNTY, N. MEX.

Judge SETH. Will you please state your name?

Mr. MITCHELL. Albert K. Mitchell.

Judge SETH. Where do you live?

Mr. MITCHELL. Harding County.

Judge SETH. Have you been in the cattle business very long?

Mr. MITCHELL. All my life.

Judge SETH. Are you a past president of the livestock association?

Mr. MITCHELL. I am.

Judge SETH. Are you familiar with that Mills resettlement project?

Mr. MITCHELL. Yes.

Judge SETH. Mr. Mitchell, do you know anything about a tract now embraced in the project, known as the McKinley tract?

Mr. MITCHELL. Not the McKinley, the McDaniels tract.

Judge SETH. Tell what you know of the acquisition of that, by the Soil Conservation Service.

Mr. MITCHELL. A number of years ago, at the time they were purchasing the tract now known as the Mills resettlement tract—this, I learned, that this area known as the McDaniels holdings, at that time owned by John McDaniels, was being offered to them for sale. It happens to lie in the corner of our holdings, just outside of our fence, and I could have blocked up our holdings by acquiring title to that area. I am interested, as a taxpayer in our county, in seeing all of this land stay on the tax rolls, and I could have used this land to advantage.

I learned at that time that the land, it was contemplated to purchase by the Resettlement Administration, at a certain price. I wasn't anxious to own it, but I figured I could use it, and probably keep it on the tax rolls. I raised their bid 50 cents an acre, and I was greatly surprised to learn 10 days later that my bid had been rejected because the Resettlement Administration had, in turn, raised my bid 50 cents an acre.

Judge SETH. Did you regard it as submarginal land?

Mr. MITCHELL. No, I regarded it as full grazing land.

Judge SETH. You would have put it to the ordinary grazing use and kept it on the tax rolls?

Mr. MITCHELL. Absolutely.

Judge SETH. Mr. Mitchell, what kind of grazing is there in the country around that resettlement project, generally?

Mr. MITCHELL. Well, that is one of the most productive grazing areas in New Mexico, I think.

Judge SETH. Do you have any idea of the carrying capacity of the outside land, when properly handled?

Mr. MITCHELL. In our pastures adjoining it, we can average around 25 or 30 acres to the head per year.

Judge SETH. That would be 20 or 22 to the section?

Mr. MITCHELL. Twenty or more to the section, depending on the season.

Judge SETH. Would it be to the advantage of that county to get that land back into private ownership and onto the tax rolls?

Mr. MITCHELL. Definitely.

Judge SETH. The county is pretty hard up, isn't it?

Mr. MITCHELL. The county, one of our smallest counties, with a low valuation, is having a great deal of difficulty meeting our county budget, and the taking off of some 66,000 acres almost ruined our county.

Judge SETH. That is all.

The CHAIRMAN. All right.

This land is all under the administration of the Soil Conservation Service?

Judge SETH. Yes, sir.

STATEMENT OF ED HERINGA, CLAYTON, N. MEX.

Judge SETH. Please state your name.

Mr. HERINGA. My name is Ed Heringa. I live at Clayton, N. Mex., and I am a native citizen of New Mexico, and I have lived here all my life.

Senator CHAVEZ. Were you born around Gladstone?

Mr. HERINGA. Maxwell.

Judge SETH. Are you president of the Union County Livestock Association?

Mr. HERINGA. Yes, sir.

Judge SETH. Are you familiar with that resettlement project in Union County, over on the Texas line, south of Clayton?

Mr. HERINGA. Just in that I have been through there a good many times and have known the country, you might say, all my life.

Judge SETH. Have you a statement prepared by some of the board of county commissioners with respect to the disposition of that Union County resettlement area?

Mr. HERINGA. Yes, sir.

Judge SMITH. Is this the statement that I hand to you?

Mr. HERINGA. Yes, sir; that is the original copy.

Judge SETH. What do they favor as to the disposition of that?

Mr. HERINGA. Well, most of the people in the county want this land returned to the tax rolls.

Judge SETH. And they are not asking that it be donated to anyone, are they?

Mr. HERINGA. No, sir; they are asking that they be able to repurchase it from the Resettlement Administration.

Judge SETH. At appraisal prices?

Mr. HERINGA. Yes, sir.

Judge SETH. And they are willing to pay the appraised value?

Mr. HERINGA. Yes, sir.

Judge SETH. In your opinion, should they be gotten back onto the tax rolls?

Mr. HERINGA. Definitely.

Judge SETH. That is the substance of the statement, isn't it?

Mr. HERINGA. Yes.

Judge SETH. I would like to offer that for the record.

The CHAIRMAN. Very well, insert it.

(The document is as follows:)

At a public meeting held in the Union County courthouse on August 28, 1943, it was decided to appoint a committee of three members for the purpose of presenting data to the public lands hearing to be held in Albuquerque on September 7, 8, and 9. A committee composed of Ed Heringa, president of the Union County Land & Livestock Association; G. J. Dallas, a farmer and rancher of Clayton; and Ted Harris, a farmer and rancher of Seneca, N. Mex., was appointed by Mr. Dick Wright, of the Union City Board of Commissioners. This committee has formed the following report and respectfully submits it to the Senate public lands hearing.

Following the severe drought period of several years, the land in question was set aside as submarginal land and was bought by the Bureau of Agricultural Economics and since then has been turned over to the Soil Conservation Service for administration. Up to the present date, 56,464 acres have been bought by the Government and taken off the tax rolls. Several thousand acres more have been or still are under option, but we understand that these lands will not be

bought. The drought period and the economic depression combined to cause many of the land owners to move out because of their inability to make a living on the small tracts of land in their possession. According to the records in the treasurer's office of Union County, there were 538 landowners on the tax rolls in 1937 and the 1942 roll shows a total of 318, a loss of 220 families in the area in question. We agree that there were too many small landholders at this time and do not recommend that this condition be brought back. However, had it not been for the extreme drought period during the years 1933-36, many of these people could have stayed on the lands and the communities would not have disappeared entirely.

The average rainfall for Union County since 1891 is 15.99 and during the drought period of 4 years the average rainfall was 8.19, or about one-half of the average. The Dust Bowl as it was called at this time and later years was created by wind erosion on these abandoned farms.

Since its acquisition by the Bureau of Agricultural Economics and its administration by the Soil Conservation Service, these lands have been reclaimed to a large extent. Old abandoned improvements have been removed, fences taken up and moved to the boundaries of the various community pastures. Many old fields have been reseeded and the wind erosion hazard has been almost eliminated. Much credit is due the Soil Conservation Service for its work and we wish to commend them for their efforts. At present there are 67 permittees on these Government lands; that is, 67 people have grazing permits, and we understand these permits are all held by persons owning or holding under lease adjoining lands with their improvements. The grazing allowance at present is very low but the Soil Conservation Service district engineer assures us that as the land is further reclaimed the revenue to the county will be increased. A large percentage of the permittees are very well pleased with the administration of the district, yet many of them want a chance to buy a part of the Bureau of Agricultural Economics lands adjacent to them.

The revenue to Union County from the Soil Conservation Service for 1942 was \$484.59. At the present rate of valuation of lands in our county the 56,464 acres of land if they were on the tax roll would add \$1,518.59 to our revenue. The increased personal-property taxes would add considerably more to the above figure, if these lands were back in private ownership. Aside from the tax-revenue increase to our county, the elimination of the Federal expense on the land in question would save thousands of dollars of public money each year. If the land can be returned to private ownership and sold in units large enough for an individual to make a good living on by stock farming, possibly 30 to 40 families can be supported on the land involved.

We strongly condemn any further purchase of private lands by the Federal Government and respectfully urge that the lands taken over by the Government be returned to private ownership as speedily as possible.

We wish to submit a five-point program in regard to the repurchase of this particular area, and further request that these suggestions be admitted to the record of this hearing:

1. Lands involved to be appraised by the local representatives of the Soil Conservation Service and also to be apportioned or allocated to persons now having permits to graze on the area, if they desire to buy any of the land.

Justification.—We feel that these men know the lands better than any committee or other group that could be appointed. They also know the permittees and their problems, and as they would have no personal interest could administer the sales more fairly. We also respectfully request that an effort be made to sell the land without an auction sale to the highest bidder.

2. Permittees to be given preference right to buy lands adjacent to their holdings.

Justification.—The men holding permits are mostly citizens of the better class who have stayed with the county through bad times as well as good, and we feel they should have a first chance to buy lands they are interested in.

3. No one owner to be allowed to buy more than enough of the Bureau of Agricultural Economics lands to complete a four-section unit for himself.

Justification.—It is feared that unless this restriction is put on that some large operator will buy all or half of the acreage involved and cause some of the present permittees to lose their chance for a self-sustaining home place.

4. A restriction be put in the deed at the time of sale that no operator may plow up or farm more than 20 acres of any section of land bought from the Bureau of Agricultural Economics.

Justification.—A large part of this land is reclaimed farm land and to allow it to be farmed again would only increase the wind erosion hazard in the future when we have dry years. As it is proposed that this be strictly a stock-farming unit 20 acres per section or 80 acres on the four-section unit, would provide sufficient feed crop.

5. Land to be sold on a basis of 25 percent paid down at time of sale and a long-term loan be made on the balance.

We the committee, from Union County, N. Mex., strongly urge that our pleas be heard and respectfully submit the above paper as being the will of the majority of the citizens of Union County.

Judge SETH. Is there any other statement you want to make?

Mr. HERINGA. No; I don't think so. Most of the people think that the Soil Conservation Service has done a good job of administering the land. There is a good deal of it was oil fields, badly wind eroded, and they have brought it back to fairly good grassland.

Judge SETH. But they think the time is over for the Government to continue to hold it?

Mr. HERINGA. Yes, sir; the men that have the permits on the places want the land returned to private ownership.

Senator CHAVEZ. I am talking about the Union County project, along the Texas line, with reference to the town of Amistad.

Mr. HERINGA. North of Amistad?

Senator CHAVEZ. Between Amistad and Clayton.

Mr. HERINGA. Yes, sir; and east of it, against the line.

The CHAIRMAN. When was that acquired; that land?

Mr. HERINGA. In 1937, I believe, since that time.

Senator CHAVEZ. During the Dust Bowl period?

Mr. HERINGA. Immediately following the Dust Bowl period; yes, sir. That is what caused it to be so much wind eroded there, that Dust Bowl drought period from 1923 to 1937.

Senator CHAVEZ. It is by nature grazing land, instead of farming land?

Mr. HERINGA. It should have been; yes, sir. But a lot was plowed up prior to the time, 1934.

Senator CHAVEZ. And then the wind came and blew the topsoil out?

Mr. HERINGA. When the people left and the wind came it all blew away.

The CHAIRMAN. Is it going back to sod now?

Mr. HERINGA. No, sir; returned to weeds. The grass will come later. We figure it will take approximately 20 years for it to get back to sod.

The CHAIRMAN. All right.

STATEMENT OF JOHN DAVENPORT, ESPANOLA, N. MEX.

Judge SETH. Will you please state your name and address, and your business?

Mr. DAVENPORT. John Davenport, Rio Arriba County, N. Mex. I live at Espanola, and I'm in the livestock business.

Judge SETH. Are you a partner in Frank Bond & Son, Ltd.?

Mr. DAVENPORT. Yes, sir.

Judge SETH. How long have you been in the cattle business?

Mr. DAVENPORT. Sheep and cattle for 30 years.

Judge SETH. You live in Rio Arriba County?

Mr. DAVENPORT. Yes, sir.

Judge SETH. Have you worked up a statement of the land in Rio Arriba County, as to whether it is Government owned, State owned, and what is subject to taxation?

Mr. DAVENPORT. Yes, sir.

Judge SETH. Is that substantially correct, to your knowledge?

Mr. DAVENPORT. That's right.

Judge SETH. Will you please state the total area of the county?

Mr. DAVENPORT. The total area is 3,769,856.89 acres.

Judge SETH. How much is federally controlled?

Mr. DAVENPORT. Federally owned land, the total is 2,620,367.04 acres.

Judge SETH. Now, of the total you have just given, state how it is divided among the various governmental agencies.

Mr. DAVENPORT. The Forest Service, 1,190,709.29 acres. The Grazing Service, 552,113.02 acres. Farm Security Administration, 230,813.83 acres. Other Federal lands, 4,498.42 acres. Indian Service, 642,232.49 acres.

Judge SETH. How much State land is there in the county?

Mr. DAVENPORT. 83,329.45 acres.

Judge SETH. How much does that leave in private ownership?

Mr. DAVENPORT. 1,066,160.40 acres.

Judge SETH. What percent of the total private ownership is subject to taxation?

Mr. DAVENPORT. Twenty-eight and one-fourth percent, practically.

Judge SETH. May we offer this for the record?

The CHAIRMAN. Yes.

(The tabulation is as follows:)

Rio Arriba County, N. Mex.

Divided as follows:

	<i>Acres</i>
Forest Service-----	1, 190,709.29
Grazing Service-----	552, 113.02
Farm Security Administration-----	230, 813.83
Other Federal lands-----	4, 498.42
Indian Service-----	642, 232.49
<hr/>	
Total Federal-owned lands (all of which are nontaxable)---	2, 620, 367.04
State-owned lands-----	83, 329.45
Private holdings-----	1, 066, 160.40
<hr/>	
Total number of acres in county-----	3, 769, 856.89

0.2828 percent privately owned taxable property in Rio Arriba County.

0.7172 percent Federal- and State-owned lands in Rio Arriba County which are nontaxable.

The CHAIRMAN. What industries do you have up there?

Mr. DAVENPORT. Livestock, principally. There is some farming, and some timber operations.

Judge SETH. The farming is confined, to a great extent, to the valleys around the Rio Grande and its tributaries?

Mr. DAVENPORT. It is.

The CHAIRMAN. What do you raise, what crops?

Mr. DAVENPORT. Small acreages, mostly chile, truck, some beans.

Senator CHAVEZ. It's generally subsistence?

Mr. DAVENPORT. Generally subsistence farms.

Judge SETH. Would you say those irrigated tracts are cultivated, along the streams; would they average more than 10 acres to the family?

Mr. DAVENPORT. No; lots of them run down to 1, 2, and 3 acres.

Senator CHAVEZ. I think we can get some information from Mr. Adams, with reference to the average holdings. Is Mr. Adams here? Mr. Adams, we want to get a statement of the average family holding, for the irrigated land in upper Rio Grande.

Mr. ADAMS. A little less than 7 acres per family unit.

Senator CHAVEZ. Thank you.

Judge SETH. You have been in the sheep and cattle business for how long?

Mr. DAVENPORT. Thirty years.

Judge SETH. Are you familiar with the Espiritu Santo grant?

Mr. DAVENPORT. Very familiar with it.

Judge SETH. Have you had grazing lands, or do you still have grazing lands, close to it?

Mr. DAVENPORT. We adjoin it, on the south and on the east.

Judge SETH. Did you formerly adjoin it on the west?

Mr. DAVENPORT. Yes, sir.

Judge SETH. How does the Espiritu Santo compare, generally, with the surrounding country that you have had, as to the carrying capacity?

Mr. DAVENPORT. There could be very little difference.

Judge SETH. And what is the carrying capacity on the outside, and on the Espiritu Santo, in your opinion?

Mr. DAVENPORT. On the south of the Espiritu Santo, we have had the range for some 15 years on which we figured 15 head per section.

The CHAIRMAN. Fifteen head of cattle?

Mr. DAVENPORT. Fifteen head of cattle per year, per section, and on the east we have the San Ysidro, which we leased for a good many years, summer range. On that we figure 30 head per section, for the summer seasons.

Judge SETH. Is there any substantial difference between those grants and the Espiritu Santo?

Mr. DAVENPORT. The San Diego grant is similar to the eastern edge of the Espiritu Santo grant, which is much higher than the rest of that grant.

Judge SETH. But your land to the south——

Mr. DAVENPORT. It compares with it. We also control the land west of the Puerco.

Judge SETH. West of the Espiritu Santo, in that strip around Cabezon and the Ignacio Chavez, did you formerly have interests in there?

Mr. DAVENPORT. We controlled that for a good many years, and ran 15,000 to 18,000 sheep in there.

Judge SETH. How did you control it?

Mr. DAVENPORT. Through leases, with the railroad lands and the State lands.

Judge SETH. That is, Frank Bond & Son have the railroad land leased?

Mr. DAVENPORT. Yes, sir.

Judge SETH. Did you give it up?

Mr. DAVENPORT. Yes, sir.

Judge SETH. How did you happen to give it up, Mr. Davenport?

Mr. DAVENPORT. Well, the Soil Conservation Service informed us that if we didn't get out of that area they would force us out.

Judge SETH. How were they going to force you out?

Mr. DAVENPORT. They were going to establish grazing district No. 9, the sister or brother to No. 7.

Judge SETH. You were already familiar with No. 7; were you?

Mr. DAVENPORT. Yes.

Judge SETH. Who told you that?

Mr. DAVENPORT. Mr. Calkins, who was head of the Service at that time. Vance Rogers was there.

Judge SETH. What did you do, surrender your lands?

Mr. DAVENPORT. When they told us that we thought we were out of America; so we let them have it.

Judge SETH. You were in there longer than any other interest in there?

Mr. DAVENPORT. We have this interest, that the proposed regulations of district 8 were to the effect that no one person in there could own more than 500 head of sheep. We had the sheep rented out to shareholders. We sold the sheep to these sharemen; it will be 5 years this fall, on a 5-year contract. They have made this contract, and this year they will own those sheep, in bands of 500 head. The only interest that we have had was in seeing those men that lived there used that range all the while and will continue to use it.

Judge SETH. Were these men that used the range under agreement with Frank Bond & Son, that you sold the sheep to, the men that were handling your sheep before you moved out?

Mr. DAVENPORT. They were partido shareholders.

Judge SETH. You turned the sheep over to them?

Senator CHAVEZ. I am sure Senator McCarran, who was an outstanding lawyer long before he went to make the laws of the country, would be interested in the judicial explanation of a partido contract, as we know it in New Mexico.

Mr. DAVENPORT. Our partido contracts are like this: We rent a man a thousand head of sheep of a certain age for a period of 1 year and as long thereafter as both parties are willing. He pays us rent on that thousand head of sheep, 200 lambs every year, guaranteeing an average of 55 pounds or better. At the expiration of that contract, whether by the wish of the partido contractor or our wish, he returns to us the identical number of sheep of the same age. He has the rest of the lambs and the wool.

The CHAIRMAN. He gets all the wool?

Mr. DAVENPORT. He gets all the wool and the rest of the lambs.

The CHAIRMAN. How many out of a thousand?

Mr. DAVENPORT. Two hundred.

The CHAIRMAN. Fifty-five pounds, live weight?

Mr. DAVENPORT. Fifty-five pounds or better.

Senator CHAVEZ. What is the average lambing in the area, such as you have described, under the partido contract?

Mr. DAVENPORT. Well, our men average 80 to 85 percent.

Senator CHAVEZ. So he lambs 850 head of sheep, or 800, and gives you 200 as rental?

Mr. DAVENPORT. Yes, sir.

Senator CHAVEZ. And he keeps 600?

Mr. DAVENPORT. Yes, sir.

Senator CHAVEZ. Plus the wool?

Mr. DAVENPORT. Yes, sir; and when he needs cake he gets it on that day, and he doesn't have to ask any Government agency for it.

The CHAIRMAN. In other words, you see that he has what he needs.

Mr. DAVENPORT. We see that he is protected for range and what supplemental feed he needs, and anything he needs to take care of that bunch of sheep.

The CHAIRMAN. He carries an account with you for those things?

Mr. DAVENPORT. Yes; on which we charge him 8 percent interest.

The CHAIRMAN. How about his herders' pay; do they have herders or do they herd themselves?

Mr. DAVENPORT. They do the herding themselves. They pay herders on the first of the month, the renter renders me a statement of what he owes his herders, and I make a check out direct to the herder for his account.

The CHAIRMAN. Then after that he gives you the 200, and he settles with you, from what he has left, for his running account for 6 months or a year. Is that right?

Mr. DAVENPORT. That is right.

The CHAIRMAN. At the end of the year you have a settlement?

Mr. DAVENPORT. That's right.

The CHAIRMAN. At the end of the period you take back a thousand sheep of the same age and same grade that you gave him in the first instance?

Mr. DAVENPORT. Yes, sir.

The CHAIRMAN. And then he has the balance?

Mr. DAVENPORT. That's right.

Judge SETH. That has been a long-time custom of handling sheep in New Mexico, hasn't it?

Mr. DAVENPORT. That's right.

The CHAIRMAN. Of course he has to bear the expense of his fees and license charges for the range that he uses, and the like?

Mr. DAVENPORT. The only thing we do is pay the taxes.

The CHAIRMAN. You pay the taxes?

Mr. DAVENPORT. Yes, sir.

The CHAIRMAN. On the sheep, you pay the taxes on the whole?

Mr. DAVENPORT. The title is in our name, and we pay the taxes on whatever he has.

Senator CHAVEZ. Do you charge the taxes to him afterward?

Mr. DAVENPORT. No, sir.

Judge SETH. You handle his lambs and the wool that he sells?

Mr. DAVENPORT. Yes, sir.

The CHAIRMAN. Is that a part of your contract, that you shall?

Mr. DAVENPORT. No; if somebody else pays more money, he can sell to them. That's his privilege.

Senator CHAVEZ. He generally gets the market price for his wool and his lambs?

Mr. DAVENPORT. That's right.

The CHAIRMAN. All right. Thank you, Mr. Davenport.

Judge SETH. Is there anything further, Mr. Davenport?

Mr. DAVENPORT. Well, we have kind of gotten away from the comparison of carrying capacity. I am also a member of the grazing board of San Ysidro district No. 1, and I have been, since it started. The Soil Conservation Service made the statement here, today or yesterday, that the Grazing Service lands had been handled very well. I hope you remember that statement. Now, on this Espiritu

Santo grant, for the last—ever since the grazing district was established, we have handled the lands west of the Rio Puerco, and the Soil Conservation Service has handled the lands on the Espiritu Santo, and there is just the Rio Puerco between ours, which has an established carrying capacity for those lands of 10 head per section. It is taken up, along the Puerco, with free use permittees; but why is it, if our lands in the Grazing Service have been handled successfully, and we have handled 10 head per section, why can't they carry more than 5 head per section on the Espiritu Santo grant? That is something to think about.

The CHAIRMAN. Were your lands in that grant?

Mr. DAVENPORT. No; the Grazing Service lands are west of the grant, with the Rio Puerco between them.

The CHAIRMAN. The nature of the territory is about the same.

Mr. DAVENPORT. Exactly the same. It has been grazed all the same these years.

The CHAIRMAN. You run your stock in the grazing district?

Mr. DAVENPORT. Not Frank Bond & Son stock; the stock of the people that live up and down the Rio Puerco. I am speaking now as a member of the grazing board of the San Ysidro grazing district. The range is identical; the river separates them. We have been able to care of 10 head per section on the Grazing Service lands—the grazing board has. The Soil Conservation Service has been able to take care of 5 head per section, and I just don't know the answer.

Judge SETH. Are you familiar with the Ignacio Chavez grant?

Mr. DAVENPORT. Yes, sir.

Judge SETH. Is that about like the other?

Mr. DAVENPORT. Parts of it are better. It is a higher country, and the upper mesas are better, though not as well watered. But it is practically the same type of range.

Judge SETH. And should perhaps have a little more carrying capacity?

Mr. DAVENPORT. It has more carrying capacity on the high mesa country, as proven by Forest Service statements and Mr. Leech's statement that it carries 15 or 18 head per section.

The CHAIRMAN. All right.

STATEMENT OF CLAUDE E. WOOD, STATE LAND OFFICE, ALBUQUERQUE, N. MEX.

Mr. WOOD. My name is Claude E. Wood, and I am head of the grazing department of the State land office.

Before I make any statement, Mr. Chairman, I would like to add to your files by presenting your committee with the report of the operations of the State land office for the last 30 years. These volumes need not be made a part of the record, but merely placed in the files.

The CHAIRMAN. Very well.

(The volumes referred to were placed on file with the investigator of the committee.)

Mr. WOOD. As you all probably know, back before statehood, under the Ferguson Act, and then by our enabling act, the State of New Mexico was granted some 12,700,000 acres of lands from the public domain, which were held in trust by the State of New Mexico and are administered by the duly elected commissioner of public lands.

The CHAIRMAN. Now, right there, how were those grants made? What are the terms of the grants? They were sections 2 and 32, and 16 and 36; is that right?

Mr. WOOD. Sections 2, 16, 32, and 36 were granted to the State for the benefit of the common schools. Then there were various grants to the educational, penal, reformatory institutions of the State in various amounts, bringing the total up to the 12,700,000 acres. These lands were not in place, but were selected by the State land commissioner, the Governor and attorney general, which composed the State land board.

The CHAIRMAN. Were those lands selected by the board that you have mentioned at the behest or request of any individual, or merely as a selection for the State?

Mr. WOOD. Those selections were made at the request of the ranchers of the State.

The CHAIRMAN. And what were the terms on which the lands were sold to the individuals?

Mr. WOOD. Well, there has been very little of the lands sold, but those sales were made, contracts set up of various forms of contracts which were prescribed by law. One contract provided an amortization plan which paid the land out in 30 years. Another plan was to sell the land with a payment of 5 percent down, the first year's interest in advance, and the interest payable in advance each year thereafter for a period of 30 years, at which time the balance of principal would be due. Then we had what was called—

Judge SETH. Wait a minute, Mr. Wood, the enabling act set certain minimum prices, did it not?

Mr. WOOD. Yes; the enabling act set certain minimum prices for the lease and sale of those lands. All lands east of the range line, between townships 18 and 19 east, could not be sold for less than \$3 per acre. Any lands west of that line could not be sold for less than 50 cents per acre. The minimum least rental rate was fixed at 3 cents per acre for grazing lands, and, I believe, 10 cents an acre for agricultural lands. Under the enabling act, we in the land office considered that rents that are administered by the State are safeguarded in about every possible way possible that they can be safeguarded. The act is a model act, and is very plain. Most 10- or 12-year-old boys can understand the language of that act.

A few words in regard to the administration of the land by the land office in recent years. I want to say that during the last 3 years there has been only one contest of State lands in the State of New Mexico—and we still have under grazing leases some eleven and one-half million acres of State lands—and this contest was settled between the parties contesting before the commissioner had an opportunity to hand down a decision after the hearing. The records of the State land office, both as to pay rolls and any other expenses in connection with the land office, the recording of any of the operations of the land office, all leases, assignment contracts of every nature, copies of the United States public surveys, are available for the public at all times.

Policies of the land office are usually formed by the land commissioner, working with those that use the lands. We have at the present time an unofficial advisory committee, that is, one that is not prescribed by law, made up by some 25 or 30 ranchers, scattered

all over the State, shēepmen, cattlemen, big ranchers, small ranchers, Anglos, Spanish-American, and we call those men to advise with us when we have some legislation to consider, or some new rules that we want to put into effect, and see how they or the industry is going to be affected. I think, during, or just prior to, most sessions of our legislature, that committee, or a part of it at least, from one time to another, has met with us and we have discussed legislation that would be of benefit to the livestock industry and the people of the State as a whole.

One more thing, I mentioned contests awhile ago, and the land commissioner, when the land commissioner decides a contest and the contesting parties don't think they have justice, they have a right to appeal to the courts. They can appeal to the district court in the district in which the land is involved, and they can appeal from that to the supreme court of the State.

Senator CHAVEZ. Statutory authority?

Mr. WOOD. Yes, sir.

Judge SEITH. I might state there, on that appeal, it is a trial de novo, not like the N. L. R. B.; the court hears the case de novo on appeal.

Mr. WOOD. I would like to say further, that in years past, going back into some of the cases that have been tried before the land commissioner, and appealed, sometimes those cases are reversed, too. The commissioner is not considered always right.

In connection with the income and the cost of operation of the State land office, I'd like to say at this time that we have approximately \$20,000,000, so to speak, in the bank, in the permanent funds which are invested only in securities authorized by the State legislature, and then only after approval of the State board of finance. The Treasury cannot invest in any security of any kind without the approval of the State board of finance.

I would like to point out further, there has been so much discussion here about the different agencies, and the administration of lands, where there is so much overlapping of authority, or lack of authority in one agency or the other, so many of them don't know which one is responsible for the administration of the lands; I would like to point to one case, which the State eventually became involved in, leading up to something here that the grazing boys, Mr. Painter, around here will probably rib me a little about. Up here in Colfax County, I believe, there is the Carey Act lands, administered, a good many years ago, by the Carey Land Board, which ceased to function. For many years the land lay there, and was used or misused, I might say, by everyone that could get into the argument as to who had preference rights, and the State derived no revenue. It was not on the tax rolls. By act of Congress, I believe, in 1939 or 1940, I am not sure of the date, that land was granted to the State of New Mexico. We went on the ground, field men of the State land office and myself, and stayed 4 days. We talked to each of the ranchers involved, decided what they should have to lease, issued the leases, and we haven't heard from them since. They were apparently well satisfied with the way we adjudicated the rights, and I think that is true in the handling of all the other leased lands of the State land office.

Senator CHAVEZ. You get a check once a year?

Mr. Wood. Once a year, and we only have to send them a notice. We never have to write them the second time. I just had a telephone girl from the office, and she said they would be 2 days entering one morning's checks. We keep a record on the checks when they come in. That is the way they pay off, when the 1st of September comes.

We have heard some discussion of the soil-conservation lands, particularly the Mills area, tonight. There have been, from time to time, over the last 2 or 3 years, people that come to us from the State land office, and want to know why the State did not acquire some land, and handle it in the same manner that we handle the Carey Act land. We have told them that the land office was agreeable, but that it would take an act of Congress, probably. We took the matter up with Senator Hatch, Senator Chavez, and Mr. Anderson, and discussed the matter with them. We took the matter up with the Soil Conservation Service, and the reply we got would put so many restrictions on the State that we might just as well not own the land. So we concluded, before anything could be done, the State acquiring any such tract as that, it would be necessary for Congress to take such action. That is why I bring it up. If it isn't gotten back into the hands of private individuals and put on the tax rolls, that tract of land should be turned over to the State to administer so we could derive some use of the school sections within it. One question that might be brought up, in connection with the State handling such a tract, is that while they stated it had been badly overgrazed, and they rode it, and so forth, the field men of our Department and myself report, in traveling over the State and making an examination of State lands, find that, as a general rule, the State lands are cared for a little better than most any class of lands that you have.

The reason for that is, when a stockman gets hold of a State lease he knows he has got it. We are not going to take it away from him when the 1st of October comes. He has some security and some stability, and the right set-up when he holds State lands. Many of the ranchers of the State, I believe, would just as soon have State land as privately owned land, or, at least, they have expressed that opinion to us.

The question of State exchanges was brought up this morning or this afternoon, and especially in regard to the areas around those certain grants, the Rio Puerto area, which were mentioned. The State would be happy to make exchanges that would help relieve the situation, and we would be happy to make exchanges that would correct land patterns that need correcting. But, when you go to making those exchanges, let's remember that the lands located outside of those grants, in the Taylor grazing district, have already been allotted, and if the State selected those lands, under our present policy, we would have to lease them to the man holding the Taylor grazing allotment. That is the policy of the land office. If we didn't do that, we would be working in the opposite direction from the Federal Government in administering the public domain, and there would be no end to the confusion and argument between the two departments.

I'd like to say, in closing, that we find the Taylor Grazing Service very cooperative with our office. I have traveled with their men all over the State, and I think they are doing a splendid job. We find the Forest Service to be very cooperative with us.

As to the Indian Service, I can't say as much. We have tried to make one or two exchanges in that area, and the only exchange we got through, so far, is an exchange that they requested, and finally met with our approval, after some adjustment. I can't see, for the life of me, why, when the State wishes to make exchanges that would block up and consolidate our lands, when the administration of Federal lands—our lands are located in the Taylor grazing district, both our base lands and selected lands; I can't see why the Indian Service would have any say as to whether or not our selection was allowed. That case has come up, and we appealed that to the Secretary of the Interior, and will probably have a hearing and have the thing settled at some time. But that question has been in my mind, and that is something I can't understand. Why should one agency go over into the land administered by another agency and block the selection or exchange that would correct our land patterns and remedy the general situation as a whole?

The CHAIRMAN. Mr. Wood, Congressman Anderson wishes to ask a question.

Congressman ANDERSON. With reference to the Mills area, you speak about the regulations that the Soil Conservation laid down. The mills area, however, was very badly eroded, and badly going to pieces, was it not?

Mr. WOOD. That is right. That was my understanding.

Congressman ANDERSON. Did you see it at all in 1934 or 1935?

Mr. WOOD. Not in 1934 or 1935. The first time I was in the area was in 1937.

Congressman ANDERSON. Has it not improved between 1937 and the present date?

Mr. WOOD. I went over it a month ago and it has improved considerably.

Congressman ANDERSON. Then there are benefits in the restrictions?

Mr. WOOD. Oh, yes; benefits in the restrictions. I am of the opinion, though I think the Soil Conservation Service has done a good job in that respect, in bringing the land back, but I think their job has been completed, and is well on the road to recovery; and if it was turned over to the State to administer, that you would see the land continue to improve.

Congressman ANDERSON. What I am trying to find out is, if it were to be brought back to private ownership or State ownership, would you, or would you not, be in favor, of continuing the policy which would restore the land to productive use?

Mr. WOOD. Yes, sir. Our policy is this, we don't, when we know about it, and when it is called to our attention, approve of anyone misusing our lands, and will take the matter up with our lessee immediately, when it is called to our attention. Of course, we only have about 35 employees administering some 12½ million acres of land. We could administer a good deal more with that 35 employees.

Congressman ANDERSON. I am quite sure that would be the policy, and would be, in case you took it back; but I do believe that land was in very bad shape. I saw some of it in 1934, and the change between 1934 and 1943 is remarkable.

Mr. WOOD. I noticed a great change since 1937, myself.

Mr. LEE. Mr. Chairman, can I ask him a question? Did not the State land office receive a letter from the Office of Indian Affairs

protesting to all leases, to estopment, in the northern part of the State?

Mr. WOOD. We received a letter from Dr. Aberle, I believe, of the United Pueblo, stating they wished to protest the renewal of all grazing leases in certain townships and areas.

The CHAIRMAN. Do you mean leases of the State lands?

Mr. WOOD. Leases of the State lands. I replied to her that I would not consider any protest of the leases of those ranches in that area as being very friendly. I haven't heard anything further from it.

Senator CHAVEZ. What degree of confidence do you have for the results on your appeal, on the case that you have appealed to the Secretary of the Interior?

Mr. WOOD. We feel that the Secretary will give us a fair trial.

Senator CHAVEZ. I want to congratulate you.

Mr. WOOD. I would like to say, further, that I have confidence in our officials in Washington. I believe that they will not knowingly do the wrong thing, when the things are brought to their attention in the proper manner. I think sometimes, some of us fall down on the job, a little bit, and we fail to get up and express ourselves, and expend a little bit of time and energy in bringing some of these things to the attention of such hearings as this, which will bring it to their attention.

Senator CHAVEZ. I have the confidence; but as I suggested to Mrs. Henderson last night to appeal—

Mr. WOOD. Well, that is what we are doing. I would like to say that the Commissioner of the State land office requested me to make this statement.

The CHAIRMAN. I want to say that the winning ways of the Senator from New Mexico could do more than I could in 2 hours.

Mr. WOOD. Commissioner Rogers asked me to make the statement, and to inform this committee that our office is opposed to any further withdrawals of land from the public domain for national parks, Indian reservations, or any other kind of reservations in this State, without an act of Congress.

Senator CHAVEZ. I think that is supposed to be the law.

Mr. WOOD. It's supposed to be the law, but it isn't the law. It isn't carried out, rather. We have a recent notice from the Park Service, to a man in our office, stating that they need several more townships of land for the Carlsbad Caverns National Park. Now, that is all good grazing land, there, and it is only a little hole in the ground, and they have about a township or two already. We have a great deal of State lands in that area. And we have a request, from west of Gallup, that the Manuelita Park be set aside for a park area, a township or more of lands there, of which we have State land. They have asked us to exchange our lands in the White Sands area. We would be glad to exchange our lands; but we think there are mineral possibilities there, possibly oil, and they won't approve an exchange unless we relinquish our rights to the minerals.

Congressman ANDERSON. What do they want the land at Carlsbad for?

Mr. WOOD. I don't know—

Congressman ANDERSON. More than the undersurface rights?

Mr. WOOD. They wanted the surface rights.

Congressman ANDERSON. For a cave?

Mr. WOOD. Well, the cave doesn't cover only a very small area, as you know. These national parks, Mr. Anderson, a lot of times, use all this extra area to protect the game, and the squirrels, and the chipmunks, and stuff like that. There is a great penalty, you know, for killing a field mouse on a national park.

Congressman ANDERSON. I'm wondering if any explanation was given to you as to the exact purpose?

Mr. WOOD. No; other than they wanted to extend the boundaries of the park.

Congressman ANDERSON. Where are the officials of the Park Service?

Mr. WOOD. At Santa Fe.

Senator CHAVEZ. Well, they better do it by Executive order.

Mr. WOOD. We told them we wouldn't go along with them on their proposition; would not agree to make an exchange on a proposition of that kind.

Secretary CHAPMAN. Did I understand whether these were leases or permits?

Mr. WOOD. We issued some 5-year leases, in some cases. We do not issue annual permits.

Secretary CHAPMAN. That 11,000,000 acres that is mostly school lands, or part of that; how is that divided?

Mr. WOOD. That is—I forget just the figures on that. May I refer to one of these booklets here just a minute?

Mr. LEE. I think it would be well to tell the Secretary that those leases are transferable, and we can use them as collateral in the financing of our ranches, and we can also use them as commensurate base, under the Taylor Grazing Act.

Mr. WOOD. Well—

Mr. LEE. The most stable grazing in the State is on our State lands.

Mr. WOOD. 8,783,000 acres, common schools; 310,000, university; 249,000, agricultural college; 266,000, normal schools; 199,000, School of Mines; 148,000, Military Institute; 50,000, reform school; 50,000, blind asylum; 50,000, deaf and dumb, and there was a second grant for the deaf and dumb and blind of 99,000. That was 100,000, but it has only been 99,000 under the corrected grant. The water reservoir, 500,000; insane asylum, 150,000; improvements to the Rio Grande, 100,000; public buildings, 131,000; penitentiary, 150,000; reformatory institutions, 100,000; and there was what is known as county bond grants, railroad bond grants, amounting to about 1,000,000 acres. Then there was a later grant for 30,000 acres for the benefit of the Eastern New Mexico Normal School; and a county bond grant to satisfy certain railroad bonded indebtedness of the Santa Fe.

Senator CHAVEZ. 30,000 to the Eastern New Mexico—shouldn't that be 77,000?

Mr. WOOD. I beg your pardon, I didn't see that. There is 106,000 altogether, that has been selected for them.

Congressman ANDERSON. The Senator was in the House when that grant was made.

Senator CHAVEZ. I was responsible for that.

Secretary CHAPMAN. I would like to ask you one more question. What service are you doing in servicing these lands or the lessees?

Mr. WOOD. What do you mean?

Secretary CHAPMAN. Services of any kind, other than collecting the fees and issuing the permits.

Mr. WOOD. We issue the leases and collect the fees, and when differences arise between the lessees we go out in the field and attempt to make settlements and adjustments and work the matter up to the satisfaction of all parties concerned.

Secretary CHAPMAN. Would you be able to give me the date of that letter you referred to of Dr. Aberle's?

Mr. WOOD. I can't give you the exact date, but I would be glad to furnish you with a copy of it. I don't have it.

The CHAIRMAN. What is that?

Secretary CHAPMAN. The letter he referred to of Dr. Aberle's.

The CHAIRMAN. I would like to have a copy of that go into the record.

Mr. WOOD. We'll have some photostatic copies made, and will mail one to the committee and one to Mr. Chapman.

The CHAIRMAN. We'll be here tomorrow.

Mr. WOOD. Well, the office is in Santa Fe, and I'll have to get it from the office.

The CHAIRMAN. Very well.

(The letter is as follows:)

UNITED PUEBLOS AGENCY,
Albuquerque, N. Mex., July 18, 1938.

COMMISSIONER OF PUBLIC LANDS.

Santa Fe, N. Mex.

(Attention Mr. Claude E. Wood.)

DEAR MR. COMMISSIONER: United Pueblos Agency is negotiating for the adjustment of Indian and non-Indian use rights within Government-purchase areas. In order that the present status of State leases may not be changed until our plans are completed, I wish to enter a friendly protest against the issuance or reissuance of State leases in the following lands:

Section:	Township	Range
All State-owned land-----	6, 7 N.	6 W.
Do-----	6 N.	7, 8, 9, 10, 11 W.
Do-----	7 N.	9, 10 W.
Do-----	8 N.	9, 10 W.
2, 16-----	13 N.	3 E.
Portion 36-----	14 N.	3 E.
All State lands-----	14 N.	4 E.
Do-----	15 N.	4 E.
Do-----	14 N.	2 E.
Do-----	14 N.	1 E.
Do-----	15 N.	1 E.
Do-----	15 N.	2 E.
Do-----	16 N.	5 E.
Do-----	16 N.	4 E.
Do-----	16 N.	3 E.
Do-----	17 N.	3 E.
Do-----	17 N.	2 E.

Sincerely yours,

Senator CHAVEZ. Mr. Wood, it would be a little out of order, but you said something about 100,000 acres, I believe for the improvements of the Rio Grande. How is that administered? What do you do with that?

Mr. WOOD. That land is leased, just like the other land, Senator. It is selected at various places in the State and the money goes, I believe, to the State engineer's office in connection with their water work, and so forth.

Judge SETH. Interstate streams?

Mr. WOOD. That is right, interstate streams.

The CHAIRMAN. Are there any other questions?

Mr. FURMAN. Mr. Chairman, I was going to ask you if I could make a brief statement when Mr. Wood finishes.

Mr. WOOD. I am finished.

The CHAIRMAN. Very well.

STATEMENT OF ALAN F. FURMAN, SOIL CONSERVATION SERVICE, ALBUQUERQUE, N. MEX.

Mr. FURMAN. My name is Furman, of the Soil Conservation Service at Albuquerque, N. Mex.

I wanted to make a brief statement in connection with the remarks and observations made by several persons a few minutes ago, the first one being Mr. Burkes, from Harding County, N. Mex. Mr. Burkes is one of the permittees on that project, with whom we have had very amicable relations during the past several years. We have letters in our files from Mr. Burkes in which he states he has sold more pounds of better beef from his ranch after his range stocking was reduced, in accordance with our recommendations, than he produced before that time, when he was originally running them.

With reference to the request that the Soil Conservation Service administered lands in Harding County be sold to individuals, I want to submit for the record a letter from Dr. Bennett, Chief of the Soil Conservation Service, to the Honorable John J. Dempsey, Governor of New Mexico, dated May 10, 1943, in which Dr. Bennett says that the lands were in very bad shape when we bought them, are not fully revegetated, and we still have a job to do in that area, and I would like to read one brief paragraph of it.

We do believe that the provision in title III whereby Congress prohibited the sale of these lands to individuals is wise. More time is needed to revegetate and restore the productivity of range lands, and to make the necessary land-use adjustments, so that small operators who formerly depended largely upon the production of cash grain crops, may be assisted to develop a livestock-farm type of enterprise, or small ranches to increase their units to economic size. We believe the results of the purchase of these submarginal farm lands in this area speak for themselves, particularly at a time like this, when there is a demand in transition areas, such as this one, to forget conservation and again plow up grass lands to put into grain crops simply because moisture and price conditions are favorable. It is important, both from the standpoint of producing feed for the war effort and conserving the Nation's resources, that lands primarily suitable for grass production be kept in grass.

This letter applies also to Union County in every respect. There were some other gentlemen here, a few minutes after Mr. Burkes, who mentioned turning in the county lands, selling them back to individuals. I would like to submit this letter for the record.

The CHAIRMAN. Very well.

(The letter is as follows:)

DEPARTMENT OF AGRICULTURE,
SOIL CONSERVATION SERVICE,
Washington, D. C., May 10, 1943.

Hon. JOHN J. DEMPSEY,

Governor of New Mexico, Santa Fe, N. Mex.

DEAR GOVERNOR DEMPSEY: House Joint Memorial No. 4 of the Sixteenth Legislature of New Mexico, sent to the Secretary of Agriculture, has been referred to this office for reply as the lands in question in Harding County are a part of the

ills land-utilization project, administered by this Service under title III of the Bankhead-Jones Farm Tenant Act.

The memorial petitions Congress to enact appropriate legislation whereby these lands may be disposed of to private individuals so as to restore them to the tax rolls, or to compensate the State and county for the tax loss sustained as a result of Federal ownership.

In order to obtain a correct perspective regarding this project, it is desirable to survey briefly the conditions existing in the project area at the time land purchase was initiated by the Federal Government.

The project is located in the "transition zone" between the wheat country of the plains and the upland grazing areas of northeastern New Mexico. This area was formerly open range but with an influx of homesteaders, the range was broken up into small holdings which were inadequate for raising livestock and in which the land was unsuited for profitable farming over extended periods. Although this area formerly supported an excellent stand of blue grama, overgrazing had seriously depleted the range lands, wind erosion had not only removed considerable top soil from cultivated fields, but blowing soil had further destroyed the grass cover, and dust storms were a menace to the health and welfare of residents of the area.

The area was selected for purchase by the Federal Government after consultation with various State and local agencies, and local residents. Representatives of the agricultural experiment station expressed the view that some form of land-use adjustment was definitely necessary in the dry farming areas of northeastern New Mexico and that the Mills area offered probably the best situation in which to initiate a program of adjustment. Residents of the area entered a petition urging that a project be established and on December 8, 1934, the residents of the area unanimously voted that a project be initiated. At that time, many farms had been abandoned, wind erosion was prevalent, and there appeared little likelihood that the remaining farmers and small ranchers could locate or establish economic units.

Subsequently, 75,491 acres of land were purchased out of a total of 135,640 acres in the project area. Of the remaining acreage 16,360 acres are State owned and the balance in private ownership. There was purchased in Harding County 841 acres out of a total of 1,352,960 acres within the county. On the basis of the assessed valuation in 1935, lands taken off the tax roll in Harding County reduced the total tax base by \$134,746, or 4.4 percent.

In 1941, the total assessed valuation of Harding County was \$660 greater than in 1935. The total county levy was 11.457 mills in 1941, compared with 12.42 mills in 1935 and the school district levies have also decreased. Taxes levied were \$34,735.60 in 1941 and \$34,615.89 in 1935. In spite of the fact that 841 acres were taken off the tax roll in Harding County, through Federal purchases, the tax levy in 1941 was practically the same as in 1935, and the county had slightly more tax money in 1941 than it did in 1935. Considering the fact that during the 1935-41 period, the assessed valuation of cultivated land had been reduced from \$3.50 to \$2.50 per acre, it is difficult to see how the financial situation of the county has been impaired as a result of the removal from the tax rolls of the submarginal lands purchased.

As a matter of fact, there is considerable evidence to the contrary. As a result of the land purchases, approximately \$5,700 in delinquent taxes were paid into county treasury. The number of livestock on the tax roll has increased. This is partly due to the increased carrying capacity of the purchased lands. Some 19,000 acres formerly in cultivation have been seeded to grass or is returning naturally. In 1937 the carrying capacity of the purchased land was estimated to be 500 head yearlong. In 1942, 1,378 head were grazed and it is estimated that after the seeding program is completed and under proper range management, these lands will eventually support about 1,700 animal units.

As a result of the purchase program, it has been possible for the county to maintain maintenance on between 20 and 30 miles of roads. This was largely possible due to changes in the pattern of settlement.

Before the purchase program was initiated, the land was unable to support a population occupying it and a large number of farmers had abandoned their lands and left the county. The purchase of submarginal lands enabled a considerable number of persons stranded on uneconomic dry farms to liquidate their properties and relocate elsewhere. At the time of purchase 115 farm families lived in the area. In 1942 there was 48. Thirty of these families had grazing permits. The economic status of these families has improved is beyond question.

The average size of each unit has increased over 1,700 acres. This does not include Government-owned lands used for grazing. The average size of the 30 permits is 46 animal units. Twenty permittees owning less than 100 animal units each have permits for grazing on Government lands an average of 37 head each. Ten permittees owning 100 or more animal units have permits for an average of 68 head each.

A comparison of the size of the operating units of the 30 permittees in 1939 as compared with 1942 indicates an increase in taxable property (livestock) during that period. This increase in livestock is largely due to the increased productivity of the range brought about by seeding, fencing, and livestock water developments, resulting in increased carrying capacity of the range. In addition, the operators have obtained a much greater degree of financial security through the improved condition of the range, more adequate sizes of operating units, and the assurance that the Federally-owned land will be made available year after year.

Size of operating unit	1936	1942
50 animal units or less	18	2
51 to 100 animal units or less	6	11
101 to 200 animal units or less	3	4
201 to 300 animal units or less	1	2
301 and over	2	3
Total	30	22

In addition to the indirect benefits accruing to the counties resulting from the purchase of these submarginal lands, 25 percent of the revenue received from the project lands is paid to the counties in lieu of taxes for school and road purposes. When Harding County receives the payment from 1942 project revenue which is now due, it will have received \$3,500. for the years 1939 to 1942, inclusive, in cash payments from the Federal Treasury.

While on paper at least it would appear that if these lands were now on the tax rolls, the tax revenue to the counties would be greater for the present, it is also a fact that with these lands off the tax roll, the mill levy is the same as it was in 1935, the assessed value of cropland has been reduced from \$3.50 to \$2.50 per acre and the total tax revenue of the county has not decreased. There is no assurance that if these lands were returned to private ownership, the indirect benefits of the project to the community might not be wiped out and that in a very few years, conditions which prevailed in 1935 and the years prior to that time might not again develop. The financial structure of the county would reflect this changed condition in the community and would suffer accordingly.

We do believe that the provision in title III whereby Congress prohibited the sale of these lands to individuals is wise. More time is needed to revegetate and restore the productivity of range lands, and to make the necessary land use adjustments so that small operators who formerly depended largely upon the production of cash grain crops, may be assisted to develop a livestock-farm type of enterprise, or small ranchers to increase their units to economic size. We believe the results of the purchase of these submarginal farm lands in this area speak for themselves, particularly at a time like this, when there is a demand in transition areas such as this one, to forget conservation and again plow up grass lands to put into grain crops simply because moisture and price conditions are favorable. It is important, both from the standpoint of producing feed for the war effort, and conserving the Nation's resources, that lands primarily suitable for grass production be kept in grass.

The recommendation that the State and county be compensated for the loss in revenue sustained due to Federal ownership of the land is a subject which has been receiving considerable study by the various Federal Government departments which have land under their jurisdiction. It appears to be the consensus of opinion that some adjustments in the rate of payments in lieu of taxes is warranted. It is believed that some definite action in this regard can be anticipated before very long. Since congressional action is necessary to change the present schedules of payments, it is not possible to predict whether a change will be made, and if made, when it will be effective.

Sincerely,

H. H. BENNETT Chief.

Cc: CYRIL LUKER,

Soil Conservation Service, Albuquerque, N. Mex.

Mr. FURMAN. With respect to the loss of tax base through the purchase of lands, it would be futile to say that land acquired by the Government does not remove the tax base. However, I have a very well-prepared statement, in reference to Union County, which shows we purchased about eight-tenths of 1 percent of the land in that county, and it shows that the net savings to the county through this program were \$8,624, rather than a loss to the county.

I will explain how that happened. In the first place, we make a cash return to the county, as you know, of 25 percent of the yield from the land. We were able, through purchase, to eliminate a school and a number of miles of road, which cost the county several thousand dollars a year. The lands increased in their ability to support live-stock, and it was therefore a lot more taxable real property on the area than there was when we took it over, and all of these factors compensate the loss of tax base.

The situation at Harding County is not so favorable for the county. We were unable to eliminate as much school cost, but the purchased lands, which were capable of carrying about 500 head in 1937, are now carrying about 1,500 head; and it is obvious that the buying power of these ranches has increased, so there is considerable benefit to the county in the purchasing power alone. We submit that these circumstances have probably more than offset the loss of the tax base. I would like to submit this report on Harding County for the record.

The **CHAIRMAN.** Who made the report?

Mr. FURMAN. Mr. Daker, of the Soil Conservation Service.

Congressman ANDERSON. May I ask you a question? Did I understand you to say that that portion of the 300,000-acre tract in Oklahoma, west Texas, and New Mexico, that portion taken out of Union, was eight-tenths of 1 percent of the area of Union, or taxable values of Union County?

Mr. FURMAN. The acreage of Union County is 2,000,000 acres. We purchased 56,000.

Senator CHAVEZ. Let's get this straight.

Congressman ANDERSON. What is the total acreage of Union County? You purchased what?

Mr. FURMAN. The total acreage in Union County is 1,966,000 acres, approximately.

Congressman ANDERSON. That is right.

Mr. FURMAN. The acreage purchased in Union City was 56,464 acres.

Congressman ANDERSON. You maintain that is eight-tenths of 1 percent?

Mr. FURMAN. Of the assessed value.

Congressman ANDERSON. I asked you that specifically because I knew it was more than eight-tenths.

Mr. FURMAN. Well, I answered you because I have checked it. The assessed value in 1940 was \$9,678,000, assessed value of title III lands in 1940 was \$77,000, percentage in reduction assessed value of the county by purchase of land by the Government, eight-tenths of 1 percent.

Congressman ANDERSON. That is because that land at that time was badly eroded and had been very badly used, and was on the tax rolls at an extremely low value. As far as the area is concerned, it is substantially larger.

Mr. FURMAN. Mr. Daker, what is the percentage of reduction on acreage?

Mr. H. J. DAKER. About 2 percent.

Congressman ANDERSON. How do you figure that? As I figure, 56,000 and 1,900,000; I would say it was closer to 3 percent, wouldn't you?

Mr. DAKER. Two and a fraction.

Congressman ANDERSON. It's closer to 3 than it is to 2.

Mr. DAKER. I can't say without figuring it.

Congressman ANDERSON. It is closer to 3 than it is to 2.

Mr. DAKER. I have got the exact figures down there.

Congressman ANDERSON. As to the carrying capacity, you say the carrying capacity of Harding County, or the Mills development project, was 500 head of cattle. They are now carrying what?

Mr. FURMAN. The approximate carrying capacity of the purchased lands in the Mills County project in 1937 was approximately 500 head, in rough figures.

Congressman ANDERSON. And they are now carrying what?

Mr. FURMAN. Approximately 1,500.

Congressman ANDERSON. Are you familiar with the fact that there were small grain farmers in there not fattening cattle, the fact that those lands were taken off small grain and put into grazing areas; and that might account for this jump from 500 to 1,500?

Mr. FURMAN. In 1937, weren't most of those farms in very bad condition, with the topsoil going out?

Congressman ANDERSON. I think I got through saying it.

Mr. FURMAN. There was nothing being produced on them, anyway.

Congressman ANDERSON. That is correct.

Mr. FURMAN. So the production of livestock was about 500 head, and now it is being put back into grazing use, and thus will carry about 1,500 head with a potential of about 1,700.

A few remarks about the carrying capacities of the two projects: The average carrying capacity of the Mills project, including these blown-out fields, not fully revegetated, is about 12 head per section as established at that time. It has adjusted upward and downward, in accordance with the annual or seasonal production of forage. There are sections in the Mills project which carry as little as 3 head per section, and other sections which carry as much as 20 head per section. The carrying capacity in the Harding County—in the Union County project is 16 head per section, average carrying capacity. There are sections over there which are not in use at all at this time. There is no vegetation on them. They are being fenced and reseeded. There are other sections which carry 18 head per section. Our records show that, just as incidental information, \$4,824.20 were collected from the Mills project for this last calendar year, of which the county has one-fourth, or about \$1,250 in cash returns that will be paid to them in the next 2 weeks, I believe.

In Union County the return is still small because a lot of land is still not in use. You are familiar with the fact that that was actually in the Dust Bowl. On the west edge, the topsoil was almost entirely removed on some of that land.

With reference to Mr. Davenport's remarks, I presume he was talking about the Soil Conservation Service forming district 8. He must have meant the Grazing Service. The Soil Conservation Service

forms no grazing districts; neither does the Soil Conservation Service form a soil conservation district.

Judge SETH. Wasn't Mr. Calkins head of the Soil Conservation Service?

Mr. FURMAN. Yes.

Judge SETH. He was the one that said it to him, as he testified.

Mr. FURMAN. I don't know how such a remark had been made. The committee knows that the Soil Conservation Service has absolutely no power to form grazing districts.

Senator CHAVEZ. Could it have been under influence?

Mr. FURMAN. I am unable to answer that question.

Judge SETH. The Indian Service doesn't form grazing districts either, does it?

Mr. FURMAN. I believe not.

Congressman ANDERSON. Who forms it? Like Topsy, did it "just growed"?

Mr. FURMAN. There was no grazing district ever formed. It was talked about and read about in the records last year. It was a plan, but nothing ever came of it.

Mr. DAVENPORT. In other words, that was just a bluff the Soil Conservation Service was running?

Mr. FURMAN. I wasn't here at the time, Mr. Davenport; I don't know.

Senator CHAVEZ. There is only one man that can deny it. Mr. Davenport says it was Mr. Calkins, and he is in Central America.

Mr. DAVENPORT. I believe Herb Stewart was present at the time that interview took place. I'm not sure, but it is my recollection he was there.

Mr. FURMAN. Is Herb Stewart here?

The CHAIRMAN. Will you come forward, please, Mr. Stewart? Will you state your name, and your place of residence, and your business?

**STATEMENT OF HERB STEWART, SOIL CONSERVATION SERVICE,
ALBUQUERQUE, N. MEX.**

Mr. STEWART. My name is Herb Stewart, and I am stationed at Albuquerque. I'm with the Soil Conservation Service.

The CHAIRMAN. Did you hear the statements that were made here?

Mr. STEWART. Yes, sir.

The CHAIRMAN. It is related that perhaps you were present when the statements were made. What have you to say?

Mr. STEWART. I was not present. I know something about the statements, however. As far as I know, if any such thing was made, it was made by Mr. Calkins, who was a member of the Interdepartmental Rio Grande Board, and it had nothing to do whatsoever with the Soil Conservation Service.

The CHAIRMAN. Nothing to do with the Soil Conservation Service?

Mr. STEWART. Mr. Calkins at that time was a member of the Rio Grande Interdepartment Board.

Senator CHAVEZ. Which was advising as to the making of the district?

Mr. STEWART. Interdepartmental Board was.

Senator CHAVEZ. He was head of the Soil Conservation Service at the time.

Mr. STEWART. Of region 8; yes, sir; that is correct.

The CHAIRMAN. Perhaps Mr. Furman should not have touched on that subject, because he doesn't seem to know much about it.

Mr. FURMAN. I beg your pardon for touching upon it; but as spokesman for the Service, I wanted to try to attempt to cover the remarks that were made about the Service, as completely as possible.

The CHAIRMAN. Well, no accusation was made, and you don't know anything about it. It is not for you to cover up.

Mr. FURMAN. Very well.

The CHAIRMAN. What you do know about it, we will be very glad to hear.

Mr. FURMAN. Here is the report signed by Mr. Daker.

The CHAIRMAN. Very well; it may go into the record.

(The report is as follows:)

SUMMARY OF FACTS CONCERNING UNION COUNTY, N. MEX., AND LAND UTILIZATION PROJECT, NM-LU-21, 1943

GENERAL

In 1937 the land utilization project in Union County was established as a part of what was then known as the tristate project, consisting of portions of Texas, Oklahoma, and Union County, N. Mex. This area was designated as a purchase area due to the economic unsoundness of the farm and ranch units. As a result of these unsound economic units an improper land use had developed which directly caused severe wind erosion and had, therefore, damaged the land to such an extent that most of it could no longer be farmed. The majority of the farmers within the Union County portion of the project had reached the stage where they could no longer make a living for themselves from the land, and the majority of them had either abandoned the land and left the county or were on some form of Government relief.

At the present time a minority group, consisting principally of very large landowners within Union County have petitioned to have this Government-owned land sold by the Government to private owners. This group will, no doubt, lay great importance on the fact that this Government-owned land has been removed from the tax rolls of the county and therefore has greatly reduced the county revenue.

Union County covers a total area of 1,966,000 acres. The Government has purchased 56,464 acres, or 2.8 percent of the total area within the county.

Within the total area of Union County the State of New Mexico owns and leases 461,770 acres, which is 23.4 percent of the entire county. Approximately 75 percent of this State-owned land is permanently leased to less than 2 percent of the total number of landowners within the county. The State leases this land at the rate of 0.3 cent per acre a year and the county received none of this lease money.

Ninety percent of the landowners within the Union County land utilization project now have the use of the Government land. These landowners at the present time are paying a fee of approximately 9 cents per acre for the use of this land. The county receives 25 percent of this fee.

ASSESSED VALUE

In 1940 the assessed value of Union County was \$9,678,000, whereas in 1943 he assessed value has been reduced to \$8,200,000, or a total reduction of \$1,478,000.

This reduction has been caused by four factors: The removal of a branch line of the Santa Fe Railroad in the fall of 1942, a considerable reduction in assessment rates on land, a large reduction in the number of farm and ranch units within the county and the purchase of title III lands in the county. The removal of the Santa Fe railroad caused the largest reduction in the assessed value of the county. The reduction in assessment rates and the decrease in farm families which meant the removal of personal property was the next largest contributing factor, whereas the removal of title III lands from the tax rolls has caused a reduction in assessment value of the county of only nine-tenths of 1 percent.

FINANCIAL EFFECTS

Between the years of 1938 and 1943 the total county revenue has been reduced \$135,674.48, whereas the cost of the county government during these same years has been reduced \$120,680.50. However, at the present time the cost of the county has been discontinued. These schools have been consolidated with the

This year the county's share of the revenue derived from title III lands will be approximately \$768.59 less than the revenue the county would derive if these lands were on the county tax rolls. However, through the purchase of this land by the Government one school has been closed and the high school of another county has been discontinued. These schools have been consolidated with the school system of Clayton, N. Mex. Forty-six and one-half miles of county roads have been closed as they are no longer needed. These factors are saving the taxpayers of the county \$9,393.39. This amount less the present loss in revenue received by the county makes a total saved of \$8,624.80 to the county.

CHANGE IN LAND TENURE

The above-mentioned minority group, no doubt, put some considerable stress on the reduction in number of farm families within the land-utilization project. It is true that there has been a greater percentage of reduction within the project area than there has been in the remainder of the county; nevertheless, the records prove that there has been a substantial reduction in the entire county. This reduction was needed in the entire county, and as a result of same the ranchers in the county are much more stable at the present time from an economic standpoint than they have been in the past. Furthermore, the records prove that this adjustment was needed more within the project area than it was in the balance of the county. Prior to 1937 the average size of the farm and ranch units in the county outside of the project area was 1,496 acres, as compared to 457 acres within the project area. Both figures were too low to make up a sound economic unit. At the present time the size of the farm and ranch units in the county have increased so that the units outside of the project area now contain on an average of 2,824 acres which is a sound unit, and within the project area contain 1,488 acres which are still economically unsound. However, by supplementing the units within the project area with grazing permits on title III lands, the farm operators are now able to make a living on the land and are comparable from an economical standpoint with an average operator outside of the project area.

Prior to the time the land-utilization project was established in 1937, there were 364 farms located within the project area. Of these 364 farms, 265 of them had been abandoned by 1937 and the land was in such condition that it was damaging adjoining property. Since 1937 the Government has purchased 138 of these farm units. Regardless of the contention that the Government reduced the number of farm families by the purchase of the land, the records show that of the 138 farm units purchased it was necessary for the Government to relocate only 25 families, and the remaining 113 are included in the above-mentioned 15 who had abandoned their farms. Since 1937 the remaining 74 families within the project area have absorbed the remaining 152 abandoned farms. This accounts for the increase in size of farms within the area from 457 acres to 1,488 acres.

ECONOMIC CONDITIONS

Prior to 1937 the average Union County farm located outside of the project area could produce forage for 37.4 head of cattle as compared with 11.4 head for the average farm within the project area. It can readily be seen that the average

farmer within the county could not make a living in 1937 from the production of livestock.

However at the present time the picture has changed. The average Union County farm outside of the project area is large enough to now produce feed for 70 head of cattle; whereas the average farm within the project area can produce feed for only 37.2 head of cattle which figure is still below that of the average farm outside of the project area in 1937. However, by the use of title III lands the average farmer within the project area is able to increase the size of his herd by 23.4 head thereby enabling this farmer to maintain an average of 60.6 head and thereby placing him in a position where he is able to make a living from the land.

CONCLUSION

The saving in county expenses greatly offsets the revenue which would be derived by the county from taxation of title III lands.

The majority of the present farmers within the project area are financially unable at the present time to purchase additional land; therefore, if this land were sold, it would undoubtedly be purchased by a few large ranch operators even though it would be impractical for them to use many tracts of this land. Nevertheless such a purchase would deprive the present permittees of the use of this land with the result that they would be unable to make a living on their own land and would eventually be forced to sell their land to these same large operators.

Mr. FURMAN. I'd like to ask if Mr. Wager Smith is in the room.

The CHAIRMAN. Is Mr. Wager Smith in the room? (No response.)

Mr. FURMAN. Well, since he isn't, and not knowing what he would say, and his only having told me this afternoon what he would say about land purchases in the Cuba-Rio Puerco project, of which he was in charge, I won't attempt to say what he told me this afternoon.

That is all I have to say.

Judge SETH. Were you here in 1937?

Mr. FURMAN. No; I was not.

Judge SETH. When did you first see the Mills or the Union County resettlement projects?

Mr. FURMAN. In the spring of 1938.

Judge SETH. And in your report of 1937 they were all feeling the effect of the Dust Bowl, were they not?

Mr. FURMAN. Yes; they were.

Judge SETH. In your reports are you giving credit at all to the moisture that has fallen since the Dust Bowl period quit?

Mr. FURMAN. Very much so. We had a fine year in 1941, which helped tremendously.

Judge SETH. And your activities are not responsible for the recovery of the area?

Mr. FURMAN. We hope we assist nature to some extent.

Judge SETH. Oh, you give nature some credit.

Mr. FURMAN. A great deal.

Judge SETH. Conditions have materially changed since the Dust Bowl time, have they not?

Mr. FURMAN. An extremely favorable year in 1941, which helped our seed planting to a great extent. Seeds planted for 2 or 3 years, which we thought might have been dead, came out in 1941.

Judge SETH. The west part of the Mills project never was in bad shape, was it?

Mr. FURMAN. I am going to call on Mr. Dickens to answer that.

Judge SETH. Wasn't it all good grazing lands?

Mr. DICKENS. Certain parts of the west portion of the project were good grazing land.

Judge SETH. A lot of that land in the west part never was submarginal, was it?

Mr. DICKENS. It never was broken out; it didn't blow away.

Judge SETH. It has always been fairly good grazing?

Mr. DICKENS. I haven't been there.

Judge SETH. When did you first see it?

Mr. DICKENS. About 9 months ago.

STATEMENT OF GEORGE MORRIS, MILLS, N. MEX.

Mr. MORRIS. I am a permittee in the Mills district. I came there 4 years ago in a covered wagon, and I have lived there all my life practically, except 3 years and 8 days in the United States Army, when I served 27 months in the Philippine Islands. I don't know whether I did such a good job or not, but I came back.

In regard to the Mills district, in there, in 1916, we had a very dry year that year. We had no more bad weather up until 1933 or 1934, and that is when it blew away practically, more or less. The land I live under permit today—I found out from the people that owned that land—owned the land right west of me; I tried to buy that land. I went to those people and tried to buy it, and they said they would sell to me, but the United States Government had too many high-powered lessees for me. I couldn't buy it.

The CHAIRMAN. What branch of the Government?

Mr. MORRIS. The Soil Conservation Service.

Senator CHAVEZ. Wait a minute; wasn't it the Resettlement Administration?

Mr. MORRIS. Pardon me, that's what it was under when they came. I went to buy that land, and I am willing to buy that land today, and willing to pay the cash for it, and willing to pay the taxes on it, and I think I could make a good job of it, just as good as has been done.

Senator CHAVEZ. You consider it good grazing land?

Mr. MORRIS. I do. If I didn't, I wouldn't try to buy it.

Senator CHAVEZ. Mr. Morris, differentiating between the land that being used for farming purposes and the grazing land, has the grazing land been good land all the time since you have known it?

Mr. MORRIS. Yes, sir.

Senator CHAVEZ. The land that blew away was the plowed land?

Mr. MORRIS. What blew away had been plowed, more or less.

Congressman ANDERSON. When did the Rural Rehabilitation Corporation come in and buy that land?

Mr. MORRIS. They first come in there, I think, in 1935 or '36.

Congressman ANDERSON. At that time, could you have bought a tax title to that land?

Mr. MORRIS. No, sir.

Congressman ANDERSON. Why not?

Mr. MORRIS. Not on the land that I wanted to join up with me.

Congressman ANDERSON. You say that the Government bought it away from you; from these people that owned it?

Mr. MORRIS. I tried to buy it from them.

Congressman ANDERSON. What did you offer them?

Mr. MORRIS. I offered them \$3 an acre for that land.

Congressman ANDERSON. What did the Government pay for it?

Mr. MORRIS. I don't know. There was no improvements on the land at all, practically. There might have been one or two little bar cross fences on it.

Congressman ANDERSON. I am surprised; I was connected with the Rural Rehabilitation at the start. I can't recall a single piece of ground that the Government bought that anybody else was bidding for. I do I recall a single piece that the Government bought that there was not any delinquency tax dealing against.

Mr. MORRIS. The tax dealings against it, I don't know anything about it.

The CHAIRMAN. You offered \$3 for it?

Mr. MORRIS. I did, and I offered to buy it, and I would buy it today but I could not buy it, because they were too high powered for me. Because I had the same question come up with my mother. Our land was in the estate, and they came down to my mother, and almost drove her crazy, and told her she would blow away, and she had better go. Consequently, I had to go to a lawyer to protect my mother.

The CHAIRMAN. From whom?

Mr. MORRIS. They sent Sandy Smith down there, from Washington Smith's office.

The CHAIRMAN. To do what; to get what?

Mr. MORRIS. To buy that land.

The CHAIRMAN. Was he acting for the Rehabilitation people?

Mr. MORRIS. He was; he was working in their office.

The CHAIRMAN. What was he offering?

Mr. MORRIS. I don't remember that they offered any money at that time, or the exact amount.

The CHAIRMAN. Well, you make the statement that he was setting her crazy, trying to buy the land. Just how? Was he making inducements to her to sell?

Mr. MORRIS. Sure; he had her scared to death, afraid it would blow away; he said the lands were blowing away, and doing this and that and my mother, by jingo, went down there without me and my brother knowing anything about it—

The CHAIRMAN. And what happened?

Mr. MORRIS. She went up to the office. I think she went to the office. I came there, and I found him in my mother's house, and I told him, I said, "Now, listen, keep away from mother and don't try to buy that land." I went back the next day and the same thing happened, and I said, "Get out and stay out and don't come back any more."

The CHAIRMAN. He was buying for the Rehabilitation?

Mr. MORRIS. He was either buying or talking it up.

The CHAIRMAN. I see. All right, he was a pretty good talker.

Mr. MORRIS. I'll say he was a good talker!

Congressman ANDERSON. Mr. Morris, as a matter of fact, in 1934 and 1935, do you recall whether or not a delegation came from Mills to talk to the Relief Administrator and petition him to buy agricultural lands? Would you remember a delegation leaving Mills to see if a sale could be made to the Government?

Mr. MORRIS. No; I don't.

Congressman ANDERSON. You were there all that time?

Mr. MORRIS. I was living there.

Congressman ANDERSON. Did they raise any money to send a delegation down to Santa Fe, to see if the land could be sold to the Government?

Mr. MORRIS. I could not say.

Congressman ANDERSON. Were there not two types of land, range lands that were pretty good, and fields plowed up, that were pretty bad?

Mr. MORRIS. There were. That was plowed up.

Congressman ANDERSON. Would you regard it as sensible that the Government said it had to buy sufficiently large tracts, so it could control the area. It did buy some range lands that were good, in order to protect those lands that were blowing away?

Mr. MORRIS. Well, I don't know about that.

Congressman ANDERSON. Did you have dust storms in Mills?

Mr. MORRIS. Yes, sir.

Congressman ANDERSON. Steady?

Mr. MORRIS. Not always.

Congressman ANDERSON. Well, were they bad?

Mr. MORRIS. Bad at that time, 1933 and '34.

Congressman ANDERSON. You were sorry to see the Government buy that land, and try to stop the Dust Bowl?

Mr. MORRIS. I didn't like to see land bought that I would like to have bought myself.

Senator CHAVEZ. You are talking about grazing land?

Mr. MORRIS. Yes, sir; grazing lands only.

Congressman ANDERSON. I would say there was grazing land purchased at the time, without any question, in order to round out a project, as a person who heard something about it. I was not head of Rural Rehabilitation when most of the work was done and I opposed the purchase of most of the land. I do recall that many people came in to petition the Government to buy.

Senator CHAVEZ. Mr. Congressman, Wilson & Co., who were the biggest holders of the outfit in Mills district, were actually the ones who wanted the Government to buy; as a matter of fact, have had some congressmen trying to collect from the Government now for what they think they weren't paid. There is a bill pending in Congress for \$30,000 for the old buildings.

The CHAIRMAN. Very well, thank you, sir.

Now, gentlemen, I have got to come to a pause. It is 10:30. I think we have gone about as far as we can tonight, although I would like to go on for another hour or so, because I am afraid that tomorrow night we are going to have to run later than now. However, we are trying to boil this thing down so we can conclude and hear everybody before tomorrow at midnight, because I must leave here today morning.

At this point there will go into the record, by request, a letter from a rancher who states that he is unable to be present. The Soil Conservation Service respects to the charges made in this letter, as follows:

CIENEGA RANCH,
Rodeo, N. Mex., August 29, 1943.

DR. PAT MCCARRAN,
Chairman, Subcommittee of the Committee on Public Lands and Surveys,
Albuquerque, N. Mex.

DEAR SIR: Although unable to appear in person before your committee, I beg to introduce into the record of your hearings the following statement rela-

servation Service will be given an opportunity to submit competitive to the acquisition of private land by agencies of the Federal Government and its coincidental withdrawal from the tax rolls:

On or about September 1, 1937, the undersigned acquired from the First National Bank of Lordsburg, N. Mex., a ranch of some 75 sections in Hidalgo County, N. Mex. and Cochise County, Ariz., of which some 25 sections consisted of private land (deeded and State lease), and some 50 sections controlled under the provisions of the Taylor Grazing Act. Included in the former was an unexpired lease of 1,305 acres of patented land, the owner of which was Mr. D. D. Parramore, Abilene, Tex., and which property lay in the virtual geographical center of the ranch acquired by the undersigned, and known as the San Simon Cienega.

At the time of acquisition it was understood by the undersigned that the Department of Agriculture, Soil Conservation Service, contemplated the construction of an erosion control dam on the lower end of said San Simon Cienega, and the construction of said dam, and its protection by fences was agreed to by both parties to the lease upon the renewal thereof in 1938. For many years the said San Simon Cienega had been valued for tax purposes at \$3 per acre and was so carried on the rolls. Due to its unusual subirrigated properties, however, a portion thereof was at that time worth in excess of that figure, and the whole tract according to land values was worth on an average of \$8 per acre, or a total value of approximately \$6,500. This valuation will be borne out by any cattleman living in the vicinity and knowing the tract.

About this time the said Soil Conservation Service inaugurated a policy of purchasing land on which the construction of practices was contemplated, accordingly, the said Cienega was appraised by the said Service, and an offer in excess of \$19,000 was made to the owner, Mr. Parramore, which naturally was immediately accepted; and the undersigned was accordingly immediately deprived of the use of a tract of land lying in the very heart of his ranch, which had been a part of said ranch the memory of man runs not to the contrary. The property also was immediately withdrawn from the tax rolls, and the county deprived accordingly of proportionate revenue.

Upon commencing construction of the aforementioned dam, it was discovered by the said Soil Conservation Service that more than half of the proposed dam site lay outside of the tract purchased, and on property owned in fee by the undersigned.

Although deprived of 1,305 acres of pasture to build a dam occupying not to exceed 2 acres in extent, the undersigned was then threatened with condemnation proceedings unless he acquiesced in a perpetual easement over his own land to complete the construction of the said dam. Needless to say, the undersigned, powerless to do otherwise, acceded to the demands of the Service; and executed an easement, for which he was granted the munificent sum of \$1.

In summation, permit me to make the following points:

- (1) The Soil Conservation Service expended \$19,000 (approximately) to acquire a dam site, for which they could have secured easements gratis.
- (2) The Soil Conservation Service expended \$19,000 (approximately) for property whose fair value did not exceed one-third thereof.
- (3) The undersigned was deprived of the very heart of his ranch for no ostensible good purpose.
- (4) The counties of Hidalgo and Cochise were deprived of the revenues from the said San Simon Cienega, enjoyed thereby for more than 60 years.
- (5) The Federal taxpayers were virtually defrauded of more than \$19,000 by a whim of bureaucracy.

Very respectfully yours,

EZRA J. WARNER
DEPARTMENT OF AGRICULTURE,
SOIL CONSERVATION SERVICE.

Albuquerque, N. Mex., November 24, 1943.

HON. PAT McCARRAN,

Chairman, Subcommittee on Public Lands and Surveys,

Senate Office Building, Washington, D. C.

DEAR SENATOR McCARRAN: Reference is made to a letter written you by Mr. Ezra J. Warner, of Rodeo, N. Mex., under date of August 29, 1943, a copy of which was supplied us by Mr. E. S. Haskell with the suggestion that we provide you with our views on the matters taken up by Mr. Warner.

Our answers to the five points enumerated on page 2 of Mr. Warner's letter are as follows:

1. The Soil Conservation Service did not acquire the lands in question for the mere purpose of securing a dam site. The construction of the dam and dike at the north end of the Parramore tract, which is the land referred to by Mr. Varner, was merely mechanical aid and incidental to the main task of protecting the entire south end of the San Simon Valley from the fate which has already overtaken the central and northern portions.

The principal reason for land purchase was not merely to construct the dam but to control the use of lands in the valley south of the dam which were beginning to erode in the same manner as lands have in the 60-mile stretch of valley between the dam site and the Gila River.

For your information the San Simon Valley beginning at its confluence with the Gila River near Solomonville has been channelized by accelerated erosion over a distance of nearly 60 miles southward. This has overdrained and ruined fertile valley lands and the San Simon River while contributing a negligible quantity of water has been the largest contributor of silt on the entire Gila watershed, thereby seriously impairing the life and effectiveness of the San Carlos Reservoir.

There are still 30 miles of fertile valley south of the Parramore tract which the Soil Conservation Service is doing its best to protect and save. As stated in the opening paragraph, structures alone are insufficient, sound land use must be practiced above any structure in order to accomplish the objective.

When the Soil Conservation Service began to work on this problem, severe erosion had already begun in the Parramore tract which lies in the heart of a small subirrigated area called a Cienega which could be thought of as a meadow. The Soil Conservation Service did not immediately propose the purchase of this tract but according to our records attempted for a period of 2 years to bring about proper controlled use of the Cienega through cooperative agreements with the owners, Messrs. Parramore and Davis. All efforts in this connection failed since the owners would not agree to the rate of stocking determined to be necessary for the protection of the area. Neither did the owners agree to supply contributions of material for mechanical remedial measures including the fencing of the area. Thus it was regrettably but finally determined that the saving of the Cienega and the southern portion of the valley could not be accomplished as long as the land concerned remained in private ownership.

It is granted that easements alone might have been secured gratis but it is stated that easements and structures alone would not have arrested one of the worst cases of man-made erosion in the entire West which has to be seen to be appreciated.

2. The appraised value placed upon the 1,305-acre Cienega tract segregated by the States in which it lies is as follows:

TRACT 1008 (ARIZONA)

Land classification	Acreage	Appraised valuation	Total
A-1. Hay and pasture.....	71	\$30	\$2, 130. 00
B-1. Hay and pasture.....	14	15	210. 00
A-1. Grazing.....	362	6	2, 172. 00
C-1. Submarginal grazing.....	177. 48	2	354. 96
	624. 48		4, 866. 96
IMPROVEMENTS			
miles of fence.....			300. 00
Total.....			5, 166. 96

TRACT 1008-B (NEW MEXICO)

A-1. Hay and pasture.....	395	\$30	\$11, 850. 00
B-1. Hay and pasture.....	173	15	2, 595. 00
C-1. Submarginal grazing.....	112. 02	2	224. 04
	680. 02		14, 669. 04
IMPROVEMENTS			
Well.....			200. 00
Buildings and fence.....			650. 00
Total.....			15, 519. 04
Grand total.....			20, 685. 00

You will notice that the tracts have been divided into land classes and each class valued separately. The A-1 hay and pasture land has been given a value of \$30 per acre. This land is unique in that there is nothing like it in southern Arizona. It is naturally watered, has irrigation water rights, a number of springs, several flowing wells, and is capable under careful supervision of carrying 10 times the number of livestock carried on adjoining dry lands. This tract is capable of supplying feed during drought or other emergency conditions to large numbers of small stockmen in this area.

You will note that the other classes of land are given lower values down to \$2 per acre. The State of Arizona places a minimum price of \$3 on any of its land. The price paid by the United States for the 1,305 acres was \$19,750 including improvements or slightly more than \$15 per acre.

Attached is a copy of a letter to this office from Robert E. Barnard who was negotiator for the Soil Conservation Service at the time the appraisal and optioning of this land took place. You will note that he states that Mr. Parramore advised that Mr. Warner was willing to pay \$25 per acre for exactly the same tract of land which was described and discussed above. We feel that this answers point 2 and that portion of Mr. Warner's letter which deals with the alleged value or lack of value of the land. It might be mentioned incidentally that Mr. Parramore chose to sell his land for cash to the United States rather than to accept the terms which Mr. Warner offered.

3. The United States did acquire 1,305 acres which lay within the exterior boundaries of the 50,000-acre Warner ranch, though, according to our map at the north end. This tract might well have been sold by the owner to any individual who desired it and who could meet the terms. The owner was nonresident and its eventual sale might have been anticipated.

Mr. Warner owned and still owns, we believe, an area of similar Cienega hay and grassland approximately equal to the Cienega area acquired by the Government. This valuable property lies to the south or above the Cienega land acquired by the Government and will be protected and benefited through the proper management of and conservation practices established on the adjoining Government land and by the structure which has been installed.

We submit that Mr. Warner's statement to the effect that he was deprived of the heart of his ranch is seriously overdrawn since at the time the Government began negotiations for the Parramore tract he did not own or control any land as far north as this area but did subsequently acquire adjoining land.

We believe that the phrase "for no ostensible good purpose" was answered under point 1 of this letter.

4. The Bankhead-Jones Act provides that 25 percent of the yield from lands acquired under title III shall be returned to counties for schools and roads.

Our records indicate that approximately the same returns are being paid by the United States to the counties as were received by the counties from taxes before the lands were purchased. As an example, taxes paid to Cochise County in 1938, \$37.30. Paid by the United States to Cochise County in 1942, \$32.13.

5. We feel that this point which is evidently intended to be of a general derogatory character has been answered largely under points 1 and 2.

The only other comment we have to make in this matter is that Mr. Warner was not advised at any time that the erosion-control structure could be placed entirely on the north end of the Parramore tract. Our engineers had known that the dike would extend westward on to adjoining property. Mr. Warner acquired this tract subsequent to the time the Government began negotiations for the Parramore tract. He was advised that the Government began negotiations for the Parramore tract. He was advised that the Government would either like to secure an easement on a small area or would purchase the land. According to our files Mr. Warner could not reach a decision for an interminable time and as a matter of fact this Service despaired of ever working out the situation and had considered abandoning the entire project on account of difficulties of this nature. After having analyzed all written material and discussed the matter with all the personnel who handled this case, we are prepared to state categorically that Mr. Warner was not threatened with condemnation which is contrary to existing Bureau policies. Our records are available at any time.

If there is any further information needed in this matter, we will be pleased to attempt to secure it.

Very truly yours,

CYRIL LUKER, *Regional Conservator.*
By F. D. MATTHEWS, *Acting.*

Mr. LEE. Mr. Chairman, we have one other witness who has come a long ways and who will be unable to remain until tomorrow. Would it be possible for the committee to hear his statement?

The CHAIRMAN. Very well, we will go on.

Mr. LEE. I will ask Mr. Davenport to interpret for him, because he doesn't speak English.

STATEMENT OF JACOBO HERRARA, CUBA, N. MEX., AS INTERPRETED BY MR. DAVENPORT

Judge SETH. Will you state your name and where you live?

Mr. HERRARA. Jacobo Herrera, Cuba, N. Mex.

Judge SETH. What is your business?

Mr. HERRARA. I am a farmer and sheep herder, sheep owner.

Judge SETH. Did you formerly run sheep under partido, from Bond?

Mr. HERRARA. Yes, sir.

Judge SETH. Where did you run them?

Mr. HERRARA. On the forest and on the east of the Navajo; that is the territory adjacent to the Navajo Reservation, east of the Navajo Reservation; in Cuba, the west of Cuba, now in the new area of the Soil Conservation Service.

Judge SETH. How many sheep did you have of your own?

Mr. HERRARA. I had as many as 600.

Judge SETH. How many did you have on shares from Bond?

Mr. HERRARA. Four hundred.

Judge SETH. You ran them in the summertime on the forest?

Mr. HERRARA. Yes, sir.

Judge SETH. And do you know that Mr. Bond's permit on the forest was cut?

Mr. HERRARA. Yes, sir.

Judge SETH. And you have to take back, give back, the sheep that you ran for Bond, because they couldn't run on the forest. Is that right?

Mr. HERRARA. Yes, sir.

Judge SETH. And how many sheep do you have now?

Mr. HERRARA. Five hundred.

Judge SETH. Where are they running?

Mr. HERRARA. Part of them are on the forest, part of them on my private lands at Cuba.

Judge SETH. How much on each?

Mr. HERRARA. Two hundred and fifty head.

Judge SETH. How far apart are those two herds?

Mr. HERRARA. They could be 6 miles.

Judge SETH. And how many men do you have with each 250 head?

Mr. HERRARA. Two men with each 250.

Judge SETH. In other words, you have four men with 500 head of sheep?

Mr. HERRARA. Yes, sir.

Judge SETH. Did you make application to graze them altogether, Mr. Herrera?

Mr. HERRARA. Yes, sir.

Judge SETH. And who did you make application to?

Mr. HERRARA. First application at Mr. Strong's office, and he didn't pass it.

Judge SETH. And did you ever run on any of the Soil Conservation area west of Cuba?

Mr. HERRARA. I had them for 15 days on the Soil Conservation Service land west of Puerco, at the old Tillman switch, on the Western Railroad. The Grazing Service and Mr. Salmon, the grazier, gave me a permit at this particular spot in June for 15 days. When I got there, there were other sheepmen on the area, two other bands of sheep, and there wasn't any feed left. They gave me a temporary permit for about 15 days on this place; but you see I was so slow about getting the permit that the feed was gone and I had to feed the sheep on my own ranch.

Senator CHAVEZ. Let me get this straight. The translation is that the Grazing Service gave Mr. Herrera the permit, a permit from February to the 15th of June, but he was unable to use it because there were other sheep on the range, and he only used it for 15 days.

Judge SETH. Now, what became of your forest permit?

Mr. HERRARA. They gave me a permit on the forest for 250 head. The other 250 head I bought from Frank Bond & Son, and they have been running under Frank Bond & Son's permit.

Judge SETH. Didn't you have a permit at one time for a bigger amount than 250 head on the forest?

Mr. HERRARA. Yes, 600 head.

Senator CHAVEZ. May I interpolate there, too? Didn't he also say the reason he was refused a permit was because he had not finished paying the Frank Bond Co. for the sheep, still owed some money on the sheep?

Judge SETH. Is that the reason the forest permit was cut down?

Mr. DAVENPORT. Because he had not finished paying for it.

Judge SETH. Your forest permit was cut from 500 or 600 to 250?

Mr. HERRARA. Yes, sir.

Judge SETH. For any reason other than you had not finished paying for the sheep?

Mr. HERRARA. No.

Judge SETH. Had you bought the sheep from Frank Bond?

Mr. HERRARA. Yes, sir, part of them, to finish out my permit, to make a total of 500 head.

Judge SETH. And you had to divide your herd, then, and you run 250 on the forest and the other 250 wherever you could get grass?

Mr. HERRARA. Where I can.

Judge SETH. Where do you winter?

Mr. HERRARA. I don't know where I am going to winter them. I only have my ranches.

Judge SETH. Then your 500 head now are divided into two bands, and you have to have two men with each band?

Mr. HERRARA. Yes.

Judge SETH. Can you make any money running sheep that way?

Mr. HERRARA. No.

Judge SETH. Is there anything else you want to say?

Mr. HERRARA. If I am unable to get range, I don't know what I am going to do with these sheep.

Mr. LEE. Mr. Herrera, in helping you to get your range, Congressman Anderson, our Congressman, took it up with Washington to get you some lands on the grant. He got a temporary permit, only for this year, and this winter you will be out entirely unless you are able to get an extension. Mr. Chairman, he won't have any range this winter.

Mr. HERRARA. I work for 10 years, until I was 26 years old, trying to get started in this business. In 1917 I had a little bunch of sheep and the Government called me for military service, and I had to sell them in order to go to the Government service. I was in the service a year. When I got back, I had to start in all over again in order to get another start in the sheep business. Now I have 10 children, and I have these sheep to see if I can be an independent man.

One of my boys is now in the military service. If I am unable to get range for my sheep, I will have to sell them. I am ready to go and help the Government out again, if that is necessary.

Congressman ANDERSON. How long was he with Frank Bond?

Mr. DAVENPORT. He says for 14 years.

Congressman ANDERSON. Did he ever have any complaint from Mr. Bond on his work as partidero?

Mr. DAVENPORT. I can answer that, Congressman Anderson; I know that, but I want him to.

Mr. HERRARA. There was none. Evidently he trusted me, because he trusted his sheep to me.

Congressman ANDERSON. He did, and the point I wanted to bring out, Senator, was that this man would never have lost his connection at all except that the Bond permit was reduced and they had to get rid of their partidero contractors, men like that who had been running sheep for them for years and years and years. When that partidero contract was dissolved, this man found himself with the results of 14 years of hard work in the shape of a group, or a band, of sheep. In order to try and take care of that band of sheep, he sent his boy into the Army and he has to keep half of the sheep in one place and half of the sheep in another place. Only by the most vigorous type of protesting am I able to get him a chance to stay on the land at all. Now, he doesn't know how long he can stay.

The CHAIRMAN. Who has control of the territory over which he grazes?

Congressman ANDERSON. I found two agencies had control of it. I had a great deal of difficulty in trying to get them together as to whether he should have any lands at all.

The CHAIRMAN. Who was that?

Congressman ANDERSON. The Soil Conservation Service and the Grazing Service.

Mr. DAVENPORT. Could I also make a statement there? We at one time had a permit, on the Santa Fe National Forest, of 12,000 sheep. That permit has been cut down to 4,100, to be exact. At the time of this cut we endeavored to have that cut adjudicated to these partidero men of ours, but it was denied by the Forest Service, and there was nothing we could do. That is the reason for this situation now. This man has 250 sheep on the forest, and he has 250 sheep which, this summer, have been on our private mountain ranges, because we want to take care of him.

Congressman ANDERSON. I don't think, Senator, either agency wanted to be failing in duty, but you have divided responsibility. The way it could have been solved was to apparently bring the two agencies together in one office and say, "Will you both agree to try to do something for this man, temporarily?" It would be much better if we had the same sort of single control in this part of the country.

The CHAIRMAN. What do you know about it, Mr. Leech?

Mr. LEECH. I would have to ask Mr. Salmon to tell us about it.

The CHAIRMAN. Mr. Salmon is in charge of that area?

Mr. LEECH. He is the district grazier of district 1

STATEMENT OF H. M. SALMON, DISTRICT GRAZIER, ALBUQUERQUE, N. MEX.

Mr. SALMON. In the start, when this Grazing Service commenced, I think Mr. Herrera had a permit with the Grazing Service in the area. There is very little Federal land, it is so little there is scarcely none at all. However, adjacent to Mr. Herrera's base property were 240 acres of land, which he was allocated, and it was base land which was assigned to him. He kept this permit—I don't recall, but it must have been for a couple of years or something like that, and we gave him as much as we could from that base in the period of time. That was all we figured could be run in this particular area. Then he let his permit go for a couple of years, thinking, I suppose, that it was hardly enough to support the outfit; and then some time ago when this came up, Mr. Anderson, I think, had quite a little to do with it. We got together with the Soil Conservation Service, and we selected an area in there that had not been maybe used by anyone else, and I think that Mr. Herrera still holds a permit to graze on that particular area. I don't know that the Soil Conservation Service, or the Grazing Service, either, have canceled Mr. Herrera's permit on this area. I think that it is still intact, and that he has the privilege of grazing at that place.

Congressman ANDERSON. Did you say he would be safe in assuming he is protected there for the winter?

Mr. SALMON. Yes, I think so.

Congressman ANDERSON. That is the best assurance he has had in a long time. I couldn't get that in Washington.

Mr. LEE. I think, Mr. Salmon, you are mistaken. We have a letter from Washington from the Grazing Service.

Congressman ANDERSON. He has overruled it, emphatically, and I am delighted.

Mr. SALMON. There might be a higher official that has made some statement to that effect; but as far as I know, with my transactions with Mr. Strong, he is still eligible to a grazing permit there.

Senator CHAVEZ. Did you understand the statement made by Mr. Salmon?

Mr. DAVENPORT. He says he did.

Congressman ANDERSON. He is set for the winter.

Mr. DAVENPORT. On 240 acres?

Mr. SALMON. The land that was allowed him by the Soil Conservation Service and this, too, of course.

Mr. DAVENPORT. Will the Soil Conservation Service say that?

Mr. SALMON. Probably. I don't think they would disagree.

The CHAIRMAN. Is the Soil Conservation Service here?

Mr. STRONG. Mr. Chairman, and everyone that has asked for this response, I concur with what Mr. Salmon has said. We found a piece of land that was near there, in which the Grazing Service had some land and the Soil Conservation Service had some land. The Soil Conservation Service and the Grazing Service made a verbal agreement on the administration of that particular land. We, under the Soil Conservation Service, our employees, were of the opinion that that land was being handled by the Grazing Service, and so informed them that we were looking for this particular piece of land, and the Grazing Service issued the permit. They have charge of our lands in that area and can continue to issue the permits.

Senator CHAVEZ. You can stop right there. That is good.

The CHAIRMAN. The committee will stand at recess until tomorrow morning at 9 o'clock.

(Recess until 9 a. m., Thursday, September 9, 1943.)

ADMINISTRATION AND USE OF PUBLIC LANDS

THURSDAY, SEPTEMBER 9, 1943

UNITED STATES SENATE,
SUBCOMMITTEE OF COMMITTEE ON PUBLIC LANDS AND SURVEYS,
Albuquerque, N. Mex.

The CHAIRMAN. The committee will be in order.

There were some matters I understood you wanted to present this morning, Mr. Lee.

Mr. LEE. Mr. Hovey would like about 10 minutes.

The CHAIRMAN. I am going to have to request that everyone be as brief as possible, so that all who wish to be heard may be heard. This meeting must terminate this evening. We will run as late as we can, and try to give everybody an opportunity, but I must ask for as much brevity as possible.

STATEMENT OF B. P. HOVEY, BERNALILLO, N. MEX.

Mr. B. P. HOVEY. Mr. Chairman, the people of La Jara and Cuba community, some of them are here present. The Apache Indian Reservation extends clear down to the area where these people could be using it, and at the present time, and for years the Indians have never used that land. It is a reservation, Mr. Chairman, that extended—I couldn't exactly say the mileage—from the headquarters on down, but I imagine it's about 40 miles. Some Indian agency from Dulce has tried to push the Apache Indians on down to us; this lower end of the reservation. For years and years the native people from La Jara and Cuba country have used it. At the time it was under lease, Edward Sargent from Chama put in improvements.

As far as I understand, on this map I would like to show the committee. The people from La Jara live right in this spotted line or patch. This is the reservation, unused. These people are well crowded; sometimes turn their stock in here to trespass.

The CHAIRMAN. What is in there on the reservation?

Mr. HOVEY. Nothing.

The CHAIRMAN. No stock?

Mr. HOVEY. No stock. There is an Apache Indian's place about here [indicating] by the name of Henry. I don't know his last name. I have been up to him time after time, trying to inquire what stock belonging to the Apache Indians would graze down it, and the only answer I have gotten from him, he is the only one willing to come down there, because he is a part Spanish boy from somewhere in Rio Arriba County. That is the information I got from this man named Henry Lynch, Fred Lynch, that is right. He is the only one that has

about 200 head of cattle somewhere around here, but no other ones will use this. The way I understand it, the Sandoval and Rio Arriba boundary line, and the people from this area are asking just what land is within the county. That is composed, more or less, we could say, of eight townships and they want to know if it is possible for the needy people from that area there could use it for their domestic use.

If there are any questions to be asked, Mr. Chairman, we have a number of Spanish-speaking people, good Americans, and some of them have boys in the armed service. They are good citizens of this country.

(At Mr. Hovey's request the representatives from the above-named community stood up.)

Mr. HOVEY. Any questions to be asked? Mr. Chairman, you can ask any one of those people from that area and they will tell you more about it than I can.

The CHAIRMAN. I understand from your statement that these people who arose here a moment ago live in the area just off of that reservation?

Mr. HOVEY. Yes, sir.

The CHAIRMAN. That is supposed to be, or you have explained it as an Apache Reservation?

Mr. HOVEY. It is an Apache Reservation.

The CHAIRMAN. But according to your statement, it is not being used by any Indians?

Mr. HOVEY. Yes, sir; with the exception of Fred Lynch, who was up here.

The CHAIRMAN. He adheres to the Apache Tribe, doesn't he, although he is part Spanish?

Mr. HOVEY. He is half Apache, and half Spanish-American, married to a squaw of the Apaches.

STATEMENT OF A. E. STOVER, DULCE, N. MEX.

Mr. A. E. STOVER, Dulce, N. Mex. Mr. Chairman, can I ask the gentleman some questions?

The CHAIRMAN. Yes, sir.

Mr. STOVER. You say a Jicarilla Indian named Fred Lynch?

Mr. HOVEY. That's right.

Mr. STOVER. You say he is a Jicarilla? Not a Jicarilla-Apache?

Mr. HOVEY. Yes.

Mr. STOVER. I beg your pardon, he is a Mexican.

Senator CHAVEZ. Probably that's why he is not in there.

Mr. STOVER. He's in there, because he is married to Emma Quirt's daughter.

The CHAIRMAN. The statement was that he adheres to the tribe.

Mr. STOVER. He's married to a woman of the tribe, and she runs cattle in there. That statement that there are no Apaches in there is absolutely false.

The CHAIRMAN. Well, the time is ripe now.

Mr. STOVER. The Jicarilla-Apache Tribe, Mr. Chairman, has been in that area since 1909 and have been making beneficial use of that reservation. They are using it now, sir, every foot of it, and they

are practicing deferred grazing which, if the gentleman and his compadres and all the rest of the livestock men in New Mexico had practiced—

Senator CHAVEZ. I suppose they have had fine advice from the Indian Bureau, and that is why they are doing it. I happen to know that country, too.

Mr. STOVER. Yes, sir; I know you do, Senator. I believe you know that it is in the hands of—

Senator CHAVEZ. If it is in the hands of the Indians, I think it would be—

Mr. STOVER. It is in the hands of the Indians.

Senator CHAVEZ. How large is that reservation?

Mr. STOVER. There are 750,000 acres.

Senator CHAVEZ. How many Apache Indians?

Mr. STOVER. Eight hundred.

Senator CHAVEZ. Is that the total—men, women, and children?

Mr. STOVER. Yes, sir.

Senator CHAVEZ. They have 750,000 acres of land?

Mr. STOVER. Yes, sir.

Senator CHAVEZ. How many head of cattle in that reservation?

Mr. STOVER. 1,600.

Senator CHAVEZ. In the entire area?

Mr. STOVER. Yes, sir. I would also like to qualify the statement that gentleman said that that land is not in use down there. The reservation is approximately 70 miles long, north and south, with an average width of 18 miles, and extends far into the mountains. It is an ideal sheep range, with summer and winter range, and the Indians practice deferred grazing, using the north end of the reservation in the summertime and moving every hoof of livestock to the south end of the reservation in the wintertime. They have 36,000 head of sheep that they move into this area where the gentleman said there was no livestock on, 6 months out of the year, 1,600 head of cattle, and several hundred horses.

Mr. LEE. How many people do you employ outside of the reservation to herd the sheep for the Apaches?

Mr. STOVER. Are you speaking of me, or the Apaches?

Mr. LEE. You are managing it.

Mr. STOVER. Government activity, or individual Indian activity? Which are you speaking of?

Mr. LEE. You draw so many fine lines I can never tell which is which. The point I want to know is how many native people outside of the reservation are employed to herd the sheep of the Jicarilla-Apaches on the reservation?

Mr. STOVER. Very few. No one can give you the exact number.

Mr. LEE. Pretty near all of the sheep are herded by native herders, or they have been for the last few years.

Mr. STOVER. The Jicarilla-Apaches are herding their own sheep, just as other men are, because of the shortage of man-power.

Mr. LEE. Because of the shortage of man-power?

Mr. STOVER. Yes; a large number of their boys are in the armed forces, the same as those of other citizens.

Mr. LEE. Don't ever think we doubt that. We have Indians here that show you their sons fought in Guadalcanal, and we have not a

single word against a single Indian. It has never been shown in this hearing in any place where a livestock man has had any trouble with a single Indian, nor has there been an Indian testify to any trouble with the stockman. Our trouble is entirely different, so don't say they are serving their country. They serve the country, and we serve the country, both the same, and we are both agreed on what is happening here.

Mr. STOVER. Thank you, sir.

The CHAIRMAN. All right, let's proceed.

Mr. STOVER. I would be glad to answer any question concerning the use of land on the Jicarilla Reservation.

The CHAIRMAN. The statement is made here that the Indians are not using that lower part of the reservation, and here is a group of 10 or 12 who arose here and wanted to use it. How many of the men who are sitting over here who arose a minute ago have seen Indians on that reservation, using it?

(Mr. Hovey translated the above question of Senator McCarran, to which there was no response.)

STATEMENT OF MAX EICHWALD, CUBA, N. MEX.

Mr. EICHWALD. I was into the Apache Reservation this spring, and up until May—I was in there looking for some cattle that had strayed. I rode with Fred Lynch and talked to him, and he said that there wasn't enough cattle or sheep to cover that area around to the Cuba-La Jara country; that he had been there for 5 or 6 years, or maybe more, and he had, from Dulce clear on to Cuba to graze his stock. I rode with him 1 day, all day, and we rode for miles and miles together, and I didn't see any cattle at all along that place.

Senator CHAVEZ. Who is Fred Lynch?

Mr. EICHWALD. Apache-Spanish fellow that is staying inside the reservation. He has about 200 head of cattle.

The CHAIRMAN. Well, are there Indians in there using that territory?

Mr. EICHWALD. There are in the northern and western part of the reservation.

The CHAIRMAN. How about the southern part referred to by the witness?

Mr. EICHWALD. I haven't seen any.

The CHAIRMAN. How often have you been in there?

Mr. EICHWALD. I have been in there on and off for about every 2 weeks.

The CHAIRMAN. Is there any livestock in there?

Mr. EICHWALD. I haven't seen any. There is a few of Fred Lynch's on the summer.

The CHAIRMAN. How long ago is it since you have been there?

Mr. EICHWALD. I have been all my life in Cuba.

The CHAIRMAN. How long is it since you have been in the southern end of the Apache Reservation?

Mr. EICHWALD. I have been about 2 months, maybe.

The CHAIRMAN. Does anyone else want to be heard on that?

STATEMENT OF REYES S. GURULE, LA JARA, N. MEX., AS INTERPRETED BY SENATOR CHAVEZ

Mr. GURULE. My name is Reyes S. Gurule, and I live at La Jara. I was born and reared and I am still at La Jara. I adjoin them. I am acquainted with the reservation. I know that part adjoining us. I do not know the part where the Indians live.

About the only time the Apaches come into that part of the reservation is when they come to the feast at Jemez.

Around the neighborhood of where we live they do not have any stock. They do have some stock on the western portion of the reservation. I arrived here on the 7th of the month. I was around the area the day before, on the 6th. About the only head of stock on there now is those that stray from the outside to the inside.

Mr. STOVER. May I ask a question? Will you ask the witness if he is familiar with the stock that runs on that reservation between the 1st of November each year and the 1st of May of each year?

Mr. GURULE. No, sir.

Mr. STOVER. Was he ever on part of that reservation during that period of time?

Mr. GURULE. I go there practically every day in the year, throughout the entire year.

Mr. STOVER. On the reservation?

Mr. GURULE. On the reservation, because my stock gets in there, and I go in after it.

Senator CHAVEZ. Have you ever leased a part of that property heretofore?

Mr. GURULE. I have tried to rent it, but they never have rented it to me. Mr. Sargent did have a lease in there; Mr. Ed Sargent, several years ago, he rented the place.

The CHAIRMAN. All right.

Mr. HOVEY. If you want any more witnesses, everyone will testify about the same, Mr. Chairman.

Senator CHAVEZ. John, are you acquainted with the circumstances up there?

Mr. DAVENPORT. Yes, sir; I had the first lease referred to, but the last lease was about 7 years ago, when the Indian Service adopted the policy of throwing all the lessees off the land to acquire more property. I ran the last lease there.

Senator CHAVEZ. You leased the property from the Service?

Mr. DAVENPORT. Yes, sir.

Senator CHAVEZ. And in turn, you rented it to Mr. Gurule?

Mr. DAVENPORT. I ran my cattle in part of his.

The CHAIRMAN. Have you been in there recently?

Mr. DAVENPORT. I go by there quite often.

The CHAIRMAN. That is referring to the southern end of that reservation within the county lines described here by the witness having the map. Are there any Indians in there?

Mr. DAVENPORT. I never have seen one in there. I held that place under lease about 3 years, and I never saw an Indian in there.

Senator CHAVEZ. How far away were the Indians?

Mr. DAVENPORT. They live at Dulce. That must be, I would say, around 75 miles from there. I may be off a little there.

Senator CHAVEZ. Do the Apaches group themselves around?

Mr. DAVENPORT. Yes, sir; they do winter some of their sheep a little farther north, probably 15 or 20 miles farther north than this particular area they are talking about. This is the extreme south end of the reservation. It is impossible to use that area for sheep, because it is a pingue country.

The CHAIRMAN. A what?

Mr. DAVENPORT. That is a poisonous weed.

Senator CHAVEZ. So you have to use it for cattle?

Mr. DAVENPORT. It has to be used for cattle.

The CHAIRMAN. Are there any questions?

Mr. STOVER. Mr. Davenport, have you been on that part of the Jicarilla-Apache Reservation between the 1st of November and the 1st of May, in the last 7 years?

Mr. DAVENPORT. I haven't been on the reservation. I have been by it and through it on the Farmington Road several times during that time.

Mr. STOVER. During the winter months?

Mr. DAVENPORT. Yes.

Mr. STOVER. And you saw sheep?

Mr. DAVENPORT. No, sir.

Senator CHAVEZ. Did you go through there last winter?

Mr. DAVENPORT. Yes, sir; I went to Aztec last winter.

Senator CHAVEZ. And the winter before last?

Mr. DAVENPORT. Yes, sir.

Senator CHAVEZ. At any time did you see any sheep in this particular part?

Mr. DAVENPORT. Not in that particular area, in fact, we have a range in Largo Canyon, and we have to go through Counsellor's Trading Post to get down there. I have to go out there once or twice every winter.

The CHAIRMAN. All right. Let's proceed.

Mr. HOVEY. Are there any other questions to the native people?

Senator CHAVEZ. No.

Mr. HOVEY. Well, we will pass on to the other questions we have involved here.

The people somewhere on this grant, the land surrounding that village belongs to Mr. Lee Evans. There is a small piece of land here in Township 11, R. 3 W., right around here. Some native people live in that area, but now it is under control of the Indian Service.

The CHAIRMAN. What is that, now?

Mr. HOVEY. Some native people living in that area there, in the public domain there, it is in the hands of the Indian Service for the Navajo Indians from Canyoncito to here somewhere. [indicating]. They haven't used the land since they acquired it. They have some exchange for use of that public domain. I asked one of the agencies yesterday whether or not they owned any land in that area and the answer was "No." Of course, I knew that should have been the answer, because I have checked on it.

So, therefore, I, by myself here—the boys can't stay here, they are just poor people. They came in here Monday and stayed until last night until the meeting was adjourned. This land, the way I understand it, the yellow belongs to the Indians. The people are asking

or 14 sections of that land there, including the holdings that the people have within the area.

Senator CHAVEZ. Now let me get this straight, Mr. Hovey. You say that the Indian Service has some public-domain land there?

Mr. HOVEY. Yes, sir.

Senator CHAVEZ. Where did they get it?

Mr. HOVEY. The information I can give you, Senator, the inquiry between me and the Indian Service, whether or not they had any holdings of their own, and the answer was "No." I asked them, "What have you got there?" And they answered, "Public domain."

Mr. JAMES STEWART. Mr. Chairman, may I make a statement?

The CHAIRMAN. Yes, sir.

Mr. STEWART. This area is occupied by a small group of Navajos, as Mr. Hovey says, a Canyoncito Band of Navajos. The land status within this small area of a total of 55,626 acres is involved. That is the total over all.

Senator CHAVEZ. How many Navajos are within the area?

Mr. STEWART. I will lead up to that.

The land tenure or the pattern of ownership in this over-all acreage consists of 11,626 acres of Indian owned land, Indian owned in terms of allotted land. There are 35,948 acres of so-called submarginal resettlement purchase land. There is some public domain totaling 18,766 acres. There is so-called rehabilitation land of 951 acres, all totaling 55,626 acres of land.

The Navajo population in this particular area is 351. That is the average of about 17 families, Navajo families in there. They have approximately, in terms of cattle units yearlong, 777 units. Those are split into sheep and cattle. The carrying capacity in the area is 708 cattle units. The average spread per family would be 65 sheep units converted from the cattle units on the five to one basis.

There is use of this land, unquestionably. There is a problem, as Mr. Hovey has indicated, of those people over the rim. That is where they are, are they not?

Mr. HOVEY. That's right.

Mr. STEWART. Of the use in there.

Now, there is an existing arrangement of ours with certain of the Spanish-American people that are over this rim, so to speak. Now, those people want to extend that use, in this over-all area that I just mentioned.
