Now, before that is done, there is also a Spanish-American, Steve Herrera, further in and toward the center of the area. Before any adjustment of use in behalf of the people over the rim is considered, then the equities and rights of Mr. Herrera must be considered. To give a decision here at this meeting now is impossible, but rather than leave the matter in the air and say that we would resist any attempt to take from these Canyoncito Navajos any land-use rights, I would a lot rather leave it on this basis, that we will meet with those people over there and unquestionably we have got to meet with Mr. Herrera and work out what can be worked out for the solution of the problem.

Senator CHAVEZ. The additional property that you obtained there for the use of the Indians, based on the same idea that you did on district 7, by getting the public domain, by getting some of the Taylor grazing land, by taking advantage of submarginal purchases, the re-

habilitation purchases, and so forth, under the idea that instead of going to the United States of America, the land should have gone to the Indians, isn't that correct?

Mr. STEWART. Of course, basically, Mr. Senator, these allotments were made to these Indians long prior to our discussion. This is in the proposed old Navajo Boundary extension bill area.

Senator CHAVEZ. That didn't pass.

Mr. STEWART. That is right. Those allotments were made long prior to any consideration of legislation.

Senator CHAVEZ. No one is worrying about the allotments, because they were made.

Mr. STEWART. But the fact that the allotments are being checker-boarded naturally could not be made otherwise, because of the land grants in there, in order to give them to the Navajo people on the area to block out. The same thing was done by the Santa Fe over here. We went into this program and built it up for the Navajo Indians.

Senator CHAVEZ. You suggested the word "equities" here awhile ago.

Mr. STEWART. That's right.

Senator CHAVEZ. I am in favor of that. Why shouldn't the people, other citizens, and I consider the Indians just as good citizens as any other citizen—the idea is to give him equity. But there should be some equity for the other people, too. Why grab it over there for a few Navajos and let the others starve?

Mr. STEWART. Of course, Senator, the equities of the people that have property rights within this over-all area have been met by virtue of the resettlement purchase program.

Mr. LEE. May I inject one other issue in there that goes a little further than what you have said? Mr. Brophy, when one of these native people in there was trying to buy the land from the Santa Fe Railroad, he wrote a letter telling them the Santa Fe Railroad had no title in there, it was no good. He wrote a letter to the Santa Fe Railroad telling them their title was no good. Mr. Hemenway wrote a letter back and said he didn't agree.

Now, the native people that tried—that particular family had been on that land, I imagine, some 30 or 40 years. Mr. Hemenway can be summoned here and can produce the evidence that they had been leasing that land for years and years, and yet they were frightened out of trying to protect themselves by an attorney for the Indians. I don't know just what Mr. Brophy's title is, the Indian Rights Society, or the Indian Service; but they are always like that, they drive these people out, and they don't want to bring a lawsuit.

Mr. STEWART. Do you have copies of such letters, Mr. Lee?

Mr. LEE. No; but we can secure them from the Santa Fe Railroad. I have seen them.

The CHAIRMAN. Let's have the copies as soon as you can get them. We can't let this drag out all day.

(The letters are as follows:)

ALBUQUERQUE, N. MEX., April 4, 1942.

SANTA FE PACIFIC RAILROAD CO., AND ATCHISON,

TOPEKA & SANTA FE RAILROAD CO. LAND DEPARTMENT,

Albuquerque, N. Mex.

GENTLEMEN: It has come to my notice that you claim to own and are preparing to sell sections 3, 5, 7, 9, and 17, in township 2 north, range 6 west, and section 35, township 3 north, range 6 west. This land is in New Mexico.

We have been advised by the Puertocito Band of Navajo Indians that they and their ancestors have occupied this land since 1844. Improvements have been built thereon, wells have been dug and considerable areas have been cultivated. This is to advise you that said land is now claimed by the Puertocito Band of the Navajo Tribe of Indians and the individual Indian occupants of the said land or either of them. Said land is owned by said band or tribe or individual occupants in fee simple. Any other lands occupied for the required length of time, although apparently within your grant, are likewise claimed and owned by said band, tribe or individual Indian occupants.

Please advise us whether or not you agree with this statement.

Yours truly,

WILLIAM A. BROPHY,
Special Attorney for Pueblo Indians.

ALBUQUERQUE, April 18, 1942.

MR. WILLIAM A. BROPHY,
Special Attorney for Pueblo Indians,
Albuquerque, N. Mex.

DEAR MR. BROPHY: Wish to acknowledge receipt of yours of April 4 in the matter of the ownership of certain lands in township 3 north, range 6 west, Socorro County, N. Mex.

This is to advise that the Santa Fe Pacific Railroad Co. does not agree with the statement made in your above-mentioned letter of April 4.

Yours truly,

E. O. HEMENWAY.

ALBUQUERQUE, N. MEX., April 4, 1942.

MR. MARTINIANO CHAVEZ,
MR. JOSE CHAVEZ Y BACA,
Magdalena, N. Mex.

DEAR SIR: We understand that you are negotiating with the Santa Fe Pacific Railroad Co. or the Atchison, Topeka & Santa Fe Railroad Co. for the purchase of sections 3, 5, 7, 9, and 17, township 2 north, range 6 west, and section 35, township 3 north, range 6 west.

This land has been used and occupied by the Puertocito Band of the Navajo Tribe of Indians and the members thereof since 1844 according to information furnished us by said band of Indians. Pursuant to the law said lands are owned by said band, tribe, or the individual occupants thereof. Improvements have been made upon said land by members of said band or tribe.

This is to place you upon notice that said land is claimed and owned by said Puertocito Band of the Navajo Tribe of Indians and the members thereof who occupy said lands, without any admission that notice other than the factual occupancy of said lands by said Indians is necessary to charge you with knowledge of the correct ownership.

Yours truly,

WILLIAM A. BROPHY,
Special Attorney for Pueblo Indians.

MR. HOVEY. Mr. Chairman, nevertheless, the land has not been used by the Indians for the last 2 years; but the question put to them whether they used it last year and the year before last, they said, "No." We are the ones that are using them.

Now, we don't like to take all the time, and we can't run all day here.

There is another question involved, where the Indians from Cochiti—I will show you on the map. The people living in Chili acquired the deeds from the Government, according to some records we have here, away back in 1856. The Indian Pueblo Agency from Santa Fe asked those owners of those deeds to let them have them, so they would have a copy. One of the deeds was 1856, and the other one was 1876. I don't know whether they got their deeds back from the Indian Land Board or not, but they have receipts that they furnished deeds to the Board members.

Senator CHAVEZ. Was the idea there that the deeds were not returned; is that it?

Mr. HOVEY. I don't know. I asked one of the men, and he said, "I don't know what happened," but they have receipts anyhow, and can be checked up in Washington.

Now, this is the land involved, Mr. Chairman, and these people, their deeds are right around here, and this is the Indian grant, Santo Domingo land grant. There are, more or less, 15 sections of land that has not been used except 10 days in May. The reason that that land was used in May, I suppose, was because the people from Chili came to Bernalillo and asked me whether I could come and see the Indian agency; if they could get a sublease from them to use this land for their domestic use livestock.

Senator CHAVEZ. The piece of land between the Cochiti grant and the Santo Domingo grant?

Mr. HOVEY. That's right.

Senator CHAVEZ. Where did that come from?

Mr. HOVEY. Public domain, with the exception of one State land that the Indian Service got it leased. When I came and talked to Mr. Dismuke, he said, "No; we haven't used it, but we are going to." They brought an Indian from Zia Pueblo from up here to lamb, and this Indian stayed in that land 10 days, because none of these Indians have used this patch of land.

Senator CHAVEZ. And they still won't let the neighbors use it?

Mr. HOVEY. They won't let the poor people go in with their milk cows there.

The CHAIRMAN. Who controls that strip of land?

Mr. HOVEY. The Indians have a lease from the State land office.

The CHAIRMAN. Who controls the public domain in there?

Mr. HOVEY. Well, we allotted—I, as a member of advisory board for district No. 1, allotted that to begin with, to a fellow by the name of Real from Cochiti. Later on he came to us and said he had no use for that, and the Indians had an obligation put in. These people, well, they don't read papers or anything, and didn't know anything about it, and they didn't put in application. We act on the applications that we had before us.

Senator CHAVEZ. You allotted it to the Indians?

Mr. HOVEY. We allotted it to the Indians.

Senator CHAVEZ. Notwithstanding that allotment, they are not using that?

Mr. HOVEY. That is right.

Mr. STEWART. Mr. Chairman, could Mr. Dismuke make a few comments on that? I don't know anything about it.

STATEMENT OF DEWEY DISMUKE, UNITED PUEBLOS RANGE, FORESTRY DEPARTMENT, UNITED STATES INDIAN SERVICE

Mr. DISMUKE. I would like to make one correction, please. There are only about 10 sections in the allotment, instead of 15, and the Pueblo of Cochiti was given a grazing permit by the Grazing District No. 1 Board for 40 cattle units in the area. According to information I get from the Indians, they haven't made as full a use of it as they would like to have, due to there not being any water in the area. If

you will notice the map, they have to come clear from this allotment over to the river for water, the inhabitants of Chili.

Mr. HOVEY. Mr. Chairman, excuse me, there is a ditch. People use that ditch to irrigate their land, their holdings that they have. These people acquired those holdings back in 1856, 10 years after this land was turned in to the United States.

Mr. DISMUKE. So the Cochitis haven't made the full use of the number they were permitted to use in there, due to lack of water. Until such time as they could drill a well near the west boundary of their Pueblo grant, and in so doing be able to water this public domain allotment. But it took time for them to arrange for funds to drill such a well. Plans are now ready to drill this well.

Senator CHAVEZ. Why didn't they have funds? Haven't they got some tribal funds?

Mr. DISMUKE. This is tribal money they plan on using to drill the well.

Senator CHAVEZ. But didn't they always have funds?

Mr. DISMUKE. They have to get permission from the Indian Office to spend those funds for a matter of this kind.

Senator CHAVEZ. Those funds attained to the Pueblos, under the Pueblo lands bill.

Mr. DISMUKE. I believe you are right.

Senator CHAVEZ. Did they make application to develop the water?

Mr. DISMUKE. They expected the agency, over a period of 2 or 3 years, to make this development, and the agency never got around to it with the agency's funds. Recently, about 3 or 4 months ago, the Cochitis decided to use tribal funds to make this development.

Senator CHAVEZ. Is there anything wrong with their using the tribal funds prior to the time, instead of using public funds?

Mr. DISMUKE. No, sir.

Senator CHAVEZ. The Government allotted them quite a sum of money, as I recall. Anyway, it was a substantial sum, though I don't recall the amount. Do you mean to tell the committee right here now, instead of allowing them to use their own funds, you suggested that the United States Government build that well; is that the idea?

Mr. DISMUKE. That seemed to be the Indian idea. They never suggested using the tribal funds, until some 3 or 4 months ago.

Senator CHAVEZ. You say the Indians are only using this for a few head of cattle, due to the lack of water. If another neighbor can use it, isn't that good Americanism?

Mr. DISMUKE. That would be up to the Indians, and the Division of Grazing.

Senator CHAVEZ. Is it the Indians, or the Bureau, that objects to letting the poor neighbors put in a cow or two?

Mr. DISMUKE. Let the Indians speak for themselves as to whether they are using it, and to what extent they have used it in the past.

The CHAIRMAN. You are in charge of it. There is no use passing it on to the Indians. You can answer that question. Don't dodge around it.

Mr. DISMUKE. They tell me they are using it now; they have cattle in there now. I haven't seen the cattle, but they are there. They would know whether or not——

The CHAIRMAN. This work is under your supervision, isn't it?

Mr. DISMUKE. Two million acres; yes. Our territory is something like 300 miles across, and I can't keep track of all the details.

The CHAIRMAN. All right; let's go ahead.

Mr. STEWART. The governor of the Cochiti Pueblo—

The CHAIRMAN. You asked yesterday that this hearing be deferred. I have got to close this matter. I intended to call on you for an opportunity for the Indians to be heard.

(Off-the-record discussion.)

The CHAIRMAN. I want to close this matter now, and then go on with the other matters.

Mr. STEWART. On the request that the Navajos be heard, I told your investigator yesterday they had withdrawn that request.

The CHAIRMAN. That is what I was told.

Mr. STEWART. Yes, sir; but this is a Pueblo Indian.

The CHAIRMAN. You want that of record, do you not, that they have withdrawn that request, because I want to be in the clear on that. I don't want anybody to say I have denied anyone the right to be heard.

Mr. STEWART. But this is the Pueblo group.

The CHAIRMAN. Do you have anything more to say, Mr. Hovey?

Mr. STEWART. Where is Mr. Montoya, the governor?

Mr. STOVER. That is not in connection with the Pueblos—

The CHAIRMAN. This is on the subject uppermost here?

Mr. STOVER. No; it isn't.

Secretary CHAPMAN. Wait a minute, Mr. Stover, please.

STATEMENT OF JOSE ALCARIO MONTOYA, GOVERNOR, COCHITI PUEBLO

Secretary CHAPMAN. Give your name.

Mr. MONTTOYA. Jose Alcarrio Montoya. I am governor of Cochiti Pueblo.

The CHAIRMAN. Do you speak English?

Mr. MONTTOYA. Just a little; not much.

The CHAIRMAN. All right; take your time and speak English slowly. and say what you have to say.

Mr. MONTTOYA. Well, according to that I have heard about it, I am going to—Pueblo Cochiti have a governor, and it seems to me that we in bargain with our grant, at least a Taylor grazing land, on the west side of it.

I heard a man that testify that the holding of the pueblo, the people of Chili, that they claim from 1836; and it seems to me that we were first, then the Mexicans; that we were using that land before any white men ever came in our grant, or our property. Now it seems to me that we are the first privileged to use that land, instead of other people. Of course, the pueblo has a small grant, and we are not able to take care of our livestock for this reason; the Pueblo Cochiti is looking for so many grazing lands, and that is why we leased this grant on the west side of our grant.

Senator CHAVEZ. It was stated here that land was allotted to the Pueblo Cochiti, but it was not being used, for the reason that Mr. Dismuke said, you didn't have water.

Mr. MONTROYA. That is true. We are not able to use it on account of the lack of water. The stock has to come about 3 or 4 miles from the grazing land down to the river, and now we have made an application, through the Indian Office, for the money that we have in the treasury.

Senator CHAVEZ. Your money?

Mr. MONTROYA. Our money.

Senator CHAVEZ. It belongs to the people of Cochiti, not to the government, at all?

Mr. MONTROYA. No, sir. The money is available now, that is going to be started to dig a well for that purpose, to graze on that grant, or mean on the grazing land.

Mr. LEE. Do you mind telling the people how many cattle you have here at Cochiti?

Mr. MONTROYA. Probably there would be about 400 cattle and about hundred horses.

Mr. LEE. All told, that is, everybody's?

Mr. MONTROYA. No; not everybody.

Mr. LEE. That's what I meant—how many?

Mr. MONTROYA. Well, there must be 24 of them, the people that have cattle, but we are speaking for all of it.

Mr. LEE. I realize that, but I meant the total number. I realize there are only 24 that do own livestock.

Mr. MONTROYA. Yes.

The CHAIRMAN. Well, let's get this clear. The 24 own about 400. Is that right?

Mr. MONTROYA. Yes, sir.

Mr. LEE. I think, Governor, it might be enlightening to the committee if you explain to them how you handle your stock there. That the war chief is in charge of the stock?

Mr. MONTROYA. Well, you see, we haven't got any herd of sheep or goats. That is only cattle and horses that we have in your property, is that right?

Mr. LEE. But the sheep brought in there; there were some sheep that came from Jemez this spring?

Mr. MONTROYA. From Jemez, that is not from Cochiti, it was the Jemez. Now, it seems to me that we are involving with our grant that I think we are the first privileged to have that land, instead of somebody else.

Senator CHAVEZ. According to the testimony of Mr. Hovey, that is correct. You were allotted that particular piece of land by the board duly created. The only question is whether you are using it. If you are not using it, there wouldn't be anything wrong to have somebody else graze a cow.

Mr. MONTROYA. How about if you give these other people grazing lands where they are going to water the cattle or animals they are going to put in there? They have got to come through into our grant, because they haven't got no water, where to water them?

Senator CHAVEZ. Something was said about a ditch. I don't know where it is.

Mr. MONTROYA. Right in our grant.

Senator CHAVEZ. Why don't you use that ditch for water?

Mr. MONTOKA. Well, be more conflict if they give to somebody else.

Mr. LEE. Can I explain this? Under the Taylor grazing law it couldn't give it to anyone else but your pueblo, as you know. We had allotted it to you. Now, in the past you have rented that land. The Pueblo has rented it 1 year to Hugh Bryant. I remember another time you rented it to other people to come in there.

Mr. MONTOKA. We didn't rent it to graze there; we leased them to go through.

Mr. LEE. Hugh Bryant leased it for quite a while, didn't he?

Mr. MONTOKA. I don't think he did; no. We just leased them to go through for the right of way.

Mr. LEE. But the point is, they want you to understand, that with your commensurate rights you people have a right to use it. The question is whether, when you are not using it, if somebody else can use it until such time as you were in shape and had stock enough to use it. That is the question here. We are not trying to take it away from you.

Mr. MONTOKA. No; but then you see, now we are able to draw water there, you see, to have it watered close to the pasture. We are going to use it.

Senator CHAVEZ. When do you think you are going to get a windmill up there?

Mr. MONTOKA. That depends on the Indian Agency. They are the ones that have got to do it.

Senator CHAVEZ. I think the committee would be interested in this point, with reference to the use of your own money; now you have some money, as a pueblo, have you not?

Mr. MONTOKA. Not as a pueblo, the Treasury of the United States.

Senator CHAVEZ. But it belongs to the Cochiti Indians?

Mr. MONTOKA. Yes.

Senator CHAVEZ. When you need some of that money, you have to go through the agency?

Mr. MONTOKA. We have to go to the agency. That is the way it comes.

The CHAIRMAN. Are there any questions from anyone? All right, Governor, that is all.

Mr. DIEGO ABEITA (Isleta Pueblo). I would like for you to state the population of the Cochiti Pueblo, so the committee can understand how many the land is supporting.

Mr. MONTOKA. There is 335.

Senator CHAVEZ. That is the population, men, women, and children?

Mr. MONTOKA. Yes, sir.

The CHAIRMAN. Is there anything else on this subject?

We are going to pass on to another subject. You wanted to make a statement, sir?

Mr. STOVER. Mr. Chairman, if you would permit, I would like to call a witness to explain the use of the reservation land at Jicarilla, so that the record might be clear.

Mr. LEE. We admit the grazing is deferred.

The CHAIRMAN. Very well; state your name and your residence and your official position, if any.

STATEMENT OF EVAN L. FLORY, REGIONAL CHIEF OF SOIL AND MOISTURE CONSERVATION, UNITED STATES INDIAN SERVICE

Mr. FLORY. My name is Evan Flory, and I am regional chief of soil and moisture conservation for the Indian Service at Phoenix, Ariz.

The Indian Service has an obligation to protect the resources of the Indian lands for the Indian reservations in the Southwest region. Some of them are understocked. Some of them are overstocked. The carrying capacity on the Jicarilla Reservation is not more than the number of stock that they have on the reservation.

The area in question was released from lease some years ago, and it was felt that it needed a rest for a short time in order for the vegetation to recover its vigor and productivity. In 1940 and '41 we had a very fine year, plenty of grass on the rest of the reservation. Last year there wasn't enough water adequate to utilize the grass on the area in question. Water has since been developed, and full use will be made of that area this coming winter. If grass is not knee-high at the present time on that area, there is not going to be feed during the coming winter.

When you practice deferred grazing you will have a full vegetative growth of the season available at this time of the year. On many of the reservations in the Southwest attention has been called from time to time to the fact that feed is available and not being used. But the general practice is to defer pastures and rotate pastures. That program is not complete at the present time, but the Indians have been making improvements every year in making more uniform use of their vegetative resources.

I said a while ago no reservation is understocked; on some reservations, however, we have areas which are heavily overgrazed, and other portions of the same reservation which are not properly utilized, because it is not possible to develop water in all cases, and the complete movement of stock has not been entirely worked out.

The CHAIRMAN. All right, sir, thank you.

We will pass on to another subject. Again I want to go back to the subject that was deferred the other day to make this record complete here and to protect this committee at all times. On the opening day it was announced by Mr. Stewart that a group of Navajo Indians wanted to be heard that day. I called for them and asked them to testify, and Mr. Stewart asked that it be deferred to the following day; asked that it be deferred until the evening; and that day our investigator advised us that Mr. Stewart had advised him that they preferred not to be heard. The record so stands.

Senator CHAVEZ. Mr. Chairman, one Navajo, Deshna-Clah-Cheshiligay, chief of the Navajo Rights Association, an organization that doesn't get along with the Bureau, requested me last night, if it was possible for the committee to hear him, he would like to be heard.

The CHAIRMAN. We will hear him now. Will you come forward, please?

STATEMENT OF DESHNA-CLAH-CHES-CHILIGAY, SHIPROCK, N. MEX.

The CHAIRMAN. Do you speak English?

Mr. CHILIGAY. A little; not much.

The CHAIRMAN. Take your time and speak plainly and slowly. The reporter can get your expressions. Tell your story just as you want to, without any fear of anything.

Senator CHAVEZ. Tell the committee your name first.

Mr. CHILIGAY. Deshna-Clah-Ches-Chiligay.

Senator CHAVEZ. You live where?

Mr. CHILIGAY. I live at Shiprock, N. Mex.

Senator CHAVEZ. What district of the Navajo area is that?

Mr. CHILIGAY. Northern district.

Senator CHAVEZ. Have you an official position among the Navajos?

Mr. CHILIGAY. Yes, sir; I am chairman of the Navajo Rights Association.

Senator CHAVEZ. Are you a full-blooded Navajo?

Mr. CHILIGAY. Yes, sir.

Senator CHAVEZ. Were you born in the area?

Mr. CHILIGAY. Yes, sir.

Senator CHAVEZ. Now tell your story.

Mr. CHILIGAY. Ever since Navajo Nation came back from the Battle of Redondo, or Fort Sumners, my people have abided by the treaty which was made at that time, in 1868. My people made an agreement with the Government of the United States, and this treaty the Navajo Nation abided by. And as the Navajo Nation were very small in numbers at that time, they have increased greatly up to the present time, something like around 50,000 Navajo Indians. We are progressing rapidly, and we want to go ahead. We do not want to stand still, for some bureau of the Government, particularly the Indian Bureau, to let my people stay in one spot and be looked at from outside, as sort of a curiosity, something like buffalos fenced up in the area.

People that don't know what buffalo is will go there to see what buffalo looks like. I don't want my people to be looked at that way.

The present Indian Bureau had, ever since it came to administrate Navajo Nation, have administrated according to what I said about the buffalo. Now we, the Navajo Nation, have many grievances, ever since present Indian Bureau came into existence. We are in confusion; we don't know who to go to. There are too many bosses on the reservation.

Senator CHAVEZ. White bosses or Navajos?

Mr. CHILIGAY. White bosses; and of course we have the Soil Conservation Service administrating to our people that wanted to try to go ahead, through the Indian Bureau. The Indian Bureau takes it, then the present Service comes in, and then the Agriculture Department comes in, and then of course there are many officers under them, and too many regulations has been put to us. Some of them which we do not understand, which we cannot understand, yet today it is too complicated for my people.

For this reason the regulations were drawn up, against the wishes of my people; and to enforce these regulations against the wishes of the tribal council, law and order has been set up to enforce these regulations. That is the un-American way of doing things in the

United States, are these regulations that are affecting my people.

Senator CHAVEZ. The law-enforcement branch is another branch of the Bureau?

Mr. CHILIGAY. Another branch. It is in the same Service, but another branch to enforce these regulations, which were drawn up against the wishes of my people, to enforce the Indian Bureau's regulations. And under Mr. Fryer, the general superintendent, things got worse and worse and worse, and the Indians, the old people, the old-timers, they even could not speak. When they do speak and try to explain, he did not understand them. The regulations affecting the grazing, regulations which is put before them time and again, the Navajo Indians, the old people, and even crippled people, tried to explain that they didn't know what the regulations meant, and would like to have it explained more fully to them; and the Indian, he is thrown in jail, time and again, under Mr. Fryer. Of course these regulations has been established, and still are enforced.

Mr. STEWART. These are grazing regulations?

Mr. CHILIGAY. Grazing regulations.

The CHAIRMAN. Where is Mr. Fryer now?

Secretary CHAPMAN. He is not with the Service any more.

The CHAIRMAN. Well, what other service did he transfer to?

Secretary CHAPMAN. He went to the War Relocation.

The CHAIRMAN. He has charge of the Japs now?

Mr. ADAMS. He is in Africa, with the Rehabilitation.

Senator CHAVEZ. Military or civilian?

Mr. ADAMS. Rehabilitation.

Mr. CHILIGAY. Some of the old employees that he worked with, some of them were still in the Service here. Of course, they are under the Soil Conservation Service.

And now, you see that we don't know who our bosses are, who to go to present our grievances. We would like to have as a superintendent that we can go to and discuss our problems with, in the American way. Up to the present time, on the reservation and off the reservation, the Navajos still are in confusion, because a lot of improper administration to the Navajo Nation is going on. The Navajos are requesting, today, that they want the Government to look into their cases, and have more in a better way than what the Indian Bureau is trying to make for the Navajos, and an agent that will look into their cases, and that will give them a better management on their reservation.

We are looking up to the time when we can compete with our white brothers.

Under this court system, on the reservation, the cases are tried without a jury. Policeman, when he makes the arrest, arrests the Indian, and the judge of the Indian court; those two are the only ones. They are the prosecuting attorneys, or whatever they may be called, but the person having trouble has no defense. If he tried to get one, he is charged with contempt. If a man tries to help him, he is thrown in jail, and sometimes they both have to go to jail.

That sort of business, on and off the Reservation, affects the Navajo and altogether brought confusion upon my people; and of course, the Soil Conservation Service, we have outs and outs.

The CHAIRMAN. What was that last expression?

Mr. CHILIGAY. We have it out and out with the Soil Conservation Service. Of course, their policy, I suppose, is a new branch of the Government, which most of us here, yesterday and today, and day before yesterday, most of the white people, even though they are smart people, and have been educated for years and years and hundreds of years, still don't understand the Soil Conservation Service program.

Now, I don't see, when just in a hundred years—1868, that is a little over 70 years—I don't see how we can understand their program. As I had a large flock of sheep, one time when the Soil Conservation Service came into existence, forcing our agents—that is, they are forcing our agents like you would do when a bull gets naughty and you can't manage him, you have got to put the ring through his nose to lead him around. The Soil Conservation Service is leading our agent around, so the agent is confused, he is in confusion.

That is the way we look at it, that is the way the whole thing is. I had a flock of sheep; well, they told me to reduce it.

Senator CHAVEZ. How many did you have?

Mr. CHILIGAY. I had close to 2,000 head, one time. I had close to 300 head of cattle, too. They asked me to reduce; and I only got about 350 sheep units today. But every now and then they come to me and say, "How many sheep you have got? You count your sheep, you count your sheep." Well, if I don't count my sheep, I have to go to jail. That is, the Indian court, without defense, without nobody to present my case. Finally, they told me to go out: "You go off the reservation: the surplus animals you take off the reservation."

Well, I tried to do that.

Senator CHAVEZ. Who told you to do that?

Mr. CHILIGAY. The Window Rock Agency. So I went around, scouted around all over the country south of Farmington, off the reservation there, and I found a Navajo Indian living over there. I asked him if he had any land around there that he don't use; so he say he got a little piece up there, an allotment. I say to him, "They told me to get off with the surplus animals that I have." So he say he consented to my wishes, and we went to the subagent of Window Rock, and he asked me to fill out papers. When I start to fill those papers out I asked questions about the forms, and came to find out that it was around about what when I took my sheep off the reservation, just as soon as I pass over the line the property becomes the property of the other fellow that I am supposed to loan, or just give it to him, so that I might increase my holdings off the reservation. But the thing was ruined as soon as I cross the reservation. "The whole thing was not mine; so I said to myself, "If this thing is that way, I might as well sell them and use the money to my pleasure."

A lot of these things go on. That is the kind of set-up. I say—

Senator CHAVEZ. How were the reductions made? You said you had 2,000 head of sheep. Did they ask you to sell to him?

Mr. CHILIGAY. They don't ask me; but they force us to.

Senator CHAVEZ. Tell the committee how they went about it.

Mr. CHILIGAY. Well, I say something about the regulations. The regulations are drawn up by the Indian Bureau, and, of course, we don't know when we go to Washington to present our cases to the Bureau heads in Washington. He refers it back to the tribal council, and the tribal council meets and tries to correct these mistakes. The Bu-

reau head won't listen to us. Just like recently, the tribal council, the Commissioner, won't even listen to us.

How are you going to get along with a man of that kind? How are you going to thresh your troubles out? We like to have a man we can plan our things with, and we want to go ahead. Of course, you know that we are the first Americans on this continent, and we want to be alongside with our white brothers. We don't want to have no friction; we want to get along.

So there, I am asking the Government, through the committee, to postpone all what they are trying to do with us, the program what they have now. Postpone it until everything quiets down, until the United Nations win the war; and several years afterwards, when everything quiets down, then we talk the thing over and thresh it out.

Senator CHAVEZ. You want to do for the duration what other Americans want to do and then afterward you want to do what the other Americans want to do.

Mr. CHILIGAY. We want everything in the American way, in the democratic way. We don't want to sneak around and do something here, and blame it on another Bureau agency; another Bureau agency would blame it on the other fellow.

Senator CHAVEZ. Well, there is only one redeeming feature about the whole situation, and that is that the white man is in the same shape.

Mr. CHILIGAY. That is the way I look at it. [Applause.]

The CHAIRMAN. Anyone else care to be heard now?

Is Mr. Walter Sarracino here? If you will please come forward, you may make any statement you see fit. Please state your name for the record, and where you live.

STATEMENT OF WALTER SARRACINO, LAGUNA PUEBLO, N. MEX.

Mr. SARRACINO. My name is Walter Sarracino, from Laguna Pueblo.

The CHAIRMAN. For whom do you speak?

Mr. SARRACINO. Right at the present time I will speak for myself and my sister, but I am representative from our pueblo in regard to their interests.

The CHAIRMAN. Very well.

Mr. SARRACINO. While it may come up a little later on, I would like to say something in regard to my people, which I have always been interested in, tried to work in the interests of my people.

The CHAIRMAN. You may proceed on that.

Mr. SARRACINO. Right at present time, this is personal holdings which we have, a little ranch on the Canyoncito area on the Rio Puerco; took a homestead up, father and I, about 1912, and we have been ranching there ever since, over 30 years. We had at the beginning, when we took up this place, we live according to regulations of the homestead. We built home, corrals, fences, and earthen tanks, and whatever is available around there in railroad land, we lease it; and we lease this here from State land; which I can show you the old leases that we have from the railroad, since 1917. I have them right on my person here; and the leases from the State; and we have another homestead.

We took my sister, she took up homestead there, in section 30; and my father took up another homestead, half of this section 60, town-

ship 9, which is 320 acres. Then he bought a citizen homestead on section 34, and we have had control of section 32, as a State land; and on this here we have a small permit description on this holding. But after that, when this law came in, where the railroads discontinued holding their rights, why, we had to give up our leases; and we have around, over a thousand acres of citizen holdings, acres on there which we pay taxes on.

Senator CHAVEZ. That is land that the family owns?

Mr. SARRACINO. Yes, sir. There is a lot of them come up here and stated about the soil conservation. It came in, and we were sitting there; why, just as the man stated, we don't know who to go to. So finally, as Mr. Fryer was in charge from this office, here in Albuquerque, at that time, around 1938, we went to him for permit on that land.

Senator CHAVEZ. On the land you had formerly leased from the railroad?

Mr. SARRACINO. Yes; and, at that time, I think it was under discussion that you people had yesterday on No. 7, Navajo area, Canyoncito area. They took another area at that time, and it changed again, and it was thrown under the head of the Indian Service here in Albuquerque.

So that agreement that I had with the Forest, at that time; it was no good. Then the agreement that I made with Mr. Fryer, at that time; we made it for 5 years. I have here the agreement with me, the one first made.

Senator CHAVEZ. With Mr. Fryer?

Mr. SARRACINO. With Mr. Fryer.

Senator CHAVEZ. First you were leasing from the railroad?

Mr. SARRACINO. Yes, sir.

Senator CHAVEZ. You were leasing State lands?

Mr. SARRACINO. Yes, sir.

Senator CHAVEZ. Then the matter was exchanged, and it was thrown into the Canyoncito area?

Mr. SARRACINO. Yes, sir.

Senator CHAVEZ. After that it was changed to another agency?

Mr. SARRACINO. Yes, sir.

Senator CHAVEZ. And finally to the Pueblo Board here, or to the Pueblo Agency?

Mr. SARRACINO. Yes, sir.

Senator CHAVEZ. But the first one that took it after the exchange was Mr. Fryer, the superintendent of the Navajos, and you went to him and tried to lease that land from that agency?

Mr. SARRACINO. Well, I wanted to have some kind of agreement, so we could run our stock in there.

Senator CHAVEZ. And you did?

Mr. SARRACINO. Then I did.

Senator CHAVEZ. Is that the agreement that you have?

Mr. SARRACINO. It is right here.

Senator CHAVEZ. For how many years?

Mr. SARRACINO. Five years.

Senator CHAVEZ. Commencing when?

Mr. SARRACINO. Around October 1938.

Senator CHAVEZ. When did the Pueblo Agency get control of your area?

Mr. SARRACINO. I can't give you the exact date, but according to this agreement, the agreement I got was on January 8, 1940.

Senator CHAVEZ. From the Pueblo Agency?

Mr. SARRACINO. The Pueblo Agency.

Senator CHAVEZ. Very well, go ahead.

Mr. SARRACINO. And I was told that the agreement that Mr. Fryer as made was no good; it was not strong.

Senator CHAVEZ. He belonged to the Indian Bureau; didn't he?

Mr. SARRACINO. Yes; but that is what I didn't understand. And this agreement was made again, from the Indian Office here, and it is just made for a year. It could be revoked any time, and is just an agreement. Like this gentleman just said, how can a man make improvements on ranches or other things? He would be afraid to spend his money, if they are liable to take it away from him most any time, and when you have no protection whatever on your rights, well, I don't know. A fellow don't know where he is, and after this land was exchanged and turned into Navajo, well, the Navajos could graze me all over with the sheep. I had no more protection. They told me that they could graze me right up to my door, which they did. They make that, after they heard this thing, that it was open for them, they all came up there in our area. They built corrals on the places there, especially on section 28, on the northeast corner, where my brother has his holding. There is big corrals still there. The Navajos stayed here for 2 or 3 weeks, I don't know, and that is what ruined the country, too, staying in one place. That is what the process is supposed to be, to move from one place to another, without staying in one place.

Then, another one on the northwest part, he stayed there for about 2 or 4 weeks, too; and on the south side, too, the same way; and I don't know what to do. I don't have any more protection.

Senator CHAVEZ. Did you take it up with the agency?

Mr. SARRACINO. I tried to, but it was turned over to them. I didn't have any more chance to go anywhere, and we were told that that was the law.

While I am here, I have no grudge personally against any of the office force. But what I want is some protection. Where we have been holding this grant, where I could graze my stock, that is what I want to know, like we have been grazing before. But the way it is, I am standing here, and I can't make no improvements. I even went up to the office, and tried to get a permit to build horse pastures, or build a few tanks. They told me if I build the tanks, they have to be \$500 tanks. But I have no protection that these Indians could come right in there and water their sheep. We have an earthen tank up there, which we spent around a thousand dollars on. And ever since we take this homestead up there, the Navajos comes in and water their sheep, and they water what stock they have down here. I tried to raise just as good stock as like any of you men have good horses, and more good studs, but I have no pastures to put them in.

When these people find out, down below, that I am on top of the mesa, they throw their horses in there; so they are going to get the benefit out of it, and I have to go to work and discontinue my studs and make workhorse out of them.

So all I am asking is some kind of a protection, where I could continue grazing, like we have been before. That means my two sisters—one of my sisters is a widow, and I am looking after their interests—when on the outside—the Pueblo grant, you understand. But it is no longer outside, it fell inside the Navajo area.

Mr. LEE. Can I ask you a couple of questions? You have a boy the Marines, who volunteered in the Marines, down at Guadalcanal, didn't you?

Mr. SARRACINO. Yes, sir.

Mr. LEE. On this land you own outside, you have always paid tax on it, haven't you?

Mr. SARRACINO. Yes, sir.

Mr. LEE. Aren't you a delegate, by your people of Laguna, Washington? Didn't you go there one time? I think I remember seeing you there.

Mr. SARRACINO. Yes, sir. On that question that you asked, that is the reason I tried to hold this land, for the boys when they come back so they can enjoy it again. But the way it stands, what is a man going to do when you have no protection, and you are trying to live like the rest of the citizen people?

The CHAIRMAN. Who is your superintendent?

Mr. SARRACINO. My superintendent is Dr. Aberle.

The CHAIRMAN. What is the condition of your people? What is the feeling of your people, your Pueblo people, with reference to the administration of your reservation, and the Indian Service, generally speaking?

Mr. SARRACINO. Well, before this Soil Conservation came in, our people in Laguna, well, they were pretty well-to-do; just like when we first hit that First World War. They came out, and asked if they could buy bonds, at that time; and we had a meeting in Laguna, and presented this case to our people, our stockmen, and in about 5 or 10 minutes we had \$30,000 bonds bought right there.

Senator CHAVEZ. The Lagunas are generally stockmen, aren't they?

Mr. SARRACINO. Yes, sir.

Senator CHAVEZ. Cattle and sheepmen?

Mr. SARRACINO. Yes, sir. But today you can have a meeting for weeks and months, and they couldn't raise ten or five thousand dollars. That is the difference now.

On reductions, I am sorry to say, there is no regulation: there is no system. If they were going to reduce it, like that man said, he is not the only man that really went down. We have got a lot of people that really went down, too.

I have one little instance right here with me; it was sent in to us when we were going to Washington to present to our Commissioner. This man got some sheep, like some that were asking questions. He had 175 head of sheep, and he was supposed to pay \$85 a year back to the Government. He came around to see what could be done: that after the reduction, he had only 35 head of sheep, from 175; and he still owed the Government. How was he going to pay this back? Not just only this one man, there are several of them in there.

I am not afraid to testify it. That is the reason they sent us to Washington, to try to see our Commissioner, and see if we can make some kind of adjustment on this here reduction. But just as that

an said here, when we went in his office, we weren't very well received there in the office. We tried to present our case in a way here we could try to get together; but no, he wouldn't listen.

The CHAIRMAN. Who wouldn't listen?

Mr. SARRACINO. Our commissioner, John Collier.

Senator CHAVEZ. You made a trip clear to Washington, at the expense of the Laguna Pueblo?

Mr. SARRACINO. At the expense to the Pueblo Laguna, because it was hurting them on this reduction. When we got there, we went up; we was going to Ickes, but at that time he was in New York. He was supposed to be there for about 3 weeks, and we couldn't afford to stay 3 weeks up there; so we had to—there we were, we didn't know where to go. So finally we decided to go up and see our Senator, and see what he could do for us; so we went to see him. I guess you will recall that we came into your office at that time, and we explained this thing to you, didn't we?

Senator CHAVEZ. That's right.

Mr. SARRACINO. And after discussing it, we had a date to meet with Mr. Collier, didn't we?

Senator CHAVEZ. That's right.

Mr. SARRACINO. And he didn't come, did he?

Senator CHAVEZ. That's right.

Mr. SARRACINO. I think he sent Mr. Stewart to your office, at that time.

Senator CHAVEZ. That's right.

Mr. SARRACINO. And we discussed this thing. I remember it very well, just like yesterday, what you said to Mr. Stewart here. You did not mention his name as Mr. Stewart, you said, "Jim, what is the matter down there with the Bureau? We are having so many complaints, the same thing as this here." Isn't that what you said to him?

Senator CHAVEZ. That's right.

Mr. SARRACINO. Well, you said, "You fellows ought to go down and do something for these people. One thing, Jim, I want you to do," you said to him at that time, "to go down and try to adjust that. Will you promise me that, Jim?"

Senator CHAVEZ. That's right.

Mr. SARRACINO. And Mr. Stewart said that he would. He came down here at that time, and no adjustments were ever made. It is still running just the way as when we had the meeting. Our Commissioner was there when we were holding this meeting. He was so anxious to get out; he wants to go to Navajo country; no business ever there; and left the council and went. What he promised would be made with us never has been carried out.

The CHAIRMAN. Was Collier out here himself?

Mr. SARRACINO. Yes; he came out here.

Senator CHAVEZ. As a result of that conference in Washington with Mr. Stewart, he promised to come and look into the matter. The boys appealed to me, and it appeared that they had a reasonable request, stated the conditions of the range, and said that they needed more cattle and more sheep, to give them a little chance to produce a little more for the market. They promised to do it; but I've never been able to get them to do a thing.

Mr. SARRACINO. That is the reason that we went. We inquire for more livestock, as our stock; and what our people give us to try to have it increased.

Senator CHAVEZ. How do the people in general feel toward the position of the authorities, the Commissioner's office? Are they satisfied with their work?

Mr. SARRACINO. Well, just as I stated, I guess you could judge it by yourself, the way it has been carried out.

Senator CHAVEZ. Has any effort been made to intimidate any of the members of the Laguna Indians, with reference to reductions or other regulations, by officials of the Bureau, or do they just do nothing?

Mr. SARRACINO. Well, it is just about the same, never been doing anything hardly. Might be a little increase a little later; but it was a very little increase, when we came back from back there. I know you gentlemen, Senator, you are here to try to adjust this here; not just for the outsiders, but with the Indians. Isn't that true?

Senator CHAVEZ. That's right.

Mr. SARRACINO. But there were rumors around that the McCarran committee is coming out, and Mr. McCarran, himself, he is against the Indians. He is going to take the land away from them. And Mr. Chavez the same way, our Senator. That is the way it was put before the Indians.

Senator CHAVEZ. Who put it before them like that?

Mr. SARRACINO. Well, the parties—I would rather not mention.

The CHAIRMAN. I think it should be mentioned.

Mr. SARRACINO. The party that is looking after the Indians.

The CHAIRMAN. Who is it?

Mr. SARRACINO. Just the party that is looking after the Indians.

The CHAIRMAN. An Indian Service employee?

Mr. SARRACINO. Indian Services employees; that you were coming out to take the land away from the Indians.

I was trying to explain, if it wasn't for that, because our Senator knows that the Lagunas are always stockmen and depend on the stock. He knows this; we haven't got enough land. That is the reason, when they inquire for the Montana and Sedillo grants, he approved to pass it. Isn't that right?

Senator CHAVEZ. That's right.

Mr. SARRACINO. Because you find out the Laguna Indians needed that land, didn't you?

Senator CHAVEZ. That's right.

Mr. SARRACINO. That is the way I understood you in Washington. We asked him, when we went out back there, to try to get some kind of—

Senator CHAVEZ. It wasn't a question of land. It was a question of the number of animals that the Indian Bureau would let you raise.

Mr. SARRACINO. But still, we were asking, as you may recall, we would like to have this Montana-Sedillo into more of a firm, so the Laguna could say they owned it. You stated, I think, that it could be done, and passed by Congress; that you were willing to cooperate with the Indian Office if they were ready to push. Isn't that true?

Senator CHAVEZ. Yes; but are they ready? I'm still waiting, and I don't know how long we are going to have to wait. Maybe the wagon is going to break down.

The CHAIRMAN. Have you any questions, Mr. Secretary?

Secretary CHAPMAN. No.

The CHAIRMAN. This presents an interesting picture, I think, to you.

Mr. LEE. How is the grass out there in that area now? What is the condition of the range?

Mr. SARRACINO. It has been very good all this time; and what we were afraid of at that time, we were afraid of you looking over into the pasture and seeing the grass coming up.

Mr. LEE. Well, I was.

Mr. SARRACINO. That is the reason we tried to get the office to increase a little more, so we could use all that grass; but no.

Mr. LEE. I was looking at it every day.

Mr. SARRACINO. But I know I can depend on our Senators. They will do all they can, so my people could still hold them lands that they are holding on.

Mr. LEE. To keep the record straight, there has never been any protest by either livestock associations that you people shouldn't have those grants. We always admitted that. There has never been any protest to your office, has there, Senator?

Senator CHAVEZ. No and the position of the office has always been this, that the Indian must be protected, but must not be protected at the expense of the others. The others must not be protected at the expense of the Indian. Treat them all alike.

Mr. LEE. Well, that is all Mr. Sarracino is asking to be treated like anyone else.

Mr. SARRACINO. That is it. We would like to put a little more stock on this Sedillo and Montana. I think it is only running about six or seven to a section now. But just as the gentleman states, up north around the Cabezon, that is poorer country up there; and we ought to have at least 12 or 14 to a section; and still it wouldn't hurt that. I know it, because I spent 8 years on Sedillo grant, when we still had them cattle in there. We had over 2,000 head in there running at that time; and it never did hurt it.

Mr. LEE. It's in better shape now than it has ever been in a hundred years?

Mr. SARRACINO. Yes; because there ain't hardly enough stock in there. The Laguna people has got enough stock to use every bit of it, and then more, on this here ranch, and that is what we ask. We like to have a little more increase, and still hold just the way they are, for the benefits of my people there.

The CHAIRMAN. All right. are there any questions?

Mr. DIEGO ABEITA. May I ask a question to Mr. Sarracino? You were Governor at the time, I think, that the reduction of Laguna started. Do you remember how many sheep in aggregate the tribe had, the Lagunas had? Wasn't it 54,000 head?

Mr. SARRACINO. At that time we had—correct. We had around there.

Mr. ABEITA. How much was the total reduction?

Mr. SARRACINO. I think we have now around 23,000 in there.

Mr. ABEITA. Around 23,000?

Mr. SARRACINO. Around it there.

Mr. ABEITA. Weren't we all made to understand by the Government, that with these reductions we were paying for these submarginal lands

which were to be given to us, and we were paying our sheep; isn't that your understanding?

Mr. SARRACINO. Not exactly. Here is one thing we were promised at the time of the reduction. I was Governor at that time, and Mr. Fryer was on at that time. One, I want you people to reduce your stock, and I am going to get more land for you people. That is the promise that was made to our people there.

The CHAIRMAN. Did he say how he was going to get it?

Mr. SARRACINO. He didn't say exactly, but he said, when the Indian Office is going to get it for you people, if you make this reduction, we are going to give you 8 years' work if you reduce it; and I got up and said, "Eight years' work? I just can't understand that 8 years' work."

At that time, when the Soil Conservation Service was made, it was so much money, I guess you all understand. At that time they don't know which arroyo they want to dump money into at that time.

Senator CHAVEZ. What is the use of having the land if they won't let you use it?

Mr. SARRACINO. Oh, this year they promise us, they promise my people 8 years' work. We were supposed to reduce and get rid of all of that, goats, that was mentioned here yesterday. At that time there was a lot of goats on our reservation.

The CHAIRMAN. What are they used for? Are they grazed just as sheep are grazed?

Mr. SARRACINO. They use it for their own use, and in the camps they use them as a milk, and when the dry season comes they are the only ones that are left in good shape enough to use them. That is what they were using at that time. I think the sheepmen will approve that, that the goats were a lot better than sheep during that time, isn't that correct?

Mr. LEE. That is correct. They are more of a meat animal, and they give more food value in milk for the children than sheep do.

Senator CHAVEZ. And they can stand the drought better?

Mr. LEE. If properly handled, they are quite an asset to the range. In Texas they use them completely, to balance the range.

Mr. SARRACINO. I made a statement at the meeting at that time to the Indian Office. Maybe they still remember. I said that I just could not believe this work could be carried through 8 years. I said, "I may believe, if you people guarantee my people that you will keep them operating 8 years." He said, "No," he says, "we can't guarantee."

I know why, because the Congress is the party that appropriates this money, and we don't know what is going to happen in 8 years. Maybe it will come, and maybe it won't. We have a big war, and maybe the Government will call all that money, just as our Senator says, "There goes the airplane, buy more bonds." Maybe it's a good thing we didn't dump all that money into them arroyos. But I want you to understand, too, that we haven't got anything against the Bureau. I know they are trying to do the best they can, that is, the Bureau back there.

Senator CHAVEZ. In Washington?

Mr. SARRACINO. In Washington.

Senator CHAVEZ. Well, I don't like Washington any more than you do.

The CHAIRMAN. All right.

Mr. SARRACINO. So my people make the reduction on this year on the stock. It was not voluntarily made, it was promised to them; but finally we heard in different reservations that this here, that this reduction was voluntarily made by Lagunas. So, we bought with years work but it never went through, but we went through with our reduction. A lot of our men went broke, small men, like that man that was testifying here yesterday.

The CHAIRMAN. You made one statement there, and I didn't quite catch your wording. You said, "Was this reduction made voluntarily?" It sounded like it was "involuntarily." Was it made voluntarily or involuntarily?

Mr. SARRACINO. No, sir; it wasn't.

The CHAIRMAN. I wanted to get the word clear.

Mr. SARRACINO. A little later it came up, if we don't go according to this here, there will be no soil-conservation work, we are going to haul everything out here and put it some place else. But our sheepmen were a little scared and come right out. If they carry this out, our other nonsheepmen will have no work, is what they thought, so they had to sacrifice so they would go ahead, so they reduced their herds.

The CHAIRMAN. In other words, your sheepmen reduced, so that the nonsheepmen might have some benefits?

Mr. SARRACINO. Correct.

The CHAIRMAN. I am trying—I would like to ask you a question. Your pueblo lives as a community. Is that right?

Mr. SARRACINO. Yes, sir.

The CHAIRMAN. One for all, and all for one?

Mr. SARRACINO. Yes, sir; but I want you to understand, we are making living for individuals who got their own problems just like you people are trying to make their living. But just as that man says yesterday here, in regard to over-carrying capacity, we understand it; we are not trying to ruin our country by grazing, but it is already over-carrying capacity.

Now, this other man wants to come up and try to have a little more stock. Where would he go? They told us that the man was to start a business, and he has to go outside and lease the land, or get out and have to stock some place else. That is the way I was told.

Senator CHAVEZ. Anything else?

Mr. SARRACINO. On that, of course, they had pretty good leeway. When the offers come we could say we never made any such agreement. Why? Because the agreement was never made. At the meeting down there they made it at the office, and they left that 8 years out. But all my people understand that this 8-year work was supposed to be, and they took from all, the goats away from the poor old fellows that aren't able to go out and do any more work, but they were promised the work on different little places when the Soil Conservation Service came in. They did work maybe 1 or 2 months, and then they was throwed out and today they are trying to make their own living. Right in my own holdings, right in here. I have no protection whatever. I am going back to my personal holdings.

We have some private fence and different other things, and they have been destructed, and they broke into our headquarters to get provisions and ropes and other stuff. So I sent my sister's son-in-law

to go down to Canyoncito and see the range rider. I don't know what his title is; his name is Thompson, or Thomas. He made that report this year, and he says what happened; and Thomas turned around and says, "Oh, that is just a little thing. The Indian Office won't pay no attention to it." It is not a little thing for me.

Senator CHAVEZ. What about this law and order set-up they have, isn't that supposed to take care of things like that?

Mr. SARRACINO. They are supposed to enforce it. That is the way I got it. Well, we have a watering place in section 34 there, and it was skin dry, and I was depending on my tanks there. What happened, some of the outsiders there, neighboring people, they open the water faucet and let the water run on down to the creeks. I have had such a thing happen to me, back and forth like this; and I am here today to get some kind of protection on our holdings. I am willing to cooperate.

The CHAIRMAN. Are there any questions?

Mr. JOHN ALONZO. I would like, with your permission, to allow Mr. Beardsley to speak for us. He is the spokesman that has been elected.

The CHAIRMAN. Are there any questions of the witness before the committee? Do you wish to interrogate the witness? Do you want to ask any questions of this witness?

Senator CHAVEZ. You are from Laguna, too?

Mr. JOHN ALONZO. The governor of Laguna Pueblo. This is Mr. Eli Beardsley from Winslow, a member of the Puebla Laguna, a railroad man.

The CHAIRMAN. There was someone over here who wanted to be heard. I don't want to cut anybody out.

Do you wish to be heard, sir?

Mr. JOHN ALONZO. Yes, sir.

STATEMENT OF JOHN ALONZO, CORREO, N. MEX.

Mr. ALONZO. Mr. Chairman, in order to forestall the statements that Walter Sarracino has made, for the benefit of the record. I would like to get this straight in regard to what he said. He had been living on outside holdings, outside the Laguna Reservation.

To begin with, just as a matter of introduction, Walter is an uncle of mine, see, and he had left the family, prior to my return from the school. I had returned from school to assist my grandfather, so he and I had worked in together as partners, you might say. In other words, I was there to provide for him, see? Up until the days in 1938, after I left home for myself, which is off the reservation. I did that. At that time Walter Sarracino, who was operating independently, he was in the hotel business in New Laguna.

Well, it came to a time after I left home and went out for myself. my grandfather had asked them to be personal representatives.

The CHAIRMAN. Asked who?

Mr. JOHN ALONZO. Walter Sarracino. Now, then, this was along in 1937 when all this land program was at the beginning. My grandfather and myself had paid railroad leases on this particular township referred to up to this date, which I have a letter from Walter V. Woehlke, as chairman, and John Adams as secretary. In order to

clarify the whole matter for the record, we had to surrender our railroad leases, due to the fact of the Government purchase.

The CHAIRMAN. Who required you to surrender your railroad leases?

Mr. SARRACINO. Well, this letter—should I enter that in the record, or shall I read it?

The CHAIRMAN. Is it by that letter that you were required to surrender your leases?

Mr. ALONZO. Yes.

The CHAIRMAN. Who signed the letter?

Mr. ALONZO. Walter Woehlke and John Adams.

The CHAIRMAN. Very well, I think it might go in the record.

(The letter is as follows:)

INTERDEPARTMENTAL RIO GRANDE COMMITTEE,

Albuquerque, N. Mex., June 2, 1937.

Mr. J. J. ALONZO,

Corrao, N. Mex.

DEAR SIR: The Interdepartmental Rio Grande Committee is most anxious that you should place the correct interpretation upon the granting of a temporary grazing permit for the grazing season of 1937 on the area of withdrawn public domain and the railroad sections purchased by the Government within the Canoncito purchase area. The railroad sections in the area for which a temporary seasonal grazing permit has been issued to you was bought in order to enable the Government to exercise effective control over the area to prevent overstocking and overgrazing, to check erosion, and to bring about revegetation, while at the same time affording relief to the Navajo Indians whose reservations are enormously overstocked and in a state of advanced erosion. The objective underlying the purchase of the railroad sections by the Federal Government cannot be reached unless the Federal Government, through the proper agency, has complete control over the stocking and grazing of the entire area. It had been the intention of purchasing not only the railroad sections but also all of the limited acreage of private holdings within the purchase-project area, but a temporary scarcity of funds delayed the completion of the purchases.

As a result of the delay this spring, a situation arose which would have led to the overrunning of the entire area, including the land which you formerly had under lease, by outside stock. This development would have resulted in still greater overgrazing and additional damage to the Government sections, as well as the patented lands in the area.

In order to prevent this additional damage and to protect the land within this area, the Interdepartmental Rio Grande Committee induced the various agencies concerned with the administration of the land in this purchase project to agree to a temporary allocation of grazing use in the withdrawn area pending the completion of the purchase program, limiting this temporary grazing to the 1937 grazing season. This step was undertaken for the protection of the land and in order to give you additional time in which to rearrange your business in contemplation of the assignment of the grazing rights on this area to Indian use under conservative management. There would have been no need for this temporary allocation of grazing use if the purchases had been completed at the time when the railroad sections were acquired.

Now the necessary additional funds to complete the purchase program have been provided and you are being given an opportunity to rearrange your operations and to dispose of your holdings in the purchase-project area.

The Rio Grande Interdepartmental Committee is most anxious to have you realize that the grazing use allocated to you in the withdrawn project area is limited to the present grazing season and was made for your protection and for the purpose of giving you additional time to adjust your operations preparatory to the use of the grazing on the purchased lands and the intermingled public domain by the Indians. The provisions of the Taylor Grazing Act do not apply on the withdrawn area. There is no possibility of renewing these temporary permits beyond the present season. The committee hopes that this explanation will make clear to you the temporary nature of the concessions granted you in the purchase project and that you will make use of the opportunity to adjust your

operations to the conditions described above. It is quite certain that the Federal Government will put conservative management of the area into effect prior to the grazing season of 1938 and that this conservative management will necessitate the surrender of the use of the purchased railroad sections and of the withdrawn public domain by the present temporary permittees.

Very truly yours,

WALTER V. WOHLKE, *Chairman.*
By JOHN A. ADAMS, *Secretary.*

The CHAIRMAN. Now, go ahead.

Mr. ALONZO. The idea of the letter was at that time we was allowed a temporary permit just for the season, a seasonal permit, which was for the last year, in 1937, giving us to understand that we were no longer in a position to operate and continue our operations, but to get out and seek, and give us enough time to get out and see if we could make some arrangements for our future operations as well. It so happened, at the time, there was a wealthy Spanish-American, Ysidro Sandoval, who had at that time under his holding a township which was later sold to the Government, for the benefit of the Indians, in that Canyoncito area. The only one excluded out of the purchase was the State lands. I went ahead and acquired the State lands, for the purpose of blocking out with the Indian Service, for the purpose of my own individual protection.

Well, this was done, what I feared, in a systematic way, because at that time the Soil Conservation Service was supervising the area. So I have here, with letters, the agreement that we drew up on October 19, 1938, for the 5-year period, which will expire next month.

During that gathering, in order to work out this problem, we had a proposed boundary set up, which would be my north boundary, or the south boundary of the Navajo Canyoncito Grant. This exchange aggregated in the neighborhood of a little better than 2,700 acres, that is in lieu of exchange selection. These isolated State lands were turned over to the Indian Service for grazing use; in lieu was turned over to me this Government purchase area.

Well, going back to the date that I had left my grandfather, under this agreement and exchange; I think Mr. Dismuke is here in the house, and he is well familiar with this situation. Here is the whole situation of the agreement: that was supposed to be within the proposed boundary, which aggregated 2,700 acres. That was what the Indian Service had for an exchange; but I am annually paying to the State rental for these isolated sections. There was, I can't recall the exact figures, but it is in the agreement what I consider a surplus acreage of the State land. These, we agreed, that I would turn over my grandfather's—of course, he is dead now, he has been dead for the last 3 years—for his own personal use, and I would be paying leases on it right along. Of course, Walter was appointed as representative.

Now then, what I am trying to get in, gentlemen, for the record, as I said, I would like to continue that for the benefit of the record; but I have a personal problem here, which, in your presence and knowledge. I would like to consult the Indian Service people on, because, for the simple reason, I think they are to some extent responsible for this full-blooded Indian, who has never been educated. His name is Vivian Herrera, of Zia Pueblo. According to my understanding, he had been told to vacate the Reservation here at Zia, due to some religious difficulty, or something.

Senator CHAVEZ. Does the Indian Bureau take part in the religious business of the Indians?

Mr. ALONZO. To my knowledge, they don't seem to try to do something for this gentleman.

Well, this Indian had around in the neighborhood of a hundred head of cattle of his own at that time, and he didn't know who to turn the cattle to. He was throwed off the reservation, and finally a man from San Ysidro, Garcia, a Spanish-American boy, took hold of these cattle down to the Montana grant, and had them for a period of time. I don't know just how long; but finally they stayed there, until he moved down to what is now the Rio Puerco Bridge, on Highway 66, and located.

These cattle wasn't there a short length of time until he got a notice to buy him out. So there he was, with this man's cattle, and didn't know where to go; so they approached me, if I could accommodate this boy. I asked him if they had done anything about trying to get available land for him, due to the fact he was a ward of the Government, and still retaining his tribal rights as Indian. But nothing has been done now, up until this present date, and they are on this little set-up, this little ranching unit of my own, which is operated independently of the Indian Service.

Senator CHAVEZ. That is yours?

Mr. ALONZO. That is mine.

Senator CHAVEZ. They haven't a thing to do with it?

Mr. ALONZO. Under this exchange, a portion of it is under this exchange, and I have title holdings thereon. It is getting to a time with me as an individual, where I cannot continue to accommodate this boy no longer. Since there is all kinds of available land on these Government areas, it seems as though they ought to be able to accommodate them.

The CHAIRMAN. Let's see if I can get this clear. This boy was put off the reservation?

Mr. ALONZO. Yes, sir.

The CHAIRMAN. Which reservation?

Mr. ALONZO. From the Zia Pueblo.

The CHAIRMAN. He had some livestock?

Mr. ALONZO. Yes.

The CHAIRMAN. He took the livestock with him from the reservation?

Mr. ALONZO. That's it.

The CHAIRMAN. He came down here to the bridge on the river?

Mr. ALONZO. Yes, sir.

The CHAIRMAN. Then you had some holdings, and you accommodated the livestock up to the present time?

Mr. ALONZO. Up to the present time, which is about 2 years now.

Senator CHAVEZ. But in order to locate this bridge, that is within the Sedillo grant?

Mr. ALONZO. That is it.

Senator CHAVEZ. In Indian country?

Mr. ALONZO. Indian country, west of the Rio Puerco.

Senator CHAVEZ. And they sent him out of that country, too?

Mr. ALONZO. He had this cattle up on the Montana grant, which is up above, 10 or 12, or 15 miles.

Senator CHAVEZ. They got him out of there, and you accommodated him, so he wouldn't lose his cattle; but you are not in a position to carry on?

Mr. ALONZO. That is it.

At this particular moment the object in my mind, like as I said a moment ago, in your presence and knowledge, I would like to work out some kind of a solution for this Indian with the Indian Service, whereby they could find available range for him sometime hereafter, in the near future, when we can get together.

The CHAIRMAN. Who knows about this Indian; anybody? Who is the superintendent of that reservation?

Mr. STEWART. The Governor of Zia Pueblo could answer that.

The CHAIRMAN. What's the matter with your reservation authorities? I want to know from the reservation authorities what they know about this case. Are any of them here? There is no use calling on the Indians to answer such questions that the agents of the range should answer.

Mr. DISMUKE. The matters Mr. Sarracino and Johnny Alonzo were referring to, a three-way deal there, whereby we consolidated, agreeable to Sarracino and Alonzo, consolidated the Johnny Alonzo holdings, and gave Walter Sarracino a permit to graze 50 animal units yearlong within the Canyoncito area. Those agreements were made in 1938 and will expire this fall, still operating. As far as we intend, those agreements will be renewed upon their expiration.

Senator CHAVEZ. Let's go to the Indian that has a hundred head of cattle.

Mr. DISMUKE. I wanted to state this for the record.

The CHAIRMAN. What about this Indian here?

Mr. DISMUKE. What I know about that is hearsay. Let the Zia Governor tell about it. He is really just as——

Secretary CHAPMAN. He was talking about another Indian lease, weren't you?

The CHAIRMAN. This Indian that was put off the reservation with his livestock, and he has been accommodated here for about a year or a year and a half.

Mr. ALONZO. Two years.

The CHAIRMAN. Is there no one in the administration circles who knows anything about that case?

Mr. WHITAKER. I am superintendent of education of the United Pueblos Agency. I would like to testify for the record, Mr. Vivian Herrera, unless there are two persons of the same name, has been employed, first by the Santa Fe Indian School, and the Albuquerque Indian School, continuously, I believe, since I became associated with those schools, a year ago last June.

The CHAIRMAN. What has that got to do with this matter that is up now?

Mr. WHITAKER. I understood you wished to know about the livelihood of the Indian.

Mr. ALONZO. He is employed by the Indian Service on odd jobs at Santa Fe, and finally transferred to Albuquerque, and was employed here at the dairy, or on a farm, as a common laborer.

Senator CHAVEZ. He would still be with his cattle, attending to his business, if he hadn't been sent out of the Zia Pueblo?

Mr. ALONZO. That's right.

Senator CHAVEZ. And forced to let someone else take care of this cattle for him, because he didn't have anywhere to go; but he would be with the cattle right now, if he had a place to go.

Mr. ALONZO. I imagine he would.

Mr. DISMUKE. The matter of the expulsion of this Zia Indian from the Pueblo is not an agency action in any way; it is strictly a Pueblo matter.

Senator CHAVEZ. Well, I know; but hasn't the Bureau supervision over matters of that kind, where the very livelihood of an Indian is involved? Isn't it your duty to go down and find out what the trouble is?

Mr. DISMUKE. As to the use of the Pueblo lands, but we leave that largely up to the Governor. If he and the people expel him, that is their business.

Senator CHAVEZ. You don't protect the Indian and his rights at all, then?

Mr. DISMUKE. In a matter of that kind I say it isn't our affair.

Mr. ALONZO. Well, that is the point, right there.

The CHAIRMAN. I don't think we are going into any religious controversy.

Mr. ALONZO. Regardless of whether it be a religious matter, or whatever it may be, this gentleman, being an Indian without an education; just for a trifling matter, or trouble within the community; and the United States Government and the Indian Service as an agency; for them to stand back and see this injustice done, I call that——

The CHAIRMAN. The matter presents itself to the chairman of this committee thus: Regardless of the cause of the expulsion, the matter cuts itself up there. We have got nothing to do with the expulsion whatever, or what it is behind it. That is a matter of tribal relations, or whatever it may be. But it is an Indian with some stock out on the range, who seems to be taken care of by another of his tribe, and they are asking the question, Can there be range found for these livestock?

Now, that is the story, as far as this committee is going into it; and if there is such a thing as working it out, fine and dandy. It is an isolated case, and I don't know that we are going into it very deeply. But if the Indian Service, or some service having charge of the open public domain, can find a solution for it, it would be very advantageous if it could be done while this man is here.

Mr. ALONZO. Just a moment there, Senator; what I am after, at this point, is some assurance for this unfortunate Indian. Supposing that I decided to turn his cattle out, where should he go? That is the point. It looks like all of the available land we have been hearing about has gone to waste. We ought to be able to find a little feed for these cattle.

The CHAIRMAN. Has anyone in authority an answer to that question?

Mr. DISMUKE. So far as I know personally, Mr. Herrera has never appealed to us for relief for his cattle. If he will do so we will make an attempt to find a home for them.

Mr. ALONZO. If you will give me that assurance——

Mr. DISMUKE. We will do our best.

Mr. ALONZO. I will do all I can to help him out; I have done it so far.

The CHAIRMAN. Let's proceed here. Is that all?

Mr. ALONZO. Well, so far as that, that is all, Senator, for the time being. I am more interested in that matter than anything else. Thanks.

STATEMENT OF ELI BEARDSLEY, WINSLOW, ARIZ.

Mr. BEARDSLEY. What I want to say this morning is perhaps what has been said along the line of the Indian people. Perhaps very few of you people, that have never had any contact with the Indians, understand the way these people carry out their government.

The Indian Service has not attempted to interfere with any of our Pueblo governments. I want to say this much; it has been stated from different ones that so far as the Indian is concerned, you will all perhaps reflect and understand, since the landing of the white man on the eastern shores, he has gradually gone west. He has gradually shoved the Indian further and further from his possessions.

There came a time when the United States assumed—when I say the United States I means you citizens, because you are the ones that took on the responsibility of keeping the Indians. You made your treaties. I am sorry to say a good many of those treaties have not been kept.

In order that you may accomplish and bring about your obligations, you placed the responsibility in the Congress of the United States, so that they could function. The Indian was placed under the wardship, under the authority of what is now known as the Indian Bureau. Not caring to take its own responsibility, the state designated its power and authority to the Congress, and Congress designated a branch whereby that the Indians should be looked after, and that is the Indian Bureau today.

The Indian Bureau, so far as it is concerned today, has been assailed because it has tried to protect what few Indians there are left. The State is represented well here, and it seems that the idea, so far as we can gather, has been to take away, or, as I might say, that the cattlemen of this State of Arizona and New Mexico seem to feel that they must monopolize the whole grazing areas in these two States, regardless of whether or not the Indian has any right to graze, or to have any rights in the States.

I say this personally because I have experienced that the States are very much opposed and, in a way, have passed discriminatory laws which will not benefit the Indian. I say this, insofar as I have lived in these States, I have experienced that in a good many places.

There are, I say, people in this State that are willing to consider the Indian, his highest obligation toward him; and so I say that, so far as the Indian Department is concerned, they are trying to rectify some of the mistakes. You know and I know that none of us are without these things. Perhaps mistakes have been made in the Service in trying to handle the stock, in trying to keep the Indians as they should be. There have been a great many misunderstandings between the Indians and the "Big Father," as he calls the Government.

There have been up to this date accusations of improper conduct of the Service, misuse of the lands which they have prohibited the Indians from using as our outside livestock men have used theirs. Some of

these things that are being brought up the Indian knows well just the condition he has to go by.

When the time this great reduction came for the Indians we were told just exactly what was to come off. We explained to our people that conditions, the sacrifices that had to be made, in order that these range conditions can be brought back to its fullest use. The Indian really has sacrificed. He sacrificed three-fourths of his livestock. A while ago you heard a gentleman ask what the Indian had before the reduction of the stock on the Indian reservation. We had at that time about 55,000 head, on a small area, overstocked, which only had a capacity for about 18,000 head. We were told at the time that this area could not carry the number of head that we had. What must be done? That was the question brought up to the Indian; and the Indian himself willingly, whether he was willing, but he gave his consent to reduce in order that this grass may come back again so as to be used in time to come.

It is nearly 8 years now since that took place. Within the time we have not been permitted to increase because we wanted to get the grass and have it get a good stand. Many of you stockmen perhaps have noticed that there is plenty of grass on the Indian ranges. That is for the reason the Indian himself realizes that if he overstocks the range it will be in the same condition in no time, because we are not certain of these ranges. Therefore, we must conserve, to a certain extent; but we are in a position today to begin to increase on the areas that we held back so that it can stand to have stock on it.

Another thing we have consented to these things, is that the statement has been made that it was under certain conditions. Those conditions did not mature in that case, and it was not the fault of the Indian Service. It was the fault, I believe, in Congress, that the money had been pulled away. They have set out a program, and we were to follow that program. The program was laid down, and a certain amount of money was to be appropriated; but that money never came.

There we are, right there, and we are trying to blame the Indian Service and the other bureaus.

For my part, the Soil Conservation has done a remarkable work, on all these lands. What could I have done, if I was left to look after the soil erosions, and all these things? What could my people do? Although someone here said that we knew how to take care of these things, we may have known natural things; but the scientific way of doing things, as I believe, has done a wonderful thing in our forests, in our lands, and everything that pertains to the Nation and to nature.

Therefore, I can't see why we should condemn anything, until we have seen that it is not beneficial to the human race. I believe this way, that so far as we are concerned, the Indian has always been loyal. I hear a good many of you say you are a hundred percent American. I can go you one better. I am 200 percent American, because my forefathers were here, and they started to fight for their lands, in defense of their homes, ever since you can remember, any of you can remember, and still today he is fighting for his country. We all ought to prosecute this war for what we know, and for what we understand, to the democracy of the Nation. Democracy covers

a whole lot, ladies and gentlemen, and if we could understand it, all of us, this is no time to pick at one another. This is no time to bring up the question, whether you have the right, or I have the right. I consider that I have just as much right, and you consider that you have just as much right. We are spilling the blood of humanity, in order to maintain that.

Democracy includes the right and privilege, to the fullest extent, to individuals; and it gives us the right to do as we have done in the past. The American way of life, you all understand what that means. We are fighting for those things.

So, in behalf of the people, and my people, what we want is unity. Unity and consideration for each other's rights, to life, liberty, and the pursuit of happiness. That is all we ask, and what these people, these Indians want, is enough to make a decent living, and an honest living. That is all we ask for. We are not here to plead for land that we cannot use; we are pleading to give us a chance to live.

You stockmen have, some of you, I don't know how many sections, each one of you; and perhaps you are making money to put it in the bank. That is not the idea of the Indian. He may have that, but he hasn't got that. He has not enough land. We say, we still cry, there is not enough land for the Indian.

When I mentioned, a while ago, that the Indian at one time had 55,000 head to a small area, but we are back to not half. At that time the Indians made a fine living off the number of stock that they had. At the present time there is not enough to make a decent living out of it. Therefore, we are only pleading that more land be granted. We feel, as some of you have said, you have prior holdings, and I can say, we had prior holdings, before any of you came here. [Applause.]

And that is all I am asking for. So far as the things have been spoken here, the Indian feels that, so far as the Bureau is concerned, they still adhere to the Bureau, because the Indian has the protection. If he did not have the protection, the Indian would become a tramp right now. And besides, the State has not consulted us on any question, whether we desire to come under the State, or whether we still wish to remain as we have. The State has not said how they are going to care for us. They have not given us any assurance as to what protection our land will have. Perhaps there is a time coming that we may sit down and reason these things over, because it is coming eventually.

The American Indians will merge into civilization, and the Indian will take up his responsibility, just the same as anybody else. The time is not quite ripe. We need a little more time. Some of you got the idea, perhaps, that it would be better for the Indian to be turned loose, as the black man was turned loose in 1865, or somewhere around there. But we feel that we still need the protection. Many of you say, "Why, you are able to take care of yourselves." I am; I am able to take care of myself as an individual citizen; but as a tribe, as a race of people, the Indian is not ready. He must have a little more time. We must give him the full benefits of your institutions, education, in order that he may assume his responsibilities when the time comes. Preparation is needed. A man that is going into a race must have preparation. I know that because I used to be a long-distance runner when I was in school. I had to train. I had to prepare, in order

that I may enter the race; and that is the same thing that holds good with the Indian people.

I believe when I say these things, I represent the sentiment of the people of all these pueblos throughout this valley; and I want to say that, insofar as the difficulties that have been presented come up among the Indian people, the Indian people have their own form of government, just like this case, that this boy has been, perhaps, ousted out of his reservation. That is entirely up to the Indian people themselves, within the community. We have certain laws and rules which govern the people of that particular village. Any difficulties, any problem that arises within the pueblo, the pueblos themselves take care of that. It is not up to the agency.

The agent has been accused of meddling with things, pueblo affairs. So far as I know, I don't know whether she ever has; but so far as we are concerned, she has never meddled with our affairs, because, as I have said, the affairs of the people, it is up to them. It is their problem, and they must discuss those things and work out a solution to their problem; and that, I want to be understood, because there has been some statement made here that it looks like no one knows anything about these things. But there is the whole situation right there. It is up to them to solve that problem. And in conclusion, I will say this—that, so far as the Indian people are concerned, with the stock at the present time, they have a chance to sit down with their agencies, different agencies, and work out the stock problem among themselves.

It is perfectly agreeable with all these Indians that they can and will, perhaps, be looked after in a manner which will be satisfactory to all of them.

I thank you.

Mr. LEE. How many years have you worked for the Santa Fe Railroad?

Mr. BEARDSLEY. Twenty-two years.

Mr. LEE. You live in Winslow, Ariz.?

Mr. BEARDSLEY. I live in Winslow, Ariz., but I have stock out here.

Mr. LEE. You haven't any cattle.

Mr. BEARDSLEY. I did have some sheep, but I had to sell them.

Mr. LEE. And you haven't any now.

Senator CHAVEZ. Is that due to the program you have been talking about?

Mr. BEARDSLEY. Yes, sir.

The CHAIRMAN. We will take a few minutes recess.

(Recess until 10:45 a. m.)

The CHAIRMAN. The meeting will come to order.

All right, sir, you may proceed. What is your name?

STATEMENT OF DIEGO ABEITA, ISLETA PUEBLO

Mr. ABEITA. My name is Diego Abeita, Isleta Pueblo, located 12 miles south of here, a plat of which I have here.

Now, I understand you are a committee on lands. I will explain the situation of our Pueblo, which is a grant we hold a title to in fee simple. As Senator Chavez knows, it is made up of three grants, the Isleta Pueblo grant, granted to the Indians by the Crown of Spain;

the Lo de Padilla, bought from the native people in 1750—we bought that area of 51,000 acres from the heir of Diego Padilla in 1750—and the Joaquin Sedilla-Antonio Gutierrez grant. We purchased the two grants outright, and we hold them as anybody holds title to their property.

The CHAIRMAN. Those grants, one came from Spain during the time of the reign of Spain over Mexico, and the others were purchased by your Indian group individually from whom?

Mr. ABEITA. From the heirs of those who acquired the grants, from the Crown of Spain, at the same time.

The CHAIRMAN. All were Spanish grants, originally?

Mr. ABEITA. The title of all the three grants dates back to the sovereignty of Spain. We lost some of that land, 14,710 acres, which was bought by the submarginal land purchase.

This is to kind of clear the issue—you want to get into something else; clear the issue.

The Lo de Padilla tract was bought by the submarginal land program, 14,710 acres; and 10,000 acres on the Rio Puerco side was bought by the same program, as a correction area. Inasmuch as we had purchased those on previous occasions, but had lost them through the negligence of the Government in representing our claims, or the recognition in the prejudicial errors that occurred since we acquired these lands, these are not in conflict with any of the stockmen. One of the stockmen made the remarks that there was a squeeze in, by the Bureau on one side, and by another, a purchasing agent, on the other side.

Well, we feel that the squeeze is from interested parties on one side, and the bureaucrats on the other, and the Indians are in the middle; and we heard yesterday what little stockmen had to do with the Bureaus. They certainly didn't like them. You can imagine our predicament; we have to live under them from day to day, and all the time.

The CHAIRMAN. Do you belong—I am trying to get this clear in my mind—do you belong to a tribe?

Mr. ABEITA. The Isleta Tribe. I come up here officially, speaking for the Governor of the Pueblo Isleta, two lieutenants, and a council of 12 men, who are elected by an overwhelming majority vote of the people of Isleta Pueblo.

The Indian Office has seen fit to ignore and disregard these elections, and place upon us those people of their own choice, and their own selection, for personal benefits and personal ambitions, I think.

The CHAIRMAN. When did that take place?

Mr. ABEITA. We have our elections on the 1st of January, every year. It took place on the 1st of January.

The CHAIRMAN. Now, you elected your Governor and your tribal council, or whatever it is called?

Mr. ABEITA. Elected our governor through our own ancient customs, and we have our own system of government there, which is denied us by the Indian Bureau.

The CHAIRMAN. I want to get this clear. In January you elect your Governor and your council?

Mr. ABEITA. Yes.

The CHAIRMAN. Now, the Indian Bureau refuses to recognize the elections?

Mr. ABEITA. They not only refuse to recognize elections, but they have inspired, planned, and conducted other elections, so they can recognize who they please, even if they are not elected by the people of the Pueblo. They have denied a fact of democracy that has existed there from time immemorial, to place upon it an oligarchy that is a thing of their own fancy.

The CHAIRMAN. Is that in your Pueblo alone?

Mr. ABEITA. I think it exists also in the Pueblo of Zuni. I think it is a systematic effort of the Indian Department to break down the Pueblos, and they will break down the larger ones first, inasmuch as they can break down the weaker Pueblos at their will, and deny us the right of self-determination and self-administration and self-government.

Now, I want to make the record clear here. We have no quarrel with our friend, the Secretary of the Interior, Harold Ickes, with our good friend, Mr. Oscar Chapman, Under Secretary. We think they are good men. We have never known them to be otherwise. I might say, I went to school with Mr. Chapman, at one time. I don't want to embarrass him, but I got thrown out of the same Spanish class with him. The only difference is, I landed by the wayside and he landed up in "Costigan's bailiwick."

Anyway, we think that the Secretary, and our worthy friend here, are prevailed upon, preoccupied with a good many other matters of importance; and they are prevailed upon by fast, smooth, and persuasive talk by these bureaucrats, these people who have never held a job in their lives before, some of them; some of them never had any power. They bring those short-haired women from Columbia University and the University of Chicago, with their bass voices, to dictate to us what an Indian should do. That is not fair. You will pardon me for my mild manner.

We want to paint before you this picture of this gross incompetence, waste, wasteful expenditure of the public's money, wasteful and shameful administration of Indian lands, Indian property, people's property, people's money, people's lives. This is a serious thing that cannot be dwelled upon lightly by the administration, I think; and as I said, we are not including those people who are occupied with a great many other matters. We know that it is humanly impossible to review every act that some minor official might have. But I do want to impress upon you that they should be disciplined in some way. If they can't be disciplined by the Department, then Congress and its might should discipline them.

This Bureau of Indian Affairs operates under John Collier, the Commissioner. His agent, Dr. Sophie Aberle Brophy, to whom he has sought to delegate authority over the Pueblo people, and to whom he has bestowed a title, "Superintendent of the United Pueblo Agency," at an annual salary of \$6,000 a year, and an unknown amount in expenses; during this year she has been absent from her work for 6 months, half of the year, sojourning in Mexico, Puerto Rico, and Washington, Chicago, and elsewhere.

We don't see why any superintendent should spend one-half or one-third of her time, or any substantial part of her time, away from her post. I think it's impossible to administer anything under that condition.

Now, that is the customary amount of absenteeism among the higher-ups in the Indian Service. The traveling expenses must be terrific.

In this critical time, we do not see why Mrs. Aberle Brophy's salary can't be stricken from the appropriation bill. A precedent for this action, Senator, has been already set. Back in 1932, you will remember, a very courageous Senator by the name of Senator Frazier from North Dakota, who inserted a provision in the appropriations bill, where he provided that none of the money appropriated for Indian causes should be used to pay the salary of a commissioner of the Southwest tribes, which movement, oddly, Mr. Collier sponsored at that time. Now he has effected the same thing, by the change of words and change of terminology, and change of titles. A rose by any other name is—well, you know the rest.

The administration of the land is purportedly vested in the trustees for the Indians, but the Indians are a mere chattel. Here is signed a contract between the Indians and the Government. Now, we are not here to argue, but there could be a question of whether a guardian has any right to sign a contract with a ward. I am not an authority on contracts, I am not a lawyer, but there is a question as to how far a guardian can make a ward carry out a contract.

Senator CHAVEZ. Tell the committee, go into details. I would like to know about that, for my own information anyway. What are you referring to?

Mr. ABEITA. To a range-management contract. I want to show the committee, Senator, that these range-management contracts are a version of a land steal. Now, it is better than that. Now—pardon the phrases, Senator, but I can't think of better terms—these ranges that are set up, instead of being administered as they used to be, there is a set-up made, and then a request goes into Washington, into Congress, for an appropriation. Say they set up at one time; they were requesting for—let us say, setting up something like 200,000 acres, and they were requesting \$300,000 to administer it; more than the market value of the land.

Senator CHAVEZ. With tribal funds?

Mr. ABEITA. Public money, out of Washington.

Well, I fail to see the difference between Indian money and money appropriated by Congress to the Indian Bureau. It is all Indian money, because as I gather it, Senator, after Congress appropriates for the Indian, it is the Indian's money, and the money appropriated for the benefit of the Indians should be used to the benefit of the Indians.

Senator CHAVEZ. It's appropriated to the Indian Bureau to carry on the administration of Indian affairs.

Mr. ABEITA. For the welfare of the Indians.

Senator CHAVEZ. And Indian affairs.

Mr. ABEITA. Well, it is Indian money.

The CHAIRMAN. What you mean by that is, after it is appropriated by the Congress, it is appropriated for specific purposes?

Mr. ABEITA. Yes; for the Indians.

The CHAIRMAN. It becomes Indian money in that it can only be devoted to the purposes for which Congress appropriated it, and that is, for the Indians in their respective activities.

Mr. ABEITA. That's right, yes; that is the point I wish to make.

Now, it seems to me like here is a broad picture of the whole thing; before the Indians can ever get benefits from it, in the first place, here is a Bureau that gets hold of most of that money, and uses it to pay salaries, expenses, telephone bills, and one thing and another, that do not pertain to the Indian administration, or the welfare of the Indians, and the Indians are left alone, anyway.

This contract, that last contract, these signed or purportedly signed by the Government, and setting up five Indians as dummies to manage this range, every provision in that contract is made so that it meets the approval of the superintendent of the United Pueblos Agencies.

Now, that doesn't determine any administration, it doesn't leave any of the determining of the administration to the Indians; it leaves it to the Indian Office, again.

Senator CHAVEZ. They have the final veto power?

Mr. ABEITA. The final veto power, and the final say on how it is to be administered.

The revenue off this land must be largely from a cattle herd. When we had the nerve to borrow, back in 1934, when all the cattlemen here were going broke, we took the drought-relief cattle on the provision that we pay back a like sum to the Government in 3 years. We paid back the 643 animals in 3 years, and made \$18,000, which we put in the bank here, and we had one of the best herds going. These gentlemen over here with whom we were competing, will testify to that.

Now, while we were in debt, the Indian Service didn't want to get their hands into this cattle herd; but as soon as we got out of debt, it was a different picture.

When we took over our cattle, in the first sale we weighed our stuff around 255 pounds. At sales times the following year, around 230 pounds. The last year that I knew something about it, they weighed 459.7 pounds; and no credit to the Indian administration, but credit to the Indians.

Now, again, under the Indian administration, when they have got their fingers in the pie, and got their farmers as key men in the trusteeship, the sales time last year they went down to 342 pounds again; which, I think, indicates a downward trend, although the range was better last year than the year we made an average of 459.7 pounds.

Now, no report of that business has been given us, even though it is stipulated in the contracts. No report has been given us for 2 years of the business transactions of that herd. We don't know what is going on. When the dividend was declared last year, half of the pueblo was left out of it. Over 126 people in the pueblo, deserving people, old people, people of the pueblo who had an undivided, equal interest in that corporate—

Senator CHAVEZ. Do you mean to say that the herd belongs to the pueblo as a whole?

Mr. ABEITA. That's right. Everybody has an interest in it.

Senator CHAVEZ. The smallest child has an interest?

Mr. ABEITA. It is established and patterned after the old Indian system, set up and advocated by the Indians themselves. That system would work out, if it wasn't for the selfishness of the bureaucrats. Now, last year they divided this income, say, they gave \$20 to each individual, but left one-half, about a half of the pueblo out; incidentally, those not to the liking of the Indian Bureau. I am not here

to fight for that \$20; it wouldn't carry us over if we were starving, nor would it make us rich, either. But if that principle is set down, the Indian Bureau can say, "You have no right on this reservation," and they can exclude us from any interest in the whole reservation; and we don't feel like selling our heritage for a brass button and a tin whistle!

Those benefits have been construed to belong to only the faction that is favorable to the Indian Bureau.

Senator CHAVEZ. Will you please clear that up? The herd belongs to the tribe as a whole?

Mr. ABEITA. That's right.

Senator CHAVEZ. And last year they declared a dividend?

Mr. ABEITA. Yes.

Senator CHAVEZ. And the dividend was not apportioned to all who you feel were entitled to it?

Mr. ABEITA. It wasn't apportioned at all to most of the people; only to a group favorable to the Indian Bureau.

Senator CHAVEZ. What was the reason? The other Indians are full-blooded Indians living in the pueblo, and entitled to the benefits. What excuse was given, if any?

Mr. ABEITA. I see an ulterior motive, several excuses.

Senator CHAVEZ. Never mind the motive; what excuse was given?

Mr. ABEITA. The Indian Bureau gave the excuse that they had nothing to do with it. The bank said they were stopped by the Indian Bureau, and everything was conflicting. We can't make heads or tails out of this arrangement. I see a motive in it still, Senator, and that was to defeat our elected governor, and give the power to the Indian Bureau's recognized governor over this fund; to kind of buy off the constituents, to sign away their rights to elect whoever they please. I don't call that democratic. We have our system of democracy, that is as old as the hills down there; and I think it is a very detrimental thing to any people to tear it down.

Although we may be few, as compared to the white people, in our own set-up we are certainly not going to see our little democracy torn down.

Now, right here at this point I want to bring out that there has been some statements here as to the number of Indians that are serving in the war. About 10 percent of our population is in the war, and lots of them are in the war effort. Now, it is kind of bad to see that lots of Indian boys are going away and still feel they have to look over their shoulders to see what the Indian Bureau is going to do next, and to be at the mercy of such an Indian Bureau, while they are going over to fight for their country. I dare say, Mr. Chairman, that more of us Indians would be in this war, helping to win it, if we didn't have to look out and be on guard all the time with this treacherous Indian Bureau at our throats.

Now, just dwelling on the cattle herd some more; there are some sheep in this Isleta grant of doubtful ownership. We don't know who they actually belong to; I mean, we don't know whose they are. They are using one of the trustees as the owner, and we think they belong to a white man who has a connection with the Indian Bureau. We don't know; but we would like to have some investigator look into the ownership of a certain band of sheep ranging on the Montana side

of our range, over there, that we think is being used by some white stockmen; and they are using the Indians merely as a dummy; and we are getting neither range lease nor revenue.

Now, on certain parts of the Indian lands there are situated schools conducted by the Indian Bureau, Government improvements, schools. The standard of education dispensed in these institutions is sorrowfully deficient, due to mismanagement, meddling, lack of sincerity of purpose.

The Indian Bureau sends experimenters, with freakish ideas on education, to toy with the institutions at Albuquerque and Santa Fe and Haskell. The curriculum does not meet any of the college-entrance requirements; the students come out of there practically illiterate; and still the Government is spending \$10,000,000 a year for Indian education.

Mr. Collier himself flouts that principle of education in the statement in the issue of News Week of April 26. He very boldly says:

The Indian schools are not controlled by the octopus of college-entry requirements. We are not held down by the goose step and uniformity of public schools, which prevent creative work.

Well, you know the public-school system is one of the best things this country has.

Senator CHAVEZ. That's what has made the country.

Mr. ABEITA. It has made the country; and yet here is a man at the head of a bureau in the Government that flouts that system of public education.

Senator CHAVEZ. Do you know any lawyers among the Indian boys in the State?

Mr. ABEITA. Not one in the pueblos.

Senator CHAVEZ. Engineers?

Mr. ABEITA. None; not one among the pueblos.

Senator CHAVEZ. Dentists?

Mr. ABEITA. Not one.

Senator CHAVEZ. Do you know of any particular professional men within the pueblos, outside of the ones who have been brought in?

Mr. ABEITA. I don't know of one, Senator, and the Indian Department has been educating the Indians for a hundred years, and at a cost of millions of dollars. What education I have has largely been acquired through personal effort.

Now, Mr. Collier made the statement there that they don't have to go by the academic standards of the public schools. Well, Senator, when our boys go to fight over there with the United States Army, they are required to calculate by the same standard of academic learning as the white boys in the same Army and at the same time, and they are jeopardizing the efficiency of the manpower of the armed forces.

Senator CHAVEZ. You are pretty well acquainted with the conditions of the schools and the Indian Bureau agencies throughout the entire State, are you not?

Mr. ABEITA. Yes.

Senator CHAVEZ. Are there any Indian girls over there who are stenographers or typists, or so on, at Window Rock, for instance?

Mr. ABEITA. I believe there are some stenographers, Indian stenographers, in the Indian Service, but there is not an Indian in the policy-making section.

Senator CHAVEZ. In comparison to the population of the Indians—

Mr. ABEITA. There is no comparison. There is no comparison of ratio of employment of Indians. There are more white people employed in there, and we are not objecting to the white people, only the class of white people. Some people are brought in here from New York, Chicago, and from San Francisco, and from God knows where else, who have read something about the Indians in a book maybe, and they try to fit up to that pattern.

Now, we don't like that. If you were an Indian, you wouldn't like it, either.

Senator CHAVEZ. On the practical end of it, do you have Indian farmers practically in every pueblo?

Mr. ABEITA. That is a sad thing, Senator; these farmers are being used merely as messengers. I can tell you here that these farmers—

Senator CHAVEZ. Are there any Indians among them?

Mr. ABEITA. There are Indians among them. I can show you here what they are—just up to here; and they are being used to coach Indians, like when this committee comes around and the Indian farmers are given gasoline and automobiles and tires, and paid to go among the Indians to tell them this committee, like you heard one witness say, is coming over here to take the lands away from the Indians. That has been going on now ever since they heard this committee was going to appear here. They come in here and try to change the conditions and the constitution of the council. This was delivered to a spokesman of Santo Domingo Pueblo on May 4 by an Indian farmer.

We have no quarrel with the farmers, or with that farmer; only that he is used as a tool for the Indian Bureau and the Indian Agency.

Senator CHAVEZ. What are you referring to?

Mr. ABEITA. The constitution of the All-Pueblo Council, which is simple, with four provisions in it. They tried to change it, so that they can exclude any Indian they don't approve of.

The CHAIRMAN. Who doesn't approve of?

Mr. ABEITA. Well, this was typed at the Indian office over on the third floor of the Federal Building. I imagine the Indian Bureau would have to approve of them.

Senator CHAVEZ. With reference to messengers, and so forth, that you speak of, I am handing you some documents here, and I ask you if you know what they are, to tell the committee how they were brought about, and circulated?

Mr. ABEITA. Sure.

Senator CHAVEZ. What is that?

Mr. ABEITA. That is a resolution that was brought up to Taos and Sandia, the other two pueblos. Anyway, this one happens to be—this was brought by the farmers or the extension agents in Government cars.

Senator CHAVEZ. Where was that taken to?

Mr. ABEITA. To Sandia Pueblo, as it is date-lined; and the Indians there were told that unless they endorsed it, the Bureau—or they were

given to understand that unless they endorsed it the Indian Bureau, which was being criticized, which I was to criticize, they would be taken out of their lands and homes, and that it was coming, and so therefore, I think this was signed.

Senator CHAVEZ. Do you know that that was distributed by an Indian Bureau agent?

Mr. ABEITA. I know. I can identify him.

The CHAIRMAN. What does that say?

Mr. ABEITA. It says:

Whereas the question of abolishing the Indian Bureau has been brought to our attention, and we have seen by recent articles in the press that certain citizens and Members of Congress have shown their desire to do away with the Indian Service, we the undersigned members of the Pueblo of Sandia hereby show our opposition to abolish the Indian Service.

The feeling of the entire pueblo is that the Indian Service has done a great service to the Indians, and should be permitted to continue.

Senator CHAVEZ. Accordingly, that was not prepared by any member of the Sandia Pueblo at all?

Mr. ABEITA. No; it was prepared here in the Indian Service office, and delivered by the Extension Service, for which you appropriate \$663,000 a year to be of service to the Indians. That is the kind of stuff that we don't think is of any service to the Indians.

Senator CHAVEZ. You have seen this resolution, too?

Mr. ABEITA. Yes, sir.

Senator CHAVEZ. How was that circulated?

Mr. ABEITA. It was brought up by the Extension Service, by people hired to be farmers and stockman, and various other titles; brought to Taos and Sandia.

Senator CHAVEZ. Read that resolution.

Mr. ABEITA. It reads as follows:

RESOLUTION OF THE PUEBLO OF SANDIA

Be it resolved by the pueblo of Sandia in New Mexico, at a general meeting of the qualified members of the pueblo, duly called and assembled, That only the governor, Francisco Lauriano and lieutenant governor, Paul Chavez, of this pueblo, and such other persons as they designate, are authorized by the pueblo of Sandia to present to the McCarran committee of the United States Senate, and any other investigating committee of Congress, the official position of the pueblo at Sandia concerning any lands, or any other matters that those committees may be investigating, or interested in.

Dated at Sandia Pueblo, this 5th day of September 1943.

Senator CHAVEZ. Do you know where that was prepared?

Mr. ABEITA. In the Indian Office.

The CHAIRMAN. Who is that duly elected governor whose name is mentioned?

Mr. ABEITA. We have no quarrel with the governor of Sandia Pueblo. He is a good man, and we know it. He is the governor of Sandia Pueblo.

Senator CHAVEZ. But this was not prepared by the Sandia Pueblo people?

Mr. ABEITA. No; it wasn't.

Taos had a chance to sign something like that and they wouldn't; and Antonio Lujan, who was over here a minute ago, the same thing was brought up there. They wouldn't sign.

What I want to impress the committee with is that these resolutions you have there have been inspired by the Indian Bureau, and no weight should be given to such resolutions.

Senator CHAVEZ. That is, if they are presented?

Mr. ABEITA. If they are presented. John Bird here has a resolution that was prepared by himself. I have no quarrel with that.

Senator CHAVEZ. All of these were acceded to by the Indian people, irrespective of how they feel?

Mr. ABEITA. If it is prepared by the Indian people we have no quarrel with it.

Senator CHAVEZ. Here is another one. Do you know whether that was ever circulated?

Mr. ABEITA. Yes; this was brought over to the Sandia Pueblo. It reads as follows:

RESOLUTION

Be it resolved by the pueblo of Sandia at a meeting of the qualified members of the council on this day of September 5, 1943, That:

1. We have no reason to oppose the administration of our lands by the Indian Service because we feel it has always acted in our best interests.

2. Although our pueblo does not use very many public lands we are standing strongly against the changing of the administration of these lands because we want to stand by those pueblos who are directly affected with this investigation.

3. We are under the flag of the United States and many of our boys are fighting for the protection of their land which has been handed down to us by our forefathers. We feel that the least we can do and the least our Government can do is to hold these lands intact for us and for the men in the armed forces. As a people under the flag we have a right to ask for this protection not only for our soldiers but for ourselves and those that will follow us.

What will our boys say when they return and see that everything they have fought for is lost? Are our young men being killed in the battlefields to preserve this land of ours for some selfish stockmen who already have most of the land and wants more? No; we believe in our Government and we have faith that when this investigation is completed these lands will remain in our hands.

4. Many years ago we had more land which we used in the right way. Then the Government staked out our boundaries and opened the rest of the land for settlement by non-Indians. Now we hear of this investigation and it appears that the white man has found a way by which our few remaining pieces of land can be taken away from us. The Spanish and the Mexican Governments respected our rights to these lands and we ask only that this Government also respect our rights.

(Generally circulated among the pueblos by employees of the Extension Service of the Indian Bureau—names of signatures not copied by request of person calling attention to this.)

Senator CHAVEZ. Now, you believe in the right of petition, of course?

Mr. ABEITA. Of course, sure.

Senator CHAVEZ. And you believe there is nothing wrong with that particular petition?

Mr. ABEITA. No.

Senator CHAVEZ. Do you know whether or not the Indians of the pueblo affected prepared that petition?

Mr. ABEITA. I don't think they prepared it. I think it was prepared in the Indian Bureau. It was delivered up there by an Indian Bureau official, or an employee of the Indian officials.

The CHAIRMAN. We will take a recess at this point, until 2:30 o'clock.

(Recess until 2:30 p. m.)

AFTERNOON SESSION

The CHAIRMAN. The committee will come to order. The witness who was before the committee may come forward.

There was a party who wished to interrogate you.

You may come forward. Please state your name for the record, and then you may ask your question.

STATEMENT OF GEORGE K. PRADT, LAGUNA, N. MEX.

GEORGE K. PRADT (Laguna, N. Mex.). My name is George K. Pradt. I am from Laguna.

Mr. Abeita, you were reading some resolutions, awhile ago, and I believe you stated they were written by the personnel of the Indian Service.

One of those resolutions was written at a meeting of the all-pueblo meeting, and they discussed the matter by bringing up a resolution, and wanted to go up to their regular meeting place up in Santo Domingo. That is so far away; I was low on gasoline, on my ration book. If I had gone up there I would have used up my ration book, and I wanted to save enough to get home on, so I got up and proposed to the house, and said, "Why not make one out here? A resolution is simple enough to make out here." So when I sat down they called my bluff and wanted me to write out my resolution.

The CHAIRMAN. Who called your bluff?

Mr. PRADT. The Indian people.

The CHAIRMAN. Where was that?

Mr. PRADT. At the Indian school in Albuquerque.

The CHAIRMAN. How many were there?

Mr. PRADT. I cannot say how many pueblos were represented, but I suppose they were all to be, all 19 pueblos, I believe, were supposed to have been there.

The CHAIRMAN. How many were there?

Mr. PRADT. Laguna, Acoma, Taos, San Ildefonso, Santa Clara; I don't know about that Santo Domingo, I'm not familiar with the other pueblos.

The CHAIRMAN. How many resolutions did you write there?

Mr. PRADT. I wrote one.

The CHAIRMAN. Go ahead and ask your question.

Mr. PRADT. I would like to read those resolutions. I would like to pick out the one I wrote.

Mr. ABEITA. Those resolutions were in the possession of Senator Chavez. They were turned in to the record. If you want to identify them—

Mr. PRADT. I will identify the one I wrote. Here it is, this is the one here, the resolution reads:

Whereas the question of abolishing the Indian Bureau has been brought to our attention and we have seen by recent articles in the press that certain citizens and Members of Congress have shown their desire to do away with the Indian Service, we, the undersigned members of the Pueblo of Sandia, hereby show our opposition to abolish the Indian Service.

I was asked to write the resolution, and I told them I would write a sample and they didn't have to necessarily follow the exact words, but the resolution is just about the exact words that I just read here.

The CHAIRMAN. Is that the resolution you wrote?

Mr. PRADT. It is a copy of it. They made a copy of it. I wanted to give the Indians credit for doing that themselves, and not the employees of the Government service.

The CHAIRMAN. All right, are there any other questions?

Mr. PRADT. I have nothing else to say.

The CHAIRMAN. All right, that is all.

You may proceed, Mr. Abeita.

Mr. ABEITA. I want to make a statement, in furtherance of this resolution here, that the Taos Pueblo, and several of the other pueblos, told me they came away from that meeting at the Albuquerque Indian school, which is Government property—and, incidentally, it is rather unusual to hold pueblo meetings on the Government ground—the Indians complain that they don't feel free to express themselves while they are guests of the Indian Bureau, and they must always comply with the wishes of the Indian Bureau while they are on the Government Indian school grounds, or Indian Bureau property. To further amplify that, the Indian Bureau does extensively circulate resolutions of this kind.

I can call Warren Ondelacy up here.

Warren, didn't you have an experience of this kind where, in Zuni Pueblo, the Indian Bureau has circulated resolutions against you?

STATEMENT OF WARREN ONDELACY, ZUNI, N. MEX.

Mr. WARREN ONDELACY (Zuni, N. Mex.). Yes, sir.

Mr. ABEITA. Tell us about it.

The CHAIRMAN. I don't know, I'll be frank with you, I want to let everyone have a chance here, but it seems to me we are going a little far afield, much farther afield than we have time for. We must bring this to a close as speedily as we can, because time is very short with us here.

Mr. STEWART. Mr. Chairman, all the pueblo governors that are here would like to be heard. They have indicated that to me this noon.

Mr. ONDELACY. I am the ex-governor of Zuni. I came before this committee to present myself as an individual delegate from Zuni. I have been governor for 6 months only.

First of all, I want to say that I am interested in Indian land problems, like anybody else. I am interested in livestock; I haven't got very much livestock, but my brothers are. I am interested in more room, more land for the Indians. But while I was working on these problems—there is a tribal head man, a religious head of the tribe, who is the sun priest, general director of all religious rites. I'm not going into details because that tribal religious rites does not come in with this hearing. The Indians can settle that trouble among themselves.

The main thing I came up before this committee is because, when they put me out of office, just because these priests came to me for help to remove a non-Indian agent, or rather to be given a transfer, on account of a religious standpoint of view. But the trouble arised after they put me out of office, though improper, you might say. But

I want to understand that I am glad to be out of office, because I do not get paid for it. All I get is good name; that is all I get. But this is one reason I came up before the committee, is because, when they put me out of office, they went ahead, the Indian Bureau did, went ahead and published about me in newspaper. This newspaper clipping came out of Albuquerque Journal and one from the Gallup Independent. It says here:

Zuni Indian change of governor, called by tribesmen "Little Hitler" Warren Ondelacy, Zuni governor, has been removed and his lieutenant governor, Henry Nalu, has been appointed to his place by the tribesmen, Dr. Aberle, superintendent of the Albuquerque Agency, had been informed. Dr. Aberle said Zuni Indians reported the change to her, and that circumstances of Ondelacy's removal were not given. Gallup sources and tribesmen considered Ondelacy a "Little Hitler" because he tried to eject from the reservation all who disagreed with him.

This little statement hurts my feeling, because I did not kill my tribesmen; I didn't kill anybody. My son-in-law is in Africa right now, today. What are we fighting for? What are the Indians fighting for? Are we fighting for religious freedom, or are we fighting for servants to the Government employees?

I tried to call a third meeting of all the Indians. They turned me down. We could not have no more meetings.

The CHAIRMAN. Who said you couldn't?

Mr. ONDELACY. Mr. Olsen, representing Dr. Aberle. So there I was, but I said, I am glad to be out of office. But I am interested in the land problem, and we all want to increase our herds, but like some of our men have stated, there is too many bosses. We don't know which one to go to. That is true with the Zunis. Any old Indian can tell you the same thing. Way back years ago old Indians used to refuse to ask more money from the whites, because we don't like to get nothing from the white people. We would rather work for our own selves, instead of asking for more money every year.

So that is all I have to say.

The CHAIRMAN. Any questions?

That is all. You may proceed, Mr. Abeita. I wish you would bring this to a close as rapidly as possible, because I think we have gone into a field where we don't have very much jurisdiction.

Mr. ABEITA. Yes, sir, Senator; I will try to make it as brief as possible, and discuss the extensive nature of these things, but the administration of the Indian Service is extensive.

I wish to introduce, as further elaboration of all this argument, that resolution formed by the meetings of Indians, which indicate just what we have been arguing here. One of them is dated February 8, 1943, where we tried to call an all-Pueblo council meeting, and were prevented from having this council meeting by employees of the Indian Service sending notes to various pueblos before the meeting. They stated that there would be no meeting held, and the meeting was poorly attended. We don't think it is just right.

At this meeting, that was called the 8th day of February, those that were there made a resolution as follows:

At the meeting of the all-Pueblo Council, duly called on this 8th day of February 1943, after hearing and deliberating on certain situations in the pueblo, here by resolution condemn the practice of the Indian Bureau in creating trouble within

various Indian pueblos by pitting one Indian against another or one faction against another faction to cause disunity at a time when unity is so needed. We label this as unpatriotic and incompatible to the best interest for the Indian and Government for which they work. We condemn the acts of violence to which certain factions have been spurred with the tacit approval of the Indian Bureau and at times even helped along actively by paid members of the Indian Bureau to oppose and tear down Pueblo institutions known to us traditionally without giving us better forms by which to live.

We plea that, at this time as no other before, there is need for competent and efficient management of Pueblo Indian affairs and selection of personnel in the Indian Bureau, if it is to continue, that will make this possible. We resolve further that copies of this resolution be sent to the Secretary of Interior, Commissioner of Indian Affairs, and possibly others who may have an interest to effect the desired results.

(Signed) GOV. ELIAS JIRON.
Sandia, GOV. FRANK LARAMIE.
Cochiti, GOV. PATACIO ARQUEBO.
Taos, JUAN LAIBRO CONCHA.
Acting Chairman, JOSE ALCARIO MONTAYA.
Acting Secretary, TELESFORE ROMERO.

There was another resolution that passed, which endorsed the selection of Elias Jiron as Governor of the Pueblo Isleta to a much-discussed position. I wish to present those two matters for the record.

The CHAIRMAN. Very well.

(The resolution is as follows:)

THE ALL-PUEBLO COUNCIL OF NEW MEXICO

The all-pueblo council meeting, on this 8th day of February 1943, called upon by several pueblos to deliberate the case of Isleta Pueblo, hereby rendering opinion, after due deliberation and hearing, that Elias Jiron, a resident of the pueblo of Isleta, N. Mex., is a duly elected governor of the pueblo of Isleta by reason of coming into authority through customs that are known in the pueblos and by voice of the people of that pueblo as it has been shown.

We consider that although the symbols of his office and those of the captain of war and the other symbols of various officers of the pueblo of Isleta have been confiscated and grabbed by force, that possession of these symbols alone gained by forceful violence is not sufficient to give the physical possessor reason to exercise governing authority. Authority and honor are given by election by the governed through majority vote, not by the theft of symbols or badges of office.

This applies also to the authority of the captain of war and we similarly find that Jose Velarde is the properly qualified captain of war of Isleta Pueblo and Felipe Lente and Antonio Torres the lieutenant governors of that pueblo.

The caciques, and in this case, the acting cacique, are the proper custodians of the canes which are symbols of authority in the pueblos and we urge upon the authorities to restore these canes into their custody through proper means as promptly as possible. We request that the Secretary of the Interior and the Commissioner of Indian Affairs take cognizance of this council's findings and give proper recognition to Elias Jiron as governor of the pueblo of Isleta and properly recognize him so that he may discharge the duties of that office to which he has been duly elected. We further appeal to the Secretary of the Interior to remove the underlying influence in the Indian Bureau that have been causing these disturbances now well nigh onto 8 years, and that a copy of this be sent to the Secretary of the Interior, the Commissioner of Indian Affairs, and such other Government authorities as may be able to correct this situation.

(Signed) GOV. ELIAS JIRON,

Acting Chairman, JOSE ALCARIO MONTAYA,
Acting Secretary, TELESFORE ROMERO.

Mr. ABEITA. There is one little incident here, which involves a small school section situated on the Indian land. I want to show it because it is an example of other things that the Indian Office is doing in misadministering Indian Affairs. The pueblo of Isleta is made up of three settlements, Chicole, Charcos, and Isleta pueblo. The Chicole has 60 or 70 families, and on this section over here, three miles from the pueblo at that place, the Government has maintained a small school, called Chicole school, to accommodate 60 little children. This year we find, at the opening of school, that school is abolished, without previous notice to parents; which a lot of people take to be an act of reprisal by the Indian Bureau. Here is the situation, the Government appropriates the money. From the hearings of the House Committee on Appropriations, on page 352, a request is made by the Indian Service for the Chicole school, which they say contains two rooms, for the amount of \$6,900.

The CHAIRMAN. What year?

Mr. ABEITA. 1943; and they closed this school at this time when the children need it; and they get the appropriation, too.

The CHAIRMAN. Was the appropriation passed by both Houses?

Mr. ABEITA. Yes sir; and here is the situation: I am glad that Governor Dempsey is here, our friend, Governor Dempsey, is here to hear this. Here is the Indian situation: Here is an appropriation by Congress for the education of these Indian children, the humblest children in the State. We pay a sales tax, which is the New Mexico school tax. We don't complain, but every purchase we make we pay a 2 percent sales tax. Here are 60 children left out in the cold, without means of getting an education, unless they can walk over to the other school at Isleta.

The CHAIRMAN. How far is that?

Mr. ABEITA. About 4 miles. On cold days it's quite a problem. Now, the Indian Service can't see the way to provide a teacher, or can't transfer a teacher, for some reason or other. Why can't they make arrangements to use the facilities there, instead of letting it stand there and depreciate into non-use? There are good facilities and school houses and everything there. Why can't they make arrangements so that the State can send teachers there for these children?

Senator CHAVEZ. Where are the \$6,000?

The CHAIRMAN. Maybe it was impossible to get teachers.

Mr. ABEITA. There was a teacher, up to the first of this month, and she was transferred. We don't know where to.

The CHAIRMAN. One teacher to that school, or more?

Mr. ABEITA. I think there were two teachers; but I am sure the Governor of our State is very fair, and he is interested in all children of the State, no matter whether they are Indian, Spanish-American, or white children.

Senator CHAVEZ. I want to know what happened to the \$6,000 that the Government appropriated.

Mr. ABEITA. We don't know what happened to that \$6,900 that the Government appropriated,

Now, there is a lot of money for wasting. It seems like there is plenty for studies and surveys, and useless expenditures; and when it comes to cutting down on economies, and they have to economize

on something, they have to economize on poor little helpless children, the humblest children, as I say, in the State of New Mexico. They can't fight back; but we intend to see that they get justice.

As I say, there is money wasted on experimental houses, green-houses. Over here, that experiment with water-grown plants, whatever that is costing, \$5,000 or \$6,000, right out here at this Government warehouse place; and so far all we can gather is that those green-houses have raised 100 pounds of kale and 100 pounds of beet tops. Now, they throw beet tops away, these markets; and we don't see that there is any connection between those expenditures and that sort of thing. Why can't they apply some of that money to educate those school children?

The CHAIRMAN. That isn't the question at all. The money has been appropriated for it specifically, and it should be directed to that item specifically. Again, I wish you would move along, because we have got to close as soon as possible, some time tonight.

Mr. ABEITA. I am making this all as brief as possible.

Here is another resolution I present for the record, a resolution passed by several of the Pueblos, which Mr. Collier, in *ex parte* hearing in Congress, refused, and attached several unsavory adjectives before my name, when he was refuting it. There is a matter to illustrate how money is spent. I have got a break-down of how money is spent, to show you how the appropriations are spent.

Now, you know, 2 years ago \$50,000 was appropriated for arts and craft, the Board of Arts and Craft. Now, I got these figures from the General Accounting Office. Now, out of that \$50,000, \$22,280 was used for salaries in Washington alone; \$13,700 in the field, assistant general manager and four clerks.

Senator CHAVEZ. That included personnel?

Mr. ABEITA. Yes.

\$3,800 for salaries; \$7,500 for salary for general manager; \$7,600 for traveling expenses; \$400 for telephone and telegraph.

That exhausted the whole appropriation. The Indians didn't even get representation on that board. [Applause.]

Now, on that board is not a single Indian craftsman who knows the mechanics of Indian arts and craft. They went down to Mexico, and retained somebody whose name we can't even pronounce—d'Harnoncourt, I think his name is.

Senator CHAVEZ. He is Hungarian. Suppose you pronounce it.

Secretary CHAPMAN. René d'Harnoncourt.

Mr. ABEITA. I understand he is a Hungarian by birth, or something. But the thing is that the Indian boys are going over there trying to win his freed m back; and he comes over here at \$7,500 a year. It looks like the Indian Department isn't satisfied with us going over to get their freedom, they want us to prostrate our freedom and our destinies to their foolishness. It is not fair.

I don't want to take up any more time, unless you want to ask questions, Senator. I will offer this resolution for the record.

(The document is as follows:)

ISLETA PUEBLO

Whereas the nation now faces a critical time and it becomes necessary that we all strive to make available all resources possible for the defense of our country; and

Whereas we witness many needless and extravagant expenditures by the Bureau of Indian Affairs of Government moneys and substance for projects and purposes at times not only unnecessary but often detrimental to us;

Therefore we the officers and the council of the Pueblo of Isleta hereby take this occasion to memorialize the Congress of the United States to consider seriously these our propositions:

1. To eliminate appropriations for—
 - A. The Indian Arts and Crafts Board.
 - B. Farmers, stockmen, extension workers, etc.
2. To provide in the appropriations law that none of the space and equipment of the Indian Service shall be used to accommodate "trainees," "consultants to trainees," "special scholars," and the like, whose presence around the Indian Office only tends to make that department less efficient to the Indians.
3. To limit the expenditure of moneys appropriated for traveling expenses of the Indian Service employees and officials to within the respective bounds of their jurisdictions.
4. To provide that none of the money appropriated for the Indian Bureau shall be used to pay the salary or expenses of Dr. Sophie D. Aberle, superintendent of the United Pueblo Agency at Albuquerque, N. Mex.
5. That the Indian Bureau be made responsible to deliver the academic and vocational education to the Indians for which purpose they are drawing funds from Congress.
6. That the salary of any employee or official, including the Commissioner of Indian Affairs and superintendents, be suspended upon the demand of the majority of the Indians for whom they work and the money reverted back to the Federal Treasury.
7. To eliminate all nonessential employees and items from the Indian Bureau and stress efficiency, economy, and results from what is provided for the Indians by the Congress of the United States.

We hereby further endorse as accurate and representative of us the declaration of grievances and other statements made by Elias Jiron, Governor of the Pueblo of Isleta, and Diego Abeita, secretary and spokesman of Isleta Pueblo Council, and filed with the Senate Committee on Indian Affairs.

Signed this 16th day of April 1942 in the Pueblo of Isleta, N. Mex.

First Lt. Gov. PHILIP LENTE.

Second Lt. Gov. ANTONIO TORRES.

(Other signatures attached.)

The CHAIRMAN. You made one statement that I am interested in. In one expression you said that Mr. Collier said something about you before a committee?

Mr. ABEITA. Yes, sir.

The CHAIRMAN. What was it?

Mr. ABEITA. I have it right here, sir:

Finally, the Diego Abeita petition request that funds for the payment of the superintendent of the United pueblos be withheld from the appropriation act—

Senator CHAVEZ. You are quoting?

Mr. ABEITA. I am quoting the letter.

* * * In sum: an excitable, aggrieved, injudicious individual Indian has got himself into a position of leadership with a minority faction of one pueblo. He is in consultation with white people, including an attorney retained by his faction. He has made extreme exertions to procure expression in support of his course of action, through all the pueblos, and has succeeded in getting signatures of 2 among 19 Governors, and from none, I believe, of the councils and principal men of any of the pueblos, and nothing by a condemnation of his course of action, through the council of all the New Mexico pueblos.

Well, that is characteristic of Mr. Collier. He calls names. The broad implication is that this man is in charge of people trying to get more power, even down in Mexico through his Indian institute. If he is allowed by Congress to go down there, and he calls those Indian leaders names, it is going to cause serious international criticism; and I understand that he got \$22,500, some years ago, to pro-

mote this plan of action down there in Mexico, and got himself a power there in supreme control. That is the exact wording of the constitution of that compact.

Senator CHAVEZ. Now, Diego, let's get down to the facts. The side you represent are discontented with the Indian Bureau, we can see that.

Mr. ABEITA. That's right.

Senator CHAVEZ. What proportion of the entire Indian population would you say that your side represents?

Mr. ABEITA. Well, I have signatures here, Senator, of about 137 people, just men, in Isleta. There are hundreds in the pueblos, thousands, I should say, thousands of Indians that feel that way. We are unfortunate that I represent the more humble people of the Indians, who cannot afford to be here today, and who have no way of being here. We are limited.

Senator CHAVEZ. That is the Isleta. Would you say that 55 percent of the Indians in Isleta take your side?

Mr. ABEITA. I should say about 80 percent of them.

Senator CHAVEZ. What about Sandia?

Mr. ABEITA. That is a compact pueblo. They are favorable to us.

Senator CHAVEZ. How many Indians are there, about 140?

Mr. ABEITA. About 125.

Senator CHAVEZ. Go up to the other places. Santa Ana, are they in favor of the way things are being done by the Bureau?

Mr. ABEITA. We have never solicited their expression there.

Senator CHAVEZ. What about the big pueblos, Laguna?

Mr. ABEITA. John Bird is here as spokesman for Domingo. They are in favor of us. John Bird is here. I think he can rise and give you a short answer to that.

Senator CHAVEZ. John, would the majority of the people of Santo Domingo be in accord with the program of the Indian Bureau, or would you people want it different?

STATEMENT OF JOHN BIRD, LAGUNA, N. MEX.

Mr. BIRD. At the beginning of their trouble the Santo Domingo majority were in favor of Abeita's followers; not only the Pueblo of Santo Domingo, but most of the pueblos in the Rio Grande Valley. However, up to the present time, how the situation stands, but we are still for Abeita.

Senator CHAVEZ. Is there anyone here from Taos?

STATEMENT OF ANTONIO MIRABAL

Mr. MIRABAL. Well, do you mean come from the meeting up at Santo Domingo? At that time I was not at the meeting myself, because the rule is that when we send our delegation to some meetings, any of the places, it is up to the council to choose this man and send him to the meeting. At that time I was not at the meeting, but I heard they favored Abeita.

Senator CHAVEZ. You are from Taos?

Mr. MIRABAL. Yes.

Senator CHAVEZ. You know the people, every boy, child, man, and woman?

Mr. MIRABAL. Yes.

Senator CHAVEZ. What is your opinion? Do you feel like telling the committee whether you are in favor of the Abeita side or the Indian Bureau program?

Mr. MIRABAL. You are speaking about——

Senator CHAVEZ. I am now talking about the program of the Indian Bureau. Are you satisfied with that?

Mr. MIRABAL. No; I'm going to tell you how we feel from Taos. Of course, the Indian Bureau officials, they are human beings, and the Indian Bureau is set up, I think, by Congress, to control the Indian administration; so this is the way Taos council feels: Since we come to the meeting here in Albuquerque, up to the Indian school, we were explained there that the Indian Bureau was to be abolished, and we was to be taxed and all the schools were to be closed.

Senator CHAVEZ. Who told you that?

Mr. MIRABAL. Well, up there, I think a man—I don't know his name.

Mr. JOHN BIRD. Mr. Brophy and Dr. Aberle were in the session that morning. We had a 2 days' session and they were there the last day. I happened to be present there.

The CHAIRMAN. What did they tell you about closing the schools and doing away—who told you that?

Mr. MIRABAL. At the meeting, that is what we have been discussing. So then when we come time, when they asked us resolutions be sent, they were sent by a farmer up to Taos. I told the meeting there that we didn't sign that resolution because our rule is, it is up to our council to send a man to the meeting, and we don't know what man is going to be sent to the next meeting. For that reason we didn't fill out. We told him that if we didn't bring in that resolution, if we are put out, we can go right back—no, sir, that is not our rule. We told them there, so in that line this is the way the council discussed in our pueblo after we went back and told them what it was all about. They say that we be under the Indian Bureau for many years, and the Indian Bureau had the power to look after our land so the land squatters do not come in, and in case we are taxed, no protection. That means the whole Indian life will be abolished because, in those days, while we have the agent looking after our land, still other land squatters come in and took possession of the best of our land. We were kind of pushed up on the hill, and by good-hearted people, all over the United States, help us out to get back our land or be compensated where the land was lost, and in case of this happening, all those good people's money and their work will be all lost. So the way we decide, that if the employers, the white man, makes mistake, all he lose is his job, but if we Indians make mistake, not get any protection, then that is just a hard lot that will break up the whole thing. So we must be very careful to take every step. That is the way the council discussed the matter up, that is the way we stand.

If the employers done wrong, and don't handle the matter good, and they are fired, all they lose is their job; but if we make mistake, that means we are going to suffer the rest of our lives. So the council says that we want it, and the Indian Bureau, with protection for the land, so the squatters do not come in. At the same time we want to give us a better education, because a man like me, I pick up English, and to speak is pretty hard. If I had a good schooling it would be

different today; but I have no education, and it is pretty hard for me to speak a foreign language. I would do better with my own language. But there are a lot of things I can't speak the way I want.

We want the Indian Bureau, with the protections of guarding our land just like it has been; and we want better schools, in order to compare with you white people, and you just look how these things are. You white people, you have got your own race in Congress, and also the Spanish people got their man over at Congress, and I am pretty sure they can help them. Who have we got there? If we are turned loose and those protection is gone, why, then we might as well be dumped into the trash pile. That is where we are fit to live, we Indians.

Senator CHAVEZ. Do you think if the Indian Bureau continues you will be able to get to Congress? I want you to go to Congress and go to the Senate and to the House. I want you to take part, but I want you to take part as Americans, not because you are under control of some Government bureau.

Mr. MIRABAL. Well, but, Mr. Chavez, look here. I suppose not me—I am too old—

Senator CHAVEZ. I am speaking about the Indian, the Indian in general.

Mr. MIRABAL. I am too old, I suppose. If we have a good education there will be some children who would learn. I think they are human, but since we have no education, how can we go there?

Senator CHAVEZ. Tony, for a hundred years the Indian Bureau has been trying to educate you people. That is the complaint of lots of people in the country, that is the complaint of the Indians themselves, that notwithstanding the millions and millions of dollars that have been used, you still have to have the protection of the Indian Bureau. I would like to see the time come when you people can run your own business.

Mr. MIRABAL. That is what I mean, with that education.

Senator CHAVEZ. When is that coming?

Mr. MIRABAL. I don't know. You don't know, either. I don't.

Senator CHAVEZ. It seems that the system under which you have prevailed has not been successful, that what—if you need a farmer, they get somebody from the East to show the people around, to show the Taos how to weave their blankets, and how to pound the silver, some short-haired girl from an English village, and it isn't doing the Indians any good. On the Navajo Reservation, among the employees, there are 85 Indians doing menial work; nothing like typewriting, or anything like that. I would like to see the Indian get over, like Mr. Lee and Mr. Davenport and Mr. Chavez. I'd like to see the day come when he can take care of himself without depending upon Washington.

Mr. MIRABAL. But then, right now, you mean to say, we have gone and pay the taxes right now?

Senator CHAVEZ. Nobody ever said anything about taxes.

Mr. MIRABAL. Why did they be discussing about it?

Senator CHAVEZ. I don't know why they should say anything of the sort, or that it was recommended that the Indian Bureau be abolished, or reported to that effect, but nothing has been done. If the Indian Bureau should be abolished by the Congress of the United States they will take care of the Indian. Don't you worry, you have lots of friends. It is a mistake for the Indians to feel that way. If

there is something wrong with the way the Indian Bureau is going, we are trying to rectify that. [Applause.]

Mr. MIRABAL. Now, we from Taos, is just one pueblo, and I don't know how the rest feel. At the same time, if this matter is taken all over the United States, why I don't know how much we amount to. But then, as I said, if the Indians be smart enough to keep the land squatters out of their land, there would never be no trouble, but we are so dumb, or I don't know—when that happened that way, we lost part of our best land, and we were compensated. And if that matter comes up, why then, it will be lost, all those good people's money, and their work that they help us out to get our land back.

Senator CHAVEZ. Don't you think Congress has something to do with that? I helped to get \$720,000 for the Indians in New Mexico that the Indian Bureau had nothing to do with. I helped protect your lands up in Taos County and helped you get 40,000 acres of land in the area of Taos. Don't you think Congress had something to do with that?

Mr. MIRABAL. Now, look here, Mr. Chavez, the last meeting you had in Santa Fe, you was there and Mr. Frazier and Senator Thomas and somebody else. That time we asked for a patent in the Blue Lake, for the Blue Lake area.

Senator CHAVEZ. You got it didn't you?

Mr. MIRABAL. We did. We were still tricked on that particular tract.

Senator CHAVEZ. Well, Mr. Collier prepared the bill.

Mr. MIRABAL. Well, you know the way it happened, when the land board section was going on in Taos one of the lawyers went up there and they told us, "You are fighting foolishly here. You had better give up this town here, that is the way that exchange for the Blue Lake area." So the council, excited, we don't even go to see our lawyer, Mr. Judge Hannah. We just went right ahead and told the lawyer we wanted to give up certain land there, up at Taos, for Blue Lake; and later they told us that you can't trade a horse that doesn't belong to the owner.

Senator CHAVEZ. Let me say something right there, Tony. I know that Judge Hannah worked like a slave for many years in the interests of the Pueblo Indians of this State. He slaved without a penny of compensation. I know that he was responsible for getting \$720,000 for what you had lost to the white settlers. I know that he was responsible for the protection of the lands that you got. I know that he was responsible for the Blue Lake area. Let's try to be fair with him. As a matter of fact, you paid him for it after you got the \$720,000, but he worked hard for the Indians of New Mexico. I want that for the record.

Mr. AREITA. I want to insert for the record that the Indians realize how hard Judge Hannah worked: but they compensated him afterward to the extent of \$7,000, or thereabouts, for our fight and he earned it, and he has been a good friend of ours and he is still a good friend of ours.

Mr. MIRABAL. Now, our Governor over here got the resolution that we wrote, and I want to put it in the record.

The CHAIRMAN. All right, thank you.

(The resolution referred to will be found among the resolutions inserted later, under the title "Taos Pueblo Community.")

Mr. JOHN BIRD. Let me check a moment with Mr. Mirabal. I don't believe he quite understood what Senator Chavez has asked him.

Prior to the Indian Bureau, or the practice of the self-government of each pueblo, through the Rio Grande pueblos—I don't think he quite understood you.

Mr. Mirabal, are you for going to learn to leave your people, or are you for going to or not going to have Indian Bureau or Service pull you around? Are they doing you any good or not? That is the main thing right there. I believe that, up to this time, each pueblo have certain things to be corrected, in the function of the Indian Bureau: not saying all pueblos have the same type of Indian. That is what he wants to know, Mr. Mirabal.

The CHAIRMAN. I think he has answered it as far as he needs to answer it.

Again, I must draw your attention to the fact that we have to curtail this matter. We are on the edge of where we have jurisdiction.

Mr. ABEITA. I just wanted to cite that instance, Mr. Chairman, of this ex parte hearing. It returned to that statement there. I want to warn you that we think Mr. Collier is the dangerous man; dangerous not because he is all wrong, but dangerous because he is one-half right, yes, even three-fourths right. But the one-fourth or one-half in which he is wrong is utterly and fundamentally wrong, which makes his net conclusions all wrong. [Applause.]

The CHAIRMAN. All right.

Now, I promised Governor Dempsey and others who are interested in the bill known as S. 1152 that they could be heard.

This matter was brought on this morning and it has reached some considerable limit. The Governor is here and I am not going to try to hold him. I understand there are several people here who want to be heard on the S. 1152, and if they want to be heard now I think they should be heard.

Mr. STEWART. There is a Zuni here who wants to make a statement.

STATEMENT OF HENRY NATEWA, AS INTERPRETED BY HENRY NIETO

Mr. NATEWA. I am Governor of Zuni, N. Mex. I am official delegate for my tribe, and also this is my interpreter.

Mr. NIETO. Senator and friends, my name is Henry Nieto, and I am the official interpreter for the Zuni Governor. We are here today to discuss a little on our land, of what we had held before the Spaniards and white people came. Prior to the time of the Spaniards the Zunis—

The CHAIRMAN. You are not interpreting now.

Mr. NIETO. I have a statement that I wish to make.

The CHAIRMAN. I don't know how far you are going to go, but you're not going to get very much further.

Mr. NIETO. I am saying that prior to the time of the Spaniards the Zunis held Government north purchase area and the Government south purchase area. This boundary extended from what is known area New Mexico, extending clear down to St. John's, sort of a rectangle. All of these lands have been owned once before by the Zunis, including both the purchase areas. That was later taken away and brought back to the Indians again.

As to the fact of the Indian Bureau, I, in behalf of my people, most of my big sheep owners are uneducated, for this simple reason, my people are not able to be under any agency or either under State jurisdiction. This is through the power of my people that the Governor and I are the representatives from Zuni, and we wish that all of our lands to be administered under the Indian Bureau. I thank you.

Mr. STEWART. Mr. Chairman, in view of the fact that all of the Governors have wanted to be heard, the chairman or the vice chairman of the All-Pueblo Council is here, and it seems to me he could speak for all of the Governors and save that much time. In addition, Joe Padilla would like to be heard.

The CHAIRMAN. Well, one thing leads to another, Mr. Superintendent. I found that out by letting this come in this morning. You asked to have Indians heard, and I have deferred for you right straight along, but it has to come to an end somewhere. Now, how long is this going to take?

Mr. STEWART. These are Pueblo Indians, rather than Navajos.

The CHAIRMAN. I understood all of these were Pueblos.

Mr. STEWART. Those that you deferred for, particularly at my request, were the Navajos. I don't believe it will take those two gentlemen long. This is Mr. Abel Paisano.

The CHAIRMAN. How many of these who have testified here are in the employ of the Indian Service, the last two? The last four? How many of those are employed by the Indian Service?

Mr. STEWART. I don't believe any of them are employed—

Senator CHAVEZ. Directly or indirectly?

Mr. JOHN BIRD. That Paisano, he is one employed in the Indian Service, and I object, because of all the pueblos on the Rio Grande Valley, a delegate from each one pueblo has a certain matter to present, prior to the Indian Service. So I object that any Indian Service employee, whether it is an Indian or not, should represent the Indians as a general whole.

The CHAIRMAN. Are you in the employ of the Indian Service?

Mr. PAISANO. Yes, sir.

The CHAIRMAN. Do you want to present employees of the Indian Service, Mr. Superintendent? Let's get this thing clear here. I don't see why you should attempt to bring forward employees of the Indian Service and not announce it.

(The following letter and statement are inserted at this point by request of the Department of the Interior:)

CASA BLANCA, N. MEX., September 10, 1943.

Hon. PAT MCCARRAN,
United States Senate, Washington, D. C.

DEAR MR. MCCARRAN: Your committee ruled me out at the hearing yesterday and at the request of governors of my pueblos, I kindly ask of you as chairman of the committee that I be allowed to have my brief speech into the record on the following conditions: None of my official representatives from the pueblos were heard except from the Zuni Pueblo. Mr. James Stewart requested that I be heard, but was ruled out on account of being an employee of the Indian Service. I wish to clarify that I was to speak for my people as a secretary of the All Pueblo Council being elected the same way that the Congressmen are elected, as an official representative from my pueblo (Laguna) and also as an ex-serviceman of the First World War.

I shall only be too grateful if the Senator will reconsider the ruling and let my statement go into the record.

Sincerely,

ABEL PAISANO,
Secretary, All Pueblo Council.

Speaking as secretary of the All Pueblo Council and for the pueblo governors who are present here and representing the people of their pueblos and who will not be able to speak on account of limited time of the committee. I shall make this as brief as possible, making statements of facts as seen myself as I visit all the pueblos as time permits, studying problems of my people. Since the committee is mainly interested in the land and grazing problems I shall cover briefly by stating that of the 19 pueblos, there are 7 pueblos who have benefited from the resettlement or submarginal purchases; of these, 3 of them depend entirely on livestock for their livelihood on the reservations. They are Zuni, Acoma, and the Laguna. The other 4 depend on both livestock and farming and the balance of the 19 depend mostly on farming but to a certain extent have some livestock. Prior to 1935 much of our grazing land was fast depleting under the strain of over-grazing which was the problem all over the West. At this point I shall use my pueblo (Laguna) as an illustration to the committee. In 1934 Laguna realized that it was facing a problem of soil erosion on their land and which was gradually getting worse and something had to be done. We had then some 242,348 acres with approximately 55,000 sheep units on the area (5 head of sheep equivalent to 1 unit, or a cow). The Department of Agriculture and the Indian Service surveyed our range and found that the carrying capacity of this land was only 15,000 sheep units. I wish for the stockman to take note of this, or any nonstockman, and see our problem. I am sure that anyone could see what this meant, if proper grazing was to be administered. It means either more land for the Indians or a tremendous cut of livestock which meant a tremendous sacrifice of livelihood of the Pueblo of Laguna, realizing that the land was fast eroding, Laguna agreed with the Department of Agriculture and the Department of the Interior to carry out a stock-adjustment program, with an assurance of additional grazing land. The program was started in 1935 and additional land was secured for the Laguna's use totaled 166,000 acres and the carrying capacity of the land totaled 5,942 sheep units; the same course was followed in the other pueblos depending largely on the amount of stock. Soil-erosion control work was carried out in all of the pueblos. The result of this program was a great sacrifice of stock reductions, but today we have good range lands. So well have the Indians and the Government agencies done the work that the non-Indian stockmen, now, envy the Indians. I may further state these facts, that when the Indians received additional grazing land, these lands were bought from the non-Indian stockmen who were glad to get rid of them because of overgrazed conditions. I actually saw the land myself which was given the Laguna and which Mr. Floyd Lee sold to the Government and was in a far worse condition than that of the Laguna Reservation. This land was the Montano grant consisting of 44,071 acres and the carrying capacity was then 1,800, and the purchase price was \$132,211.98.

But, as I have stated, that with the cooperation of the Federal agencies, and with great sacrifices and with sincere effort we improved the grazing conditions, and today this same land looks so well that some of the same stockmen have petitioned to get it back by requesting that these lands be under the Taylor Grazing Act. Indians could not qualify in many things under the act and would eventually lose out with the grazing permits. It just seems unjust that the land be taken away from a large group of people who were promised land and who sacrificed to get them and put it in good condition and be given to the stockman who already sold it and unwisely overgrazed it.

The non-Indian stockmen have been well represented here by able lawyers because they can afford to, and they have spoken in terms of thousands of head of stock, and in hundreds of land sections, and I will be willing to bet that each one of them has bank accounts in terms of thousands of dollars. If my people were to be heard they would speak in terms of hundreds of head of stock, and below 500 head, and in terms of tens of land sections and no bank accounts. And if justice were to be done more land would be recommended for my people instead of "no more land for the Indians." Non-Indian stockman spoke for bigger bank roll. If the Indian spoke he would speak for only fair living, as money to him is greediness, loss of friendship, trouble, and worry. May I state that Laguna in 1942 derived from stock \$133,176 with population of 2,686, and if divided for individual distribution each would receive about \$49.58. Of all the 19 pueblos this amount was derived from the stock, \$543,526; with total population of 13,743 each would receive \$39.60.

In view of these facts, the Indian Service has been criticized by non-Indians for land grabbing. It leaves only one explanation, and that is the Indian Service must have carried out the obligation of the Congress of the United States for its people to look after the Indians' property and care for him as they have, or else

the officials who represented their Indian people would not be so unanimously in favor of the Indian Service.

Since the pueblo governors could not be heard, I wish to inform the committee that they are here officially representing the people of their respective pueblos, just as the committee is representing the Congress of the United States by its people. Each pueblo held meetings and had the people choose their representatives to this hearing and a message for the committee to take back to the Congress of the United States that the Indians have answered the call of Uncle Sam to the armed forces, 10 to 1, in proportion to that of the white man, and the Indians' part in this fight is for what he now has and for the democracy which has been his traditional guide long before any white man sat a foot on this continent. The Indian has always been very friendly as far back as when the white man came to this country, he came [white man] with only what he had on his back, and the Indian gave him protection, shared his land, game, food, and his home. The Indians were exempt from the First World War but nevertheless they volunteered by the thousands and fought with his white brother, and to date he is still a friend. One can but look into every corner of the earth where there is fighting, and there you will find the Indian side by side with his white brother again fighting for what he wishes to share when he comes back. A quotation of Gene Linberg in the Denver Post fits well into the picture—title, "War Aim": "Guard well the dream of a man who knows what he is fighting for. Out where the reek of tropics steams up from a jungle floor, let nothing change in this land of his. Let nothing dull its gleam while he's away risking pain and death fighting to save that dream. He shares it gladly with all who love freedom—whose hearts have known. Pride in their God-given right to choose each for himself alone. Let nothing darken their land of dreams however far they roam. They have entrusted its keeping to you, guard it well till they come home." Be it known to the committee that the Indian Service has not taken away any land from the non-Indians or the Indians unless the owners themselves have offered the land to sell, and we still do not have what we should have at present, in order to make a fair living, the same as the non-Indian stockman. I state this because it has been stated by many non-Indians that they are not opposing anything with the Indian himself but are opposing the Indian Service.

We [Indians] feel that when they oppose the Indian Service's land policy they directly oppose us. In conclusion I wish to say that the statements made from individual Indians condemning the Indian Service has been made on purely the basis of personal grudges which do not cover the wishes of the pueblo as a whole. On the other hand the Governors want to present the sentiments of their people who wish to thank the Indian Service for the good things that they have accomplished for them and for the protection of their land and property. They wish for the committee to convey to Congress that they wish to continue under the same protection of the Indian Service until they have adjusted themselves as the white men did who have had since the eleventh century to the eighteenth century to adjust themselves and the Indian has only had about a better than half a century now. We shall let the Congress know when we do not need further protection by the Government.

I thank you.

ABEL PAISANO,
Secretary, All Pueblo Council.

Mr. BIRD. I may be interrupting this thing, but I believe I have as much right as anybody. He was registered with the Indian Service before he went in the service in the Army.

The CHAIRMAN. Who?

Mr. BIRD. Joe Padilla.

The CHAIRMAN. Has that man been in the Indian Service?

I don't want to cut you out of anything, but I tell you right now—

Mr. STEWART. He is not in the Indian Service now.

The CHAIRMAN. How long since he has been?

Mr. STEWART. Virtually all of these Indians have been employed by the Government at one time or another.

The CHAIRMAN. How long since this man was employed?

Mr. PADILLA. Nearly 2 years now.

The CHAIRMAN. All right, come in.

STATEMENT OF JOE PADILLA

Mr. PADILLA. My name is Joe Padilla, and I am a member of New Mexico, member of the armed forces, under assignment.

Mr. Chairman, I have not attended all of your meetings, but what I have heard here, it seems fundamentally the underlying statements and the wishes of the people, is freedom. I have got to please the man who coined the word, got to please the man who fights for his rights to distribute it among the people. It seems that the underlying statements that have been uttered through this picture, for the record, for the committee, has been more or less charges against the Indian Bureau.

Well, to my knowledge, the Indian Bureau, whether it has done any good or not, I am certain of one thing, that to the present day the Indian is not able or capable of running his own affairs in such a way so that he can maintain and retain his own land. An indication or example of that has been experienced by the Indians of South Dakota. I do not wish to bring them in, only by way of remarks. The Indians, as a whole, although the Government has been trying to educate them for the last 100 years, due to the attitude of the Indians, and the nature and the customs and their belief, they have not been able to readily accept the white man's way of life. They have accepted some of the worst ways of the white man, but they have not learned to have the better ways. As a result, I do not believe that, at the present time, the Indians should be turned loose or without an agency, to live and run their own affairs, because of the very nature of the white man or his political set-up. Because of that, sooner or later, the Indian will lose every bit of land he has. If he does not know how to read, and the few that do know can see only so far, and not any further.

The people as a whole have been charging the Indian Office that the Indians are not given a good education, or the schools are not good enough, so that they can obtain a good education. I have seen in some of the pueblos where we have schools. Many of the youngsters are not attending these schools, because there is no rule whereby to force these youngsters who badly need the education. And then they wonder why we have no education or why we have not learned in the last 100 years.

A remark was made with reference to the distribution of community money at Isleta Pueblo, sometime in the past. I do know that in 1942 there was a distribution made, and it was an equal distribution; but, for some reason or another, some of the people did not go to the place of distribution to receive their share of that money. Whether they did it in order to show that they did not want the man in office who was distributing the money, or whether it was some other reason, I don't know. But whatever it was, they had just as much chance to receive that share, and I want you to get this clear, that there was no misdistribution, and no one was left out of that particular fund.

I would like to say that, in general, that in the last 4 years, from what I have seen on the reservation, there has been a tremendous improvement through the agency and the cooperation of other Federal agencies, such as the Soil Conservation and other bureaus, which have

been established for that purpose in the State of New Mexico. That is all I wish to say.

I will not take up any more of your Irish patience.

The CHAIRMAN. Take up what? Who told you to say that?

Mr. PADILLA. No one; it came from my mind.

Senator CHAVEZ. May I say I have known Joe Padilla many years, and he is a very good boy. He went to school and he has a very good character. He is well respected.

The CHAIRMAN. Who gave you the information that there was any movement on the part of Congress, for this committee or any committee of Congress, to take your lands away from you?

Mr. PADILLA. I did not say anything about Congress.

The CHAIRMAN. Who gave you the information that there was any movement on the part of Congress, or a committee of Congress, to do away with the Indian Bureau?

Mr. PADILLA. No one, except that I felt that from what had been said that might be the tendency.

The CHAIRMAN. Who said anything that made you feel that way?

Mr. PADILLA. No one in particular.

The CHAIRMAN. Well, anyone in general?

Mr. PADILLA. No one in general.

The CHAIRMAN. Why did you dwell on the subject when you came up here?

Mr. PADILLA. I felt you might be impressed in the same way I was, so I decided to make these remarks.

The CHAIRMAN. Let me tell you something. There is no movement in Congress, or on the part of any committee in Congress, to do away with the Indian Bureau. There is no movement of any committee of Congress to take your lands away from you. Anyone who has peddled that propaganda to you is doing you irreparable injury and a great wrong. There is, perhaps, a scrutiny on the part of Congress to try to see that the Indian Bureau is conducted for what it was intended to be, and not to meet the whims of some individual or group of individuals. You had better get that clear. [Applause.]

Mr. PADILLA. I am glad to hear that.

Mr. STEWART. Mr. Chairman, I would like to assure the chairman that I had no knowledge that the previous person was a Government employee at the time of calling him.

The CHAIRMAN. Very well.

Mr. STEWART. That still leaves the other governor, who has requested to be heard. He was to speak for all of the governors. Since Mr. Paisano was disqualified, it still leaves the other governors who request for consideration.

The CHAIRMAN. All right; that is all. That will end that subject. We will now go into the other subject, the matter of S. 1152.

Mr. STEWART. Mr. Chairman, did you intend they could be called?

The CHAIRMAN. Well, you see the time, Mr. Superintendent. I take it that controversy would run about as it has run all day.

Mr. STEWART. It would be to give their views as to what has gone on heretofore.

Senator CHAVEZ. Can't they put that in writing and submit it to the committee?

Mr. STEWART. Yes.

Mr. BIRD. Mr. Chairman, I believe each one of the pueblos has a resolution, in writing, to present to the committee. Each pueblo has one to be filed.

The CHAIRMAN. Each pueblo has a resolution and wishes to file it: is that the idea? Are they already prepared?

Mr. BIRD. Yes, sir.

Mr. STEWART. Is that true?

Mr. BIRD. Yes, sir.

The CHAIRMAN. We'll have someone collect them.

Mr. STEWART. The governors of the various pueblos—

The CHAIRMAN. Have them put in their resolutions, too.

(The resolutions referred to are as follows:)

STATEMENT OF PUEBLO OF ACOMA

When the United States took over our territory, in 1852, treaties were negotiated which pledged to the Indians their lands, these treaties were not ratified by the Senate, President Lincoln renewed the pledge and gave the Indians title to their lands and recognized their civilized self-government, he, knowing the Indians owned the lands long before any white man set foot on this continent.

Since the arrival of white man, encroachments on the Indian lands were heavy, what lands granted to the Pueblo Indians by Spain, passed to white ownership through the fact that paper titles had been lost, or dishonest surveys threw the Indian lands into white boundaries.

Because their grazing areas had been reduced to mere pittance compared with the original areas which they possessed, many of the Pueblos were compelled to load their small ranges at an improper number of stock. They had the choice of overgrazing their range and thereby damaging their land or of going hungry. This is the reason why Congress saw fit to purchase additional land in recent years, with a sincere belief that Congress acted with prospective ideals for the Indians with a view of what they contemplated of the past.

Previous to the enactment of acquiring land by purchase by the Government, all around the Indian lands overgrazing was done, depleting and destroying the cover of its top soil, but since grazing regulation has been put into effect by the Government, on the areas used by the white stock owners now used by the Indians, is gradually getting its grass back again.

We are willing to apply every kind of scientific method to best use on the lands made available for our use, but it is a fact that human, as well as animal carrying capacity of our land will not be sufficient to sustain the growing population of my pueblo and the answer to this problem is in your hands, my Indians have no authority to answer them.

The Indians understand this land was bought according to a direction by the President himself, whatever is affixed to the soil in its management, the Indians have applied to it, resulting with bringing back the forage and vegetation on these ranges.

The Indians at this particular Acoma Pueblo, derive their main source of income from livestock industry of which the purchased area is adapted to, both sheep and cattle are ranged on these lands practically 7 months out of a year, being high it is used mostly for summer range for both classes of livestock. Water being the main factor, few springs were developed and windmills were installed, open dirt tanks were built to hold surplus water when it rains. These developments were done by Emergency Conservation Work, Soil Conservation Service, and triple-A funds. Even with such developments water is not at our command at all times, windmills go out of working order and we are met with drought in some years, making it very difficult for the livestock owners to meet their economic conditions, thereby using voluntary drastic cuts in their herds by sales, sacrificing young breeding stock to meet the circumstances.

We have our own cattle-and-sheep officers appointed by the owners who do not draw any kind of compensation. They cooperate with the Government supervisors in management of range practices. With such program in operation, one notices great improvements in weight of fleeces, grade and weights of both classes of livestock. An example of one herd which I helped this spring to shear averaged 10 pounds per fleece off bred ewe.

Reduction in livestock is made every fall to conform to the carrying capacity of the range. This is done through marketing channels, comprising of non-breeding class and at various times of breeding stock when the quota of the range capacity does not justify it.

We enjoy our property and the Indians feel that the Government purchased these lands for the use of the Indians to carry on their industry and in the manner it does not injure the white stock owner, providing the injured person was not guided by selfish purpose.

The population of this pueblo is 1,293 according to the census, 822 families making up the population. Two hundred and sixteen families are interested in livestock industry. Total income from sales of livestock and livestock products in 1942 amounted to \$69,914 averaging approximately \$23.67 income per family from the industry.

We have tried to explain the usage of the range to interpret whether we have abided in the way it was intended by the Government, if we have, it is fair to say that we have played our share in exercising the democracy on the range.

In view of the above the officers and members of the pueblo of Acoma at a duly assembled meeting resolve:

That this pueblo recommends to any committee investigating lands be advised that the pueblo of Acoma wants administration of their lands to stay as it is in the Indian Service, the Indian Service not only knows our needs in grazing lands in livestock but in everything concerning our economic conditions.

Pino.

RESOLUTION OF THE PUEBLO OF ACOMA

Be it resolved by the Pueblo of Acoma in New Mexico, at Acoma, N. Mex., in general meeting of the qualified members of the Pueblo duly called and assembled, that only the Governor, Vicente Roy Chavez, and the Lieutenant Governor, Lorenzo Concho of this Pueblo and such other persons as they designate, are authorized by the Pueblo of Acoma to present to the McCarran committee, of the United States Senate, and any other investigating committees of Congress, the official position of the Pueblo of Acoma concerning any land or any other matters that those committees may be investigating or interested in.

Dated at Acoma this 12th day of August, 1943.

Vicente Roy Chavez, governor; Lorenzo Concho (his X mark); Toribio Aragon (his X mark); Albert Lino; Ben E. Ortiz; Julian L. Chino; Robert R. Vincenti; John E. Sanchez; Lorenzo Romero; Roman Sanchez (his X mark); Joe H. Louis; John K. Poncho; Raymond Waulju; Joe H. Sanchez; Frank Estevan; Toreblo Sanchez; Sam L. Vallo; Frank E. Weeks; Antonio Garcia (his X mark); James T. Vallo; Steve Orilla; Lorenzo W. Pino.

To the McCarran Investigating Committee:

GENTLEMEN: Our Federal Government still has an Indian problem, and has not yet fulfilled its obligation to the Indians of the Southwest. We Indians are inclined to believe that influential citizens of the State, and a few of our own race, have over-estimated their ability to shoulder our problems should the Indian Service be abolished. The Indian agency is the only representative system the Indian relies on for protection of his property and well-being. Abolishing the Indian Service at this time would mean the breaking down of what the Government has built up in shaping our life, to the stage where we will be able to take our place in this country on an equal chance with our white brother. When we say this we are speaking for the majority of Indians who are unable to read and write English. It is necessary to continue to have the Indian Bureau function as it has done to safeguard our interests and continue to improve conditions where it is needed.

We all know that it is humanly impossible for any one superintendent to satisfy all of our people at the same time, just as much as it is for you Congressmen to satisfy all the people in your respective States. But it is true also that some good is in every one of you, or you would not be where you are; and it is the good

motives and principles in such persons that has inspired them to accomplish many of the practical things done for the Indians. There are many problems that come up, too numerous in fact for anyone to solve in any limited time covering matters from our industry to legal questions. We have no members of our tribe who are capable of transacting business in a white man's way. Naturally we look up to someone to represent us. The burden falls on the Indian Service which we regard with respect.

Our people seldom make decisions without giving considerable thought to the problem at hand. Important matters sometimes require several council meetings for discussion and understanding, in which every member of the tribe is privileged to express his views, coming to their decision by majority vote. At no time is a Government official permitted to transact any business without the approval of the tribe, thence through the Agency department concerned. And we believe we keep the Indian Service personnel plenty busy. Most Government policies and regulations need more detailed explanation and supervision among Indians than for other classes. Full compliance with stock reduction programs, selective service and rationing would be impossible without their help. This is the reason we say, the Indians are looked after about little matters as well as big. It is this Indian Bureau representation which Congress created for the Indians and which we are rightfully entitled to, not so much because our forefathers once owned all the lands, but because we are respectable, deserving citizens of this country. From the Acoma Reservation through enlistments and Selective Service our boys number 52 serving beside their white pals, in the meanest places. Some Pueblo—several Indian mothers—have given five or six boys for the cause that is dear to us. With these facts in mind, we are wondering what root will be the next that will be out to retard the progress and well-being of our Indians in their fight to welcome citizens of the United States of America.

In view of the facts stated above, the Acomas in assembly, September 4, 1943, proposed and passed the following resolution:

"Resolved, That the Indians of Acoma go on record as opposed to any movement to abolish the Indian Service."

Respectfully,

Vicente Roy Chavez, Governor; Lorenzo Concho (his X mark); Torihio Aragon; Albert Lino; Ben E. Ortiz; Julian T. Chino; Robert R. Vicenti; John E. Sanchez, Lorenzo Romero; Ramon Sanchez; Joe H. Louis; John K. Poncho; Raymond Wanya; Joe H. Sanchez; Frank Estevan; Toulro Sanchez; Frank E. Week; Antonio Garcia (his X mark); James T. Nallo; Steve Orilla.

COCHITI PUEBLO,

Bernalillo, N. Mex., September 3, 1943.

RESOLUTION

We the council members, the governor and lieutenant governor, all members of the United Pueblos Council, and members of Cochiti Indian Pueblo, do hereby present the following resolution to wit:

1. That we earnestly protest the abolishment of the Indian Bureau as proposed by Senator Elmer Thomas and other members of the Indian Affairs Committee. We feel that the following reasons are sufficient to continue the Bureau in operation.

A. We Indians are in no position to pay for boarding schools outside of our pueblo. This would be discontinued if the Bureau were to be abolished.

B. The health of our families would suffer if hospitals were to be discontinued. The Indian hospitals are kept by our Government under the supervision of the Indian Bureau. We have never been, nor are we now, in a position to pay for hospitalization for our families and for ourselves.

C. If the Bureau were to be abolished, the day schools at the pueblos would be discontinued and probably taken over by the county and State. Since we are not citizens and taxpayers, we would not be in a position to contribute to these schools.

D. Our extension service which has played a big part in the improvement of our lands would be abolished.

E. Not being prepared to assume the duties of citizenship, and our land being nontaxable, we are in no position to assume the expenses which would come with the abolition of the Indian Bureau.

F. Our boys in the armed forces are fighting for the liberty and freedom of the world as well as for us. We do not want them to come home to find that

some of the very things they have been fighting for have been taken away from them. We feel that they would be paid a very poor reward should the Indian Bureau be abolished.

G. In regard to our land: Were we not the sole owners of America? After everything is taken away, where do we Indians go from here?

Gov. Petacio Arquero, Lt. Gov. Jerry Quintano, Jose Loreto Arquero, J. D. M. Melchor, Celestina Quintana, Louis Ortiz, Gruz Perez, Santiago Arquero, Cipriano Quintana, Joes Rey Suina, Lorenzo Suina, Lorenzo Cordero, Crescencio Pecos, Nestor Herrera, Frank Herrera, Pasqual Suina, Fernando Cordero, Juanito Trugillo, Jim Herrera, Philip Coopa, Robert Martinez, Epifanio Pecos, Juan Benada, Santiago Pecos, Alfred Herrera, Raymond Herrera, Paul Trujillo, Eluterio Cordero, Juan R. Merchor, Juan Jose Suina, Diego Romero, Eluterio Suina, Eufasio Suina, Cipriano Chavez, Frank Chavez, Crescencio Suina, Jim Herrera, Petacio Arquero.

PUEBLO OF ISLETA,

Isleta, N. Mex., August 26, 1943.

CHAIRMAN OF THE SENATE SUBCOMMITTEE ON INDIAN INVESTIGATION:

Mr. CHAIRMAN: We, authorized by the governor of Isleta acting upon the advice of the Isleta Pueblo Council to give the following statement in the name of the people of Isleta Pueblo:

The governor and the Council of Isleta for whom we are giving this statement represent the people of Isleta.

We are not asking much of you. All we ask is to help us to retain what land we have now. This land or grant was, we will say for the sake of history, given to us by the King of Spain which was later approved by the Mexican Government when it was taken over by them, and then again approved by the United States when we became part of the United States.

It seems like every time we are transferred from one government to another our grant decreased in size, especially when the United States took over. Now, that the United States Government has given us back a few parcels of land some people are kicking on that account, and want these parcels of land taken away from us and given to them.

We have stock on these lands. We are paying leases for these lands which we think is unfair to us for the simple reason that it had been ours even before Columbus was born. We do not think that if a white man got a hold of these lands he would pay more taxes or make more improvements on it than we do now.

One of these parcels of land which is located on the southwest corner of our grant was lost by us through an error of one letter when the title for this land was in question.

We will explain it only briefly and you can form your own ideas as to the nature of this error. When our southwest boundary was being approved, one letter in one simple word in Spanish made a difference of some 2 miles in the length of this boundary. The word "Caja" in Spanish, was misspelled to "Ceja" and was the cause of our losing this corner of our grant when the survey was made. The surveyor went west on our south boundary only as far west as the deed stated in Spanish; "Hasta la Ceja del Rio Puerco" instead of going as far as "Hasta la Caja del Rio Puerco."

We are not asking to have this changed any other way, we only wish to have you see just how simple it was to take advantage of our old people who did not understand the language and the writing of any form.

1. It has come to our attention that Congress has been given a report which if passed will abolish the whole Indian Service. Some people have made the suggestion that the Government need no longer take care of us. These people want to do away with all Government protection for our land, do away with all of the schools for our children, abolish all hospitals and then make us citizens and in general refuse to carry out the sacred promises that their forefathers made in the treaties with our forefathers.

2. We must say that this bill is very bad and it will do no good but only harm for all. We have experienced many times the breaking of treaties and the troubles that come after broken treaties, but never, never before has anyone tried to do us more harm than those who are now trying to have the Government stop all help for us. If this bill passes we see in the future for our people and all Indian people in general nothing but trouble and unhappiness.

3. It is true that some of our people without thinking asked that the Indian Service be abolished because of some personal feelings against some Indian officials and because of the mistakes made by some Indian Service employees. In their attempt to get even with some Indian Service officials they have led the way to hurt their own people. They did not stop to think that the majority of us are not yet ready for citizenship.

4. They only think of themselves and they have not thought of the general welfare of our people. These few ignorant people who have from time to time fought against the Government that is helping us, have never expressed the real voice of the people they claim they represented.

5. We wonder why some people should ask Congress to abolish all help from the Government. We have read over and over again the proposed bill or report that attempts to do away with the Indian Service. We read that the writers of the bill have charged that the Indian Service has not used the money wisely given by Congress. They charge that the Indian schools are bad and in general the Indian Service has many incompetent officials.

6. We gather from these reports that the Indian Service could have done a better job with the money given by Congress instead the Indian Service has been wasteful. That if the Indian Service had done a good job in carrying out its obligations we would be more ready for citizenship today.

7. * * *

8. We are not here to file charges against anyone but only to reason for justice. We suggest that Congress make a thorough investigation of the Indian Service as soon as possible to find out just what the real causes of these troubles are in the Indian Service. Then correct the trouble but not abolish the whole Indian Service because of the incompetence of some Indian Service officials.

9. We take this opportunity, gentlemen, to express our sincere gratitude for our Government's help all these years. And hope that it will not stop helping us simply because some Indian Service officials have neglected their obligations or because a few smart, ambitious Indians cry for citizenship regardless of our wishes.

10. There have been no interference from any of the offices in our internal affairs as has been stated by some dissatisfied members, unless we ask them, too, and only for advisers and not judges. They have nothing to do about our customs and our management of our internal affairs. It is unfair to accuse anyone for disrupting our customs since no one but ourselves have that to manage.

11. Leave us as we are now with what we have and you will be doing your part in helping us to be good citizens. We are doing our part in helping with what we have in pennies as well as the boys in the service, so let's be friends and help and meet half way.

12. Today we have some eighty boys from our village in the armed forces. A good many are on foreign soil and in the thickest of fighting with the enemy, fighting for what? Fighting to retain our freedom, we are told. Now, gentlemen, how much of this freedom is the Indian going to enjoy when the war is over? Is he going to have his land intact when he gets back from the war or will he have to go elsewhere to make his living because some avid people acquired his land while he was fighting for these same people? Now, we ask you in the name of justice and our boys in the service to let your conscience guide you instead of the political votes.

13. We petition Congress to be mindful of the many thousands of our young Indian braves who are now fighting for our country and not let it happen to have those braves return home to find all Indian schools closed for their children, no hospitals for them to go to and find their pueblos at the mercy of politicians and their lands being held for auction because of tax delinquency.

Thank you, gentlemen.

RESOLUTION OF THE PUEBLO OF ISLETA

Resolved by the Pueblo of Isleta in New Mexico, at a general meeting of the qualified members of the pueblo duly called and assembled, That only the governor, John R. Abeita, and lieutenant governor, Juan Rey Lucero, of this pueblo, and such other persons as they designate are authorized by the pueblo of Isleta to present to the McCarran committee of the United States Senate and any other investigating committees of Congress, the official position of the pueblo

of Isleta concerning any land or any other matters that those committees may be investigating or interested in.

Dated at Isleta Pueblo this 28th day of August 1943.

Members of council, 1943: Jose Carpio, Frank Marrujo, Juan Domingo Jojola, Damacio Lujan, Joe L. Lucero, Felipe S. Abeita, Antonio Lucero, Juan P. Jojola, Remijio Lente, Juan Andres Abeita, Andres Lucero, Felipe Lujan.

Officials of pueblo, 1943: John R. Abeita, governor; Juan Rey Lucero, first lieutenant governor; Frank Chiurivi, second lieutenant governor; Pete Jaramillo; Joe S. Jiron; Charles F. Jojola, secretary.

Members of the pueblo: Nicolas Lente, Andres Jojola, Nicolas Lujan, Domingo Lucero, Juan Lucero, Lolo Lucero, Bartolo Montoya, Tomas Abeita, Juan B. Jujola, Lulidor Lucero, Ambrosia Abeita, Nicholas Oujillo, Felipe Zuni, Joe S. Abeita, Bautista Zuni, Tomas Chavez, Lazaro Chiurivi, Joe Anzara, Diego R. Chiurivi, Pablo Jaramillo, Francisco Jiron, Esquipula Jojola, Alfred Lente, Juan Chavez, Carlos Lucero, Ramon Zuni, Bartolo Lente, Diego Lujan, Bautista Lucero, Remijo Jiron, John P. Jojola, Felipe Sangre, Joe S. Jojola, Laurence Anzara, Charlie D. Jojola, Johnny Lucero, John D. Jojola, Domingo Jojola, Moses Lujan, Jose M. RESOLUTION OF THE PUEBLO OF JEMEZ

The meeting was held in the pueblo of Jemez on the 28th of August. The decision was made in the meeting in regard to the United States Indian Service.

We, the Jemez Indians, abide by the Federal law and by the law of the pueblo. Of course, we also abide by the State law. We Indians are defended by the United States Indian Service.

We do not want anybody to abolish the Indian Office. Our present life and our young generation and whatever we hold dear in our pueblo life need full protection by the United States Indian Service. We have no way to continue living if the Indian Office should be abolished.

We depend on the United States Indian Service because they have done all we need and we want this to continue in our future life.

Approved by the Council of Jemez.

Alcario Gachupin, governor of Jemez Pueblo; Pat Toya, lieutenant governor; Manuel Fragua; Jose Manuel Loretto; San Juanito (his mark) Lorette; Juan Diego (his mark) Casiquito; Jose Felipe Jepa; Joe M. Toya; Manuel Yepa.

(All signatures and marks witnessed by Pat Toya, lieutenant governor.)

RESOLUTIONS TO BE PRESENTED TO THE McCARRAN COMMITTEE. PASSED BY THE JEMEZ PUEBLO COUNCIL SEPTEMBER 1, 1943

In the first year we were captured by the Spanish Government and were issued a grant. Later the United States Government by a treaty took possession of this country. We were put under the flag of the United States and our Jemez Pueblo, similar to the other pueblos of New Mexico were placed under the United States Indian Service and we are satisfied. At our meeting we drew up the following resolutions—

Resolved that

1. The administration of Indian lands and other lands administered by the Indian Service remain under the agency.

2. Indians of the pueblo will be glad to expand their small herds of stock on their present land if by so doing they could remain under the Federal range regulations. Recommendations of the Indian Service Range Division are followed in all cases pertaining to land use.

3. The Indians of this pueblo are poor and needy and the manner in which grazing rights has been handled has done the most good to the greatest possible number of individuals.

4. The present lands in use by the pueblo is only a portion of the lands originally held by the Indians of this Pueblo. Therefore, we feel that our rights to the present holdings be assured us by the Government.

5. At the present time we seriously oppose the changing of administration of lands because we have no complaint against the manner by which the United States Indian Service has handled these lands for us.

6. The Indians have lost a great deal of land in the past for which they have not been properly paid. Now we find that the number of Indians in the pueblo are increasing and are greatly in need of that land we lost.

7. Lastly, we wish to ask our friends, the various governmental agencies, the Senators and Congressmen of this State, and the McCarran committee to carefully study our situation before making any recommendations. Being under the flag we have our boys in the armed forces fighting to protect that which we hold dear, namely our land and our way of life. We do not want them to return and find the things they are fighting for gone and in its place the things they went out to destroy.

ALCARIO GACHUPIN, *Governor.*

PAT TOYA, *Lieutenant Governor.*

SAN JUANITO (his mark) FRAGUA, *Councilman.*

GUADALUPE FRAGUA, *Councilman.*

MANUEL YEPA, *Councilman.*

RESOLUTION

Resolved at a joint meeting of the Councils of Jemez and Zia at Jemez Pueblo, N. Mex., on September 1, 1943, in regard to Ojo de Espiritu Santo Grant, which is now administered by the S. C. S. for the use of the Indians of Jemez, Zia, and certain non-Indians.

That in view of the fact that Espiritu Santo Grant once belonged to us, given to us by Don Thomas Velez Gachupin, governor general of the kingdom of New Mexico (the act of grant on file at the Land Office in Santa Fe, N. Mex.), the exclusive use should be given to the Indians of the pueblos of Zia and Jemez.

That even though we still claim ownership of the land, the Court of Private Land Claims has judged against us and is now legally owned by the United States Government. We feel that the grant should be turned over to the Indian Service, to be administered for the use of the Indians of Jemez and Zia.

The Indians of these two pueblos have perhaps the poorest grazing land in the State of New Mexico, and if the Ojo de Espiritu Santo Grant which is their best grazing land, is taken away from them, the already exceedingly poor Indians will be subjected to still more suffering.

The Indians of these two pueblos have always been satisfied with the administration of lands by the Indian Bureau.

Jemez: Alcarrio Gachupin, governor; Pat Toya, lieutenant governor; Manuel Fragua, second lieutenant governor; Jose Manuel Loretto, fiscal; Joe M. Toya, Manuel Yepa, Guadalupe Fragua, Juan E. (his + mark) Sando, Santiago (his + mark) Lucero, Juan Diego (his + mark) Casiquito, councilmen.

Zia: Juanlito Medina, governor; Perfecto Pino, lieutenant governor; Antonio Gachupin, Lorenzo Medina, councilmen.

(All signatures and marks witnessed by D. C. Dozier.)

RESOLUTION OF THE PUEBLO OF LAGUNA

Whereas the question of abolishing the Indian Service has been brought to our attention; and whereas this item has been published in the Associated Press news so that the citizens of this State and some Members of the Congress have expressed strong sentiment to abolish the Indian Bureau, therefore, we the undersigned

members of the Pueblo of Laguna Council at a meeting held September 1, 1943, at Laguna, N. Mex., do hereby resolve that the Indian Bureau shall not be abolished.

John C. Sarracino, acting governor; Abe Larkmond, first lieutenant governor; Robert K. Thompson, second lieutenant governor; _____, head fiscal; Antonio Chero _____, first fiscal; Walter Hardia, second fiscal; _____, interpreter; R. O. Marmon, Secretary; Phil Paisand, Joseph T. Ray, Mariano Lenton, Tom Kose, Francisco Lourzo, Frank J. Peters, Robert Walla, Goge Piro, Howard Analla, Lewis Daylice, David Hiyi, Noble Thompson, Juan Aragon, Roy Sice, Sr., John E. Martinez, Sr., Lorenzo Mooney, Harry Lliston, Joe Luther, George P. Dailey, Fred Davis, Sr., Lorenzo Aragon, Sam Victorino, Charlie Day, Dan Romero, Jose Romero (his mark), Albert F. Paisano, Benjamin Romero, Thomas Analla, Lewis Phillips, Morris L. Spira, John R. Peters, Thomas Perry (his mark), _____, Pablo Montogo (his mark), councilmen.

NAMBE PUEBLO,

Santa Fe, N. Mex., September 2, 1943.

RESOLUTION OF THE PUEBLO OF NAMBE

Whereas the recommendation of the Senate Subcommittee on Indian Affairs for the abolishment of the Indian Service has been brought to our attention, and whereas this recommendation has been given publicity in the Associated Press newspapers, and some of the citizens of the State and Members of Congress have expressed strong sentiment to abolish the Indian Service, we the undersigned members of Nambe Pueblo of the State of New Mexico do hereby resolve to protest the abolishment of the Indian Service.

PETARIA PENA.
ANTONIO TRUJILLO.
MOSES PEÑA.
FEDENCIO ROMERO.

PICURIS PUEBLO,

Penasco, N. Mex., September 1, 1943.

Whereas the question of abolishing the Indian Service has been brought to our attention and whereas this item has been published in the Associated Press news so the citizens of this State and some Members of the Congress have expressed strong sentiment to abolish the Indian Service.

We, the undersigned members of pueblo of Picuris, of the State of New Mexico, do hereby resolve that the Indian Service shall not be abolished.

Augustine Martinez, Antonio D. Simbolo, Jesus Mermejo, Manuel Duran, Roman Martinez, Kumoo Duran, Jose E. Lopez, Jim Simbolo, Johan J. Martinez, Abran Martinez, Manuel Vargas, Roland Durand, Cruz Simbolo, Gerald Nailor, Manuel Simbolo, Ayapito Martinez, Pedro Martinez, Frank Duran, Reyes Martinez.

RESOLUTION OF THE PUEBLO OF POJOAQUE

POJOAQUE PUEBLO,

Santa Fe, N. Mex., September 2, 1943.

Whereas the question of abolishing the Indian Service has been brought to our attention through the newspapers and by other means; and

Whereas strong sentiment has been voiced by citizens of the State of New Mexico and Members of Congress for the abolishing of the Indian Service, we, the undersigned members of Pojoaque Pueblo, do hereby

Resolve, That the Indian Service should not be abolished for the following reasons:

1. We are not ready to face taxation of Indian lands, nor do we think we could hold our lands without the protection of the Government.

2. We are not able to send our children to private boarding schools, and no suitable schools are available to us at or near our pueblo.

3. We do not believe that the Public Health Service would help the Indian people like the Indian hospitals do, and we are not able to pay for private hospitals.

4. We need assistance with our land and livestock problems that is not available to us only from Indian Service.

5. We need help in our dealings with the non-Indians, so that they do not take advantage of us.

6. We need help to understand the rules and regulations of our Government during wartime and how best to help with the war effort.

JUAN I. TAPIA.
THOMAS ROMERO.
ZENOBIA MARTIN.

RESOLUTION

Be it resolved by the pueblo of Sandia at a meeting of the qualified members of the council on this day of September 5, 1943, that—

1. We have no reason to oppose the administration of our lands by the Indian Service because we feel it has always acted in our best interests.

2. Although our pueblo does not use very many public lands we are standing strongly against the changing of the administration of these lands because we want to stand by those pueblos who are directly affected with this investigation.

3. We are under the flag of the United States and many of our boys are fighting for the protection of their land which has been handed down to us by our forefathers. We feel that the least we can do and the least our Government can do is to hold these lands intact for us and for the men in the armed forces. As a people under the flag we have a right to ask for this protection not only for our soldiers but for ourselves and those that will follow us.

What will our boys say when they return and see that everything they have fought for is lost? Are our young men being killed in the battlefields to preserve this land of ours for some selfish stockmen who already have most of the land and wants more? No; we believe in our Government and we have faith that when this investigation is completed these lands will remain in our hands.

4. Many years ago we had more land which we used in the right way. Then the Government staked out our boundaries and opened the rest of the land for settlement by non-Indians. Now we hear of this investigation and it appears that the white man has found a way by which our few remaining pieces of land can be taken away from us. The Spanish and the Mexican Governments respected our rights to these lands and we ask only that this Government also respect our rights.

FRANCISCO (his X mark) LAURIANO,
Governor.

PAUL CHAVEZ *Lieutenant Governor.*

JUAN A. LUJA, *Councilman.*

PASQUAL ASTORI, *Councilman.*

IGNACIO BACA, *Councilman.*

SANDIA INDIAN PUEBLO,
Bernalillo, N. Mex., September 5, 1943.

Whereas the question of abolishing the Indian Bureau has been brought to our attention and we have seen by recent articles in the press that certain citizens and Members of Congress have shown their desire to do away with the Indian Service, we the undersigned members of the pueblo of Sandia hereby show our opposition to abolish the Indian Service.

The feeling of the entire pueblo is that the Indian Service has done a great service to the Indians and should be permitted to continue.

Francis (his mark) Lauriano, Governor; Paul Chavez, Lieutenant Governor; Juan H. Lujan; Pasquale Antoni; Ignatius Baca; Lorenzo Chavez; Lorenzo Lucero; Pete Avila Juan R. Chavez; Miguel Lucero; Vincente Lujan; Nicholas Ortiz; Hilore Sanchez; Luciano (his mark) Lujan; Lupito (his mark) Ortiz; Juante Lauriano.

Whereas the question of abolishing the Indian Service has been brought to our attention, and whereas this item has been published in the Associated Press news, and the citizens of this State and some of the Members of Congress have expressed strong sentiments to abolish the Indian Bureau. We, the undersigned members of the pueblo of San Felipe de Bernalillo, N. Mex., do hereby on this day of August 31, 1943, resolve that the Indian Service shall not be abolished.

Don Sanchez, governor of San Felipe; Jim Sanchez, secretary; Fred Tenorio, fiscal major; Phillip D. Sandoval, lieutenant major. Councilmen: Santiago Troncosa, Harvey Townsend, John Ray, Chris Sandoval, Jose Rey Sanchez, Valentino Sandoval, Felipe Chavarillo, Daniel Valesquez, Antonio Duran, Pablo Aguilar, Domingo Chaves, Andres Valesquez, Antonio Valencia, Martino Candlario, Diego Leyba, Felipe C. Tenorio, Pedro Candlario, Jose D. Valencia, Alendro Troncosa, Jacoba Sandoval, George Tenorio, Jose Chavez, Zick Chavarillo, Ramon Sandoval, David Quintana, Joe Parina, John Valencia, Jim Tenorio, Marcelino Troncosa, Joe Duran, Barney Sandoval, Felipe Sandoval, Ignacio Garcia, Nasario Lucero, Feliciano Valencio, Juan R. Valencio, Delfino Valasquez.

SAN FELIPE PUEBLO,
Bernalillo, N. Mex., September 6, 1943.

RESOLUTION

Resolved by the Pueblo of San Felipe on this 6th day of September 1943, That:

1. All lands used by Indians whether federally owned or under Indian ownership remain under the present administration for the reasons stated below:

(a) The Indian Service understands our problems and has administered our lands in such a manner so that the majority of Indians have been treated on an equal basis.

(b) Our grazing lands are limited and if they are to be opened for outsiders it will cause considerable hardship on all our people.

2. The Indians are increasing and at this time cannot afford to lose any land. In fact we are needing more land which unfortunately we cannot get. Therefore, we have to conserve the lands we now hold and have them managed carefully and intelligently. We believe the Indian lands are better managed by the Indian Bureau because of its long experience in dealing with the Indians.

3. We have our young men fighting in this war to attain freedom and protection for the future. If they come back and find that their Indian Service has been abolished and their lands taken away they would have fought in vain.

4. Many years ago our Indians used all the land around our pueblo then the white men came and some of our land was opened for them to settle. They practically took all our lands and left us with only the poorest grazing lands. Now it seems that they are trying to take this away. Because of the unjust treatment of the past we believe that our Government should at least give us the uninterrupted free use of the land we now hold.

Don Sanchez, Governor, Lut Jim Sanchez, Fred Tenorio, trial mayor, Phillip D. Sandoval; Lupe Valasquez, David Chaumillo, Councilmen.

SAN ILDEFONSO PUEBLO, N. MEX.

September 2, 1943.

Whereas the question of abolishing the Indian Service has been brought to our attention, and whereas this item has been published in the Associated Press news so that the citizens of this State and some Members of Congress have expressed strong sentiment to abolish the Indian Bureau, we, the undersigned members of the pueblo of San Ildefonso de New Mexico, do hereby resolve that the Indian Service shall not be abolished.

1. We do not want Indian property taken from Federal protection and put on local tax boards.

2. We do not want Indian boarding schools closed, but we do want education and discipline improved so that the pupils can go to college without further preparation.

8. We do not want Indian day schools closed, but we want grades increased through the eighth with sufficient good teachers.
4. We want tuition for Indian children in public schools paid where necessary.
5. We do not want Indian hospitals abandoned for Indians and turned over to the United States Public Health Service. We want good doctors who will not be transferred frequently. We should like to see Indians who are capable employed in the hospitals. We want to keep the medical field service.
6. We want to keep the Indian Arts and Crafts Board.
7. We do not want the management of Indian forests turned over to the Department of Agriculture.
8. We do not want Indian tribal funds distributed per capita to individual Indians.

San Ildefonso Pueblo: Gov. Sotero Montoya, Phillip Montoya, Antonio J. Martinez, Antonio Virgil, Juan Jose Montoya, Anselmo Martinez, Incarnacion Peña, Bernardo Sanchez, Facundo Sanchez, Miguel Martinez, Ignacio (his x mark) Aguilar, Joe A. Aguilar, Agapito Pino, Juan B. Tafoya, Juan Cruz Roybal, Louis Gonzales Atlano Montoya, Adam Martinez, Doniclo Sanchez, Richard Martinez, Abel Sanchez, Antonio Peña.

RESOLUTION

We, the Indians of San Ildefonso Pueblo, present for your serious consideration, the following resolutions on which we are agreed:

- (1) We beseech you in prayer that the Indian Bureau shall not be abolished.
- (2) We further beseech you in prayer that Indian property shall not be taken from Federal protection nor put on local tax rolls. We are not now endowed with sufficient means for decent living.
- (3) In our prayer we beseech you that the Indian boarding schools shall not be closed. We desire higher education and discipline so our children may go on the college without further preparation.
- (4) We continue our prayer to ask that the Indian day schools shall not be closed but that we shall have higher grades established through the eighth grade with sufficient good teachers.
- (5) In our prayer we beseech you to have tuition for Indian children paid in public schools when necessary.
- (6) We reach deep in our hearts to know how our sick may be attended if Indian hospitals are abandoned for Indians. We desire and need good, permanent doctors. Give Indians, who are capable, employment in hospitals and continue the medical field service.
- (7) We most deeply implore you to allow the Indian forests to remain under their present administration.
- (8) And we further implore you to keep the Indian arts and craft board.
- (9) We pray again to gain your attention that all Indian tribal funds may remain intact to accumulate so that agricultural requirements will always have a fund to provide supplies when needed.

We close our prayer to have you know that deep appreciation will flow freely from our hearts for all the good that has come our way in the past, and in your careful deliberation, we feel that all good shall remain and increase.

GOV. SOTERO MONTOYA.
LOUIS GONZALES.
JOE A. AGUILAR.

RESOLUTION OF THE PUEBLO OF SANTA ANA

Resolved by the Pueblo of Santa Ana in New Mexico, at a general meeting of the qualified members of the Pueblo duly called and assembled, That only the governor, Jesus Manuel, and lieutenant governor, Leo Peña, of this pueblo and such other persons as they designate are authorized by the pueblo of Santa Ana to present to the McCarran committee of the United States Senate and any other investigating committees of Congress, the official position of the

pueblo of Santa Ana concerning any land or any other matters that those committees may be investigating or interested in.

Dated at Santa Ana Pueblo this 31st day of August, 1943.

Jesus (his X mark) Manuel, governor; Leo Peña, lieutenant governor; Puorpilo Montazu, councilman; Valentino Montazu, councilman; Louis (his X mark) Peña, councilman; Jose Bobe (his X mark) Pino, councilman; Cristo (his X mark) Raton, councilman.

SANTA ANA PUEBLO,
Bernalillo, N. Mex., September 3, 1943.

RESOLUTION

At a meeting of the Santa Ana Pueblo Council held September 3, 1943, the following resolution was passed in regard to hearings of the McCarran committee of the United States Senate.

Resolved, That Indian lands, public lands, and all other lands now used by the Indians and administered by the Indian Service remain under that Bureau for the reasons stated below:

1. Through a long period of working with Indians, the Indian Service understands and respects the rights of Indians and, therefore, has administered the Indian lands and other land used by Indians of this pueblo in such a manner so that the greatest possible good has been done to the maximum number of individual Indians.

2. The Indians are increasing and, therefore, are needing more land for their crops and their stock. We understand that it is not possible to get more land for us; therefore, it is necessary that we follow careful plans of grazing, etc., to get the greatest possible amount of good from the lands we now have. The least our Government can do is to assure us of the use of these lands for all time to come.

3. Intentional misuse of grazing lands has not been practiced by the Indians because we have followed only practices recommended by our Government. For example: The Indians in many cases wish to increase the number of their stock; but as this would mean going against regulations, this has not been permitted.

4. We realize that some of the larger cattlemen need more land so that they can increase their stock and in that way make it possible to put more cattle on the market. On the other hand, we have filled our land to capacity; and we also would like to increase our herds not only to put more beef on the market, but to feed our increasing population.

5. The land which we use now and a great deal more was once used by us; and if we had realized that it was to be opened to non-Indians, we would have grabbed it, put fences around it, and perhaps today we would not be as poor as we are.

Jesus (his mark) Manuel; Leo Peña, lieutenant governor; Elifio Montoya; Dossisio Roman; Joe Gareid; Pampito Montoya; Valentino Montoya.

SANTA ANA PUEBLO, September 3, 1943.

RESOLUTION

Since the question of abolishing the Indian Bureau has been brought to our attention, we feel strongly that we should make our statement in defense of the Indian Service, especially in view of the recent publicity which shows that certain citizens and some Members of Congress are for abolishing the Indian Bureau.

The undersigned members from the Pueblo of Santa Ana hereby resolve that the Indian Service shall be permitted to continue for all time.

Jesus (his X mark) Manuel, governor; Leo Pena, lieutenant governor; Pompilo G. Montoya, councilman; Porfino Montoya, councilman; Valentino Montoya, councilman; Longino Otero, councilman; Valencia Garcia, councilman; Elias (his X mark) Armijo, coun-

cilman; Louis (his X mark) Pena, councilman; Ventura (his X mark) Sanchez, councilman; Jose Bohe (his X mark) Pino, councilman; Eligio Montoya, councilman; Tomas Cristobal, councilman; Fabian Lopez, councilman; Emilliano Otero, councilman; Joe Sanchez, councilman; Frank Garcia, councilman; Domingo R. Montoya, councilman; Sandro Montoya, councilman; Donicis Roman, councilman; Joe Garcia, councilman; Unelio Monchego, councilman; Santiago Tenorio, councilman; Pedro Leon, councilman; Petralino Montoya, councilman.

RESOLUTION OF SANTA CLARA PUEBLO

Whereas the question of abolishing the Indian Service has been brought to our attention by the Senate partial report 310 of June 11, 1943:

Some Members of Congress and some citizens of New Mexico have expressed strong sentiments against abolishing the Indian Bureau.

We, the undersigned, qualified members of Santa Clara Pueblo, hereby resolve that the Indian Bureau shall not be abolished.

Resolved, That the Santa Clara Indians wish to go on record as being well satisfied with the management by the Bureau, of the land, schools, forest, and hospitalization.

Dated on this 1st day of September 1943, at Santa Clara Pueblo, N. Mex.

Juan Chavarria, governor; Cleto Tafoya, lieutenant governor; Joe D. Naranjo, sheriff; Joe C. Naranjo, secretary; Patrick Gutierrez, representative; Jose D. D. Naranjo, representative; Jose Reyes Tafoya, representative; Abristo Naranjo, representative; Jose Dolores Naranjo, representative; Ralph Suazo, representative; Alvino Naranjo, representative; Henry Gutierrez; Mike Naranjo; Christina Naranjo; Mrs. H. O. Hardin; Herman Velarde, Alcaraz Tafoya; Geromino (his thumb mark) Tafoya; Camilio Tafoya; Antonio Silva; Nestor Naranjo; Paul Naranjo; Anastacia Sisneros; Helen Sisneros; Geronimo Naranjo; Lawrence Singer; Helen C. Padilla; Florencia Suazo; Marcelino Gutierrez; Victoriano Sisneros; Clara Sisneros; Epemano (his thumb mark) Sisneros; Josefita (his thumb mark) Naranjo; Santiago Naranjo; Kenneth Shupla; Ignacio Naranjo; Eugene Naranjo; Felix Sisneros; Lupita (his thumb mark) Sisneros; Jose C. Gutierrez; Vidal (his thumb mark) Gutierrez; Salvador Naranjo; Tomasita Tafoya; Cresencia Tafoya; Placido (his thumb mark) Tafayo; Julia Martinez; Antonio (his thumb mark) Gutierrez; Matias Gutierrez; Eugene Gutierrez; Frances Chavarria; Desiderio Naranjo; John Naranjo; Ruyenta Dashus; Severo (his thumb mark) Naranjo; Sam Baca; William P. Baca; Marelene N. Miller; Rosila L. Bailey; Damacio Tafoya; Pedro (his thumb mark) Cajeti; Laurencita Gutierrez; Jesusita Suazo; Margaret Cata.

SANTO DOMINGO PUEBLO RESOLUTION

SEPTEMBER 3, 1943

Whereas the recommendation of abolishing the Indian Service has been brought to our attention through report No. 310, We, the undersigned members of the Pueblo of Santa Domingo do hereby resolve that:

As applied in this area, the Indian Service shall not be entirely abolished but corrected to enforce an administration suitable to a more direct benefit to the Indians and so planned as to prepare the Indians to a place equal to those of other people. In correcting the Indian Service policies, Congress should have a planned program for a given year executed to really help prepare us to that end. This preparation must of necessity be without any political hindrance, mismanagement on the part of the administrators, and any experiments.

We favor doing away with researches as carried on and practised at present, because these researchers are done not only at the expense of Indians but also

at the expense of the appropriation money earmarked by Congress for the Indians' benefit. These researches under any title or name, are for the sake of experiments and furthering the promoters' interest rather than helping the Indians. The results of these "studies" are not made known to the Indians.

Trained Indians who are as well qualified to participate in such programs as the "student aid and trainees" of the United Pueblos Agency are denied the chance which the handpicked choices of the administration enjoy. With unusual exceptions, these students stay but for a short period and are given high salaried positions in the offices where they handle problems that require wise counseling.

Concerning directors, supervisors and "experts," we consider such a group as being too highly paid for the services they render the Indians. Their services are limited to their own likings and are too limited or insignificant to be of much value to us. These high salaried people should conform to the civil service laws and not be appointed by personal friends in high positions. Special workers for the Indians should be paid for the specific services rather than carried on monthly or yearly salaries.

The appropriation fund intended for the Indians should be made known to us and we should be informed as to its expenditures. The Indians should be informed about their own tribal funds which ought to be handled directly by the agency instead of the office in Washington. When the Indians make important and necessary trips in behalf of their respective pueblos, they should be entitled to the use of per diem and travel expenses from the Indian appropriations as our Indian officials are, instead of using their tribal or compensation funds.

The standards of all Indian schools must be raised without further delay. The boarding schools should be used to educate the Indian children. The children should not help keep up the schools by working on details for half a day which has no connection in preparing him academically or later life. The school period of 9 months should be used in schooling the children 9 months and not only half of that due to help keeping up the school. We want Indian supervisor of our schools. We demand putting Indians on school boards at every school to assure us of high standards. We demand that we have a voice in determining as to who is best qualified to serve our interests in schools and other administrations.

Besides schooling, we consider agricultural extension a very vital program in the furtherance of preparing the Indians to self-sufficiency. We ask that this branch of service be expanded rather than liquidated. If this branch of service were to be eliminated, the Indians would lose much. The extension service has much valuable data on Indian farms, livestock, families, etc., which the State does not have.

The United States Government has its moral and legal obligations to respect its treaties and agreements with the Indians. The United States Government should not break faith with us at this time when we are not prepared to assume full responsibilities as a result of its seemingly disinterested manner of handling the program of Indian policies to prepare us to self reliance. We demand that our land be held in trust by the Government and the Government adhere to every agreement and treaty it has signed with the Indians.

Since the health situation among the Indians is acute and the Government has its obligation to maintain health of its people, the hospitals and other medical facilities should continue uninterrupted. Since health deals with a human life, we demand that only the best qualified doctors and nurses be employed to maintain and improve health among the Indians. We want the same provision in health as in schooling with regards as to determining who is a desirable employee. The interns should not practice and experiment in the Indian hospitals and among Indians as has been in the past.

Since we are so out of touch with the Arts and Crafts Board, the Board should be abolished and Congress should grant a specific arts and crafts program which would prove of more value to us. A regional or local art board would be of more value than one in Washington. Indians should have something to say in the matter of what the schools should offer in the art courses.

Respectfully submitted.

JOSE ELASEO CALABAZA, *Governor.*

(Signed also by the Lieutenant Governor, the secretary, and 20 council members.)

TAOS PUEBLO COMMUNITY.
Taos, N. Mex., August 6, 1944.

We, the undersigned, adopt the resolution opposing to abolish the Indian Bureau. We are not able to carry on the taxation. We are not able to pay the schooling for our children.

We are not able to pay the hospitals for our health. We wanted all the protection from the Federal Government which we are receiving up to date.

We wanted for our land to not be allotted. We wanted to carry on our land as a community, as we are carrying on today.

We firmly oppose to abolish the Indian Bureau.

SANTANA SANDOVAL, Governor (his X mark).

JULIAN SUAZO, Lieutenant Governor.

JUAN ISIDRO CONCHA, Casiqui.

CESARIO ROMERO, War Chief.

JUAN ANTONINO LUJAN, Lieutenant War Chief,
(his X mark).

(And 27 councilmen.)

TESUQUE PUEBLO, N. MEX.,
September 2, 1944.

To Whom It May Concern:

We, the members of Tesuque Pueblo, have met to talk over the report of the Senate subcommittee under Senator Thomas, which favors a large reduction in the Bureau of Indian Affairs.

We have all decided that we are opposed to such reductions, and we go on record in favor of continuing the Bureau of Indian Affairs and of increasing instead of decreasing its appropriations.

We realize that the various Commissioners and their assistants, including those now in office, have made many mistakes. They have failed to do many things which they have promised to do. Money which could have been used for necessary purposes has been spent on things which do not amount to much. Better people could have been hired for many positions, but many of those positions have salaries too low to attract the best people. In spite of all of this, we feel that the Bureau of Indian Affairs has done great good for the Indian tribes and we wish to continue our lives under its administration.

We are a small tribe, numbering about 150 people, and we have very little tribal or family money. We earn our living by farming, pottery making, and such jobs as we can get from time to time. Most of our living comes from our farms, because farming our land is the only work of which we are certain.

Our grant of land contains more than 16,000 acres, but only a few hundred acres have soil good enough for farming. There are less than 100 acres of good pasture. The rest is poor grade range land capable of supporting about 100 head of stock according to Soil Conservation Service. Actually we graze about 150 head because we need that many for our living and our work. We could use more horses and cattle if we had good enough range land on which to pasture them. While we have nearly 110 acres of land for each person in the Pueblo, we have only about 3 acres per person of land which can be farmed, and because of water shortage we farm only a part of this.

Our land is so located that it must be irrigated by ditches coming from reservoirs. Rainfall is not sufficient and not enough comes at the right time for our crops. The Indian Service has built us two reservoirs, but these are not large enough to properly irrigate our land under cultivation. We cannot farm more land without more water. We had no money to build these reservoirs and we are very grateful to the Indian Service for them. Before these reservoirs were built our people had a hard time getting enough to eat.

The Indian Service has helped us with our ditches far more than we could have done ourselves. Our soil is very porous and we lose a great deal of water as it runs through the ditches. The Indian Service put in concrete pipes from our reservoirs to the edge of our fields. This has saved much water. We hope that more of such piping can be done after the war.

The Indian Service has helped us build a number of structures to retard soil erosion and to protect us from floods. These have been of great help to our village and our farm lands. We are in need of more of this kind of protection for our fields.

The Indian Service has made it possible for us to fence our land and thus keep our stock on our grant and other stock out. Also the Service has helped us fence our fields and keep stock out of them.

The Indian Service has been of great help in showing us how to improve sanitary conditions around our village. As a result there is better health among our people, and we do not lose so many of our babies. Our population is increasing instead of decreasing as it did for many years.

We have a day school where our young children go. We want to keep this school. We do not want to send our children to day schools at villages several miles away. We are an Indian tribe and we want to remain so. We want our children educated together at the school on our grant. We have no money to keep up this school, and we need the Indian Service to help us do so.

We want our field nurse, a field doctor after the war, and use of the hospital at the United States Indian School at Santa Fe, N. Mex. We do not have money to pay for much medical service, and the health of our people will suffer if the Government service is taken away. Many times we have not been satisfied with the medical service furnished by the Indian Bureau, but we prefer it to what we could afford to get from the city of Santa Fe or the State of New Mexico.

We are the descendants of an Indian tribe which has lived on our land long before the white people came to America. We want to remain an Indian tribe and live according to the customs and religion which we have always had. We do not care about voting under the white man's law, or about other rights which we might receive if Government protection were taken away. We have gotten along very well under the Indian Service, and we wish to continue under it. We feel that we will have a much better chance for improvement and will receive much better treatment than if we are put under State control.

We realize that there are Indians who do not like the Indian Service and who are trying to make trouble and have it abolished. There always are people who are never satisfied no matter how much is done for them. We feel that these Indians do not realize the great problems which the Indians will have to face after the war. They do not realize what it would mean to adjust ourselves to a new way of living if the Indian Service were taken away. We know that many Indians have just complaints against the Indian Service and they should be allowed to tell of these. But these complaints are of small importance as compared with the good which the Indian Service has done for the Indian tribes.

There are white people who do not like the Indians or the Indian Service. Most of these white people do not understand the Indians, their problems or needs. They are jealous and angry because the Government of the United States is helping the people who were here first and most of whose lands and rights the white people took away. The Indians have asked very little. Much of the land which they occupy is very poor and of low value. The things which have been done for the Indians by the Government are no more than should have been done by a just government in return for what the Indian tribes have suffered and lost. It is true that we Indians are few in number. But we have a long history and we have done and made things which give much credit to ourselves and to the American Nation. We are unique groups in the American Nation which are worth while for the Government to protect and perpetuate. If Government control is withdrawn together with the encouragement which the Indian Service has given to maintain our tribal characters and customs, there is serious danger that the tribes will disintegrate, their peoples scatter, and the Indian groups would be lost forever as groups distinct in the American Nation. We do not want this to happen.

We have given many of our boys and some of our girls to serve in the war. We are glad to do that. We have given in many other ways. But we do not want to give up the protection of the United States Government and the Bureau of Indian Affairs which have helped so much in giving us better living conditions and better knowledge.

We consider that the Indian Bureau under Commissioner Collier has done more for the Indians than was previously done under any other Commissioner. We have received more material benefits, such as irrigation and flood-control improvements, roads, fences, sanitary improvements, betterment of farm and livestock methods, medical service, and education, than we had received under previous administrations. We have received greater encouragement to develop as a group and to preserve the customs and activities which have been handed down to us by our ancestors. We have gone far under the administration of Commissioner Collier and we declare ourselves as being very much in favor of him.

The following resolution was passed by the Zia Pueblo Council at a meeting held August 23, 1943:

Resolved, That Indian lands and lands belonging to the United States Government now being administered by the Indian Service for the use of the Indians remain under the present administration for the following reasons:

1. It is land, the greater portion of which has always been used by the public and has been properly grazed according to range regulations introduced to us by the Indian Service.

2. The right of individuals to use this land has been handled in such a manner that it has done maximum good to the greatest number of needy Indian stock men.

3. The Indians of this pueblo would gladly expand the number of stock; but as this would mean breaking the rules of proper grazing, this has not been permitted nor will it be resorted to.

4. We oppose the changing of administration of these lands because in many cases the Indians will not qualify under the Federal Range Code in grazing land and it would mean taking many, many acres now used properly by the Indians.

We justify the above item because the Indians have in many instances in the past suffered unjustly from the loss of land which they have always claimed as theirs and which they had used prior to the whites, but of which they have lost the use. For the loss of these lands the Indians have never been compensated.

5. The Indians are a growing minority and need a greater amount of land. Unfortunately, no more land can be acquired for the Indians due to certain laws of the Government. Therefore, the least that we can ask is that we be assured the use of the lands we now have.

6. The Pueblo of Zia feels that the Indian Service was created to assist the Indians, to protect him and his property, and to see that they are properly rehabilitated. For this reason the Indians of Zia wish the committee to listen to the Indians and do what they recommend.

7. Zia: Population as of January 1, 1943, 235.

Land:

Original pueblo grant	16,281.67
Reservation	368.35
	<u>16,650.02</u>

Government lands used by Zia:

Zia allotment (Government-purchased lands in Zia-Santa Ana purchase area)	13,164.22
Zia community allotment (Government-purchased land)	5,232.39
	<u>18,396.61</u>

Public domain—under permit from Grazing

Service:

Zia allotment	13,172.62
Community	2,528.64
	<u>15,701.26</u>

Borrogo grant

Zia portion of San Ysidro grant

Espiritu Santo grant (by permit from Soil Conservation

Service)

	39,862.00	60,538.56
--	-----------	-----------

State leases, 2,243.98.

Total lands used by Zia (grant, reservation, Government purchases, Grazing Service permit, Soil Conservation Service permit, State lease), 113,530.95.

Sheep units owned Jan. 1, 1943, 5,045.

8. I, Juanito Medina, as Governor of the Pueblo of Zia, wish to make my personal statement.

First. I wish to confirm every item in the resolution made by my Pueblo Council.
Second. I plead with this committee, with the various governmental agencies and the various Indian defense associations to assist us in retaining our lands and the lands we are using, as this means of raising livestock is our only source of income. Grazing lands are poor, farming is very limited as our farm land is very small, and the soil is very poor. Water for half of the crop season is not available to our crops.

Juanito Medina, Perfecto Pino, Cres Toribio, Lorenzo Medina, Emiliano Galvan, Jose L. C. Galvan, Antonio Gachupin, Andres Pino, Jose R. Toribio.

At a meeting of the Zuni councilmen, held on August 23, 1943, the following resolutions were adopted:

(1) We, the Zuni people, favor the administering of our grazing land by the Indian Service.

(2) We also favor the continuation of the administration of the Indian Service on our reservation. We do not favor the administration of our schools, hospital, land, and other problems by the State and other agencies.

The reasons we favor these views are as follows:

(1) We have received just, satisfactory, and sympathetic treatment in the past and we wish to continue under the Indian Service administration.

(2) We feel that we are not ready to be put under State government. Under the present system we are assuming responsibilities gradually and we wish to continue along that policy rather than be put under agencies whose policies have not been tried out on our reservation.

(3) We already have a range program worked out by the Zuni stockmen that is proving satisfactory in the improvement of sheep and cattle and range and soil conservation and we favor the continuation of this program under the administration of the Indian Service.

(4) We favor the continuing of the administration of our schools, hospital, and range, under one head. Their administration under different agencies would not be a savings in expenses as they cannot be administered with less personnel. As it is the present staff is being worked to the maximum. Various positions have been abolished and the same work is being carried on. We do not think that the State can assume the financial responsibilities of administering our various agencies. If the Federal Government will be expected to appropriate funds for their maintenance, we favor their administration by the Indian Service.

(5) We enjoy the rights and privileges of true democracy in being able to administer our own internal affairs, regarding law, order, marriage, and religion. Under a form of civil government administered by the State we feel that these rights and privileges would not receive the same consideration. We wish to have the right to continue in the freedom and liberty of our own form of government that has been worked out and handed down to us for many generations.

(Signed by:) Kaskala (his thumb mark); Ewanle Quam (his thumb mark); Henry Natewa, governor (his thumb mark); Awashu California, lieutenant governor (his thumb mark); H. R. Nieto, official interpreter; Johnnie Pattone—witnesses to marks: Alfonso Zunio, Madelyn Walela.

RESOLUTION

SEPTEMBER 2, 1943.

We the undersigned members from the pueblo of Zia hereby show our opposition to the Senate Report No. 310 which proposes abolishing the Indian Bureau. The Indians of this pueblo have felt it necessary to take this action because they have seen in recent articles and publications that certain leading citizens and Members of Congress have expressed their desire to abolish the Indian Service.

The feeling of the entire pueblo is that the Indian Service has assisted them far more than can be described in words.

Juanito Medina (governor), Perfecto Pino (lieutenant governor), Jose L. C. Galvan, Cres Toribio, Lorenzo Medina, Emiliana Galvan, Antonio Medina, Antonio Lucero, Antonio Gachupin, Jose B. Toribio (his mark), Amado Shiye, Isidro Shiye, Joe D. Pino, Cecilio

Shije, Jose V. Medina, John S. Salz, Juan Diego Herrera, Sebastian Shije, Andres Pino, Juan Jose Shije, Aleandro Toribio, Frank S. Toribio, Antonie Galvan, Juanice Galvan, Jose H. Shije, Beato Pino (his mark).

All signatures and marks witnessed by Perfecto Pino.

RESOLUTION OF THE PUEBLO OF ZUNI

Be it resolved by the pueblo of Zuni in New Mexico, at Zuni, N. Mex., in general meeting of the qualified members of the pueblo duly called and assembled, That only the governor, Henry Natewa, and the lieutenant governor, Awashu California, of this pueblo and such other persons as they designate are authorized by the pueblo of Zuni to present to the McCarran committee of the United States Senate and any other investigating committee of the United States Senate and any other investigating committees of Congress, the official position of the pueblo of Zuni, concerning any land or any other matters that those committees may be investigating or interested in.

Dated at Zuni, N. Mex., this 25th day of August 1943.

(Signed with various signatures and thumbmarks of Indians.)

At the meeting of the Zuni councilmen held on August 23, 1943, the following resolutions were adopted on pertaining to land used by the Zunis.

We want this information be given to any committee who are investigating lands.

1. We want to keep on using the land we are now using. We have rights to these lands for the following reasons:

(1) The Zunis founded their present land prior to the time of the Spaniards; prior to all surveys the Zunis had large amount of lands, but it was never surveyed, the Zunis thought it was theirs then, but no white man knew of it.

(2) The Zunis have used their reservation all the way since their first settlement, including the present north purchase area and most of the south purchase area; and

(3) There are several Zuni homesteaders outside and within the two purchase areas. In the north purchase area, Laniate Quetawki, Jamon. In the south. Utimer Watecelu, Wyaco (now Lucio). At present you can still see their ruin homes and stock corrals, which shows that the Zunis used this purchase areas years ago.

(4) During the years when first land surveys were made the Zunis started leasing lands; before 1912 the Zunis used more of the land than they do now, including the north and the south purchase areas.

(5) The Zunis would like to increase their stock in number, but due to a small amount of land we have now, we cannot increase our stock. Compare to the white man's stock owners, as the Zunis do not have too much land.

(6) The Zuni stock owners paid leases on the railroad lands, until the Government purchase the land.

(7) The Zunis had 7,000 acres least in Arizona until the railroad refused to lease to the Zunis, as they did not want the Zunis in Arizona.

(8) The Zunis have 415,000 acres to 611 families, compared to Fitchner, a white stockman, who has 5,000 acres. An average Zuni family has only 670 acres compared to Fitchner of 5,000 acres.

Our sons are fighting in the war to protect us and to protect their lands and their Government. When they come back they must call it their land and would want to raise stock on this, their land. Without this land they would not raise their stock of their own sufficient to their needs.

(9) The Zunis depend largely on their stock and land for their support and do not have any other incomes that they largely depend on. Their other source is through the Zuni farmer with his products from the farm.

2. We, the Zuni people, favor the old administering of our lands by the present Indian Service for the following reasons:

(1) We already have a range program worked and by the Zuni stockmen that is proving satisfactory in the improvement of sheep and cattle and range and soil conservation, and we favor the continuation of the program under the administration of the Indian Service.

(2) The Indian Service grazing regulations are understood by the Zuni live-stock owners and wish to continue on as it has been.

(3) Majority of stock owners are uneducated and still depend on our own Government through the Indian Service.

(5) The majority of our Zunis are uneducated and are unable to be governed by the State.

(6) Through the Taylor grazing regulations we may not understand and may not be qualified to use the land even though we know we have a right to use the land.

(7) The improvement of sheep have greatly increased in weight and quality in wool through the extension work of the Indian Service.

(8) About 1927 our wool weight was $3\frac{3}{4}$ pounds. In 1942 our wool weight was $7\frac{1}{2}$ pounds, gaining about $3\frac{1}{2}$ pounds.

(9) The improvement of cattle have greatly increased in weight and quality.

(10) We Zunis are satisfied with the way the Indian Service are helping with administration of our land and our stock.

We the Zuni people wish to have our land the way it is at present so that our sons who are in the armed forces will help decide what shall be done with our land and our administration.

HENRY NATEWA, *Governor.*

AWASHU (his thumb mark) CALIFORNIA,
Lieutenant Governor.

HARRY ROE NIETO,

Acting Secretary, Official Interpreter.

KAS (his thumb mark) KALLA.

JOHNNIE PATTONE.

EWANNIE (his thumb mark) QUAM.

Witnesses to thumb marks: H. R. Nieto and Johnnie Pattone.

The CHAIRMAN. Governor Dempsey, you wanted to be heard on 1152. You may proceed now.

Mr. STEWART. Thank you, Mr. Chairman, for the privilege of getting those in the record. I regret that they could not speak, but I appreciate this opportunity.

The CHAIRMAN. I take it that the colloquy would run along just about as it did all morning, and I think that we tried to give you as fair a break on the thing as we could.

I want to make a statement before we go into this other subject. I want to say to these people who have come forward here on various subjects and testified here, some for groups and some individually, I made a statement at the opening of this hearing, as I have at the opening of other hearings, that they might make a free and untrammelled statement, without any fear of reprisal. So that that word may be understood, I repeat that they may make a free and untrammelled statement without any fear of punishment. The special investigator of this committee is going to return to the State of New Mexico, and he is going to return at the behest and instruction of this committee, for the purpose of determining whether or not any reprisals follow this hearing, and I am going to say to you frankly that if there is even a symptom of reprisal or punishment on the part or toward anyone who has testified here this committee is going to take it up, and I am very sorry to say somebody is liable to lose his status or else his meal ticket.

Now you may proceed, Governor Dempsey.

Secretary CHAPMAN. Mr. Chairman, quite a few of these Indians have asked if they would be permitted to leave now as they want to get back to their territories.

The CHAIRMAN. Certainly. Again I want to before that is done, lest perchance anyone should say I denied anyone the right of being heard, I opened the subject this morning as I did earlier in the hearings that they might all be heard as best we could hear them. I closed it because I thought we had listened to a pretty fair cross section of the colloquy or the controversy, and I closed it because we must close the hearings and other subjects had to be heard.

Now, if I have denied anyone who really wanted to be heard the privilege of being heard, I would like to know it. Otherwise those who desire to leave may leave now if they see fit or they may remain if they see fit.

Very well, Governor.

STATEMENT OF JOHN J. DEMPSEY, GOVERNOR OF THE STATE OF NEW MEXICO

Mr. DEMPSEY. Mr. Chairman, Senator Chavez, ladies and gentlemen: I come here, Mr. Chairman, to voice opposition to S. 1152. It has for its purpose providing a Federal agency to take over practically the wildlife of the State of New Mexico. We of New Mexico believe that insofar as that sovereign State is concerned, that it is quite competent to manage its own affairs, cooperating with any agency of the Federal Government that desires our cooperation.

But this bill goes far beyond that. Under this bill a Federal agency in Washington would be dominant over the State of New Mexico. The bill sets forth that when any agency of the Government having land—supervising land in New Mexico—calls upon the game commission or game warden to exterminate certain game, if that commission or if the warden is unwilling or unable because of provisions of State laws and regulations to comply, then the Federal agent, notwithstanding restrictions of State laws, may come in and give permits to those within the State or without the State to do such killing as the Federal officials may elect.

We think that is wrong. We have worked in very close cooperation with the Federal agencies. We have worked in close cooperation with the farmers, the stock growers of this State, and it has only been a short while ago that there was an appeal made to me requesting that certain elk be killed on one of the ranches. I had no difficulty whatever in arranging that with the commission and the game warden, and that was done.

Now, there is another thing in this bill that appears in so many pieces of legislation that are passing the Congress of the United States and all going to curtail the privileges of the people of this Nation. I refer to section 2 that says:

Any person who willfully violates any rule or regulation promulgated, or any condition or requirement of any permit issued, under authority of this Act shall, upon conviction thereof, be fined not more than \$500 or imprisoned for not more than six months, or both.

We have had quite so much of this recently, Senator, in connection with O. P. A., in particular, where, notwithstanding State laws making certain speed limits, in violation of that law and providing a penalty when it was found that the individuals did violate the speed regulations, instead of haling the violator before a judge and a jury, which guarantees to these citizens a fair trial, an investigator of the O. P. A. would arrest the violator, and sometimes not the violator. In one instance that I know of where a truck driver exceeded the speed limit, the truck was ordered out of service for 15 days. That man that owned the truck had a total of about 20 trucks. In the final analysis of the situation, the man who violated the law was given 15 days and the owner of the truck was denied the service of his truck for some 15 days. It so happened that that truck happened to

be engaged in war industry. I took that up with the director, Mr. Bingham, a reliable and fair person. He didn't have the authority to change it and he called the regional director in Denver and finally prevailed upon him in this particular instance to free that truck.

When the Congress of the United States in a piece of legislation advocates the power to an agency to make rules, any and all of them which have the same power as the law creating them—well I think we are going a little far. We have recently had a ridiculous thing occur to us in the Congress of the United States, where I was a Member for 6 years, representing you people, and closely associated with the chairman of this committee, Senator McCarran. There never was an important committee representing the Rocky Mountain States of which I was not a member. The steering member of the Rocky Mountain group was the now junior Senator from Nevada, Senator Scrugham. He was the steering man of our special Rocky Mountain States insofar as the Congress of the United States was concerned. We were always recognized as one of the Rocky Mountain States, and then suddenly we are taken out of that area, out of that group, and we're placed with Louisiana and Arkansas for gasoline rationing purposes. Now, we have less transportation facilities in New Mexico than probably any State in the Union. When you ration gasoline you are rationing transportation in this State. If we had subways, such as they have in New York, and elevated railroads and trolley cars and busses and what not, you wouldn't complain, nor are we complaining now. Anything the Government wants for the war effort they can have. We are not complaining that Nevada, Arizona, Idaho, Colorado, all get 4 gallons of gasoline. But we want to be placed in the group that we belong in, and we don't want the power vested in anybody in Washington to take us out of that group.

If this bill were passed I am fearful, Senator, that the situation in New Mexico will be such that, instead of conserving our game and wildlife in New Mexico, it would be eventually destroyed. We have a splendid commission in New Mexico; we have splendid control over the situation; and there is very, very little complaint about it.

I intended to say more. I thought the bill was drawn by the Fish and Wildlife Bureau in Washington, and I know something about that particular Bureau. I was going to discuss that. But I am advised, reliably, that this bill was not drawn by that Bureau and not drawn by the Interior Department. As a matter of fact, they are opposing the passage of the bill, and, I understand, opposing it because they feel that the cooperation existing now is all they could possibly ask for; so I have nothing to say about the Bureau. But I do hope, and I am sure, Senator, since you are the introducer of the bill, insofar as New Mexico is concerned, this bill will not pass the Congress of the United States, because it goes too far; and I hope that never again in the Congress of the United States, will there be a bill passed that will authorize any agency to make laws affecting the people of this Nation or the State of New Mexico. [Applause.]

I am quite willing, with the Members of Congress who are the representatives of this Nation, to abide by or support any law that Congress itself passes, but to delegate to these agencies the power to do it, I think it is wrong. There is no Bill of Rights or no safety in the Bill of Rights if that is going to continue.

That is all I have to say, Thank you, sir.

The CHAIRMAN. Thank you.

Are there any questions? Is Mr. Colin Neblett here?

Mr. ELLIOTT BARKER. He regrets very much that he is tied up in the Federal court and is not able to come.

The CHAIRMAN. I am very sorry. He asked to be heard on this subject and I am extremely sorry he couldn't be here.

STATEMENT OF ELLIOTT S. BARKER, STATE GAME WARDEN, NEW MEXICO

Mr. BARKER. Mr. Chairman, I am Elliott S. Barker, State game warden and secretary to the State game commission of the State of New Mexico, Santa Fe, N. Mex.

For the purpose of showing the background for the statements that I shall make relative to wildlife, livestock, ranges, and Senate bill No. 1152, I wish to state that I was raised in a game country on a mountain cattle ranch in New Mexico. I entered the Forest Service as assistant forest ranger in 1909, and worked up through various positions to forest supervisor, in which capacity I served for several years before resigning in 1919 to again go into the cattle business. I ranched again for 11 years in an excellent big-game area. Then for a year I had charge of game and predator control on a 300,000-acre ranch. For the past 13 years I have been State game warden. I feel that my experience has given me a rather broad conception of game from an ecological viewpoint.

There is a bit of history back of Senate bill No. 1152, which it is necessary that we understand. Back in 1934 the Secretary of Agriculture promulgated a regulation known as G-20-A, which contained virtually the same provisions for turning game administration over to the Forest Service, as Senate bill 1152 contains for turning game over to any Federal land administrative agency, except that regulation G-20-A did have some redeeming features not found in the Senate bill.

That regulation drew fire from game administrators, conservation and wildlife protective organizations all over the country. Finally at the insistence of the Western Association of Game and Fish Commissioners and the International Association of Game, Fish, and Conservation Commissioners, and many other organizations that regulation, which so far as I know, was never used due to opposition to it was abolished 2 years ago and a regulation known as W-2 was promulgated in its stead. I submit a copy of regulation W-2 for the record.

This regulation was acceptable to the various States, because it has the spirit of cooperation written into it. It has been in effect too short a time for anyone to say that it will or won't solve some overpopulation problems. State game administrators believe that regulation W-2 is workable, and provides the proper approach to the subject.

When the Taylor Grazing Act was passed, we of New Mexico got all interested groups together to work out a plan for handling of wildlife on the public domain. Stockmen, sportsmen, conservationists, university professors, the State game department, and other State and Federal officials, working together, evolved a plan now known as circular No. 3, Special rules for grazing district in New Mexico, which

was formally adopted, and approved by the Secretary of the Interior on August 21, 1935. I submit a copy of that circular for the record. We have been operating satisfactorily under that plan for 8 years. (The document is as follows:)

WILDLIFE ON THE PUBLIC DOMAIN

Wildlife, or game, is a public asset of exceedingly great value and has a definite right and place on all public lands. This right is recognized by the Taylor Grazing Act. Therefore, all interested agencies and organizations in the State of New Mexico working through their official representatives evolved a definite program for wildlife on the public domain. The plan was approved by the New Mexico Cattle Growers Association, and the Wool Growers Association, demonstrating again the friendly attitude of New Mexico stockmen to game. The plan is fair to all, sportsmen, stockmen, game department, and above all to wildlife itself. The plan was approved by the Secretary of the Interior and promulgated into a regulation designated as rule 3, and is in effect and operation at the present time.

The entire plan or rule is quoted below for information of all stockmen using the public domain:

CIRCULAR NO. 3, "SPECIAL RULES FOR GRAZING DISTRICTS IN NEW MEXICO"

"In addition to the regularly elected district advisers for each grazing district established under the Taylor Grazing Act in New Mexico, there is hereby authorized to be appointed one district adviser in each grazing district to represent wildlife and recreational resources. Such district adviser shall have the same qualifications as the elected advisers, except that he need not be an owner of livestock, and he shall be nominated by the land use committee of New Mexico State Planning Board. This district adviser may be appointed by the Secretary of the Interior in the same manner and form as the other district advisers.

"The utilization of grazing district lands by domestic livestock shall be in accord with the following fundamental principles for conservation and propagation of wildlife and other natural resources upon the public domain:

"(a) *Carrying capacity to provide for game.*—In estimating carrying capacities of public domain ranges and in allotment of numbers of domestic stock to be grazed within any grazing district, allowance shall be made for reasonable utilization by wildlife.

"(b) *Game and bird refuges.*—Game refuges necessary for adequate protection and restocking of game animals and game birds may be established within any grazing district, the location and size of such refuges to be determined so far as possible in cooperation with grazing district permittees.

"(c) *Areas best suited to wildlife production.*—Upon such areas as may be determined by the Secretary of the Interior, upon consideration of all interests involved, to be of higher value for and better adapted to production of wildlife than to domestic stock, preference shall be given to such higher use.

"(d) *Game animals to be limited.*—If or when game animals shall become overabundant to an extent detrimental to the range and forage thereon, the State or Federal laws will be invoked to limit by removal through hunting or otherwise the game animals on such overpopulated area until a reasonable number has been attained.

"(e) *Game law observance.*—All permittees on grazing districts shall be required to comply with all State and Federal game laws, and local officials of the Department of the Interior shall cooperate with State officials in the enforcement of State game laws and regulations.

"(f) *Administration.*—Provision for the observance of game regulations shall be included in each grazing permit.

"In conformity with these principles the State Game Commission should prepare and submit to the Land Use Committee of the New Mexico State Planning Board a game management plan or any modification of any game management plan theretofore adopted for any grazing district, which plan after approval by the Land Use Committee of the New Mexico State Planning Board may constitute the State's official plan for wildlife management within such district or area and after such plan is approved by the Secretary the administration and operations under the Taylor grazing act in that district or area involved shall conform to such plan.

"The State Science Commission, which is now charged with the duties of preservation of the archeological, ethnological, paleontological, and other similar scientific resources of the State, may prepare and submit to the Land Use Committee of the New Mexico State Planning Board a program for the preservation of these objects of scientific value, which program may be added to or changed from time to time by the State Science Commission as necessity arises and this plan after its adoption by the Land Use Committee of the New Mexico Planning Board may constitute the official plan for the State, and the provision therein shall be binding in all grazing districts after such plan is approved by the Secretary of the Interior.

JOHN F. DEEDS, *Acting Director.*

"Approved: August 21, 1935,

HAROLD L. ICKES,
Secretary of the Interior."

Mr. BARKER. Since the Forest Service and the Grazing Service are the chief land administrative agencies with which we deal on wildlife matters, and since we have had no difficulties whatever over jurisdictional matters with other agencies, we assumed that all was going well. This feeling was justified by the additional fact that we have made many cooperative agreements with all agencies concerned in the management of large tracts of land purchased in recent years for various purposes by the Federal Government. A copy of one of these agreements, that for the La Majada grant, is submitted for the record.

The State game commission also has a general cooperative agreement with the United States Forest Service, which serves as a guiding policy in game management on national forests and I tender a copy of that agreement for the record.

(The agreement is as follows:)

FIELD AGREEMENT BETWEEN THE NEW MEXICO STATE GAME DEPARTMENT, SANTA FE, N. MEX., THE BIOLOGICAL SURVEY, UNITED STATES DEPARTMENT OF AGRICULTURE, ALBUQUERQUE, N. MEX., THE SOIL CONSERVATION SERVICE, UNITED STATES DEPARTMENT OF AGRICULTURE, ALBUQUERQUE, N. MEX., RELATIVE TO WILDLIFE MANAGEMENT, CAJA DEL RIO-MAJADA AND RAMON VIGIL GRANTS, SANTA FE AND SANDOVAL COUNTIES, N. MEX.

A. GENERAL

The following plan, with only such needed additions or modifications as are found necessary during its actual application, shall constitute the wildlife section of the land use plan for the Caja del Rio-Majada and Ramon Vigil grants.

These grants are located 15 to 25 miles north and west of Santa Fe, in Santa Fe and Sandoval Counties, N. Mex. They lie in townships 15, 16, 17, 18, and 19 N. and ranges 6 and 7 E., New Mexico principal meridian, and contain 123,000 acres of land.

Upon its approval, this plan shall become the wildlife management plan for this area and will be recognized by the approving agencies as such. In the event that an agency other than those approving this plan should later be given custody, the acceptance and perpetuation of this plan by the receiving agency will be requested by the approving agencies.

Nothing contained herein shall be construed as binding the signatory Federal agencies to the expenditure of funds, unless appropriated by Congress for that purpose, or to activities not authorized by their regular duties; nor to bind the State game department to acts or expenditures not authorized by the laws of the State of New Mexico.

B. PROTECTION

In order to increase the numbers of beneficial wildlife on this and adjacent areas, the State game department will close and post against hunting the horse pasture at the Old Pankey ranch headquarters, an area of approximately 1,400 acres, and the horse pasture at the 1,200-foot well, an area of approximately 600 acres (these areas are outlined in red on the attached map), for an indefinite period, in order to protect quail for restocking purposes, and to provide for better hunting on areas adjacent to these enclosures.

C. LAW ENFORCEMENT

(1) The Soil Conservation Service range rider, or riders, on these areas will be designated by the State game commission as nonsalaried deputy game warden, or wardens, and will render assistance to the game department, consistent with their regular duties on the area.

(2) If the arrangement above outlined should prove inadequate to provide the necessary protection, the State game department will make a special effort to protect the area from illegal hunting by assigning a paid district deputy game warden to a patrol that will include this area.

D. RESTOCKING

The Biological Survey will furnish basic biological information concerning the planting of game species to insure that the stock proposed for planting are suitable for the area and are free from disease which might defeat the purpose of the plantings or do other damage.

No exotic game plantings will be made under present conditions. The following planting plan shall be adhered to as closely as possible.

(1) *Game birds.*

(a) Scaled quail (*Callipepla squamata*) will be trapped on areas where they are abundant and transported to this area for releasing.

Approximately 100 will be transplanted during the spring of 1939 and will be added to by small plantings later if required.

These plantings will be released at selected locations on the grants with approximately 30 birds released at each location. (One planting to be made in the Water Canyon area on the Ramon Vigil grant.)

(b) Turkey (*Melagris gallopavo*): The Ramon Vigil portion of this area is now supplied with a light stocking of these birds. It is confidently expected that with the improved vegetative cover and better control of hunting, the desired increase in the numbers of these birds will occur.

(c) Grouse (*Dendragapus obscurus*): The western portion of the Ramon Vigil grant is suitable range for these birds. There are a few birds on the area and, with proper protection, they should increase in numbers sufficient to afford a limited amount of hunting.

(2) *Game mammals.*

(a) Antelope (*Antilocapra americana*): There are none of these game animals present on the area. The two southern range subunits, namely, Tetilla and Majada, are suitable for antelope, the former consisting of 21,305 acres and the later 18,054 acres. Both subunits are fenced and well watered. Each of these units should be stocked with these animals in numbers not to interfere with use by domestic livestock. It is estimated that the Tetilla and Majada subunits will range a maximum of 200 head of antelope on the more remote portions of the area, utilizing the annual weeds and browse, without any reduction in livestock numbers or interference with proper recovery. Stock for transplanting shall be secured by trapping from antelope herds located in New Mexico, the trapping and transplanting to be done by the New Mexico State Game Department. The number available for stocking will be determined by the number trapped. Probably 10 or 12 does and 4 or 5 bucks can be secured and these will be added to by new plantings of small numbers for the next 2 or 3 years to insure new blood in the herd. Since there is no regular open season for antelope hunting in the State, the area will not be posted as a game refuge, except the small portions previously referred to. Hunting will be permitted when the antelope planted have shown a substantial increase. The total numbers for the area will not be allowed to increase to exceed 200 head which is the estimated allowable maximum that will not be detrimental to the range. The annual take after this number is reached shall be decided by the administrative agency and State game department.

(b) Mule deer (*Odocoileus hemionus*): There are a small number of these game animals on the area. Browse plants suitable for deer are scarce on the area except along the breaks of the Rio Grande and on the Ramon Vigil grant. No additional plantings will be made on the area. The control of illegal hunting on the area by the deputized range riders should give ample protection for deer and maintain them in sufficient numbers. If, at a later date, investigation by the administrative agency and the State game department indicates the need of greater protection, the deer range or portions of it will be closed to hunting.

(3) *Miscellaneous game and fur bearers.*

(a) Bear (*Euarctos americanus*): The canyon portions of the Ramon Vigil grant are suitable bear habitat. There are a few bears in the area and, with proper protection, should remain and possibly increase. If at any time individual bears become predatory in relation to domestic stock on this area, the State game department will take proper steps to remove these predatory bears from the area.

(b) Beaver (*Castor canadensis*): A small number of these animals have been planted in Water Canyon on the Ramon Vigil grant. These animals will very probably stock this stream and aid materially in stabilizing the flow. They will be protected. When they are properly established, an annual harvest will be made of selected animals taken under permit from the State game department.

(c) Abert squirrel (*Sciurus aberti*): These game fur bearers are common to the west of the Rio Grande in this area and, given the protection proposed in this plan, will continue in sufficient numbers on the area.

E. FACTUAL DATA

The recovery of vegetation on the area has been gratifying during the brief period of conservative use which has obtained so far. It is confidently expected that the numbers of domestic stock to be accommodated will in no way be diminished by the proposed stocking of wildlife. The present water developments appear adequate to care for the domestic stock and wildlife.

The grants comprise typical rolling foothills, mesas, and alluvial valleys. Drainage is effected by the Cienega, Santa Fe, Arroyo Ancho, and other drainages from the east and by Water Canyon and two other canyons from the west. The drainage from both east and west empties directly into the Rio Grande.

The elevation varies from 5,500 feet for "flat" areas on the Majada to 8,000 feet for the upper portion of the Ramon Vigil grant. The average rainfall varies from 10 inches in the southwest corner to 16 inches in the highlands on the Ramon Vigil grant. Snowfall on the higher elevations is slightly over 2 feet. The vegetative type is made up of western yellow pine saw timber on the west portion and of pinon-juniper woodlands and grasslands over the major portion remaining except for the lower portion of the Tetilla and Majada subunits, which is mainly grassland. The grassland is composed chiefly of grama species with some snake-weed, ring grass, and annuals.

Soils of the area vary from a reddish-brown silt and clay loam in the mountains to light grayish-brown sandy loam in the lower flats east of the Rio Grande. Water penetrates the typical surface soils of these areas at a moderate rate. The soils of the Ramon Vigil grant west of the Rio Grande are lighter in texture and, consequently, absorb moisture more readily than the more heavy-textured soils of the Caja del Rio-Majada grants east of the river.

F. RANGE MANAGEMENT

We believe that vegetative cover is the governing factor in our wildlife problem, and any wildlife plan on range land should be based on proper range management.

The following grazing plan, or a plan with similar limitations as to carrying capacity for domestic stock, shall be continued by the agency in charge of the area. Any increases in domestic stock, if allowed, will be only the numbers justified by a utilization survey.

The grants are at present used as a cattle range by the farmers and ranchers adjacent to them. Their total area is divided into five subunits for range management purposes. The carrying capacity of the area is now estimated at 1,050 cow units yearlong, to be grazed according to the attached management plan. The plan provides for deferred and rotation grazing by domestic stock and will materially enhance the value of the area from a wildlife standpoint.

Should the status of the area change and it be found desirable to change the class of livestock grazed to sheep, no adverse effect on wildlife should be felt, provided the proper carrying capacity and seasons of use are adhered to.

G. GENERAL SUMMARY

In predatory animal control, fur values shall be considered only as of secondary importance to the protection of valuable game species. However, where adequate predatory control is possible through winter trapping, preference shall be given that season in order to secure the maximum value for the fur.

Wildlife shall not be allowed to increase on the area to such an extent that they will, at any time, seriously interfere with the vegetative recovery or the proper use of the range by permitted domestic stock. Should this condition threaten at any time, the State game department will take proper measures to forestall it by removing the surplus game animals from the area either by trapping or by special open seasons, if the regular open seasons are not sufficient to control the numbers.

The number of game animals to be taken and the manner of taking shall be determined annually by the State game department in collaboration with the administrative agency in charge, on a basis of a game census of the area.

Respectfully submitted this 9th day of November 1938.

LOUIS LANEY,

Chief Biological Aide, Rio Grande District.

Approved by:

COLIN NEBLETT,

Chairman, State Game Commission.

DON A. GILCHRIST,

Regional Director, Biological Survey.

HUGH G. CALKINS,

Regional Conservator, Soil Conservation Service.

MR. BARKER. In view of all these things, we were astounded when we received a copy of Senate bill No. 1152. We stand firmly upon the principle that the State is capable of managing its own wildlife affairs, on all types of land. We stand firmly in the position, which is upheld by many Federal and State court decisions, that the wildlife belongs to the State, in its sovereign capacity, and that its regulation is the undeniable prerogative of the State.

We feel that this bill, which purports to give any Federal land administrative agency the right to set seasons and bag limits and issue licenses to hunt, contrary to State law, is not needed, in the first place, and, in the second place, is an unjustified and unprecedented attempt at usurpation of States' rights, even at the present level of such infringements as we see from day to day.

Not only that, but the bill is wholly impracticable, and utterly impossible of application. Why, Mr. Chairman, you have that evidence before you. If you will but take a look at this land status map here, you will see it. Land ownership on the public domain and the national forests are interspersed with State and private lands to such an extent that no hunter, no game animal, nor even the land administrator himself, can tell when he is on State, private, or public land, and certainly this bill, at best, could apply only to Federal land. Then, too, recall what Mr. Floyd Lee said yesterday about the 17 different land agencies involved in grazing district No. 1. How could anyone administer the game on his area, or how could the various agencies ever hope to get together on the management and carry it out regardless of State laws? No, even if passed, it won't work.

In gaining control over migratory birds, the Federal Government maintained that the movement of birds from one State and one Nation to another made it necessary for the larger governing body, the Federal Government, to have control. That was correct. But now the Government reverses itself, and attempts to give control of other game to the many agencies administering innumerable tracts of Federal land within the State. Big game and upland birds are migratory, insofar as movement from one type of land ownership to another is concerned, and must be controlled by the State as a whole, instead of the agency administering small units.

The New Mexico Game Department may possibly be in an unusually fortunate position, in that we have the full support of livestock growers and enjoy pleasant cooperative relations with the various Federal agencies. But I assert that we do not have anything here that cannot be brought about in other States, if those concerned will get together and sincerely try to find a common meeting of minds and policies where game and range use is concerned.

We, in New Mexico, have been watchful to prevent any serious overstocking of game occurring on public, private, or State lands. The commission has taken action, whenever and wherever needed, by providing special seasons and bag limits to remove the desired number of game animals, to keep them within the carrying capacity of the range.

Our game code provides that the commission shall have power to make regulations providing when, to what extent, and by what means game of any species, or of either sex, may be taken. Hence, we can relieve any situation that arises, and we have consistently done so.

Whenever any problem area is called to our attention, joint investigations by all interested parties are made, and action taken upon the basis of facts brought out. In many cases the game department takes action upon its own initiative. True, we have had local problem areas, but we have taken care of them, and shall continue to do so.

As an example, a few years ago we found antelope becoming concentrated in certain areas. We first provided hunting seasons, under a permit system. This scattered them out, put them onto new ranges, and relieved the problem, for the most part. In other areas hunting was not sufficient, and since we had lots of areas with no antelope at all, our department devised a technique for trapping and transplanting them. And I might say that we pioneered in that work, being the first agency in the world to successfully move antelope in this manner. Since 1937 we have trapped and moved over 1,600 head of antelope to new ranges, and have gotten 60 new herds started in locations where there were none. And I know of no single instance where the land user did not welcome the animals to his lands. Several other States have copied our technique, and are now successfully moving antelope.

We recognize the fact that Federal land administrative agencies are responsible for protection of their lands against damage. When damage occurs, and can't be relieved otherwise, these agencies have recourse to the courts. The Kaibab decision gives them the right to go in and kill the game, but not to issue licenses to others to do so in violation of State laws, as Senate bill 1152 purports to do.

Game definitely has a rightful place on our public ranges. Like livestock, it should and must be kept within the proper joint carrying capacity of the range. This can be done through cooperative endeavors, but it can never be done by threats, such as Senate bill 1152. We do not claim that the State game departments are perfect, and we won't admit that Federal agencies are either. Some have assumed that to turn a thing over to a Federal agency is a panacea for all evils. As a matter of fact, to do so is to write a prescription for more trouble.

While there have been some who felt that the Forest Service is sponsoring this bill, we refuse to believe that the United States Forest Service desires to see this bill passed, because, in the first place, the

bill is wholly destructive and does not contain any of the redeeming features of old regulation G-20-A, and, second, because through the promulgation of regulation W-2, in agreement with the States, a definite plan for handling overpopulations of game was provided, and to attempt to supplant that regulation, before it has been given a fair trial, by a bill of this sort would be an act of bad faith.

So far as New Mexico is concerned, Circular No. 3, Special Rules for Grazing Districts in New Mexico, is adequate for handling problem areas on the public domain administered under the Taylor Grazing Act, and I can't see why the Grazing Service should want this bill. The sportsmen of the State are unanimously opposed to it.

As for the stockmen, they will later speak for themselves, but our relations in game matters have been so satisfactory and so agreeable right along that I cannot conceive of their supporting such a bill.

If it has been introduced, as some state, to spur the various States on to more effective cooperative action, I foresee the reverse effect will result. You can't make a balky horse pull a load by waving a whip over his back, but you can make a steady horse balk that way.

In conclusion, may I say that certainly the bill is not needed and not wanted in New Mexico. If perchance there should be States where there seems to be a need for it, may I say that what has been accomplished in the way of legislation, and development of cooperative relations in New Mexico, can be accomplished in any other State if the subject is properly approached by all concerned. We feel that a helpful hand by Federal agencies, along that line, can accomplish far more than any attempt to take over control of wildlife resources.

I think the following verse expresses the sentiment of the people of this State:

Oh, give me a home, where the buffalo roam
And the deer and the antelope play,
Where seldom is heard a discouraging word,
And the skies are not cloudy all day.

[Applause.]

The CHAIRMAN. Mr. Hugh Woodward, president of the Game Protective Association of Albuquerque, you may be heard.

STATEMENT OF HUGH B. WOODWARD, PRESIDENT OF THE GAME PROTECTIVE ASSOCIATION, ALBUQUERQUE, N. MEX.

Mr. WOODWARD. Mr. Chairman and gentlemen, the Albuquerque Game Protective Association, at a general meeting held July 9, 1943, unanimously adopted a strong resolution opposing the enactment of Senate bill 1152 of the Seventy-eighth Congress, first session. We tender for the record, with this statement, a copy of this resolution.

Insofar as the State of New Mexico is concerned, we believe that no such legislation as embodied in the McCarran bill is necessary or advisable. Under the existing statutes of the State of New Mexico ample powers are vested in the State game commission, in its supervision of wildlife, to assure protection of all lands within this State, whether controlled by a Federal agency, by the State itself, or by private individuals. All such lands are, by the State game commission in cooperation with the several Federal bureaus and agencies, State land commissioner of the State of New Mexico, and private owners, presently

being adequately protected against excess game animal populations. The present policies of game and wildlife administration by the State department have the approval and support of the New Mexico Wool Growers' Association, New Mexico Cattle Growers' Association, and of the several Federal agencies. Representatives of the sheep and cattle industries and the Federal agencies are present before this committee, and we solicit inquiry by your committee of these representatives as to their cooperation with the State department with reference to land use.

New Mexico is singularly fortunate in its statutory provisions for the preservation and regulation of wildlife.

By chapter 35 of the Session Laws of 1921, section 43-102, New Mexico Statutes 1941 Annotated, the legislature created a State game commission of three members, not more than two of said members to be of the same political party, the commission to be appointed by the governor with the advice and consent of the senate, its membership to have staggered terms of 6 years for each member.

For many years United States District Judge Colin Neblett has been chairman of this commission and, under his exceptionally wise and able direction, the functioning of the commission has won the respect, approval, and support of the citizenship of this State to a remarkable degree. During the past 15 years under all Governors, Republican and Democratic alike, the department and its personnel has been nonpolitical and independent.

Funds for the support and administration of the department are all derived from license fees, the sale of furs and pelts taken by the employees of the department, and incidental revenues. None of its funds is derived from general appropriation. Reciprocally the legislature of New Mexico has uniformly refused to permit any part of such funds to be used for any purpose extrinsic to the work of the department.

The first section of the basic act creating the commission recites a declaration of policy, to-wit:

It is the purpose of this act and the policy of the State of New Mexico to provide an adequate and flexible system for the protection of the game and fish of New Mexico and for their use and development for public recreation and food supply, and to provide for their propagation, planting, protection, regulation, and conservation to the extent necessary to provide and maintain an adequate supply of game and fish within the State of New Mexico.

By the basic act the game commission was given general powers. After 10 years' trial of wildlife administration by the commission, the legislature of New Mexico, by chapter 117 of the laws of 1931, section 43-111, New Mexico Statutes 1941, annotated, gave the game commission very broad and general authority to make rules and regulations relating to game and fish with reference to seasons, bag limits, manner, methods, and devices which may be used in hunting, taking, and killing game animals, game birds, and game fish. The functioning of the commission and the department, under the broad powers accorded by the 1931 statutes, has permitted and fostered a broad program of cooperation between the State department, the several Federal agencies having supervision over lands in the State of New Mexico, the livestock interests, and private landowners, to the end that, while the wildlife population of the State has been steadily protected, developed, increased, and distributed, the range, forage,

and habitat of game animals have been protected, and the numbers of big game animals limited, so that no serious conflict has arisen or now exists between game animals and domestic livestock. Where excess game populations have developed, in cooperation with Federal agencies and ranch owners, special seasons and special rules have been promulgated by the game commission, which have been effective in limiting and reducing excess populations of such animals upon areas where reduction of numbers seemed necessary or advisable.

A number of cooperative contracts have been entered into between the game commission and the various Federal agencies having supervision of lands within this State. These contracts have had to do with the restoration, protection, and administration of wildlife upon the areas involved, with due regard to the protection of the soil, herbage, and forage upon said areas, and for the reduction of excess populations of big game animals, where such populations increase so as to threaten serious conflict with domestic livestock. These agreements have in practice functioned most successfully so that a harmonious relationship has been continuously maintained between the several Federal agencies, private livestock interests, and the game department of the State of New Mexico. The best evidence of such functioning has been the consistent and valued support of the State game department by the livestock interests of the State of New Mexico, functioning through the New Mexico Cattle Growers' Association and the New Mexico Wool Growers' Association. Where problems have arisen, they have all been successfully solved by field inspections and negotiations between all interested parties involved.

Special seasons are each year established by the game commission, and special rules promulgated, so that excess populations of big game animals are reduced by orderly and proper procedure. This method of administration has resulted in the protection of the wildlife of the State and of the range and habitat of such animals, and has removed any serious complaint of livestock men against unwarranted consumption of forage by big game animals.

The New Mexico legislation involved, and the program of administration, has been first sponsored and consistently supported by the organized sportsmen and conservationists of the State of New Mexico through the various wildlife protective associations of the State and, particularly, by the several units of the State Game Protective Association of the State of New Mexico. Speaking for the sportsmen of the State of New Mexico, may we say that we believe that, under the guidance of our State game commission, New Mexico has had a singularly happy experience in the administration of its wildlife. The sportsmen of the State gratefully appreciate the cooperation and support which has been given to the wildlife program by the ranchers, landowners, and livestock interests of the State and of the tact, wisdom, and cooperation accorded the program by the local administrative heads of the various Federal agencies and bureaus within this State.

We believe that it would be most unfortunate to disturb the prevailing conditions within the State of New Mexico, by transferring the supervision of wildlife upon federally controlled lands to any bureau or department of the Federal Government. No reason for such change exists, and we strongly feel that such change of policy could not func-

tion successfully but would result in continuous conflict, disagreement, and dissatisfaction between private landowners, Federal agencies, livestock interests, sportsmen of the State of New Mexico, and the game department. We hold that, when administrative matters concerning land use and wildlife administration are referred to local and resident Federal representatives, the problems are readily met and solved, but when delegated to Washington, to be administered under a code of rules and regulations formulated by some swivel-chair theorist, the result would be disastrous to all parties concerned and, especially, to the wildlife of this State for whose protection, preservation, and restoration the sportsmen's organizations of this State have continuously battled during the past 40 years.

I anticipate the retort that the happy relationship which exists in New Mexico, with reference to wildlife problems and land use, does not exist in some other Western States. My answer is this: That New Mexico has given a practical demonstration of maximum beneficial land use, both by game animals and livestock, under a program of cooperation between the State department, the Federal agencies, and private landowners. If the problems involved are approached by the several interested parties in a spirit of forbearance and cooperation, such problems can be worked out in other States as they have been in New Mexico. The administration of wildlife, other than migratory birds, is essentially a local, not a Federal problem. Local agencies and authorities can remedy existing evils much better than any Federal department in Washington.

Two fundamentals are necessary: First, the vesting, in a nonpartisan and politically independent State commission or department, of flexible regulatory authority; and, second, a disposition on the part of such department and of private landowners and Federal agencies supervising public lands to meet and counsel in a spirit of cooperation for the adjustment of land use to suit local conditions.

Mr. Chairman, in behalf of the organized sportsmen and wildlife conservationists of the State of New Mexico, we desire to register our strenuous, unalterable, and unanimous opposition of the enactment of Senate bill 1152, or any similar legislation which would trespass upon the rights of the people of the State of New Mexico to administer what we consider a vitally important asset of this State, namely, its wildlife.

RESOLUTION

(Unanimously adopted by the Albuquerque Game Protective Association, July 9, 1943)

Whereas the provision of the McCarran bill, being Senate bill No. 1152 of the Seventy-eighth Congress, first session, introduced on April 21, 1943, are in direct violation of the principles uniformly sustained by the several courts of the United States, including the United States Supreme Court, that the wildlife within each State is the property of the State and subject to State regulation;

And whereas the passage and enforcement of Senate bill No. 1152 would constitute an unlawful appropriation of the property of the people of the sovereign State of New Mexico and the enactment of such a statute would be in direct violation of the spirit of all former statutes and acts promulgated by the Congress of the United States and the legislatures of the several States and the judicial interpretations thereof:

And whereas our organization believes that the matter of the control of wildlife to the Federal Government or any division, bureau, or corporation thereof would be an infringement upon the rights of our State and would be seriously

detrimental to the welfare of the wildlife of the State of New Mexico and ultimately to the people of the State of New Mexico;

And whereas the policy adopted and uniformly maintained by the State Game Commission of the State of New Mexico cooperating with the several Federal bureaus, departments, and agencies having the supervision of the Federal lands of this State, has consistently been to annually harvest and take such game animals as will protect and preserve the species and at the same time, protect, and preserve the range and habitat of such animals;

And whereas said practice, as followed, has the approval and endorsement of the people of the State of New Mexico and particularly all sportsmen and conservationists interested in the preservation of the wildlife within this State: Now, therefore, be it

Resolved, That the Albuquerque Game Protective Association is most strongly and unalterably opposed to the enactment of the McCarran bill or any bill which would deprive the State of New Mexico and its agencies of the right to protect and conserve the wildlife resources of this State;

That in our opinion, said bill is vicious in principle and its operation, if enacted, would be seriously detrimental to the wildlife of the State of New Mexico and to the welfare of the people of the State of New Mexico.

That, by reason of said matters, we urgently request that our Senators and Representatives in the Congress of the United States strongly oppose the enactment of the McCarran bill or any other legislation of similar import which would vest control of the wildlife of the State of New Mexico in any Federal bureau, agency, department, or corporation;

That a copy of this resolution be immediately forwarded to each of the Senators for the State of New Mexico and to each of the members of the House of Representatives from the State of New Mexico;

That the officers and directors of this association be and they are hereby empowered to take any further action which in their opinion may be of assistance in manifesting our condemnation of and opposition to this proposed legislation.

[Applause.]

The CHAIRMAN. Mr. Raymond B. Stamm, secretary of the State game protective association, do you wish to be heard?

STATEMENT OF RAYMOND B. STAMM, SECRETARY, NEW MEXICO STATE GAME PROTECTIVE ASSOCIATION

Mr. STAMM. Mr. Chairman and gentlemen of the committee, because I cannot believe that it is necessary for me to be otherwise, I am going to be pleasingly brief, but I will ask that you not construe this brevity to be otherwise than unalterable opposition to this Senate bill.

Thirty years ago we had game laws in New Mexico worthy of the name. The sportsmen organized a cosmopolitan organization, which is still alive in this State today, with members made up of the Forest Service, Government bureaus, a member of the livestock association—Senator Chavez is a member, Representative Anderson is a member—and we built up a game department in New Mexico of which we are very proud. We are proud of the record we have made in solving all of the problems, and talking it over around a table.

We feel as Mr. Barker and Mr. Woodward have stated, we have proven the lack of any need of such a bill as this; and while we of New Mexico are bound, in our State pride, to feel maybe we have done something they could not do, deep down in our hearts we know the other States could do; and we see no use for the bill.

Again, I ask you not to take my brevity as indicative of any lack of opposition. I assure you I am speaking for the other local associations throughout the State, or 15 of them, who are unalterably opposed to this bill.

Senator CHAVEZ. Do you agree with Mr. Woodward's statement that the Federal Government from Washington should not control our State game?

Mr. STAMM. Absolutely I agree with him; yes, sir.

Senator CHAVEZ. How do you feel with reference to the other agencies of the Federal Government controlling the affairs of New Mexico?

Mr. STAMM. I am speaking here today as a voice for the sportsmen of New Mexico.

Senator CHAVEZ. Well, then, I won't ask you to answer it.

The CHAIRMAN. Mr. Floyd B. Lee, president of the New Mexico Wool Growers' Association.

Mr. LEE. Mr. Chairman, I just might state that the New Mexico Wool Growers' Association has cooperated 100 percent with the State game department. We feel there is no need for the bill. We have our game representatives on our board and we have had no trouble whatever with the game in New Mexico. We have worked out—in fact, it went so far that when there was some elk on one of my farms out there eating the alfalfa that when they heard we were out of the Rocky Mountain States they moved back into the Rocky Mountains.

The CHAIRMAN. Mr. Brownfield made his statement the other day.

Mr. LEE. He made it and asked to be excused today.

STATEMENT OF ALBERT DAY, ASSISTANT DIRECTOR, UNITED STATES FISH AND WILDLIFE SERVICE, CHICAGO, ILL.

Mr. DAY. Mr. Chairman, ladies and gentlemen, Mr. Chapman has just been called away to a conference. He asked that I report to your committee that the Interior Department is officially opposed to the enactment of this bill, although the report has not been made public as yet.

In brief, the reason for the Department's position is about the same as the expressions that have been given by some of the State representatives, not only here but at other hearings. In effect, it is felt that the Federal Government now has the authority to undertake reductions in the States if the States fail or refuse to act, but that such actions are to be performed only under the most extreme circumstances. The authority, however, does exist, as exemplified by the famous *Kaibab deer case*. It is also felt, in connection with authorization of this sort, the Federal Government would be put in a peculiar position of going out and regulating wildlife on public lands leased by permittees for the benefit of the grass, which belongs to the Government but is eaten by the livestock of the permittees. This would put the Government in rather an unusual situation.

The CHAIRMAN. Pardon the interruption. I have been trying to straighten out that last statement, Mr. Day. You say it would put the Federal Government in a peculiar position because it would require the Federal Government, who leases the public domain to permittees—what was the remainder of that?

Mr. DAY. Under the terms of this bill, the Government would actually make reductions of deer on the open public domain for the benefit of livestock which are privately owned, as well as to protect the soil and vegetation of the lands of the United States. If it were making the reduction for the benefit of the soil or the plantlife, there would be

little question; but if it is being made merely to protect the interests of the permittees, it extends the Government into new fields.

Senator CHAVEZ. What are the coyotes exterminated for, for the benefit of whom, the grass or the stockman or the individual or the lessee?

Mr. DAY. That is correct.

Congressman ANDERSON. What's the difference?

Mr. DAY. Well, it extends the authority to a point——

Senator CHAVEZ. Beyond the coyotes?

Mr. DAY. Beyond the coyotes. The confusion that would result in administration of the bill has already been pointed out, with the various patterns of land ownerships as they are. Various agencies administering interwoven tracts of land would lend no end of local problems in handling a bill of this sort. It must be admitted that some States do have serious game problems. They are, however, considerably localized, and it is not felt that there is a sufficient general problem to warrant legislation of this kind. We feel it would undoubtedly lead to confusion and to differences of opinion and to difficulties and misunderstandings between the States and the many Federal agencies.

Of recent years there has been a better and broader understanding between State game departments and the Federal agencies, I believe, than ever before; at least, in speaking of the Fish and Wildlife Service, that has been the case. We have had more cooperation with State game departments than we have ever had before; and, for that reason, we are fearful that this legislation would impair some of the fine relations that we now have. For that reason we feel that the bill in its present form would be inadvisable.

Mr. RUTLEDGE. Mr. Chairman, I would like to question him now, or later.

The CHAIRMAN. Yes, sir; I think now would be the best time.

Mr. RUTLEDGE. I have always got to be on the unpopular side. I can't wave the flag and make the eagle scream. What about Jackson Hole? Right now, young man, you have got somewhere about 30,000 head of elk. You fellows don't know what game congestion is. They come down on your refuge there to the extent of 10,000 head, and you can only feed 7,000 head. What are you going to do about that? That has been going on, to my knowledge, for the last 20 years, and no action has been taken on the reduction of that herd. Now, I think it is time we looked these things squarely in the face.

Mr. DAY. We are. I have made several trips to Wyoming in an attempt to work out a satisfactory arrangement with the game department. I must admit that we have been at loggerheads, and even reached the point where, at one time, the newspapers said it was "Federal domination," and that we were telling the State what they must do. We have continued to insist that it is their right to reduce that herd, and that they must assume that right. Last winter they paid out \$50,000 for feed, and they have taken the position that they will pay it out again this year, unless the herd is reduced. I think they are going to bring it down; however, if they don't, we still have the authority to go in and make the reduction ourselves, as a last resort measure.

Mr. RUTLEDGE. On what basis?

Mr. DAY. The Kaibab decision

Mr. RUTLEDGE. Who got it? You know who took the Kaibab decision. I've got my fighting clothes on.

The CHAIRMAN. You are not half as unpopular as the author of this bill.

Mr. RUTLEDGE. Fellows, did you get that? Twenty-five or thirty thousand elk coming down in that town of Jackson, on those farms and haystacks. He says he has to have it done this year, or next year. I have been hoping to have it done for 20 years; and I think that maybe Mr. Kneipp worked on it for 10 years before that. We didn't get any action.

Mr. DAY. We are hopeful we will get it this year. There were 5,000 head killed throughout the western part of Wyoming last year, and we have insisted on 6,500 head to be killed in Jackson Hole this year. We're opening a portion of the Federal refuge to hunting. I still think it is the States' responsibility to reduce it, but I also think that we now have the authority to do it, if it becomes absolutely necessary.

Mr. RUTLEDGE. I doubt if you will exercise that authority. As I said in the Glenwood Springs meeting, you lack the guts.

Mr. DAY. Of course, we are not alone. There happen to be others.

Mr. RUTLEDGE. I know that.

Senator CHAVEZ. Well, we've got the Federal Government fighting now.

The CHAIRMAN. Thank you very much.

There is one more name on the list; but before he speaks, I think in fairness, in that he represents the Forest Service, he is the forester for region No. 3, I believe a little light on this subject will do no harm.

I wish that those who consider this bill would consider it from another standpoint, rather than condemnatory. To begin with, there is no man, and I say this boastfully, no man on the floor of the Senate of the United States more zealously determined to retain States' rights, in every particular, than the author of this bill. But I am confronted, and you are confronted, with the law, and everyone who has discussed this bill, in every meeting, has overlooked the law.

What is the law now? You have State rights. Now, do you control the open public domain of the United States? Whose property is it? The rights set out in the *Kaibab case*, by the Supreme Court of the United States, were not new, nor novel. The principles enunciated in the *Kaibab case* were as old as English civilization. The owner of private property has the right to remove a destructive agency. In a not too remote case, in the State of Montana, the principle was enunciated, where a farmer sent word to the game warden, "We are killing elk on this farm," and the game warden, when he came up, was led out to where the body of the elk was. The farmer was arrested for a violation of the laws of the State of Montana. The case is most interesting in that it held that he had a right to protect his ranch and the feed for his cattle against invasion by elk herds.

Now, that was nothing new. The Supreme Court of the United States, in the *Kaibab case*, only enunciated the common old principles of law, that the Federal Government had the right to go in upon its own property and remove that which impaired the range or devastated the territory; and the Supreme Court of the United States, in the *Kaibab case*, went farther. It said that it could kill, could reduce the numbers, and could remove the bodies, by taking them across the terri-

torial lines or the Federal lines, notwithstanding State law in the State of Arizona.

So, to begin with, this overriding by the Federal Government, of which we hear so much complaint, is here now. It is upon us now; it is the law now; and it can be exercised by the Federal Government tomorrow morning, if they see fit. It was admitted by the learned gentleman representing the Fish and Wildlife Service of the Federal Government, that the Federal Government can go into Jackson Hole and eliminate, reduce, if you please, now. If the Kaibab Forest again became infested with too many game animals, the Federal Government can go in and eliminate, without consulting the State of Arizona, but upon its own determination. Could anything be more distinct? Could there be a more outstanding overriding by the Federal Government than what exists in the law at the present time?

There has been some discussion, some here, and some in other hearings, that the wildlife belonged to the State. That is not the law. The Supreme Court of the United States has enunciated, and the State courts have held, with but rare exception, that the wildlife belongs to all the people. The State is trustee for the people, and has the right to regulate the taking of wildlife, the taking of game animals.

So we approach this subject with some other things in mind. We were startled, just a few months ago, in the Congress of the United States, when an Executive order issued from the Executive office that even dumbfounded the congressional delegation from the State of Wyoming. Overnight, the Jackson Hole country had been the subject of an Executive order, whereby territory of thousands upon thousands of acres were withdrawn from the public domain, under the monument law. A park can only be created by an act of Congress, but a monument can be created by an Executive order. The monument law was set up by the Federal Government so that objects of historical, scientific value, unusual natural objects, and the like, might be, by Executive order, preserved. But here the monument law was transformed into a park law, and a great national park was set up over night, by Executive order.

Executive order after Executive order is being handed down today by the Federal Government. The hearings of this committee held in Colorado and other places, in Utah, reflected a condition wherein it is stated before this committee that deer are tramping out great sections of the State of Colorado. When we ask, "Can't the State of Colorado do something about it?" they say, "We have done everything we can; we have enlarged the season; we have done away with the sex regulation; we have permitted a greater number to be taken per season."

And then we ask the question, "Doesn't that reduce the numbers?" and the answer comes back, "No." And if I may be just a little facetious at this point, this was a striking thing. When we said, "When you enlarge it, do away with the sex regulation, why won't that permit the sportsmen of this country to come in and reduce what is necessary in this area?" One fellow said, "Because the sportsman will only shoot a deer just as far as his rifle will reach from his car." That was an answer, and I thought it was facetiously made; but it was made quite seriously. He said, "That does not reduce the deer population in the interior."

So, the problem presents itself to the Forest Service, to the Grazing Service, to other services of territories that are today overstocked with that which is destroying or impairing the grazing possibilities on the Federal domain. Is the Federal Government going to remain complacent all of the time, until the States get around to it; or will we get an Executive order overnight that will follow the Kaibab case and say, "Mr. Kneipp," or "Mr. Rutledge, you go in on that territory and kill off where you find the population to be so great?"

That is the law. When that Executive order is issued no Congress has a right to change it. All we could do would be to complain; and you fine gentlemen, all you could do would be to say, "We are overridden with Executive orders." A lot of us would agree with you.

So what was the thought behind all of this? This bill was introduced as drastically as our imagination could fix it. This did not come from the Forest Service; this did not come from the Grazing Service; this didn't come from any department. It came out and went into Congress to arouse the people of America, the sportsmen of America, and those who are interested in the welfare of the open public domain and the promulgation of wildlife, that they might formulate a statute that would head off an Executive order. [Applause.]

Now, it can be done. The first part of this proposed statute would stop and stay the hand of the Federal Government, if it should be passed, because it says that the Federal Government shall first consult the State authorities.

The Federal Government doesn't have to consult the State authorities today. All they have to do is to determine for themselves that an impairment of the Federal range is being brought about by wildlife, and they can go in and eradicate or reduce. That they don't do it shows a fine spirit of cooperation, to be very frank with you, because they could do it.

Now, to my friends of the sportsmen of this community, this bill need bring you no harm. This bill need bring you no alarm. It was introduced by one who believes in State rights. It was introduced, and then referred to his own committee, so that today it rests securely in this committee, right here. You need have no alarm. What I want from the sportsmen of this country and from the sports writers of this country is some constructive suggestion, rather than this everlasting saying, "Kick the bill out." The bill is out, as far as that is concerned; you needn't worry about that.

You are going to be confronted, one of these mornings, by the Executive order; and you won't be able to kick that out.

MR. HUGH B. WOODWARD. May I ask a question at this point, Mr. Chairman?

THE CHAIRMAN. Certainly, sir.

MR. WOODWARD. This is my question: In behalf of the sportsmen, I want to express our appreciation of the statement you have made as to the reasons back of this bill. Let me ask you this question: Would you not accomplish the result which you say is sought by a very short bill, which would state or provide that no wild game animals shall be killed by any Federal agency or supervising agency upon any public land until a request had been made of the State Department, and the State Department had failed to act?

THE CHAIRMAN. That is exactly what the bill says.

Mr. WOODWARD. But it goes further, and then says that if the State Department fails to act, that then the Government, or any head or acting head of an agency, can go ahead and license hunters, and put them in there, under any terms they see fit, and take away what they see fit.

The CHAIRMAN. If that is the part you object to, your objection is well taken. You don't have to worry about that at all.

Mr. WOODWARD. I suggest a statutory limitation of power, not an enlargement of power, which we conceive that bill to be.

The CHAIRMAN. That is just what I want to bring up. This is a limitation of power. We have demonstrated that the power now exists. As the law is written now, the Federal Government doesn't even have to consult the State. The power now exists. This very part of this bill limits that power, and says you must first go to the State.

Mr. WOODWARD. If it stopped there we would be very happy.

The CHAIRMAN. Your criticism is a good one, and I am glad to have this criticism, because I am in hopes that out of all this discussion, Nation-wide, if you please, there will come progressive legislation suited to conditions and cooperated in by the respective States to which the Federal Government will accede.

Mr. WOODWARD. Amen.

The CHAIRMAN. That is the story.

But you are not going to get that by saying, "Kick it out." You're not going to get it by standing up and criticising it. Why haven't you come in here and given me a criticism? I'll give you one that is more than yours.

This brings up a conflict between every Federal department that has control of Federal range. Nobody has said a word about that.

Mr. WOODWARD. Yes, sir; I think Mr. Barker pointed out the possibility of conflict between the various administrative agencies.

The CHAIRMAN. Very well. The General Land Office, the Grazing Service, the Forest Service, the Indian Bureau, even the Soil Conservation—truly, the Soil Conservation would come in to conserve the surface. Why not? If it was overrun by animals that could cause erosion, and so on, and so forth?

Now, gentlemen, your criticism is good; it is commendable. The author of the bill takes it. He likes it. He wants legislation that will be acceptable to those of you who have made a study of it, but who have forgotten that the law now exists; and as it now exists, it is more drastic than this bill itself.

Now, that is the whole story behind this bill. It is the whole story in the bill; and if some of these magazine writers would only frame a bill that would be progressive and meet the criticism that you gentlemen have very properly made, and let us have it, and put it through Congress, so that the Federal Government may protect its holdings, that the stock raisers may have the benefit of that protection—because the stock raisers are interested in this thing—so that the respective States may have their rights recognized, and the people of those States have their rights recognized as being the owners of the wildlife.

Now, there is another side to this. If the Appropriation Committee, and I have been sitting on it now for 11 years, if the Appropriation Committee for the Department of the Interior were to fail to

make an appropriation for the extermination of predatory animals, we would have the sky brought down on our heads. The States call on the Federal Government to go in and kill off the predators. Some of the States cooperate; some contribute to it; but the Federal Government is always called upon. Now, with one breath you say, "Kill off," and with another breath you say, "It is an invasion of States' rights!" Do you see your position?

Mr. WOODWARD. We appreciate that. That is correct.

The CHAIRMAN. Out of that position, what I want to bring out—I am going to say this now for the last time—is a meeting of the minds of the fine people of this country who are really intent upon conservation of wildlife, to bring about a statute, whether it be authorized by me or the Senators from New Mexico, or someone else, that will meet all the conditions that you want, and still protect the open public domain, and still give a right to the Federal Government to protect the open public domain.

That is the story, all in a nutshell. It all emanated from this wise, fine-looking fellow over here in the Grazing Service, who went up into the Kaibab Forest and eliminated; and the Supreme Court of the United States said he had a right to do so.

Mr. WOODWARD. I think he was right.

Mr. RUTLEDGE. Thank you, Mr. Woodward.

The CHAIRMAN. Now, I omitted one gentleman, because I thought it would be fair to let someone reply to my position here, and I purposely selected the last one, Mr. Frank C. W. Pooler, regional forester. If he cares to be heard, we would be glad to hear him now.

**STATEMENT OF FRANK C. W. POOLER, REGIONAL FORESTER,
UNITED STATES FOREST SERVICE, ALBUQUERQUE, N. MEX.**

Mr. POOLER. I am afraid I haven't very much to offer, in addition to what has been said here on the bill. I can testify, however, to the splendid cooperation that has existed among the agencies, particularly the Forest Service and the Game Department, in all matters relating to game, wildlife; and the situation has been such that it is only fair to say that in New Mexico we do not need this bill. We would not have to invoke it, and I think we would get along very well without it.

Now, I am not authorized to speak for the Forest Service on this subject. Mr. Kneipp, the representative of the Chief, is here, and I believe that he could perhaps add something to what I have said. Thank you.

The CHAIRMAN. Thank you, Mr. Pooler.

Mr. Kneipp, do you care to be heard?

**STATEMENT OF L. F. KNEIPP, ASSISTANT CHIEF, UNITED STATES
FOREST SERVICE, WASHINGTON, D. C.**

Mr. KNEIPP. Mr. Chairman, I think the Forest Service could fully endorse the statements made by Mr. Barker and Mr. Woodward, on the basis of our knowledge of the fine and constructive cooperation we have had in New Mexico. My thought would be that if S. 1152 were on the statute books today it would be wholly inoperative in the State, because its operation demands the existence of certain condi-

tions, and through the cooperative and constructive attitude in New Mexico, those conditions do not exist in this State.

Unfortunately, there are other States where the situation is not nearly so happy. You, as chairman of this subcommittee, know that at a number of the hearings there have been very strong protests in a number of the States that conditions remain uncorrected, and are very acute; and that it was in response to the widespread demand of stockmen that this matter first receive the committee's attention.

As to the attitude of the Department of Agriculture with respect to the bill, at the time I left Washington the Department's report had not been formulated. The subject was then under discussion. It involved not alone the Forest Service, but several other bureaus as well; and the final opinion had not been reached. At that time, however, the attitude of the Forest Service might be presented in this way: In response to a widespread demand from the various game interests, the old regulation, G-20-A, formulated in 1934, has been superseded by a new regulation, W-2, predicated upon the principle of complete cooperation between the States and the Federal Government. Some progress has been made under that regulation in some States but not in all States. However, the feeling of the Forest Service is that the regulation has not been in operation long enough to fully test its effectiveness to determine whether it will or will not meet all the situations that seem to demand correction. The viewpoint of the Forest Service is that it would just as soon or, rather, would prefer to proceed under regulation W-2 for such further period of time as might be necessary to prove whether that is or is not a workable formula. If it proves to be workable, the situation, so far as the Forest Service is concerned, will be met, and no need will exist for further legislation. If it proves unworkable, if there are certain States which fail to meet the requirements of the situation, then, further legislative action clearly defining the policy of the Congress and the position of the United States with reference to this question would seem to be desirable, and should be enacted.

The CHAIRMAN. Thank you, Mr. Kneipp.

Mr. RUTLEDGE. Could I ask Mr. Kneipp a question or two?

I feel, as the rest of you, that nothing demands this in New Mexico; but I wish you would tell us how many congested areas of game animals there are in the forests of Colorado.

Mr. KNEIPP. As you know, Mr. Rutledge, at the meeting in Glenwood Springs last November, the Forest Service submitted plats showing, I believe, a total of 21 areas of serious or major proportions to which, I think, were added areas outside the national forests. Upon those areas, the conditions were very acute, affecting not only the land itself and the forest cover on it, and not only the livestock, but the game itself. There are other States; there are some very difficult and unsolved problems in Oregon, some in Washington, some in California, and, I think, there are some in Montana, in some parts. These are not spread throughout the entire States, but are more or less localized in certain territories. There may be still other States in which the same problem exists in rather an acute degree, in comparatively small areas, in fact, in some of the eastern States, the problem is becoming one that requires attention.

Mr. RUTLEDGE. I'm trying to remember the name of that area in Colorado. Was it Sapinero? That was where the technical man

of the State Game Commission had studied the area carefully. He had studied others; but this one sticks in my mind. They have found eighteen or nineteen thousand head of deer on that territory within a comparatively small watershed, and, he said, forage only for 12,000. The problem was what to do with the extra six or seven thousand head of deer. The State game warden was there, and he hedged around it a great deal, and I don't think he got much done. We did get the information that they burned the carcasses of 2,500 deer along the road of the Sapinero district. That is the kind of thing that—

Mr. KNEIPP. At the Glenwood Spring meeting the people from Gunnison cited a condition there that was quite acute. Two or three spokesmen spoke to the committee quite effectively, and their factual contentions were not seriously denied. Gunnison, incidentally, is a small mountain town, and yet in the town of Gunnison, subsequently, I understand, a meeting of sportsmen strongly expressed opposition to any effort to reduce the deer that were congregating around that town. We have some confused conditions there, where people of the same community differ markedly as to the gravity of the situation, and as to the means of cure. I think, though, you were referring to the statement made by Mr. Carhart, who is now connected with the Pittman-Robertson organization.

Mr. RUTLEDGE. Mr. Chairman, I don't know whether you are going to close this thing. I feel I ought to say a few words. I will try to make it very brief.

The **CHAIRMAN.** Very well.

STATEMENT OF R. H. RUTLEDGE, CHIEF, UNITED STATES GRAZING SERVICE, SALT LAKE CITY, UTAH

Mr. RUTLEDGE. I think the chairman is right—that we should try to get our heads together on these things. Maybe I go at it roughly or crudely, but I am faced with this thing every day; not in New Mexico—Elliott Barker is handling things all right here.

In some States I am accused of being a partisan toward wildlife by the stockmen. I am surprised these stockmen take this position. Maybe I am partisan to game; I don't yield to anybody, not even that little old gentleman back there, as to knowledge of this western country and my love for game and wildlife, but I sense that in the handling of grazing we have got to put in business principles. In the Grazing Service there are three fundamental things connected with game: First, in the carrying capacity of our ranges we have to set aside enough carrying capacity for the game now running there; we have, secondly, a wildlife representative on each advisory board; and, third, we are following the principle that when, under the Pittman-Robertson Act, land is purchased by the State, the grazing preferences or rights which belong to that land goes to the State for game. Now, that shows our general approach on it.

Now, this thing was discussed in Glenwood Springs. I understand I have been quoted and accused about what I said there on some of these things. I want to read just a word or two. In discussing this matter with Mr. Carhart after he had made his report, Senator Holman asked this question:

Senator HOLMAN. May I pursue that question a little further? Do you believe you have reduced the herd from 18,000 down to 12,000 now?

Mr. CARHART. No; we haven't. Now the manpower to take our census is very low. I don't know whether I can get them.

That is just the kind of thing that works all the time. We don't get it.

Now, as to my own statement, I may have made other statements in there, but I said this: "If I have any suggestions to make on this legislation, it might be that you men [speaking to the committee] consider the possibility for some legislation which will give the administrative forces controlling a piece of land the authority to keep game within proper limits."

I stand back of that suggestion, fellows. I stand back of the game men and of the stockmen. I could point out to you, as Mr. Kneipp has quoted to you, 21 areas in Colorado—I can point out a lot of them on grazing districts that are very, very bad, and State game wardens don't seem to be able to get any action. The stockmen's boards come to me and ride me ragged with, "What are you going to do with the excess deer or elk on those grazing districts?" What am I to do? I believe I am as good a cooperator as there is in the world. As a matter of fact, I was sponsor of the game-control bill of Utah, which has had its up and downs for 10 or 15 years. We are getting some results on that, but it takes that long to get action, and the action is not complete.

Now, all I am asking for is that you listen to Senator McCarran pretty carefully. He is a wise-looking guy—and I'll come right back at him—he knows what he is doing and is trying to do. He's trying to do something here that will put us all in the clear on this thing, so that we can go at these cases in a businesslike way and handle them whenever they need to be handled. If the State can do it, fine; if it can't and doesn't do it, then what are we going to do?

Mr. HUGH W. WOODWARD. Will the gentleman yield to a question?

Mr. RUTLEDGE. Yes.

Mr. WOODWARD. Is it not possible to handle these acute situations as the Kaibab was handled, under the authority which the Supreme Court has said is vested in every landowner?

Mr. RUTLEDGE. I'll give you a job if you'll come up and handle some of them for me.

Mr. WOODWARD. If your answer is no, that it can't, that is a fair answer.

Mr. RUTLEDGE. It can be handled, but that is a very painful process, to go into a State, and, again, to move the deer and the elk without any legislative pronouncement on the matter. You have got your finger on it exactly. I know you can go down and kill those deer, I can go down and kill those deer, and I have done it, and I have lived through it. Sometimes I have wondered if I was going to live through it. But that is not the kind of thing we ought to be doing. I think we should be jamming in there, under an Executive order, as the chairman has said, and doing that, in spite of the contract.

Mr. WOODWARD. May I ask you further, this, then; instead of grabbing an affirmative right to the head of the Federal agency to exercise judgment as to a particular situation, would not a statute such as I have suggested, a statute of limitation, accomplish its purpose so far as putting the pressure upon the individual State is concerned, which, I understand, is the object of this bill?

Mr. **RUTLEDGE**. My mind is open on it, on any approach. As I said in Glenwood Springs, we ought to explore the ground and see what could be done about it. Your suggestions will aid in that exploration.

Mr. **BARKER**. May I ask one question, Senator?

In this particular bill there is one point that we would particularly object to in any bill, even if we conceded, as Mr. Woodward has said, probably that some bill might be necessary, and that is the provision that whenever in the opinion of the head of any land administrative agency this thing needs to be done—we doubt just a little bit whether it ought to rest solely with the head of a land administrative agency to say what should or should not be done. Would there not be some way to provide a check? I might say on this particular phase of it, without turning it over, lock, stock, and barrel, to one man and permit him to exercise his authority, couldn't there be a check? As I said in my talk, we don't claim to be perfect in our game administration in New Mexico, but we steadfastly refuse to admit that the Federal agencies are or would be perfect, either. We would, in the legislation, insist there would be some check on that man as to when the removing was really necessary.

I have one case in mind that I might just mention. Eleven or twelve years ago the Forest Service man, then in charge of game, came to our commission meeting and reported 3,000 elk in the Pecos area of the Santa Fe Forest, where I knew, and everyone knew, there were not over 500 or 600 head of elk. In that case the Forest Service did not follow that up in any way; neither did the commission; because the request was more or less ridiculous. Yet the official made that request in that commission meeting, to open the season to unlimited hunting for elk, because there were 3,000 elk in a few sections. Actually they were not there, and they still are not there. Therefore, we feel some check could be made.

Do you think that could be worked out?

Mr. **RUTLEDGE**. You don't want whole authority——

Mr. **BARKER**. We don't want to see the full authority going to one man. The State ought to have some check. If you were to attempt to apply this law, if it were passed now, all you have to do is take this man's opinion. It may be the opinion of game experts or the opinion of your stockman that that action is not necessary, and yet that particular man may say it is. The law, in referring to anybody, should determine that it is necessary, but not that he go ahead and do it without any check. What would you suggest as to a check on him?

Mr. **RUTLEDGE**. You are making suggestions to the Senator for the drawing of this bill. I didn't draw this bill. I'm not too much wedded to any approach to it, except that we get together, and get something that we can work under.

The **CHAIRMAN**. Let me answer that.

My own State has taken quite definite steps, in the last legislature, toward that end. When there appears to be a congested area, a committee is set up, consisting of one representative of the Forest Service, a representative of the Grazing Service, a representative of the State fish and game commission, and one or two others. I haven't them in mind right now. They go in and make a survey, or cause a survey to be made, and their judgment goes as to whether or not there shall

be eradication or elimination. Now, that is a step in the direction of the first principle enunciated in this bill, and that is that the Federal Government shall not act until it has first conferred with the State authorities. Remember, now it has the right to act without conference, but if this bill were passed, with all of its other failings—and there are points in it with all of its failings—if this bill were passed, any court would construe that the Federal Government must first submit this matter, pursuant to the bill, to the State authorities.

So this is an inhibition, rather covered up in there, but it is an inhibition against voluntary action by the Federal Government without first announcing it to the State. But your idea has merit in it, ample merit. In other words, I don't think it should be left to the judgment of any one individual. I think it should be left to a study, and the study should be made by some constituted authority, and the State should have a voice in the making of that authority; so your suggestion meets with my thought that I have had for a long time.

Every time I see a magazine article bearing on this bill it sets me back to studying again as to how we can formulate it, but I don't get any ideas from the articles. I've had to drum them up myself.

Mr. BARKER. I might just say, that is what I was trying to put over; the very thing we are practicing here in New Mexico without any bill that says we must. For instance, last year on the San Andreas National Wildlife Refuge, where the Forest Service also has interests, there is an overlapping there with where the Grazing Division has interests, and that causes an overlapping there, and the game department has definitely an interest, because we are custodian of the State game; and where the sportsmen have an interest, because they're the ones that harvest it; and where the stockmen have an interest, because they are using the forage in there also; we, among us—I don't know who suggested it—realized there was an approaching point of overpopulation on that particular area.

We got together and provided a field inspection of several days with a representative of the United States Forest Service, perhaps more than one, a Fish and Wildlife Service representative, a representative from the local sportsmen's organizations, and one from the stockmen, one from the game department, one from the Grazing Division, and one from the Soil Conservation Service, who was not directly interested. Out of that came a general report which we could all sign, and did sign, recommending and recording certain findings of facts, and recommending certain action. The action was taken, and I think everybody is happy; and also it is being repeated in other areas. It is illustrative of what we are doing. Now, if a bill were passed, some provision like that ought to be made.

The CHAIRMAN. I agree with you entirely. Let me tell you something about wildlife; some of us out here in the wide, open country know what wildlife is. We have grown up with it. Some of us have hunted for wildlife since we were able to put a gun to our shoulders, and I happen to be one of them—that is the only weakness that I have—that happens to be one of them, but the only weakness that I have, among many others, that is public. In other words, I like to hunt and I like to fish, so I know what wildlife is.

But there are many people in this country, and many authors of articles in this country who put out fine articles on wildlife who know

very little about the real nature or the real existence of wildlife. They have it as a hobby, but they don't know it intimately, so that bills of this kind, or even movements such as you suggest, or plans such as you have set up here in the State of New Mexico would be criticized severely. If you said, "We are going to kill off or remove a certain number of deer from a certain section," the holy horror that would go up would be colossal. But you know and I know that we have to deal with this thing realistically. The people that live and dwell and own and operate and pay taxes off the open public domain have got to deal with it factually and realistically, because there is where it is, in reality. That the plans you have worked out here are admirable, I agree, from what I have listened to today and I think other States could do the same, but they don't always do it. They have conditions that I fear, that I have good and sufficient cause to give me fear, that some day or other the attitude of Mr. Rutledge, wherein he says he dispises to go in and kill off, the attitude of Mr. Kneipp, when he says he is opposed to the plan of killing off for the purpose of eliminating, the attitude of others who are not in favor of eliminating in that way, that will all culminate in the White House in which an Executive order will come out and say, "Go in and kill off." Then, what are you going to do?

Now, if we get a statute worked out of it, I think we will have done a great and good work. That is the reason I am glad you gentlemen have come in here and criticized this bill. I thank you.

Senator CHAVEZ. I believe that finishes the game department's end of the proceedings.

There is an attorney here from Santa Fe, representing several clients, and he would like to get a little time from the committee.

The CHAIRMAN. Gentlemen, I think that we will have to close this subject.

Mr. WOODWARD. Thank you very much, Mr. Chairman, for your courtesies.

STATEMENT OF ALBERT H. CLANCY, ATTORNEY AT LAW, SANTA FE, N. MEX.

Mr. CLANCY. Mr. Chairman and gentlemen of the subcommittee. I appear on behalf of some half a dozen people, as an attorney and a friend. These people live down here close to Beaverhead, N. Mex., 8 miles from Magdalena. It has been impossible for them to get here on account of the gasoline situation and rubber, and I believe a reading of the letter of Mrs. Jack Dyer, one of the people interested, will give you the situation:

My husband and I own $2\frac{3}{4}$ sections of land. We have in addition a permit for grazing privileges on one-fourth section of isolated United States Grazing Service land which joins many sections of grazing land that is now controlled by the Hubbell Sheep Co., who is one of the largest land controllers in the State. I went to the office of Mr. John L. Greenwald, regional grazier of the Grazing Service, Magdalena, N. Mex., in March of 1942 to make an application for grazing privileges on about 6 sections of Grazing Service land adjoining our land, but was not allowed to apply by Mr. Greenwald.

We later took this matter up with the Albuquerque office and the Grazing Service, and were permitted to apply there. The application was forwarded to Mr. Greenwald, and we have on file his acknowledgment of the receipt. The advisory board of this territory was to act on this application at their meeting this spring, but in April I had heard nothing concerning this matter and wrote

to Mr. Greenwald about it, explaining I wanted information concerning the action taken by the board on our application of June 1942. His reply dealt only with my application of February 1943, which was a renewal application for the quarter section of grazing land mentioned above. I feel sure he has failed to present our application to the advisory board, since all applications that I am personally acquainted with received this information by registered mail early in April.

I have in my possession correspondence showing that he on one occasion refused to use information concerning the number of acres of grazing land controlled by the Hubbell Sheep Co., due, as he said, to the national emergency. At the same time Mr. Greenwald refused to allow me to apply, refused also to let a neighbor of ours, apply whose situation was the same as ours. I believe this neighbor would sign an affidavit to that fact.

There is another man down there, Claude Austin by name, who owns patented land right close to Mrs. Dyer, who has a legal fence around it and who has a good well on his place, who has made application through the Magdalena office for the last 4 years for land adjoining his land and in the forest for the purpose of grazing some stock.

Each and every one of these applications have been rejected, as have the applications of another in that locality, one Artie Davis. It all seems to run along the same lines, the information requested is "of a confidential nature." This is with reference to the letter I read from Mrs. Dyer. I can't see why it is confidential.

The CHAIRMAN. What is that?

Mr. CLANCY. The answer of the district grazier, when Mrs. Dyer requested the number of acres which the Hubbell Co. was using, the answer was:

Since part of the information requested is of a confidential nature, and you stated no reason for such a request, and due to the present national emergency, this office does not feel at liberty to grant the information requested until more definite information concerning your request is submitted.

Mr. RUTLEDGE. I think we can get action on the application. I don't know what the reasons are. I don't think we will try the case here. Apparently there is some slip-up here.

The CHAIRMAN. I think we can terminate that very quickly. Mr. Leech, and others connected here, will you take this matter up?

Mr. LEECH. Yes, sir; Mr. Chairman, I will take it up with Mr. Greenwald this very evening, and I will be glad to discuss it with the attorney also, and I believe we can work that out.

Mr. CLANCY. That is all we want, gentlemen.

The CHAIRMAN. Thank you.

I understand that there are two stockmen present who intended to testify, but because of the lateness of the hour, they will submit short statements for the record instead.

(The statements are as follows:)

HATCH, N. MEX., September 9, 1943.

Senator PAT MCCARRAN,
McCarran Subcommittee,
City.

GENTLEMEN: I have come 200 miles from near Hatch, N. Mex., in order to tell you of the unjust things the department of grazing has been doing in connection with the Taylor Act, in my part of the country.

In my case, I started it in 1939, with plenty of prior water rights and prior years, and was turned down on every decision until it reached the Secretary of Interior, who gave me five sections.

Later, I purchased 2 ranches with prior water and prior years enough for not less than 100 head, but at the trial the examiner, Mr. Williams, compared me to

a hitch-hiker, and when my attorney heard of it, he advised a settlement, so I left with less than I came with. My lawyer was R. C. Garland, of Las Cruces, N. Mex., who will verify.

My case is just typical of the way they treat small operators.

Sincerely,

C. H. WARD

PETITION: OBJECTIONS TO TAYLOR ACT FROM SMALL CATTLEMAN'S POINT OF VIEW

To the McCarran Subcommittee on Public Lands:

As a small cattleman, I, R. B. Hackler, of Rincon, N. Mex., hereby respectfully submit that the following outline expresses some of my objections to the Taylor Grazing Act, from the point of view of a small cattle raiser:

1. I believe that there should be an independent reexamination and reopening of all cases decided, where any interested party desires same, and independent adjudications based upon equity, rather than upon arbitrary rules. Influence of large operators should be eliminated.

2. I believe that the act should be amended to increase what I call the exemptions under the act. Every livestock man should be permitted to have what he had before the passage of the act, up to 100 head and 20 sections of land, and then permit the Bureau to go ahead and regulate all above that. This will eliminate from the Taylor Act the abuse whereby large operators have through pressure and litigation taken thousands of acres from the weaker competitors, under color of law and without just compensation.

R. B. HACKLER,
Small Cattleman.

STATEMENT OF D. S. HARROUN, CARLSBAD, N. MEX.

Mr. HARROUN. My name is D. S. Harroun. I am a farmer at Carlsbad, N. Mex.

Congressman ANDERSON. Just a moment, won't you let the Senator have some idea as to the size of your ranch and the character of your operations?

Mr. HARROUN. Yes, sir.

Our farm—to go back a little, my parents brought me to this country in 1913. At that time this land that we now operate was mostly wild land. I remember the survey party that we had out that year killed over a hundred rattlesnakes in less than 2 months. I worked on the farm during every summer vacation until the time I went to college. I think the work I did as a farm hand was one of the things that convinced me I would like to be a mining engineer, and when I went to school I chose mining engineering as a profession. That was in 1917. The war was on and I only attended for 2 months, and then I enlisted in the Navy and was discharged in March 1919.

I determined to go back into mining, but first, to learn a little about it first-hand, and I got a job at Joplin in the lead-zinc district as a mucker. During that time I determined for myself that I wanted to follow mining, and I went back to Golden and graduated in 1922. Subsequent to that, that is following graduation, I worked in various mining camps in the Southwest, in Bisbee as a miner, in Jerome as a miner, powder monkey, timberman, timberer, contractor. Later I went down to northern Sonora, worked in the old mines for pretty near 2 years. I worked as an engineer and line foreman.

Congressman ANDERSON. I was principally trying to get the size of your ranch down there, and the scope of your operations.

Mr. HARROUN. I'm coming back to that in just a minute.

The reason I give this background is because it has a bearing on the subject matter I am going to bring up in just a minute.

After 6 years' experience—you know a man doesn't learn mining in school—at the end of 6 years' actual experience, at which time I worked up to superintendent of a small mine in Colorado, I felt I was beginning to know something about the business. At that time our farm was in rather bad financial condition, and my parents asked me to come back and assist them in the operation of the farm. That was in 1927.

The farm lies south and east of Carlsbad, about 6,000 acres all told, served by direct diversion through the water of the Pecos River. We are farming, I regret to say, only about 1,500 or 1,600 acres. That is due to the present shortage of men. We can't get enough farm hands and there is a great deal of good land lying idle. At the time I went there, as I say, we had something over \$200,000 in the place, and the potash development was just starting in that area, and, naturally, being a mining man, I was interested in the development of potash. For that reason I quickly became acquainted with some of the men who were connected with the work there and, when it developed they needed water, we made a trade with them; sold them the upper end of our place. Now that, together with some rather successful years, has reduced our indebtedness to less than \$5,000, so that we are practically out of debt now.

Being neighbors to the potash industry—in fact, the United States Potash Co. erected a refinery on the upper part of our place; bought the land in order to get the water, because we do have the oldest water right on that part of the river. In 1932 a group of us, largely due to my advice—and these were all either relatives or friends of mine—made application for potash-prospecting permits. You know, it is different from lode mining, it is a little bit like the Joplin lead-zinc mines, in that your exploration work is done solely by core drilling. There are no outcrops, of course. So that instead of staking a mining claim, you make an application for a permit to drill. Your priority that you gain is simply by being first to choose this area, and you state your reasons for so choosing it, and, of course, those are based on the mineral composition and the geology of the region. I'm not going into that discussion of the ore permits there.

I had hoped to have a blackboard, so I could put it on so you could understand it very quickly, but it is more or less irrelevant, the case.

Our applications were made; eight of them were accepted and permits granted in 1932. At that time, due to the depression, we were unable to get to drill them ourselves or to get anyone who would drill them, except wildcat promoters, and we didn't care to get involved with any promotional scheme. Therefore, in 1934, we applied for an extension of time, and it was granted, and the conditions were such that you could not interest anyone in development of potash at that time. The potash industry was in its infancy and was going through a test competition with the European cartel. The result of that was successful; by the way, the American companies were successful in competing with the European cartel. I have a statement I will read later on in support of that.

To carry our history a little further, then, in 1936 these eight permits were held for cancelation. We protested it, and corresponded until

1939, at which time they were finally canceled. We took out new applications on the same area. Now, it is important to realize that no one else, including the present producers, was interested in our area, the area that we had under permit application at that time.

We are south; we join onto our patented line and run east about two townships, roughly 12 miles, and about a township wide. We are directly south, and join onto the holdings of the Union Potash, or their successors, the International Co., and more or less in line with the other producers. It is my feeling that we have the best area to prospect in America, and I think a great many other people feel that way, too, now, although at that time, as I say, there was very little interest in it. There was one hole that had been drilled by the United States Geological Survey. It was drilled for potash on the area that we are discussing; drilled before we went in there. It has attracted very little attention; it is No. 22, and about 1,200 feet disclosed 3 feet of potash ore of a grade of about 16 percent. It is generally considered that a bed should be at least 5 to 6 feet in thickness and about 20 to 27 percent K_2O content to be commercial, so this was not considered a commercial discovery. While it is not a commercial discovery, however, it is an indication, and is one of the things that we intend to follow up if we are allowed to prospect.

To make it brief—that is, to conserve time—in 1939 we divided all ore activities to secure these permits. In 1935 the Secretary of the Interior issued Order No. 914, which is as follows:

In the interest of the public it is hereby ordered that, until further notice, no action be taken in the matter of granting permits or leases under the Potash Act of February 7, 1927 (44 Stat. 1057), unless required by law.

This order shall not preclude action on any application for extension of term of permit under the amendatory act of May 7, 1932 (41 Stat. 151); nor shall it preclude rejection of any application or cancellation of any permit or lease for cause, or action in connection with royalty or rental under any lease; nor shall it relieve any permittee or lessee from compliance with any requirement contained in his permit or lease.

But in any particularly meritorious case, when in the judgment of the Secretary delay might be detrimental to the interest of the public, the provisions of this order may be waived.

That order, therefore, had stopped all action for our group and, of course, stopped all action on new applications for the eight that had been canceled. We went to Washington in January 1940. We presented this memorandum to the General Land Office, asking that we be made an exception. The reason we should be made an exception was, on the advice of a great number of people, it would be impossible to get the Department of the Interior to change their basic policy, that we could understand this last paragraph which states that any particular meritorious case, and so forth, they could grant a permit; so we asked that we be made an exception. That was presented, and the arguments largely were based on the use of a patented project called the "Cross process", which I will not go into now. As a matter of fact, all those arguments and the memorandum are obsolete at the present time.

In March our application was rejected. We appealed it and in April we had a hearing in Washington before Dr. Mendenhall, who was acting for the Secretary. I have with me our arguments that we presented in support of our case, and the transcript of that hearing. I'm not going to read it, but I will read who was there. It was held before Dr. Mendenhall, Acting Assistant Secretary of the

Interior. Present were: A. B. Carpenter, our attorney; Mr. Walter Cross, one of the owners of the patent, and myself, representing the applicants; and Mr. Harry Edelstein, assistant solicitor; Oscar A. Baker, assistant solicitor; a gentleman from the conservation branch of the United States Geological Survey; Mr. H. I. Smith, also of the conservation branch of the United States Geological Survey.

Immediately following the hearing we were promised prompt action, and we asked for a statement of the time, and they said between 1 and 2 months; in other words between 4 and 8 weeks. Actually it was 2 years and 7 months before a decision was handed down. During those 2 years and 7 months I made three or four trips to Washington and developed a game view argument due to our entering into the war and the use of potash in the war industry. I am pretty sure I was right on my contentions, because all three of the operating companies have been awarded the Army and Navy E.

Let me say at this point that I have a great many friends among the operating personnel of those three companies, personal friends. They are fine men and the companies are doing a good job. I don't quarrel with the companies, other than when they attempt, if they do attempt, to preclude the rest of the public from developing further the potash resources of the country. I feel that we made the charge in these documents that you see here, the potash industry was a bottleneck. Now, we can't prove that charge legally, I realize. The Department of Justice attempted to do that, and referred it to the Department of Commerce. Harry Hopkins wrote a long article or a long answer to it and said there were four companies operating in America, which there are, and that, therefore, they had free competition. It might be free. Just because there are four companies doesn't necessarily mean you have complete freedom of competition.

However, if the Department of Justice could not definitely prove a monopoly, certainly I couldn't. I do know this, that while I was there I went to the Potash Institute in Washington and asked them if I, as a farmer, could buy the potash, and the price I was quoted would be the same as from any company, and it would be the same anywhere in the United States, roughly, the same. As a farmer at Carlsbad I would have to pay the same price as a farmer at Atlanta, Ga., would have to pay for potash. Prior to the Department of Justice hearings I would have had to pay not only the price of the Atlanta, Ga., farmer, but the freight would be added from there back, but they dropped that later.

So our case, then, was decided finally by the Secretary on November 25, 1942. It was rejected. However, we felt that we had virtually won our case in this rejection. It is rather long and I don't intend to read all of it, but I will read the last few paragraphs which bring out the point and explain my reason for saying that we considered it a victory.

(The document is as follows:)

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, November 25, 1942.

A. 22585

Walter M. Cross, Jr., and D. S. Harroun. Las Cruces 045258, 045480, 047279, 047280, 047281, 047282, 047395, 057109, 057110, 057111, 057112, 057113, 057114, 057115, 057116, 057149, 057150, 057527, 057548. Applications for potash prospecting permits rejected. Affirmed.

APPEAL FROM THE GENERAL LAND OFFICE

Walter M. Cross, Jr., and D. S. Harroun have appealed from a decision of the Commissioner of the General Land Office entered March 5, 1940, denying their request that certain potash prospecting permits be issued and that they be permitted to test a patented mining process by actual operation in the Government potash test well drilled in the NW¼ NW¼ sec. 35, T. 20 S., R. 29 E. New Mexico principal meridian.

The present appeal is confined to the refusal of the General Land Office to issue the potash-prospecting permits. The request for the use of the Government test well has been abandoned.

The decision of the Commissioner of the General Land Office rejecting the applications was based on departmental order No. 914, dated April 5, 1933. That order suspends further action on application for permits or leases under the Potash Act, but provides in paragraph 3 that, "In any particularly meritorious case, when in the judgment of the Secretary delay might be detrimental to the interests of the public, the provisions of this order may be waived."

The issue, therefore, is whether the proposal of Cross and Harroun constitutes a particularly meritorious case such that delay in its approval might be detrimental to the interests of the public.

Briefly stated, the facts are these: Roy Cross, of Kansas City, Mo., has been granted a patent on a hydrothermal process for the mining of potash. The appellants, Walter M. Cross, Jr., of Kansas City, Mo., and D. S. Harroun, of Carlsbad, N. Mex., on behalf of 19 applicants urge the issuance of potash prospecting permits for an aggregate area of about 40,000 acres of public lands in the State of New Mexico for the purpose, as stated by them, of demonstrating by actual test the feasibility of the Roy Cross process.

The appellants allege that all locations suitable for a favorable test of the process and for the economic production of potash are on the public domain. They contend that the Roy Cross process has important advantages over present methods of mining potash which justify the granting to them of prospecting permits. The process has not been developed beyond what may be termed the "test-tube" stage, but has been reported to have given favorable results on small quantities of potash salts in the laboratory. Appellants maintain that the laboratory process may be translated into commercial production, that its use will result in substantial economies in the cost of producing potash, with a consequent decrease of its cost to the consumer, and that it will make possible the removal of 100 percent of the potash content of the deposits and thus contribute to the conservation of an important natural resource.

The advantages claimed for the Cross process present technical issues and, in accordance with established procedure, the appeal was submitted to the Geological Survey for a report. The Survey has submitted a number of memoranda, all adverse to permitting the process, in its present laboratory stage, to be used on a large scale on public-domain potash lands. It has been pointed out that no proof of the appellants' contentions, or even substantial evidence of their validity, has been or can at this time be submitted; that the alleged economy and efficiency of the Roy Cross process are purely hypothetical; and that the application of the process to public lands might be hazardous to the potash deposits. These deposits are public, not private, property; therefore, they are not to be dealt with casually and experimentally. The Survey also reports that, at least for experimental purposes, suitable private lands can be found on which to test the process.

After appellants had been informally advised that I had found their contentions to be without substantial merit, but before the formal decision no ruling had been signed, new attorneys requested that their appearance be noted in behalf of the appellant-applicants. In a supplementary letter they stated that if the Department should conclude that the use of the Cross method should not be permitted, appellants were willing to use methods already in use in other potash mines for the extraction and treatment of the mineral. Although the appellants have not expressly relinquished their claim for special consideration because of their process, their present willingness to use conventional processes weakens their position in this respect and suggests that their concern may be as much to enter the potash business as to demonstrate the effectiveness and advantages of a new method.

In all the circumstances the claim of appellants to an improved method of mining potash is not substantial enough to warrant a conclusion that this new process makes the application a "particularly meritorious case" in which "delay might

be detrimental to the interests of the public" within the terms of order No. 914. Apart from the claimed advantages of their new process, the appellants are in no better position to obtain permits than the more than 200 other applicants for potash prospecting permits whose applications have been suspended pursuant to the order.

The appellants have also in effect challenged the policy implicit in order No. 914 because it has resulted in confining potash production to a few companies, claiming that this in effect amounts to a monopoly which operates against the public interest. This argument is addressed to a reconsideration of general policy and either a modification or revocation of the order; it cannot be urged as a basis for distinguishing these particular applications from all other applicants for permits.

I have carefully considered this important policy question. Order No. 914 was promulgated in part because at the time, April 1935, domestic producers had substantial unsold stocks on hand, the German potassium syndicate was underselling these producers, and the domestic market was further disturbed by a large Spanish production offered to American consumers at secret discounts and by fears of Russian dumping. These reasons no longer exist. As a matter of general policy, it is the position of the Department that within the limits of sound conservation policies, the privilege of extracting minerals from public lands should be generally available to qualified persons and should not be confined to a few individuals or companies. I have, accordingly, ordered an investigation for the purpose of ascertaining whether order No. 914 should be revoked or modified, or whether the administration of the potash lands and leases should be modified to meet the needs of the economic situation resulting from general order No. 914.

The decision of the Commissioner of the General Land Office is affirmed.

HAROLD L. ICKES,
Secretary of the Interior.

Mr. HARROUN. Now, that very evidently pointed to a revocation of 914, and we expected that to happen, which it did.

Order No. 1829 was issued June 9, 1943:

The potash resources of the public domain have been managed so as to facilitate the domestic production of potash upon a sound basis. In furtherance of this policy, order No. 914 of April 5, 1935, suspended the granting of permits or leases under the Potash Leasing Act of February 7, 1927 (44 Stat. 1057, 30 U. S. C., sec. 281), unless delay might be detrimental to the public interest. This order is no longer deemed necessary in view of the changed conditions since its issuance, and it is hereby vacated.

To assure the prudent utilization of the potash and associated minerals to the public lands, thereby benefiting agriculture and aiding the national defense, and in order to develop the domestic potash industry, all pending applications for potash permits or leases and all such applications hereafter filed will be considered in the light of the act, the applicable regulations and the following factors:

1. The current and future need for additional development of potash and associated compounds, consistent with sound conservation principles.

2. The prospective value of the land designated in the application for other minerals, such as magnesium, aluminum, oil and gas, whose production is essential in the public interest, and the ability of the applicant to develop and produce commercially potash and associated minerals in conformance with conservation and sound business practices, thus providing diversified development and production in the same area.

3. The decentralization of sources of production through the development of potash deposits in different areas.

4. The maintenance of competitive enterprise in the potash industry.

If by reason of one or more of these four factors, an application is considered to be in the public interest it may be granted.

Applications by lessees for additional lands may also receive favorable consideration where essential to continued operation of existing facilities.

I'm going to read that last statement again because I feel that it is important:

Applications by lessees for additional lands may also receive favorable consideration where essential to continued operation of existing facilities.

Gentlemen, we are ready now. At the time we would not have been financially able to prospect this area. We now can do it ourselves, and we don't have to go to any promoters or anyone else to drill it.

The CHAIRMAN. Have you made application?

Mr. HARROUN. Applications are in, yes sir; and I have here in my hand a printed form. We figured when we got that order it was really a matter of time until we could go ahead with this drilling, and we proceeded along these lines, to get ready to drill. Less than a month ago my attorney in Washington sent me this printed form. It is no secret, but it has not been sent out yet. It is headed "Decision," then it has a place for the applicant's name, a space for the serial number, a title "potash," and a subhead, which reads "application rejected." I am going to read it.

The Secretary of the Interior, by order No. 1829 of June 9, 1943, a copy of which is attached, vacated order No. 914 of April 5, 1935, which had suspended action on all applications for potash permits and leases, and stated that all such applications should thereafter be considered in the light of the act of February 7, 1927 (44 Stat. 1057, 30 U. S. C. sec. 281), the applicable regulations and the factors set out in order No. 1829.

Pursuant to the provisions of order No. 1829, the above potash application has been considered. It does not contain a showing sufficient to permit its approval under the terms of the order or the regulations (43 CFR 194.7, 194.16, Circ. 1120, April 20, 1927, 52 L. D. 85, 88).

This application is hereby rejected, effective, without further notice, 30 days from receipt of this decision by the applicant if he shall fail to file prior to the expiration of such period a supplemental statement in support of the application. Such statement should contain a detailed showing in compliance with the current regulations as to his proposed methods of mining and conducting operations, the diligence with which such operations will be carried on, the amount of capital available therefor, and should include the essential information required by order No. 1829. The applicant should also indicate whether he has available the necessary machinery and equipment for the production of potash, or if not, that he will be able to obtain such machinery and equipment taking into account, among other things, the necessity of obtaining War Production Board priorities. Should a supplemental showing be filed, the application will be considered in the light of all the relevant data.

We waited 2 years and 7 months to get a decision, and now we are given 30 days to prepare a short statement, and this is what they say the statement should be:

Such statement should contain a detailed showing in compliance with the current regulations as to his proposed methods of mining and conducting operations, the diligence with which such operations will be carried on, the amount of capital available therefor, and should include the essential information required by order No. 1829.

Now, that, on the face of it, might look fair. There are a number of men here who have been down there and seen those plants. Living next to them and knowing them intimately, I know about what they consist of, and I know there is not one of them built under a cost of less than \$5,000,000, and probably most of them are running close in the neighborhood of 10,000,000 by now. That is a surface plant, and the cost of sinking the shaft, and so forth.

Senator CHAVEZ. Is this refinery a part of the thing to be prepared within the 30 days?

Mr. HARROUN. I assume it would be, Senator.

This strikes me simply as a cold turkey. I can't conceive of anybody being able to qualify under this decision, except the present producing companies. They are the only ones that could.

Senator CHAVEZ. Doesn't the decision refer to the fact you should give full information as to your ability to produce? In other words, to get the permit to produce it does not refer to the construction?

Mr. HARROUN. Senator, it implies that—

The CHAIRMAN. It doesn't refer to treatments, does it?

Senator CHAVEZ. Ore production information is what they desire before they can pass on your application.

Mr. HARROUN. I'll read it again.

Such statement should contain a detailed showing in compliance with the current regulations as to his proposed methods of mining and conducting operations, the diligence with which such operations will be carried on, the amount of capital available therefor, and should include the essential information required by order No. 1829. The applicant should also indicate whether he has available the necessary machinery and equipment for the production of potash, or if not, that he will be able to obtain such machinery and equipment taking into account, among other things, the necessity of obtaining War Production Board priorities. Should a supplemental showing be filed, the application will be considered in the light of all the relevant data.

Senator CHAVEZ. That is a statement?

Mr. HARROUN. That is a statement. Now, ordinarily you have to find an ore body before you can make a detailed statement of just how you are going to mine and how you are going to conduct your operations. Until you have found an ore body, I don't know how you would detail a statement.

Senator CHAVEZ. Detail it by saying you intend to drive a shaft and find out.

Mr. HARROUN. You can do that; yes.

Senator CHAVEZ. Isn't that what they want?

Mr. HARROUN. I don't see why it is necessary to give a detailed statement that we are conducting a mining operation diligently. We'd be fools if we didn't. They want to know the amount of capital available. We have arranged through some sources to get capital if we find the ore. We would not care to disclose those sources at the present time because quite a lapse of time will intervene between the time we get the permit and the time we discover ore. You have got to drill it, that's the only way we can find these bodies.

Senator CHAVEZ. Get back to the three companies here in New Mexico. How do they proceed? They have got a permit?

Mr. HARROUN. They proceed this way, they got a permit and then proceeded to drill.

Senator CHAVEZ. Before they got the permit they had to show the Department, I presume, that they had so much money available?

Mr. HARROUN. I suppose they did, to make some kind of a showing.

Senator CHAVEZ. That is what the Department requires now of you and your associates.

Mr. HARROUN. As I recall it, all they had to do was simply show they had the money to go ahead and drill it and explore under the requirements at that time. The requirements at that time simply were that you drill 500 feet which, of course, is enough to account for the bed—you drill 500 feet and you could hold a permit. It was similar on the oil-gas permit. After you drilled and made a discovery you applied for a lease, and that followed the set form.

Now, here they say:

The applicant should also indicate whether he has available the necessary machinery and equipment for the production of potash.

Now, to produce potash, you have to have sufficient machinery there to mine it, sink a shaft in the mine. For high-pressure equipment it takes a great deal of copper tubing, and that is hard to get right now. The Army is furloughing a batch of men back to the copper mines, and how in heaven's name we can go to the W. P. B. and ask for priority on that type of equipment when we haven't even discovered potash is beyond me.

The CHAIRMAN. Is the product as it comes from the earth known as potash, or is it potash after the treatment?

Mr. HARROUN. The word "potash" merely refers to K_2O , which does not exist. Potash is the term, Mr. Senator, and it refers to all classes of ores, refined ores, and I will say this right now, that no raw ores are being shipped; the salts are the highest grade ores, which used to be shipped directly without being refined. They were not very competitive.

Senator CHAVEZ. Well now, to get down to the Senator's question. Is the term "potash" used in reference to the mineral that is produced, or what the results of the processing are at the refining plant?

Mr. HARROUN. It is a loose term. I wouldn't attempt to answer that question. I will say this ore that they mine and ship, used to mine and ship directly, was called by the trade "manure salts"; the fine potash that is sold, is sold on the basis of the K_2O content, is called "refined potash" in the trade journals. Does that answer the question?

The CHAIRMAN. Well, it does and it doesn't. I wanted to know how that regulation addressed itself to the product as it comes from the earth. Then you would have to state what you had in the way of equipment to bring it from the earth.

Mr. HARROUN. That's right.

The CHAIRMAN. If it is not potash when it comes from the earth, but must be refined or treated, and its production depends on the refinement or treatment, then you would have to state what equipment you had for the refining of it. So, if it is potash when it comes from the earth, that is one thing; if it is not potash until it is treated, that is another.

Mr. HARROUN. As used locally, the term "potash" is generally considered to be the fine product as it is shipped. That is, they speak of so many carloads of potash in shipping. That is the way it is termed.

The CHAIRMAN. However, you locate for potash and you apply for potash.

Mr. HARROUN. Yes.

The CHAIRMAN. It is the question of how the department means to deal with the subject. That is, the way you would make answer to that question propounded there and make a statement to cover it, would depend on how the department regarded the term "potash."

Mr. HARROUN. Even if it regarded it as the ore in the ground, you would still have to show your equipment, and apparently from this order you have to show availability of your equipment. Now, you would have to have two shafts, one to get proper circulation of air, and, to compete with the present companies, you have to have one of those large shafts like they all, four compartment shafts.

The CHAIRMAN. Isn't it true that if you intended to go seriously into the mining of potash you have to have that type of equipment and facilities?

Mr. HARROUN. Yes, sir; it is the general procedure in exploration and development of those beds—that has been more or less as follows, and it is the procedure we will adopt: You start drilling operations to try and locate a commercial bed. When you find in the hole what appears to be a commercial bed, you continue drilling until you have blocked out enough ore to justify further development by shaft sinking, and sinking these two shafts, connecting them, and putting in your refining plant or your ore-dressing plant and milling it. Now you have to develop enough ore on that pay, or some part of it, as soon as you have enough ore blocked out to do that. Then you will immediately begin your sinking of the shaft; that can be done on very short notice. The first shaft, which is usually the smaller one, they get down to the ore and then they put in the large shaft.

The CHAIRMAN. Now I'm afraid I must ask you to get at your point. What is it that you want to present to this committee?

Mr. HARROUN. I want to present the committee this fact: That, as it appears to us, we cannot under any circumstances hope to go before the W. P. B. and ask for a priority for enough equipment to put any beds into production until we have the beds. Therefore, that apparently present blanket decision will drop all present applications out of the picture and leave available only the four companies who already have the equipment.

The CHAIRMAN. All right.

Mr. HARROUN. That's all there is to it.

The CHAIRMAN. Have you anything to say, Mr. Havell?

Mr. HAVELL. No, Senator; I think Mr. Harroun has made a fair statement concerning the histories of the applications, both of which have been rejected. However, he has not as yet filed a showing under the new regulation, and I can assure you that if you will file your application, with the showing required here, it will be given careful consideration, as will be many, many other applications. As to this form, it is only a form to avoid typing hundreds and hundreds of letters. It is filled out in connection with any particular case. It is of no special significance.

The CHAIRMAN. There is one comment I would like to make there. It would seem as though it did have some significance. That is, whether or not that circular letter is so couched as to be complied with only by certain existing concerns. In other words, do you mean there for him to state what equipment he has to treat the ore; put it into the form of potash? If so, of course, he hasn't anything, and couldn't get anything, probably, at this time, so he would be shut out there. If, on the other hand, it means facilities for removing the ore from the earth, that is another thing; he probably could or might be able to get that equipment.

Mr. HAVELL. Mr. Chairman, I am quite positive that it referred to the equipment to remove from the bowels of the earth that substance that under the Leasing Act is called potash, on which the royalties must be paid.

The CHAIRMAN. Well, that clarifies it to some extent.

Mr. HARROUN. Some extent; yes, sir. However, those shafts are large ones. We could go in and put in a makeshift job merely to hold the permit.

The CHAIRMAN. But right there I can see a very good reason why the Department would call for certain specific activities, and certain

specific equipment. The necessity for potash in this country is so great and possibly will continue to be so great, that to permit locations and only partial activity, enough on the locations to hold the territory in which the potash exists, is certainly not to be encouraged; and it would look as though the Department had sought to discourage that very thing. We have today, and I use this by way of a very rough illustration, in this country, various areas of public domain, so-called, held by placer or lode locations, many by the placer locations. We hear of them at these hearings every day. There is a great territory covered by placer locations that are simply held there from year to year, from period to period, and have been held there for years and years, and nothing has yet been done, nor has the Government been able to do anything to extricate it from that condition. Now, it would be exceedingly grave if any department would permit a condition of this kind to visit itself upon the deposits of potash that may be in this country, and I say, the Department should be commended to this extent, to see to it that the location is made in earnest, seriously, and with the purpose of extracting the ore from the earth for commercial use.

Now you can see where the justification is for some of these regulations.

MR. HARROUN. I quite agree with you on that. I don't think the Department, or anyone else, believes that we are not sincere in our effort. After 11 years, and about seven or eight trips to Washington, I think they will grant us that. The only thing in connection with the large shafts, and I quite agree with what Senator McCarran has said, and I think the Department is correct in protecting their land, because after all they are the landlords, and the producers are simply lessees; but at the present time it may be rather difficult, and I think you gentlemen of the Interior Department will agree with me, that it may be a little bit difficult to get priorities on cables and such things as that, until we have drilled and located an ore body. I can't conceive of the W. P. B. granting us priorities until we have something to talk about. Now, after all, my first job is to drill.

SENATOR CHAVEZ. How are you going to drill unless you get the equipment?

MR. HARROUN. I have arranged for that; to do the exploration.

If there are no other questions, I think that is all, sir.

THE CHAIRMAN. I just want to say this to you, though; to be frank with you, while I have gone through and listened, and I am very much interested, and I would like to be of assistance, you are really addressing your problem to the wrong committee. There is a committee of the Senate headed by Senator O'Mahoney, of Wyoming, that has to do with that very specific thing; and I think that your presentation should be made to that committee, rather than this committee. I merely say that to you because it distinguishes between the two committees and their functions.

MR. HARROUN. That is in Washington?

THE CHAIRMAN. Senator O'Mahoney has come out and held several hearings; I don't know whether he is coming out again, or what you propose to do. The reason I let you go on in detail was to make the record, and present it to Senator O'Mahoney. That is what I shall do, because I think that is where the jurisdiction lies.

Senator CHAVEZ. His committee has to do with exploration, mineral exploration, such as you have outlined.

Mr. HARROUN. Thank you, sir.

The CHAIRMAN. The committee will be in recess until 8:30 tonight. (Recess until 8:30 p. m.)

EVENING SESSION

The CHAIRMAN. It appears to the Chairman that we are on the last lap of these hearings. There are a few more here to be heard and we will try to cover the ground.

There were two parties who came here from Dona Ana County. I think what they want is to have a certain letter put into the record. Is that what you wanted, to have this letter inserted in the record? It will be inserted into the record. I am not at all certain that this committee has jurisdiction of the subject, but your letter will be inserted in the record.

Mr. JOHN SWIFT, Las Cruces, N. Mex. We want the letter put in, but I would like to make a statement.

(The letter and enclosure are as follows:)

SOUTHERN TENANT FARMERS UNION,
Memphis, Tenn., September 7, 1943.

Senator PAT McCARRAN,
Senate Land and Survey Committee,
Albuquerque, N. Mex.

DEAR SENATOR McCARRAN: I am sending this letter and the enclosed material by J. J. Olden and G. W. Holesome in whose behalf I wired you yesterday requesting that they be permitted to appear before your committee.

These men represent about 40 Negro farm families who settled in Dona Ana County in 1926 after taking up homesteads. We are interested in seeing that the lands these people now own are developed for farming purposes and further that additional land in the Jornada experimental range be opened for farming purposes.

We recently sent Mr. J. E. Clayton of Houston, Tex., out to Las Cruces to look into possibilities for some of our people here in the South being settled on some of this land in New Mexico. Mr. Clayton is principal of a State agricultural high school at Littig, Tex., and for several years was with the land development division of the Missouri Pacific Railway. During this time he succeeded in settling on lands owned by this railway company and others some 8,000 families. I am enclosing a copy of his report on the situation in Dona Ana County.

We will appreciate it if you will have this letter and his report included in the record of your hearing there.

Yours very truly,

H. L. MITCHELL, *General Secretary.*

EL PASO, TEX., August 26, 1943.

Mr. H. L. MITCHELL,
General Secretary, Southern Tenant Farmers Union, Memphis, Tenn.

DEAR MR. MITCHELL: I left Las Cruces, N. Mex., this morning and will leave here on the 10:30 train tonight and will get back to home in Houston at 6:30 Saturday evening.

I have been organizing among my people for over 25 years and I have never seen the like as the meetings we held at Las Cruces. We got the applications of every colored family in the town and country. All the farmers, school teachers, and preachers joined the union.

We have people here from Arkansas, Louisiana, Georgia, Alabama, Mississippi, Oklahoma, and Texas and many of them knew me several years ago.

Though I found these people ready for the union, they have some hard problems and need help. I want the union to get in touch with our good friends in Washington and see if we can't get some help for these people.

G. W. Holesome, one of the leaders of the colored farmers and president of our local, came from east Texas along with most of the others in 1926 to take up Government-owned land which they homesteaded. The Department of Interior and the Department of Agriculture opened the valley between the Organ and Dona Ana Mountains in Dona Ana County, N. Mex. to colored homesteaders. The valley between the two ranges of mountains west of Las Cruces was opened to white people at the same time. Both groups began settling in 1926. Times got hard several years afterwards and the whites sold their homesteads and left for the cities but the colored settlers stuck it out and when their 3 years was up the Government gave them a patent on their lands. Most of them got patents on 640 acres and other 320 acres. When these people got their titles to the land the few big cattlemen in Dona Ana County saw that these colored farmers would soon become independent and they could not longer lease this land from the Government for grazing cattle at a few cents an acre. The cattlemen then tried to drive those farmers out but they refused to be frightened off their property. Then the cattlemen put pressure on the local merchants and bankers and got them to deny these farmers any sort of credit. They then had the agricultural college and Department of Agriculture to declare this valley submarginal land. The local officials of the Farm Security Administration likewise refused to give them any help and would not make them loans. Some of the families had to leave their farms and go into Las Cruces to work but many of them like G. W. Holesome remained on the land. The cattlemen are now trying to buy their farms from them. These farmers hold on some way and make crops each year and even those in town manage to work a little of the land every year.

The Government Weather Bureau states that this is the driest year in the past 10 years but yesterday they carried me through all of this valley in a truck and I saw much better crops on this land than I have seen anywhere in east Texas or the hills of Arkansas and Alabama. Last year a man rented 80 acres from one of the settlers and raised a crop of hegira which brought him \$3,500 and he did not get to work it often as his tractors were busy on his large cotton farm in the Rio Grande Valley. He had only two rains on this crop. This year he has the same land rented and it's planted in pint beans and I have not seen a bean crop as good as his in any other State I have visited. A few years ago some of our men were able to get in a full crop and produced all the seed and food they needed. They made 1½ to 2 bales of cotton per acre. I saw alfalfa on this land yesterday knee-high and they get three to four cuttings each season. This land without fertilizer and irrigation will produce as much per acre as Arkansas and Mississippi delta lands. All these people need is some help from the Government and more settlers in to co-operate with them. The help they need in financing to drill enough wells to irrigate 10 to 20 acres each and they can clear thousands of dollars on small tracts and produce tons of food and feed crops.

The cattlemen of Dona Ana County have persuaded the Department of the Interior to close all of the land not yet homesteaded so the farmers can't get any more of it. The cattlemen will then have a chance to lease it all for a few cents an acre. Can't you get in touch with Secretary Ickes and urge him to investigate and have this land opened up to homesteading again?

The cattlemen are meeting in Albuquerque on September 8 and 9 and plan to get the Secretary of the Interior to let them have all that valley for grazing purposes. Our colored farmers have patents on 26,000 acres now and it would be a shame for the United States Government to oust them from their homes and turn their lands over to the cattlemen. All of these people have sons in Europe, Asia, Africa, and Australia fighting for our country. This valley is needed for our farm boys when they get back home.

If the Government will open up this land to homesteaders again the Union can put several hundred families who have sons or husbands in the armed services and have this rich valley ready for them when they get back from the war. Millions of dollars worth of food can be produced here in the meantime. President Roosevelt said the other day that he wanted to see the Dust Bowl put back into cultivation next year. This land is a thousand times better than the Dust Bowl. The part of the valley our people are now in is 8 miles long and 12 miles wide. The fine paved U. S. Highway 70 runs through the south

end of the colony. It is 8 miles to the line where the Government has reserved. I also went up there where the Government sign reads "United States Department of Agriculture Forest Reserve Jornada Experimental Range."

This body of land in the reserve extends 30 miles up the valley between the two mountain ranges and is 12 miles wide, rich, and level land. Our Union could put thousands of homesteaders in there if it could be opened up but right now we want to keep the part of the valley where our members have 26,000 acres homesteaded.

I am sending you some letters and a newspaper clipping about the Albuquerque meeting. Please see if you can get these people some help at once.

J. E. CLAYTON, *Houston, Tex.*

The CHAIRMAN. I want to tell you that I doubt very much if this committee has jurisdiction over this subject.

STATEMENT OF JOHN SWIFT, LAS CRUCES, N. MEX.

Mr. SWIFT. I have been residing in this State for 16 years. I come in this State, filed a homestead, northeast of Las Cruces, and during the time that we have been there, we have had some very perilous times of trying to stay on the homestead. We stayed on there all right up until we secured our patent. After we secured our patent, they came to buy us out.

The CHAIRMAN. Who tried to buy you out?

Mr. SWIFT. Mr. Berry and Mr. Cary and the resettlement habilitation, when they first began to set up, first come before us, and called a meeting, and said that the Government was trying to buy us out, and move us out of the land; said it was submargin land. After we met them at the Federal court, where Mr. Paul Krump—they were going to move us out, and buy our land out at 90 cents per acre—said the Government authorized them to secure the filing fee, their fees for the proving for it, would be \$4, deducted from our money, if they bought us out. That the money that the land was sold for, won't be turned over to each individual, but would be placed in the hands of an overseer. There would be an overseer appointed over us, for 20 men to each overseer; and if we needed a horse or a milk cow, we would have to go to an overseer, and ask him for a horse or cow; and he would take our money out of his pocket and buy our cow and bring it to us and tell us whatever he paid for it. What was left of the remainder he would put back in his pocket, and hold it until we needed something else. I told him at the time I didn't see any need for us to sell out, and going out into a set-up as that. Mr. Paul Krump asked—which is our register there. He said, "Is that the way you dealt with the white homesteaders?" They said, "No; but we are going to deal with these black people that way." Mr. Paul said to us, he said, "If you all accept that kind of a deal, why it would be all right, but if you don't want to accept it, you don't have to." We said, "We are not accepting that kind of a deal."

So we refused selling out and, after we refused selling out, they said our land was submargin, and we had been rejected from any help whatever of any set-up of the Government. We don't get any help; so Congressman Dempsey, when he was in operation in Washington—my wife taking it up with him and contacting him for help. He asked her, and told her, he said, "I can't answer your question, Mrs. Swift, until I hear from Mr. Wilkins," which is our county agent there, operating at the time. He contacted Mr. Wilkins, and got an answer from him,

and then he advised my wife what to do. He said to my wife, he said, "I have an answer from Mr. Wilkins, and I'll advise you what to do." He says, "You all sell out; go into the valley, where Mr. Wilkins would want you to go, and I am sure you will get all the help you want from the Government set-up. They will help you. I don't know your present circumstances on your homestead, but here is Mr. Wilkins' letter." That is the only letter we ever got back from Washington that was sent in to Washington, that they didn't wash our face with it. They would want the letter if we go to them for help. After I got the letter and seen what it was, I go to the chamber of commerce, and get a statement of commerce there that I have been putting stuff we raised on exhibit in the chamber of commerce, and he gave me a statement. I went to the Lone Star Feed Co., and they give us a letter and a statement of what was growing upon the ground; and also the Gin Co., he gave a statement of what had been grown in cotton we had grewed out there, and had grown a bale to the acre. I bundled them all up and sent them to Mr. Dempsey, when he was our Congressman; and also Mr. Wilkins said to Mr. Dempsey, "John Swift said if the Government comes back with a sell-out he won't sell out. We offered to pry those black people out, and they would not leave. What money is appropriated to help those people we are using in the northern part of the State, where it is better used. Let them folks come down in the valley and pick cotton for a living."

That was all done because we would not sell our home. They started for what they could do, try to buy our homes out; so we wouldn't sell.

We had a little school, and they closed this school, moved it into town. We had 12 students at the time, and had our bus hauling our children. I was handling the bus. In order to discontent, to make us leave from out there, they moved the children into town, consolidated the school; and then I would be at the bus hauling in transporting our children into town, which would come to \$156 a month. They readily seen that would be a help to us out there, drawing that money. By moving us into town they knocked us clean out of transporting our children into town to school, for a period of a year. Then they brought it back again, and then hired a white man to handle the bus and pick up our children and haul them into town.

I don't think it's fair that they should treat that way. I think we should handle our own children; but since that segregation cut us out of the school, they won't let us operate, and now the children come into these schools. Why should they move us from hauling our own children, and let a white man haul our children around? Why can't we haul our own children? If you are going to discriminate against any child being with you in your school then they had three or four white children, too. If those discriminations against any children were set in our schoolhouse it should be the same for my child to sit in that bus with your white child, should it?

That is your rulings and regulations. Those things are what we are trying to foot down there.

The CHAIRMAN. Who is doing this?

Mr. SWIFT. It seems to be the cattlemen. Pardon me just a minute. And it seemed to be a syndicate there, most, that works with the cattlemen; and also our State college, they seem to be working in cooperation with them. They say our land is submargin land, not

sufficient to live on, to make a living; and they cannot furnish us any help out there, for it will not secure anything. But I don't see why that land would be submargin land, or a person cannot make a living on it, when it will produce the stuff which I have before you here tonight.

Now, there is a white gentleman out there; last year he rented land from one of us colored people, steaded, a white man. He come out there, and he planted the colored boys to work it; and he worked this land, and on about 30 or 40 acres, or something like that, I think he sold about three or four thousand dollars worth of feed off this land. If this land is submargin land, which they tell us it won't produce nothing, why would it not produce for the black man as well as for the white man? It seems to me there is some officials in there who do no want this black man to own this land, see? Just a few days ago a white fellow wanted it. The people who homesteaded sold out, overheard two of them talking, "What made you sell out your homestead?" Well, he said, "The reason I sold out and left them out there," he said, "we are trying to get shut of them; and the harder we fought them, they stuck and stayed. I thought I would move out, and put all of my time to help moving, to try to move those niggers out of this country." The fellow said, "Now, if you can move them away from there we could settle our folks there, and we know it is fine land; it makes good stuff if we get a section, we do something with it."

The CHAIRMAN. You don't have to sell, do you?

Mr. SWIFT. No, sir.

The CHAIRMAN. What are you worried about?

Mr. SWIFT. We can't get help to handle our land, you see.

The CHAIRMAN. You're not the only ones in that trouble.

Mr. SWIFT. I have, in all, 1,500 acres of land. I filed on six forties, to take care of our land, and would have to move. Here is a bean we raised in 1941, a pinto bean that I raised on my place, and a white bean that I raised in 1941. Here is a black-eyed pea we raised in 1942. This squash, and those cucumbers and beans, are being raised out there this year. Now the State college, they have a record; been kept for a hundred years. Every 10 years there is a drought, from 7 to 10 years drought, that don't anything produce. This year is the tenth year, and this stuff is being produced out there this year.

The CHAIRMAN. Do you irrigate out there? Have you got any water?

Mr. SWIFT. Rainfall, we depend upon for our living. All this stuff is raised. Here you see it from the rainfall. We are farming there.

The CHAIRMAN. How many acres have you?

Mr. SWIFT. I have, in all 1,500 acres of land. I filed on six forties, and bought the rest; and there is others on from three twenties up to a section. There are about 26,000 acres of land in that body of homesteaders out there of my race of people, whom I am representing here tonight.

The CHAIRMAN. How many?

Mr. SWIFT. Twenty-six thousand.

The CHAIRMAN. How many colored folks?

Mr. SWIFT. Somewhere around thirty-six or forty families of us; something like that, I think.

The CHAIRMAN. Do you have any livestock?

Mr. SWIFT. Milk cows, a few horses, hogs and chickens, and such as that.

The CHAIRMAN. You are making a living over there?

Mr. SWIFT. We don't exactly make a living there. We have to go out and work by the day; but if we were so we could stay at home, and put our time at home, we would be able to make our living, and just raise food and be able to put into the Government, to help this war and trouble which is going on. We have boys into this war, as well as others. We feel it would be our duty, if we raised food and stuff, to help secure this war; and if we have something to do with, such as beans and vegetables, we could raise it there without any trouble.

The CHAIRMAN. What is to prevent you from going on and raising it now?

Mr. SWIFT. Finances. We haven't the finances. Where you have to go out and work every day, you can't secure enough above to go home and make a crop and feed your family. That is our trouble; mostly day labor.

The CHAIRMAN. If you did not work on the outside, could you make a living on the land?

Mr. SWIFT. If we had finance we could stay there, as we ought to, the year through; and we could make plenty of money, and a good living on the homesteads and be able to pay our loans back.

The CHAIRMAN. Of course, the trouble with everybody, if they had the finances they would go all right.

Mr. SWIFT. Yes, sir.

Mr. LEE. Mr. Chairman, may I just offer, as information, that they have the R. A. C. C. loans now, that you don't need any security. You can go there, to your board at Las Cruces, and could secure loans up to \$1,500, which would be enough, I think, to make your crop on.

Mr. SWIFT. Without the I. C. C. loan?

Mr. LEE. The R. A. C. C.—Regional Agricultural Credit Corporation.

Mr. SWIFT. How long has that been established there?

Mr. LEE. Recently. I thought maybe you didn't know it. I thought that would help you.

Mr. SWIFT. I appreciate that. All the other loans we have been to, that have been set up there, were denied us. This year we went to the three A office there, where we understood that the Government get money to raise beans, and such things like that and pay to us for the war purpose, and we knew if we could raise that—we went to the fellow, I went, and he said to me, he says, "Well," he says, "we ain't going to let you have a damn thing out there." And one of my committee, that went with me, said, "Well, if you can't help us we will have to take it up with the high authorities." He said, "You can take it up with whom you damned please; take it up to the high heavens, if you want to. We ain't going to let you have a damn thing out there."

Those impressions upon people who are supposed to be citizens, and who pays our taxes, as law-abiding men. I feel if you go and ask for loans, I don't believe a man should be spoke to like that, especially where you are not going in and insulting and speaking to people that way. I think he should speak to us as nice as we speak

to him. I take it for granted, when a man speaks, if I go and speak to a man rough, he has the same privilege to speak rough back to me, because I spoke to him just as I want him to speak to me. We were taking it nice with him. Well, we went ahead and tried to raise some stuff, and come to find out later, one of my neighbors has a few peas out planted, and now he begin to inquire from him, "Are you going to make any beans out there this year, and around how many are you going to have?" If he had helped us, we could have had possibly a thousand tons of beans, which would have been a help to the country today. But we just haven't got but a few, so we are here before you today to see if there would be any way, whether we could thrash out any way that might help us. Since this gentleman has told us about this man, we will go back and try to look into this.

We have lots of land, and we would like to settle other people in there on that land, who are needing homes from back in the other States where they have been flooded and washed out. Our race of people would like to come there. We are willing to cut our land up, and divide it up and put those people on the land so they can help themselves. As a race of people we don't feel that we want to look to another man to support us. We feel that we are able to work, and if we can get aid to go along we can support ourselves and help others. We don't believe in going out begging for our living.

One reason we went out there and suffered as we did on that land, we felt that the Government, when it opened up that land for entry, or stock raising and forage crops, we felt he knowed what he was doing when he did so, knowed that land would make that, or else he wouldn't have stated it to the people: would grow those things, and that you could file on it. We feel today that the Government in Washington, D. C., still knows that ground would produce that stuff, rather than others coming to us and telling us that it will not do it. We feel that our Senator in Washington, D. C., knows that ground will produce what they say it will produce. We have no other source to go to, but to our Congressman and our Governor for help. I thank you. I don't want to take up any more of your time.

The CHAIRMAN. Are there any old established ranches, or farms, in that community that have tried out this dry-farming business there?

Mr. SWIFT. No; there isn't any old farms there; only from 1926, when we began to file in there. But we learned since we went in there, the early days—

The CHAIRMAN. Were you the first to try dry farming in there?

Mr. SWIFT. Some in there ahead of us. I went in in 1928, and some went in in 1926. Since we went there we found out there was people that tried farming there in the early days of the cattlemen. They went in there and tried it out.

The CHAIRMAN. Did they make a go of it?

Mr. SWIFT. They made a go of it, and then abolished that, I understand they say, "We better abolish this, and stop. If we don't, the Government will open that land entry and people will come in here and file it and take it and then deprive us of this range." I understood, from old-timers, we were not the first ones, but we stuck. They says, "No credit should come to the black people who went there and produced stuff, where you said you couldn't. You all weren't the first to

raise stuff there. We raised it there years ago, and abolished it on this account—afraid it would be open for entry and deprive them of the land.”

The CHAIRMAN. Well, you take it up with the R. A. C. C., if they have established an office there, as I’ve just stated. You should be able to get assistance. I don’t know of any other way. I don’t know that you can be compelled to leave there. You stay there just as long as you can.

Mr. SWIFT. We’re going to do that. We have to work by the day, as we have been, but we’re going to try to stay right on, and do our best. We thank you all for the privilege of coming before you, and demonstrating our stuff before you, and anything you can do to help us, we certainly would appreciate it.

The CHAIRMAN. All right. A dry farmer, as a rule, has a pretty hard time in any country.

Mr. SWIFT. It’s pretty hard for him anywhere he goes. Now, it seems like the people have gotten to a place where we can’t trust the Saviour any longer to furnish us water and aid. He tells us to till the soil, and he will send the rain. It seems like we have gotten it in our heads that we can’t trust the Master. We have to appropriate the thing for ourselves, and put the water like we want it, before we will be able to produce. If we go back and trust Him a little bit closer, I believe we would be much better and more successful in our understanding, than we is.

The CHAIRMAN. That is right.

Mr. SWIFT. We have done disregarded our Heavenly Father. We don’t look to Him any more; we’re just taking things into our own hands.

The CHAIRMAN. It wouldn’t hurt any of us a bit to go back to Him.

Mr. SWIFT. I think that is the best thing for us to do; lay close to His bosom. Thank you very much.

The CHAIRMAN. All right.

There were some permittees on the Jemez National Forest who wish to be heard.

STATEMENT OF MAX EICHWALD, CUBA, N. MEX.

Mr. EICHWALD. My name is Max Eichwald from Cuba, N. Mex. and I am a farmer and cattle man.

The CHAIRMAN. What is your trouble?

Mr. EICHWALD. The problem that I have to bring before you is that we have a few people that have come from my town, up here, to discuss the manner of increasing our permits on this national forest, in order to make a better living. We all have permits, but we don’t have enough permits to take care of the stuff that we did every year.

The CHAIRMAN. What forest are you in?

Mr. EICHWALD. The Santa Fe National Forest.

The CHAIRMAN. How much of a permit have you?

Mr. EICHWALD. I have a permit for 6 head of cattle.

The CHAIRMAN. What else do you do besides raise cattle?

Mr. EICHWALD. I farm.

The CHAIRMAN. Have you got a dry farm, too?

Mr. EICHWALD. No; I irrigate.

The CHAIRMAN. What do you raise?

Mr. EICHWALD. Beans, corn, wheat, oats.

The CHAIRMAN. Well, now, how are the other permits on there? Are they large permits there?

Mr. EICHWALD. There are some large permits.

The CHAIRMAN. How large?

Mr. EICHWALD. Some up to a hundred head.

The CHAIRMAN. None over a hundred head that you know of?

Mr. EICHWALD. No; I don't.

The CHAIRMAN. About how many of you there use that forest, if you know?

Mr. EICHWALD. I don't exactly know.

The CHAIRMAN. Have you taken this up with the local forest office?

Mr. EICHWALD. We have tried, for years and years and with no success been able to get any permits. In my case, I have a good 4 permit, which was an exchange of permit for my own land, in exchange of their grazing land. I have over three 40-acres of land, and I haven't been able to acquire any better than 6 head of cattle for that small amount of land. There is a few of us here, that I know are in the same fix that I am in there. There are some that have 6 or 10 head of cattle, and some that have 5, and they've never been able to acquire an increase in their permits. We are required to have registered bulls on the national forest. They are all extremely high now. I know there is a good thing, and I wish I had a registered bull. But with 6 head of cattle I don't know if I could even raise one-fourth of the amount to buy one. I believe that we have been trying to make a living in that country and we have asked for permits, but we haven't been able to get any. We know that country, we have been through it, and we know that there is plenty of grazing land for the amount of cattle that there is in that region.

The CHAIRMAN. I think we had this matter up here about the first or second day, didn't we?

STATEMENT OF P. V. WOODHEAD, ASSISTANT REGIONAL FORESTER, ALBUQUERQUE, N. MEX.

Mr. WOODHEAD. Mr. Chairman, would you like to have me make a brief statement about the situation on the Jemez division?

The CHAIRMAN. Yes, please.

Mr. WOODHEAD. This gentleman has given you the high lights of the situation which typifies northern New Mexico. I don't know about his individual case, but there are a great many like it. I have on my desk right now a petition, signed by 110 people in the Cuba area, asking for increased permits. Most of those people are thinking about this Jemez division, the area this gentleman is talking about.

Now, on this area there are now 424 permittees, grazing 5,515 cattle and horses, an average of 13 per permit. There are 48 sheep permittees, grazing 19,107 sheep, or an average of 398 per permit. The largest permits on the unit for cattle are 2, with a total of 358. That would be about 175 apiece, 179 average for those 2 classes. Most of the permits are in the very small groups.

The CHAIRMAN. You made a study to see whether or not this carrying capacity is sufficient to increase the smaller ones?

Mr. WOODHEAD. Senator, we have given that area every special consideration, for a number of years. We realize that many of the stockmen will not agree with us when we say the area is fully stocked or overstocked; but as a result of 25 years, at least, experience on that particular area, and range surveys and range inspections and watching that vegetation, that is our considered judgment of the condition.

We wish that we could do something for these people, in the way of increasing their permits. There is no question but what they need them; and that is true of the whole northern New Mexico section, where we have 2,100 permits on the 2 national forests, the Santa Fe and the Carson. Each has the same sort of situation described here by other people talking about other types of land. I wish I could hold out encouragement for the gentleman, but there is nothing I can do, as I see it.

The CHAIRMAN. It is just a question of not enough land?

Mr. WOODHEAD. Too many people for the resources that are there. They desperately need additional sources of income, everybody realizes that, everybody in the whole country has been studying things, but nobody has come out with any real solution for the problem.

The CHAIRMAN. All right.

I wish I could say more to you. I am sorry.

Is there someone else to be heard?

STATEMENT OF EPIFANIO GUITIERREZ, LA JARA, N. MEX.

Mr. GUITIERREZ. Well, I don't speak very good English.

The CHAIRMAN. Well, you may speak slowly.

Mr. GUITIERREZ. In fact, I don't speak my own language, but whenever I am a blank maybe you can guess what I mean and fit it up.

The CHAIRMAN. All right.

Mr. GUITIERREZ. To be brief, I have two boys in the Army. One is married and has three children, so I am in charge of his stock—in fact, have his ranch while he is away. He has a permit in the forest for 170 head of sheep, and I have a permit of 441 head on the forest. I have been trying to increase for—I don't know how many years—and the result is that I had to have half of my herding down in the Grazing Service lands and in the Soil Conservation Service land and part in the forest. Now, with my sheep, I cannot afford—with that small number of sheep, I cannot afford to hire four herders and make a living.

I tried the Forest Service several times to let me go and take all these sheep in the forest for a shorter season. Then I could come out, in order to save expenses. The only one that I remember, and you can correct me if I am wrong, the only ones that I remember that I can do it.

The rest of the time I make my application for my full amount, and in return we get our answer that the application was approved for so much head and rejected for so much because there is no range available.

The CHAIRMAN. That is, from the forest? What do you do with the rest of them?

Mr. GUITIERREZ. These am outside on the Grazing Service land—Soil Conservation Service land.

The CHAIRMAN. How many?

Mr. GUITIERREZ. I have got at the present time 250 head—in fact, I left 270 head.

The CHAIRMAN. Outside?

Mr. GUITIERREZ. On the grazing and soil-conservation land; but you know that it is pretty hard to leave these, I should say, separate the same sheep and leave them down here, when you have to keep them all together the rest of the year, after you come out of the forest.

So, by leaving this bunch of sheep over here, of course, you leave some of the sheep that knows where to go to get their feed.

The CHAIRMAN. What is the permit your son has?

Mr. GUITIERREZ. One hundred and seventy head.

The CHAIRMAN. How many have you?

Mr. GUITIERREZ. Four hundred and forty-one.

The CHAIRMAN. In the forest?

Mr. GUITIERREZ. Making a total of 611 head.

Mr. WOODHEAD. Could I ask a question, Senator?

The CHAIRMAN. Yes.

Mr. WOODHEAD. You run your sheep and your son's sheep together up on the forest?

Mr. GUITIERREZ. Yes, sir; in the same allotment.

Mr. WOODHEAD. I have a few figures here on this case, and I would just like to check them with the gentleman to see if they are right. It is really not so pertinent to what he is talking about, but it does give a little of the history of the case, according to the record. If these are wrong, will you please correct me?

Mr. GUITIERREZ. Sure.

Mr. WOODHEAD. He was granted his first permit in 1915—28 head of goats—and that apparently ran along at that level, 28 head of goats, until 1923, when he changed over to sheep, 150. In 1925 a permit was issued for 200 sheep; in 1926 a permit for 200 sheep; in 1927 a permit for 200 sheep; and then, in 1928, you purchased 50 sheep from Mr. Aragon, and a permit renewed for 300. In other words, your old permit for 200 was increased by 50, plus 80 more—an increase there over the number you purchased. Then, in 1929, you had 330 again, and in 1930, 341, which is your present preference, which you stated.

Your son's preference is 170. Now, as I understand your problem, you have 200 more sheep which you have to handle down on some other land during the summertime.

Mr. GUITIERREZ. Yes.

The CHAIRMAN. Let me get this straight. You have 411 on the forest, altogether, your son and yourself?

Mr. GUITIERREZ. Six hundred and eleven.

The CHAIRMAN. Besides that you have 200 down?

Mr. GUITIERREZ. Two hundred and fifty down.

The CHAIRMAN. Besides that?

Mr. GUITIERREZ. Besides that; yes. Different herd, and what I'm trying to do is to find a solution, where to take these sheep in the forest.

The CHAIRMAN. All of the time?

Mr. GUITIERREZ. A shorter season, in order to save time and save expenses.

Mr. WOODHEAD. Senator, I don't know what we might be able to do about it, but I would be glad to agree to do this much, anyway.

This is your summer season, but it is about over now, so the problem won't face you——

Mr. GUITIERREZ. We have about a month, until the 15th of October.

Mr. WOODHEAD. I would be glad to meet with you this fall, with the ranger or the supervisors, at Cuba; is that your home?

Mr. GUITIERREZ. La Jara.

Mr. WOODHEAD. And talk it over with you a little bit, and see whether or not we could do what you want to have done, without saying now that it can or cannot be done.

Mr. GUITIERREZ. It's too late to do anything this year.

Mr. WOODHEAD. I mean, before next summer.

Mr. GUITIERREZ. But if you can do it next summer, yes; because at the present time I either have to trust that you, or trust that the Grazing Service, or the Soil Conservation land——

Mr. WOODHEAD. We'll possibly have to get together with the people on whose land you have this winter permit, and we might be able to work something out.

Mr. GUITIERREZ. The reason is this, because I have these sheep, as I stated, in two different bunches, one on the forest, and one on the outside——

Mr. WOODHEAD. I understand that, Mr. Gutierrez.

Mr. GUITIERREZ. It's pretty hard to get somebody to herd them right now. I have two men over there waiting for me tomorrow.

Mr. WOODHEAD. I understand that part of the problem.

Mr. GUTIERREZ. They have agreed to herd the sheep until tomorrow. I'll have to be there tomorrow, and I have two different bunches of sheep and, in order to save them from the coyotes, I either have to take these into the forest, or take the others into the forest and herd them over here. That is the reason I have to trespass the forest or the Grazing Service, or the Soil Conservation Service land. I may not have to do it very long down here, just for a few days; but I have to trespass the Soil Conservation Service land in taking them to my place.

Mr. RUTLEDGE. What is the size of your permit on the Federal range, the public domain, the Grazing Service?

Mr. GUITIERREZ. It is 500 head.

Mr. RUTLEDGE. For what period?

Mr. GUITIERREZ. Well, it cuts down, you see.

Mr. RUTLEDGE. From October?

Mr. GUITIERREZ. From October 15 to June 15.

Mr. RUTLEDGE. That is your permit?

Mr. GUITIERREZ. Yes.

Mr. RUTLEDGE. What is the boy's permit?

Mr. GUITIERREZ. It is the same; and then I have to leave the other ones here; why I have got to go over——

Mr. RUTLEDGE. In the winter, you are out on Soil Conservation and Grazing district land, and you put them together, do you?

Mr. GUITIERREZ. Yes; together.

Mr. RUTLEDGE. You don't have to have two herds there?

Mr. GUITIERREZ. No; that is what I am after, to find a solution to put these sheep together, in order to save them, and save their expenses.

Mr. WOODHEAD. May I ask Mr. Davenport a question? Is he talking about this adjustment right now or next summer?

Mr. DAVENPORT. He wants to put those 250 head of sheep up on the forest with the others, right now.

Mr. WOODHEAD. I thought he was talking about an adjustment for next summer's range use.

Mr. GUITIERREZ. I'm up against it right now. I don't know whether to go on the winter range now. That would make it very bad.

Mr. LEE. What distresses him is where to go. If he goes on the winter range now, there is nothing left for the man to do but put the sheep together on a forest, and be trespassed. Our wool growers' association has advised him to do it, and advised him that's the thing to do. Here he is; he has committed the great crime of starting with 20 head of goats in 1915; in 28 years he finally got up to 500 sheep; and he has 2 sons in this war, and he has to have 4 men to herd 500 head of sheep, because they won't give him a permit to go up there to protect himself for winter. It is unfair and unjust, and we feel it should be settled and settled immediately.

Mr. RUTLEDGE. Is our man on that district here?

Mr. GUITIERREZ. People say there are several permits that have been canceled around over there, even in my own allotment, and my neighbors' allotment.

The **CHAIRMAN.** Wait a minute; let me hear from the Grazing Service.

Mr. RUTLEDGE. I was thinking of this, Mr. Woodhead; they graze a certain amount of time on the forest. I wonder, if it is practical, could it be arranged that they graze a certain number of days, or A. U. M.'s on the forest, and then they can graze a certain number of A. U. M.'s off. Would it be possible there, if he could double up for a shorter time, and then come on to the winter range; or would that work?

Mr. LEE. That was discussed; that is what our board has permitted him to do, and he has asked to cut down the permit on the forest to make up for the difference in the number, and the Grazing Service is giving him permission to come on the winter range when he has to.

Mr. RUTLEDGE. Balance are A. U. M.'s.

Mr. LEE. Here we are at war, and the Government agency doesn't want to bend a rule the tiniest bit to help win it.

Mr. RUTLEDGE. I will authorize Mr. Salmon to work it out from our standpoint.

The **CHAIRMAN.** That settles that. Let's go on to the next one.

STATEMENT OF JESUS MARIA MONTOYA, CUBA, N. MEX.

Mr. MONTOYA. My name is Jesus Maria Montoya. I was here yesterday afternoon.

Well, I have a bunch, 80 head of cattle, that belongs to my boy, who is in the Army, and I and Leandro Montoya. We have permits, turned them down on them. He had 80 head of cattle permit, only have 70 head. They have been there. If I don't make a mistake, they have been there 28 years now. My boy in the Army, and I have to take care of the cattle, and I asked Mr. Joe Foreman; he has the permits that I have outside; and I need to keep myself and the sheep and I have to hire another man. I have to hire another man to take care of these 15 head of cattle outside, and I asked for these fellows maybe, I don't know for how many years, year after year, to make an application for 80 head of cattle to allow those

outside. They have never give me a permit; instead of giving me permit——

Mr. RUTLEDGE. Where are those 80 head?

Senator CHAVEZ. Where is the 80 head of cattle that belong to your boy in the Army; where are they now?

Mr. MONTOKA. One part is in the forest, 70 head, and the other part is outside.

Senator CHAVEZ. Ten head are outside. What do you call outside, Taylor grazing land?

Mr. MONTOKA. No; this is the Reid's ranch, outside. I have here rented about five sections. It belongs——

Senator CHAVEZ. He leases it from somebody else.

Mr. MONTOKA. Yes, sir; I have a neighbor that I have in there.

Senator CHAVEZ. Eighty head belong to your boy who is in the Army?

Mr. MONTOKA. Yes, sir.

Senator CHAVEZ. And you have a permit for 70 of those, and 10 more you have to lease for from private neighbors?

Mr. MONTOKA. That's right.

Senator CHAVEZ. What is the problem now? Do you want a permit for the 10 head?

Mr. MONTOKA. If they could; yes, sir.

Senator CHAVEZ. Where would you get the land, the Forest Service or the Taylor grazing, or what?

Mr. MONTOKA. I ain on the forest for the summer season, and I come out on Taylor grazing in the wintertime, and I have my own place there, keep the cattle and sheep in the wintertime.

Senator CHAVEZ. You have land for your sheep?

Mr. MONTOKA. Yes, sir.

Senator CHAVEZ. You are not worrying about the sheep?

Mr. MONTOKA. No; I don't worry about the sheep, because Mr. Bond here is helping us a little bit in the summer.

Senator CHAVEZ. Irrespective of who helps you, you have enough land for your sheep?

Mr. MONTOKA. No; I have to reduce.

Senator CHAVEZ. You have sufficient land to take care of them?

Mr. MONTOKA. But I have to stay in it.

Senator CHAVEZ. What about the 10 head of cattle you are asking to try to get a permit for. The 10 head of cattle?

Mr. MONTOKA. Yes; every year.

Senator CHAVEZ. Now, don't say about every year. Now, do you want 10; is that what you want now?

Mr. MONTOKA. Yes, sir—no; I want to get——

Senator CHAVEZ. What do you want?

Mr. MONTOKA. I want permit for 90 head in the forest.

Senator CHAVEZ. But he only has 80 head.

Mr. MONTOKA. Yes.

Senator CHAVEZ. What do you want 100 head for?

Mr. MONTOKA. They like—we keep the good bulls outside. Of course, they cost maybe \$250 or \$200. What are we going to do with their calves that is coming; the heifers that we have to raise there; sell the whole thing, and keep the bulls there? I could talk in Spanish if you want.

Mr. POOLER. Mr. Chairman, I don't even know the gentleman's name. Senator CHAVEZ. You don't listen to it, Mr. Pooler. His name is Jesus Maria Montoya.

Mr. SALMON. I know the case, as far as the Grazing Service is concerned, but the other part, I don't know.

Mr. RUTLEDGE. Tell us what he has on Grazing Service land and private land, and what time of the year.

Mr. SALMON. He has a permit with us for 70 head of cattle, I think, and 500 head of sheep.

Mr. MONTOKA. I have permits for 80.

Mr. SALMON. In that neighborhood, I don't recall the exact number.

Mr. RUTLEDGE. What period of the year?

Mr. SALMON. For the winter season.

Mr. LEECH. What months?

Mr. SALMON. I believe it commences in October.

Mr. MONTOKA. No; the last day of November, the cattle.

Mr. SALMON. And extends to something like May, I guess; the last of May?

Mr. RUTLEDGE. Yes; the first day of May. The Grazing Service takes care of all of the stock in the winter; is that right?

Mr. SALMON. His ownership—

Mr. RUTLEDGE. He has some private land. Just what is the point?

The CHAIRMAN. What is the point? That is what we want to get now.

Mr. SALMON. I think that the point is he would like to have as much carrying capacity on the forest as he has down on the public domain, so he could balance his operation, if I understand it right.

Mr. RUTLEDGE. How much would that be?

Mr. SALMON. I don't know what his forest permit is for.

Mr. WOODHEAD. He said 70. Your forest permit is for 70 head?

Mr. MONTOKA. Yes.

Mr. SALMON. If I understand it correctly, he would like to have permits for another 10 head.

Mr. LEECH. On that 500 sheep, does he have a forest permit for them?

Mr. MONTOKA. No, sir; I graze them out; Mr. Bond gives me a permit.

Mr. RUTLEDGE. What was that?

Mr. SALMON. He grazes the 500 head during the summer period on the San Diego grant, which is controlled, I think, by Mr. Bond.

Senator CHAVEZ. But he hasn't winter grazing for the 500 head of sheep and 80 head of cattle. You have 80 head of cattle on Taylor grazing?

Mr. MONTOKA. Yes.

Senator CHAVEZ. Then you have permits for 70 head in the Forest Service?

Mr. MONTOKA. In the summertime.

Senator CHAVEZ. You want a permit from the Forest Service for 10 head of cattle?

Mr. MONTOKA. More.

Senator CHAVEZ. Now "more"—you would like to have more? Well, all would, too.

Mr. MONTOKA. Ten more. That makes 80.

The CHAIRMAN. He wants 80 head both ways, is what he wants.

Senator CHAVEZ. Then you want 500 head of sheep outside of the San Diego grant?

Mr. MONTOKA. Yes.

Senator CHAVEZ. Which do you want, Taylor grazing or Forest Service?

Mr. MONTOKA. My place, they give me permit. I don't have permit, except in the wintertime, on the Taylor grazing.

The CHAIRMAN. He has no forest permit for his sheep at all?

Mr. MONTOKA. No, sir.

The CHAIRMAN. Do you have a Taylor grazing permit?

Mr. MONTOKA. Yes; for the summertime.

The CHAIRMAN. Where do you graze the sheep in the wintertime?

Mr. MONTOKA. Taylor grazing; summertime, my sheep is up on the San Diego ranch.

Mr. LEE. May I try to sum it up, so we can speed along? It is a question of where you have 2 departments controlling the range, in which we have many, many of them, and here is one case. He has a permit for 70 head on the forest, and 80 on his winter range, and where the two services do not balance to where a man can make an economical set-up. He is caught in between those; and what he is trying to protest is to get some way that the 2 permits will match each other, and he can move his 80 cattle both ways.

The CHAIRMAN. That is the cattle, but how about the sheep?

Mr. LEE. Private land in the San Diego Forest, where he runs them in the summer, and he has a winter permit down below, as I understood the problem. All he is trying to do is to balance it out.

The CHAIRMAN. Ten head of cattle is the question?

Mr. LEE. That is the point. However, he would like to raise up to a hundred. Of course, that is out, there is no room for any increase on that forest, I think even the Forest Service will admit that.

Mr. KNEIPP. Mr. Chairman, some of these cases are given a very definite tinge of bureaucracy, especially by some of the speakers, but this thought occurs to me: This gentleman is talking about a range that is now used by 424 permittees, who graze 5,515 cattle and horses, or an average of 13 apiece. This gentleman has a permit for 70, which is a little more than 5 times the average. He wants a permit for 80, which means an increase of 10. One question is this, Should he get that increase, as against some of the other 424 permittees who have only 6 or 7, like this man who spoke here a little while ago?

Senator CHAVEZ. Shouldn't you also consider the fact that these 10 head belong to a soldier who is out of the country, and what is going to happen to that soldier's property if he doesn't get the permit?

Mr. KNEIPP. I had assumed possibly many of these other permits belonged to soldiers, or the fathers or wives of soldiers. I'm trying to arbitrate between a group of people in dire need, to apportion between them a resource which is wholly inadequate to their needs, in the fairest possible way. That is not bureaucracy.

Mr. LEE. Doctor, I think you missed the point. He is not asking to get more cattle than his neighbors, or an increase to damage any of his neighbors. He is trying to work out an economic unit where he can go from one place to another with these 80 head which he has a permit for. He could solve the question very easily by cutting his Taylor

down 10, and then he would have an economic unit to go back and forth, but he would be down 10 head. Naturally, any man wants to try to keep the total up to where it is, and he's not arguing to get in and bother any of those people. All his relatives belong to the same—

Mr. KNEIPP. Well, to accomplish that object, he wants to put 10 more cattle on a heavily stocked range, upon which there is a large unsatisfied demand from other people at the present time.

Mr. LEE. That is the truth, he is trying to make himself an economic unit.

Mr. MONTOKA. Where I keep my cattle, nobody is in there except my own property. I have been there for 28 years.

Senator CHAVEZ. You mean in the forest?

Mr. MONTOKA. Yes; it is a place nobody can ride in there except a man who knows the country. I don't think that the rangers go into that country, or anybody very good except myself.

Senator CHAVEZ. Anyone who knows that range from the Forest Service, in that area?

Mr. WOODHEAD. I know it in a general way, Senator.

Senator CHAVEZ. He says he goes in there where very few people go in.

Mr. MONTOKA. The rangers know that country just by the files. When I go to gather my 70 head of cattle, I can, I know where to go. I can keep them, and ask these people sometime to brand my calves to give me a place, some other place where I can gather them. I could show them how many cattle I have; they never give me a chance to do it.

Mr. WOODHEAD. I think I made this statement before you came in; on my desk right now I have a petition signed by 101 people from Cuba. I haven't checked it. I don't know how many of them have permits, or if any of them have permits; but they all want larger permits or a permit. This case could be multiplied, up in that country, as you know, many times.

Now, we have studied that range situation up there as carefully as we know how for a good many years. In our judgment, we have all the livestock on there that we can carry. We realize some of the other stockmen over here won't agree with us. We have heard them for 3 days, but we know distinctly how much a range will carry.

Senator CHAVEZ. Of course, the Forest Service is all knowing, and must know it all, and must carry out their way, irrespective of what somebody else might say.

Mr. WOODHEAD. I don't think so, exactly, Senator. I have ridden this range.

Senator CHAVEZ. Have you been on the place and encountered a single cow? But you can sit at Albuquerque, or Santa Fe, or elsewhere, and tell him how many head of cattle he can graze.

Mr. WOODHEAD. No, sir; the supervisor and the local ranger handle those permits.

Senator CHAVEZ. You are driving the country to perdition and resentment.

Mr. RUTLEDGE. Mr. Senator, I still have another suggestion. I understand that the land outside that he grazes on is, to a very small extent, Grazing Service land. He runs mostly on the private land,

and the Grazing Service has a few little forties, or sections in there. Is that right?

Mr. MONTONA. I expect that I can keep that more cattle all right on that range.

Mr. RUTLEDGE. I don't mean that. I was just explaining the situation. Maybe I am speaking out of turn, because the interests of the Grazing Service are small. We only have a small amount of range, and it is an off and on with his range that he leases; but, again, would it be possible to put the 80 head on there for a little shorter time, and bring them off?

Mr. WOODHEAD. I don't know whether it is a community allotment, or what the situation is there.

Mr. RUTLEDGE. We are willing to balance animal units in——

Senator CHAVEZ. You arbitrarily say he can't put one more cow in there.

Mr. WOODHEAD. I didn't say. I said I couldn't sit here and make the decision.

Mr. RUTLEDGE. Do you know this case also, Mr. Lee?

Mr. LEE. Yes, I know the case very well.

Mr. RUTLEDGE. Is the statement right, that I was making to Mr. Salmon? I am not sure I got it all. The Grazing Service; land outside upon which he runs is largely patented land. We have a few forties or sections in it.

Mr. LEE. He has a full permit for what he needs.

Mr. RUTLEDGE. Now, I don't want to speak out of turn, but he could run 10 days shorter on the forest, with the whole bunch; 10 days' shorter season on the forest with the 80 head; maybe we could take care of them the rest of the time.

Mr. LEE. Yes; I think he could do it; bend the rules to meet the conditions in these kinds of times, yes.

The CHAIRMAN. I understood that the Forest and Grazing Service will try to get together on this, if it is possible. This is not binding to anybody; but if it is possible, the committee will appreciate it.

Mr. MONTONA. Thank you.

STATEMENT OF J. VALENTIN SWAZO, ABIQUI, RIO ARIBO COUNTY, N. MEX

The CHAIRMAN. Will you come forward and state your name, so the others will know it?

Mr. SWAZO. Valentin Swazo.

The CHAIRMAN. Where do you live?

Mr. SWAZO. Abiqui, N. Mex.

The CHAIRMAN. What is your business?

Mr. SWAZO. Farmer and cattleman.

It being that I cannot speak the English language, I am going to discuss myself, and I am going to forget for a while the high rank of the officials of Senator Chavez in which he has been promoted by the people of New Mexico, and ask him to be my interpreter. I want to make the brief remarks I will make in Spanish.

Senator CHAVEZ. Go ahead.

Mr. SWAZO (as interpreted by Senator Chavez). I come from a section of Rio Arribo County, representing an association of 120 members of cattlemen.

We have approximately 100,000 acres of land within land grants. We have some 840 head of cattle that we herd or graze within that range. We have different units of fence lines within the area, and we have sufficient land there to take care of our herds. This is due to the cooperation we have been getting from the Department of Agriculture, or the officers there, and we feel that we can go ahead with such cooperation.

The president of this committee wishes that my colleagues, or partners, would come, but they suggested that I speak for them. I have heard many complaints here this afternoon. I know that the committee has worked hard and is tired, the Senators, and would not desire to tire them further, but I'm going to refer to a few things I have heard this afternoon.

With reference to the increase of animal units, with reference to the permits, I wish to say that this organization of ours do not have such difficulties. The officers of the Farm Security and the Soil Conservation Service cooperate with us right along, and due to that we have no difficulties whatsoever. We appreciate and are very grateful for same. The people who surround the land grants in question have the opportunity of asking for permits, and they do get those permits when there is an opportunity to so get them, and we are very much satisfied.

Thank you for your attention.

STATEMENT OF BUD RICE, BUDVILLE, CUBERO, N. MEX.

MR. RICE. My name is Bud Rice, Cubero, N. Mex.; I am a stock raiser.

Senator CHAVEZ. You speak for yourself and other people?

MR. RICE. Some of my neighbors. I myself have a few head of stock of cattle that I run, together with Joe Sanchez. We both own deeded land, what is known as the Rinconado district, west of San Fidel.

It is my understanding that Mr. Sanchez, back in 1924, had a permit on the forest, which he used until it was revoked in 1932, I believe it was. The excuse given at that time was that the cattle he had were not his own, they were a share proposition with Mr. Mirabal. Mr. Silvestre Mirabel is well known in this State; the majority of the small operators know him. The majority of them still do operate a share proposition. It was called to our attention yesterday, this proposition is worked out through the Bond interest, in reverse to what it used to be. Mr. Sanchez now owns his own cattle, the same as I do, and me and he has tried repeatedly to get back a permit, of some size or other, and has been refused. On our side of Mt. Taylor there is, I understand, the three permits at present in use, Mr. Duran, Mr. Chavez, and Mr. Chavez' son-in-law, which is all one. It seems to me to be an injustice that this man Sanchez, who, when he took out his permit in 1924, was given to understand that if he was to put improvements along on this forest land, he would be allowed to stay there. Now, he built 6 miles of fence, which is still there, and some other improvements which, of course, he lost at the time his permit was revoked. It seems as though there should be some way for a man that has lived there, as he has, for over 20 years, on his own property, and now has a few head of stock of his own, that he should be allowed a permit for part of that

stock, at least, on the forest for the summer. We are able to take care of our stock, on our lower deeded land, through the winter, by keeping them off in the summer. But we are forced to go out and rent land from men who have large tracts of Taylor grazing allotment and have pooled their allotments and blocked out, used their allotments themselves and leased out their privately owned lands to us, per head—they will not lease it out per section—so we will be protected from year to year. We are forced to go some years to one place and some years to another. Instead of that, we have to depend on our good luck from year to year. We are forced to use range along with their sheep, and we have no protection at all.

Senator CHAVEZ. Let's get that straight. Do you mean to tell the committee that some of these people have Taylor grazing land and Forest land and land of their own?

Mr. RICE. Yes, sir.

Senator CHAVEZ. They graze their sheep and stock within the lands that they lease from the Government, and rent out their private property?

Mr. RICE. That is exactly the point I wish to bring out.

Senator CHAVEZ. Is that an isolated case, or is it a general practice?

Mr. RICE. It seems to be the general practice in that district. How it is over the rest of the State I could not say, Senator.

Senator CHAVEZ. They use private property as commensurate, in order to be able to get Taylor grazing land?

Mr. RICE. That is right. I understand, due to their own private holdings that they allotted Taylor grazing permits.

Senator CHAVEZ. They graze their own stock within the Taylor grazing permits, and rent out their private property?

Mr. RICE. Right. That is what I want to bring to your attention. Why shouldn't the smaller men be allowed those permits, or a small percentage of them, so that we could benefit directly, instead of paying higher rent? It doesn't seem to be quite fair.

Now, there came up, during the last few months, a situation there where my father had a homestead, a few years ago, on the Seboyeta, where this land around there was thrown open to homestead entry. That was filed on, and this certain tract I am speaking of, the homestead entry was revoked here about the end of last year. My mother received notice that her claim had been disallowed, and then I in turn applied for that small tract of land, because we owned railroad land adjoining it, upon which we have a spring. That has run as far back as anyone can remember. I came to the office and talked about it, and some of the gentlemen there stopped by to speak to me, and said it looked to them like Mr. Durand should have it, because he had a well. It doesn't seem to me that a well, even man-made and operated by a windmill, entitles a man to more land than a man who owns land with a spring on it that has run. That is a question I don't see their side of. If they don't pump that water, they don't have the water on the land. We own the spring, that has run forever. The amount of land isn't large; it isn't a matter that it would help them any, but it would help the little fellow an awful lot.

Mr. LEECH. Mr. Salmon, what can you tell us about this case?

Mr. SALMON. There is a tract of land in the town of San Fidel, right in the town; it comprises maybe three quarters of a section.

Mr. LEECH. The tract owned by Mr. Rice?

Mr. SALMON. No; the Federal land we have in this area. The rest of it is all patented.

Mr. LEE. It comprises 200 acres; doesn't it?

Mr. SALMON. I can't say what the acreage is; it's a very small tract of land, and we have had, I expect, 15 applications for this land by applicants, citizens of this town, who have applied. I don't think to date the advisory board has acted on this case. I was at our last meeting, and I don't think anyone has notices of the action taken by the advisory board. I know that I have not dictated them, and I don't suppose they have gone out of the office yet. I think that the advisory board's recommendation was, finally, that the people of this community be allowed free use license on this tract of land, for the carrying capacity of the piece of land. I don't think Mr. Rice lives within the area, so I believe, under the Federal Range Code, he would be disqualified for free-use licenses. He doesn't live within several miles of the place.

Mr. RUTLEDGE. These people in this little town used it for milk cows, saddle horses, and work horses?

Mr. SALMON. That's right.

Mr. RUTLEDGE. Is that all of the case, or is there something else?

Senator CHAVEZ. Do you know anything else about the Sanchez case, Mr. Salmon?

Mr. SALMON. Yes, sir; I think I do. At one time this entire outfit was what is known as the Mirabal estate, and it was finally divided amongst the heirs of this estate in Candelaria. That thing he refers to was the allotment adjacent to this area. I think Mr. Sanchez was at one time the foreman on this ranch, for Mr. Mirabal. It seems they had some kind of an agreement amongst themselves—I don't think in writing, I think it was a verbal agreement—that Mr. Sanchez would control certain equities in these lands, maybe the stock, I won't say for sure, for his compensation for his labor or pay. I don't know the particulars, but after this was divided in Candelaria—anyway, the man is in Holbrook, Ariz.

Senator CHAVEZ. That is the son-in-law of Mirabal's?

Mr. SALMON. And I think last year he leased this property to someone, and then they had a grazing license on the area. That is the first time that we have had anything to do with Mr. Mirabal's estate since it has been divided.

Senator CHAVEZ. Is that the way you understand it?

Mr. RICE. That is the way it is. Mr. Sanchez owned some deeded land there, and I, too, have some deeded land there. We have some land leased, altogether composing little more than 8 sections, within 2 miles of the forest, in the Rinconado district. I have four and a half days of water there, on a 28-day "corrida," which I run into a dirt tank for watering purposes; and Mr. Sanchez has water on his property. We have the spring on this railroad purchase for water, when we use this as winter range; but our situation is that we need summer range. If it is possible to secure, as Mr. Salmon advises, a little piece of land, I am quite agreeable that it be allowed to the pueblo.

Senator CHAVEZ. You have discussed summer range with the Forest officials, you and Mr. Sanchez?

Mr. RICE. He has handled it, I haven't talked to them.

Senator CHAVEZ. Have you been turned down?

Mr. RICE. According to what Mr. Salmon says, it has been awaiting the settlement of the estate.

Senator CHAVEZ. As I understand, Mr. Salmon represents the Taylor Grazing Service.

Mr. RICE. Yes.

Senator CHAVEZ. Have you discussed the matter of summer range with the Forest Service officials?

Mr. RICE. I haven't. Mr. Sanchez did; he has been trying to get his permit renewed for the past few years, due to the fact he owns his own stock now.

Senator CHAVEZ. Suppose you call him up here.

Mr. RUTLEDGE. How much land do you own or lease?

Mr. RICE. Altogether, a little over 8 sections owned and leased.

Mr. RUTLEDGE. How many has Mr. Sanchez?

Mr. RICE. That is the two of us together.

STATEMENT OF JOE SANCHEZ, CUBERO, N. MEX.

Mr. SANCHEZ. You know, Mr. Salmon, that I and Juanito Mirabal, our people, came to your office and asked about this land, and you told me to wait until the heirs will settle up. Mr. Salmon, he told me he will not advise me, so we can make arrangements, and he never done it until he make arrangements with Candelaria; yet I and our people came to his office again and discussed the matter again; and he told me this, he make me a date, so we settle it at the ranch. He went over there, and I showed him the property and water and everything, so they blocked me on 8 sections of land, and I don't think it is enough land for the year round, for the 150 head that I got. I have been running that place for 20 years, and I think that Mr. Floyd Lee knows about it.

Mr. LEE. I know the place; yes.

Senator CHAVEZ. That is Mr. Salmon; that is the Taylor Grazing man. It appears that is about to be solved, this application for summer range.

Mr. SANCHEZ. I used it to run the cattle on the forest, since 1924 to 1932.

Senator CHAVEZ. Under your permit?

Mr. SANCHEZ. Under my permit.

Senator CHAVEZ. It belonged to you, and not to Mr. Mirabal?

Mr. SANCHEZ. Not to Mr. Mirabal.

Senator CHAVEZ. Why did you lose it?

Mr. SANCHEZ. They told me if I make improvements on the forest, they would protect me on the forest.

Senator CHAVEZ. What did you do?

Mr. SANCHEZ. I made 6 miles of fence. When I got through of it, and I make a little house on the forest to look after the cattle in the summer; then they told me I can't use the forest because I had the cattle on shares. So they threw me out; so I had to go to Silvestre, about 60 miles from this place, to summer range.

Senator CHAVEZ. You had the cattle on shares prior to the time you were thrown out?

Mr. SANCHEZ. Yes.

Senator CHAVEZ. From 1924 to 1932; they knew, then, that you had them on shares?

Mr. SANCHEZ. Yes; I had the cattle on shares for 40 or 50 years; my dad did, and when he died I took the cattle. I think Mr. Floyd Lee would say that, too.

Mr. LEE. That is right; you and your family have had those cattle since before I was born.

Senator CHAVEZ. Can someone from the Forest Service tell us—

Mr. SANCHEZ. I want to see if they allow me on the forest again.

Senator CHAVEZ. Here is a man who has run a bunch of cattle there under the system that prevails in New Mexico and was thrown out all of a sudden.

Mr. WOODHEAD. I don't know that case.

Senator CHAVEZ. Now that he has the cattle, he still can't get the permit.

Mr. SANCHEZ. That is the Montana National Forest.

Mr. WOODHEAD. Ask him to whom he talked about this, and when.

Senator CHAVEZ. Have you applied lately to the Forest Service for that?

Mr. SANCHEZ. I went to Mr. Tucker, and he told me I can't go in the forest.

Mr. LEE. He is the forest ranger there, stationed at Grant.

Mr. POOLER. Are you familiar with this, Mr. Arthur?

Mr. O. FRED ARTHUR, supervisor, Cibola National Forest, Albuquerque, N. Mex. The condition there, stated by the first gentleman—free permittees in the forest, Mr. Durand, Chavez, and Tafoya; the range is stocked by those three permittees. I know nothing about Mr. Sanchez' case, of course, since, so far as I know now, he would be considered as a new applicant, along with other people in that vicinity.

The CHAIRMAN. But he has been running in there for years.

Mr. SANCHEZ. Mr. George Flake ran there at the time, in 1924.

Mr. LEE. George Flake, the ranger there? George Flake?

Mr. SANCHEZ. George Flake, the ranger. John Means told me that.

Mr. LEE. You were put out under Mr. Means?

Mr. SANCHEZ. Mr. Flake, first, in 1924, and then Mr. John Means.

Mr. LEE. Means canceled it?

Mr. SANCHEZ. Yes.

Senator CHAVEZ. After he had allowed you to range for how many years?

Mr. SANCHEZ. From 1924 to 1932; and I make improvements on the Forest; got 6 miles of fence on the south end of that forest.

Mr. ARTHUR. Not knowing what the records might show, I imagine the applications, over these years, showed ownership by Mr. Sanchez, and when it finally was disclosed that he didn't own them, under the policy that prevailed, the permittee must be the owner of the stock permitted.

The CHAIRMAN. He has answered that to the effect, as I caught it, that it was known all the time that he was running on shares.

Mr. ARTHUR. I doubt very much if it was known by the Forest officials, in the individual case, although we have all been familiar with the partido arrangement.

The CHAIRMAN. That seems to prevail quite constantly here, or did.
Mr. ARTHUR. As far as I am personally concerned, I know nothing about the case. I wasn't there at the time.

Senator CHAVEZ. If you go and make a new application, we will see what happens.

Mr. SANCHEZ. I went to Tucker, and he said he couldn't give it to me.

Senator CHAVEZ. Let them turn you down once more.

Mr. POOLER. Senator——

Mr. SANCHEZ. Yes, sir.

Mr. POOLER. In a good many of these cases, in most of these cases, probably all of them, you run up against just this, that if you put more stock on you either are going to spoil the grazing for everybody, or you are going to have to take somebody's stock off, to make room for the stock you put on. That is just an unpleasant, but realistic, way of looking at it. It comes right straight back to the same proposition, that the ranges are fully stocked, and that if you put on more stock, why, you are going to run down hill; and if you put on more stock and not hurt the range, you have got to take somebody else's stock off.

Mr. SANCHEZ. Somebody else is out already, 100 head of cattle. Mr. Floyd Lee took 100 head out of that forest. R. H. Wylie died 2 or 3 years ago; sold out that cattle——

Mr. LEE. Yes; those cattle are out of the Forest.

Mr. SANCHEZ. I used to run 200 head on that forest. The ranch used to run six or eight hundred head, and now about four or five hundred head are on that forest.

Mr. LEE. Mr. Adams, do you remember when his permit——

Mr. ADAMS. I remember when he had a permit, when I was supervisor there.

Mr. LEE. Do you remember who it was that was put in his place, when he was canceled out?

Mr. ADAMS. I just remember he was a permittee, when I was on the Forest, but what happened afterward, I'm sorry, but I don't know.

Mr. SANCHEZ. Just I and Durand, Wylie, and Chavez used to run in that forest before.

Senator CHAVEZ. Now, Durand is there, and Chavez is there, and Wylie has gone?

Mr. SANCHEZ. Only but 500 head in that side.

Mr. LEE. The whole south side of Mount Taylor?

Mr. SANCHEZ. They used to run about 1,000 head over there. I don't think it was overstocked.

Senator CHAVEZ. Still, you make the application.

Mr. RICE. I would like to say one more thing in regard to the bill presented here yesterday, proposing to set as a permanent figure the amount of the permits allotted. It looks to me like it is very shortsighted in one way, and farsighted in another.

The CHAIRMAN. What bill is that?

Mr. RICE. Making it unlawful to reduce the size of a permit, except reducing for range necessity, not to reduce it to allow smaller persons to enter. It looks farsighted in this respect; it is a foundation work upon which a cattle king can be built, through acquiring all of the cattle of the smaller man who is forced to sell out; and it is very nearsighted, I believe, in looking forward to the return of these boys who

have gone off to fight for us. When those boys come home, those few that do, will have a certain amount of money that has been put in bonds for them, through their families. Supposing now, a few wish to purchase a few head of cattle and settle down on little land they may happen to have, close to these different places where the permits allowed, and they need permits for 5 or 10 or 11 head? According to this bill, it would be impossible to accommodate them, and I wish to protest it on those grounds.

I thank you.

Mr. LEE. Mr. Chairman, to keep the records straight, you protested that land inside of San Fidel. Do you still want to protest?

Mr. RICE. It's all the same to me, as long as it is allowed to the public, and not to one individual who at present has monopolized one side of Mount Taylor. It is very satisfactory to me.

Mr. LEE. That is what we wanted.

STATEMENT OF JOE C. WARF, CARONA, N. MEX.

The CHAIRMAN. State your name and your place of residence.

Mr. WARF. My name is Joe C. Warf, Carona, N. Mex., Grazing District No. 6. I have a big property, mostly consisting of patented land; no State lease. The other gentlemen around me have acquired State leases, small ranches; neighbors applied for an allotment on Taylor land. One in particular that I know of, it took him 3 years to get it, lots of trouble, and running around. The other has asked for allotments in our district, that has not got an allotment. He never made an appeal, and only put in for allotments. I made an appeal; take me for an examination, and decision was against me. I appealed it to the Department of the Interior, and the decision is still against me.

I have a little better than 3,000 acres of patented land, I pay taxes on State leases, and I'm completely surrounded, a matter of 40 acres, 80, something like that.

The CHAIRMAN. How many livestock do you have?

Mr. WARF. I have around 47 head of 6 months' old calves, 26 or 7—

The CHAIRMAN. Is that all the livestock you run?

Mr. WARF. I have a couple of horses. I did have more, but I sold them down, on account of cutting down on the unit; building up the grass. I asked for an allotment, to protect my private holdings that I had. My intervener, Mr. Jenkins—it is not a question of too small, not enough land there, we have got plenty. I only asked for enough to block up my unit to where I could handle it economically, not trespass on anyone, use my land; and I offered, in this hearing before Mr. Williams at Roswell, we offered to do anything in the world to get my little holdings together. My base property is outside of the district, no fence from my patented land to the district. Then I have a section over in the district, and I asked him for a small allotment around there. It would give me a chance to go to that and run some sheep. This section runs two miles long, and directly east of me. The allotment is made to a neighbor rancher, strictly, so they give Mr. J. R. Jenkins an allotment on a small strip right where he is completely surrounded by my section of land, 60 or probably 160 yards down there, running on the east strip. I have a plat here that shows.

I have tried to trade out, deal out, so I am getting there. I haven't used this 640 acres; only a few sheep for a short while. It was laying

in a way that couldn't be herded. I didn't want to trespass on the Taylor grazing land; that is the law. One neighbor of mine down there, I understand, was up by the Federal Government, and fined \$100 for trespassing on the Taylor grazing land.

I appealed and I understand, and finally probably settled it some way. I don't know. I haven't heard.

I was refused an allotment. They claim conditions are, not sufficient permit water to service that immediate range. My intervener had wells. I never did contest him having his wells or his rights or anything in it, at all. I wanted him to have any rights, and I would like to have my little unit to where I could operate successfully, to make a living.

I got no relief when I appealed to the Department of Interior: carried it up to the further decision, and it was all against me, all the way up. I have the decisions and everything here. I tried to comply with the law.

I had another section of land; it is what we call Government land. Taylor grazing land, laying outside the district. I made application for it, or part of it, and I was turned down on the lease on it; so my intervener intervened for me to have any allotment on this, refused it to trade out any land, so I could use any land.

The CHAIRMAN. Any questions?

Mr. WARF. J. R. Jenkins, the man that intervened to keep me from getting it.

Mr. RUTLEDGE. He means his competitor.

Mr. WARF. They have it on this paper here, my intervener. Meantime, my neighbor for 3 years is getting allotments. His ranch is set up here. He has been established for a long time in water; and then they give this J. R. Jenkins this Taylor land, clear across this ranch over there. This boy had quite a time getting it allotted, and I never have had any allotment to me. I made my application, and I'm still making applications. I understand they have given J. R. Jenkins a 10-year allotment on this. I and another boy filed a protest with the board at district 6. We'll protest any 10-year allotment on this land, as long as our right was ignored; and, as far as a man establishing this Taylor land, why a man wouldn't be an innocent purchaser, when he sold this ranch and set up with these Taylor allotments on it, and 10 years.

I guess that will be about all.

The CHAIRMAN. Any questions?

Mr. LEECH. Mr. Chairman, this is a case from over in New Mexico grazing district No. 6. It was considered by the advisory board and the district grazier. An appeal was filed, through an examiner, a hearing had, and a decision rendered, and an appeal made to the Secretary of the Interior, and the examiner's decision was affirmed. It was a conflict between this gentleman and Mr. J. R. Jenkins, as I understand. The issue was a question of whether or not this man had water on his range to service it for a 12 months' period. I have Mr. Carl Welch, the district grazier, here and we would be glad to give you any of the details of this particular case, if you like.

The CHAIRMAN. It is an individual case, strictly so. It has been taken through all the courses afforded by law, and has gone to the Secretary of the Interior, you state, and it stands in that condition now. This committee is powerless. Our limitations are such that

we can't interfere with that judgment. I would like to do it, perhaps, if I knew the details and the facts. But I don't, and I haven't power, nor has the committee any power, even if we did know them. The only thing we can say to the Grazing Service is, use every means possible to see that justice and fair play and equity is worked out. Now, when we have said that, that is all we can say.

Mr. LEECH. We assure we will do that, Senator.

The CHAIRMAN. It is one of those cases where you have reached the end of the road, and this committee is powerless. I think nothing short of a congressional act would change the situation.

Mr. WARF. I would like to ask you if it wouldn't apply to others on the base, the same as it would apply to me?

The CHAIRMAN. I would say yes.

Mr. WARF. I know of other parties, practically in the same status, that got their allotment, by the simple reason, I guess, that the neighbors around them would not fight them; so this man fights and intervenes for me, to have a little acreage to divide up with.

The CHAIRMAN. You understand, that is a matter between two individuals, by one intervener against you. He doesn't intervene against someone else. I am powerless to say he shall or shall not intervene. He has a perfect right to, don't you see, and he has a right to pick those against whom he may intervene. He may intervene against one or a half a dozen others. It is impossible to say we could regulate that. That appears plain to you, doesn't it?

Mr. WARF. Yes, sir; that is the situation.

The CHAIRMAN. Well, I am very sorry.

Mr. WARF. Thank you.

The CHAIRMAN. There were some papers proposed for the record, from John M. Cooper, Navajo Indian Agency; sheep-dipping records, during the period when goats were killed.

Mr. STEWART. We have permission to put that in with the Investigator tomorrow morning, Mr. Chairman.

The CHAIRMAN. Very well. We have figures on the goat and sheep slaughter under the F. E. R. A.

Mr. STEWART. We would like to have the same permission for that.

The CHAIRMAN. Claude E. Wood, State land office, is to furnish us with a photostatic copy of a letter by Dr. Aberle protesting renewal of leases to ranchers.

Now, there were some letters to be produced by Mr. Brophy. He was to furnish two letters for the record.

Mr. WILLIAM BROPHY. I will have those in the hands of the investigator in the morning.

The CHAIRMAN. Very well. Thank you.

Now, ladies and gentlemen, we are about at the end of the road. In fact, we are there.

Mr. LEE. Mr. Chairman, we have finished the investigation, and I would like to say on behalf of the New Mexico Cattlemen's Association and Wool Growers' Association, we appreciate very much your bringing your committee to New Mexico, and we feel that the investigation here has brought to the attention not only of our people but also to you gentlemen in the Senate the problems we confront. I think it is only through such outstanding gentlemen as you are, and fearless, that we will be able to meet these problems and in the future be able to work out the land problem not only in New Mexico but the

West. We wish to thank you, and to say that we think that you are very fair. We hope that if we can ever be of assistance to you in the future on the problem we will be more than glad to do so. [Applause.]

Senator CHAVEZ. On behalf of the many constituents from the State of New Mexico that do not belong to any organized group but who have appeared before the committee and testified and told their own little tales of woe as they appeared to them, I want to thank you. I am sure they are satisfied with the way they were treated before the committee; not only the committee but by the different agencies of the Federal Government that have to do with the many problems of the citizenship of New Mexico. They will get cooperation and fair treatment.

The CHAIRMAN. In conclusion I deem it entirely proper to make some brief observations. Naturally I will not attempt to pass on contested matters here, which must eventually be reviewed by the full committee. It would be presumptuous on my part to assume the attitude of being the entire committee.

Nowhere in our investigations and hearings, conducted now over several years, has there been presented a labyrinth of intricate problems such as that which has been presented in the 3 days' hearings here. These questions involve human equations and human conditions that to solve will require tedious study and long-range planning. It is not a question of how many stock or livestock one individual or one group may have; it is a question, in most instances, of whether one or more have enough to sustain life. That has appealed to me all through these years. In most other hearings that we have conducted the numbers have been entirely larger than those presented here. If I may express it, the marvel is that human beings can sustain themselves on the numbers that they have disclosed in this record. Six animals on the open public domain, five animals on the open public domain, even a hundred cattle on the open public domain is, in most countries, not enough to sustain a family unit.

The involved map of the land patterns here are intricate beyond description. The overlapping of Federal agencies presents itself most emphatically here. The study is one of tremendous interest and extreme necessity for some careful solving of the problems.

There are groups here that are increasing in numbers; there are groups that are not particularly increasing; but as a whole, the population is increasing, the population of all classes. As the population increases, the problem increases. To say that this could be solved by any agency, in one fell swoop, would be to put it beyond human ability. But I am of the belief that, with some cooperation on the part of the Federal agencies in charge of administration, and with some cooperation on the part of the State of New Mexico, and with some cooperation on the part of those who are the larger users of the open public domain, the matter can be worked out. And worked out it should be. Not that anyone will ever grow rich out of it, but that humanity may have a chance, individually, to sustain itself, as the years go on. [Applause.]

We wish to express, at the conclusion of the hearings, our sincere gratitude to everyone who represents the departments here. We have had cooperation, a cordiality, and a fine spirit prevailing throughout all the hearings. We have had the Grazing Service, the Forest Service,

the Park Service, and all of these services, and the Land Office, and all of the other services, who have had their experts and their well-trained men attending these hearings; and we have called on them for assistance; and whenever we have called on them for advice, we had it. The Indian Service, likewise, and all departments, have come forward with advice and information.

I want to express my personal gratitude to Mr. Stewart for the candor, the frankness, with which he answered the questions that were propounded to him. I think it was commendable. In many instances he answered the questions in a way that brought reflection, perhaps, upon his own department; but he did it fearlessly, and he did it frankly, and it was a refreshing instance of a fine, upstanding individual who did not fear to take a little criticism if it was coming his way.

With that, and with our gratitude, we leave tomorrow morning, on the Chief, for Washington, to go back to the Congress. Again, we are all grateful to all who have attended this meeting here. It has been the best-attended meeting we have ever had, since this committee was created; and we like the interest you have taken. We like the interest that the community has taken in it; and especially we like the fair comments that have come of this hearing and about this hearing from the press of this city. They have been fair and frank and candid all the way through.

The meeting stands adjourned.

ADMINISTRATION AND USE OF PUBLIC LANDS

FRIDAY, NOVEMBER 19, 1943

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON
PUBLIC LANDS AND SURVEYS,
Salt Lake City, Utah.

The subcommittee met at 10 a. m. in the Rose Room of the Newhouse Hotel.

Present: Senator Pat McCarran (chairman), United States Senator from Nevada, and Senator Abe Murdock, from Utah.

Also present: E. S. Haskell, special investigator.

Thereupon the following proceedings were had:

Senator McCARRAN. This meeting will come to order. If there are those outside of the meeting room who want to attend, will somebody kindly announce that the meeting has been called? The reason for that is that time is exceedingly precious. We want to utilize every moment possible.

This meeting is called by the subcommittee of the Committee on Public Lands of the United States Senate under Resolution 241, Seventy-sixth Congress, and subsequent resolutions.

Resolution 241 authorizes and directs a subcommittee of the Committee on Public Lands and Surveys of the Senate to investigate matters pertaining to the acquisition, the withdrawal, and the administration of the open public domain.

There is a uniform rule in the Committee on Public Lands that whenever a hearing is held in a State having a member on this subcommittee the member who lives in the State, and who represents the State, shall be the presiding officer at the meeting.

Therefore, this meeting will be conducted under the guidance of our very able colleague, Senator Murdock, of Utah. I am now turning the meeting over to Senator Murdock to chairman the meeting during the course of these hearings.

I just want to say one thing further before I give up the gavel—it is a funny-looking gavel but it is all right. I must leave here this evening. I shall remain during the entire day to assist Senator Murdock, but it is just absolutely imperative that I depart for other places this evening. We will utilize every hour and every minute of the time. We hope that those who have remarks to make will address themselves specifically to the subject at hand, and we will proceed accordingly. Senator Murdock.

Senator MURDOCK. Mr. Chairman—

Senator McCARRAN. You are now the chairman.

Senator MURDOCK. In behalf of the people of Utah, and Utah's Governor, we want to express, first, our gratitude to you for coming

here and bringing your committee to listen to the problems and questions that may be presented here.

I want to say this, that there is no man in the Senate of the United States today who is more conversant and more sympathetic and more aggressive on western problems, whether they are livestock, mining, grazing, or whatnot, than the senior Senator from Nevada, the Honorable Pat McCarran. This makes the second hearing that he has held in Utah while I have been a member of his committee, and I know that coming here at this time is a real sacrifice on his part, but we are delighted, Senator McCarran, to have you here, and very grateful to you for coming.

Our question this morning, that is, the first question that we will consider, is the Executive order which resulted in the withdrawal of approximately 3,000,000 acres of the public domain in Grand and San Juan Counties. I think the great bulk of the land is in Grand County, but I am informed that part of it extends into San Juan County.

We called on the Grazing Service, and Mr. A. S. Brown, chairman of the Publicity and Industrial Commission of the State of Utah, to arrange our hearings for us; that is, to arrange the place of the hearing and the reporter and for witnesses. We take this opportunity, Mr. Brown and Mr. Leech, we thank you for the very splendid cooperation we have had from you.

I think Mr. Brown has prepared a list of witnesses who want to appear and to be heard on the question I have referred to. Mr. Brown is with us. We will ask you, Mr. Brown, to present the witnesses in the order that you think they should appear.

STATEMENT OF A. S. BROWN, CHAIRMAN, DEPARTMENT OF PUBLICITY AND INDUSTRIAL DEVELOPMENT, SALT LAKE CITY, UTAH

Mr. BROWN. Mr. Chairman, I furnished that list but I think perhaps it would be better as we go along for you to call the names as we proceed. It is designated on the list what their business is, so that there will be no trouble I think, but after I am through testifying myself I will be here ready to serve in any way that I can, in order to expedite the meeting.

Senator MURDOCK. Before you begin, Mr. Brown, may I say that cards will be passed among the audience here for the purpose of registering. We hope that everyone of you will put your name and address on one of these cards, so we will know who is here. Those who register will be provided with copies of the record after it is printed. (Those who registered are as follows:)

LIST OF PERSONS PRESENT AT SALT LAKE CITY, UTAH, HEARING, 1943

J. Pratt Allred, Fillmore, Utah.

Gus P. Backman, Salt Lake City, Utah.

Reed W. Bailey, 1061 Twenty-fifth Street, Ogen, Utah.

H. W. Balsley, Moab, Utah.

Burt B. Brewster, Mining and Contracting Review, Salt Lake City, Utah.

A. S. Brown, chairman, Department of Public and Industrial Development, 210 Dooly Building, Salt Lake City, Utah.

Ora Bundy, vice president, National Reclamation Association, Salt Lake City, Utah.

- Albert M. Buranek, Utah State Department of Publicity and Industrial Development, 210 Dooly Building, Salt Lake City, Utah.
- George M. Cannon, 623 Continental Bank Building (attorney for Howells Livestock, Inc.), Salt Lake City, Utah.
- Frederick P. Champ, Logan, Utah.
- H. T. Cheney, Utah Metal Mine Operators Association, 918 Kearns Building, Salt Lake City, Utah.
- Charles DeMoisy, grazing inspector, United States Forest Service, Ogden, Utah.
- J. D. Dillard, Box 215, Moab, Utah.
- E. J. Fjeldsted, secretary, Chamber of Commerce, Ogden, Utah.
- J. Whitney Floyd, extension forester, United States A. C., Logan, Utah.
- A. W. Gabbey, Square G Ranch, Jenny Lake, Jackson Hole, Wyo.
- Mrs. A. W. Gabbey, Square G Ranch, Jenny Lake, Jackson Hole, Wyo.
- C. A. Hauptman, United States Geological Survey, Salt Lake City, Utah.
- Thomas C. Havell, General Land Office, Washington, D. C.
- Knute Hill, superintendent, Uintah-Ouray Indian Agency, Fort Duchesne, Utah.
- William A. Hilton, Chief Counsel, Grazing Service, 401 Walker Bank, Salt Lake City, Utah.
- Charles T. Hohenthal, field examiner, Branch of Field Examination, General Land Office, 355 Federal Building, Salt Lake City, Utah.
- James A. Hooper, secretary, Utah Wool Growers Association, 408 Beneficial Life Building, Salt Lake City, Utah.
- Lee Kay, Utah State Fish and Game Department, State Capitol Building, Salt Lake City, Utah.
- Don E. Kenney, State board of agriculture, Salt Lake City, Utah.
- L. F. Kneipp, Assistant Chief (also representing Department of Agriculture), Forest Service, Washington, D. C.
- F. C. Koziol, forest supervisor, Wasatch National Forest, 465 Federal Building, Salt Lake City, Utah.
- F. G. Laskey, United States Geological Survey, Salt Lake City, Utah.
- J. H. Leech, Acting Director, Grazing Service, Department of the Interior, Salt Lake City, Utah.
- Ross Leonard, director, Utah Fish and Game Commission, Salt Lake City, Utah.
- Joseph F. Livingston, Craig, Colo.
- Tom Lyon, 818 Kearns Building, Salt Lake City, Utah.
- W. S. McCarthy, 1451 Arlington Drive, Salt Lake City, Utah.
- A. G. Mackenzie, manager, Utah Metal Mine Operators Association, Kearns Building, Salt Lake City, Utah.
- Spencer W. Madsen, 1659 East 3350 South, Salt Lake City, Utah.
- Frank G. Martinez, Richfield, Utah.
- R. N. McIntosh, Fillmore, Utah.
- Dalton Meeks, Moab, Utah.
- Mitchell Melich, attorney at law, Moab, Utah.
- L. C. Montgomery, Heber City, Utah.
- Charles F. Moore, regional grazier, Grazing Service, Salt Lake City, Utah.
- N. G. Morgan, Jr., 210 McIntyre Building, Salt Lake City, Utah.
- O. A. Olsen, Regional Forester, Ogden, Utah.
- Knox Patterson, attorney at law, Boston Building, Salt Lake City, Utah.
- John Q. Peterson, 1032 South Seventeenth East, Salt Lake City, Utah.
- Henry J. Plimhof, commissioner, department of publicity and industrial development, Salt Lake City, Utah.
- George W. Reid, 57 North Ninth West, chief warden, State fish and game commission, Salt Lake City, Utah.
- D. R. Seeley, Vernal, Utah.
- H. E. Seeley, Vernal, Utah.
- O. L. Severy, Bureau of Mines, Salt Lake City, Utah.
- David G. Smith, 1433 Richards Street, Salt Lake City, Utah.
- Tony Smith, 96 Virginia Street, Salt Lake City, Utah.
- Walter T. Smith, 1660 Harrison Avenue, Salt Lake City, Utah.
- Leon S. Stanley, civil engineer, 129 F Street, Salt Lake City, Utah.
- John Stewart, 925 South West Temple Street, Salt Lake City, Utah.
- Glen C. Stewart, president, West Millard Wildlife, Delta, Utah.
- Ell I. Taylor, Salt Lake City, Utah.
- George Thomas, University of Utah, Salt Lake City, Utah.
- Carl J. Trauerman, mining engineer (secretary-manager, Mining Association of Montana), Butte, Mont.
- B. L. Turpin, fish and game department, State Capitol Building, Salt Lake City, Utah.

H. A. Tyzack, Vernal, Utah.

N. F. Waddell, regional field examiner, General Land Office, Salt Lake City, Utah.

H. B. Waters, president, Telluride Power Co., 1309 Walker Bank Building, Salt Lake City, Utah.

Ralph R. Woolley, United States Geological Survey, Salt Lake City, Utah.

Senator MURDOCK. Mr. Brown, we will hear you now. You may proceed in your own way.

MR. BROWN. Mr. Chairman and ladies and gentlemen, I have in my hand here a copy of the General Land Office Public Land Order No. 130, which I later will introduce into the testimony here and will mark for identification purposes as "Exhibit B." This states:

Subject to valid existing rights, the public lands in the following-described areas are hereby temporarily withdrawn from settlement, locating, sale, and entry, and reserved for classification and for prospecting and development under the mineral-leasing laws:

The areas described, including both public and nonpublic lands, aggregate approximately 2,977,700 acres.

Ralph R. Woolley, United States Geological Survey, Salt Lake City, Utah.

Governor Maw was to have been here this morning. He is keenly interested in this matter and very much opposed to the land withdrawal; but he was called back to a meeting of the executive committee of the Governors' Conference in Chicago and was unable to be present; so he asked me to represent him.

I do not know exactly what he would have said, but I have in my hand here, and will introduce it, to be marked "Exhibit A" for purposes of identification, a resolution which was introduced by Governor Maw at the Governors' Conference of Western and Southern Governors at Denver, Colo., on September 17 and 18, 1943.

At that Governors' Conference there were 23 Governors present. This is the text of the resolution:

Whereas under date of May 28, 1943, the Secretary of the Interior executed Order No. 130 withdrawing approximately 3,000,000 acres of lands in Grand and San Juan Counties, Utah, from entry for mineral development and homesteading; and

Whereas said order was issued without the knowledge of the general public and without granting the opportunity of a hearing to the people of the immediate area, State and county officials primarily concerned. Now, therefore, be it

Resolved, That we are unalterably opposed to the practice of Federal agencies secretly withdrawing such lands by Executive order and believe that the interests of the people of the public-lands States can best be served only if such activity is immediately discontinued and that such withdrawals be properly effected only by an act of Congress which will provide for public hearing and debate where the rights of all parties concerned may be adequately considered; be it further

Resolved, That we are opposed to the extension of the leasing system as applied to mineral deposits as a means of circumventing the mining laws of the States; be it further

Resolved, That a copy of this resolution be sent to President Roosevelt.

MR. BROWN. For the sake of the record, I am introducing a copy of General Land Office Public Land Order 130, Utah. (See exhibit B, p 3521.)

This is the order which attempts to withdraw approximately 2,977,700 acres of Government land in Grand and San Juan Counties, Utah. The date of this order is May 26, 1943, but it was not filed until July 23, 1943, and published in the Federal Register, Saturday, July 24, 1943.

On July 30, 1943, immediately after I was advised of this order No. 130, I wired Senator Abe Murdock, of Utah, as follows:

Public Land Order No. 130, General Land Office, withdraws approximately 3,000,000 acres of lands in Grand County. Will appreciate it if you can find out why and advise.

Senator Murdock, soon after, advised that he had taken the matter up with the Department, and they had offered some sort of an explanation which was not at all satisfying to me. Consequently, on August 23, 1943, I wired Harold L. Ickes, Secretary of the Interior, as follows:

Would appreciate full explanation of Public Land Order No. 130 to General Land Office withdrawing approximately 3,000,000 acres of land in Grand and San Juan Counties, Utah. We are having numerous requests for information in regard to the cause of this order. Would appreciate prompt reply by wire.

On August 25, 1943, having had no answer to my wire to Secretary Ickes, I wired Fred Johnson, Commissioner of the General Land Office, Washington, D. C., as follows:

Our Department requested by Governor to make complete analysis of order issued by Secretary of the Interior known as Public Land Order No. 130, withdrawing nearly 3,000,000 acres of public lands in southern Utah for classification. We feel our people entitled to complete understanding as to causes and effects of this order. If made for purpose of protecting people of Utah and United States from having area monopolized for purpose of retarding development, there is no objection, but if this order will discourage development of the area by private enterprise or take for the Federal Government interests which naturally would reflect to advantage of State or communities close to this area, we naturally would protest. Feel that in interest of harmony and cooperation between State and Government we should be fully apprised of all purposes and conditions surrounding withdrawal so we may appraise effects from standpoint of State. Am sure full open complete frank statement would benefit both our State and Nation. I wired Secretary Ickes Monday but have not yet received reply. Please wire collect, followed by full letter of explanation and our people will appreciate it.

On August 27, 1943, I received the following wire from Fred Johnson:

A. S. BROWN,

*Chairman, State Department of Publicity and Industrial Development,
Salt Lake City, Utah.*

Retel 26 Public Land Order 130 protects development Utah's strategic war minerals against filing of nonmetalliferous mining locations. Withdrawal only temporary pending classification of lands and does not preclude mineral leasing operation. Letter follows.

JOHNSON, *Commissioner.*

When the letter mentioned in Johnson's wire did not reach me promptly, I again wired Commissioner Fred Johnson, of the General Land Office, on September 1, 1943, as follows:

Letter promised by your wire August 27 not received. There is a violent storm of protest brewing in Utah which might be stopped by full disclosure of facts and reasons for order 130. Please air mail letter and make it complete in every detail.

On September 7, 1943, I received two letters, one from Fred Johnson, Commissioner, General Land Office, and one from Oscar L. Chapman, Assistant Secretary of the Interior. These letters are dated, September 4, 1943, and both were sent by air mail, addressed to me. The opening paragraph in the letter from Fred W. Johnson says:

This is in reply to your telegram of September 1 requesting complete information concerning Public Land Order No. 130.

The first paragraph in the letter from Oscar L. Chapman says :

Secretary Ickes has asked me to reply to your telegram of August 23, 1943, requesting information concerning Public Land Order No. 130.

From that point on the letters are identical in their wording. One signed by Mr. Chapman and the other signed by Mr. Johnson.

This convinced me that there was a "nigger in the wood pile" somewhere, and that someone, higher up, was telling Mr. Johnson and Mr. Chapman just exactly what they could say and what information they could pass on to us. I am introducing these two letters into the record. They do not contain any specific information to tell anything definite or worthwhile about the meaning of the order. In fact, I gained the distinct impression that their main idea was to throw out a "smoke screen" and then get behind it. It was clearly evident that somebody in the Interior Department in Washington was framing up something, through order No. 130, which they did not wish to have the people of Utah know about. Consequently, every word that was sent out from that office was censored. (See exhibits C and D, pp. 3521-3522.)

I do not charge anybody with criminal conspiracy, but I do say that evidently, in the Interior Department, they do not think that the people of Utah know what is best for them in regard to the handling of the public lands within the confines of the State of Utah. They want to tell us just what is good and what is bad for us. Paternalism in government raised to the *n*th degree. It is just another of the many examples we have had of bureaucratic practices and tendencies, indicating that the members of these departments in Washington think they know more about the people's business than the people themselves, and they are going to run our affairs for us whether we like it or not. I approached this matter with them in a very conciliatory frame of mind, and offered to cooperate, if they would give us full information in regard to the intent and purpose of the order; but they treated me, a State officer, charged with developing the natural resources of the State, like I was a small boy who had to be told just what was good and what was bad; and I'll admit, I don't like to be treated that way. I think there should be cooperation between National and State Government, instead of having the National Government try to do all the thinking and dictating.

The most objectionable and humiliating feature of this whole affair is that busy men, cattlemen, sheepmen, mining men, men busy trying to do their part to win the war, have to stop their work and come in here to this hearing, in order to protect their highly essential business interests, and see to it that their own Government doesn't take away from them their ways and means of making a living.

None of us really knows what this is all about, and they won't tell us.

In our protests, we have to guess more or less what it means and what they are trying to do.

We are shooting with a shotgun when we ought to be shooting with a rifle.

I offer the following statement as my best guess as to the aims and effects of order No. 130.

MEMORANDUM IN RE: PUBLIC LAND ORDER No. 130

WITHDRAWAL ORDER

On April 24, 1943, by Executive Order 9337, the President undertook to make a blanket delegation to the Secretary of the Interior of authority to withdraw or reserve public lands, under the authorization vested in the President by the act of June 25, 1910. Acting under this attempted delegation of authority, the Secretary of the Interior, on May 26, 1943, by Public Land Order 130, "temporarily withdrew from settlement, location, sale, and entry, and reserved for classification and for prospecting and development under the mineral-leasing laws" an area of 2,977,700 acres in Grand, San Juan, Wayne, and Garfield Counties, Utah.

EFFECT OF THE WITHDRAWAL

Although the withdrawal order refers to a reservation "for prospecting and development under the mineral-leasing laws," no withdrawal was needed to make operative the mineral leasing laws in the withdrawn area. These lands before, as after the withdrawal, were subject to prospecting and development under the mineral-leasing laws.

The withdrawal under the Taylor Grazing Act, and the inclusion of this entire area within grazing districts, under this act, precluded the filing or allowance of any nonmineral entries without specific approval of the Interior Department.

Even under the withdrawal order, mining locations for metalliferous minerals may be made under the mining laws.

The practical effect of the withdrawal order was, thus, to prevent the location of mining claims for valuable nonmetalliferous minerals.

PURPOSE OF THE WITHDRAWAL

Both Assistant Secretary of the Interior, Oscar L. Chapman, and Commissioner of the General Land Office, Fred W. Johnson, have stated that the withdrawal "was issued as a measure of protection to the State and the Nation in order to assure the future development of strategic leasing minerals needed for successful prosecution of the war."

The Assistant Secretary and the Commissioner have each further stated:

"Had this order not been issued, opportunity to contribute important leasing minerals to the winning of the war from these public domain lands within the State might have been frustrated by the filing of locations for nonmetalliferous surface minerals of relatively little value compared to the strategic leasing minerals which are believed to occur at substantial depth.

"The withdrawal is designed to protect the interest of the State and the Nation in oil, gas, potassium, sodium, and minerals associated therewith, which are subject to lease under the mineral-leasing laws. The effect of the order is to encourage and promote the development of these minerals without interference by persons who might attempt to locate unimportant surface minerals under the mining laws."

The records of mining locations of the affected counties fail to show any basis for the expressed fear of frustration of opportunity or interference with development of oil and gas or potassium and associated minerals by reason of mining locations for nonmetalliferous "unimportant surface minerals."

A valid location of a mining claim requires more than a mere posting and recording of a notice. It requires a valid discovery of a valuable mineral. Regardless of the filing of a mining location, the Interior Department retains jurisdiction to investigate and determine the good faith and validity of any mining location. The Interior Department has authority to prevent the acquisition of minerals, subject to the mineral leasing laws, through any subterfuge of location of nonmetalliferous mineral deposits of slight value. The mere possibility of the filing of mining locations for nonmetalliferous minerals is not limited to the Utah area withdrawn. This offered reason would afford equal "justification" for blanket withdrawals of public lands throughout Utah and throughout other public land States, unless this withdrawn area is thought

to be unusually replete with valuable nonmetalliferous minerals, subject in discovery to valid location under the mining laws.

If this Utah area is outstanding in this regard, even greater seriousness appears to the preclusion of development of discovered valuable nonmetalliferous minerals on the mere possibility that other minerals may exist and, at some future time, be found at substantial depth underlying the lands so located.

The areas within the withdrawal limits presently considered most likely to contain oil and gas, or potassium and magnesium, are now covered by applications or permits or leases which, while outstanding, preclude valid mining locations either for nonmetalliferous or for metalliferous minerals. No mining location can be made, after a filing under the mineral leasing laws, which will interfere with the exercise of rights granted under such laws. The necessity of valid discoveries of valuable mineral, the requirement of good faith, and the expense of locating and maintaining mining claims practically preclude the covering of any substantial areas for "unimportant surface minerals" of little value.

A far more real interference with oil and gas prospecting throughout the West is, and has been, the repeal under sponsorship of the Interior Department, of the law authorizing the issuance of oil and gas prospecting permits with the incident reward of a discovery lease on one-fourth of the permit area at a 5 percent royalty, and the substitution of legislation limiting disposition to leases involving annual rental payments and royalties of from 12½ to 32 percent. The deterring effect of this change was recognized, and but partially removed, by Congress in the act of December 12, 1942, authorizing a flat 12½ percent royalty on oil leases where wells are brought in constituting discoveries of new fields or new deposits.

An absolute frustration of opportunity for development of potassium and minerals associated therewith was found in Order 914 of the Secretary of the Interior, dated April 5, 1935, under which all applications for potassium permits and leases were suspended. No permit or lease for potash, and associated minerals, has been issued in Utah under the mineral leasing laws since 1935, although hundreds of applications have been filed. Not until the Secretary of the Interior's order No. 1829 of June 9, 1943, was said order 914 modified so as to afford any opportunity for the development of the potassium, and associated minerals, resources in this area.

The justifications offered by Assistant Secretary Chapman and Commissioner Johnson are but general and indefinite assertions, undemonstrated, and without supporting facts.

PERIOD OF WITHDRAWAL

While Assistant Secretary Chapman and Commissioner Johnson each states: "Moreover you will observe from the text of the order itself that the withdrawal is merely a temporary safeguard which will be set aside as soon as the lands involved have been classified in accordance with conservation requirements."

Experience has shown that similar withdrawals for "classification" have been in effect for over 30 years, with no present prospect of revocation. It is difficult to conceive how, during a period of present reasonably contemplated duration of the war, the extensive prospecting and development necessary for any recovery and utilization of possible deep-seated deposits of potash and associated minerals could be made in the withdrawn area, with the possible exception of the area near Thompson, Utah, where considerable prospecting has been done on patented lands and under a State mineral lease and under Federal oil leases. Practical considerations and past experience justify serious doubts that withdrawal order 130 could have any relation to the development of strategic minerals for the winning of the war, or that such order is temporary within any commonly accepted conception of the term.

It is well known that Secretary of the Interior Ickes has sponsored, and desires, a program to prohibit future disposition of any minerals on the public domain by other than leasing—that is, Federal ownership and control of all presently undisposed of mineral resources. Congress has been, to date, unwilling to subscribe to this program.

In the enactment of the Federal Leasing Act of February 25, 1920, the House report stated, "this legislation is made necessary by certain withdrawals made

by President Taft during his administration and later by President Wilson during his administration * * * it will keep open and develop the West and * * * it will break the deadlock which has existed in the West since the withdrawals of 1909."

Can order 130 be a beginning—a "trial balloon" perhaps—of a broad withdrawal program, a program contemplated to force congressional action by tying up, in great areas, nonmetalliferous minerals not subject to the mineral-leasing laws, and creating a new deadlock? I have no doubt about it. In my judgment that is exactly what they are trying to do.

The mineral resources of the West have been developed and can best be developed, under a system of private ownership and initiative; a system which offers the prospector a chance to secure and hold ground by his own work; the pot of gold at the end of the rainbow of faith and optimism; an incentive to support the prospector's struggle and bolster his faith; an inducement to invest capital despite the uncertainties and risk of mining ventures.

The reasons for a leasing system which apply to oil and coal and potash to some other minerals subject to the mineral leasing laws do not apply generally to the mineral resources.

Conservation is, of course, a worthy object, but, in its true sense, conservation is a proper and full use. The term is too frequently misused to mean nonuse—a hoarding of resources for the future. The term "conservation" is too frequently used to cloak a socialistic philosophy—a nonfrank sponsorship of Government ownership and control.

The Utah Department of Publicity and Industrial Development is charged with fostering the development of natural resources in every part of the State of Utah. It would be surprising if this department were not concerned with the effect and clear implications of the withdrawal order above referred to. The citizens and officials of Utah, and of all public-land States, should be concerned with the exercise by the Secretary of the Interior—an official not directly responsible to the electorate—of a delegated authority in suspending the operation of public-land laws as to a substantial portion of Utah. They should be even more concerned with the existence of this delegated authority to suspend the public-land laws at will as to all public lands in all States.

The significance of the withdrawal order under discussion must be interpreted in the light of other acts, such as the recent withdrawal of lands near Jackson Hole, Wyo., as a national monument.

In my judgment the power of withdrawal of public lands, whether by direct Presidential action or exercise of a delegated authority, should be limited to strictly temporary withdrawals, for a period of not to exceed 1 year to 18 months, with congressional approval constituting a prerequisite to continued effectiveness of the withdrawal.

This right of temporary withdrawal would permit the prompt executive action necessary to meet exigencies requiring such action, but would require an accounting and justification by the executive of the action taken, and congressional approval for any long-continued suspension of the operation of the laws enacted for the disposition and management of the public lands.

I wish to put into the record the attached clipping from the Salt Lake City Tribune of Sunday, October 25, 1943:

"NEVADAN HITS MINE LEASE ACT EXTENSION

"WASHINGTON, October 24.—Senator Scrugham, Democrat, Nevada, said Sunday the Interior Department 'again is sending up trial balloons' to get the mining industry reaction to a proposal 'which would extend the present leasing act to include all mineral deposits.

" 'This proposal of the Secretary of the Interior is not new,' Scrugham said in a statement. 'It is a bugbear which is periodically raising its ugly head to plague our mining industry.

" 'It is stated in defense of a leasing system on the public domain that State and Federal revenues from mining will be increased. Perhaps those responsible for concocting this scheme have never heard of the law of diminishing returns.'

"Scrugham, chairman of a subcommittee on mining of the Senate Small Business Committee, said: 'The West wants no part of such a scheme.'

I say, "Amen."

UNITED STATES,
DEPARTMENT OF THE INTERIOR,
Washington, June 9, 1943.

ORDER No. 1829

The potash resources of the public domain have been managed so as to facilitate the domestic production of potash upon a sound basis. In furtherance of this policy, order No. 914 of April 5, 1935, suspended the granting of permits or leases under the Potash Leasing Act of February 7, 1927 (44 Stat. 1057, 30 U. S. C. sec. 281), unless delay might be detrimental to the public interest. This order is no longer deemed necessary in view of the changed conditions since its issuance, and it is hereby vacated.

To assure the prudent utilization of the potash and associated minerals in the public lands, thereby benefiting agriculture and aiding the national defense, and in order to develop the domestic potash industry, all pending applications for potash permits or leases and all such applications hereafter filed will be considered in the light of the act, the applicable regulations and the following factors:

1. The current and future need for additional development of potash and associated compounds, consistent with sound conservation principles.

2. The prospective value of the land designated in the application for other minerals, such as magnesium, aluminum, oil, and gas, whose production is essential in the public interest, and the ability of the applicant to develop and produce commercially potash and associated minerals in conformance with conservation and sound business practice, thus providing diversified development and production in the same area.

3. The decentralization of sources of production through the development of potash deposits in different areas.

4. The maintenance of competitive enterprise in the potash industry.

If by reason of one or more of these four factors, an application is considered to be in the public interest it may be granted.

Applications by lessees for additional lands may also receive favorable consideration where essential to continued operation of existing facilities.

HAROLD L. ICKES,
Secretary of the Interior.

(Exhibits referred to in preceding address by Mr. A. S. Brown:)

EXHIBIT A. RESOLUTION PASSED BY CONFERENCE OF WESTERN AND SOUTHERN GOVERNORS, DENVER, COLO., SEPTEMBER 17 AND 18, 1943.

(Twenty-three Governors were represented.)

Whereas under date of May 28, 1943, the Secretary of the Interior executed order No. 130 withdrawing approximately 3,000,000 acres of lands in Grand and San Juan Counties, Utah, from entry for mineral development and homesteading; and

Whereas said order was issued without the knowledge of the general public and without granting the opportunity of a hearing to the people of the immediate area, State and county officials primarily concerned; Now, therefore, be it

Resolved, That we are unalterably opposed to the practice of Federal agencies secretly withdrawing such lands by Executive order and believe that the interests of the people of the public lands States can best be served only if such activity is immediately discontinued and that such withdrawals be properly affected only by an act of Congress which will provide for public hearing and debate where the rights of all parties concerned may be adequately considered; be it further

Resolved, That we are opposed to the extension of the leasing system as applied to mineral deposits as a means of circumventing the mining laws of the States; be it further

Resolved, That copy of this resolution be sent to President Roosevelt.

EXHIBIT B

GENERAL LAND OFFICE

(Public Land Order 130)

UTAH

WITHDRAWING PUBLIC LANDS FOR CLASSIFICATION

By virtue of the authority contained in the act of June 25, 1910, chapter 421, 36 Statutes 847, as amended by the act of August 24, 1912, chapter 369, 37 Statutes 497 (U. S. C., title 43, secs. 141-143), and pursuant to Executive Order No. 9837 of April 24, 1943, it is ordered as follows:

Subject to valid existing rights, the public lands in the following-described areas are hereby temporarily withdrawn from settlement, locating, sale, and entry, and reserved for classification and for prospecting and development under the mineral-leasing laws:

SALT LAKE MERIDIAN

Tps. 21 to 24 S., R. 15 E.
Tps. 21 to 26 S., R. 16 E., partly unsurveyed.
Tps. 21 to 32 S., R. 17 E., partly unsurveyed.
Tps. 21 to 32 S., R. 18 E., partly unsurveyed.
Tps. 21 to 32 S., R. 19 E., partly unsurveyed.
Tps. 21 to 32 S., R. 20 E., partly unsurveyed.
Tps. 21 to 32 S., R. 21 E., partly unsurveyed.
Tps. 22 to 32 S., R. 22 E., partly unsurveyed.
Tps. 22 to 37 S., R. 23 E.
Tps. 23 and 24 S., R. 24 E., partly unsurveyed.
Tps. 29 to 38 S., R. 24 E.
Tps. 23 and 24 S., R. 25 E.
Tps. 29 and 38 S., R. 25 E.
Tps. 23 and 24 S., R. 26 E.
Tps. 29 to 38 S., R. 26 E.

The areas described, including both public and nonpublic lands, aggregate approximately 2,977,700 acres.

ABE FORTAS,
Acting Secretary of the Interior.

MAY 26, 1943.

(Federal Register Doc. 43, 11800: Filed, July 23, 1943; 9:30 a. m.)

EXHIBIT C

1949750 N

UNITED STATES DEPARTMENT OF THE INTERIOR,
GENERAL LAND OFFICE,
Washington 25, D. C., September 4, 1943.

MR. A. S. BROWN,
*Chairman, State Department of Publicity and
Industrial Development, Salt Lake City, Utah.*

MY DEAR MR. BROWN: This is in reply to your telegram of September 1 requesting complete information concerning public land order No. 130.

This order provided for the temporary withdrawal of approximately 3,000,000 acres of land in Utah from settlement, location, sale, and entry under the public-land laws, including locations under the United States mining laws for non-metalliferous minerals, and was issued as a measure of protection to the State and the Nation in order to assure the future development of strategic leasing minerals needed for the successful prosecution of the war. Prospecting and development for minerals subject to lease under the leasing laws is expressly authorized by the terms of the order. Had this order not been issued opportunity to contribute important leasing minerals to the winning of the war from these public-domain lands within the State might have been frustrated by the filing of locations for nonmetalliferous surface minerals of relatively little value

compared to the strategic leasing minerals which are believed to occur at substantial depth.

The withdrawal is designed to protect the interest of the State and the Nation in oil, gas, potassium, sodium, and minerals associated therewith, which are subject to lease under the mineral-leasing laws. The effect of the order is to encourage and promote the development of these minerals without interference by persons who might attempt to locate unimportant surface minerals under the mining laws. You may feel assured that the order does not preclude in any way the filing of applications for permits and leases covering the leasable minerals.

Moreover, you will observe from the text of the order itself that the withdrawal is merely a temporary safeguard which will be set aside as soon as the lands involved have been classified in accordance with conservation requirements. I am confident you will agree that the task of making essential minerals available for the winning of the war is of paramount importance and far outweighs any possible inconvenience which may result to private persons affected by the order.

Very truly yours,

FRED W. JOHNSON, *Commissioner.*

Received September 7, 1943. Department of publicity and industrial development.

EXHIBIT D

UNITED STATES DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington 25, D. C., September 3, 1943.

Mr. A. S. BROWN,
*Chairman, Department of Publicity and Industrial Development,
Salt Lake City, Utah.*

MY DEAR MR. BROWN: Secretary Ickes has asked me to reply to your telegram of August 23, requesting information concerning public land order No. 130.

This order provided for the temporary withdrawal of approximately 3,000,000 acres of land in Utah from settlement, location, sale, and entry under the public-land laws, including mining locations under the United States mining laws for nonmetalliferous minerals, and was issued as a measure of protection to the State and the Nation to assure the future development of strategic leasing minerals needed for the successful prosecution of the war. By the terms of the order prospecting and development under the mineral-leasing laws is expressly authorized. Had this order not been issued, opportunity to contribute to the production of the leasing minerals from these public-domain lands within the State might have been frustrated by the filing of locations for nonmetalliferous surface minerals of relatively little value compared to the important leasing minerals which are believed to occur at substantial depth.

The withdrawal is designed to protect the interest of the State and the Nation in oil, gas, potassium, sodium, and minerals associated therewith, which are subject to lease under the mineral-leasing laws. The effect of the order is to encourage and promote the development of these minerals without interference by persons who might attempt to locate nonmetallic surface minerals under the mining laws. You may feel assured that the order does not affect in any way the right of applicants to file for permits or leases under the mineral-leasing laws. Moreover, you will observe from the text of the order itself that the withdrawal is merely a temporary safeguard which can be set aside as soon as the lands involved have been classified in accordance with conservation requirements.

I trust that the foregoing will satisfactorily explain the purpose of this withdrawal.

Sincerely yours,

OSCAR L. CHAPMAN,
Assistant Secretary.

Received September 7, 1943. Department of publicity and industrial development.

Senator MURDOCK. The very purpose of a meeting of this kind, under the rules established by our distinguished chairman, is to afford every

person in the room an opportunity to question any witness who makes a statement. Now, if any of the officials here from the Interior Department, or any other department, or any other person in the room, has any question to submit to Chairman Brown of the publicity and industrial development commission, you now have that opportunity. Are there any questions?

Mr. THOMAS C. HAVELL (of the General Land Office). I presume there are to be other witnesses on this general subject.

Senator MURDOCK. That is true.

Mr. HAVELL. It may be necessary later, and I may ask the privilege to make a statement as to the attitude of the Department in connection with this withdrawal, but I have no question to ask at the present time.

Senator MURDOCK. We will hear you later, Mr. Havell. Does anyone in the audience have any questions to submit to Mr. Brown?

Apparently not, Mr. Brown.

Mr. Burt Brewster, we will hear from you. State your name.

STATEMENT OF BURT B. BREWSTER, THE MINING AND CONTRACTING REVIEW, SALT LAKE CITY, UTAH

Mr. BREWSTER. Burt B. Brewster. Owner and publisher of the Salt Lake Mining and Contracting Review.

Senator MURDOCK. All right, Mr. Brewster, you may proceed in your own way.

Mr. BREWSTER. Senator Murdock and Senator McCarran, since, as an engineer of mines, I have devoted the past 32 years to the mining industry, with the first 21 years of that period to equipping mines, from Mexico to Nome, and the last 10 years to studying the problems of mining, particularly the problems imposed by legislation and bureaucratic action, I do not feel that I am presumptuous in appearing before this committee.

My statement will be confined to the recent somewhat stealthy withdrawal of 3,000,000 acres of public lands in southern Utah. Officially, this withdrawal was labeled "General Land Office, Public Land Order 130, Utah, Withdrawing Public Lands for Classification."

I contend that the order was illegally drawn and stealthily executed, for the following reasons:

1. "Stealthily executed" because dated May 26 but not filed for public notice until July 23, both dates referring to 1943.

2. "Illegally drawn" for the following reasons: Public land order 130 was couched in the following English:

By virtue of the authority contained in the act of June 25, 1910, chapter 421, 36 Statutes 947, as amended by act of August 24, 1912, chapter 369, 37 Statutes 497 (U. S. C., title 43, secs. 141-143) and pursuant to Executive Order No. 9337 of April 24, 1943, it is ordered as follows:

Subject to valid existing rights, the public lands in the following areas (indicated on map displayed at this hearing) are hereby withdrawn from settlement, location, sale, and entry, and reserved for classification and for prospecting and development under the mineral-leasing laws.

Order No. 130 was signed by one Abe Fortas, Acting Secretary of the Interior.

What was the nature of Executive Order No. 9337 of April 24, 1943? Examination of the record reveals that it superseded Executive Order No. 9146 of April 24, 1942, which authorized the Secretary of the Interior to sign all orders withdrawing or reserving lands, and so forth.

But note what Executive Order No. 9337 (issued a year later) did to Executive Order No. 9146. Signed by President Roosevelt, order No. 9337 bestowed upon the Secretary of the Interior the right to withdraw or reserve lands to the same extent that such lands might be withdrawn or reserved by the President himself. That is, the authority to sign was changed to the right to promulgate such orders.

Since Executive Order No. 9337 was issued "by virtue of the act of June 25, 1910, as amended by the act of August 24, 1912," it becomes necessary to examine both of these acts.

The act of June 25, 1910, gave the President the right to make withdrawals of public lands but specified (note well)—

that all lands withdrawn under the provisions of the act shall at all times be open to exploration, discovery, occupation, and purchase under the mining laws of the United States, so far as the same apply to minerals other than coal, oil, gas, and phosphates.

The act of August 24, 1912, which amended the act of June 25, 1910, says:

All lands withdrawn be open to exploration, discovery, and purchase under the mining laws of the United States, so far as the same apply to metalliferous minerals.

Returning to order 130, under which the 3,000,000 acres of public domain in Utah were withdrawn, it will be noted that the order withdrew the land and reserved it for prospecting and development "under the mineral-leasing laws." I call your attention to the use of the words "mineral-leasing laws" instead of "mining laws," as provided in all the statutes upon which order No. 130 is predicated. The words "mineral-leasing laws" do not appear in the statutes upon which the order is based.

It is also a fact that there is no statute in existence that authorizes either the President or the Secretary of the Interior to grant a lease or prospecting permit on any lands for any substance not provided for in the act of 1920, an act not mentioned in the cited authority for the Utah withdrawal order, and an act which does not deal with ordinary metalliferous deposits.

In conclusion: From the foregoing it would appear that order 130, withdrawing the 3,000,000 acres of Utah land, is not legally drawn, because it assumes certain authority which is not provided for in the statutes upon which it is predicated; and, further, there is grave doubt that in enacting the statutes relating to the withdrawal of public lands that the Congress intended that the President could, under the provisions of the acts, delegate his executive authority *carte blanche* to the Secretary to withdraw lands at will, in the absence of a formal Executive order of withdrawal, something Ickes and his subordinates appear to have been doing for some time.

In closing, it is my sincere belief that the steadily and legally questionable withdrawal of 3,000,000 acres of Utah land, and all its ramifications, are worthy of special congressional action. And, if by some loophole, order 130 can be stamped "legal," that Congress in-

augurate legislation calculated to protect the States and the citizens of the United States from the erratic acts of more or less ignorant and unprincipled promulgators of facistic orders and manifestos.

Senator MURDOCK. I take it you do not object to submitting yourself for interrogation?

Mr. BREWSTER. No, sir.

Senator McCARRAN. You are familiar with the character of the land withdrawn?

Mr. BREWSTER. Fairly, yes.

Senator McCARRAN. From the standpoint of its being mineral or nonmineral?

Mr. BREWSTER. It is very much mineralized.

Senator McCARRAN. That is what I want to find out—the nature of the land. I understand it is depicted on the board over here, as it is located geographically. The green on the map represents the land withdrawn, approximately?

Mr. BREWSTER. Yes, sir.

Senator McCARRAN. Someone has stated, in my presence, that this tract of land is apparently much given to shale and shale deposits. Is that true?

Mr. BREWSTER. There is a considerable amount of shale on the surface, yes, sir; on various parts.

Senator McCARRAN. Have any minerals other than metal been discovered?

Mr. BREWSTER. Yes; magnesium and potassium, in lands adjoining, and no doubt extend into that area. There are copper deposits. The LaSal district is copper. There is no proof that the copper has not extended into that particular part that is withdrawn.

Senator McCARRAN. Have shale locations, placer locations, been laid over any of this section?

Mr. BREWSTER. That I don't know.

Senator McCARRAN. Does anyone here in the room possess that information?

Mr. KNOX PATTERSON. What was that question?

Senator McCARRAN. Have shale locations, or placer locations covering shale, been lain over this section?

Mr. PATTERSON. Yes, very recently.

Senator MURDOCK. Will you state your name so we will have it for the record?

Mr. PATTERSON. Knox Patterson. I am very familiar with all that country.

Senator McCARRAN. Thank you. I will address my questions to you now, for just a moment, Mr. Patterson:

How extensive is the information, or the evidence, that shale exists in that particular locality that has been withdrawn?

Mr. PATTERSON. There are all characters of formations there. It is not limited to shale in any sense of the word. Throughout that area there are hundreds, perhaps thousands, of particular locations of vanadium and uranium and coal and other metals, gold, silver, copper. There are minerals of various kinds, the same minerals you will find everywhere.

Right now, at Monticello, Utah, there is a large vanadium mill being operated by the Government, producing tons and tons of vanadium

for the Government. That extends over that entire area, and other lands, clear to Colorado.

Senator McCARRAN. The reason I propound the question as I do—please understand that I am not familiar with the locality, and that I have only heard some rumors as to why this Executive order may have been promulgated. I am looking for an answer to the question from those who know. We may propound questions, from time to time, during the day. This statement has been made in my presence here, not by anyone in authority, however, that the withdrawal was primarily promulgated because there was rather a rush in there to cover the open public domain with placer locations, looking to the control of shale.

Mr. PATTERSON. And magnesium.

Senator McCARRAN. And magnesium; yes; that may be true, but the shale was the thing mentioned.

Mr. PATTERSON. I don't know what they claim for it, but there have been numerous filings of shale lands. What they claim for it, I don't know exactly.

Senator McCARRAN. At the present time it may be observed here—and I say this just in passing—that our oil reserves in the West are rapidly being depleted, according to the best advice we can get. Just recently the O'Mahoney bill went through the Senate, providing that the Bureau of Mines, or other agencies of the Government, will set up testing plants, and establish the possibility of successfully treating and reducing synthetic oil from shale, and that has given an impetus to a new activity for the acquisition of open public domain possessing shale. The excuse was given to me, unofficially—entirely unofficially—and from one official, then, that the Government sought to make reserves out of these lands, thus to protect the Government in the matter of getting additional oil.

There isn't any question, Mr. Chairman, but what in the very near future the United States Government is going to have to look for oil from other sources in the West, because, when the war really gets into the Pacific—in my individual judgment it has not reached into the Pacific at all yet—but when it really gets going in the Pacific we are going to have to have greater reserves of oil than we now seem to have for the future.

I am just wondering if the suggestion that was made to me unofficially has any real significance. That is the reason I am asking these questions.

Mr. PATTERSON. Referring to shale land, there are no oil shale lands in that section. Getting farther north there may be.

Senator MURDOCK. Are there any further questions from anybody. I hope no one in the audience will be at all backward in submitting any questions they may have.

STATEMENT OF THOMAS C. HAVELL, CHIEF, BRANCH OF ADJUDICATION, GENERAL LAND OFFICE, WASHINGTON, D. C.

Mr. HAVELL. Mr. Chairman, Mr. Brewster has questioned the legality of withdrawal order No. 130. In answer to that I would say that under the authority vested in the Secretary of the Interior to sign what were theretofore known as Executive orders withdrawing public

lands, the Secretary is required to submit all drafts of orders, which he seeks to sign under the delegated authority, to the Bureau of the Budget and the Attorney General. These are the two screens set up by the President, through which these withdrawal orders must pass before the Secretary is authorized to sign the order.

This public-land order should have been and was so submitted to the Bureau of the Budget, and received approval there, and was so submitted to the Attorney General and received approval there. So, I feel that the highest legal authority of the Government having passed upon the legality of the order, the Secretary of the Interior was surely justified in signing it, so far as the legal aspect was concerned.

Mr. BREWSTER. May I answer that?

Senator MURDOCK. Yes.

Mr. BREWSTER. It is strange that they did not discover that the words "mineral leasing" were substituted for "mining law."

Mr. HAVELL. There is a distinction in the public-land laws between the mining laws and the Mineral Leasing Act. The Solicitor's office of the Department of the Interior, and the Attorney General, if my memory serves me correctly, have ruled that the term "Mining Laws of the United States" does not include the Mineral Leasing Act.

Senator MURDOCK. And refers specifically to what?

Mr. HAVELL. Specifically to the mineral laws, the lode and placer laws.

Mr. PATTERSON. May I ask the gentleman a question?

Senator MURDOCK. Yes, Mr. Patterson.

Mr. PATTERSON. Does it show the approval? Does the law so show the approval of the Attorney General or the President?

Mr. HAVELL. The Executive order authorizes the Secretary of the Interior to sign these orders, and is designed to relieve the White House from the enormous burden now carried because of the war.¹

Mr. PATTERSON. How do we know that the President and the Attorney General approve it?

Mr. HAVELL. I will give you my word; but that is not the answer. The answer is that the President, by Executive order, has made that requirement.

Mr. PATTERSON. Where do we get evidence of that?

Mr. HAVELL. By the fact that the President has ordered the Secretary of the Interior to adopt that course, and that course is adopted.

Mr. PATTERSON. Is that an official document?

Mr. HAVELL. That is an official document.

Mr. PATTERSON. Where may it be had?

Mr. HAVELL. You mean the Executive order or these instructions?

Mr. PATTERSON. No; requiring it to be submitted to the Attorney General.

Mr. HAVELL. The two Executive orders authorizing the Secretary to sign, Executive Order No. 9337, or the one that that order amended. That is in the Executive order.

Mr. PATTERSON. Do the orders carry that information, approved by the President?

Mr. HAVELL. That is in the Executive order itself.

¹ See later testimony of this witness for copy of Executive order.

Mr. BREWSTER. Is there anything in the statute that provides the Third Assistant Secretary of the Interior is able to promulgate orders?

Mr. HAVELL. The Secretary can delegate to his Assistant Secretaries the signing of any documents, papers, or orders, and when so signed they have the same effect as if signed by the Secretary himself.

Mr. BREWSTER. If President Roosevelt happens to be in Moscow or Casablanca the Department at Washington can withdraw anything they wish, as long as the Attorney General sees it.

My impression is that this 3,000,000 acres of land is rather a small item in the Department. They kick it around until it reaches the Third Assistant Secretary, and, in the meantime, words can be inserted in the order that are not authorized by any of the authorities cited.

Mr. HAVELL. Mr. Brewster, quite to the contrary, every one of these public-land orders are considered most carefully. They pass through the Solicitor's office of the Interior Department; they pass through, as I have said, the Bureau of the Budget and the office of the Attorney General. To my mind, it is not conceivable that there would be any authority exercised thereby that is not strictly in accordance with the law.

Mr. BREWSTER. Is it usual procedure to withdraw lands and then hold up notice to the public for 2 or 3 months?

Mr. HAVELL. I would like to speak on that. I had intended to do so later, but now, that the question is here before us, I would like to make this statement regarding the delay in the publication of this public-land withdrawal order No. 130. The delay in the publication in the Federal Register occurred in this way: The order was signed by the Secretary and came to the desk of one of the attorneys who was charged with the responsibility of handling such matters. It happened in my branch of the General Land Office, the adjudication branch. Inadvertently, the paper got off of his desk, and it was not discovered until about 2 months later.

When it was discovered I personally reprimanded the employee who was responsible for the delay. In addition to that, I set up a procedure in the office to prevent such an occurrence happening again.

It was an accident. There was no motive back of it. It happened in my own branch of the office, and the only explanation that can be offered, and the correct explanation, is that it was an accident. The papers got off the desk.

However, since the Federal Register Act provides that no order is effective, as notice to the public, until it is published in the Federal Register, no rights have been impaired or injured because of the delay in the publication. If anything, it has worked to the advantage of these people who are complaining of the order itself, because it gave an additional period of 60 days.

Senator MURDOCK. Mr. Havell, may I make this suggestion, that all of the documents that you have referred to be inserted in the record at this point, following your statement, so we will know what you are talking about.

Mr. HAVELL. I will be very happy, Senator Murdock, to present to the investigator all of the documents to which I have referred, or all

of the documents which I have referred to here that are not otherwise introduced in the record.

(The documents are as follows:¹)

EXECUTIVE ORDER 9146

AUTHORIZING THE SECRETARY OF THE INTERIOR TO WITHDRAW AND RESERVE PUBLIC LANDS

By virtue of the authority vested in me by the act of June 25, 1910, c. 421, 36 Stat. 847, and as President of the United States, I hereby authorize the Secretary of the Interior to sign all orders withdrawing or reserving public lands of the United States, and all orders revoking or modifying such orders: *Provided*, that all such orders shall have the prior approval of the Director of the Bureau of the Budget and the Attorney General, as now required with respect to proposed Executive Orders by Executive Order No. 7298 of February 18, 1936, and shall be submitted to the Division of the Federal Register for filing and publication: *Provided, further*, that no such order which affects lands under the administrative jurisdiction of any executive department or agency of the Government, other than the Department of the Interior, shall be signed by the Secretary of the Interior without the prior concurrence of the head of the department or agency concerned.

FRANKLIN D ROOSEVELT

THE WHITE HOUSE, April 24, 1942.

[F. R. Doc. 42-3682; Filed, April 25, 1942; 11:04 a. m.]

EXECUTIVE ORDER 9337

AUTHORIZING THE SECRETARY OF THE INTERIOR TO WITHDRAW AND RESERVE LANDS OF THE PUBLIC DOMAIN AND OTHER LANDS OWNED OR CONTROLLED BY THE UNITED STATES

By virtue of the authority vested in me by the act of June 25, 1910, ch. 421, 36 Stat. 847, and as President of the United States, it is ordered as follows:

Section 1. The Secretary of the Interior is hereby authorized to withdraw or reserve lands of the public domain and other lands owned or controlled by the United States to the same extent that such lands might be withdrawn or reserved by the President, and also, to the same extent, to modify or revoke withdrawals or reservations of such lands: *Provided*, That all orders of the Secretary of the Interior issued under the authority of this order shall have the prior approval of the Director of the Bureau of the Budget and the Attorney General, as now required with respect to proposed Executive orders by Executive Order No. 7298 of February 18, 1936, and shall be submitted to the Division of the Federal Register for filing and publication: *Provided, further*, That no such order which affects lands under the administrative jurisdiction of any executive department or agency of the Government, other than the Department of the Interior, shall be issued by the Secretary of the Interior without the prior concurrence of the head of the department or agency concerned.

Section 2. This order supersedes Executive Order No. 9146 of April 24, 1942, entitled "Authorizing the Secretary of the Interior to Withdraw and Reserve Public Lands."

FRANKLIN D ROOSEVELT

THE WHITE HOUSE, April 24, 1943.

[F. R. Doc. 43-6460; Filed, April 26, 1943; 3:15 p. m.]

¹ With the exception of General Land Office Circular 1120: Regulations concerning Potash Mining and Prospecting Leases. This circular is readily available from the General Land Office.

UNITED STATES,
DEPARTMENT OF THE INTERIOR,
GEOLOGICAL SURVEY.
Washington, February 25, 1943.

The COMMISSIONER, *General Land Office*:

Information has been received from your office and from other sources to the effect that numerous mining claims for relatively valueless surface minerals are being staked in the Salt Valley area, Grand County, Utah, in an apparent attempt to acquire title by subterfuge to deposits of leasing-law minerals occurring at depth in that area.

Accordingly, for the purpose of protecting the Government's interest in any deposits of oil, gas, potassium, sodium, magnesium, and associated minerals in the Paradox basin of southeastern Utah, I recommend that appropriate action be taken, pursuant to the act of June 25, 1910 (36 Stat. 847), as amended by the act of August 24, 1912 (37 Stat. 497), to withdraw, subject to valid existing rights, the public lands in the following townships from settlement, location, sale, or entry and to reserve them for classification and for prospecting and development under the mineral-leasing laws:

SALT LAKE MERIDIAN, UTAH

Ts. 21 to 24 S., R. 15 E. et al.

Ts. 21 to 28 S., R. 16 E.

Ts. 21 to 24 S., and unsurveyed Ts. 25 to 32 S., Rs. 17, 18, and 19 E.

Ts. 21 to 30 S., and unsurveyed Ts. 31 and 32 S., R. 20 E.

Ts. 21 to 32 S., R. 21 E.

Ts. 22 to 32 S., R. 22 E.

Ts. 22 to 37 S., R. 23 E.

Ts. 23 and 24 S., and Ts. 29 to 38 S., Rs. 24, 25, and 26 E.

Conflict exists with grazing districts Nos. 6 and 7, Utah, with the La Sal National Forest and with the Arches National Monument.

JULIAN D. SEARS, *Acting Director*.

UNITED STATES,
DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, April 3, 1943.

The DIRECTOR OF THE BUREAU OF THE BUDGET.

SIR: Enclosed for your consideration are copies of a proposed public-land order. Pursuant to Executive Order No. 9146 of April 24, 1942, please inform this Department whether the draft meets with your approval.

Copies of the proposed order also have been forwarded to the Attorney General.

Very truly yours,

OSCAR L. CHAPMAN, *Assistant Secretary*.

Title of proposed public-land order: "Withdrawing Public Lands for Classification."

Pertinent information: The purpose of the withdrawal is to protect the Government's interest in any deposits of oil, gas, potassium, sodium, and minerals associated therewith. Information available indicates that mining locations for non-metalliferous minerals relatively of little value are being made on the lands in order to acquire by subterfuge leasable minerals occurring at depth in that area. The lands are affected by withdrawals for grazing districts, a national monument, first form reclamation, a national forest, water-power projects, public-water reserves, and coal.

OFFICE OF THE ATTORNEY GENERAL,
Washington, D. C., April 29, 1943.

The honorable the SECRETARY OF THE INTERIOR.

MY DEAR MR. SECRETARY: I am herewith transmitting a revised draft of your proposed order temporarily withdrawing certain public lands in Utah from settlement, location, sale, and entry, and reserving them for classification and for prospecting and development under the mineral-leasing laws.

The proposed order has been revised in this Department, primarily to incorporate a change suggested by the Bureau of the Budget and to substitute for the reference to Executive Order No. 9146 of April 24, 1942, occurring in the introductory paragraph, a reference to Executive Order No. 9337 of April 24, 1943. No change has been made in substance.

The revised draft has been informally approved by the Bureau of the Budget, and it has my approval as to form and legality. A copy of Mr. Bailey's letter of April 21, 1943, with which he transmitted a copy of the order for my consideration, is enclosed.

Sincerely yours,

FRANCIS BIDDLE,
Attorney General.

UNITED STATES DEPARTMENT OF THE INTERIOR

WITHDRAWING PUBLIC LANDS FOR CLASSIFICATION

UTAH

By virtue of the authority contained in the act of June 25, 1910, chapter 421, 36 Statute 847, as amended by the act of August 24, 1912, chapter 369, 37 Statute 497 (U. S. C., title 43, secs. 141-143), and pursuant to Executive Order No. 9337 of April 24, 1943, it is ordered as follows:

Subject to valid existing rights, the public lands in the following-described areas are hereby temporarily withdrawn from settlement, location, sale, and entry, and reserved for classification and for prospecting and development under the mineral-leasing laws:

SALT LAKE MERIDIAN

Tps. 21 to 24 S., R. 15 E.
Tps. 21 to 26 S., R. 16 E., partly unsurveyed.
Tps. 21 to 32 S., R. 17 E., partly unsurveyed.
Tps. 21 to 32 S., R. 18 E., partly unsurveyed.
Tps. 21 to 32 S., R. 19 E., partly unsurveyed.
Tps. 21 to 32 S., R. 20 E., partly unsurveyed.
Tps. 21 to 32 S., R. 21 E., partly unsurveyed.
Tps. 22 to 32 S., R. 22 E., partly unsurveyed.
Tps. 22 to 37 S., R. 23 E.
Tps. 23 and 24 S., R. 24 E., partly unsurveyed.
Tps. 29 to 38 S., R. 24 E.
Tps. 23 and 24 S., R. 25 E.
Tps. 29 to 38 S., R. 25 E.
Tps. 23 and 24 S., R. 26 E.
Tps. 29 to 38 S., R. 26 E.

The areas described, including both public and nonpublic lands, aggregate approximately 2,977,700 acres.

ABE FORTAS,
Acting Secretary of the Interior.

TITLE 43. CODE OF FEDERAL REGULATIONS

SUBTITLE A

PART 4. DELEGATION OF AUTHORITY

Order No. 1795

By virtue of the authority vested in the Secretary of the Interior to issue rules and regulations in the administration of the functions of the Department of the Interior; the authority conferred by the act of March 14, 1862 (12 Stat. 355, 369, ch. 41; secs. 438, 439 Rev. Stats.; 5 U. S. C. (1940 ed.), secs. 482, 483); the act of March 3, 1885 (23 Stat. 478, 497, ch. 360; 5 U. S. C. (1940 ed.), sec. 482); the act of May 9, 1935 (49 Stat. 176, 177, ch. 101; 5 U. S. C. (1940 ed.), sec. 481a):

the act of March 28, 1918 (40 Stat. 499, ch. 29; 5 U. S. C. (1940 ed.), sec. 483); sec. 161, Rev. Stats., 5 U. S. C. (1940 ed.), sec. 22; and the general authority of the Secretary of the Interior to prescribe the functions and delegate the duties to be performed by the Under Secretary, the First Assistant Secretary and the Assistant Secretary, the following delegation of authority is hereby ordered and prescribed:

4.1 Delegation of authority to the Under Secretary, First Assistant Secretary, and Assistant Secretary.—The Under Secretary, the First Assistant Secretary, and the Assistant Secretary are hereby respectively authorized and directed, with respect to any matter, duty, or function relating to, arising under, or in connection with the following bureaus, offices, officers, and functions of the Department of the Interior, to perform all the functions and duties and exercise all the powers, authority, and discretion of the Secretary, and the acts and directions of the Under Secretary, the First Assistant Secretary, or the Assistant Secretary, respectively, pursuant to the authority herein delegated, shall be deemed to be the acts and directions of the Secretary:

A. Under Secretary: (1) Division of Territories and Island Possessions; (2) general departmental supervision, including the functions of organization surveys, budget, personnel supervision and management, classification, labor relations, and the Chief Clerk.

B. First Assistant Secretary: (1) Bureau of Mines, (2) Geological Survey, (3) Bureau of Reclamation, (4) Bituminous Coal Division, and (5) Petroleum Conservation Division.

C. Assistant Secretary: (1) Office of Indian Affairs, (2) General Land Office, (3) Grazing Service, (4) National Park Service, (5) Office of Land Utilization, (6) Fish and Wildlife Service, and (7) Board on Geographical Names.

4.2 Conservation Branch of Geological Survey.—Matters on which the Conservation Branch of the Geological Survey acts in conjunction with the General Land Office or the Office of Indian Affairs, or in which it acts in relation to the work of these bureaus, shall be considered to be within the assignment of the Assistant Secretary.

4.3 Authority in absence of designated secretarial official.—In the absence of the Secretary, the Under Secretary will act as Secretary of the Interior and at all times the Under Secretary shall have general jurisdiction subject only to the Secretary. In the absence of the Secretary and the Under Secretary, the ranking Assistant Secretary on duty will act as Secretary. In the absence of either the Under Secretary, the First Assistant Secretary, or the Assistant Secretary, the Secretary or Acting Secretary will designate the person who shall act as such officer.

4.4 Offices under direct supervision of the Secretary.—The following offices and divisions shall remain under the direct supervision of the Secretary: (1) Office of the Solicitor, (2) Division of Information, (3) Division of Power and the Bonneville Power Administration, (4) Office of Field Representatives, (5) Petroleum Administration for War, (6) Office of Solid Fuels Coordinator for War, and (7) Office of Fishery Coordination.

4.5 This order supersedes orders 1764 of November 20, 1942, and 1772 of December 14, 1942.

This order shall be published in the Federal Register.

Issued and effective this 11th day of March 1943.

HAROLD L. ICKES,
Secretary of the Interior.

GENERAL LAND OFFICE.

OFFICE COMMUNICATION

Memorandum for the Commissioner.

The order was signed May 26. I am unable to explain why it had not been sent to the Federal Register, and regret that such action was not taken promptly.

The files do not show that the record was recharged to me, although I must have had it at the time in June, when a memo covering withdrawals was prepared for the annual report. The fact that it had not been sent to the Federal Register must have escaped by attention then. The record did not appear on my desk again until July 19. I don't know where it had been or who had it. It was not lost on my desk during that time because I have no records except one mineral case, other than those submitted for review, and my desk is usually clear of such records at the close of office hours.

My experience with records like Public Land Order 130 is that they are borrowed and oftentimes held for some time by the borrower, or passed from desk to desk for information.

When I saw public land order, July 19, it did not occur to me then that it had not been promulgated through the usual channels. On the morning of July 20 Mr. Hoffman brought in Public Land Order 150. I looked at Public Land Order 130 to see if it had the form of certification I needed. It was then I discovered that the order had not been promulgated. The record and a copy of the file card are attached.

R. L. WILKINSON.

GENERAL LAND OFFICE,
July 23, 1943.

OFFICE COMMUNICATION

To: Mr. Hoffman, Division N.

Mr. Wilkinson, in his note regarding Public Land Order No. 130, says that the file does not show that the record was recharged to him and that his experience in such matters is that the cases are borrowed and often held for some time, or passed from desk to desk for information. This is all beside the point.

Public land orders are not officially promulgated until they are printed in the Federal Register. Therefore, the employee who prepares and submits a public-land order should carry the responsibility of seeing that the original and copies are submitted for publication just as soon as the order is signed. Publication should not depend upon whether the case is recharged or whether it is borrowed or passed from desk to desk. The responsibility rests with the employee, regardless of what becomes of the case.

HAVELL,

Supervisor, Branch of Adjudication.

DEPARTMENT OF THE INTERIOR,
Washington, April 5, 1935.

ORDER No. 914

In the interest of the public it is hereby ordered that, until further notice, no action be taken in the matter of granting permits or leases under the Potash Act of February 7, 1927 (44 Stat. 1057), unless required by law.

This order shall not preclude action on any application for extension of term of permit under the amendatory act of May 7, 1932 (41 Stat. 151); nor shall it preclude rejection of any application or cancelation of any permit or lease for cause, or action in connection with royalty or rental under any lease; nor shall it relieve any permittee or lessee from compliance with any requirement contained in his permit or lease.

But in any particularly meritorious case, when in the judgment of the Secretary delay might be detrimental to the interest of the public, the provisions of this order may be waived.

T. A. WALTERS,

Acting Secretary of the Interior.

DEPARTMENT OF THE INTERIOR,
Washington, June 9, 1943.

ORDER No. 1829

The potash resources of the public domain have been managed so as to facilitate the domestic production of potash upon a sound basis. In furtherance of this policy, order No. 914 of April 5, 1935, suspended the granting of permits or leases under the Potash Leasing Act of February 7, 1927 (44 Stat. 1057, 80 U. S. C., sec. 281), unless delay might be detrimental to the public interest. This order is no longer deemed necessary in view of the changed conditions since its issuance, and it is hereby vacated.

To assure the prudent utilization of the potash and associated minerals in the public lands, thereby benefiting agriculture and aiding the national defense, and

in order to develop the domestic potash industry, all pending applications for potash permits or leases and all such applications hereafter filed will be considered in the light of the act, the applicable regulations and the following factors:

1. The current and future need for additional development of potash and associated compounds, consistent with sound conservation principles.

2. The prospective value of the land designated in the application for other minerals, such as magnesium, aluminum, oil and gas, whose production is essential in the public interest, and the ability of the applicant to develop and produce commercially potash and associated minerals in conformance with conservation and sound business practices, thus providing diversified development and production in the same area.

3. The decentralization of sources of production through the development of potash deposits in different areas.

4. The maintenance of competitive enterprise in the potash industry.

If by reason of one or more of these four factors, an application is considered to be in the public interest it may be granted.

Applications by lessees for additional lands may also receive favorable consideration where essential to continued operation of existing facilities.

HAROLD L. ICKES,
Secretary of the Interior.

Mr. BREWSTER. Senator, may I have one more question?

Senator MURDOCK. You may.

Mr. BREWSTER. Isn't it a rather strange coincidence that the one spot in the United States that had the eyes of every engineer and every metallurgist focused on it—because of containing probably the greatest deposit of magnesium in the world, and possibilities of potash and oil—should have all these accidents and coincidences occur, just at that moment? It seems rather strange to me.

Mr. HAVELL. I will respond later on that; but if this is the proper time to address myself to that matter I want to say that it was brought to the attention of the Department, or was reported to the Department, that a large number of nonmetalliferous mining claims were being located in this general area.

Senator MURDOCK. By what means—under the lode law, or the placer law?

Mr. HAVELL. That I cannot answer, Senator. I don't know. But it was brought to the attention of the Department and it was reported to the Department, that on a large number of mining claims for fire clay and building stone, and so forth, there was a very pronounced indication of valuable deposits of magnesium and potash through this area. That matter was brought to the attention of the Geological Survey. Some of the information resulted from wells drilled for oil in about 1920, when oil was a leasing mineral, and some was gained from other sources, including wells put down on Eagle, No. 1, on private lands in cooperation with the Bureau of Mines.

A mining claim gives the locator the right to all the minerals in his claim regardless of whether it is for shale, or any other nonmetalliferous substance. If the claim should include a vital deposit of potash or magnesium, the claimant would have the right to extract the potash under the guise of the claim. In order to insure the development of the potash and the magnesium under the mineral leasing law which Congress had provided in 1927, the Department felt that it would be advisable to withdraw these lands from location, principally under the nonmetalliferous mining laws, in order that the potash and the magnesium, so vital to the prosecution of the war, would be made available for immediate use, and not tied up as minerals have been tied up under mining locations.

Under a mining location you only have to show a discovery and perform your annual assessment work, and even that assessment work you are relieved of now, because of the shortage of manpower.

The result is that these mining claims would tie up an area of potash, because, under the mining laws, it would not be possible for a potash lease to operate on that area.

So in order to insure the immediate development of potash and magnesium, and not permit a situation to develop whereby these valuable war minerals could be tied up for speculative purposes, this order of withdrawal was put into effect. It does not stop metalliferous mining claims. It does not stop the honest development of potash and the magnesium, under the leasing law provided by Congress for those purposes.

Senator MURDOCK. If you say the order was made principally for the purpose of making your potash and magnesium immediately available for development, isn't it true that there are now pending before the Interior Department, and have been for months, applications for leases by the potash company? I am not sure that I know the correct name, but the company that took over the territory which was drilled,

Mr. BREWSTER. The Potash Co. of America.

Senator MURDOCK. The Potash Co. of America. Haven't they pending, with the Interior Department now, for months, applications under the leasing law, without any action whatever?

Mr. HAVELL. I understand there are a number of potash applications that have been filed. There has been some confusion as to whether potash could be developed under oil leases, but I think you are correct, Senator; there are before the Department, or have been before the Department in recent months, these applications for potash.

Before the war there seemed to be an abundance of potash. I might relate a little history. Some years prior to the war all of our potash came from Germany, and later some from Spain. We depended entirely on foreign markets.

The discovery of potash in southern and southeastern New Mexico, and the potash that is being recovered from Searles Lake in California, all of which is on public land, Federal property, have been developed to the point where they were meeting the entire national demand.

There is some now, Senator, being developed in this State, in the salt flats. That is from patented private property, but practically all the potash of this country today that is being used for fertilizing and for the war is coming from the public lands under the leasing system.

With the supply before the war sufficient to meet the demand, the Secretary withdrew all potash from further location under the Leasing Act. More recently he relieved the potash from that withdrawal.¹

Senator MURDOCK. Is that general?

Mr. HAVELL. The order was lifted in its entirety, but he required, however, that a showing be made as to four matters before he would entertain an application for potash.

I have not the order here. It was introduced in the hearings of this committee at Albuquerque. In general, it required the showing of the need for the potash, and that the applicant was in a position to pro-

¹ The text of the 2 orders appears in earlier testimony of the witness.

duce the potash, and also a showing that it would not lead to any monopoly. That, in substance, was what the Secretary required. So the Department is now in a position to consider those applications for potash leases under a showing on those four points that have been set up in the Secretary's order.

Perhaps I can later lay my hand on that order No. 1829. May I submit it for the record?

Senator MURDOCK. Yes.

Mr. HAVELL. So that the situation with reference to those pending applications is that a showing under these war provisions here will put those applications in a position where they can be processed.

Senator MURDOCK. With the need for magnesium as it has been for months, and also, I assume, for potash, doesn't it occur to you that it is not immediately available for war purposes, by reason of the procrastination or delay within the Department itself, in failing to take action on these leases?

Mr. HAVELL. No.

Senator MURDOCK. That is a hard thing for me to understand—to have months and months go by, and still no action taken.

Mr. HAVELL. I wish I had a better insight into the details of the particular cases to which you refer. Were they not filed during the period in which the potash was withdrawn, and that has caused some delay? Then, in addition to that, Senator, was not the Defense Plant Corporation interested in the development of potash? Did it not finance the putting down of this well on Eagle No. 1? Was there not considerable delay due to the uncertainty, on the part of the Defense Plant Corporation, to know just how they were going to proceed, or whether they were going to proceed at all, with the Government development of this potash? Wasn't it only recently, in recent months, that the Defense Plant Corporation has decided not to go further, so far as Federal support is concerned?

Senator MURDOCK. I think we can eliminate the Defense Plant entirely, and go back to the time that they moved out and served notice on the Interior Department that they were through. That has been. I would say, at least 8 months ago. Then, when the Potash Co. moved in and took over, under an operating agreement, it was my understanding that they met on the lifting of the ban on potash and magnesium, and immediately submitted their applications. I was advised, just the other day, they are still pending. Nothing had been done. It is that delay—what appears to me to be an interminable delay—in the Department itself, that has held up the development of this country out here.

Mr. HAVELL. Senator, had the applicants made the showing in those four paragraphs, under the order of June 9, 1943?

Senator MURDOCK. In other words, they have not made a separate showing?

Mr. HAVELL. I am speaking off the record, because the record is in Washington, and I am here. I am rather inclined to say that up to the time we left Washington no showing had been made under these four paragraphs of order 1829, of June 9, 1943. It may be there has been some misunderstanding between the potash applicants and the Interior Department. If so, perhaps this is the place to bring it out, to see if we can't break the log jam.

Senator MURDOCK. That is one of the purposes—to break that log jam, and get this country developed, if there is anything to develop.

The record I read from the Bureau of Mines is the record of the well that was drilled for the Defense Plant Corporation, and the corroborating statement of Mr. Brewster that the territory surrounding that is probably the richest carnallite and sylvite deposit that has ever been discovered. In the report I read from the Bureau of Mines, they had a value of \$4,000,000 per acre, on the land surrounding the well.

Mr. HAVELL. It has been 5 months since the area was open for potash applications, and it has been publicized. I think every applicant is aware of the showing that has to be made; and until the showing is made, the responsibility for the delay must be with the applicants.

Senator MURDOCK. I would say this, that in glancing over the four points that are made, I do not challenge their legality, but it seems to me that there are certain provisions imposed on the person who wants to develop it, that might make it impossible for him to comply with the four conditions there that he must comply with.

You take it on the competitor's situation; it seems to me that is a matter that could be handled by the Antitrust Division of the Department of Justice. When the Secretary of the Interior begins to delve into that question before issuing application, there might be some encroachment on the Department of Justice. I am just thinking out loud on the situation that is created by the four points.

Senator McCARRAN. While we are on that, I wonder if I might present a suggestion, or query, to Mr. Havell, dealing with these four points?

The one is the current and future need for additional development of potash and associated compounds. Now, how could anyone say what the future need would be? How could any applicant give a satisfactory answer to a Department, as to what the future needs might be?

Then "consistent with sound conservation principles," he will say: "What are sound conservation principles?" I will select any 20 engineers, and there will be 20 decisions as to what sound conservation principles would be. That is my guess.

Senator MURDOCK. I think you mean 20 different opinions.

Senator McCARRAN. Yes. This seems to be somewhat of an answer, Mr. Chairman, to your query as to the delay.

We come to No. 2:

2. The prospective value of the land designated in the application, for other minerals, such as magnesium and aluminum, oil and gas, whose protection is essential in the public interest and the ability of the applicant to develop and produce commercial potash and associated minerals in conformance with conservation and sound business principles, thus providing diversified development and protection in the same area.

Now, will you, Mr. Havell, tell me how one individual, or one group of individuals, could possibly make good on that requirement? I refer especially to this—

and the ability of the applicant to develop and produce commercial potash and associated minerals in conformance with conservation and sound business principles, thus providing diversified development and protection in the same area.

I am just going around in a whirl there.

Mr. HAVELL. As you know, I am not a geologist, nor a mineral man.

Senator McCARRAN. No; but you have pretty good horse sense—I know that.

Mr. HAVELL. Perhaps I can throw some light on this—the ability of the applicant to develop and produce. If it is a matter that was brought up by Mr. Harroun, in Albuquerque, in the hearing there, I

think the chairman pointed out to Mr. Harroun that it was not good policy to allow potash applications when the applicant did not have the ability to produce. Since the War Production Board proposed the matter of equipment, as to what may be made available to the applicant to produce, there is a problem there to clear up, so potash leases will not be granted and held dormant, with no production.

So the Department felt the applicant should show an ability to produce potash before it was allowed.

Senator MURDOCK. May I interrupt you there?

Mr. HAVELL. Yes.

Senator MURDOCK. Considering it from that angle alone, didn't you, by that provision, tend to throw all production into the hands of the people who are already in the field? It seems to me, from reading the four conditions there, that are set out, very casually—for this is the first time I have seen them—it seems to me if I were already in the potash business and I wanted to perpetuate and preserve a monopoly on it, I could not write four conditions that would be more conducive to that end than what we find here.

It seems to me that if the company that is now monopolizing that business, if they wanted to accomplish that they could have nothing better than that rule.

Mr. HAVELL. Isn't that negatived by No. 4? The Secretary said he wanted to maintain a competitive enterprise in the industry.

Senator MURDOCK. How can you bring in competition when they first must establish the fact that they are able to produce? Probably the very questions that would be asked the applicant, who is trying to qualify under that condition, would be: "What is your background? Have you ever produced potash before? Do you know anything about its commercial production?" So that, in my opinion, under that one condition there he would have to qualify by showing a background of producing.

Mr. HAVELL. The purpose of that, Senator, was to prevent the tying up of this potash by allowing the lease to one who was not in a position to develop it.

Senator MURDOCK. That is just the point that I am making.

Mr. HAVELL. The development of oil shale in Colorado and Utah was tied up. There was no production. The oil shale is lying there and no effort at all to produce.

Senator MURDOCK. I deplore that as much as you do.

Mr. HAVELL. They are trying to prevent the tying up of potash and mineral leases in the same way.

Senator MURDOCK. It seems you are keeping everybody out of the field. Certainly that is not the type of conservation we want. It certainly is not conducive to winning the war, to have potash and magnesium lying dormant out there in Grand County. As a practical proposition, it seems to me we are keeping everybody out of the field, and thereby preserving a monopoly of the one or two or three companies.

Mr. HAVELL. I am not advising the potash applicants to present their case to the Secretary, but I am sure that a showing to the Secretary of the Interior, in response to No. 2, would be given very serious consideration, because I know that the Department is anxious to develop potash and magnesium and strategic war minerals to the extent of the demand.

Senator McCARRAN. I am interested in another phase of this, Mr. Havell. I don't like to interrogate Mr. Havell too closely, because I know he does not have the direct say with many of these things. We are indebted to him for acquiring knowledge of his branch of the Interior Department. We find him a source of very valuable information, and we thank him.

I want to touch on another phase of this subject, Mr. Havell, relative to the Executive order that is now in existence. You have stated that it was required, before the Secretary of the Interior shall sign an order of withdrawal, that it shall first be submitted to the Bureau of the Budget, and also the Department of Justice, the Attorney General. The thought that strikes me is that somewhere the initial act must come into existence. In other words, who was it that selected this territory and promulgated the activity to have it withdrawn, in the first instance? Where did that originate, and why? Can anyone answer that?

Mr. HAVELL. I think so, Senator. Unless my memory is at fault, in the Department, the recommendation for the withdrawal came from the Geological Survey.

Senator McCARRAN. That is — a communication, do you suppose?

Mr. HAVELL. The Geological Survey recommended the withdrawal of these lands in the form in which this order now exists.

Senator McCARRAN. Mr. Havell, could you give us, for the record here, the date and the nature and form of the request from the Geological Survey? Is it available to us?

Mr. HAVELL. I cannot, but will later furnish the committee with a copy.¹

Mr. BROWN. Perhaps somebody from the Geological Survey is in the audience.

Senator McCARRAN. Is there anyone from the Geological Survey who can answer that question—the date of the request, the nature of the request, and the form of the request? Is there anyone here from the United States Geological Survey?

Mr. BROWN. We will have them here this afternoon.

Senator MURDOCK. May we ask, Mr. Brown, that you contact whoever is here from the Geological Survey, and tell them the committee requests their presence this afternoon.

Mr. BROWN. Yes, sir.

Senator McCARRAN. When the order is first made in that form, it is sent to the Bureau of the Budget, undoubtedly, and probably simultaneously sent to the Department of Justice, or perhaps following the O. K. of the Bureau of the Budget. I am wondering if, during that time, during its transition from the requests by the Geological Survey to the promulgation of the Executive order, and its submission as to form to the Bureau of the Budget and the Department of Justice, is there any step by which the public may be apprised of the nature of the order and its significance?

Mr. HAVELL. There is not, Senator; and in a withdrawal of this kind, I don't believe that it would be advisable, because it would be like locking the door after the horse is out. This being what we consider a protective withdrawal of these minerals to head off these mining claims for low value nonmetalliferous minerals, if we had

¹ See earlier testimony of the witness for copy of the communication.

adopted that plan we would have simply brought them in, and the whole country would have been plastered with claims. I don't believe it would have been in the public's interest to have brought a proposed order of this kind before the public—I am not speaking now of all orders, but of this kind. I don't think it would be the proper thing, because you would simply be inviting the doing of the very thing the order was intended to stop.

Senator McCARRAN. I don't know whether I am correct in this assumption, but it does appear to me that both the Bureau of the Budget and the Department of Justice pass on the order, largely, as to form. I doubt if either the Bureau of the Budget or the Department of Justice goes into the merits behind the order itself, as to whether or not it is an order well founded, by reason of the nature and character of the country to be affected. I rather take it that both of those departments pass on it as a matter of form. I may be mistaken in that, but I haven't anything to the contrary.

Mr. HAVELL. Of course, I can't speak for the Bureau of the Budget or the Attorney General. I can say that orders are returned to us, at times, from both sources, for revision.

Senator McCARRAN. That is as to form?

Mr. HAVELL. No. The Bureau of the Budget is concerned with economic factors, and matters of that kind. Of course, the Attorney General is primarily responsible for the law.

Senator McCARRAN. Thank you.

Mr. BREWSTER. Senator, may I get out of your way, with a final statement?

Senator MURDOCK. Yes.

Mr. BREWSTER. These gentlemen from the Department of the Interior testified that the withdrawal order was based upon the solicitude of the Department for production of magnesium and potassium for war purposes, by withdrawal of the land at the time that the second largest company in the world was interested in drilling the ground—and a great many sections. There seemed to be no doubt that they were going ahead.

Now, what did they do? When they withdrew that land, they left entirely in the hands of this large potash company, the best-known carnallite project in the world.

It happens the president of one of the largest potash companies in America admitted to me, in the presence of witnesses, that it had never been their intention to produce magnesium for war; it was to be a post-war proposition. After leading all the people of Utah to think we had a war industry right at hand, you left it in the hands of one of the largest potash companies in America.

I suggest this Senate committee try to connect up Mr. Bunker's activities, in connection with this withdrawal order.

Senator McCARRAN. We will do that, before we get through.

Senator MURDOCK. Mr. Brewster, that is the point I was attempting to develop. The four conditions imposed had the practical result of monopolizing, rather than decentralizing, the production of potassium.

Mr. BREWSTER. The people of Utah have been left to think they had a war industry in magnesium, down there, that would immediately produce. I took the question to the president of the company, and he said it was a post-war company, from the very start.

Senator MURDOCK. Mr. Mackenzie, you may proceed.

**STATEMENT OF A. G. MACKENZIE, MANAGER, UTAH METAL MINE,
OPERATORS ASSOCIATION, SALT LAKE CITY, UTAH**

Mr. MACKENZIE. I am A. G. Mackenzie, of Salt Lake City, manager of the Utah Metal Mine Operators Association.

This organization is a group of large and small mines which produce more than 90 percent of this State's metal output. I appear at this hearing to present briefly the attitude of our group with respect to the matters under consideration. I am aware that many others wish to present their views to the subcommittee, perhaps in detail. I will devote my statement to the broad facts and the broad principles involved.

Our industry is opposed to withdrawal of public lands without specific action by Congress, after opportunity for hearing and consideration. We are also opposed to extension of the program of leasing mineral lands. The subjects are closely related; and advocacy of either implies a reversion to outmoded conceptions of government, suggestive of the ancient and medieval doctrines of sovereignty, or what in modern dress is generally termed totalitarianism.

Our industry is, and always has been, an advocate of the historic plan of developing the West, and especially the western mineral resources. It is a proved success, and has become a stable factor in western progress. In this State, for illustration, about one-half the entire population normally depends for livelihood on the metal mining industry, and that is true in greater or less degree in all the western mining States.

The prevalent system for the development of the mineral lands in this country is three-quarters of a century old. The procedure is clearly defined by law, not subject to change except through established and orderly legal action, and is well understood. Any citizen, even in the most modest circumstances, may participate, and the rights of the general public are abundantly protected and safeguarded through the laws and the properly constituted agencies to administer and enforce them.

These conditions have resulted in a splendid and efficient utilization of our mineral resources. They have encouraged and made possible full and economic development. They have evolved methods, practices, equipment, and personnel that have become patterns of excellence throughout the world. They have made possible an industry so readily adapted and responsive that it has never failed to meet the demands of any national emergency, as well as all peacetime requirements.

The encouragement of private ventures into the mineral field continues to be important. We have been, and are now, in a period of rapid depletion of known mineral reserves. Stimulation of private ventures is urgently needed. They call for assumption of hazards which Government will never assume, but which never have daunted the initiative, fortitude, and perseverance of those who created the great mineral empire of the West. These accomplishments can never be repeated or approached under the restrictions and disabilities inherent in any plan of leasing. Private enterprise, especially the multitudes of persons of small means, has never failed gallantly to enter into the mineral field, and will continue to do so as long, and

no longer, as it is assured the right to own, operate, or sell what it discovers.

Senator MURDOCK. Is there anyone in the audience who wants to ask Mr. Mackenzie any question?

(No response.)

Senator MURDOCK. Mr. Backman. State your name, Gus, and your official position, if any?

STATEMENT OF GUS P. BACKMAN, PRESIDENT, MOUNTAIN STATES ASSOCIATION, SALT LAKE CITY, UTAH

Mr. BACKMAN. Gus P. Backman, president of the Mountain States Association.

As the representative of the Mountain States Association, an organization composed of the chambers of commerce of the eight Rocky Mountain States, and pursuant to a resolution adopted at the annual meeting of said association held at Denver, Colo., October 30-31, 1943, I wish to present the petition of that organization and its affiliated members, that congressional legislation be adopted through which the policy of withdrawing land for various and sundry reasons by administrative or Executive order, on recommendation of any individual or department, be terminated.

We are unanimously in favor of the repeal of the act passed by the Fifty-ninth Congress on June 8, 1906, and known as an act for the preservation of the American antiquities inasmuch as it has been, and is being, used for purposes other than the original intent of Congress in passing such legislation. This legislation was passed for the purpose of preserving historical or prehistorical ruins or monuments, and to preserve objects of antiquity, not for the purpose of withdrawing hundreds of thousands of acres of land from public use, without the approval of Congress, which has occurred in two instances recently, to wit: The withdrawal of tremendous areas of land in eastern Utah and western Colorado, purportedly for the preservation of dinosaur skeletons, but actually withdrew from the possibility of local development some of the finest power sites in this area; and, secondly, the Jackson Hole National Monument, which was withdrawn in spite of the strenuous protests which had always been made against such a policy by the people of the State of Wyoming, and particularly the people of Teton County.

We further believe that all types of legislation comparable with the Antiquities Act should be immediately repealed, in order to avoid the possibility of a withdrawal by a department of such tremendous areas as has recently occurred in Utah, where approximately 3,000,000 acres were withdrawn by Executive order, without the knowledge or consent of either the Congress or the people of the State of Utah.

We appreciate the fact that from time to time emergencies of various types might develop, through which it may be imperative that some type of order be issued to protect the best interests of the people of the United States; and we recommend that the Congress give study to the adoption of legislation which would grant to the Chief Executive the authority to withdraw, on a temporary basis, any lands where definite proof can be made that the best interests of the public is served through such procedure. Such authority, however, should limit the

effective time of such withdrawal to a period long enough only for the matter to be brought to the attention of the Congress of the United States, for legislative action.

From the experiences of the last several years, it is evident that only through the repeal of legislation granting the right to withdraw lands or establish monuments by Executive order, can the best interests of the States and the general public be served; and we unqualifiedly recommend that the right to permanently withdraw lands or establish monuments on a permanent basis rest in the hands of Congress only.

Senator McCARRAN. Let me say to the gentleman that, immediately following the Jackson Hole withdrawal, the Senator from Wyoming and the senior Senator from Nevada joined in a bill to repeal the Monument Act. That bill is on the calendar of the Senate, but it is one of those bills that will meet, undoubtedly, with departmental opposition. Whenever a measure meets with strenuous departmental opposition, the chances to get the bill through, the chances that it may become a law, become more than lessened. The bill has to go through the Congress, both Houses, and to be signed by the President. There is your "sticker." You will have to get the President's signature to the bill for it to become a law, repealing the Monument Act.

There is so much power vested in the President, by reason of the Monument Act, at least so much power construed to be in the President, that it is not likely you will find an Executive giving up any power. So you have to approach the subject with those things in your mind. I just draw your attention to that, to let you know the difficulties that all of the Western States would have, if they were all united, if all their legislative groups were united, in a movement to pass the measure—which they are not, I am sorry to say.

There is one other thing, Mr. Chairman, about which I want to make an observation here. Those of us who are familiar with the West, who know the significance of the open public domain, do not make our knowledge clear, no matter how hard we try, to those who live in the older and more densely settled regions of the United States. When you get east of the Mississippi River, the conception of what the West is, and what the open public domain is, is an exceedingly limited thing. They look upon us in various ways. They think that those of us who utilize the open public domain out here for grazing purposes have a golden thing thrust into the laps of those who use it.

Every day we are confronted with the statement that we ought to be paying for a subsidy; that the stock-raising industry of the West is being subsidized by the Federal Government, because they utilize the open public domain. We had that statement made in Denver, just a few days ago, by the head of the Isaac Walton League. He made it twice in succession; called it a subsidy that the Government was extending to the livestock industry of the West.

I make mention of this to show you the difficulties that those of us have who represent the Western States, in getting over a conception of what the open public domain is, and what we try to do with it.

The entire effort to put over legislation must be a united effort of all of the Western States in which public lands exist, and that of itself is not always so easy of accomplishment. Then, after we

have the delegations of the 11 Western States, in which public lands exist, we must set about on a campaign to educate our brothers from the East—east of the Mississippi River. Then we must overcome the other more strenuous hurdle of the Department.

Senator MURDOCK. Are there any questions of Mr. Backman?

Mr. BACKMAN. Mr. Chairman, with respect to the location of oil shale, I think the United States Geological Survey will provide you with information about that. The oil shale deposits in this area start about at Grand Junction, or Rifle, Colo., and run in a north and westerly direction into Uintah County, Utah, and into southwestern Wyoming, and not into this area at all.

Senator MURDOCK. Mr. Chairman, may I take this opportunity to make this statement?

Senator McCARRAN. I want you to know you are chairman of this meeting.

Senator MURDOCK. I submit, I will refer to you as "chairman."

In referring to this matter, the newspapers yesterday, in speaking of the oil shale, quoted me as saying one of those plants would be located in the State of Utah. I made no such statement. The statement I made was thus: That the enormity of our coal deposits in the State of Utah, also the enormity of our shale deposits, considered in the light of their richness, in the production of oil and gasoline, would justify the location of a plant in Utah.

I think it would be improper for me, at this time, before the legislation is even passed—it has passed the Senate, but not the House—to make any such statement. I wanted to correct that for those of you who might have read the yesterday afternoon papers.

Senator McCARRAN. I am glad you did that, Senator, because I wanted to locate it in Nevada.

Senator MURDOCK. Our next witness is Mr. James Hooper.

Mr. Hooper, will you state your name?

STATEMENT OF JAMES A. HOOPER, SECRETARY, UTAH WOOL-GROWERS ASSOCIATION, SALT LAKE CITY, UTAH

Mr. HOOPER. James A. Hooper, Secretary of the Utah Woolgrowers Association.

Senator MURDOCK. Proceed in your own way, Mr. Hooper.

Mr. HOOPER. We realize that Public Land Order No. 130 in no way restricts the particular use of the grazing. We have been, and are, opposed to the withdrawal of public lands except by an act of Congress, as we feel, unless we are protected by an opportunity to express our views, that methods such as were used in withdrawal order No. 130, will eventually militate very much against our industry.

We have repeatedly, at our conventions, opposed the withdrawal of public lands, without congressional legislation, for the establishment of national parks, national monuments, and recreational areas. We wish at this time to go on record as opposed to these withdrawals, except through legislation.

We also feel, in view of the feed shortage, from the standpoint of pasture, roughage, and concentrates, that the time has arrived when our food and fiber situation should be helped by grazing the national parks and the national monuments.

This is an opportunity which we did not wish to pass without expressing our wishes. I thank you.

Senator MURDOCK. Are there any questions to be propounded to Mr. Hooper?

Mr. HAVELL. No. I would like to confirm his statement that withdrawal order No. 130 does not restrict the grazing area of the land.

Mr. HOOPER. We realize that. We wanted to go on record as being opposed to those withdrawals without congressional action.

Senator MURDOCK. Thank you. The next witness is Mr. Ora Bundy, of the—State your name, Mr. Bundy, and your official position.

**STATEMENT OF ORA BUNDY, VICE PRESIDENT, NATIONAL
RECLAMATION ASSOCIATION, SALT LAKE CITY, UTAH**

Mr. BUNDY. My name is Ora Bundy, vice president of the National Reclamation Association, member of the publicity and industrial development commission, and director of water resources development for the State of Utah.

I have little to add, in regard to the question at hand, other than to express my apprehension of potential developments that may result from such a widespread withdrawal of public lands, not only in Utah but in any State.

The practice seems to have grown in this western country, and it is not an uncommon occurrence for those in authority to exercise their prerogatives in such matters.

Some years ago dinosaur remains were discovered in eastern Utah, excavations were made, and it was definitely established that this particular area was one of outstanding national importance in regard to paleontology. We, in Utah, were proud of this, proud that we could contribute something of historic value to the scientists and explorers of our country, could establish something of permanent record for the edification of posterity. But soon we were faced with the fact that we saw a national monument established in this area. This, I presume, under the Antiquities Act, which provides machinery for such establishments. To our great consternation, thousands of acres of land in this area were included in the monument, while, as a matter of fact, perhaps a quarter section of 160 acres would provide all of the necessary land for exploration and excavation by paleontologists, and would afford an opportunity for establishment of monuments, museums, or other desirable institutions to perpetuate the scientific discoveries in the area.

On the other hand, the inclusion of the vast acreage above mentioned goes far beyond any conceivable territory which might be productive of further remains of either mammals, reptiles, or fossils through continuing exploration, but does, on the contrary, take in in some of the most valuable potential hydroelectric sites on the Green, Yampa, and White Rivers, such as Echo Park, Split Mountain, Rattlesnake Canyon, and Minnie Maud, the development of which we, of Utah, are eagerly awaiting as a potential asset for the installation of hydroelectric plants to furnish power for the development of the vast phosphate deposits of eastern Utah, southern Idaho, and Wyoming, and for production of additional power to stimulate industries in this area.

As director of the water-resources development for the State, and director to the national reclamation association for Utah, I am deeply concerned with the possibility of the loss of any of the potential values of our waters, or the interference of Federal authorities, to the end that this life-giving asset of ours can be so curtailed as to prevent or prohibit its conservation or utilization to the greatest benefit of our people. Our national reclamation association looks upon this procedure as offering a threat to the very life of reclamation and irrigation, and has so gone on record.

As we understand it, once an area has been included in a national monument, or national park, it has been the general policy over a long period of years to preserve such areas in their primitive conditions, to prevent any development or utilization of such areas for industrial use, to prohibit the cutting of timber, as well as precluding all mining activities, and only under the strictest regulations permitting use of such areas by livestock.

We have recently been apprised of the controversy in the establishment of a national monument in the Jackson Hole area, with which you are all no doubt familiar; and we, here in Utah, are apprehensive, perhaps unjustly so, but nevertheless apprehensive, that some such procedure will result from this recent withdrawal of approximately 3,000,000 acres of land in southeastern Utah.

We are cognizant of the fact that for a number of years there has been under consideration the establishment of a monument in this area to be known as the Escalante Monument. If the present withdrawal should result in the establishment of such an area, it would mean the destruction of our greatest hopes for this area in the production of hydroelectric power at the Dewey and Dark Canyon sites, for the development of the vast magnesium and potash fields of southeastern Utah, as well as create an inhibition against several smaller irrigation and reclamation projects in this end of the State, as well as the merchandising of millions of feet of now merchandisable timber where it has reached the stage that it should be considered as ripe stumpage for future utilization, of which our Commission has spent considerable time and thought toward the development of sawmills and other processing plants, as well as the development of markets for this resource.

Our commission has never taken a stand as being against an orderly withdrawal of areas which will circumscribe any scenic or attractive territory which might contribute to the enjoyment and education of the general public. Conversely, our entire commission feels that all such scenic attractions should be protected, should be withdrawn and placed under proper jurisdiction for preservation in their scenic category for the benefit of all mankind. But we are also just as strongly of the opinion that, to set aside millions of acres and mile after mile of territory included in one large block withdrawal, is not in the public interest.

As above stated, we do not know, but we are apprehensive of the establishment of a monument in this area which, if included in this large acreage now withdrawn, would mean the taking out of circulation of mile after mile and section after section of lands that can have no value as parks or monuments but do not have great values in their mineral deposits, in their waters, in their timbers, and in their stock-

grazing potentialities, all of which would be lost to the citizens of our State upon the conclusion of such drastic action.

Under such instruments as the Commerce Act and the Antiquities Act, and the interpretation placed upon their intent, once brought into use either in connection with our water or our lands is a matter of greatest concern to the people of all these western States.

The continued encroachment of the Federal Government upon what we please to term "States rights" and the threats which such Federal actions bring to the stability of existing property rights has cast upon us a great doubt as to our authority to exercise control over such matters. Therefore, we, as citizens of this State, and we, as a commission, established for the purpose of upbuilding the State through industrial and agricultural development and for the purpose of raising the standard of living of the people of this State, wish at this time to express our keen interest in this matter; to establish our anxiety as to what the ultimate outcome of such wholesale withdrawal of lands may be and to request, of your honorable body, that all necessary steps be taken to safeguard the rights of the people of this State against unnecessary or unjustifiable encroachment by Federal authorities which may result in the loss to us of what we have always been led to believe were our individual and legally protected rights.

Senator MURDOCK. Any questions, Senator McCarran?

Senator McCARRAN. No. I am very much interested in the statement of this matter, as it develops. As it develops, it becomes entirely more interesting, and to my mind, very much more significant as we go along; but I dare say that we could bring 95 percent of the population of Utah to file their respective and individual protests against this withdrawal.

This committee has got authority, at this hearing or at a future hearing, or by other processes, in my judgment, to go deeper into this thing than the mere entertainment of protests.

I am going to make a suggestion to you, Senator, before this committee rises today, of an additional step, or additional steps, that I think we can take to get at the bottom of this thing.

I want to know who initiated this whole proposition. I want to know who was set into the picture, soundly and securely, as it appears now, before the first step was initiated; and who knew of the existence of the then set-up organization; and who, if anyone, was interested, either in the territory or its development, or its future preservation in its present state, or in the industry that might be stimulated by the product.

Those are things that I think this committee will have to dig into, and perhaps deeper than we can now dig into it today.

Senator MURDOCK. Senator, I have certain facts I have accumulated myself with reference to the magnesium deposit that was controlled by the Defense Plant Corporation. I will not take the time to relate them now, but I think I have told the distinguished Senator about them: but it seems to me that probably the whole thing can be traced back to what happened in respect to that drilling.

I might say this much, that after the United States Government, through the Defense Plant Corporation, had expended in the neighborhood of \$70,000 to drill this magnesium, carnallite, and sylvite deposit, the Bureau of Mines then made a report on the discoveries,

which were much greater than anyone ever anticipated, and then recommended to the Defense Plant Corporation that it would take about \$17,000 additional—no, I think it was \$12,000 additional—to determine the best means of mining that enormously rich deposit of magnesium and potash.

It was submitted to the War Production Board, presided over by a man there by the name of Bunker; that is, the Light Metals Division.

Mr. Bunker, at that time, was a director of the Potash Co. that finally took it over. I know for a fact that Mr. Bunker, on being apprised of the recommendation of the Bureau of Mines, reported to the Defense Plant Corporation that the War Production Board was no longer interested in it, and for the Bureau of Mines to get the machinery off the property. But, within a very short time, we find the very company of which he is a director, coming into the picture and taking over the property.

Mr. BREWSTER. Senator, he resigned.

Senator MURDOCK. Yes, he resigned later, I understand, and now claims to have disposed of his stock.

Senator McCARRAN. What I have in mind, assuming all that—the narrative is one thing—the digging in and getting the facts that we must have to establish a record here seems to me now to be the work of this committee; and, with your permission, I am going to make a suggestion later during the day or will put the special investigator of this committee right into the picture, at some time to come.

Senator MURDOCK. I think we could do nothing more beneficial at this time than to do that very thing. I have been reluctant to make any statement that would at all impede or interfere with the Potash Co. in developing that part of our State. I knew these facts at the time that the company came in. It was my opinion then that if that company, then, in good faith, had taken over those deposits, with the idea of developing them, that it was not my business to question it, and I did not; but I am rather disappointed at the way that the thing has gone since. I think that it is high time for us to put our investigator immediately on the matter to find out just what the facts are.

Mr. BROWN. May I suggest that, when you are through with Mr. Bundy, Mr. McCarthy be called next, because he can tell you more about the query of the Senator than anyone here, with reference to Mr. Bunker, whom we consider enemy No. 1 in Utah.

Senator MURDOCK. If there are no questions for Mr. Bundy, we will call Mr. McCarthy at this time.

Will you state your name, Mr. McCarthy?

STATEMENT OF W. S. MCCARTHY, SALT LAKE CITY, UTAH

Mr. MCCARTHY. W. S. McCarthy.

Senator MURDOCK. You have mining interests in Grand County?

Mr. MCCARTHY. Yes.

Senator MURDOCK. You may proceed.

Mr. MCCARTHY. Experience over a period of 20 years, and especially since September 1940, has convinced me of the truth of the statement of the Honorable Hatton W. Sumners in the September 1943 issue of Reader's Digest that—

It is not easy to get a law passed by Congress, but the bureaucrat can toss off a directive while you wait.

He can thus defeat the clearly evident intention of Congress and prevent development of the public domain to the detriment of the whole country.

My testimony, therefore, is intended to show, in a specific case, how that was accomplished by denial, without formal hearing, of rights legally acquired and apparently without regard to equity.

The old-time prospector, to whom we are indebted for bringing to light most of our valuable ore deposits, and who, in case of success, confidently expected the reward which Congress evidently intended would be his, no longer feels that assurance, if the expressions of experienced prospectors which I have heard are to be believed.

Also, he has practically disappeared, since, in addition to his bacon, beans, and burro, he now requires a certified public accountant at one elbow and a first-class lawyer at the other, neither of which he can afford, that his title to what he finds may withstand departmental assault.

Since location in 1919 to this date two small companies, locally owned, have been continuously in actual physical possession of about 2,800 acres in Grand County, Utah, taken up as placer filings.

During all the intervening years these claimants have worked diligently to develop the area, demonstrating their faith in its possibilities by the expenditure of funds of their own, and others whom they were able to interest, in a sum well over \$200,000. The officers of those companies never drew a penny of salary and, almost without exception, paid their own expenses.

Discoveries resulting from their work in this previously unnoticed and unattractive section aroused such interest as to cause a flood of applications for prospecting permits under the act of February 25, 1920, many of which have been held until very recently without effort or apparent intention on the part of the permittee to comply with requirements of that act.

Thus have prospecting rights on public land been held and development of the area retarded by payment of a \$32 filing fee, over a 20-year period.

Following our discovery of oil, applications for permits were granted, covering the ground upon which we were then actually engaged in drilling.

One such \$32 permit, held by a college professor in an Eastern State, was offered to us for a cash payment of \$3,000, plus a one-eighth royalty in oil.

Similarly were others held by opportunists for purely speculative purposes and relinquished promptly when, under new legislation, they were called upon for an annual rental fee of 50 cents per acre.

At the time our filings were made many thousands of acres were open to location. The land was barren, unattractive, and apparently worthless. After long survey and study, being otherwise convinced, these locators took over only such limited acreage as it was felt could be financed, efficiently and profitably developed.

Up to January 1942 the locators and associates had, as stated, spent approximately \$200,000 in development and annual assessment work, duly recorded, in a conscientious endeavor to comply with every rule, regulation, and requirement of Government, confident that their placer filings were valid and would ultimately be approved.

That confidence was buttressed by Supreme Court decisions and, later, by the fact that, on June 16, 1939, the Secretary of the Interior asked the House Public Lands Committee to sponsor legislation (H. R. 6560) giving him authority to remove from the land, and void the claims, of those who had for years retained possession without doing assessment work or meeting other governmental requirements.

The bill failed to pass; thus, according to the Secretary's figures as of that date, leaving 30,000 claimants in possession of 4,000,000 acres of the public domain which "were not being maintained by the performance of annual assessment work."

Evidently Congress did not look with favor upon the legislation requested. Nevertheless, by a departmental ruling, without formal hearing, we were told that our claims were not valid; that we could retain possession of the ground only by relinquishing our assertion of placer rights and applying for permits in lieu thereof, our conscientious effort, large expenditures and important discoveries notwithstanding.

Right here I want to call your attention to the fact that had it not been for the expenditure of \$200,000, or more, by a number of Utah citizens, we would not know today that we have the largest and richest deposit of potash and magnesium in the world.

Senator MURDOCK. Let me ask you, you held your metal claims under placer locations?

Mr. McCARTHY. Yes, sir.

Senator MURDOCK. And had expended \$200,000?

Mr. McCARTHY. Yes, sir.

Senator MURDOCK. Then, in your negotiations with the Department of the Interior, you were required, were you not, in order to continue with your holdings, to give up your rights under your placer locations and apply for leases? Have I followed you correctly?

Mr. McCARTHY. Yes, sir.

Senator MURDOCK. That was in connection with the drilling of the magnesium deposit out there by the Defense Plant Corporation?

Mr. McCARTHY. Yes, sir. In that connection, I would like to make my attitude clear. I have no doubt that the men who passed upon this matter, in the General Land Office, acted strictly within their rights, strictly according to law; but I have always felt that, in view of the great value of the discovery, the conscientious effort put forth, and the money expended honestly by these people, that possibly a little more elasticity in the final decision might have been exercised.

I feel, as I have always felt, and as we had good legal advice, that these placer filings were absolutely valid. The Department does not agree with us, as I say, insofar as the people who pass upon that are concerned. I think that they did it in the utmost good faith, the best of faith. They did that, no doubt; when it comes to the fine interpretation, they are right; but I do think, just the same, that we were entitled to the placer filings.

Senator MURDOCK. Let me ask you, under your placer locations, besides the metal, did you not consider you were the owner of all other minerals that might be found within the boundaries of your claim?

Mr. McCARTHY. That is the way the law was interpreted. You were not required to "call your shots" in those days.

Senator MURDOCK. In the action that was finally consummated between you and the Interior Department, did you secure the rights to the magnesium, carnallite, and sylvite, that was discovered in the area?

Mr. McCARTHY. I think those permits have not yet been issued. As to the status of them, I am not clear. We have the oil rights.

Senator MURDOCK. That is what I wanted to know.

Mr. McCARTHY. I think we have every reason to believe that we will be granted the mineral rights.

Senator MURDOCK. You take the position that the existence of the magnesium deposit there was ascertained by the work that you people did?

Mr. McCARTHY. Yes, sir.

Senator MURDOCK. It was by reason of the knowledge that was secured in your drillings that interest was created in the magnesium later on. Isn't that right?

Mr. McCARTHY. That is absolutely true. I don't think this field would have been uncovered up to this time had things gone on as they were; but we discovered that.

Mr. MURDOCK. I take it you feel now that you people were the original locators of the placer claims and should be given at least some priority in connection with the magnesium and sylvite discovered. Is that your position?

Mr. McCARTHY. Absolutely. I have in my hand here an analysis made by Mr. Herman Harmes, who was then, I think, the State chemist—September 29, 1924. I will show you that for your information. We knew then that we had these values in that ground. The reports of the United States Geological Survey, in 1932, show the same thing.

To continue with my statement: So was development of a potential oil field, and what is said to be the largest and richest deposit of magnesium in the world, delayed and prevented by departmental action, thus depriving the country at war of critically needed supplies.

Recent drilling indicates that the carnallite beds underlie at least several hundred acres. In War Minerals Report 12, at page 2, the Bureau of Mines says:

The deposit contains 78,600 tons of carnallite per acre—
and that—

The possibilities are tremendous.

At page 29 is shown the mineral content per acre, magnesium metal, 13,740,000 pounds; and K_2O (potash), 34,660 tons.

At page 32 is said:

Assuming the deposit to extend over 100 acres, 1,375,000,000 pounds of magnesium metal could be produced from it, or sufficient to supply a plant having an annual capacity of 54,000,000 pounds for 25 years.

Senator McCARRAN. In what form does that come in?

Mr. McCARTHY. Carnallite, magnesium chloride.

Mr. BREWSTER. Carnallite is a mixture of magnesium chloride and potassium chloride.

Mr. BROWN. We can show you samples of that this afternoon.

Mr. McCARTHY. Since late 1940 other factors seem to have conspired to prevent development of this rich section of the public domain.

On September 20, 1940, 7 months before the plans for a magnesium plant at Las Vegas, Nev., were first considered by the War Production Board on April 15, 1941, I wrote Mr. Donald Nelson regarding this deposit. It was again brought to his attention in February 1941 by Mr. Thurman Arnold, then Assistant Attorney General. A second letter to Mr. Nelson, on January 16, 1942, giving reference to three United States Geological Survey reports of analyses of Utah brines, as proof of their richness and value, brought a reply from Mr. Arthur Bunker, Chief of Aluminum and Magnesium Branch, who, according to testimony before the Truman committee, part 6, pages 2180-2181, was executive vice president of the Lehman Corporation, at a salary of \$60,000 per year. Mr. Bunker was also a director of the Potash Co. of America, in which the Lehman Corporation held a substantial interest.

According to press reports of that time, the Office of Production Management was told by the Army and Navy that all existing and projected magnesium plants would produce only three-fifths of their requirements; that the demand was far greater than those plants could supply.

At that critical time, in his effort to bring about development of the Utah deposit in the national interest, Senator Murdock seems to have encountered strong passive resistance, with obstacles at every turn. O. P. M. was interested, but reported to be "not disposed to take any action toward development of the deposits at the present time." The operators were advised to "get in contact with the Dow Chemical Co."

Mr. Bunker told Senator Murdock he already had asked the Bureau of Mines to drill the Utah magnesium deposits, but, strangely, the Bureau of Mines says it never received such a request.

On November 28, 1941, was published the statement that Arthur Bunker "has sent an expert to Utah to examine the brines from wells near Thompsons," but again, strangely, according to those in charge of the ground, the expert did not appear.

I want to state, gentlemen, that these people that are on the ground, in possession of the ground, have been there every minute of the time, and if the expert came there he could not very well get by them.

Senator McCARRAN. When you say "they," whom do you refer to?

Mr. McCARTHY. The men on the ground, in charge of the property.

Senator MURDOCK. Will you give his name, so that when our investigator takes up this matter he will have the information.

Mr. McCARTHY. Mr. W. F. Reeder and Joseph Wedell.

Senator MURDOCK. They reside there?

Mr. McCARTHY. Right on the ground.

Senator MURDOCK. What is their post office?

Mr. McCARTHY. Thompsons, Utah.

Disregarding, and apparently discrediting, United States Geological Survey findings—

Office of Price Administration would make no move and make no recommendation until it received a report from the National Academy of Science.

According to published reports, in January 1942, we had 6 magnesium-producing plants in operation, and in June 1943 the number had increased to 24.

By what miracle did we obtain these 18 additional plants, in view of Mr. Bunker's letter to me of February 6, 1942, file 2003-R, in which he said:

The present difficulties in obtaining adequate amounts of magnesium are not due to lack of satisfactory raw materials, but rather to shortages of electric power, difficulties in obtaining electric equipment and other critical materials.

He found it to build 18 additional plants, but he could not find it to build a plant in Utah.

Quite as obvious a query is, Did the Light Metals Branch require investigation by, and approval of, the National Academy of Science before spending millions of dollars of the taxpayers' money for these additional plants?

Little wonder that the Truman committee, in their report No. 480, part 6, page 4, says:

Evidence gathered by the subcommittee indicated there is still something seriously wrong in the Light Metals Section of the War Production Board, successor of the old Office of Production Management section, which failed so miserably to anticipate and prepare for the greatly increased demand for these metals.

What became of this property as to which the Bureau of Mines says, "The possibilities are tremendous"? It is now in possession of, and being operated by, the company of which Mr. Arthur Bunker was a director.

This particular case seems to clearly demonstrate how development of the public domain may be retarded, and the expressed will of Congress circumvented, by the action of individual Government employees.

Senator MURDOCK. Are there any questions of Mr. McCarthy?

Senator McCARRAN. You are submitting that statement for the record, Mr. McCarthy?

Mr. McCARTHY. Yes, sir.

Senator MURDOCK. Thank you very much, Mr. McCarthy. I will hand this record back to you.

It is now nearly 12:30. I suggest we will recess for lunch until 1:30.

AFTER RECESS

(Met pursuant to adjournment.)

Senator MURDOCK. The meeting will come to order. We will ask Mr. McCarthy to resume.

STATEMENT OF W. S. McCARTHY—Resumed

Senator McCARRAN. May I have a further statement.

Mr. McCarthy, how long have you been acquainted with the territory involved in this hearing, depicted in green on the map?

Mr. McCARTHY. Since 1822 or 1923. That was my first connection with it.

Senator McCARRAN. How did you first become interested in that territory?

Mr. McCARTHY. I was induced to purchase some stock in the Crescent Eagle Oil Co., at first.

Senator McCARRAN. Is that an oil producer?

Mr. McCARTHY. No; not a producer; but they drilled the first well there, which came in with a flow of oil, at that time estimated at from 1,000 to 1,200 barrels. But the well was ruined.

Senator McCARRAN. Let us go back at that. The well came in a flowing well?

Mr. McCARTHY. It blew clear over the derrick, and was estimated, as I say, to be a 1,000 to 1,200 barrel well, at that time.

Senator McCARRAN. When was that?

Mr. McCARTHY. That was in 1924, I think.

Senator McCARRAN. What has been done with that well since?

Mr. McCARTHY. The company was advised by the driller in charge to go deeper; that they had not struck what they wanted.

Senator McCARRAN. How deep were you then?

Mr. McCARTHY. About 3,200 feet. They went down to, I think, below 4,000 feet.

Senator McCARRAN. What were the results there at that time?

Mr. McCARTHY. With a 4-inch hole, it was finally abandoned, with two strings of tools and of the wire cable in the hole and the driller, when he walked away from it, is reported to have said: "Well, they will never open up that well again."

Senator McCARRAN. When you struck your flow, that blew out over your derrick, why did you go further? Why didn't you case up?

Mr. McCARTHY. Because the board of directors, as I am advised, were told by this driller—who was an experienced man—that they would get much greater production at depth.

Senator McCARRAN. Had you carried you casing down to that point?

Mr. McCARTHY. No; it is cased about 2,050 feet, I think.

Senator McCARRAN. Has any other well ever been drilled in that immediate vicinity?

Mr. McCARTHY. Yes. Ten years later we made an arrangement with the Brendel Oil & Gas Co. of Pittsburgh. They went in there looking for potash and magnesium. They drilled about 4,125 feet. They brought their own drillers from the East, very competent men; and at 4,125 feet they abandoned the project. Their drillers urged them at that time, to go on and get an oil well. In their judgment it was there.

Senator McCARRAN. How far from the first well was this later well?

Mr. McCARTHY. It is about 400 feet.

Senator McCARRAN. Did they, in passing through the strata, or the depth where you had struck the flow, encounter oil?

Mr. McCARTHY. Oh, yes.

Senator McCARRAN. Was it a flowing well then?

Mr. McCARTHY. No; but that well has made oil from that day to this, and is still making it.

Senator McCARRAN. Flowing?

Mr. McCARTHY. Just a little trickle of oil in the brine.

Senator McCARRAN. They had your log as you went down? They had your experience to guide them, didn't they?

Mr. McCARTHY. Yes, sir.

Senator McCARRAN. You had had the experience of going beyond your flow, into a different stratum, many thousands of feet beyond, and one would think that they would have taken advantage of your experience?

Mr. McCARTHY. Their reason for abandoning that, at the time, as they said, was that they did not want to ruin the chemical showing; they did not want to strike oil.

Senator McCARRAN. They did not want to strike oil?

Mr. McCARTHY. No; they were afraid of ruining the chemical showing.

Senator McCARRAN. What were they drilling for?

Mr. McCARTHY. Potash and magnesium.

Senator McCARRAN. What did they strike in the way of magnesium?

Mr. McCARTHY. As I recall, the United States Geological Survey Analysis Report, page 591, shows from 42—the latter figure I would not say definitely—but it shows a minimum of 42 percent in the salts. In the Crescent Eagle well it showed as high as 68.8.

Senator McCARRAN. Do you know where the log of those drillings might be at this time?

Mr. McCARTHY. Yes, sir.

Senator McCARRAN. Where?

Mr. McCARTHY. You will find it in War Minerals Report 12, of the Bureau of Mines. There are three logs in that War Minerals Report 12: The Crescent Eagle, the Brendel and the Defense Plant.

Senator McCARRAN. That later well, the well drilled by the Pennsylvania people, was put down in what year?

Mr. McCARTHY. 1932.

Senator McCARRAN. Were any other wells put down in that vicinity?

Mr. McCARTHY. Yes; there was a well drilled by a man named Armstrong, of California, down in the southeast corner of that same section, and that showed considerable oil at a rather shallow depth.

Senator McCARRAN. A flow?

Mr. McCARTHY. No; it did not flow, but it showed a very good sand.

Senator McCARRAN. When you say "a shallow depth," about what?

Mr. McCARTHY. Around 700 feet; something of that kind.

Senator McCARRAN. You said here in your statement this morning that up to January 1942 the locators and associates had, as stated, spent approximately \$200,000 in development and annual assessment work, duly recorded, in a conscientious endeavor to comply with every rule, regulation, and requirement of Government, confident that their placer filings were valid and would ultimately be approved.

I take it, that was put into the well which your organization put down?

Mr. McCARTHY. Yes; it was put into the well; it was put into assessment and development work. Mr. Reeder, who has been in charge of that ground all these years, one of the original locators of it, and the man who brought it to light, realized that if the agricultural lands south of there were to be protected, it would be necessary to excavate reservoirs for the brine, to keep it from running down over the country; and that was a part of the work that applied on the assessment work, and so forth.

Senator McCARRAN. War Minerals Report No. 12, I suggest at this time, become a part of the record. We can acquire that through the agency here.

(The report is as follows:)

[United States Department of the Interior War Minerals Report 12]

THOMPSON MAGNESIUM WELL, GRAND COUNTY, UTAH

Magnesium, potash

SUMMARY

The Thompson magnesium well was drilled for magnesium chloride in Grand County, Utah. The site is about $7\frac{1}{2}$ miles south and west from Thompson on the Denver, Rio Grande & Western Railroad.

A very rich section of carnallite ($\text{KMgCl}_2 \cdot 6\text{H}_2\text{O}$) and sylvite (KCl) was cored at a depth of 3,318 to 3,538 feet. This was the only magnesium-bearing section in the well. A 5.5-foot bed of sylvite began at a depth of 4,152 feet.

The results of the coring were very gratifying. In the 220-foot section, there were 91.6 feet of carnallite beds ranging from 1 foot to 13.5 feet in thickness and assaying 10 to 80 percent carnallite. Many of the thick beds assayed better than 50 percent carnallite. The 91.6 feet averaged 39.5 percent carnallite or the equivalent of 36.15 feet of solid 100-percent carnallite.

The sylvite amounted to 47.5 feet in thickness, averaging 26 percent or the equivalent of 12.35 feet of solid 100-percent sylvite. Converted into K_2O , this represents 7.8 feet of solid K_2O . The potash in the carnallite amounts to the equivalent of another 6.1 feet of solid K_2O , a total of 13.9 feet.

The deposit contains 78,600 tons of carnallite per acre, with a content of 13,740 pounds of metallic magnesium and 13,260 tons of potash. In the sylvite section, there is an additional 21,400 tons of potash per acre. The lateral extent of the deposit has yet to be explored by drilling other wells, but it is considered that this well, with the two old cable-tool test wells prove about 20 acres.

The possibilities are tremendous—the deposit may cover 20 acres, 200 acres, or 2,000 acres. Further drilling is necessary before its extent can be determined.

Material was moved on the location May 1, 1942, and the well spudded in on May 6 and completed to 4,207 feet on August 3. The well was cored continuously from 2,105 to 4,207 feet, with a recovery of 91.17 percent of the cores. Special mud, consisting of Zeogel, Impermex, magnesium chloride flake ($\text{MgCl}_2 \cdot 6\text{H}_2\text{O}$), potassium chloride, and common salt, was mixed to core the very soluble salt between 2,105 and 4,207 feet. This solution kept the cores well out to gage and is responsible for the excellent recovery. There was some etching of the cores in the carnallite section.

INTRODUCTION

The Defense Plant Corporation-Utah Magnesium Corporation Reeder No. 1 well is in the $\text{SE}\frac{1}{4}\text{SW}\frac{1}{4}\text{SE}\frac{1}{4}$, sec. 4, T. 22 S., R. 19 E., Grand County, Utah. The well was drilled on a patented placer claim belonging to W. F. Reeder and under lease to the Utah Magnesium Corporation. It is about $7\frac{1}{2}$ miles south and west from Thompson, Utah, and $1\frac{1}{2}$ miles south of Crescent Junction. The well was drilled on the north end of the plunging axis of the Salt Creek anticline (see fig. 3).

Drilling under the supervision of the Bureau of Mines¹ was done by the Mack Drilling Co. under contract. As stated above, work was begun May 6, and the hole was completed August 3, 1942.

The Reeder No. 1 well was drilled by the Bureau of Mines with the cooperation of the Geological Survey, as agents for the Defense Plant Corporation.

HISTORY OF DRILLING

Many wells have been drilled on the Salt Creek anticline in search of oil and gas. The nearest one is 218 feet S. 40° E. from the well drilled for the Defense Plant Corporation. The Crescent Eagle Oil Co. Reeder No. 1 well was started in 1920 and was finished in 1925 to a depth of 3,972 feet. It was in this well that carnallite was first discovered and many analyses made of the brines

¹ This War Minerals report is based on a field report by C. L. Severy, mining engineer.

and samples while drilling. It was a cable tool test, so no cores were taken. The log of this well and many others of the district is shown in Federal Geological Survey Bulletin 863, *Geology of the Salt Valley Anticline and Adjacent Areas*, Grand County, Utah, by C. H. Dane (1935, 184 pp.).

In September 1928 another well was started 400 feet south of the Crescent Eagle No. 1 Reeder. It was drilled by the Brendell Oil & Gas Co. in NW $\frac{1}{4}$ NE $\frac{1}{4}$ NE $\frac{1}{4}$, Sec. 9, T. 22 S., R. 19 E., and was carried to a depth of 4,125 feet with cable tools. This well was drilled principally to prospect the salt section for magnesium and potash. Samples of the brines from the drilling water were taken and analyzed. A considerable amount of carnallite was reported in this well. It was the showings of magnesium and potassium in the Crescent Eagle No. 1 and the Brendell No. 1 that caused the interest in the area that resulted in the drilling of the Defense Plant Corporation well.

The Utah Magnesium Corporation assembled a block of leases and permits in the area, with secs. 4 and 9, T. 22 S., R. 19 E., as the center, and interested the Defense Plant Corporation in financing the drilling of the well.

PHYSICAL FEATURES

The site of the well, except for about one-fourth mile of dirt road, is reached by hard-surface roads. Moab, Utah, lies 30 miles south; Grand Junction, Colo., 90 miles east; Green River, Utah, 22 miles west; and Salt Lake City, 210 miles north and west.

The area is an upland desert, with an elevation of about 4,800 feet above sea level. The summers are hot, and temperatures of 100° to 110° are not uncommon. The nights are always cool. In the winter the wind whips across the open desert, and the temperatures drop well below zero at times.

The annual rainfall ranges from 6 to 9 inches.

Locally there is very little water. There are no wells with any large amounts of water. Streams in the canyons of Book Cliffs to the north flow the year around but disappear upon reaching the desert. Floy Canyon has a minimum flow of 1.6 second-feet and a maximum of about 6 second-feet. This water could be made available to the magnesium operations by laying an 8- or 9-mile pipe line. The minimum of 25,000 barrels a day should be ample for a chemical plant.

Twenty miles westward is Green River, a fairly large stream which is navigable to its junction with the Colorado River to the south, and the Colorado River is navigable upstream to Moab. Twenty-five miles southwest of the well is the Colorado River, which is slightly larger than Green River. The terrain to the Colorado River is very rough and highly eroded into perpendicular cliffs several hundred feet high. The land slopes gently toward Green River. Water could be piped from Green River for working the magnesium deposits. The lift to the well would be about 800 feet.

DESCRIPTION OF DEPOSITS

The rocks exposed at the surface are Mancos shales of Cretaceous age. The well was started in the Mancos shales, which continued to 1,770 feet, and are hard, brittle, gray, and black, with calcite seams. The Dakota sandstone of Crataceous age extended from 1,770 feet to 1,807 feet, and was hard and well cemented. There was a show of oil from 1,770 to 1,779 feet. Below the Dakota the Morrison formation of Jurassic age was drilled from 1,807 to 2,091 feet. The upper part, from 1,807 to 1,932 feet, was mostly green shales, with some purple members and some thin sandstones. From 1,932 to 2,050 feet was another extremely hard quartzite sandstone, with a showing of oil and gas in the upper part. From 2,050 to 2,091 feet was shale with lime streaks, also believed to be Morrison. Below 2,091 feet, where the top of the salt occurred, to the bottom of the hole at 4,207 feet, was a succession of salt beds in alternation with several sandstones and shales, members of what is believed to be the Paradox formation of the Pennsylvanian series. The salt beds dipped 15 to 65° and the shales 20° to almost vertical. Some of the salt cores showed complete folds and change of dip in the same section of core, indicating that the salt had been squeezed.

Following is the normal stratigraphic section for the area:

Generalized section of rock exposed in area around and adjacent to Defense Plant Corporation Reeder No. 1 well and identified in logs of wells

System	Series	Formation and group	Thickness, feet	Character of rocks
Cretaceous	Upper	Mancos shale	2,000+	Slate-gray marine shale.
		Dakota sandstone	25 to 60	Yellowish quartzite sandstone.
Jurassic	do.	Unconformity:		
		Morrison formation.	700+	Variegated green and purple shales, with some white and yellow sandstone members.
		Sommerville formation.	37 to 58	Chocolate-colored shale and red sandy mudstone.
		Entrada sandstone.	275 to 300	Massive cross-bedded pinkish and grayish white sandstone.
		Carmel formation.	125 to 150	Pink, red, and reddish brown muddy sandstone.
Jurassic?		Navajo sandstone.	300	Pale buff highly cross-bedded sandstone.
		Kayenta formation.	150 to 225	Irregular bedded white, light gray, buff, pink, red-brown, and lavender sandstone.
		Wingate sandstone.	325 to 350	Massive buff cross-bedded sandstone.
Triassic	Upper	Chinle formation	200 to 225	Variegated mudstone and sandstone containing reptilian bones and teeth.
	Lower	Moenkopi formation.	0	Chocolate-brown to red-brown sandy mudstone, muddy sandstone, and shale.
Carboniferous		Permian Cutler formation, including equivalent of Rico in lower part.	225 to 300	Brown to red sandstone with subordinate red to chocolate shales.
		Pennsylvanian Hermosa formation.	0 to 800	Blue greenish and gray fossiliferous limestone interbedded with white, gray, and greenish sandstone.
		Paradox formation	2,100+	Salt, anhydrite, and some gypsum interbedded with gray-black and brown shale; some sandstones.

This generalized section is compiled from a section by E. T. McKnight in Geological Survey Bulletin 908, from a section by C. H. Dane in Geological Survey Bulletin 863, and from well logs.

Geologic section as drilled in Defense Plant Corporation—Reeder No. 1 well

Cretaceous	Upper	Mancos shale	1770	Gray and black brittle shale.
		Dakota sandstone	37	White to light gray cross-bedded sandstone.
Jurassic	do.	Morrison formation	284	Green and chocolate shales, hard quartzitic sandstone with shale and limestone at bottom.
Carboniferous	Pennsylvanian	Paradox formation	2116	Salt (halite) beds and carnallite and sylvite beds with interbedded sandstone and black shales showing oil and gas.

In the Defense Plant Corporation Reeder No. 1 well a vast section of formations is missing. Just how many feet of sediments this represents cannot be stated exactly, as the formations change in thickness over short distance, but it is estimated at 2,800 to 3,000 feet.

The theory of these salt domes is that the salt has been squeezed by tremendous pressures through the overlying formations to their present positions. It is believed that this happened at the site of this well. The salt cores showed folds

and changes of dip that would bear out this theory, which has a very material bearing on the volume of reserves that may be expected.

No detailed geology of the surface formations is shown or contemplated in this report, as this phase has been adequately covered by Geological Survey Bulletins 841, 863, 865, and 908. These bulletins discuss the surrounding territory for many miles in all directions and show most of the logs of the wells drilled in the area. For details of the geology of the area, reference is made to the above bulletins.

OCCURRENCES OF OIL AND GAS

Both oil and gas showings were found in the well at several places. The Dakota sand (1,770 to 1,807) showed some hard, oily sand from 1,775 to 1,781 feet, but it is very doubtful that there is enough porosity in this sand to permit production of oil.

In the lower sand of the Morrison formation (1,935 to 2,019 feet), a show of oil and gas was contained in the core from 1,935 to 1,942 feet. This sand was very hard, and the oil occurred in the fractures in the sand. It is very doubtful that there is enough porosity to make an oil well.

From 3,103 to 3,116 feet were alternating black bituminous shales and sandy shale with some sand that has a strong smell of petroleum and gas. The mud became very gaseous and light and smelled strongly of oil. Some high-gravity oil was collected from the mud stream. During drilling in salt at 3,160 feet the gas broke through and shot the mud 40 feet up in the derrick. At this point a gas well might be completed with a small amount of oil, if there happened to be more than just a pocket of gas. Many of the wells drilled in this area had strong flows of gas which, when let flow, lasted from only a few hours to a few days. It is believed that the conditions in this well are similar. Above this show of gas and oil the crystals in the salt cores contained small globules of oil.

From 4,178 feet to the bottom of the hole at 4,207 feet was a section of black shales, sandy shales, and shaly sands, and the fractures were filled with salt and anhydrite. These formations had a strong smell of gas and petroleum. Gas bubbled from the cores when washed. It is believed that this is the best show of oil and gas in this well.

After drilling was completed and the well shut in, the gas and oil showings increased. The hole was full of the 10.8-pound mud used in coring. A pressure of 500 pounds built up at the top of the casing above the mud, indicative that the pressure in the formation was considerably above hydrostatic and the extra weight of the mud. The well was bled many times through a valve, and several barrels of very light gravity green oil was collected on the pond. It had the appearance of the light Pennsylvania oils of Oklahoma. It is impossible to tell until a proper test is made whether production can be obtained at this point or whether most of this oil is coming from 3,103 feet or 4,178 feet. In other parts of the United States—in oil-producing territory—a showing of so much oil and gas through 4,200 feet of heavy mud would indicate a commercial well. In this area, however, much depends on the porosity of the sands, which, as observed in this well, has been very hard. The sands at 3,103 feet and at 4,178 feet were more porous than any of the upper sands.

The temperature at the bottom of the hole when the well was finished was 114.3° F. Cecil Spicer, of the Geological Survey, who assisted in sampling, believes that it will be lower after a month or 6 weeks. He expects to return later and take a series of readings at intervals of 500 feet throughout the well.

DESCRIPTION OF OPERATION

Since speed, as well as high core recovery, was one of the main considerations on this work, it was decided to use a regular oil-well rotary rig and a Reed B-R wire line core barrel. Both proved very satisfactory, and the results as to time and core recovery could not have been equalled by any other method.

A 96-foot steel tubular derrick was erected, and a Wilson Mogul Unitized draw works with a 60-horsepower Cummings Diesel engine was moved in. The pump was a Gardner-Denver mud pump powered with a 60-horsepower Waukesha gas engine using butane.

The soil at the well location and for several feet below the surface was mostly unconsolidated sand. Mud pits (see fig. 1) were dug with a bulldozer but caved so badly when put into use that a lining of 2- by 12-inch lumber was neces-

sary for the sides. No leakage was apparent after the Aquagel was mixed with the water for the regular rotary mud. Two of these pits were constructed. One was 67.5 feet long by 11.5 feet wide and 6 feet deep, with a capacity of about 900 barrels. The other tank was 16.7 feet wide by 49.5 feet long and 6 feet deep, with a capacity of 880 barrels. While the well was being drilled to the top of the salt, both tanks were used to circulate the drilling mud.

A sectionized portable office and core house (12 by 24 feet) was constructed in Moab and erected at the well. The portion of the building used as a core house was later turned over to the Geological Survey, and another house was built for storing and splitting the cores.

DRILLING

Workmen began to erect the derrick on May 2, and the well was spudded in on the afternoon shift of May 6.

Water was hauled for mixing mud on this well. The nearest supply was from a dam about 4 miles south of the location. This water was exhausted in about 3 weeks because the farmers used it for irrigating. After that, all the water was bought from the Denver, Rio Grande & Western Railroad and hauled from its water tank at Thompson, Utah, a distance of $7\frac{1}{2}$ miles. One thousand four hundred barrels of water were hauled and placed in the mud pits, and 200 sacks of Aquagel added to make the drilling mud.

The well was started with an 18-inch drag bit and the 18-inch hole carried to a depth of 25 feet through the soft surface materials. At this point the formation became hard, and the hole was drilled to 122 feet with a $14\frac{3}{4}$ -inch Hughes rock bit, then reamed to 18 inches to 85 feet to receive the surface string of casing.

Eighty-five feet of second-hand, 16-inch O. D., 70-pound welded pipe was set and cemented with 50 sacks of oil-well cement. The cement filled the hole back of the pipe solid to the surface. The cement was allowed to set 72 hours before the plug was drilled and drilling of the hole continued.

On May 14 drilling was resumed with $9\frac{3}{8}$ -inch Hughes rock bit and continued to 563 feet. At this point the hole was reamed with a $12\frac{1}{4}$ -inch rock bit and carried that size to a depth of 1,627 feet, where the hole was reduced to $8\frac{3}{4}$ inches and drilled to 1,948 feet. From 1,948 to 2,105 feet, $8\frac{3}{8}$ -inch hard-rock Reed Roller bits were used. The top of the salt section was noted at 2,091 feet. At this point a 17-foot core was taken with the Hughes conventional core barrel, and 17 feet of salt core recovered.

After this core was taken, the hole was reamed from $8\frac{3}{4}$ inches to $12\frac{1}{4}$ inches from 1,627 feet to 2,016 feet with Hughes hard-rock bits. It was the intention to set the $9\frac{3}{8}$ -inch casing on top of the salt; but after the $12\frac{1}{4}$ -inch bit was worn out on the job at 2,016 feet in a very hard sandstone and no headway had been made, it was decided to set the pipe at this point (see fig. 2).

A string of $9\frac{3}{8}$ -inch O. D., 40-pound, seamless steel casing was set at 2,016 feet and cemented by the Halliburton Oil Well Cementing Co. with 200 sacks of oil-well cement. This amount of cement was calculated to cement the casing solid for 600 feet above the casing shoe.

While the casing was being run and after 12 joints had gone into the hole, a slip used to hold the casing in place when the next joint was being screwed on fell into the hole. The bolt holding the slip to its framework had sheared off and let it fall. One day was lost fishing for this slip without recovery. The casing was finally run and cemented at 2,016 feet. After 72 hours for the cement to set, the plug was drilled and the hole bailed dry to be sure of a good water shut-off. There was no water in the hole. Three days were lost fishing and milling up the lost slip. The slip was a piece of case-hardened steel 15 inches long, 10 inches wide, and $1\frac{1}{2}$ inches thick. It finally had to be milled up and taken out in pieces.

On May 25 the hole was bailed dry to remove the rotary mud used to drill the hole, and a new pit of rotary mud was mixed, with which to core the salt section. This mud had to be one that would not flocculate in a brine and still have the viscosity and wall-plastering qualities of a regular rotary mud.

Coring was started on the twenty-sixth, but very poor recovery was obtained because small pieces of iron from the milled-up slip and ball and roller bearings from the worn-out reaming bits remained in the bottom of the hole. Coring and fishing were continued until May 29 when R. S. Rathke, the morning shift driller, constructed a most ingenious fishing basket, which recovered a half gallon of balls, rollers, and pieces of slip and completely cleared the hole.

FIGURE 4.—Removing salt from core barrel.

FIGURE 5.—Core box on left, salt core; core box on right, shale with seams filled with salt.

From May 29 and a depth of 2,177 feet, coring progressed (with only one delay of 2 days on account of a broken crown block) until August 3, when the coring was completed and the well finished to a depth of 4,207 feet.

The following tables give the bit and drilling record on the Defense Plant Corporation-Reeder No. 1 well:

Bit used before setting surface pipe

	<i>Feet</i>
18-inch Hughes drag bit.....	0-25
14 $\frac{3}{4}$ -inch Hughes rock bit.....	30-122
18-inch Hughes rock bit (reaming).....	25-87

Average progress per day, 47.8 feet.

REAGENTS

The formations drilled in this well did not make any mud, as all of the shales were hard. To start drilling, 200 sacks of Aquagel were used to give a proper drilling mud with the density and viscosity desired. At one or two places in the hole, some mud was lost in the formations, but this was remedied by adding 2 bales of chopped cellophane and 1 bale of redwood bark, with some Impermex.

For coring the soluble salt sections, a special mud was mixed. This is the first time that a mud of this character has been mixed to use with a rotary drill. The hole was bailed dry and the new mud introduced. To start coring, 400 barrels of water were hauled, and to this were added 700 sacks (70,000 pounds) of magnesium chloride flake $MgCl_2 \cdot 6H_2O$, 20 sacks of Impermex (1,000 pounds), 60 sacks of Zeogel (4,800 pounds) and 3,000 pounds of salt (NaCl). This mud had a viscosity of 37 and weighed 10.5 pounds per gallon.

This mud was used until the first carnallite showed in the cores, then 476 sacks (47,600 pounds) of magnesium chloride flake were added, as well as 100 sacks of KCl (14,500 pounds), 23 sacks of Zeogel (1,840 pounds), and 16 sacks (800 pounds) of Impermex. This mud was used until the hole was finished. The viscosity ranged from 35 to 40 and the weight from 10.5 pounds to 11 pounds per gallon. The average viscosity was 37.9 and the average weight 10.85 pounds per gallon. The mud was not completely saturated with $MgCl_2$ but was saturated with $NaCl$ at all times. The salt cuttings from the well accumulated in large quantities in the mud pit.

The carnallite was so highly soluble that it was dissolved to a depth of about one-eighth inch in all cores.

SAMPLING

A very small, but highly efficient, sampler was used in taking samples of the formations drilled to the top of the salt. This sampler was invented and patented by C. C. Gilbert, the head driller on this operation. It consisted of an arrangement of paddles that continuously scooped samples of the material in the mud from the well and dumped them into a revolving screen. Clear water played on the screen so that a continuous stream of clean washed sample was discharged into a bucket while the drilling was in progress. Samples were caught and sacked representing every 10 feet of formation drilled. From these samples, the log of the well was made from the surface to 2,105 feet. The sacked samples were turned over to Ralph S. King of the Geological Survey for study.

Below 2,105 feet, no sludge samples were taken, as the well was cored from that point to the bottom. The cores were washed clean and placed in corrugated-paper core boxes 2 feet long and 14 inches wide and 2 $\frac{3}{4}$ inches deep, divided into five compartments and holding 10 feet of core. These boxes are made by the Love Box Co., of Wichita, Kans., and were very satisfactory for receiving, storing, and shipping the cores.

STRAIGHT-HOLE TESTS

At various depths in the hole during drilling and coring, a Technical Oil Tool Corporation drift recorder was run to ascertain the angle of the hole from vertical. The contract limited the contractor to 4° from the vertical.

In drilling very hard, steeply dipping formations, it is difficult to keep a hole vertical and make much footage per day. Ordinarily, in drilling hard formations, 6 to 12 points are carried on the weight indicator. One point on the indicator represents 2,200 pounds at the cutting face of bit. In drilling the formations which stood at an angle of 15 to 20° from the horizontal in the Reeder No. 1, two to four points only could be carried on the weight indicator to keep within the limits of deviation as specified on the contract. This slowed the drilling considerably.

Following is the record of the straight-hole test:

Date	Depth, feet	Inclination, degrees	Date	Depth, feet	Inclination, degrees
May 19, 1942	798	3	May 27, 1942	1,495	3 5
May 20, 1942	855	2.75	May 28, 1942	1,615	4 3
Do	925	2	May 30, 1942	1,680	4
May 21, 1942	974	2	May 31, 1942	1,765	4 2
May 22, 1942	1,045	2	June 2, 1942	1,808	4 6
May 23, 1942	1,218	3.75	June 3, 1942	1,896	4 2
Do	1,250	3.75	June 8, 1942	2,040	4 2
May 24, 1942	1,280	3.25	July 10, 1942	2,540	2.5
May 25, 1942	1,354	3	July 24, 1942	12,909	11.2
May 26, 1942	1,405	2.9			

¹ Hole at the time was 3,300 feet, but measuring line was only 2,900 feet long.

A rotary string of drill pipe tends to drill vertically in soft, homogeneous formations, so it is probable that from 3,200 to 4,200 feet, the hole is vertical. No tests were taken below 2,900 feet.

CORING

This is the first time that a large section of highly soluble salts has ever been cored with a rotary rig using a wire-line core barrel. There was considerable opposition to this method of coring, but it was finally decided to try it. The results were highly successful, both as to time and recovery (see figs. 4 and 5).

The wire-line core barrel is a barrel taking cores 2 $\frac{3}{4}$ inches in diameter and a maximum length of 10 feet 9 inches. The barrel is dropped from the surface inside the drill pipe and either floats or is pumped down to the bottom of the hole.

where it clicks into place in the coring bit. At 3,000 feet this takes about 5 minutes. Then the desired length of core is cut and the core band removed from the hole by lowering an overshot barrel on a wire line inside the drill pipe. The overshot barrel engages a dog on top of the core barrel, and both are hoisted to the surface. Lowering and removing the core barrel for each core seldom consume more than 15 minutes. By any other method—either the conventional-type rotary core barrel or with a diamond drill—all the rotary-drill pipe or the diamond-drill rods have to be removed from the hole after each core taken (see fig. 2) and at 3,000 feet, this operation is a matter of from 3 to 4 hours for a round trip against 15 minutes with a wire-line core barrel.

A further advantage of the wire-line core barrel is that the highly soluble salts are in contact with the mud solution in the hole only a brief time. Moreover, short cores a foot or so long can be taken quickly to ascertain why the recovery is poor or when feeling for the top of a pay section, or for many reasons when a short core is desired without delaying operations for hours.

Very often, as much as 120 feet of core were taken in a 24-hour period, with 90- to 100-percent recovery. During the drilling of the well up to the time the salt section was encountered, five cores were taken with the Type J Hughes conventional core barrel; of this, 59 feet were cut and 57 feet recovered as core.

A core was taken from 1,506 to 1,521 feet to determine the dip of the strata in the Mancos shales; 15 feet were cut and 15 feet recovered as core. At the top of the Dakota sand, two cores were taken to examine the sand for porosity and permeability. This comprised a 17-foot section with 100-percent recovery from 1,775 to 1,792 feet. To pick up a lower sand marked "Heavy water sand" in the Crescent Eagle well, a core was taken from 1,932 to 1,942 feet, and 8 feet were recovered. The sand was noted in the core at 1,939 feet and contained showings of oil but not water. At the top of the salt section, a core was taken to be sure the drill was in salt. This core was from 2,105 to 2,122 feet, and 17 feet of salt core were recovered.

After the 9 $\frac{5}{8}$ -inch casing was reamed and set and the lost slip fished from the hole, coring was started at 2,122 feet with the Reed B-R wire-line core barrel. From this point to 2,143 feet, difficulties were experienced in getting any cores. Short cores were attempted, but nothing was recovered. It finally developed that there was a half gallon of small pieces of iron, ball bearings, and roller bearings in the hole, which were successfully removed at 2,143 feet. In this 21-foot section from 2,122 to 2,143 feet only 3 feet of core were recovered. It might be said that coring without any interference started at 2,143 and progressed to 4,207 feet. In this salt section, 2,004 feet were cut and 1,882 feet recovered, showing a recovery of 91.17 percent. Taking all the coring in the entire well above the salt section, as well as in it, and including the section where the junk in the hole gave so much trouble, 2,144 feet were cored and 1,942 feet recovered, making an over-all recovery for both types of barrels of 90.6 percent.

Recoveries with the wire-line core barrel in the various types of formations between 2,143 and 4,207 feet were as follows:

Material	Cored, feet	Recovered, feet	Recovery, percent
Salt (halite).....	1,323	1,219.3	92.2
Carnallite section.....	220	204.5	93.0
Shale and sand sections.....	521	458.2	87.8

In coring from 2,105 to 4,207 feet, 425 cores were taken for an average of 4.95 feet per core. The shortest core taken was 1 foot and the longest 10 feet. The longest salt core removed from the barrel all in one piece (fig. 4) was 9 feet 2 $\frac{1}{2}$ inches.

ANALYSES OF CORES

The carnallite section of cores was cut in half, and then one-half was cut in two with a band saw. One-quarter was sent to the Bureau of Mines chemical laboratory at Salt Lake City, Utah, for analysis, one-quarter was saved for the Geological Survey, and one-half was left in the core boxes for future reference at the core house at the well. A box of cores was cut above and below the carnallite section to insure sampling of all the pay zone. The sampling extended from 3,305 feet to 3,548 feet 9 inches. A sylvite section was also cut and analyzed from 4,152 to 4,157.5 feet.

The table that follows gives the analyses of the cores.

Analyses of cores from Defense Plant Corporation magnesium test well near Crescent Junction, Utah

Sample No.	Depth		Length	Recovery	Analysis, percent ¹										Type of material	
	From—	To—			Mg	MgCl ₂	Carnallite	K ₂ O	SO ₄	CaO	Cl	Na	Insoluble	Acid insoluble

Sample contained 0.45 percent lithium.

SUMMARY OF ANALYSES

The carnallite section, 3,318 to 3,539 feet, contains 91.6 feet of carnallite with an average assay of 39.5 percent carnallite. This is equivalent to 33.15 feet of solid carnallite; in other words, one-sixth of the entire carnallite-bearing section is carnallite.

There are two sylvite sections—(1) 3,419 to 3,518 feet; and (2) 4,152 to 4,157.5 feet. Section 1 contains 42 feet of sylvite with an average assay of 24.0 percent. This is equivalent to 10.1 feet of solid sylvite. Section 2 contains 55 feet of sylvite averaging 41.3 percent. This is equivalent to 2.28 feet of solid sylvite.

ORE ESTIMATES

The following table gives the thickness of the carnallite and sylvite sections and estimated quantities of contained magnesium and potash per acre:

Mineral content per acre

Section	Thick- ness, feet	Carnal- lite, tons	Magne- sium metal, pounds	Magne- sium chloride flake ($MgCl_2 \cdot 6H_2O$), tons	Sylvite (KCl), tons	Equiva- lent K_2O , tons
Carnallite.....	36.15	78,600	13,740,000	57,500	21,100	13,260
Sylvite.....	12.38				34,000	21,400
Total.....		78,600	13,740,000	57,500	55,100	34,660

The third column gives the tons of carnallite, the fourth column this tonnage expressed in pounds of magnesium metal if extracted, and the fifth column the amount of magnesium chloride flake in 78,600 tons of carnallite. The sixth column is the amount of sylvite (KCl) and the seventh column this same tonnage expressed in potash.

DRILLING COSTS

All the invoices for materials, labor, and other expenses on this operation are not complete, but a close estimate can be made on these. The well has cost about \$78,250. There are on hand considerable supplies of chemicals, rotary muds, cement, bits, and other materials that can be used on future wells or returned or sold for cash. These amount to about \$8,500 which should be credited on the cost of this well. With this credit, the total cost was \$69,750. The cost per foot for the 4,207 feet was \$16.58.

SOURCES OF POWER AND WATER

Two potential sources of power are offered in eastern Utah—a steam plant or a hydroelectric plant. The first could be erected at Green River, Utah, where water is available; and coal could be obtained from Seco, 35 miles east of Green River, or from the Price fields, 68 miles west of Green River. A second source would be the Dewey Dam power project planned at some future date on the Colorado River near the Colorado-Utah line.

Ample water for a steam plant or treatment plants is available from the Green River at the town of Green River, Utah, or from Floy Canyon.

SOLUTION TEST

If it is desired to use magnesium salts from the Thompson area at one of the existing plants or at a new plant, the methods of recovering the carnallite from the stratified layers should be investigated. If it is likely that this source of magnesium will be used, the Bureau of Mines will undertake to test solution methods for mining stratified layers. It is recommended that the solution testing be done in the near future, while the equipment and machinery of the Mack Drilling Co. are on the ground. The time for completion of this test is estimated at less than 90 days and the cost at \$35,000.

To make a solution test on the Reeder No. 1, it will be necessary to run a string of 7-inch O. D. casing to the top of the carnallite zone at 3,318 feet and cement it for 300 feet to give the pipe a good anchor in the shale zone at 3,186 to 3,234 feet and to shut off the oil and gas formations at 3,103 to 3,116 feet. If an appreciable amount of gas oil comes from the bottom of the hole, it will be necessary to cement the bottom of the hole to shut this off before the test is made.

For this test, some steel tankage must be provided and water hauled from Thompson or Green River. At the beginning, the hole will contain about 150 barrels, so the test could be started with 500 barrels for the first circulation and the quantity increased as the cavity below becomes larger.

The water should be pumped into the 7-inch casing and taken out through the tubing or drill pipe, whichever is used. The tubing should be set at the bottom of the carnallite section at 3,538 feet or for a limited test at the bottom of some rich carnallite bed. The water should be circulated continuously and samples of the brine taken every 2 hours and analyzed at the well to ascertain its magnesium chloride, potassium chloride, and sodium chloride content. From these analyses, the length of time to circulate would be determined. Eventually by continuous circulation a stable brine would result, which should contain about 26.44 percent $MgCl_2$, 1.68 percent KCl , and 0.87 percent $NaCl$. It might be advisable to remove the brine before such a solution results and retain a higher percentage of KCl for extraction.

When the first batch of water is sufficiently saturated, a second test should be started and the results observed. If tests are made over a period of about 20 days, a very good idea should be had of the kind of brine it will be possible to produce by the solution method.

POSSIBLE FUTURE DRILLING

If pumping from this single test well should prove unsuccessful, additional wells should be drilled about 400 feet from the present Reeder No. 1. The future drilling holes should be deviated from the perpendicular so that they would approach the cavity formed by leaching the present Reeder No. 1 well. This work, however, should be held in abeyance until testing from a single well is completed. The additional wells can be drilled at a cost of about \$60,000 each, and a single rig would drill one well in about 2½ months.

CONCLUSIONS

1. A deposit of magnesium- and potassium-bearing salts has been found in Grand County, Utah. These salts occur at a depth of 3,320 to 3,540 feet. The magnesium occurs as carnallite in a layer 92 feet thick, containing an average of 40 percent carnallite. The potassium occurs partly as carnallite and partly as sylvite. The sylvite occurs in two beds—one 47.5 feet thick containing 26 percent sylvite and the other 5.5 feet thick containing about 80 percent sylvite.

2. Correlation of this hole with two previous holes drilled in the region indicates that the magnesium-bearing layer extends over an area of at least 20 acres. Assuming uniform thickness over this area, the deposit will contain an equivalent of about 275,000 tons of magnesium metal and 693,000 tons of potash.

3. The salt beds consist chiefly of sodium chloride, carnallite, and potassium chloride, with small amounts of calcium and sulfate.

4. The exceptional thickness of the carnallite beds and other geological factors indicate that the carnallite probably extends over an area of at least 100 acres.

5. Assuming the deposit to extend over 100 acres, 1,375,000,000 pounds of magnesium metal could be produced from it, or sufficient to supply a plant having an annual capacity of 54,000,000 pounds for 25 years.

6. Because of the depth of these salt deposits and the presence of gas and oil in the surrounding formations, it will not be practical to mine them by underground methods.

7. Probably the best method of recovering these salts would be to remove them in aqueous solution by circulating water through a system of drill holes.

8. Adequate water for mining and chemical treatment plant is available within 15 miles of the deposit.

9. Enough coal and water are available for operating a steam power plant at Green River, Utah, having a capacity of 60,000 kilowatts. This power would permit production of 54,000,000 pounds of magnesium a year.

10. A second source of power would be the Dewey Dam power project proposed by the Bureau of Reclamation on the Colorado River near the Utah-Colorado line.

11. The gross cost of drilling the Defense Plant Corporation-Reeder No. 1 well to a depth of 4,207 feet was \$78,250 (minus an allowance of \$8,500 for excess supplies and equipment that can be returned or sold; the net cost was therefore \$69,750). It is estimated that additional wells would cost \$60,000 each.

12. The soluble-salt mining of stratified layers has not been tested. The Bureau of Mines will undertake to test one well if it is likely that the material will be used in the near future. The cost of this test is estimated at \$35,000. Additional funds are necessary if this work is to be done.

RECOMMENDATIONS

In consideration of the foregoing conclusions, the Bureau of Mines recommends:

1. That solution mining at the present Reeder No. 1 well be undertaken if material from the Thompson area is determined by the War Production Board to be needed at one of the present magnesium plants or at a plant to be built in the future. The cost of a test to determine its practicability is estimated at \$35,000.

2. That laboratory work be done to determine methods of segregating the magnesium either as pure oxide or chloride from the brine pumped from the well.

3. That, if and when a plan for production has been sufficiently organized to justify the expenditure, three or four more holes be drilled to extend the reserves further, test the pumping of several wells, and make the brine available more quickly.

APPENDIX

Sample log,² Defense Plant Corporation, No. 1 Reeder magnesium test well

<i>Depth, feet</i>	<i>Lithology</i>
0- 20	Shale, hard, brittle, grayish tan, some black; trace of gypsum; the few feet of very fine wind-blown surface sand seems to be unrepresented in the sample.
20- 40	Shale, as in preceding sample, 85 percent; gypsum, fibrous, 15 percent.
40- 80	Shale, hard, brittle, black and grayish tan.
80- 100	Shale; trace of red clay ironstone and yellowish calcite shell fragments.
	85 feet of 16-inch casing set and cemented from bottom to top.
100- 120	Shale, hard, brittle, grayish tan to light tan, and black.
120- 260	Shale, hard, brittle, flaky, black.
260- 280	Shale, trace of gypsum, fibrous, and calcite, clear crystalline.
280- 360	Shale, hard, brittle, flaky, black.
360- 380	Shale, trace of clear crystalline calcite.
380- 420	Shale, hard, brittle, flaky, black.
420- 440	Shale, trace of clear crystalline calcite.
440- 460	Shale, hard, brittle, flaky, black.
460- 480	Shale, some selenite.
480- 500	Shale, hard, brittle, flaky, black; some crystalline calcite. Probably crossed fault, as began to lose circulation.
500- 520	Shale, prismatic calcite. Losing circulation badly.
520- 540	Shale, as in preceding samples. (Reamer sample.)
540- 560	Shale (reamer sample).
560- 580	Shale, as in preceding samples.
580- 600	Shale, some fibrous calcite.
600- 620	Shale, hard, brittle, flaky, black.
620- 640	Shale, hard, brittle, flaky, black.
640- 660	Shale, hard, dark gray.
660- 680	Shale, some black.
680- 740	Shale, hard, brittle, flaky, black.
740- 780	Shale; some fibrous calcite.
780- 820	Shale; some crystalline calcite.
820- 840	Shale, hard, brittle, flaky, black.

² By Ralph H. King, geologist, Federal Geological Survey.

Depth, feet	Lithology
840- 860	Shale; sandstone, very fine, poorly sorted, very calcareous (porosity very slight), gelatinizes in HCl.
860- 980	Shale, hard, brittle, flaky, black.
980-1,000	Shale; some limestone, shaly, black, containing crystalline calcite. (Driller logs shell at 989-990.)
1,000-1,020	Shale, hard, brittle, flaky, black.
1,020-1,060	Shale; some fibrous calcite.
1,060-1,100	Shale; some shell fragments.
1,100-1,120	Shale, hard, brittle, flaky, black; some fibrous calcite.
1,120-1,160	Shale, as in preceding sample.
1,160-1,180	Shale; trace of gray shale.
1,180-1,200	Shale, hard, brittle, flaky, black; some fibrous calcite and fragments of shells (<i>Inoceramus</i>).
1,200-1,260	Shale, as in preceding sample.
1,260-1,280	Shale; some pyrite and calcite.
1,280-1,300	Shale; some bentonite, opalescent, sandy, pale greenish gray ground mass, grains (shards) mostly brown.
1,300-1,340	Shale, hard, brittle, flaky, black, pyritic (octahedrons).
1,340-1,440	Shale, hard, brittle, flaky, slightly pyritic, dark gray.
1,440-1,460	Shale, hard, brittle, flaky, black, containing some shell fragments.
1,460-1,480	Shale, abundant light-color iridescent and granular shell fragments.
1,480-1,500	Shale; some bentonite.
1,500-1,520	Shale, hard, brittle, flaky, dark gray; some calcite and shell fragments; some bentonite.
1,506-1,521 (Core)	Shale, hard, brittle, dark gray to black, thin bedded, petroliferous along joints. Very fossiliferous, especially in lower part, containing abundant <i>Inoceramus</i> and fish scales, and one <i>Prionocyclas wyomingensis</i> Meek (identified by J. B. Reeside, Jr., and by him correlated with Carlile zone of Mancos shale, approximately equal to Ferron sandstone of western Book Cliffs). Three 2- to 3-inch bands of bentonite at 1,512, 1,513, 1,514 feet. Bentonite contains abundant shards of brown glass. Bedding planes dip 15° from horizontal: $\pm 3^\circ$ deviation of hole from verticle.
1,520-1,540	Shale, hard, brittle, flaky, black, containing abundant calcite, brown to tan, some white, granular, probably shell fragments or fillings; some bentonite.
1,540-1,560	Shale, hard, brittle, flaky, black, pyritic, containing fish remains and some calcite; some bentonite, light to medium greenish gray or tan.
1,560-1,580	Shale, dark gray, pyritic; some calcite, crystalline, white to light brown.
1,580-1,600	Limestone, glauconitic, gray to dark gray, containing some bentonite and sand, gelatinizes in HCl. and shale, pyritic, glauconitic, dark gray to black; some bentonite.
1,600-1,620	Shale, as in preceding sample; some bentonite.
1,620-1,643	Shale, hard, pyritic, dark gray to black, slightly calcareous; some bentonite.
1,640-1,700 (Sic)	Shale, hard, pyritic, dark gray to black, slightly calcareous; some bentonite.
1,700-1,740	Shale, hard, dark gray, somewhat pyritic.
1,740-1,770	Shale, hard, somewhat pyritic, black.
1,770-1,774	Sandstone, moderately well sorted, fine, tightly cemented, pyritic, white to very light gray. (Driller logs sand 1,770-1,771, shale 1,771-1,772, sand 1,772-1,774.)
1,775-1,792	Sandstone, light gray, cross-bedded, cut by thin shale partings: thin shale band at 1,789 feet. From 1,775 to 1,781 is oily, rest is dry (Core) and shaly, from 1,790 to 1,792 very hard. Sand grains moderately well sorted, fine to medium, tightly cemented. (Recovery 18 feet 3 inches).
1,792-1,807	Sandstone, as in sample 1,770-1,774.
1,807-1,810	Shale, gray, moderately soft.
1,810-1,811	Shale, some waxy shale.
1,811-1,812	Shale, gray to dark gray, waxy; traces of chalcedony and jasper.

<i>Depth, feet</i>	<i>Lithology</i>
1, 810-1, 820	Shale, gray to dark gray, waxy; some chalcedony and jasper.
(Sic)	
1, 820-1, 825	Shale, gray to greenish, waxy; trace of chalcedony and flint.
1, 825-1, 845	Shale, grayish green, soapy.
1, 845-1, 850	Shale, some sandstone.
1, 850-1, 855	Shale (driller logs sandstone 1,849-1,853).
1, 855-1, 860	Shale, grayish green, soapy.
1, 860-1, 865	Shale, pyritic.
1, 865-1, 870	Shale, mottled with some black.
1, 870-1, 875	Shale, light gray.
1, 875-1, 890	Shale, somewhat sandy.
1890-1905	Shale, bluish green, waxy, slightly pyritic.
1905-1915	Shale, light to greenish gray; stringers of calcite.
1915-1920	Limestone, dense, light gray to gray, and shale.
	(Driller logs limestone 1913-1917.)
1920-1925	Shale and limestone, as in preceding sample; some dense crystalline calcite. (Driller logs limestone 1921-1923.)
1925-1930	Shale, green and gray, somewhat waxy.
1930-1932	Missing. (Driller logs shale.)
1932-1942	(Recovery 7 feet 8 inches or 80 percent.) Upper 2 feet 6 inches sandy green shale; next 3 feet hard dense sandstone containing 3 inches oily band near top; bottom 2 feet 2 inches hard broken sandstone, somewhat oil, cut by shale streaks. Sand is medium grain, not well sorted, firmly cemented with silica. Grains pull out of matrix. Color of sand is white to light gray speckled with black; of shale, gray to grayish green.
(core)	
1940-1945	Sandstone, hard, subquartzitic, medium grain, poorly sorted, white to light gray speckled with black. No porosity.
1945-1950	Missing.
1950-1955	Sandstone, as in example 1940-45.
1955-1960	Missing.
1960-1965	Sandstone, fine to medium, tightly cemented, white and pinkish tan.
1965-1970	Sandstone, fine to medium, tightly cemented, white.
1970-1975	Sandstone, and some shale, reddish brown.
1975-1980	Missing.
1980-1985	Sandstone, white, and shale, reddish brown, brittle.
1985-1990	Sandstone, reddish brown.
1990-1995	Missing.
1995-2000	Sandstone, fine, well-cemented, white to light gray.
2000-2010	Sandstone, some gray.
2010-2015	Sandstone, conglomeratic, siliceous pebbles cemented with silica, white to light gray, glassy to chalky cement.
2015-2020	Sandstone, some shale. (Driller logs shale 2019-2022.)
2020-2025	Shale, gray green, waxy, and sandstone, white and gray.
2025-2035	Sandstone, as in preceding samples, but somewhat finer, more brown.
2035-2040	Sandstone, very fine, light gray, cemented very tight with silica.
2040-2050	Sandstone, but darker gray.
2050-2055	Shale, gray, brittle, but soft; some violet brown, brittle.
2055-2060	Shale, medium to light gray, less brittle than higher shales.
2060-2070	Shale, stringers of calcite.
2070-2085	Shale, and some soft limestone stringers, white to light gray.
2085-2091	Shale, gray, calcareous, and limestone, shaly, dark gray to black, containing stringers of white calcite.

Senator McCARRAN. You said this morning that—

since late 1940 other factors seem to have conspired to prevent development of this rich section of the public domain. On September 20, 1940, 7 months before the plans for a magnesium plant at Las Vegas, Nev., were first considered by the War Production Board on April 18, 1941, I wrote Mr. Donald Nelson regarding this deposit.

Have you a copy of that letter?

Mr. McCARTHY. Yes, sir.

Senator McCARRAN. May we have it for the record?

Mr. McCARTHY. Yes, sir.

Senator McCARRAN. You will furnish that this afternoon to us, please?

Mr. McCARTHY. Yes, sir.

Senator McCARRAN. "It was again brought to his attention in February 1941, by Mr. Thurman Arnold, then Assistant Attorney General." Have you a copy of that letter?

Mr. McCARTHY. Yes, sir.

Senator McCARRAN. May we have a copy of your copy for the record, please?

Mr. McCARTHY. As a matter of fact, you may have a copy of anything I have pertaining to it.

Senator MURDOCK. Senator McCarran, may I at this time interrupt to ask the witness: How did Thurman Arnold know anything about this section?

Mr. McCARTHY. I wrote him about it, the peculiar circumstances in that connection.

Senator MURDOCK. I don't want to interfere with the Senator's examination.

Mr. McCARTHY. I would like to explain that here.

Senator McCARRAN. That is all right.

Mr. McCARTHY. In 1935 Mr. Reeder and I decided that in order something done we would have to go out and look for it. Mr. Reeder went to Pittsburgh trying to interest people. He did succeed in interesting quite a number of people in the business.

I want to say this, further, that we have never tried to promote this thing locally by the sale of stock and things of that kind. The Crescent Eagle Oil Co. is an incorporated company, and its stock is listed; but insofar as our efforts were concerned, we took this property to people of ample means, people in the business, people who had available experts to go and examine it, and find out what they were doing and what they were getting, afforded by every facility to know just what they were getting into. Then if they wanted to go ahead they were the people we wanted.

So Mr. Reeder went east and did interest a number of people. They all asked him the question: "Why did Brendel quit?"

He invariably told them: "There is your telephone, ask him."

After they had talked with him they lost interest.

In Mr. Brendel's office he encountered a man, a casual acquaintance. They got pretty well acquainted. He was an oil driller. This driller knew a lot of people that would be interested and would be willing to help Reeder. Finally this man came out here.

Senator McCARRAN. Who?

Mr. McCARTHY. This driller I speak of that Reeder got acquainted with. Shortly after he came out we succeeded in interesting some California people who came in to drill. We were told that this driller was one of the best in the United States, that there were no better than he was. So Reeder insisted upon putting him in charge of the work for these California people. That was done. They started to deepen the Brendel well, cleaned it out, and drilled it. Before long we lost a thousand feet of cable by this driller. He twice nearly run the tools through the crown block. He twice started the engine with men at work on it. Reeder finally fired him.

Reeder went into town one night to get a telegram. As he crossed the street something hit him. He thought at first it was an automobile. It was this driller. My own opinion is that there was a deliberate attempt at murder, to get Reeder off that ground. Well, he recovered.

Senator McCARRAN. You say you think there was a direct attempt at murder?

Mr. McCARTHY. Yes, sir.

Senator McCARRAN. Do you suspicion someone?

Mr. McCARTHY. Yes, sir; I certainly do.

Senator McCARRAN. Who is it?

Mr. McCARTHY. The driller, and maybe somebody behind him. I don't know that. That is merely a suspicion.

Senator McCARRAN. Have you any idea who would be behind it?

Well, no, I should not say that. But another peculiar feature of that, is this: The water tanks used in drilling that well are open at the top. A few days later, having a little trouble with the boiler, they examined these tanks, and there in the bottom was a lot of paper that had been shredded up and thrown into that water tank, to be sucked into the flues of the boiler.

A search of the cabin in which this man lived, in Thompson, developed a piece of a railroad claw-bar, about 2 feet long, that had been sawed off diagonally. Our idea is that the intention was to drop that into the well. If it got in there nobody would ever fish it out. That well would have been finished. That is one of the things that

leads us to believe that somebody did not want that territory developed.

The oil has been coming out of that ground every day since 1924. It is coming today from the Defense Plant well, rich, fine, 45 $\frac{1}{2}$ ° gravity oil, but in small quantities. It is coming from the Brendel well today.

Senator McCARRAN. When you say "the Defense Plant well," what well do you refer to?

Mr. McCARTHY. That is the well drilled by the Defense Plant Corporation, on the 3d of August 1942.

Senator McCARRAN. What is the depth attained in that well?

Mr. McCARTHY. I think that was 4,207 feet, as I recall it.

Senator McCARRAN. Were they in the same vicinity as your first well?

Mr. McCARTHY. The Brendel is 400 feet from the Crescent, I think, and the Defense Plant well is about—oh, approximately 200 feet in the other direction from the Crescent well.

Senator McCARRAN. They had the advantage of the log of your well?

Mr. McCARTHY. Yes, sir.

Senator McCARRAN. When they passed through the stratum where your well became a gusher or a flower, what was the result in their well?

Mr. McCARTHY. I would not attempt to say, off-hand, Senator; but I suggest that Mr. Severy, who was in charge of the drilling of that well, for the Defense Plant Corporation, is in the room, and could answer that, without doubt.

Senator McCARRAN. Mr. Severy, can you answer my question?

STATEMENT OF C. L. SEVERY, BUREAU OF MINES, SALT LAKE CITY, UTAH

Mr. SEVERY. What was the question?

Senator McCARRAN. Did the Defense Plant Corporation well have the advantage of the log and the history of the first well, which I choose to term the McCarthy well?

Mr. SEVERY. Yes, sir.

Senator McCARRAN. If so, what was the result when the Defense Plant Corporation well went through the stratum or formation where the McCarthy well became a gusher?

Mr. SEVERY. We went through a sandy shale at about 3,300 feet, and it had a strong petroleum odor. We were running a rotary. In running the drill you have a hole full of mud; but the gas came up through the mud. We had not passed that more than 60 feet and the gas pressure put the mud about 40 feet from the derrick.

Senator McCARRAN. Was there oil then?

Mr. SEVERY. There was some oil there; but it showed about 41.96 light gravity Pennsylvania crude oil; about 42 gravity.

Senator McCARRAN. You had a flower, then?

Mr. SEVERY. Sir?

Senator McCARRAN. The oil was flowing?

Mr. SEVERY. No; the oil never flowed. It came up through the 4,200 feet of mud, 10-pound mud; and when the well was shut in there was a pressure on top of the mud, about 800 pounds.

Senator McCARRAN. Why didn't you make the test for oil at that point?

Mr. SEVERY. They would not let me.

Senator McCARRAN. Who would not let you?

Mr. SEVERY. The War Production Board, or the Defense Plant. I made a report directly to the Defense Plant. We should have made drill stem tests of the one at 3,300, and the one at 4,200. That should have been done. After the well was completed, we tried to get them to allow us to make stem tests; and they would not do it.

Senator McCARRAN. Let me get that last statement.

(Last part of answer read, as follows: "After the well was completed, we tried to get them to allow us to make stem tests; and they would not do it".)

Senator McCARRAN. When the well was completed, the Bureau tried to get the War Production Board, or the Defense Plant Corporation—

Mr. SEVERY. The Defense Plant Corporation.

Senator McCARRAN (continuing). To permit you to make stem tests. Is that it?

Mr. SEVERY. Yes, to make some drill stem tests on the oil showing.

Senator McCARRAN. What was the outcome of that?

Mr. SEVERY. They were all through. They did not allow us to do any more work.

Senator McCARRAN. That is, the Defense Plant Corporation was through?

Mr. SEVERY. Yes, sir.

Senator McCARRAN. You got that direct statement, that they were through, and they did not want you to do any more work?

Mr. SEVERY. I got all my orders from the Defense Plant Corporation, out of Washington.

Senator MURDOCK. Who was that?

Mr. SEVERY. The name was Faulkner.

Senator MURDOCK. I think you should state, for the record, your position.

Mr. SEVERY. My position?

Senator MURDOCK. Yes.

Mr. SEVERY. Mining engineer, Bureau of Mines.

Senator MURDOCK. Mining engineer, Bureau of Mines?

Mr. SEVERY. Yes, sir.

Senator MURDOCK. Your full name is?

Mr. SEVERY. C. L. Severy.

Senator MURDOCK. You were in charge of the well?

Mr. SEVERY. In charge of the well.

Senator McCARRAN. You pulled your tools out of the hole and left the hole?

Mr. SEVERY. We left the hole full of mud.

Senator McCARRAN. You left the hole full of mud?

Mr. SEVERY. Yes.

Senator McCARRAN. You never shot for oil?

Mr. SEVERY. We never made any tests.

Senator McCARRAN. You made no tests whatever?

Mr. SEVERY. No.

Senator McCARRAN. What did you find, with reference to magnesium?

Mr. SEVERY. We found a very thick bed of carnallite and sylvite.

Senator McCARRAN. At what depth?

Mr. SEVERY. 3318 to 3538.

Senator McCARRAN. That is over 200 feet?

Mr. SEVERY. Yes.

Senator McCARRAN. What did you do?

Mr. SEVERY. We cored the whole well, from the time we hit the salt, to the bottom. We took cores about $2\frac{3}{8}$ inches in diameter.

Senator McCARRAN. Was it solid?

Mr. SEVERY. Yes.

Senator McCARRAN. It was not brine?

Mr. SEVERY. Not a brine; no. You can look at it. We recovered 91.17 percent recovery.

Senator McCARRAN. About how thick was it?

Mr. SEVERY. How thick was what?

Senator McCARRAN. The depth of your stratum in which these cores were taken, in which you found magnesium.

Mr. SEVERY. We cored 2,100 feet altogether, and the carnallite section was from 3,318 to 3,538—220 feet; but we had beds of various grades. Some of it would be 10 percent carnallite and 90 percent salt. Some of it would be 80 percent carnallite and 20 percent salt. It is a mixture of carnallite and sylvite.

Senator McCARRAN. You found that stratum below the stratum in which oil had been found before. In other words, oil came in at about 3,000?

Mr. SEVERY. Yes, about 3,100.

Senator McCARRAN. And you found this deeper?

Mr. SEVERY. Yes, this is below that oil showing.

Senator McCARRAN. What were you drilling for?

Mr. SEVERY. We were drilling for carnallite.

Senator McCARRAN. So you were not interested in the production of oil, nor the finding of oil?

Mr. SEVERY. No; and that is probably the prime reason that there was no money spent on drill stem tests.

Senator McCARRAN. You are still with the Bureau of Mines?

Mr. SEVERY. Yes, sir.

Senator McCARRAN. In your judgment, as an engineer, was there oil in commercial quantities in that region? That is a pretty tough question.

Mr. SEVERY. Yes, that is a tough question. The one thing that is characteristic of that whole district is the fact that the sandstones are very hard. There is very little permeability. You do get these flashy showings of oil and gas, when you are drilling with cable tools. Sometimes the tools come out of the hole and knock the crown block out, and then in 2 or 3 days it is gone.

Senator McCARRAN. That is gas?

Mr. SEVERY. That is gas, yes. Now, without making the drill stem test, it is hard to say whether those were commercial or not.

Senator McCARRAN. In other words, you might get a flow today, such as referred to by Mr. McCarthy, that had a large volume of gas behind it?

Mr. SEVERY. Yes.

Senator McCARRAN. That might fade out very promptly?

Mr. SEVERY. That is it; and, without properly testing it, you can't say whether there is any commercial oil in that well, or not.

Senator McCARRAN. But there is no doubt about the carnallite?

Mr. SEVERY. There is no doubt about the carnallite.

Senator McCARRAN. Where is that log of your drilling?

Mr. SEVERY. It is in my report.

Senator McCARRAN. Have you a copy of that report available?

Mr. SEVERY. I have, at the office.

Senator McCARRAN. I wonder if the committee might have it.

Mr. BROWN. I have a copy of it in my office, Senator.

Senator McCARRAN. All right, so long as we get a copy for the files of this committee.

Senator MURDOCK. Is the report you speak of the original report you made to the Bureau of Mines, or is it the report after it had been edited by the Bureau of Mines, and published?

Mr. SEVERY. All our reports are edited before they are printed.

Senator MURDOCK. Do you have a copy of your original report?

Mr. SEVERY. Yes.

Senator McCARRAN. Could we have that?

Mr. SEVERY. I don't know.

Mr. BROWN. I have two, I think, so I will let you take one of them.

Senator McCARRAN. Of his original report?

Mr. BROWN. I have Mr. Severy's original report, a photostatic copy of that. I will let you take either one you want.

Senator MURDOCK. I think, Mr. Chairman—if I may call you that again—that we should have the original report made by Mr. Severy, that is, a copy of it, made a part of this record. I don't think it would be proper to print the whole thing in the record, but certainly it should comprise a part of the files in our case.

Mr. SEVERY. There is very little difference, except in the way the summary is put together.

Senator MURDOCK. There is enough difference; I would like to have the difference made a part of our file. I have seen your original report. I think the original is what we want in our file.

Mr. BROWN. May I ask Mr. Severy a question?

Senator McCARRAN. Yes.

Mr. BROWN. Mr. Severy, as I understand it, your original report was copied, and the copy is practically the same as the one finally published, except where you calculated the values of the land by so much per acre; and they got an idea you were trying to pay off the national debt, or something of that kind, and they eliminated that. Isn't that about right?

Mr. SEVERY. That is correct.

Mr. BROWN. Your figures were correct; nobody questioned them; but they thought they should not have been there. They probably thought it was not a good idea to publish anything of that value, because there might be a wild rush. They did not take into account the fact that it takes a big, long pocketbook to get it out.

Senator MURDOCK. I would like to ask a question, Mr. Severy.

The purpose the defense plant had in mind in drilling the well was to ascertain the extent and the richness of the magnesium deposit, was it not?

Mr. SEVERY. That is right.

Senator MURDOCK. You were not disappointed, as an engineer, in what you found?

Mr. SEVERY. No; absolutely not.

Senator MURDOCK. In fact, this is not an exaggerated statement, is it, to say that you found the magnesium much richer, and of a much greater extent, than you expected?

Mr. SEVERY. Yes; that is right.

Senator MURDOCK. Is that true, also of the sylvite?

Mr. SEVERY. Yes.

Senator MURDOCK. You recommended to the defense plant that—as I remember the figure—either \$12,000 or \$17,000 of additional money be allotted to determine the best means of mining the magnesium?

Mr. SEVERY. Yes.

Senator MURDOCK. What happened to that request?

Mr. SEVERY. I wanted to make what we call a solution test, on the well.

Senator MURDOCK. Just explain what you mean by that?

Mr. SEVERY. By that, I mean to extract the carnallite and sylvite from the deposit by circulation of water; then circulate the water down the well, and when it comes out, there would be a degree of saturation, magnesium chloride and potassium chloride; then the process to separate them, which is in use now. It has all been worked out. They are easily separated—the magnesium from the potassium, in the form of chloride. That is what I wanted to do, and that is what I recommended to do.

Senator MURDOCK. That would have really given you some very valuable information; would it not?

Mr. SEVERY. Yes, sir.

Senator MURDOCK. In connection with the magnesium and the sylvite?

Mr. SEVERY. Yes, sir.

Senator MURDOCK. And the expense of doing that was very meager was it not?

Mr. SEVERY. Yes, sir.

Senator MURDOCK. Compared to the investment you had already made in drilling the well?

Mr. SEVERY. Yes; I had about \$30,000 left.

Senator McCARRAN. What became of that?

Mr. SEVERY. That goes back to the Government.

Senator MURDOCK. That goes back to the Defense Plant Corporation?

Mr. SEVERY. Yes; that is a part of the original appropriation that was not used.

Senator MURDOCK. From some source or other you were told that the Government was no longer interested in the thing, and to move on. Is that right?

Mr. SEVERY. Yes; there were plenty of sources of magnesium.

Senator MURDOCK. Notwithstanding the fact that, just a few months before, they were searching for magnesium to the extent that they allotted you \$100,000?

Mr. SEVERY. Yes.

Senator MURDOCK. To drill?

Mr. SEVERY. Yes.

Senator MURDOCK. And, then, after you discovered a vast quantity of rich magnesium, somebody in the Government decides that they are not interested at all. Is that the story?

Mr. SEVERY. That is the way it looks.

Senator McCARRAN. How long after you pulled out was it that anyone else appeared to move in—using general terms?

Mr. SEVERY. We finished the well on October 3, and I waited about a month, holding the contractor there, to see if they would let us make these tests for oil, and also the solution test on the salt, and then we got orders to close the thing up.

Senator McCARRAN. Whom did the orders come from?

Mr. SEVERY. I think those were from—that is, I got them from the Defense Plant Corporation.

Senator McCARRAN. Have you that communication?

Mr. SEVERY. I don't know whether it is in the file or not.

Senator MURDOCK. May I say, Senator McCarran, that I immediately asked Mr. Husbands, of the Defense Plant, why they did not allow the Bureau of Mines to proceed, under their direction, and I was told directly that he had received word from Mr. Bunker that they were no longer interested, and that they wanted the machinery and everything moved away, and the well abandoned. That came directly from Mr. Husbands to me.

Mr. SEVERY. To answer your question, it was right around the 1st of January.

Senator McCARRAN. What year?

Mr. SEVERY. When the Potash Co. of America made their deal.

Senator McCARRAN. What was the next thing that was done, after you pulled out, that you know anything about?

Mr. SEVERY. There was not anything done until the Potash Co. of America moved in.

Senator McCARRAN. How did you know the Potash Co. of America moved in?

Mr. SEVERY. How did I know the Potash Co. of America moved in?

Senator McCARRAN. Yes.

Mr. SEVERY. Oh, I read the papers, and hear things.

Senator McCARRAN. Were you down on the ground?

Mr. SEVERY. No.

Senator McCARRAN. Have you been on the ground since?

Mr. SEVERY. Yes.

Senator McCARRAN. When were you next on the ground, after you pulled out?

Mr. SEVERY. January 9.

Senator McCARRAN. You pulled out when? I am trying to get your dates?

Mr. SEVERY. I left there when I got my affairs straightened up—left there on the 13th of November.

Senator McCARRAN. Then, on January 9, you were down there again?

Mr. SEVERY. Yes.

Senator McCARRAN. Was this Potash Co. in there then?

Mr. SEVERY. No.

Senator McCARRAN. Anyone representing them?

Mr. SEVERY. They were in Salt Lake City.

Senator McCARRAN. Then what happened after that, to your knowledge?

Mr. SEVERY. I don't know when they actually started drilling. I think it was in February—right close to that.

Senator McCARRAN. Of '42?

Mr. SEVERY. Of '43.

Senator McCARRAN. Where did they start to drill with reference to where you put your well down?

Mr. SEVERY. They drilled their first well about 3,000 feet west.

Senator McCARRAN. How deep did they go with that, if you know?

Mr. SEVERY. I don't know.

Senator McCARRAN. Did you ever see the log of that well?

Mr. SEVERY. No.

Senator McCARRAN. Have you ever talked with those who were drilling that well?

Mr. SEVERY. All those wells have been drilled in what we call drill time; that is, no information is given out.

Senator McCARRAN. Who has the information, if you know?

Mr. SEVERY. The Potash Co. of America.

Senator McCARRAN. Where are they located?

Mr. SEVERY. Their main office is at Carlsbad, but they had an office out on the lease.

Senator McCARRAN. You say their "first well"; did they drill another well?

Mr. SEVERY. They drilled another well a little over a mile south.

Senator McCARRAN. Of your well?

Mr. SEVERY. Yes; of the McCarthy well—south and a little west.

Senator McCARRAN. What was the nature of the territory, as to ownership, on which these wells were drilled?

Mr. SEVERY. I don't know.

Senator McCARRAN. Public domain or privately owned land?

Mr. SEVERY. I have no knowledge of the title situation at all.

Senator MURDOCK. I think Mr. McCarthy can answer that.

Mr. McCARTHY. The Crescent Eagle well and the Defense Plant well are on patented ground.

Senator McCARRAN. Who holds the patent?

Mr. McCARTHY. Crescent Eagle Oil Co.

Senator McCARRAN. That is your own company?

Mr. McCARTHY. Yes; a locally owned company.

Senator McCARRAN. Did you have anything to do with the Potash Co. moving in and putting those wells down there?

Mr. McCARTHY. Nothing at all; no, sir.

Senator McCARRAN. Did they operate on your patented ground?

Mr. McCARTHY. Oh, yes.

Senator McCARRAN. How did they come to get in there?

Mr. McCARTHY. The Crescent Eagle Oil Co.—there are two companies—the Crescent Eagle Oil Co. and the Mountain States Development Co.—holding approximately 2,800 acres of land between them.

Senator McCARRAN. You are interested in both?

Mr. McCARTHY. Yes.

Senator McCARRAN. Are they subsidiaries, one of the other?

Mr. McCARTHY. No; they are entirely separate companies. I happen to be a stockholder in both.

Senator MURDOCK. They were both taken over by the Utah Magnesium?

Mr. McCARTHY. Yes; the two companies leased to the Utah Magnesium.

Senator McCARRAN. All of their holdings?

Mr. McCARTHY. At the time they leased to the Utah Magnesium Co. that company announced they would immediately spend a million and a half dollars on the ground. What caused them to change their mind, I don't know, but they went to Washington and tried to get money.

Senator McCARRAN. Most people do change their mind after they get to Washington.

Mr. McCARTHY. They tried to drill the United States Treasury, instead of the ground, and then they ran into trouble. Then is when they were advised to go to the Dow Chemical Co., and all these other subcontractors, and they finally made the deal.

Senator MURDOCK. When you say they went to Washington, you are referring now, are you not, to Mr. Sandberg and Mr. Wright, of the Utah Magnesium Co.?

Mr. McCARTHY. Yes.

Senator MURDOCK. I might say I introduced Mr. Sandberg and Mr. Wright, immediately on their arrival in Washington, to Mr. Bunker. I have regretted it ever since.

Senator McCARRAN. I don't want to get you tied in too tight.

Senator MURDOCK. I know the story from A to Z.

Mr. McCARTHY. That is where it commenced—right there.

Senator McCARRAN. I want to get back to this, the drilling by the Potash Co. of America, as I understand it, on privately owned ground which belonged to one of your concerns, which had been leased to the Utah Magnesium Co.

Mr. McCARTHY. Yes, sir. Pardon me a moment. Then the Potash Co. drilled a well on section 16, a State lease, which I personally held, from the State of Utah.

Senator McCARRAN. That is the first well?

Mr. McCARTHY. No; the second well.

Senator McCARRAN. The second well?

Mr. McCARTHY. Yes. They even went over on to the southeast quarter of section 4 of this same patented land—no, that is not patented; that is held by the Mountain States Development Co. They held it from the Mountain States Development Co., under a lease, and they drilled another well there.

Senator McCARRAN. We are getting a number of companies involved. We are getting two companies in which you were originally concerned, Mr. McCarthy, and then we get the lessee, the Utah Magnesium Co., and now we have the Mountain States?

Mr. McCARTHY. Well, the Mountain States and the Crescent Eagle leased to the Utah Magnesium; the Utah Magnesium to the Potash Co. of America, where the title now rests, and the work is being done.

Senator McCARRAN. The Utah Magnesium has leased to the Potash Co. of America?

Mr. McCARTHY. Yes, sir.

Senator McCARRAN. Under those leaseholds, these drillings have been carried on?

Mr. McCARTHY. Yes, sir.

Senator McCARRAN. Well, we are getting that straightened out.

Where does the open public domain of the United States come into this picture?

Mr. McCARTHY. I understand that the Potash Co. has filed application for a large acreage surrounding this other ground.

Senator McCARRAN. The Potash Co. of America?

Mr. McCARTHY. Yes.

Senator McCARRAN. Have filed application, according to your understanding, for a large acreage surrounding your deeded land? I call it "yours" for convenience.

Mr. McCARTHY. Yes.

Senator McCARRAN. Your deeded land?

Mr. McCARTHY. Yes.

Senator McCARRAN. They now hold—if I grasp this subject correctly—the Potash Co. of America now hold a leasehold on all of the lands of the Utah Magnesium Co.?

Mr. McCARTHY. Yes, sir.

Senator McCARRAN. Is that right?

Mr. McCARTHY. Yes, sir.

Senator McCARRAN. About 2,800 acres?

Mr. McCARTHY. Yes, sir.

Mr. BROWN. In addition, Senator, I might say, 4,000 acres of State land they have leased. That is, the Potash Co. of America.

Senator McCARRAN. That is four thousand and twenty-eight hundred—that is 6,800 acres?

Mr. BROWN. Yes, sir.

Senator McCARRAN. Now, can anyone give us direct advice on how much acreage of open public domain they have filed applications on?

STATEMENT OF N. G. MORGAN, JR., SALT LAKE CITY, UTAH

Mr. MORGAN. One hundred and five thousand acres.

Senator McCARRAN. That application has been filed on?

Mr. MORGAN. Yes.

Senator McCARRAN. What is your official position, Mr. Morgan?

Mr. MORGAN. Mining operator.

Senator McCARRAN. In private activity?

Mr. MORGAN. Yes.

Senator McCARRAN. What is the length of the life of these leases, if you know?

Mr. MORGAN. They have not been issued any leases. They have filed applications for potash permits. They are in the process of either being accepted or rejected. I don't know how they stand.

Senator McCARRAN. With reference to the date of this withdrawal order—dating it from the date of its making, and not from its publication in the Official Register; when were the applications of the Potash Co. of America filed, if anybody knows?

Mr. MORGAN. December 12 or 14, I am not sure which date.

Senator McCARRAN. That is on December 12 or 14—if any member of the Department has any record, please correct us. On December 12 or 14 the Potash Co. of America filed an application for leaseholds on the public domain?

Mr. MORGAN. That is, the Utah Magnesium filed the applications.

Senator MURDOCK. That was December of 1942.

Mr. MORGAN. That is correct.

Senator McCARRAN. I want to get this correctly: The Utah Magnesium filed these applications?

Mr. MORGAN. Yes, sir.

Senator McCARRAN. If anyone can tell us, how does the leasehold agreement between the Potash Co. of America and the Utah Magnesium affect the applications made by the Utah Magnesium?

Mr. MORGAN. It is understood they have an agreement with Utah Magnesium where they obtain the operating rights, when the leases are issued.

Senator McCARRAN. On everything that Utah Magnesium acquires?

Mr. MORGAN. Yes, sir.

Senator MURDOCK. I have seen the contract. They take over everything the Utah Magnesium had at that time, and anything on which application was filed, if granted.

Senator McCARRAN. Have we not come down to a point, if I apply this correctly, where not only the privately owned ground of the Utah Magnesium, under an agreement with the Potash Co. of America, but also the Federal domain affected by the applications of the Utah Magnesium, will become the seat of private operations of the Potash Co. of America? Doesn't it boil down to that?

Mr. MORGAN. If the permits are granted. The law requires you are only to be allowed to have—an individual or a corporation—you are only allowed to have 4,560 acres in a State; and they filed on considerably in excess of that. Nothing has been done, to my knowledge, in the issue of the permits.

Senator McCARRAN. How will this withdrawal affect those applications?

Mr. MORGAN. Not at all.

Senator McCARRAN. Why?

Mr. MORGAN. Because you are still allowed to file for mineral rights, for oil and gas rights, on public domain. The only difference is that you have to operate through a Government lease, rather than as a patented mining claim. Everything comes under the supervision of the Government, before you can operate under a patented mining claim. The catch is obtaining those potash permits.

Senator McCARRAN. Elaborate on that a little bit.

Mr. MORGAN. I, more or less, had a written article prepared. When Mr. McCarthy is through, I would rather give that.

Senator McCARRAN. All right. I am just trying to get the history of this the best I can, as we go along, for the reason that I fear we might overlook something.

Mr. MORGAN. I don't mean to withhold anything. The only thing is, I am trying to tie in the one act, withdrawing this land from the public domain. That is not only an act of Secretary Ickes, today, as he has tried to do in the past, to bring everything under Government order; but also conspired by the large monopolistic interests, and then again put up barriers to an individual obtaining these potash permits, which they have done, by requiring too many rigid performances of the individual.

Senator McCARRAN. I want to be fair here. I think fairness must predominate through all these hearings; otherwise we may get a warped idea. Up to date, if I am at all correct, up to date I fail to find Mr. Secretary Ickes in the picture. Now someone correct me on that.

Mr. MORGAN. It is his withdrawal order.

Senator MURDOCK. The order was signed, not by Ickes, but by his Under Secretary, Abe Fortas.

May I say, there is a barrier existing to the individual, who may have an individual lease. Do you have in mind the four conditions imposed?

Mr. MORGAN. I was not here all the time; but the four conditions I am aware of are the same ones we have read. I think those are the basis.

Senator McCARRAN. In your opinion, wouldn't that practice limit any new developments to a company that is already in the field?

Mr. MORGAN. Not exactly a company that is in the field; but I am in the process of trying to get permits from the Government, and I find it exceedingly hard to qualify, in view of the fact that they require that you have certain equipment. Keep in mind that you must have the War Production Board's authority to use that equipment. It practically eliminates you before you are started, unless you are associated with financial interests.

Senator McCARRAN. We had that picture presented to us at Albuquerque, N. Mex. It was presented to us very nicely, just exactly as you have said. I am sorry the Senator from Utah was not there; but we permitted it to go into the record, although we thought it was not a matter that addressed itself to our hearing. We removed it from our record, but directed that a copy of it be transmitted to Senator O'Mahoney, because he was chairman of another subcommittee of the Committee on Public Lands.¹

When were those filings made with the Secretary of the Interior?

Mr. MORGAN. Which filings?

Senator McCARRAN. I refer to their applications for open public domain leases.

Mr. MORGAN. By whom?

Senator McCARRAN. By the Utah Magnesium.

Mr. MORGAN. In December 1942.

Senator McCARRAN. And this order withdrawing this territory was dated in May following?

Mr. MORGAN. Yes.

Senator MURDOCK. After the Potash Co. had taken over the operating rights, the contract was entered into between the Utah Magnesium and the Potash Co. of America. Is that right?

Mr. MORGAN. Yes, sir.

Mr. KNOX PATTERSON. May I propose one question? I should like to know, Are you relying on your vested rights?

Senator MURDOCK. Who?

Mr. MORGAN. All these people that claim any interest in this land which is reserved under the bill.

Mr. PATTERSON. I am talking about vested rights in Mr. Morgan, who is an applicant.

Mr. MORGAN. That is correct. It gives me no vested rights.

Mr. PATTERSON. There are vested rights over here in the Utah Magnesium?

Mr. MORGAN. Not only on their patented land but on State sections.

¹ See testimony of D. S. Harroun before this subcommittee in the printed transcript of the hearings at Albuquerque, N. Mex., September 9, 1943 (pp. 3470-3481).

Mr. PATTERSON. That is right.

Mr. MORGAN. The potash applications are made subject to discovery; it could be held by the Secretary.

Senator McCARRAN. Are there any other questions?

Senator MURDOCK. I would like, Mr. McCarthy, please, will you point out on the map the location of the Crescent Eagle patented land, if you can designate it by township, range, and section.

Mr. McCARTHY. It is about here [indicating].

Senator McCARRAN. Give your political subdivision, please.

Mr. McCARTHY. 22-19, I think it is.

Senator McCARRAN. The section is what?

Mr. McCARTHY. Section 4—22 south, range 19 east.

Senator McCARRAN. Section 4?

Mr. McCARTHY. Yes.

Senator McCARRAN. Township 22 south?

Mr. McCARTHY. Yes.

Senator McCARRAN. And range 19 east?

Mr. McCARTHY. Yes.

Senator MURDOCK. May we have the map that is exhibited, Mr. Brown, as a part of the committee files?

Mr. BROWN. You may have it put in as an exhibit; yes.

Senator McCARRAN. I want to make an inquiry as to these State land holdings. How many sections of State land are involved, under lease, by either yourself or the Utah Magnesium?

Mr. McCARTHY. I hold two sections in that area, one of which is under lease to the Utah Magnesium Co.

Senator McCARRAN. And the other is in what condition?

Mr. McCARTHY. I hold it myself.

Senator McCARRAN. How near is that to the holes or wells that have been drilled?

Mr. McCARTHY. They have already drilled a well on one.

Senator McCARRAN. Who has?

Mr. McCARTHY. The Potash Co. of America. The other one has not been drilled, but it is adjoining on the north.

Senator McCARRAN. That one that has been leased to the Utah Magnesium, is that the one on which the drilling took place?

Mr. McCARTHY. Yes, sir.

Senator McCARRAN. The one that you hold individually has not been drilled?

Mr. McCARTHY. No; not yet.

Senator McCARRAN. I am interested in some further items here relating to your statement. Have you here, or is there available for this committee, the letter of Mr. Thurman Arnold, dated February 20, 1941, or thereabouts?

Mr. McCARTHY. Yes, sir.

Senator McCARRAN. May we have a copy of that for the record?

Mr. McCARTHY. Yes, sir.

Senator McCARRAN. The second letter to Mr. Nelson, on January 16, 1942, giving reference to three United States Geological Survey reports, an analysis of Utah brines, as proof of their richness, and one from Arthur Bunker. Have you that reply?

Mr. McCARTHY. Yes, sir.

Senator McCARRAN. Have you the letter that elicited that reply?

Mr. McCARTHY. Yes, sir.

Senator McCARRAN. May we have copies of both of them for the record?

Mr. McCARTHY. Senator, there are going to be so many of these I don't know whether I can remember them. If I may have a memorandum, I will see that you get them.

Senator MURDOCK. Was your correspondence so voluminous with Bunker and Arnold that you could not put them all in? We do not want to encumber the record too much, but I think probably they should be in the record.

Senator McCARRAN. I think all these letters from Mr. Bunker, and others in authority, should go into the record.

Senator MURDOCK. Why not put it that way—that you furnish, Mr. McCarthy, whatever is pertinent to the subject, in the way of correspondence with public officials.

Mr. McCARTHY. I will be very glad to do that.

(The letters are as follows:)

SALT LAKE CITY, UTAH, September 20, 1940.

Mr. DONALD M. NELSON,
*National Defense Advisory Commission,
Washington, D. C.*

DEAR SIR: After listening last evening to your clear and interesting address regarding activities of the National Defense Advisory Commission I am prompted to inquire if there is need for domestic development of magnesium, now that German sources of supply are closed.

Wells on a property in which I have a small interest produce brines containing appreciable quantities of potash, calcium chloride, bromine, and magnesium. Salts from these brines show magnesium content of 42.8 to 68.8 percent according to reports of analysis made by the United States Geological Survey.

Magazine articles state that because of the national defense program millions of dollars are being spent in recovery of one-tenth of 1 percent magnesium from sea water; yet, no producer to whom the factual data regarding our rich deposit has been presented seems to be in the least interested or disposed to investigate.

Will you please advise if the present supply of magnesium exceeds the current or prospective national need, and oblige?

Yours truly,

W. S. McCARTHY,
1451 Arlington Drive.

THE ADVISORY COMMISSION TO THE COUNCIL OF NATIONAL DEFENSE,
Washington, D. C., September 24, 1940.

Mr. W. S. McCARTHY,
Salt Lake City, Utah.

DEAR MR. McCARTHY: I am in receipt of your letter of September 20, and your inquiry as to whether or not there is a need for domestic development of magnesium.

I am referring your letter to Mr. Stettinius, whose organization is handling matters of that kind.

Thank you for your patriotic interest.

Sincerely yours,

DONALD M. NELSON,
Coordinator of National Defense Purchases.

THE ADVISORY COMMISSION TO THE COUNCIL OF NATIONAL DEFENSE,

Washington, D. C., October 2, 1940.

Mr. W. S. McCARTHY,
Salt Lake City, Utah.

DEAR MR. McCARTHY: Mr. Donald Nelson, Coordinator of National Defense Purchases, has forwarded me a copy of your letter to him of September 20, in connection with magnesium.

At the present time the supply of magnesium does not appear as though it would present an immediate bottleneck. However, additional facilities for producing magnesium are being contemplated; therefore, your letter is of particular interest to us at this time, and I am referring it to Mr. Marion Folsom, the division executive in the Industrial Materials Department for mining and mineral products.

Sincerely yours,

E. R. STETTINIUS, Jr.

SALT LAKE CITY, UTAH, February 3, 1941.

HON. THURMAN W. ARNOLD,
Assistant Attorney General,
Washington, D. C.

DEAR SIR: News items of January 31 reported a grand-jury indictment of six corporations and mine individuals charged with "conspiracy to restrict and stifle domestic production of magnesium." While the article did not so state, I assume that the investigation is being carried on under your direction and am therefore bringing certain circumstances to your attention in the hope that the information may be helpful.

In eastern Utah is located an underground body of salts which, in addition to high values in potash, calcium chloride, and other materials, contains what is believed to be the richest deposit of magnesium in the world. Analyses of samples personally taken by representatives of the United States Geological Survey show that these salts contain from 42.6 to 68.8 percent magnesium (Rept. Nos. P-591, November 11, 1932, and D-681, August 6, 1937).

Experience gained through years of unsuccessful effort to have the property developed long since convinced me that failure was due to the condition reflected in the recent indictments and that someone has been sufficiently interested in stifling production to commit murder, as was attempted, if necessary.

Please understand that I have not such proof as would withstand a court test but believe that an examination of my correspondence file and investigation of the known facts will point the way to development of evidence in support of the grand jury findings against certain defendants and help to break a bottleneck now hampering national defense.

If you are interested I will be glad to go into this matter with any properly accredited representative you may send.

Yours truly,

W. S. MCCARTHY.

DEPARTMENT OF JUSTICE,
Washington, D. C., February 25, 1941.

MR. W. S. MCCARTHY,
Salt Lake City, Utah.

DEAR SIR: Your letter of February 3, 1941, concerning the existence of magnesium, potash, and calcium-chloride salts in eastern Utah has been referred to the Advisory Commission to the Council of National Defense for attention.

Very truly yours,

THURMAN ARNOLD,
Assistant Attorney General.

SALT LAKE CITY, UTAH, November 6, 1941.

HON. ABE MURDOCK,
United States Senate,
Washington, D. C.

MY DEAR SENATOR: Yesterday's Salt Lake Tribune carries a lengthy article concerning your vigorous efforts to interest the Office of Production Management in the magnesium deposits of Grand County, Utah.

Apparently you are encountering the same subversive influences exercised during the long, effective fight you made for the development of Utah alunite and iron; interests which, if permitted to continue the strangulation of individual initiative, will surely bring upon this democracy the fate that befell France.

Not many months ago the aluminum, steel, and power interests assured us that there was an ample supply, if not a surplus, of their products. Very shortly thereafter it became necessary to send the Boy Scouts out to collect pots and skillets from housewives to meet an urgent need for aluminum. Now, in some sections, but for the wise foresight of Senator George Norris and the Congress, streets and theaters would be dark and candles again in demand because of the power shortage.

Iron? Plenty of it for all future needs. But today radio announces inauguration of a sustained, daily drive for collection of scrap iron and waste paper.

Magnesium? Huh. "Office of Production Management," the Tribune states, "has completed arrangements for the production of 400,000,000 pounds of metallic magnesium per year." What year? And, how soon will we be in dire need of it?

Newsweek, October 27, 1941, page 42, reports the placing by the Army of a "rush order for a large quantity of incendiary bombs. * * * Plant engineers discovered that, if they were to fill the entire order, they would need the entire United States output of magnesium, leaving none for the production of plane engines and the like."

In the same issue, page 39, is stated: "In recognition of the urgent need of magnesium the Office of Production Management several months ago set a production quota, to be reached by the end of 1942, 400,000,000 pounds annually." Of that amount 154,000,000 pounds will be supplied by existing plants while "most of the remainder of the expansion program will come from various Government plants to be built and operated by others."

The Office of Production Management spokesman thinks "that would meet defense needs as now understood." What if Hitler or Japan does something to change that understanding? Just think, if Britain and Russia can hold out; if Japan will keep quiet and let us alone for only 14 short months, our Army may commence to get that rush order for bombs, although the Office of Production Management spokesman is reported as saying that "Before recommending further magnesium development the Government would have to have a request from the Army and Navy for an increased supply of this light metal." But, if the predictions as to magnesium are not more reliable than those from quite as authoritative sources regarding aluminum, steel, and power, what then? Well, we will just smite the enemy with a recommendation from the National Academy of Sciences.

So, Office of Production Management suggests that Sandburg consult Dow to learn how, or whether, he may produce magnesium in Utah. Information brought out in legal proceedings during the year by that most efficient and valuable public official, Mr. Thurman Arnold, indicates that inquiry might more appropriately be made of Farbenindustrie of Germany, which it appears was, up to a year or so ago and still may be, the real authority on magnesium in the United States.

In view of the present attitude of the Office of Production Management officials, the question naturally arises as to whether or not, before approving expenditure of many millions of the taxpayer's money on the five projects mentioned on page 39 of Newsweek, October 27, they required investigation and report by the National Academy of Sciences. Were they also required to disclose their plans to Dow and get Dow's assent as a condition precedent to approval by the Office of Production Management? If not, why are such conditions now imposed upon a responsible Utah applicant?

We know that it is unnecessary to urge you to render assistance in this matter, being fully aware that you have been and are doing everything in your power to bring about this highly desirable development in order to quickly supply an acute national emergency need.

Yours truly,

W. S. McCARTHY.

SALT LAKE CITY, UTAH, January 16, 1942.

MR. DONALD M. NELSON,
Chairman, War Production Board.
Washington, D. C.

DEAR SIR: Noting the gratifying news of your recent appointment I am again bringing to your attention what is believed by competent authorities to be the world's largest and richest known deposit of magnesium.

For ready reference I am enclosing copy of my letter of September 20, 1940, to you and subsequent correspondence regarding the matter. Since October 2,

1940, no word of any kind has come to me from Mr. Marion Folsom or the Advisory Commission to the Council of National Defense.

For now over 3 months the Utah Magnesium Corporation has been negotiating with the Office of Production Management for financial help such as that given many other magnesium projects. Press reports state that the Office of Production Management advised the applicants to go to the Dow Chemical Co.

Thereafter, on November 4, 1941, press dispatches quoted an Office of Production Management official as saying, "We are considering asking the National Academy of Sciences to survey the deposit near Thompsons"; that the "Office of Production Management would make no move and make no recommendation until it received a report from the National Academy."

The same dispatch stated: "Two weeks ago Mr. Bunker told Senator Murdock he already had asked the Bureau of Mines to drill the Utah magnesium deposits, but, strangely, the Bureau of Mines says it never received such a request."

Twenty-four days later, on November 28, press reports said that the Office of Production Management has sent an expert to Utah to examine brines extracted from wells near Thompsons." Up to this time no investigator has appeared on the ground to take samples.

These suggested investigations imply a lack of confidence in the credibility of the United States Geological Survey reports (Nos. P-501, D-271, D-81). They also suggest a query, Did the Office of Production Management require a favorable report from the National Academy of Science before allotting \$100,000,000 of public funds for magnesium production to numerous other applicants whose facilities and production methods are not yet proven fully effective?

Also, Was their investigation sufficiently thorough to show that the safety of their investment and successful operation of one plant was to be dependent solely upon the services of one man, since reported in the custody of the Federal Bureau of Investigation?

Being without satisfactory answers to these queries the inescapable conclusion is that the Office of Production Management has been doing all possible to prevent development of the richest known deposit of magnesium in the interest of domestic producers, thought to be German-controlled, and without regard to the urgent need of our combat forces.

Such tactics wrecked France. Today's radio reports of the storm in Congress over motives and methods of some Office of Production Management officials indicates the dire need for a clean-up and that indictments for treason for obstructionist methods employed since December 7 would be in order.

Late reports state that "All existing plants, either built or under construction can produce only 382,000,000 of the 550,000,000 pounds (of magnesium) now wanted. Where are we to get it in time?

Four hundred and fifty-five days have passed since the matter was referred to Mr. Marion Folsom, over 90 days since it was laid in the lap of the Office of Production Management. Had the Office of Production Management acted promptly the much-needed magnesium might now be in production.

My purpose in now addressing you is, not to solicit aid in the financing above-referred to, for with that I have nothing whatever to do, but to present a specific case and, in the public interest to direct attention to a condition which undermines confidence and must retard preparedness in many directions; one which seems to cry aloud for correction.

Yours truly,

W. S. McCAETHY.

WAR PRODUCTION BOARD,
Washington, D. C., January 30, 1942.

DEAR MR. McCAETHY: Mr. Nelson has asked me to acknowledge your letter of January 16 relative to the drilling of magnesium deposits by the Utah Magnesium Corporation.

Your interest in this matter is appreciated, and I am bringing your letter to the attention of Mr. A. H. Bunker, Chief of the Magnesium Branch of the Materials Division, for consideration and review.

Sincerely yours,

D. L. ODELL,
Special Assistant to Mr. Nelson.

SALT LAKE CITY, UTAH, *February 5, 1942.*

Mr. D. L. ODELL,

War Production Board, Washington, D. C.

DEAR SIR: This will acknowledge receipt of yours of the 30th in reply to my letter of January 16 to Mr. Donald M. Nelson.

So ends another ride on the Washington Merry-Go-Round with Mr. Bunker.

You know Bret Harte said that "He whose father is Alcalde of his trial hath no fear."

Is it possible that Mr. Bunker may now sentence himself to electrocution? Unlikely. Electricity is too badly needed for other uses.

Will he order himself blown up with a bomb? Doubtful. Magnesium is too scarce. Our combat forces need it, but they can wait—*indefinitely*.

Of course he will not consent to being boiled in oil. Anyway, we can't spare it. The shortage, you know. Besides that would reduce efficiency. I. G. Farbenindustrie might not like that.

And so, the Army, Navy, and Air Forces must await the result of the National Academy of Science and other retarding investigations for an augmented, urgently needed, supply of magnesium.

Four hundred and seventy-five days wasted. Is this our boasted, highly publicized efficiency?

Again Bret Harte: "And be sure the count has reasons which will make his conduct clear."

Yours truly,

W. S. MCCARTHY.

WAR PRODUCTION BOARD,
Washington, D. C., February 6, 1942.

Mr. W. S. MCCARTHY,

Salt Lake City, Utah.

DEAR MR. MCCARTHY: Mr. Nelson has asked me to reply to your letter to him of January 16, in connection with the properties of the Utah Magnesium Corporation. The present difficulties in obtaining adequate amounts of magnesium are not due to lack of satisfactory raw materials, but rather to shortages of electric power, difficulties in obtaining electric equipment and other critical materials.

We have considered very carefully the possibility of developing the properties of the Utah Magnesium Corporation. The difficulties seem very real to us even if a plentiful supply of rich magnesium chloride brine should be developed. It may, however, be that some wells will be drilled in this district, although the problem of how best to convert any brines at that location into magnesium metal is a very difficult one to resolve.

I see in your letter that the quotation in reference to my statements to Senator Murdock is completely inaccurate; also the many suggestions in your letter to the effect that the Office of Production Management has been doing all possible to prevent the development of one of the deposits of magnesium and any other similar remarks that you have made are all completely unfounded and inappropriate.

Very truly yours,

A. H. BUNKER,
Chief, Aluminum and Magnesium Branch.

(See p. 2221, pt. 7, on S. Res. 71—par. 1, re Bunker on priorities.)

SALT LAKE CITY, UTAH, *February 15, 1942*

Mr. A. H. BUNKER,

*Chief, Aluminum and Magnesium Branch.**War Production Board, Washington, D. C.*

DEAR SIR: I have your letter of February 6, file 2003 R, in reference to mine of January 16, 1942, addressed to Mr. Donald M. Nelson.

Surely you cannot expect acceptance of the explanation offered.

Five hundred days have now passed since Mr. Stettinius referred my first communication to Mr. Marion Folsom. One hundred and forty-six days later Mr. Thurman Arnold again brought the matter to attention of the Advisory Commission to the Council of National Defense, where it appears to have died.

What became of the proposed National Academy of Science investigation or that of the expert reportedly sent on November 28, 1941, 78 days since, inasmuch as neither has yet appeared on the premises to investigate or check the findings of the United States Geological Survey, which you apparently discredit and reject.

According to press reports, the "plants now producing metallic magnesium together with all new magnesium plants that have been authorized and are now under construction, will produce only three-fifths of the requirements of the Army and Navy."

It is reported that we urgently need to produce 550,000,000 pounds; that we may expect to receive 382,000,000 pounds. Of that amount, we expect to receive 112,000,000 pounds from a plant under construction, to be completed months in the future, and 48,000,000 pounds from one which, news reports have stated, is dependent solely upon the services of an enemy alien in the custody of the Federal Bureau of Investigation.

Two weeks ago we expected to have a huge aircraft carrier or transport in war service very shortly. A tiny spark from a blow torch dashed that expectation and so, as has several times already occurred, might a hatful of air destroy sorely needed magnesium production facilities. That incident powerfully suggests the urgent need for foresight and prompt provision of increased production.

Is it any wonder that, as reported by radio, our Far Eastern forces, "fighting with incredible heroism," are "sick over indecision and lack of foresight at home" in view of the Army and Navy warning published on December 3, 1941, 4 days before Pearl Harbor, that "unless additional production (of magnesium) is authorized, the fighting forces will soon encounter a serious shortage."

That the rapidly rising tide of public indignation over procrastination and inefficiency is beginning to be noticed seems evident from the public statements of Mr. Nelson, reported yesterday, that "golden months have been wasted": that we "can win only with greatly expanded production"; that the "critical year in the existence of the United States is 1942." By Admiral Standley that "unless we put forth our entire effort we are liable to lose this war."

At this moment, without analysis, the reasons you offer for "present difficulties" sound reasonable but are absolutely without merit as they will not withstand even the most superficial examination.

For many months after this matter was presented to the Council of National Defense, leaders of big business were loudly assuring us that we had plenty, if not a surplus, of power, steel, aluminum, magnesium, and production facilities of all kinds.

Today, priorities can be invoked to provide for essential war needs, as in this case.

But for inexcusable procrastination and delay the admittedly necessary investigation could, and should, have been made months ago. Certainly shortage of electric power, equipment, or other now critical materials did not then prevent that. What did?

Mr. Thurman Arnold's annual report, recently released, seems to provide the answer.

Think of Pearl Harbor; a flotilla destroyed. MacArthur valiantly fighting with his back to the wall—Wake, Guam, Singapore. And now predictions that our own coasts will again soon be invaded. Our forces "sick over indecision and lack of foresight at home." The "golden months wasted." Small wonder, if this magnesium situation is typical of our total war effort.

Yours truly,

W. S. MCCARTHY.

SALT LAKE CITY, UTAH.

October 26, 1942.

Mr. A. H. BUNKER,

Aluminum and Magnesium Branch,

War Production Board, Washington, D. C.

DEAR SIR: Referring again to your letter of February 6, 1942, and my reply of February 15 (your file 2003 R), regarding the rich magnesium at Thompsons.

¹ October 28, 1943.—See hearings on S. Res. 71, investigation of the national-defense program, pt. 7, p. 2221, Mr. Arthur Bunker testifying: "The only thing I can say is that we are going to provide a department in the aluminum and magnesium section, and the minute orders come through needing priorities, we will be prepared to run them through for both aluminum and magnesium plants, to hasten every piece of equipment needed in those plants." See also Mr. Bunker's letter of February 6, 1942, file 2003 R.

Utah, concerning which I first wrote Mr. Donald Nelson on September 20, 1940, now over 2 years ago.

On February 14, 1942, over the Columbia network, Mr. Nelson gave the Nation's businessmen a new motto: "Act now, worry later."

He warned bluntly that unless business stops holding back because of fears about post-war conditions and concentrates on action now, there may be no future to observe. Two golden months have been wasted, he declared, "but the 10 silver months of 1942 remain."

Without doubt you have seen the Bureau of Mines report on results of recent drilling operations near Thompsons, Utah, which, according to Senator Murdock's published statement "show the deposit to be much richer than expected and of greater extent" and that "Bureau experts pronounced it the richest and largest known deposit of the mineral and the only known commercial deposit in the United States."

Nearly 3 "golden months" have elapsed since the defense plant well near Thompsons was shut down on August 3 and still no action.

Maybe the following dispatch from the Washington bureau of the Salt Lake Tribune, September 24, 1942, explains it:

"Senator Murdock carried proposals for developing the ores directly to Mr. Nelson, he said, only after he failed to get cooperation or encouragement from the aluminum and magnesium section of the War Production Board. The Senator charged that Arthur Bunker, head of the aluminum and magnesium section, opposes development in the field unless the individual project is approved by the National Academy of Science and favors fostering production efforts only through big established industries."

Apparently another 11 "golden months" have been wasted since November 4, 1941, when that same statement, from the same source, was published.

Read understandingly it is tantamount to a charge of sabotage in the interest of big business—made out in the open by a responsible United States Senator—without cloak of senatorial immunity.

The general public has had great faith in the ability, integrity, and good faith of Donald Nelson in his difficulty of advancing speedily all war objectives. That he is not getting completely loyal support within his organization seems clearly indicated by press and radio disclosures as to odoriferous conditions hampering production of synthetic rubber, sponge iron, magnesium, etc.

Until these widespread charges are publicly refuted or satisfactorily explained the conclusion must be that, instead of receiving the loyal support to which he is entitled, Mr. Nelson, the Army, Navy, aircraft industry, and the Nation have actually been double-crossed.

No doubt everyone interested in mining would be curious to know why you, a Government official, discredit and reject the findings of the United States Geological Survey and the Bureau of Mines, yet seek the opinion of an outside agency at the taxpayers' expense.

It would seem quite as sensible to ask a justice of the peace, whose income is derived from fees, to review decisions of our Supreme Court.

So the question arises as to the real worth or trustworthiness of National Academy recommendations which you appear to so highly prize, since reports indicate that we are actually getting less than 25 percent of the 550,000,000 pounds of magnesium required by the Army and Navy for 1942 and about 35 percent of the scheduled 382,000,000-pound production of six plants.

In the light of your present attitude is it possible, or even probable, that you put a hundred million dollars of taxpayers' money into those plants without a National Academy recommendation? Or did you?

So, to be consistent, you must impose the same conditions upon Utah but please do not wait another 11 months before acting.

Maybe our boys on the battlefields and seas of the world will find substitutes for much-needed supplies—or die trying—while waiting for you to act.

Why not release your brakes and help save democracy?

Yours truly,

W. S. McCAETHY.

(Above sent by U. S. mail, registered, No. 7273. Receipt dated Washington, Oct. 30, 1942, by (1) A. H. Bunker, (2) V. Lewis, addressee's agent.)

SALT LAKE CITY, UTAH,
June 7, 1943.

Mr. HARVEY A. ANDERSON,
Chief Conservation Division, War Production Board,
Washington, D. C.

DEAR SIR: On page 17 of the January 1943 issue of the magazine *Rotarian* is published an article naming 500 materials needed in the war effort. First in the list of those most critically needed is magnesium.

A news item published yesterday indicates that Basic Magnesium at Las Vegas, Nev., is having difficulty shipping its raw materials from Luning, Nev., pending possible extension of a rail line.

In view of that fact and the knowledge that some other plants are not producing up to their quota, is there still an urgent need for an augmented supply of raw material?

If so, I bring to your attention a property here in Utah as to which the Bureau of Mines, in War Minerals Report 12, page 2, says: "The deposit contains 78,000 tons of carnallite per acre. The possibilities are tremendous."

Since the issuance of that report further drilling has, it is believed, proved a very considerable extension of that deposit.

Should you be interested, I shall be glad to render any assistance possible in supplying information you may require.

Yours truly,

W. S. McCAETHY.

WAR PRODUCTION BOARD,
Washington, D. C., June 10, 1943.

Mr. W. S. McCAETHY,
Salt Lake City, Utah.

DEAR MR. McCAETHY: Please accept our sincere thanks for your letter of June 7 relative to the carnallite deposit in Utah and your offer to assist in securing further information about it. The magnesium situation has been improving for the past few months and the metal now is much less critical than it was some months ago. We believe that our present sources of raw materials will provide for the expected requirements and we understand that steps are being taken to correct the difficulties Basic Magnesium has had in transporting raw material to its plant. We will refer your offer of assistance to the Aluminum and Magnesium Division so that they can take advantage of it if they find it necessary in the future. For the present we don't believe it will be necessary to ask you to spend any time on the project.

Yours very truly,

HARVEY A. ANDERSON,
Deputy Director, Conservation Division.

SALT LAKE CITY, UTAH,
June 18, 1943.

Mr. HARVEY A. ANDERSON,
Deputy Director, Conservation Division, War Production Board,
Washington, D. C.

DEAR SIR: I have your letter of the 10th instant in reply to mine of June 7, and thank you for your prompt and courteous response to my request.

In view of the information developed by the United States Senate Special Committee Investigating the National Defense Program and the scathing denunciation of the Light Metals Section of the War Production Board, at page 4, Senate report No. 480, part 6, and also my own experience with the Light Metals Section, I could not conscientiously give them information regarding potential sources of raw material supply with any degree of confidence that it would be used in the public interest or furtherance of the war effort.

In my opinion, the taxpayer gets the "lemons"; private interests the "plum."

For the benefit of our combat forces I hope events will quickly justify your belief that expected requirements will be met. However, I recall that, in December 1941, when the Army and Navy were asking for 550,000,000 pounds of magnesium annually, an amount since largely increased, the Office of Production Management expected to provide 400,000,000 pounds in 1942. Production reported was about 130,000,000 pounds.

On January 16, last, broadcasting from Philadelphia, Mr. Donald Nelson announced that this year, 1943, we will produce 400,000,000 pounds, as against 6,700,000 pounds in 1939.

At least we are holding our own in the matter of predictions, even though actual production casts a dark shadow of doubt on their reliability and leaves our combat forces far short of their needs.

Yours truly,

W. S. McCARTHY.

Mr. McCARTHY. You asked a question, Senator, a while ago, that was not answered, as to how Mr. Thurman Arnold came into the picture.

Senator MURDOCK. I thought you brought him in.

Mr. McCARTHY. Calling attention at that time, there was under investigation, or indictment, charges of restricting or stifling production of magnesium. I wrote him with respect to that, in that letter. I called his attention to the analysis of samples personally taken by representatives of the United States Geological Survey, showing that these salts contain 42.6 to 68.8 percent magnesium. Report No. P 591, November 11, 1932, and D-681, August 6, 1937.

That is the letter that Mr. Arnold referred to the Advisory Commission of the Council of National Defense, which was then preceding the War Production Board.

Senator McCARRAN. Is there any correspondence in your file, or do you know of any correspondence from the national defense group, in reply to Arnold?

Mr. McCARTHY. No; there was nothing in that connection. I first wrote Mr. Donald Nelson about this on September 20, 1940. He very promptly answered, saying he had referred the letter to Mr. Stettinius. Mr. Stettinius answered just as promptly saying he, in turn, had referred the matter to Mr. Marion Folsom, who was in charge of the light metals.

Senator McCARRAN. Mr. Marion who?

Mr. McCARTHY. Folsom.

Senator McCARRAN. Have you those letters?

Mr. McCARTHY. I have two. I never heard a word from Mr. Folsom.

Senator McCARRAN. Did you write him?

Mr. McCARTHY. No. I thought if he paid no attention to Mr. Donald Nelson he would pay no attention to me.

Senator McCARRAN. Donald Nelson said he had referred the matter to Mr. Stettinius?

Mr. McCARTHY. Yes.

Senator McCARRAN. And Mr. Stettinius, in turn, said he had referred the matter to Mr. Folsom?

Mr. McCARTHY. Yes.

Senator McCARRAN. And there the matter seemed to stop?

Mr. McCARTHY. Yes. I later wrote Mr. Nelson, in January 1942, and to that letter receipt was acknowledged by Mr. O'Dell, who was a special assistant, I think, to Mr. Nelson. He advised me that he was referring my communication to Mr. Arthur Bunker.

Senator McCARRAN. All right, let us trace it back again, a little. You later wrote to Mr. O'Dell—no; you wrote to Donald Nelson again?

Mr. McCARTHY. I wrote to Donald Nelson.

Senator McCARRAN. And he, at that time, referred your communication to Mr. O'Dell?

Mr. McCARTHY. Yes.

Senator McCARRAN. Do you have copies of all that?

Mr. McCARTHY. Yes, sir.

Senator McCARRAN. Will you kindly furnish that for our record?

Mr. McCARTHY. I will be very glad to.

Senator McCARRAN. Then Mr. O'Dell wrote you that he was referring the matter to Arthur Bunker?

Mr. McCARTHY. Yes, sir.

Senator McCARRAN. You have copies of all those?

Mr. McCARTHY. Yes. Mr. Bunker then wrote me on the 6th of February and told me that the present difficulties in obtaining adequate amounts of magnesium are not due to lack of satisfactory raw materials but rather to shortages of electric power; difficulties in obtaining electrical equipment through the mills.

I could not quite take that, so I wrote Mr. Bunker, and I heard nothing from him since.

Senator McCARRAN. You wrote Mr. Bunker following that?

Mr. McCARTHY. Yes, sir.

Senator McCARRAN. What did you say to him?

Mr. McCARTHY. This letter is dated October 26, 1942. It was sent by registered mail to Mr. A. H. Bunker, Chief, Aluminum and Magnesium Branch, War Production Board, Washington, D. C.

DEAR SIR: Referring again to your letter of February 6, 1942, and my reply of February 15 (your file 2003-R) regarding the rich magnesium at Thompsons, Utah, concerning which I first wrote Mr. Donald Nelson on September 20, 1940—now over 2 years ago.

On February 14, 1942, over the Columbia network, Mr. Nelson gave the United States businessmen a new motto: "Act now. Worry later."

He warned bluntly that unless business stops holding back because of fears about post-war conditions, and concentrates on action now, there may be no future to observe. "Two golden months have been wasted," he declared, "but the 10 silver months of 1942 remain."

Without doubt you have seen the Bureau of Mines report on results of recent drilling operations near Thompsons, Utah, which, according to Senator Murdock's published statement "show deposits to be much richer than expected, and greater extent." And that Bureau experts pronounce it the richest and largest known deposit of the mineral and the "only known mineral deposit in the United States."

Nearly 3 "golden months" have elapsed since the Defense Plant well, near Thompsons, was shut down on August 3, and still no action.

Senator McCARRAN. They were shutting down on gold all over the country, in those days.

Mr. McCARTHY. Yes.

Maybe the following dispatch from the Washington Bureau of the Salt Lake Tribune, September 24, 1942, explains it:

Senator Murdock carried proposals for developing the ores directly to Mr. Nelson only after he failed to get cooperation or encouragement from the aluminum and magnesium section of the War Production Board.

The Senator charged that Arthur Bunker, head of the Aluminum and Magnesium Section opposes development in the field unless the individual project is approved by the National Academy of Science, and favors fostering production efforts only through big established industries.

Apparently another 11 golden months have been wasted since November 4, 1941, when that same statement from the same source was published. Read

understandingly, it is tantamount to a charge of sabotage in the interest of big business—made out in the open by a responsible United States Senator, without cloak of senatorial immunity.

The general public has had great confidence in the ability, integrity, and good faith of Donald Nelson in his difficult task of advancing speedily all war objectives. That he is not getting completely loyal support within his organization seems clearly indicated by press and radio disclosures as to odoriferous conditions hampering production of synthetic rubber, sponge iron, magnesium, etc.

Until these widespread charges are publicly refuted, or satisfactorily explained the conclusion must be that instead of receiving loyal support, to which he is entitled, Mr. Nelson, the Army, Navy, the aircraft industry, and the Nation have actually been double-crossed.

No doubt everyone interested in mining would be curious to know why you, a Government official, discredit and reject the findings of the United States Geological Survey and the Bureau of Mines, yet seek the opinion of an outside agency, at the taxpayers' expense.

It would seem quite as sensible to ask a justice of the peace, whose income is derived from fees, to review decisions of our Supreme Court.

So, the question arises as to the real worth or trustworthiness of National Academy recommendations which you appear to so highly prize, since the reports indicate that we are actually getting less than 25 percent of the 550,000,000 pounds of magnesium required by the Army and Navy for 1942, and about 35 percent of the scheduled 382,000,000 pounds production of six plants.

In the light of your present attitude, is it possible, or even probable, that you put \$100,000,000 of taxpayers' money into those plants without a National Academy recommendation, or did you?

So, to be consistent, you must impose the same conditions upon Utah, but please don't wait another 11 months before acting.

Maybe our boys on the battlefields and seas of the world will find substitutes for much needed supplies—or die trying—while waiting for you to act. Why not release your brakes and help save democracy?

Yours truly.

Senator MURDOCK. Any reply to that letter?

Mr. McCARTHY. No, sir.

Senator MURDOCK. But you do know that Bunker's company finally took over?

Mr. McCARTHY. I know that.

Senator MURDOCK. So you evidently sold him on your property?

Mr. McCARTHY. I know he got the letter, because it was registered.

Senator McCARRAN. Mr. McCarthy, in your statement today, you made reference to the National Academy of Science. Why, if you know, was the National Academy of Science brought into this picture?

Mr. McCARTHY. I haven't the remotest idea, Senator.

Senator McCARRAN. The National Academy of Science, if I am correctly advised—I hope someone will correct me if I am in error—is a research organization, is it not?

McCARTHY. That is my understanding.

Senator McCARRAN. Does anyone care to correct me on that?

Mr. BROWN. I will tell you, Senator, that one of the well-known Washington correspondents—I think it was Raymond Clapper—said that the National Academy of Science was composed of representatives of all the greatest monopolistic industries in the United States; and his words were, as I recollect them, that they were a collection of hatchet men before whom these projects were brought; that they waited until one or the other of them would kill them.

There is the Aluminum Co. of America, their representatives constitute the National Academy of Science.

Senator McCARRAN. I was trying to get his part in the picture. I have not gone into the statement, but it was to the effect that the advice of the National Academy of Science seemed to bear some weight before the U. S. Geological Survey or the Bureau of Mines. That is the inference I got from it.

Mr. McCARTHY. That is my understanding, and that is as it appears from the record.

Senator MURDOCK. It is fair to state, I believe, Senator McCarran, that in direct statements to me, both on magnesium and on aluminum. Mr. Bunker and the next man under him, Mr. Phil Wilson, rather ridiculed the work done by the Bureau of Mines. They have directly done that to me, and indicated to me that they took no stock at all in anything that the Bureau of Mines said on metallurgical processes, and that nothing but the Academy of Science would satisfy them.

I think the description of "hatchet men," that Mr. Brown referred to, is quite appropriately used.

Mr. McCARTHY. There is a feature of that to which I would like to call your attention, and that is the fact that these analyses, about which I wrote, were made 10 years ago, before magnesium was attracting attention. The Bureau of Mines or the U. S. Geological Survey had no reason whatever to report anything but the facts as they found them.

Senator McCARRAN. That is all I have to inquire right now.

Senator MURDOCK. We have a very long list of witnesses here; I am sure that we can't go through all of them.

Senator McCARRAN. Let me say to you, Senator, that, as I made the statement this morning, I venture the expression that 95 or 99 percent of the people of Utah would file protests against this withdrawal. That is quite natural. The protests that have come in here have come in from responsible people who apparently knew pretty much what they were talking about. Many of those protests are duplications.

I think in the last hour we have developed more real nutriment out of this than we did this morning, and if we could pursue this course, rather than merely the protests—I think anyone here will protest—that is just a thought I have.

Senator MURDOCK. I agree in it. I think the facts we have developed through Mr. McCarthy are an outstanding part of the testimony that has come before us.

I think we are through with Mr. McCarthy, unless someone in the audience wants to interrogate him.

I wonder if it would not be well, Senator McCarran, to call on Charles Redd, if he is in the audience. He comes from this locality.

Mr. MELICH. There are no representatives from Grand County, except Mr. Knox Patterson, a former resident, and Mr. Baldwin. We are on the tail end of the list. I wonder if we could not be heard to express the feeling of our people.

Senator MURDOCK. Are you ready?

Mr. MELICH. Yes; any time.

Senator MURDOCK. State your name.

STATEMENT OF MITCHELL MELICH, MOAB, UTAH

Mr. MELICH. I am Mitchell Melich, State senator from the twelfth district.

Senator McCARRAN. Where are you from?

Mr. MELICH. Moab.

Senator McCARRAN. Moapa, Nev.?

Mr. MELICH. No; Utah.

Senator McCARRAN. I was trying to claim you for a citizen.

Senator MURDOCK. We don't want you to claim these Utah people for Nevada. You come right from the section involved?

Mr. MELICH. Yes. My home is in Moab.

Senator MURDOCK. You may proceed in your own way.

Mr. MELICH. I am a representative of San Juan County in the State senate.

Senator McCarran wanted some information about that area that has been withdrawn. For his information I am advised that about 125,000 to 130,000 sheep spend about 7 months of the year in that area, and 10,000 to 12,000 cattle graze there during the 7-month winter season.

Not only does that area take care of a lot of livestock but I think that the only known large deposits of vanadium ore are found in southeastern Utah and western Colorado.

This area here—I did not realize it was so large until I looked at that map—I don't know why the Secretary of the Interior did not take all of Grand County when he started. He probably could have set up one of these Tugwell towns and administered it out of Washington.

Since the Jackson Hole controversy arose in Wyoming considerable has been written and said about Executive orders creating national monuments and withdrawing large areas of Federal land from location, sale, and entry. The time has come when some action by the people must be taken to prevent the setting aside of large tracts of land by mere Executive orders, without giving the people an opportunity to express their views beforehand.

The condition as to the withdrawal of approximately 3,000,000 acres of public land, under Public Land Order 130, in Grand and San Juan Counties, Utah, is no different than the Jackson Hole issue.

In Wyoming the self-named protector of the people's rights, by a scratch of the pen, attempted to cripple an industry so important in American life. Now, this same individual, probably with the same pen in hand, withdraws a mere 3,000,000 acres of land in Utah.

The only difference in the two withdrawals is that in Wyoming the persons affected are fighting to prevent the wiping out of existing rights, while in Utah we are opposed to the withdrawal for the reason that we desire to protect the right of the individual American to develop through his own initiative the resources of a large undeveloped area without interference by Government bureaus and other unnecessary governmental controls.

Grand and San Juan Counties offer unlimited opportunity to the individual interested in mining and agriculture.

The withdrawal of these public lands under order 130 does not seem to affect the right of the individual to explore, discover, and occupy public lands containing metalliferous minerals. This is due to the specific exclusion of metalliferous minerals in the act under which order No. 130 was issued.

I feel reasonably certain in saying that Public Land Order 130 would have prevented the old prospector from further continuing his life among the rocks were it not for the specific exclusion in the act.

To compel the average individual to comply with the order of the Secretary of the Interior as to classification, prospecting, and development of this large area under the mineral leasing laws is to retard its development.

The average person interested in the development of these resources locates a claim because he contemplates some gain to himself, and, having made a discovery, he attempts to develop the property, or else he sells or leases to others who make an effort to develop it; and in most instances he reserves some right in the property to himself. In any event, the discovery has been made which, in a number of cases, has led to the development of important and valuable natural resources. But you stop this type of development by withdrawal orders, and you stop American initiative, which needs a boost today, and not a handicap.

Senator McCARRAN. I would like to interrupt you. Perhaps the question does not properly address itself to this part of your statement.

You are going on the assumption that, because of certain language in the withdrawal order, a prospector for metalliferous ores may go in and prospect and explore. Isn't that your theory?

Mr. MELICH. He must, or course, discover.

Senator McCARRAN. In other words, the lode mining laws apply?

Mr. MELICH. Yes; they are not affected by this withdrawal.

Senator McCARRAN. Supposing a certificate is issued, or a right of development is granted, from the Interior Department to those who have made application, doesn't that, in itself, give absolute sovereignty and control to the party in whose favor the certificate or privilege is recorded?

Mr. MELICH. Yes, Senator McCarran; but the difficulty is this, that the minute that withdrawal goes in the land must be classified, under that order. These departmental regulations are so set up—Senator Murdock was referring to the order there—those restrictions are so difficult to meet that the average individual can't meet them.

Senator McCARRAN. I think I have not made myself clear.

Mr. MELICH. Certainly he gets the permit, but it is the effort to getting it.

Senator McCARRAN. What I am trying to evolve here—doesn't it, regardless of the language in this Executive order, which language would appear to exempt the metalliferous prospector and miner and locator—doesn't it, in fact, nevertheless, exclude him, because the sovereignty, over the domain that is granted to the applicant, gives him absolute dominance over the area that is given to him in the certificate?

In other words, suppose John Doe is accorded a certificate from the Interior Department, giving him the right to go forward in the development and production of magnesium or potash, or whatever it may be, carnallite, or anything else, can I go in there as a prospector

and locate a metalliferous lode? Certainly I can. So the language does not mean anything.

Mr. MELICH. That is true. That is why we are here objecting. We want to find out what that order 130 does mean, and what the effect of it will be upon the development of that area.

While we are on that, Senator McCarran, I would mention to you a little incident which just happened recently, under section—I think it is section 8—of the Taylor Grazing Act, which permits the classification of lands which are more suitable for agricultural purposes, being open for entry.

We have, just outside of Moab, an area there which a local stockman thought was more suitable for agricultural purposes, a tract of about 640 acres, with a very good water right on it. He filed, recently, an application to have that set aside, so that it could be made open to entry, and he would go ahead and graze his stock upon it. The papers were prepared and sent in, and, lo and behold, order 130 was staring him in the face. They said:

There is not a thing we can do with it till we find out what order 130 will do.

There is a very recent example, which will affect that area as to the livestock industry.

When I say order 130, I don't think it would affect section 7 or section 8 of the Taylor Grazing Act.

Senator MURDOCK. Do you think applications like that, Senator, are made quite frequently?

Mr. MELICH. Yes; in our area.

Senator MURDOCK. For entry under the land law?

Mr. MELICH. Certainly. I think Mr. Leech can tell you that they have a number of those applications in his office.

Mr. HAVELL. Senator, I anticipated that question. I asked our register here, Mr. Stewart, to give me this morning the record of the past 3 years, for settlement claims, such as homestead applications and applications for exchange, that were filed in the office. The figures are these:

From January 1 to December 31, 1941, there were nine homestead applications and three applications for exchange.

January 1 to December 31, 1942, there were five homestead applications and one application for exchange.

From January 1 to June 30, 1943—which is practically up to date, because that is the end of the fiscal year—we had but one homestead application and one application to exchange.

So that there has not been much activity in this area, so far as settlement claims, or the like, are concerned.

While I am on my feet, perhaps I might refer to Senator McCarran's question of a minute ago—that, had the Secretary of the Interior wanted to, he could have made this withdrawal 130 under the broad authority of the President, which would have stopped metalliferous mining claims; but he did not see fit to do that. He thought that that would be unnecessary. So that the Secretary chose to put the Executive order under the act of June 25, 1910, so that metalliferous mining claims could go forward.

Senator MCCARRAN. But, I am at a loss to know, Mr. Havell, how a metalliferous prospect or claim can be located, after the request has been complied with, by the Utah Magnesium. In other words, I did not get that.

Supposing the request of the Utah concern is complied with, it would give them dominance over something like 100,000 acres, as testified here by Mr. Morgan and Mr. McCarthy. Do you mean to say that a prospector could go in on that territory and locate a lode location?

Mr. HAVELL. No, sir; he could not.

Senator McCARRAN. All right, then, what does this language mean, when you say that this does not apply nor exempt?

Mr. HAVELL. The potash or magnesium, and not metalliferous mining claims, such as gold, silver, and those metals.

Senator McCARRAN. That is right.

Mr. HAVELL. They are located, or made, without reference to the Secretary of the Interior.

The Secretary of the Interior has no information as to the initiation of such claims, because the certificates of location are filed in the county recorder's office, and not in any branch of the General Land Office.

Senator McCARRAN. That is what I am trying to bring out. Now, assuming that the request of the Utah concern is complied with, they are given the 100,000 acres. That is withdrawn or given to them, or in their favor, by the Interior Department, under their application. Could I, as a prospector, go in and make a valid lode location in that territory accorded to them?

Mr. HAVELL. Under the lode laws you can.

Senator McCARRAN. Yes.

Mr. HAVELL. He could not, nor can you, under any area covered by any allowed application under the Mineral Leasing Act.

Senator McCARRAN. So the language in the withdrawal order, which seems to favor metalliferous lode locations, means nothing. It does not give the lode locator anything different.

Mr. MORGAN. That was even true before the withdrawal order.

Senator McCARRAN. Unless he was in there before the withdrawal order with what the Department will term a valid lode location.

Mr. MORGAN. Speaking in behalf of the Department, of which I am an attorney, before this order was given, you could go in there and obtain a lease, an oil or gas lease, and that would exclude anyone else coming in for metalliferous mining.

Senator McCARRAN. That is right.

Mr. MORGAN. So this order 130 did not really add anything to that.

Senator MURDOCK. Conditions are exactly the same on that?

Mr. MORGAN. They are.

Senator MURDOCK. Whenever an application is issued, whether we have the withdrawal order or not, for the territory involved, it excludes any location under the placer law?

Mr. MORGAN. That is correct.

Senator McCARRAN. So the language in the withdrawal order, which seems to favor the prosecution of metalliferous mining, would, at first glance, if construed in that direction, mean absolutely nothing. Do you take issue with that?

Mr. TRAUERMAN. May I ask the judge a question?

Senator MURDOCK. Which judge?

Mr. TRAUERMAN. This gentleman?

Senator MURDOCK. He is the Commissioner of the General Land Office—Mr. Havell.

Mr. TRAUERMAN. I do not remember the exemptions, but is it just generally metalliferous mines? Why wouldn't magnesium come

under that? What right would they have to give a lease under the law, the metalliferous mining law?

Mr. HAVELL. Because Congress has made certain minerals locatable under the mineral leasing law only; so potash, and associated minerals, thereafter, since the passing of that act, could be developed only under the leasing system, and no longer under the lode or placer law.

Mr. MORGAN. You can make a location on magnesium under the mining laws.

Mr. HAVELL. Yes.

Mr. MORGAN. That is on the surface?

Mr. HAVELL. It does not make any difference whether it is on the surface or 4 miles under.

Mr. MELICH. In the area included within this withdrawal, there was a well drilled there in which they found considerable brine, or magnesium; and on the strength of that discovery a number of lode claims have been located in that area.

Senator McCARRAN. For magnesium?

Mr. MELICH. For magnesium. Those claims are filed in the recorder's office of Grand County.

Now, there is some question as to how valid those notices of location are, but that was prior to the withdrawal order.

Senator MURDOCK. You say the magnesium appears on the surface?

Mr. MELICH. No; it was found while they were drilling for oil.

Senator MURDOCK. So there is nothing showing on the surface?

Mr. MELICH. Except they made the discovery by drilling.

Senator MURDOCK. The locations were made as lode claims?

Mr. MELICH. Yes, sir; that appears of record.

Mr. MORGAN. By what right did they drill on the land?

Mr. MELICH. They had a permit from the Federal Government.

Mr. MORGAN. Where they located the mining claims, was there oil and gas or potash permits filed, applications filed, in the local land office, prior to that?

Mr. MELICH. I think they had filed applications for potash permits, and after that they also filed lode locations. They pursued both courses.

Mr. KNOX PATTERSON. That was the geological end of it?

Mr. MELICH. That is the Seven Mile area. It is quite a complicated condition.

Senator McCARRAN. I guess we will not ask who owns the Apex, will we?

Senator MURDOCK. I was about to ask that.

Wherever you have a written statement, as our time is getting short, it may be understood that your written statement may be filed for the record, if you will just high-light it.

Mr. MELICH. Yes; I will brush through this, and hand it to the reporter.

Public Land Order 130, on its face, appears to be a harmless little instrument, but if permitted to remain, it is loaded with dynamite. The land withdrawn will probably be classified, and rules and regulations set up as to the terms and conditions under which permits will issue and leases be granted. These regulations will no doubt be similar to what are now in effect in similar cases. They will require performance bonds and other conditions which the average individual finds difficult to meet.

I cite for your information a case within my own knowledge, coming under the regulations pertaining to oil development on public lands. A few years ago arrangements were made for the drilling of a wild-cat oil well in Grand County, by some of the local people. Funds were very limited, and would only cover the cost of drilling the well to a certain depth; however, before operations could start, persons in charge were required by an agency of the Federal Government to furnish a surety bond of \$5,000. To obtain such a bond, collateral in the form of cash or Government bonds had to be given the surety company. This could not be done, because these individuals had only enough funds with which to complete the well.

Why could not our Federal Government have encouraged such a development, rather than set-up rules and regulations which prevented it?

What is to follow from this Public Land Order 130, is what I am more concerned about. In my opinion it will retard the development of our natural resources, in the area involved, rather than encourage them.

The present development at the Crescent field, in Grand County, for magnesium, potassium, and oil would not, in my opinion, have been brought about today had it not been for the efforts of a number of men—particularly one individual—believing in the future of that area.

The claims were located a number of years ago, without inquiring of the Secretary of the Interior, on every turn. These claims were held, as allowed by law, for many years without a great deal of development; and now we in Utah and the entire Nation may, in a short period of time, realize the efforts of the initiative and determination of those individuals.

Knowing one of the men interested in this particular development as I do, I am certain that he would not have spent one hour of his time, nor a cent of his money, attempting to develop natural resources at Crescent with an order like 130 to contend with.

The possible effect of Public Land Order 130 on sections 7 and 8 of the Taylor Grazing Act should be of some concern to the livestock industry of this State. Section 7 in the act provides for the classification of lands, within grazing districts, which are more valuable and suitable for the production of crops. The lands can be made open to homestead entry, and patent will eventually issue to the entryman.

Section 8 allows the Secretary of the Interior to accept privately owned land within a grazing district in exchange for public land of equal value. Order 130 provides that the public lands are withdrawn "from settlements, location, sale, and entry."

Does not the existence of Public Land Order 130 nullify the usefulness of sections 7 and 8 of the Taylor Grazing Act? The land withdrawn cannot be entered nor settled upon nor sold nor located.

We have, in Grand and San Juan Counties, two large grazing districts, functioning under the provisions of the Taylor Grazing Act. It is the practice among stockmen to exchange lands under section 8. Such exchanges are, in most cases, made for the best interests of the livestock industry. Stockmen are able, through these exchanges, to group their lands and operate in a unit rather than upon scattered and isolated tracts of land.

Under section 7 of the Taylor Grazing Act land can be reclassified and opened to entry, if found more suitable to raise crops.

It must be admitted that within the 3,000,000 acres withdrawn there are a number of tracts of land which should be reclassified and opened to entry. Certainly this area has not reached a point where we have all of the agricultural land we need, unless, of course, we accept the plowing under and scarcity theory of Vice President Wallace; but even he has now changed to the theory of abundance. I don't know if Senator McCarran has ever been through Grand and San Juan Counties, but if he hasn't, I am certain Senator Murdock can inform him of the acres upon acres of barren land located there and that we would be pleased to see a few green pastures scattered through the desert country.

You must realize that Grand County has only about 2,000 people and San Juan County about 4,000 people, which, I believe, includes the Indian population. So, with that small population, you could not expect a great deal to go into the Department requesting applications for land. The stock industry is so concentrated that it is only a certain number of individuals who own stock, and they are the ones interested in this reclassification of land.

Senator MURDOCK. Will you answer that, with reference to section 7?

Mr. HAVELL. Section 7 of the Taylor Grazing Act provided that lands that had been withdrawn in the two general withdrawal orders—November 26, 1934, and February 5, 1935, for lands in the grazing district—could be applied for under any public land law, if under classification they were found to be suitable. Congress wrote that after the President had withdrawn all of the public lands under the two orders, thus indicating that Congress wanted the public land laws to be applicable in grazing districts but provided they must be classified and found suitable to the use to which they were to be put.

Congress also authorized the Secretary of the Interior to withdraw public lands for water-power purposes, or for classification for any other public purpose, to be announced in the order. It was in the exercise of that authority that the Secretary made this withdrawal No. 130, so that I see no clash there.

It is a fact that with the lands withdrawn from homestead entry or other appropriation, under the surface laws, that all public land laws, excepting the metalliferous mining law and the mineral leasing laws are suspended; but Congress gave that authority to the Secretary.

Mr. MELICH. You say, then, that the 3,000,000 acres of land at the present time, by virtue of that order, is suspended, and nothing can be done about it?

Mr. HAVELL. No homestead entry, or exchange or surface entry, will be allowed so long as this order remains in effect.

Mr. MELICH. Until it is classified.

Mr. HAVELL. We would not make a move to classify it, because the order stops surface disposals.

Mr. MELICH. Doesn't it nullify those two sections 7 and 8 of the Taylor Grazing Act?

Mr. HAVELL. It has the effect that no more homestead entries will be allowed.

I would like to say this, Mr. Chairman—I did not say it this morning—that this withdrawal order 130 provides for a classification. It

says "temporary." No matter what we may think of the word "temporary," I am satisfied that the Department of the Interior, upon a showing that any particular area in this withdrawn area, any particular tract within this withdrawn area, is not valuable for magnesium or potash, the Department of the Interior, I believe, would be very willing to consider that and make an examination, and, if possible, have a classification made, showing that it was not valuable for potash and magnesium. I believe the Secretary would remove that particular tract from the withdrawal. I am saying that on my own responsibility, but I think I can speak for the Department to that extent.

Senator McCARRAN. Of course, Mr. Havell, if you would get to the point that you have to go through all the labyrinth to determine whether or not magnesium exists in all of this tract, it is going to be a long time before you would get to a decision on that subject. I take it. In other words, somebody might claim that all of that section down there is underlain with magnesite or magnesium, or what is this other—potash. So far as development, it stands that way.

Mr. MELICH. As Senator McCarran has stated, the only chance that I see for anyone complying with these Government regulations is to drill a well of about 3,000 or 4,000 feet, and find it. But everybody can't do that. I think that something must be left open to the people down there. I don't believe that there is a section in the entire West that is so open to development as the southeastern end of this State; and if we are going to withdraw that land and place all these suspension orders on it, no one is ever going in there. I don't believe Bill Reeder and his friend McCarthy, there, would ever have gone into Crescent Junction if we had had these restrictions placed on them 25 or 30 years ago. But the result of their effort, if they were under these old laws, if it were set up today, we look forward possibly to one of the largest developments in the magnesium field anywhere in the world. But that development would not have come about if we had had to comply with so many restrictions as they are placing upon us today.

Here we have an act of Congress, the Taylor Grazing Act; you suspend that by merely an order, signed by an Under Secretary of the Interior, who, I understand, is in India on leave of some sort. I think we are going in the wrong direction, and it is time to stop.

I call to your attention the effect of this order 130, in the event of construction of the Dewey Dam in Grand County. This dam would provide hydroelectric power and would no doubt furnish portions of Grand County with water for irrigation. If order 130 is permitted to remain, would it not prevent the agricultural development within the county? The order prevents the land withdrawn from being settled, located, sold, and entered. Some of the land which could be served with water from the dam is included in the withdrawal order. The answer to the inquiry would, no doubt, be that "we will take care of such a problem at the proper time." But this cannot be the answer; for what assurance have we that exceptions will be made? Past experience teaches us that once these orders are issued no force is able to remove them, let alone Congress and the people.

In Wyoming the stockmen had to resort to carrying their rifles with them in driving their livestock to their accustomed ranges in fear that their own Government would take from them their constitutional

rights of owning and protecting their property. The withdrawal order in Wyoming still stands of record, no matter what the protests have been.

I was interested in the statement of Senator McCarran, how difficult it is to pass legislation when there is such opposition against you. I appreciate that.

It is my understanding that this order was issued for the preservation of our natural resources, and to prevent their exploitation by a few selfish interests. This is the same story we continuously hear and read about. In my opinion, order No. 130 places these large selfish financial interests in a preferred class as to any future development in this area. They can comply with the mineral leasing laws; they are able to employ competent assistance and easily obtain the necessary permits required. But what of that prospector, who has been the lifeblood of the mining industry in the West? He has limited resources; he cannot be bothered with red tape; and, as a result, he steps out and is forgotten. Our resources should and must be open to all who desire to develop them. But this equality of opportunity cannot and will not exist where orders are issued which, by their very nature, create a preferred class among those having political and financial influence.

It is regrettable that sometimes our own Members in Congress are not interested enough in the welfare of their State that they accept as true the reason given by the Secretary of the Interior for issuing such orders without making inquiry of their own.

I have a recent letter, dated October 25, 1943, addressed to me by Utah's senior Senator, Elbert D. Thomas, in answer to my letter objecting to the issuance of this order 130.

It seems to me that the statement Mr. Brown read here, coming from some other Department, contained the exact words the senior Senator uses in the letter to me. Maybe the same person is writing all these letters. I don't know. I dislike bringing this in, as Senator Thomas is not here to reply, but it tends to show the lack of interest to determine the facts before passing on an opinion. I quote from his letters:

It is believed that if this order had not been issued, opportunity to contribute important leasing minerals to the winning of the war from these public domain lands within the State might have been frustrated by the filing of locations for nonmetalliferous surface minerals of relatively little value compared to the strategic leasing minerals which are believed to occur at a substantial depth. The effect of the order is to encourage and promote the development of these minerals without interference by persons who might attempt to locate unimportant nonmetalliferous minerals under the mining laws.

I assume that the important leasing minerals, referred to by Senator Thomas, are the purported magnesium and potassium deposits at the Crescent Field in Grand County. The Senator should know that this field is in the early stages of development and that there is no production from it at present and probably will be none for at least some time. If the war should end in the next year or two, it is doubtful if that area will have furnished any of these important undeveloped resources toward the winning of the war.

The habit of blaming everything on the war is a good excuse when you can't justify yourself otherwise. I ask, In what way will order 130 encourage and permit the development of minerals, as suggested by Senator Thomas? Every person I have talked to in Grand and San

Juan Counties who prospects for minerals and seeks to develop them is discouraged about this order. They believe the Government is making it more difficult for them each day.

The General Land Office also uses the present war as an excuse for this order, according to its memorandum issued under date of September 21, 1943, No. 1949759, a copy of which memorandum was furnished to me by Senator Murdock. From this memorandum it appears that the General Land Office has received certain undisclosed information to justify the issuance of the order. What is this information? By whom was it furnished? Are we not entitled to this information? Are not the people in the affected area allowed to express their opinion? I doubt if any county or city official, or, for that matter, the ordinary citizen of either Grand or San Juan Counties, were consulted about the propriety of issuing such an order at this time.

Just why, as has been brought out here today, should we suffer the effect of these orders without anybody knowing anything about them or without knowing what is going to happen?

As the gentleman said, suppose we had known this order was coming out. He said a mad scramble would have resulted. Let me remind you that when the magnesium development started there was not a mad scramble into San Juan County. The Crescent Eagle was at their property, the California interests came in, and others came into Grand County on private land. I did not see any great scramble for all of this property.

I noticed, in the last week or so, that the granting of the construction of the tunnel in Leadville—the minute that was granted the Secretary was fearful that the American people would take everything into their hands and he withdrew a large area up in the Leadville district.

Somehow they are afraid we will find something and develop it for our own good.

If Congress does not take some action to prevent the issuance of such orders in the future, I predict that the next thing to happen in Utah will be the withdrawal of the huge area known as the Escalante area, extending along the Colorado River within Grand County through to the Arizona line, a distance of approximately 150 miles in length, and about 22 miles wide. Such action would destroy the lifeblood of that section of the State. It would wipe out important grazing rights and may result in what is going on among the stockmen in Wyoming.

It is this constant fear of what is to happen that disturbs our people. We wake up and read in the morning papers of these executive withdrawals. Who is forewarned about them? Certainly legislation could and should be enacted to require the holding of hearings before local people prior to any definite action being taken. The only safeguard against these encroachments upon the people's rights is sound legislation.

Congress, in passing the act of June 25, 1910 (ch. 421, 36 Stat. 847, as amended by the act of August 24, 1912, ch. 369, 37 Stat. 497 U. S. title 43, secs. 141-143), took no chance that a President would withdraw public lands and prevent location and discovery of metalliferous minerals on such lands. Congress placed this specific exemption in the act itself, where it is now safe and not subject to the changing whims of any President who follows the suggestions of a department in such matters.

In conclusion, it is my opinion that the act, under which public land order 130 was issued should be amended so that no public lands can be withdrawn by the President without the consent and concurrence therein by the United States Senate. Such an amendment would allow the Senators from the States where any land is sought to be withdrawn to confer with their constituents on the proposed withdrawal, and, after proper hearings have been had, before the local people concerned, the entire Senate could be advised, and final action taken. This is the orderly procedure to follow, rather than being taken by surprise, as most of us were by the issuance of public land order 130. Such legislation is necessary, if the trend of control by Executive orders is to stop. It can be stopped only by the people, through their duly elected representatives in Congress. That is the only way it can be stopped, if we ever stop it.

I believe that I express the sentiment of the majority of the people of Grand and San Juan Counties on this important matter. The order should be rescinded; and we ask your efforts in having this accomplished.

I was called last night by the fish and game people down there, asking that I object to the order, because they were fearful that it might have some effect upon the hunting in that area. There is an area in there in which there is a considerable amount of deer hunting. So I am going to object on that ground. I don't know what this order does, or what it will amount to; but when one of the Departments gets control of a large section, we don't know what they will do with it. We don't want them to take away our hunting rights, even though we have to go to a lot of trouble for permits for potash and magnesium development.

It seems to me, if Congress does not do something soon, this State of Utah of ours, which has so much public land, will be a mere administration agency of the Government, and we will just have to look to Washington for whatever we do. So I ask for consideration, on behalf of our people down in southeastern Utah. I know that 95 percent of them are opposed to this order, because we think that everyone who wants to go in there should be given some encouragement to develop it. It can be developed, if that encouragement is given.

I recall, not so long ago, a very prominent official of the Department of the Interior speaking at Moab. He said that the departments of the Government were interested in what the local people want and that they will not withdraw or take any lands from the people if the people do not want them withdrawn, but I see that public-land order 130 comes out without anyone in Grand County—unless someone had some inside “dope”—knowing anything about it. I think we should have some opportunity to express ourselves before these things come out, not only in southeastern Utah but in other parts of the country.

Senator MURDOCK. Senator, do you consider that what we are doing here today is very proper?

Mr. MELICH. Yes; I do.

Senator MURDOCK. In effect, you, as a State senator and an attorney from that locality, have had an opportunity to state freely, and without any restraint at all, your opinion, and everybody in the room, so far as we will be able to hear from them, will be given that opportunity.

I think that any criticism of a public official is entirely proper, but I hope that you will bear this in mind—and I am sure you do, and the

other people here—that this order, coming out from the Secretary of the Interior, was just as much a surprise to the Utah Members of Congress as it was to yourselves.

I can say this, in defense of my colleague, the Honorable Elbert D. Thomas, that when a constituent writes about an order of this kind, about the only thing that he can do, presently, is to submit the letter to the department issuing the order. I am sure that Senator Thomas did that, and that, in all probability, the information which was transmitted to you was furnished by the General Land Office.

Of course, I agree fully with you that, after we are apprised of the situation, then we should leave no stones unturned to rectify it. I might assure you, at this time, that, so far as I am concerned—and I am sure that Senator Thomas will join me—we will leave no stones unturned until this thing is rectified.

While it is true, as Senator McCarran said this morning, that once an order is made, and you attempt to repeal it by legislation, you are up against a considerable barrier. But there is a remedy. Of course, it would not be so effective in this case, but it was resorted to, in connection with the withdrawal in Wyoming, and that was to deprive the department of any moneys whatsoever in the administration of the order. Senator O'Mahoney resorted to that, in that case.

Senator McCARRAN. I don't know about his success.

Senator MURDOCK. I have Senator O'Mahoney's word for it that he thinks it will work out all right. But there are remedies in Congress, and I am sure the people of Utah can depend on us that we will not stop till this thing is remedied.

I think I would be derelict if I did not mention those facts, inasmuch as Senator Thomas was mentioned here.

I will say this to Senator Melich, however, that he has a right to criticize Senator Thomas, or Senator Murdock, or anyone else. If people do not like criticism they should not be in public life.

Mr. MELICH. I appreciate your statement about Senator Thomas, but that does not do away with the fact that he overlooked looking into this thing. The letter he wrote to me was over his own signature. I think at least one should find out before committing himself.

Senator MURDOCK. We are very much indebted to you, Senator, for your statement.

Does anybody have a question for Senator Melich?

Mr. KNOX PATTERSON. I would like to supplement what he said.

Mr. BREWSTER. This morning, in the very intricate description of how the order got lost, that is in the category of the question: "Who stole the lock?" Now it is, "Who lost the order?"

Senator MURDOCK. Do you care to answer that?

Mr. HAVELL. It was mislaid from a desk in my branch of the General Land Office.

Senator MURDOCK. You assume responsibility?

Mr. HAVELL. It was done by people working under me. It was an accident. We handle thousands and thousands of papers. The fact that one of them gets mislaid from a desk, or gets misfiled, is a regrettable thing; but we are not 100 percent perfect.

Mr. BREWSTER. An accident of 3,000,000 acres.

Mr. HAVELL. No, sir—of papers from the desk

Mr. BREWSTER. And I say, it was an accident dealing with 3,000,000 acres.

Mr. HAVELL. It was not published in the Federal Register for 2 months. That did not injure anybody, but was to their advantage.

Senator MURDOCK. I think we have a representative of the Geological Survey here who is anxious to get away.

Mr. Woolley, are you still in the room?

Mr. WOOLLEY. Yes, sir.

Senator MURDOCK. Will you come forward and please state your name and your position?

**STATEMENT OF RALPH R. WOOLLEY, HYDRAULIC ENGINEER,
UNITED STATES GEOLOGICAL SURVEY, SALT LAKE CITY, UTAH**

Mr. WOOLLEY. Ralph R. Woolley, hydraulic engineer, Geological Survey.

Senator MURDOCK. The question we would like to have you clear up for us is: Who initiated this withdrawal order? Indications are that it was initiated by the Geological Survey. Can you tell us anything about that?

Mr. WOOLLEY. I am sorry, I can't. I sat here listening to the discussion for the last hour. I wondered just why I was here, because the first thing that I knew about the order was when I saw it in the newspaper. I never had anything to do with it. I don't know that any of the men in the Survey did.

Senator McCARRAN. Are you in charge of the office here?

Mr. WOOLLEY. Only one division.

Senator McCARRAN. Who is in charge of the other division?

Mr. WOOLLEY. The Survey here is divided up into the Water Resources Branch, the Geologic Branch, and the Conservation Branch; three different branches are represented here.

Senator McCARRAN. The Water Resources Branch is yours?

Mr. WOOLLEY. The Water Resources Branch; I act as spokesman for that branch.

The Conservation Branch has the Mineral Leasing and Oil and Gas Leasing Divisions. The Mineral Leasing Division is handled by Mr. Dyer, and the Oil and Gas by Mr. Hubble. The Geologic Branch is represented by Mr. Laskey.

Senator McCARRAN. The Geologic Branch would be the matter of exploration, development, or research?

Mr. WOOLLEY. Yes. The Geologic Branch is working primarily at this time on strategic mineral explorations and research.

Senator McCARRAN. Who is in charge of that branch?

Mr. WOOLLEY. Mr. Sam Laskey.

Senator McCARRAN. Is he here in town?

Mr. WOOLLEY. I don't know whether he is in town today or not.

Senator McCARRAN. I take it that you, in your branch, according to your statement, would have nothing to do whatever with the exploration or development or research, as regards either metalliferous deposits or nonmetalliferous valuable deposits?

Mr. WOOLLEY. That is correct. I have done a lot of work in connection with power-site withdrawals, but this thing has never come in that category.

Senator MURDOCK. Mr. Woolley, doesn't the withdrawal of water involve both the Green River and the Grand River; that is, the land lying along those rivers?

Mr. WOOLLEY. I assume so, from the map there.

Senator MURDOCK. The greatest potential water resources, or water developments, in the State of Utah are located, are they not, in that section of the country?

Mr. WOOLLEY. That is right.

Senator MURDOCK. So that water resources are involved, are they not?

Mr. WOOLLEY. Yes, sir; they are involved to that extent.

Senator MURDOCK. And you, at the head of that particular agency of the Geological Survey were not contacted at all as to this withdrawal order; isn't that true?

Mr. WOOLLEY. That is right.

Senator MURDOCK. So that you know nothing about it?

Mr. WOOLLEY. I know nothing about it.

Senator MURDOCK. Nothing was referred to you, and you knew nothing about it until it was published in the Federal Register?

Mr. WOOLLEY. That is the first notice I had of it.

Senator McCARRAN. Mr. Chairman, I am going to ask that the head of the other branch be requested to come before the committee. I would like to have Mr. Haskell make an effort at once to have him come. What is his name?

Mr. WOOLLEY. Mr. Dyer is not here, but Mr. Hauptman is present.

Senator MURDOCK. Will you state your name.

STATEMENT OF C. A. HAUPTMAN, PETROLEUM ENGINEER, CONSERVATION BRANCH, UNITED STATES GEOLOGICAL SURVEY, SALT LAKE CITY, UTAH

Mr. HAUPTMAN. C. A. Hauptman.

Senator MURDOCK. What is your position?

Mr. HAUPTMAN. Petroleum engineer, Conservation Branch of the Geological Survey.

Senator MURDOCK. Can you tell us anything about withdrawal order No. 130, Mr. Hauptman, that involves the territory depicted on the map?

Mr. HAUPTMAN. As stated by Mr. Woolley, the announcement of the withdrawal was entirely a surprise to me. I had no knowledge of anything like that until it was announced publicly.

Senator MURDOCK. You head the department of the Geological Survey here that has to do with oils?

Mr. HAUPTMAN. It is the branch of the division of the Conservation Branch which has to do with the supervision of oil and gas leasing, under the Leasing Act.

Senator MURDOCK. This is one of the potential oil areas of the State of Utah?

Mr. HAUPTMAN. We have been attempting to discover oil in this area. That is, the Potash Co. of America is now drilling in the area on oil and gas leases.

Senator MURDOCK. Was anything ever referred to you—

Mr. HAUPTMAN. Nothing.

Senator MURDOCK (continuing). In reference to this withdrawal order, prior to the time of its promulgation?

Mr. HAUPTMAN. Nothing that I have any knowledge of.

Senator MURDOCK. You knew nothing about it?

Mr. HAUPTMAN. I did not.

Senator McCARRAN. When did your branch initiate any exploration in that particular area, if at all?

Mr. HAUPTMAN. There have been oil and gas leases issued in the area, prior to my assignment to this district engineer's office.

Senator McCARRAN. How long have you been here?

Mr. HAUPTMAN. Three years.

Senator McCARRAN. During the 3 years, have you been doing anything in the way of research or development, as to oil in that region?

Mr. HAUPTMAN. The first active drilling for oil and gas in the region was done by the Defense Plant Corporation, on the Defense Plant well, which was not under my supervision, but under the Bureau of Mines.

Senator McCARRAN. Did you do any drilling, or see any drilling done, under your supervision, or any other type of exploration?

Mr. HAUPTMAN. Not until the Potash Co. initiated their work. That is a year and a half ago.

Senator McCARRAN. So we are to understand that your branch of the Geological Survey did nothing whatever in the way of research or study, since you have been in charge of the branch here, to disclose whether there was oil in that region, or not?

Mr. HAUPTMAN. If I understand your question correctly, the Geologic Branch—I cannot speak for the Geologic Branch.

Senator McCARRAN. Your own branch of the Geological Survey?

Mr. HAUPTMAN. The Oil and Gas Division, under the Leasing Act, had no activities there, and my duties carried me there only as to the development work of the Potash Co. of America.

Senator McCARRAN. When, if at all, in this locality, did you make any report to either the Interior Department or the Secretary of the Interior, or any other agency, with reference to the existence of minerals or oil in that locality?

Mr. HAUPTMAN. The reports have gone in prior to my assignment on this job, on oil shown in the area.

Senator McCARRAN. Did you, since you took over here, make any reports?

Mr. HAUPTMAN. Of new developments on oil?

Senator McCARRAN. New or old.

Mr. HAUPTMAN. New or old?

Senator McCARRAN. Yes.

Mr. HAUPTMAN. None are new, and as far as the record showed, there was no necessity for making any reports on the former.

Senator McCARRAN. Did you receive any communication, either from the Secretary of the Interior, or the Secretary's office, or anyone connected with the Secretary's office, did you receive any communication relative to the existence of oil on that locality?

Mr. HAUPTMAN. No, I don't have any recollection of it.

Senator McCARRAN. Your files, then, reflect no communication from anyone in the Interior Department, with reference to whether or not there was, in your judgment, commercial oil in that locality?

Mr. HAUPTMAN. No.

Senator McCARRAN. Your answer is that your files have no such record?

Mr. HAUPTMAN. Our files have records prior to my time there.

Senator McCARRAN. I mean since you have been in charge?

Mr. HAUPTMAN. None since I have been here.

Senator McCARRAN. None since you have been here?

Mr. HAUPTMAN. That is correct. There was no action on my part.

Senator McCARRAN. I did not ask you for any action on your part. I asked you if you received any communication from anyone in the Interior Department on the subject of oil in that locality?

Mr. HAUPTMAN. No, sir.

Senator McCARRAN. As I understand it now, there are three branches of the Geological Survey?

Mr. HAUPTMAN. Yes.

Senator McCARRAN. There is the branch having to do with power, and there is the branch having to do with the letting of oil and gas leases, and the branch which I choose to term the exploratory branch or the branch having to do with the mining?

Mr. HAUPTMAN. The Geologic Branch.

Senator McCARRAN. The Geologic Branch?

Mr. HAUPTMAN. Yes, the Geologic Branch, the Conservation Branch, and the Water Resources Branch. The Conservation Branch has the two offices here, of the Oil and Gas, and Mineral Division, of which Mr. Dyer is the supervisor.

Senator McCARRAN. And the Geologic Branch?

Mr. HAUPTMAN. The Geologic Branch is Mr. Laskey.

Senator McCARRAN. Where is he?

Mr. HAUPTMAN. He is on the fifth floor. I don't know the number of the room.

Senator McCARRAN. Is Mr. Laskey present?

(No response.)

Senator McCARRAN. Is there any position of superiority between those branches?

Mr. HAUPTMAN. We are all under the Director of the Geological Survey.

Senator McCARRAN. But, as between yourselves here, there is no one in either branch that is superior to the other?

Mr. HAUPTMAN. No.

Senator McCARRAN. In other words, the whole office is not in charge of one individual?

Mr. HAUPTMAN. No. Our chief is in Washington.

Senator McCARRAN. Each branch is in charge of a particular individual?

Mr. HAUPTMAN. Yes, sir.

Senator McCARRAN. You say you knew nothing about any movement toward the withdrawal, or an Executive order, or departmental order, looking to a withdrawal of that territory?

Mr. HAUPTMAN. That is correct.

Senator McCARRAN. And you knew nothing about it till you saw it in the Federal Register?

Mr. HAUPTMAN. That is right.

Senator McCARRAN. You at no time recommended it?

Mr. HAUPTMAN. No, sir.

Senator McCARRAN. Did you discuss with anyone from the War Production Board, or the Defense Plant Corporation, anything with

reference to the existence of either oil or any other mineral in that locality?

Mr. HAUPTMAN. I visited the operation, at the time the defense plant was drilling, under the supervision of the Bureau of Mines. I visited the operation, and discussed the operation, but had no authority on the operation.

Senator McCARRAN. All right.

Senator MURDOCK. Mr. Hauptman, does it come within your functions to keep in touch with drillings, such as have been carried on by the Potash Co. of America out in this vicinity.

Mr. HAUPTMAN. That is correct.

Senator MURDOCK. Have you done that?

Mr. HAUPTMAN. I have.

Senator MURDOCK. Do they furnish you a log of their drilling operations?

Mr. HAUPTMAN. The Potash Co. of America?

Senator MURDOCK. Yes.

Mr. HAUPTMAN. Yes, sir.

Senator MURDOCK. They do?

Mr. HAUPTMAN. Yes, sir.

Senator MURDOCK. Have you those logs available now?

Mr. HAUPTMAN. They are a public record; yes, sir.

Senator MURDOCK. In your agency?

Mr. HAUPTMAN. In the files over here.

Senator MURDOCK. How often have you visited the property out there since the drillings began by the Potash Co. of America?

Mr. HAUPTMAN. That has been my duty, to visit it very frequently.

Senator MURDOCK. Have you done that?

Mr. HAUPTMAN. I have attempted to do so.

Senator MURDOCK. How often?

Mr. HAUPTMAN. At least once a month.

Senator MURDOCK. Are you sure you are getting an exact copy of their log as they proceed with their drillings?

Mr. HAUPTMAN. I am doing everything I can to check on it. I feel certain that I am getting a correct copy of the formation as it is penetrated.

Senator MURDOCK. You are confident that nothing is being held back, and that as the logs are made, you are furnished with an exact copy?

Mr. HAUPTMAN. I am confident that the operator, which is the Potash Co. of America, is furnishing a true copy of the formations as they drill.

Senator MURDOCK. They have cooperated at all times in letting you have information?

Mr. HAUPTMAN. They have not refused me anything I have requested.

Senator MURDOCK. I think that is all. Any other questions?

Mr. BROWN. I would like to ask one question, if I may, Senator.

Senator MURDOCK. Yes.

Mr. BROWN. Who was it in your department that made a statement that was quoted in the paper, classing that area as the first proven oil field in Utah?

Mr. HAUPTMAN. I don't know, sir.

Mr. BROWN. It was so published in the paper, as the first proven oil field in Utah. You remember it, Mr. Brewster?

Mr. BREWSTER. That was an official release from the Department of the Interior.

Mr. BROWN. I thought it came from the United States Geological Survey.

Mr. HAUPTMAN. It may have come from Washington, not from the field.

Mr. BROWN. You would not say it was a proven oil field, would you?

Mr. HAUPTMAN. No, sir.

Senator MURDOCK. Mr. Hauptman, does the copy of the log of the drillings that you get contain an analysis of the cores that are produced?

Mr. HAUPTMAN. Not the log that I get. Mine has to do with oil and gas; but Mr. Dyer's office, the Mineral Division, has the information on the mineral, other than the oil and gas, as the well is drilled.

Senator MCCARRAN. What is the depth of that well, now?

Mr. HAUPTMAN. Which well?

Senator MCCARRAN. The well drilled by the Potash Co. of America?

Mr. HAUPTMAN. They are now drilling two wells.

Senator MCCARRAN. What are the respective depths?

Mr. HAUPTMAN. One of them, the third well that they have drilled, is now in the neighborhood of 4,400—the third well that they have drilled is in the neighborhood of—I can't recall offhand what it is. No; it is completed; it is 5,000.

Senator MCCARRAN. It is completed to 5,000?

Mr. HAUPTMAN. It is completed to 5,000, the third well, correct.

Senator MCCARRAN. Do these wells, each of them, reflect the existence of this carnallite body, testified to here this morning, or maybe you did not hear the testimony?

Mr. HAUPTMAN. I was not present.

Senator MCCARRAN. My recollection is that it was somewhere between 2,800 and 3,000 feet; somewhere in there. It was reflected to have been a body of carnallite through which the drills passed. Does the log which you have received from the Potash Co. of America reflect that?

Mr. HAUPTMAN. The oil and gas log does not show that.

Senator MCCARRAN. You did not take cores, then, that reflected anything of that kind?

Mr. HAUPTMAN. The cores were taken, but they were the determination of the nature of the content of the salt. That was the duty of another representative of the Geological Survey.

Senator MCCARRAN. Where is he?

Mr. HAUPTMAN. He is at the location at the present time.

Senator MURDOCK. Is that Mr. Dyer?

Mr. HAUPTMAN. Dr. Bailey. He is under Mr. Dyer's direction.

Senator MURDOCK. As I understand it, one of Mr. Dyer's assistants is here in the room.

Mr. HAUPTMAN. No.

Senator MURDOCK. We have the information that one of Mr. Dyer's assistants is here in the audience. If he is, I wonder if he would kindly arise.

Mr. HAUPTMAN. I don't believe there is.

Senator MURDOCK. Do you know of any such man being here?

Mr. HAUPTMAN. I think Mr. Karrick is, but he is not connected with this.

Senator McCARRAN. Who would have the log or the record that would show whether or not these wells passed through this body of carnallite ore, or whatever it is?

Mr. HAUPTMAN. That is on record in Mr. Dyer's office.

Senator McCARRAN. Mr. Dyer is not here?

Mr. HAUPTMAN. He is out of the city.

Senator McCARRAN. Who is next in control in that office?

Mr. HAUPTMAN. There are three representatives. All three of them are out of the city.

Senator McCARRAN. They are not available to you?

Mr. HAUPTMAN. They are not available to me.

Senator McCARRAN. They are not available to anyone that you know of right now?

Mr. HAUPTMAN. Not that I know of.

Senator MURDOCK. Give us the names—Mr. Dyer's full name and the names of his assistants.

Mr. HAUPTMAN. Bert W. Dyer is the supervisor, and Mr. Lindeman, Mr. Beers, and Mr. Bywater.

Senator McCARRAN. Does anyone here know, first-handedly, from authentic first-hand information? May I have an answer to my question: first, what does the log show, with reference to the existence of this carnallite?

STATEMENT OF W. S. McCARTHY, SALT LAKE CITY, UTAH

Mr. McCARTHY. In what particular wells?

Senator McCARRAN. In the wells that have been drilled by the Potash Co. of America.

Mr. McCARTHY. My understanding is that, in what was designated as the Wright No. 1, the showing was quite as rich, if not richer, than in the Defense Plant well.

Senator McCARRAN. Mr. McCarthy, I would take it now—this is an assumption on my part—you are directly, and perhaps indirectly, interested in the production of those wells?

Mr. McCARTHY. Yes, sir.

Senator McCARRAN. And I take it that, by reason of your interest, you have attempted to follow, with some considerable care, the log?

Mr. McCARTHY. Yes, sir. I experienced considerable difficulty in getting the information, but finally got it, as to the two wells.

Senator McCARRAN. And the existence of that body of carnallite still persists?

Mr. McCARTHY. Yes, sir.

Senator McCARRAN. We are going to get this information somewhere. I don't know how we are going to get it, but we will get it; I will tell you that.

Senator MURDOCK. I am interested in the difficulty you encountered, and from whom. Tell us about it.

Mr. McCARTHY. My contract was directly with the Utah Magnesium Co. Of course, I looked to them for fulfillment of that con-

tract. I tried, for 7 months, to get a log of the well drilling on my ground, without success.

Senator MURDOCK. You mean through the Magnesium Co.?

Mr. McCARTHY. Yes. They indicated they were unable to get it. I finally went directly to the Potash Co., and succeeded in getting the log.

Senator MURDOCK. The reason for my question was to ascertain whether you were having any difficulty with officials from the United States Government, in getting the information they had. Have you attempted that?

Mr. McCARTHY. No, I have never had any difficulty in that direction, at all.

Senator MURDOCK. None at all?

Mr. McCARTHY. None whatever.

Senator MURDOCK. Have you ever looked at the logs which are in the possession of Mr. Dyer or Mr. Hauptman, or copies of the logs?

Mr. McCARTHY. No; not as to their wells.

Senator MURDOCK. As I understand you, your contacts with the officials here of the Geological Survey have been all right?

Mr. McCARTHY. Oh, absolutely. Cooperative in every way.

Senator MURDOCK. That is the point I wanted to develop.

Is Mr. Taylor, of Moab, here?

(No response.)

Senator MURDOCK. Is Mr. Montgomery here?

Mr. MONTGOMERY. Yes, sir.

Senator MURDOCK. Will you take the stand?

State your name and position?

STATEMENT OF L. C. MONTGOMERY, PRESIDENT, UTAH CATTLE AND HORSE GROWERS ASSOCIATION, HEBER CITY, UTAH

Mr. MONTGOMERY. My name is L. C. Montgomery, from Heber City, Utah. I am president of the Utah State Cattle and Horse Growers Association. I came here under the impression that, in some way, grazing on the surface of the lands involved within this withdrawal order would be adversely affected by the order. Perhaps that assumption is wrong, and perhaps I am out of place in rendering a protest against a condition that perhaps does not exist. I will say that we got this impression, perhaps, from the fact that the Jackson Hole withdrawal order did affect grazing, and we were afraid that this withdrawal order might in some way affect grazing, and if it did, and if it does, or if it will, we want to render a protest against the order.

Perhaps the full import of the order is not fully understood. I am sure it isn't understood by me. I did not know and had never read the order until I came here today.

I had a statement prepared in protest that I now see is somewhat beside the point. I do, however, desire to protest the method of granting this order in this: That if an order of this kind and of this importance can be issued and made, affecting the vast area that it affects, with no more formality that was gone through in the issuance of this order, perhaps a similar order by some Government official, with or without Presidential sanction, could be made, eliminating the grazing on this area at some time in the future. If that can be done, we protest it.

Senator McCARRAN. May I ask Mr. Leech? Mr. Leech, do you feel that the grazing under your jurisdiction is now, or is liable to be, or may be, affected by this order?

Mr. LEECH. Senator McCarran, the way we look at this order is that it has no effect whatever on the grazing or the permits or licenses in there. There are some 153 people to 15,000 head of cattle, anywhere from 90,000 to 115,000 head of sheep, and they use it about 7 months.

Senator McCARRAN. Let me draw your attention, and see if there is any analogy here; we have had it up in a number of places; I think you have testified about it yourself. I think you have made mention of it, rather somebody made mention of it in Denver the other day, and my recollection is that at Fredonia, Ariz., and some other places, perhaps at Albuquerque, N. Mex., it was mentioned, and it had to do also with some parts of Utah. Within your grazing district, your permittees came to you and made known to you the existence of a large tract of land that was held by placer locations. Do you recall, the other day at Denver, it was related that in one instance about 100,000 acres—that was one tract?

Mr. LEECH. Yes, sir.

Senator McCARRAN. And about 20,000 acres in another tract?

Mr. LEECH. Yes.

Senator McCARRAN. Then, you recall the testimony of the stock-raiser whose concern controlled the 100,000-acre tract. His testimony was to the effect that his concern did the annual assessment work for the claim holders?

Mr. LEECH. Yes.

Senator McCARRAN. Now, supposing that this territory were covered, or a part of it covered, by leases or oil locations, placer locations, I should say, would that not affect your grazing?

Mr. LEECH. It is our position, Senator, that in these placer locations, the surface can be used for grazing. That has been our position at all times; and, of course, under the leases granted under the Leasing Act, those are grazed by livestock. There are lots of them in other places.

Senator McCARRAN. You don't attempt to control the surface of placer locations for grazing?

Mr. LEECH. Yes; we have attempted that, Senator.

Senator McCARRAN. But you have not succeeded?

Mr. LEECH. We have not succeeded too well, in some places.

Senator McCARRAN. In other words, the owner of a placer location considers himself the owner of the surface to the extent of excluding trespassers of all kinds?

Mr. LEECH. Yes, sir.

Senator McCARRAN. So you do not attempt to say that your jurisdiction overrides that ownership?

Mr. LEECH. We have attempted to utilize the surface of those claims for grazing, those unpatented claims, except just that part, immediately before the filing of operations.

Senator McCARRAN. You recall that cattle concern in Colorado paid rental, and you did not govern that territory over which they paid rental, in addition to their grazing fees?

Mr. LEECH. On that one lease, I believe, he pays both the grazing fees and also a rental to the locators of the oil shale plant.

Senator McCARRAN. I don't understand, and I don't think you do either, Mr. Leech, that you have control over those placer locations?

Mr. LEECH. That is something that we would like to know more about, Senator.

Senator McCARRAN. I know you would like it. You like it so well, you know you haven't got it. Isn't that so. [Laughter in the audience.]

Mr. MONTGOMERY. That is the whole point. We want to know, from somebody in authority, that this withdrawal does not affect grazing land. If it is going to affect grazing—I think you might all know that grazing in this State is very precious, and we feel that, if this in any way interferes with grazing, it is not a good thing.

That is the only statement I have.

Senator MURDOCK. Are there any further questions?

Mr. PLUMHOF. I would like to ask a question.

Mr. Montgomery, in view of what took place in Wyoming, in withdrawing lands, if that same action should occur in Utah, wouldn't that terminate all grazing of livestock?

Mr. MONTGOMERY. That is exactly what I said. If this order can be made as it has been made, perhaps just a supplementary order, if that can be made, excluding grazing from it—you have excluded this land from sale, from homestead, from various mining activities; and now couldn't you exclude grazing by the stroke of a pen?

Mr. PLUMHOF. If that were done we would be without any grazing privileges.

Mr. MONTGOMERY. That is the very thing we are afraid of.

Senator MURDOCK. Mr. Havell, do you care to comment on the suggestions of Mr. Montgomery?

Mr. HAVELL. No. I was passing through my mind a provision of the Taylor Grazing Act. Perhaps Mr. Leech can advise us. There is in that act authority with respect to the burden of overgrazing. Isn't that correct?

Mr. LEECH. Yes; that is provided for.

Mr. HAVELL. That bears on it.

Mr. MONTGOMERY. Let me ask you a question. This act says: "Subject to existing rights, the following lands are withdrawn." Is grazing one of those rights that this is subject to?

Mr. HAVELL. The withdrawal is from entry or disposal. The grazing area is neither an entry nor disposal. I feel, I am sure that this order does not in any respect affect grazing.

Mr. MONTGOMERY. I wish it said so, is all I can say. I wish there were something in there that would say grazing shall not be affected.

Mr. HAVELL. Perhaps a letter to the Secretary of the Interior, asking that question, would bring forth the same answer I have given you. I suggest you take that course.

Mr. PATTERSON. Do you understand now that this area that is withdrawn is going to be leased out for mining purposes?

Mr. MONTGOMERY. No; I did not know that.

Mr. PATTERSON. If a man has leased an area, he has control of it, do you understand that?

Mr. MONTGOMERY. I did not understand that.

Mr. PATTERSON. If a lease is given to a man, it is given to him to control the area?

Mr. MONTGOMERY. Yes, sir.

Mr. PATTERSON. That would manifestly affect the grazing?

Mr. MONTGOMERY. Yes, sir.

Senator MURDOCK. Mr. Havell, I would like to ask a question: Is there anything in the language of the Leasing Act which would protect the grazing privileges in existence at the time the lease was made?

Mr. HAVELL. I don't recall anything in the act, Senator; but I can tell you the policy with the Geological Survey, that as a rule oil and gas areas covered by leases are subject also to grazing use, unless, in the opinion of the Geological Survey there would be danger to the oil developments, such as pull rods in a highly developed field, where it would be proper to keep the livestock out. But mineral lands included in oil and gas areas are subject to grazing use.

Mr. BROWN. I would like to ask Mr. Havell a question: Say, over in that area around Moab, which is so picturesque, if it were suddenly made into a national monument or a national park, what would become of grazing?

Mr. HAVELL. You should not ask me that question.

Mr. BROWN. I don't think it is necessary; I think you know; I think we all know.

Mr. A. E. BLACKNER. Inasmuch as this act provides it shall be sold to the highest bidder, would it not be possible for one who bought the property to fence it. That would automatically preclude ranging.

Senator MURDOCK. Mr. Havell, can you answer that question? I would not attempt to.

Mr. HAVELL. I am afraid not, Senator. First of all, I am not sure that I know what the gentleman intended by his question. I don't know what he means by being sold to the highest bidder.

Mr. BLACKNER. Leased to the highest bidder—however they are acquired.

Mr. HAVELL. The potash in the General Leasing Act, it provides for the use of prospecting permits, granted to the first applicant who qualifies. There is no bidding. It is only where we have known producing structures that there is a bid. There were some oil leases over in Wyoming that went to the highest bidder, but in the oil leases they proceed first with the prospecting lease, which is, as stated, to the first qualified applicant.

Senator MURDOCK. I think the further question of Mr. Blackner was this:

After a prospecting permit is issued, covering a certain area, suppose the permittee would then fence the area; would he have a right to do that?

Mr. HAVELL. No. The Leasing Act authorizes the use of so much of the surface as is necessary for the mining operation.

Senator MURDOCK. In your opinion, could he fence that area?

Mr. HAVELL. You can conceive of a condition where the whole area was needed for the mining operation; but the Leasing Act provides for the use of so much of the surface as is necessary to carry out the enterprise.

Mr. PATTERSON. Under the Leasing Act?

Mr. HAVELL. Yes.

Mr. PATTERSON. Do you have the Leasing Act?

Mr. HAVELL. I have it here. I think it is the same as the General Leasing Act.

Mr. MORGAN. The Potash Leasing Act, and the oil and gas are the same.

Mr. HAVELL. I can't answer the question, Senator, without looking it up; but under the Leasing Act the Department has issued the regulations governing the leasing of potash, and the regulation, of course, followed the act. A copy of the regulations will be furnished to the committee.

Senator McCARRAN. I think that would be all right.

Senator MURDOCK. Do you consider your question has been answered, with reference to fencing?

Mr. BLACKNER. No; I don't. I think a man has a right to fence a property when he acquires it. He has a right to control it, and that is up to him. He is spending his money to develop it. I think, under the 1923 act, it says he controls that lease. It is not discretionary.

Senator MURDOCK. Mr. Havell has answered as well as he can, have you not?

Mr. HAVELL. That is the best I can say at the moment, Senator. I have in my hands the regulations of the Potash Leasing Act, but I am not able to put my finger on anything that covers that particular point.

Mr. PATTERSON. Mr. Chairman, may I interpose this query: We are not dealing solely with potash or potash regulations. We are dealing with the whole territory, the principal product of which is vanadium.

Senator MURDOCK. Is vanadium in any way affected, Mr. Havell, by this withdrawal order?

Mr. HAVELL. I don't understand it to be so.

Senator MURDOCK. Isn't vanadium located under the lode laws, ordinarily, Mr. Patterson?

Mr. PATTERSON. Yes; it is located under the lode laws, but I can say this does affect us. We have the Navajo Reservation as a pattern before us, how it is controlled; and are they leasing that?

Senator MURDOCK. Mr. Havell has answered that, so far as metaliferous claims are concerned, they are not affected by this withdrawal order. Whether they are or not I do not assume to say, but that is the answer he gave.

Mr. HAVELL. Answering the question more directly, Mr. Blackner, section D of the potash lease form provides that the Government reserves the right to dispose of the surface of the land embraced therein, under existing law or laws hereinafter enacted, insofar as said surface is not necessary for the use of the lessee in extracting or removing the deposit therefrom.

That is not in the law, but that is in the standard lease form; the Government reserves the right to dispose of the surface, except the part that the lessee needs for the extraction of the potash.

Senator McCARRAN. The lessee has the right.

Mr. HAVELL. No; the Department has the right to dispose of the surface of the lands embraced therein, under existing law, so far as the said surface is not necessary for the use of the lessee.

Senator MURDOCK. Then I take it, from your statement, that the control of the surface on the part of the lessee is not as great under a prospecting permit as it is under a lode or a placer location?

Mr. HAVELL. That is right, Senator; you are absolutely correct.

Mr. PATTERSON. May I ask a question:

The only way, Mr. Havell, that you could use the surface of it would be by homestead or the land-law entry. That is what that means, exactly, doesn't it?

Senator McCARRAN. No.

Mr. PATTERSON. It may be subject to location under the land laws, provided you are given advantage of classification, and you have never given us that classification. Isn't that true?

Mr. HAVELL. I would not say that is correct, Mr. Patterson. The question was the right of the lessee to the surface.

Senator MURDOCK. That is right, and the question arose, as I understood it, from Mr. Montgomery's suggestion that the grazing rights might be eliminated by a supplemental order. I think the whole discussion originated from his suggestion.

Mr. LEECH. I know in Wyoming there are oil and gas leases, and right on top of that lease you have a grazing lease.

Senator MURDOCK. I think what Mr. Havell has in mind is that the Department, in disposing of the surface rights, could continue the jurisdiction of the grazing surface, so that they could issue permits, the same as if no lease had been made, except as it may conflict with the actual mining or exploring of the ground.

Mr. HAVELL. Senator Murdock, that is correct.

Mr. BLACKNER. In speaking of Wyoming, I have an 800-acre tract of land, situated in a producing oil field there. The reason I brought up the question is as to the fencing of that property. I have been offered some money for that purpose, provided I would give them permission to fence it.

Senator MURDOCK. You mean you were offered money for the grazing purposes?

Mr. BLACKNER. Yes; if they were permitted to fence it. Who is going to determine that? If I take a lease, I take the lease with one thought in mind, that I need that lease, a 100-acre lease. I am not filing on 10 acres. Somebody might come along and say, "You are using only 10 acres." Who will determine that?

Senator MURDOCK. The representative of the Department advises us that the control of the surface, except as it is presently needed for mining or drilling or extraction of the minerals, is in possession of the lessee, to protect the grazing of the surface. I don't know whether that is right or not, but that is his answer.

Mr. BLACKNER. Is that a law or an order?

Senator MURDOCK. Of course, we can't undertake here, Mr. Blackner, to settle all these questions. I am sure we don't want to change anybody's mind. You have a right to your opinion. Mr. Havell tells us what his understanding and construction of the law and regulations is.

Mr. HAVELL. The mineral lease, for a particular leasing mineral, is for the development of that mineral. It is not a lease for the general use of the land. Therefore, a man who has a lease for oil and gas does not have authority to use the land for any other purpose than for the development of oil and gas.

Mr. MONTGOMERY. The question I had—I don't know that I have got it sufficiently answered—here is my question: If this were subject to valid existing rights, the following-described areas are temporarily withdrawn from settlement, grazing, removal of timber, location,

sale, and so forth. Suppose it had read that way. Where would we be at? Grazing would be out. The point I raised is this: Can a supplemental order add the removal of timber, exclusion of grazing, and so forth, from this area and put these livestock men out of business in that particular area?

You say they will not do it. I wish you would show us something in this law that would give them the guaranty that it would not be done, and that it has not been done. I don't think that grazing is such an existing right that they can claim anything. It is not a right; it is a franchise, a privilege.

Mr. HAVELL. The term "valid existing rights" is a term that has been defined in the decisions of the Department and the courts. I think the meaning is clear that it relates to rights that have been initiated under the public land laws, such as the valid settlement right, or some other right initiated and validly maintained. It is not intended to refer to grazing permits or licenses. The order does not withdraw the land from grazing permits or licenses. It withdraws the land from settlement, location, sale, and entry; and a grazing permit, for the grazing of the surface, is none of those.

There is no question in my mind. I don't hesitate to answer your question, categorically. It does not in the least affect the grazing use of the lands that are now in the grazing district, and all these lands are in the grazing district.

Mr. MONTGOMERY. All right.

Mr. MURDOCK. Thank you, Mr. Montgomery.

Mr. BROWN. Mr. Chairman, we have had many intimations and direct statements that the Department of the Interior was intending to make a recreational area, a national park or monument, of a great part of this land in San Juan County. If that were done, then grazing would be eliminated, wouldn't it?

Senator MURDOCK. I know that we have been confronted with that situation for a number of years, but I am inclined to think that it has largely been abandoned. I can give you this assurance, that, as long as I am back there, my protest will be in the Interior Department against any such withdrawal; I can say that, and I am joined in that by the other three Congressmen from Utah.

Mr. Laskey is now in the audience. I wonder if he would step forward.

Mr. MONTGOMERY. I want to be sure that the reporter got that last statement by Mr. Havell, that this withdrawal does not affect grazing. (Last statement by Mr. Havell read by the reporter.)

Senator MURDOCK. Mr. Laskey, will you state your name and your official position?

STATEMENT OF F. G. LASKEY, REGIONAL GEOLOGIST, UNITED STATES GEOLOGICAL SURVEY, SALT LAKE CITY, UTAH

Mr. LASKEY. F. G. Laskey, regional geologist of the Geological Survey.

Senator MURDOCK. Will you tell us now what your duties are, Mr. Laskey, particularly with reference to this magnesium area that we have been talking about this afternoon.

Mr. LASKEY. I have no duties connected with the magnesium area. My functions are to supervise that part of the Geological Survey of the

Bureau of Mines. I haven't had anything to do with the magnesium area.

Senator MURDOCK. Do you know anything about it?

Mr. LASKEY. Just casually, as a geologist. I know the stuff is down there.

Senator MURDOCK. You are not connected with the Department of the Geological Survey which has to do with that?

Mr. LASKEY. Let me state this: I belong to the Geologic Branch, which will have to do with geologic studies.

Senator MURDOCK. Are you under Mr. Dyer?

Mr. LASKEY. No. They are coordinate offices, the Regional, the Geologic, the Geological Branch and the Conservation Branch.

They are largely engineers, I think.

Senator MURDOCK. Did you know anything about Withdrawal Order No. 130?

Mr. LASKEY. No.

Senator MURDOCK. Are you familiar with it now?

Mr. LASKEY. Except what I gathered this afternoon since I came in. What I know about it is this, or what I have gathered, that there has been a withdrawal order that withdraws certain lands in Utah from settlement, location, and such things as that; that there has been discussion as to whether or not it affects grazing.

Likewise, there has been discussion as to what potash or oil may have been shown by oil drilling in that area.

Senator MURDOCK. So that all you know about it is what you have gathered here in the room?

Mr. LASKEY. Yes.

Senator MURDOCK. You were not contacted at all prior to the issuance of the order?

Mr. LASKEY. No. I saw the notice in this morning's paper. I did not come over here because it was a separate branch of the Survey.

Senator MURDOCK. Do you have any questions?

Senator McCARRAN. No suggestion went to the Secretary of the Interior, or to any bureau or member of any bureau, from you or from the division of the Geological Survey in which you are employed, suggesting the withdrawal of the land in controversy or in question here?

Mr. LASKEY. I can only speak for myself. No word came from my office. I would not be in a position to know what word came from Washington to any other office.

Senator McCARRAN. Have you any correspondence in your office, or in the files of your office, from any department in Washington, with reference to this withdrawal?

Mr. LASKEY. No, sir.

Senator McCARRAN. So your files are entirely devoid of any reference to this order of withdrawal or to the lands involved?

Mr. LASKEY. Yes, sir.

Senator McCARRAN. Of that you are quite certain?

Mr. LASKEY. Unless something came in while I was on field trips. It would be foreign to our function to have such correspondence.

Senator McCARRAN. The statement was made here this morning that as a rule withdrawals of this kind came by the initiative of the United States Geological Survey. Do you conform to that statement, if it was made?

Mr. LASKEY. I don't know.

Senator McCARRAN. So far as you know, nothing was initiated from your branch of the Geological office?

Mr. LASKEY. I don't know.

Senator McCARRAN. You don't know what, please?

Mr. LASKEY. I haven't any information as to whether or not—if I gather your wording right—so far as I know, no order came from my branch of the Geological Survey.

Senator McCARRAN. No recommendation?

Mr. LASKEY. No recommendation. So far as I know, none has come from there. None of my duties or functions ever brought me in touch with this problem. I don't know how they are handled, I haven't the vaguest idea.

Senator McCARRAN. Does your branch of the office have anything to do with observation or study of the log of the well being drilled there?

Mr. LASKEY. When I got here a year ago last summer that D. P. lease well was being drilled down there under the supervision of the Bureau of Mines. Mr. Bailey, the chemist, who was mentioned, and a geologist of the Survey was down there at that time. Our files may have a copy of the log of that well. Offhand I could not tell you if a copy is there. It could be easy enough to furnish the committee with a copy of it.

Senator McCARRAN. I don't know whether this matter has been cleared up or not, but I would like to make a request on the United States Geological Survey to furnish to the committee a copy of any log or history of the drilling that has taken place down there either by the Defense Plant Corporation, the Bureau of Mines, or any other agency, a study of which has been made by the United States Geological Survey.

Mr. LASKEY. If I might suggest it, Senator, if you have any other stops in this hearing, that a telegram to the Director over your name would probably get a copy of it to you at your next stop.

From what has been said I gather there were records of recent drillings of the wells, the D. P. C. wells. If that were true, and the Survey had the logs, they would be filed in Washington.

Senator MURDOCK. The log of the D. P. C. wells is contained in the Bureau of Mines report, isn't it?

Mr. LASKEY. Yes; I presume you have it already. If I have any logs, that would be the only one I would have over there.

Senator McCARRAN. It would be the log of the well that is being drilled by the Potash Co. of America?

Mr. LASKEY. If the Geological Survey has those records, I would guess—strictly a guess—they would be in Mr. Dyer's office.

Senator McCARRAN. Was Mr. Dyer here this week?

Mr. LASKEY. I don't know. The last I saw him was last week. I have been gone 2 days. The last I saw of him was the last of last week.

Senator MURDOCK. You don't know where he is now, do you?

Mr. LASKEY. No.

Senator MURDOCK. Does anyone here in this group know where Mr. Dyer is now?

Mr. BROWN. Do you know, Mr. Hauptman?

Mr. HAUPTMAN. He is in Denver at a conference of the Conservation Branch.

Senator McCARRAN. All right.

Senator MURDOCK. That is all, Mr. Laskey.

Is Mr. Ross Leonard here, the State fish and game commissioner?
(No response.)

Senator MURDOCK. Mr. Morgan.

STATEMENT BY N. G. MORGAN, JR., SALT LAKE CITY, UTAH

Senator MURDOCK. State your name, please.

Mr. MORGAN. N. G. Morgan, Jr.

Senator MURDOCK. That is "Nick" Morgan?

Mr. MORGAN. That is right.

Senator MURDOCK. You may proceed.

Mr. MORGAN. I have a little article that will take just a minute. It appears that the only effect of this departmental order is to bring magnesium and potash under a new right.

Senator MURDOCK. Did you state whether you represent any group?

Mr. MORGAN. I represent a group in this area. We have oil and gas leases, I and my associates, immediately adjoining the Potash Co. of America's holdings down there, and also prior potash applications which are now pending.

Senator McCARRAN. Do they affect the same ground on which application is now made by the Potash Co.?

Mr. MORGAN. There might be small acreage in conflict, but that is not the point at the present time.

In my appearance before your investigating committee, I desire to bring to your attention what appears to me to be a concerted effort, on the part of certain large financial interests and the Secretary of the Interior, to accomplish two definite purposes, in the initiation by the Secretary of the Interior of recent Withdrawal Order No. 914, withdrawing 3,000,000 acres of land in southeastern Utah from public entry, as follows:

Senator McCARRAN. You refer to the order with reference to the land depicted on the map?

Mr. MORGAN. That is correct. Withdrawing 3,000,000 acres of land in southeastern Utah from public entry, as follows:

1. The accomplishment of the desire of the Secretary of the Interior to bring under his control all mining lands which have previously been open to mining location.

2. To bring under monopolistic control and the elimination of all other competition the development of the great natural mineral resources found in certain sections of the Government-owned lands in southeastern Utah.

If this order is allowed to stand it will eliminate the prospecting of the area by individuals for minerals of commercial value. I am aware that this order technically does not eliminate a citizen or corporation from acquiring prospecting rights to the lands through the Interior Department, but the requirements so imposed by the Department in order for an applicant to obtain mining rights on same, are of such nature that it is absolutely impossible for any citizen to succeed in

qualifying for a permit to prospect for potash and magnesium under the Potash Leasing Act of 1927, unless he is associated with large financial interests.

It is true that the withdrawal leaves the prospector the right to make application for a permit to prospect for the mineral or mineral salts to be found there, but the Department has made studied efforts to make it almost impossible for an applicant to secure these rights.

My short appearance before you will be to cite to you a case or two wherein either I, or my associates, have been endeavoring to obtain rights to explore these lands, and to date have not been successful. My associates have been trying to get potash permits. I could relate the facts about the delay, the indecision, and the way that they have gone around it, beating around the bush, you might say, in respect to issuing this permit.

Senator McCARRAN. How long have you been applying for a permit?

Mr. MORGAN. One particular permit I am referring to was—application was made in January 1942.

Senator McCARRAN. Has any permit yet issued?

Mr. MORGAN. No, there has not been a permit issued; and it carries a priority right, so far as being the first application. We also control the oil and gas lease on that same land. They denied us permission on the basis they were not allowing diamond drilling to be used on magnesium land.

Of recent date, another case was when an associate of mine, W. P. Whisnant of Los Angeles, Calif., who has private lands under lease, made application to the War Production Board for the right to use a diamond drill that was available, and not in use, to prospect for potash and magnesium salts. I refer to a copy of the telegram that was sent to Mr. Whisnant from the War Production Board, denying him this right.

(The telegrams are as follows:)

MAY 13, 1943.

WAR PRODUCTION BOARD,
Mining Equipment Division,
Washington, D. C.

I desire to engage Boyles Bros. Drilling Co., Salt Lake City, Utah, to core drill for magnesium and other mineral salts and for oil and gas on properties. I have leased in section 21, township 22 south, range 16 east, Salt Lake Meridian, Emery County, Utah. Serial number of drill W. P. B. number C. D. 4-2. Boyles Bros. No. C-2. Please wire necessary permission.

W. P. WHISNANT,
8360 Hollywood Boulevard, Los Angeles.

WASHINGTON, D. C.

W. P. WHISNANT,
8360 Hollywood Boulevard

Reurtel Boyles Bros. serialized core drills cannot grant permission on basis of magnesium. Suggest contacting Gulf Refining Co., Los Angeles, Continental Oil Co., Denver, to ascertain if they have inactive equipment for which arrangements might be made.

ROBERT F. IMBT.
Chief, Serial Number Section,
War Production Board.

Mr. MORGAN. At the present time, when an applicant applies for a potash and magnesium permit to prospect, his application is im-

mediately denied, subject to his right within the following 30 days to appeal to the Secretary of the Interior. In appealing, the applicant has to advise his finances at hand, his experience, the equipment that is available, and by what rights he can expect to obtain other necessary equipment, in view of the fact that he will have to first obtain this permission from the War Production Board, and further prove that there is an economic need for potash and magnesium and associated salts.

The Department has made such extraordinary and ridiculous requirements of the applicant that it is entirely impossible for a citizen or company, other than large interests, to secure the right to prospect and develop these lands.

What proof do we have that the Secretary of the Interior will not again, as he did in 1935, issue an order refusing to grant permits to prospect on any of the lands at any time.

This is exemplified in the order of 1935, which has resulted in the Department, from this time until now, not issuing a single permit to prospect for potash, magnesium or associated salts in the State of Utah.

Recently in the magazine entitled "The Mining Journal" there appeared an article prepared by the General Land Office, part of which reads as follows:

That officials of the General Land Office propose to extend the present Leasing Act to include all mineral deposits. In support of this proposal the General Land Office presents a 20-year record of the Federal administration of the Leasing Act of 1920. In the two decades following its passage, they state that more than 110,000 applications for permits and leases were filed, and on June 30, 1940, more than 5,000 leases were issued.

By their own admission, they state that less than 5 percent of all applications made have been granted.

It is quite obvious that Secretary Ickes is trying to accomplish, by executive fiat, what he has long tried to get Congress to do. That is, to repeal the existing mining laws and to require that all mining in the future be permitted only under the Leasing Act, allowing the Department of the Interior to determine by permit just who is and who is not allowed to explore for minerals.

The great mining industry of Utah has been made possible, very largely, through the individual initiative of the common prospector.

The act of the Secretary in withdrawing these lands makes prospecting in Utah past history, and places in the hands of the great vested interests of this country the full and complete control to the immensely rich mineral resources found in this section of the State.

Finally, I feel that it is vital to the State of Utah, and to the mining interests of this State, that the present policy of the Department of the Interior be frustrated and that the mineral resources of this State be developed in the future as they have been in the past by the individual initiative of the citizenry of this State; that the great magnesium deposits of southeastern Utah be developed now, as rapidly as possible, to the end that when the present war emergency is over that the great magnesium plant at Las Vegas will have available the raw material necessary that will enable it to compete with the Dow Chemical Plant in Midland, Mich., and its great sea-water plant in Texas.

Senator McCARRAN. How far is this particular territory from Las Vegas?

Mr. MORGAN. About 500 miles.

Senator MURDOCK. Can you tell us this, Mr. Morgan—as I understand the situation at the basic magnesium plant in Las Vegas they first have to convert, do they not, the brucite to magnesium chloride, a process in the plant, whereas here we have the magnesium chloride in its natural state?

Mr. MORGAN. That is correct. I was advised that it would take a change from the present orders to handle the chloride from southeastern Utah.

I might mention this with respect to the Las Vegas plant: According to a statement made by Mr. Dyer of the United States Geological Survey office here, he said that the Las Vegas plant could handle the raw material we have here in Utah.

In the event this is not done, the basic magnesium plant, I am advised, under its present method of making magnesium metal will have to cease operation because of the excessive cost thereof in producing same, which will result in that great manufacturing establishment died a-borning.

If the remarks made here today by me have been interpreted to mean that a national airing of the control held by monopolistic interests in the light metals field is needed, be it so interpreted.

Senator McCARRAN. I think you have been somewhat misadvised as to recent conditions. The cost of production has been materially, very materially reduced.

Mr. MORGAN. Isn't it still costing more to produce a pound of magnesium?

Senator McCARRAN. I could not answer that question; I am not sufficiently familiar with the matter; but the cost of production, of treatments, has been materially reduced in many ways, as, for instance, peat is no longer used, and many other improvements to the method that was first set up.

Mr. MORGAN. All the articles that come out in technical magazines refer to the fact that, unless something is done, that the end of the war will see the end of the Government plant at Las Vegas.

Senator McCARRAN. I think they exaggerate.

Mr. MORGAN. Nevertheless, it would be a good thing to know that you would have a source of material.

Senator MURDOCK. We will ask Senator McCarran to keep the Utah deposit in mind.

Mr. MORGAN. That is all.

Senator MURDOCK. Any questions from anybody in the audience?

Mr. MELICH. Mr. Balsley, one of the principal operators in vanadium, and also in oil, at Moab, is here.

Senator MURDOCK. Is Mr. Frank Martinez, from Richfield, in the audience? Mr. Martinez comes next on the list. He indicated to me that he knew something about the initiation of this withdrawal order.

(No response.)

Senator MURDOCK. All right, Mr. Balsley.

Senator MURDOCK. State your name, Mr. Balsley?

STATEMENT OF H. W. BALSLEY, MOAB, UTAH

Mr. BALSLEY. My name is H. W. Balsley, and I reside at Moab, Grand County, Utah, in the heart of this newly withdrawn area.

While I am vitally interested, directly or indirectly, in the development of mining, and every other industry affected by this withdrawal, I am appearing primarily upon the suggestion, and in behalf of, a large number of prospectors and small vanadium-uranium mine operators within the area, one of whom I happen to be.

It might appear, on its face, that this withdrawal order will not affect present existing mining claims or the claimants, but I am not so sure that this is the case. This order will be subjected to rules and regulations, promulgated by the Secretary of the Interior; and who can say how those rules and regulations may affect present owners or operators within this area?

The best information we can get from attorneys, and various others I have had an opportunity to contact, is that this will very definitely affect the vanadium and uranium industry. Vanadium and uranium, if I am correctly informed, are not metalliferous minerals. I am very sure that they come in this withdrawal order.

Senator MURDOCK. May I interrupt you there to ask how are they located? How do you locate the uranium and vanadium?

Mr. BALSLEY. Lode locations.

Senator MURDOCK. Do they occur in well defined lodes?

Mr. BALSLEY. No, sir. There has always been a question whether it is a true lode or not. Some people, in order to fully protect themselves, locate both by lode and placer, because this ore is laid down in what we call lenticular pocketty forms; so there are no continuous or well defined veins.

This order will be subjected to rules and regulations, promulgated by the Secretary of the Interior. I think none of us are in a position to judge as to what these regulations may be, or how they will affect us.

Senator MURDOCK. Let us interrupt you there. Mr. Havell, is there any rule or regulation contemplated under the withdrawal order?

Mr. HAVELL. None that I know of, Senator.

Mr. BALSLEY. Certainly they would have to have something to proceed under.

Senator MURDOCK. I don't know that. Under the withdrawal order itself, I can't conceive, myself, why such a withdrawal order would not need rules and regulations.

Mr. BALSLEY. Who is going to say whether it affects us or not? We don't know whether we are affected or not. We think we are. I do know that every prospector, who has been making a living by prospecting, has ceased to prospect since this order came up.

Senator MURDOCK. Can you answer that, Mr. Havell?

Mr. HAVELL. No.

Senator MURDOCK. Aren't the present operators in the vanadium and uranium claims there fully protected by the vested right clause in the withdrawal order?

Mr. HAVELL. Those who had vested rights when the order went into effect are protected. The order so states. But I am unable to answer here as to whether, after the date of the order, any particular claim

is a metalliferous or nonmetalliferous claim. If it is metalliferous, it is excepted from the order. If it is nonmetalliferous, it is under the order.

Mr. BALSLEY. I am quite sure it can be substantiated that vanadium and uranium are not classified as metalliferous areas.

Within the last year and a half the Government has expended \$3,000,000 in southeastern Utah, adjacent to this immediate territory and over into Colorado, in the operation of vanadium mines and the extraction of the ore, both of which minerals are very essential strategic minerals.

We are very much concerned, of course, we who did have claims. If we are exempt, then we have no kick coming. There have been found new deposits of this ore, and we are very much concerned as to what regulations may affect us.

I do know that this order has had the immediate effect of stopping all prospecting for ore within this area by men who make prospecting their business.

As to what may be prescribed by the rules and regulations which will be laid down by the Secretary for the development and operation of mining claims located within this area, I would like to submit a certain Notice of Mineral Lease, covering lands located on the Navajo Indian Reservation. This notice is dated at Window Rock, Ariz., July 21, 1943. The tract of land affected is located in Apache County, Ariz.

This notice goes on to recite the minimum prices for which the vanadium content of the ores mined can be disposed. But I want to call attention to the fact that no mention whatever is made of any pay to the Government, or the Indians, for the uranium content of these ores. As you may know, in carnotite ore, as this ore is, vanadium and uranium are constantly associated. I submit to you that ore having a value of several hundred dollars per ton for its uranium content alone, regardless of the vanadium values it contains, is being mined and removed from these lands, under lease, by the operating companies on the Navajo Reservation, without the payment of one cent for the uranium content of such ore. One wonders where those who are charged with protecting the interests of the Government were while that was being put over. When they bid for vanadium they pay nothing for uranium.

It may be felt that the terms of this instrument has no direct bearing on the case in point, but I submit that the rules and regulations to be promulgated by the Secretary, under this new order, may contain practically the identical terms contained in this notice. I was present at the Indian tribal council meeting, at Window Rock, Ariz., less than 3 years ago, when the amendment to the rules mentioned in this notice was submitted to the Indians by a representative of the Interior Department. And I do know that a great many of the members of the tribal council did not, and do not now, approve of it.

Here are some of the terms of this notice (rear section noted). Now, just as to this bond. In order to furnish a bond suitable to the Government, under this notice, one is required to either furnish a surety bond for \$15,000, which has to be backed up by a like amount of cash or Government bonds, deposited with the bonding company, or by cash or Government bonds directly put up with the Government. Just how could a small operator comply with this very first requirement?

We are excluded, if any such regulation as that is promulgated for the handling of this land.

The result of this procedure on the Navajo Reservation has been that not a single lease has been granted, during the past 3 years, I am reliably informed, by an independent individual or small operator not directly affiliated with one or the other of the two large dominant corporations in the vanadium industry.

These Indian lands are not far removed from a lot of this latest withdrawn area, and the occurrence of ore, mining methods, and so forth, are practically identical.

Hundreds of prospectors and small operators have been making their living out of the vanadium-uranium ores which they find, develop, and produce within this area. What is to happen to them, if they are subjected to such conditions as those now in effect on the Indian reservation; and, in my humble judgment, that is just about what we will be up against.

Senator MURDOCK. Are there any comments or questions? Mr. Havell.

Mr. HAVELL. Senator Murdock, the gentleman referred to a mineral prospect on the Indian reservation, which has no bearing on this problem, as I see it. It is not governed by the general mining laws of the United States. That is purely an Indian matter, handled by the Indian Service for the benefit of the Indians. I see no connection between that and the problem we have here.

Mr. BALSLEY. There is a very definite connection, because we have been through the same thing down there; because this law went into effect and we went in there and tried to mine this ore and the first thing we had to do was to put up a \$15,000 bond. Why should he do it on the reservation if he would not do it on this land? The conditions are the same.

Senator MURDOCK. I don't think, Mr. Balsley, that it in any way changes the rules and regulations under your Mining and Leasing Act.

Mr. HAVELL. That is correct, Senator.

Mr. BALSLEY. Doesn't the Secretary have the right to promulgate such rules and regulations as he sees fit for the handling of the land withdrawn?

Senator MURDOCK. As I stated before, I don't think there is any authority vested in the Secretary of the Interior to promulgate rules and regulations under this withdrawal order. I think that he might modify or change the rules and regulations under the Leasing Act. That, of course, would be possible; but I don't think it could be predicated on this withdrawal order. I am quite sure on that. I don't know whether Mr. Havell agrees with that statement or not.

Mr. HAVELL. I concur with the Senator, entirely.

Senator MURDOCK. I would like to make this statement, Mr. Balsley, that I hope no rules and regulations will be made, or any amendments or modifications, which will be any more stringent or difficult to meet than those already in existence.

Mr. BALSLEY. What are we to do in the meantime? Go ahead and prospect for this ore that is vitally needed by the Government or shall we quit?

Senator MURDOCK. I was a little surprised at your readiness to concede that vanadium and uranium were not metalliferous ores. It

seems that everyone has considered them as such, up to this time, due to the fact that they have been located under the mining laws. It is my hope that what has been the practice in the past will be the practice in the future; but your own statement, of course, to the effect that they are not metalliferous—

Mr. HAUPTMAN. Who said they were not metalliferous?

Senator MURDOCK. Mr. Balsley said that. I was surprised at that statement.

Mr. HAUPTMAN. That magnesium is not a metalliferous ore?

Senator MURDOCK. Yes. I had understood nobody considers it a metalliferous ore.

Mr. HAUPTMAN. I have always considered it a metalliferous ore. I don't know why not.

Mr. BALSLEY. It comes under this order.

Mr. HAUPTMAN. What is there to indicate that? Where do they describe the different metals, saying that vanadium is not a metalliferous ore?

Senator MURDOCK. I think it is quite definitely understood—if I have understood Mr. Havell correctly—that magnesium is excluded from location by either lode or placer.

Mr. HAVELL. Vanadium?

Senator MURDOCK. No, magnesium.

Mr. HAVELL. Under the lode or placer laws, because when it appears in association with potash it comes under the Leasing Act. There are some nice points about associated minerals that I am not expert enough to go into here. We would have to get one of our geologists to go into that.

Senator MURDOCK. I fully agree with you, Mr. Balsley, that the rights that are already vested there should be, and I think they are, protected under this act. It is my hope that there will be nothing promulgated in the future, by way of rules or regulations, that will interfere with your operation. If such are promulgated I hope, if I am in the Senate at the time, that you will immediately contact me and my services will be available to protect you in any way that I can.

Mr. BALSLEY. Thank you.

Senator MURDOCK. State your name.

STATEMENT OF F. J. FJELDSTED, SECRETARY, CHAMBER OF COMMERCE, OGDEN, UTAH

Mr. FJELDSTED. My name is E. J. Fjeldsted, secretary of the Chamber of Commerce at Ogden, Utah.

In the interest of time, I am presenting this brief statement prepared by Mr. Frederick P. Champ, who is a director of the United States Chamber of Commerce. He is unable to be here in person. He asked me to file this statement with the committee today. It reflects the stand of the United States Chamber of Commerce on this question. I doubt that it is necessary to read it. It can be placed in the record as such. If there is no demand for its being read, I think, in the interest of time, Senator, we might just as well file it.

Senator MURDOCK. In the interest of time it may be received for inclusion in the record.

We are very much indebted to you, Mr. Fjeldsted, for coming down, and also to Mr. Champ, who is one of our prominent civic-minded citizens, for the position he has taken in this matter.

(The statement above referred to is in words and figures, as follows:)

**STATEMENT OF FREDERICK P. CHAMP, DIRECTOR, UNITED STATES
CHAMBER OF COMMERCE, LOGAN, UTAH**

**BEFORE UNITED STATES SENATE SUBCOMMITTEE ON PUBLIC LANDS AND SURVEYS AT
SALT LAKE CITY, UTAH, FRIDAY, NOVEMBER 19, 1943**

Senator McCarran and members of the committee, my name is Frederick P. Champ and my residence is Logan, Utah. I am appearing here as a director of the Chamber of Commerce of the United States of America and as a member of the natural resources department committee of the chamber to report its policies on the questions involved and also to make some observations on my own responsibility. The natural resources department is concerned with industries which may well be called the extractive industries—those that first recover—such natural resources as coal, oil, and gas, the metalliferous minerals, lumber, and water power.

Since it is my understanding that the principal purpose of your hearing in Salt Lake City at this time is to consider the effect of the withdrawal of substantial areas of public lands in this State from prospecting, I shall confine my observations and brief statement to the effect which such withdrawals have upon the economy of this State and the region and the questions of public policy involved in making such withdrawals by Executive order without the consent of Congress and frequently over the protest of the people in the area immediately concerned.

The membership of the Chamber of Commerce of the United States has approved a pronouncement initiated by its natural resources committee relating to mineral resources which declares that "the long established public land policy based on discovery, location, and patent which has encouraged development should be continued. The tax methods now applied to mining should be continued as appropriate for the conditions and hazards of the industry."

I am informed that the withdrawal of approximately 3,000,000 acres of land in southern Utah will prevent prospecting of any kind on said lands except by permit and under special conditions specified by the Secretary of the Interior. In effect, the mining laws which have prevailed for many years and which have encouraged prospecting, would be abrogated by the operation of this order and withdrawal.

Certainly we should conserve our resources, both renewable and nonrenewable. I hold no brief for the waster of resources nor for the servative prospector who may attempt to circumvent the privileges properly accorded him under the law. We must recognize, however, that the legitimate prospector has been our greatest discoverer of new minerals and new mines. Utah, and southern Utah in particular, has tremendous potentialities as a source for the continued discovery of many minerals, metallic and nonmetallic substances. The need for the initiative of private enterprise is nowhere more apparent than in the exploration and development of our mineral resources. It is essential to the proper development of our western economy that the way be kept open for the legitimate prospector, unregimented by the unreasonable dictates of executive departments or bureaus which have the effect of destroying his initiative and retarding the exploration of the mineral resources of our public lands. At the same time, he should have the continued guidance and assistance of the Bureau of Mines and the Geological Survey, which bureaus should, of course, be maintained at a high state of efficiency in order to continue their assistance to the industry by appropriate investigation and experiments.

As I was privileged to say before members of the Senate and House Committees on Public Lands at Jackson, Wyo., in August, the land ownership basis of Federal control is ever present as an argument for Federal ownership and control of the resources themselves. It is no longer so much a question as to whether the Government shall continue to control our public lands and natural resources as it is a question as to the manner in which this control is to be exercised. As in the case of the recent unwarranted creation of the Jackson Hole National Monument

we are confronted in this instance with Government by Executive order functioning in the disposition of productive resources which, under conservative use, may be vital to the economy of the region concerned. The impression is given that the Government no longer seems to be satisfied to function as a Government and to administer these resources as a sacred trust for the benefit of the people on the theory that these resources are dedicated to the productive use and enjoyment of its citizens. This new policy apparently contemplates the Government possessing these resources, not strictly in an administrative capacity but as a sort of superindividual controlling them as proprietary owner. Such a policy cannot be pursued without encroaching upon human rights and on an established phase of American life which has had an important part in the upbuilding of the West and which can continue to develop it under appropriate regulations and within a conservative pattern.

The action under consideration here, as in the case of the Jackson Hole National Monument, also involves the broad question of States' rights. The interests of the States in their natural resources should be preserved. Under withdrawals by Executive order or the creation of reservations involving the resources of the public lands by similar procedure, the rights of the States are invaded without opportunity for representation or review. Our opposition to Federal regional authorities which disregard State lines and control the vital resources of these areas, is based upon the same premise. State and local responsibility should be preserved against impairment by Federal action in any of its forms. This protection can only be afforded effectively by legislative process.

I therefore believe it is imperative that the laws of the United States be so amended as to prevent any further withdrawals by Executive order or by any other procedure except by and with the full knowledge and approval of the Congress and then only with the full understanding and approval of the executives and legislatures of the States concerned.

Finally, may I thank you for the privilege of entering in the record of this hearing this brief statement which I believe reflects not only the opinion of the national chamber, but the opinion of the majority of the people of this State and the West on one question before you at this time. Your interest in this, and other pressing problems involving the public lands of the West as evidenced by the holding of this and numerous other hearings in the States concerned, is deeply appreciated by every citizen who is concerned with the preservation of free enterprise and the continued productive development of our western public lands States.

Respectfully submitted.

FREDERICK P. CHAMP.

Senator MURDOCK. I understand Mr. Ross Leonard, of the fish and game department of Utah, is here.

I would like to state that Senator McCarran had to leave in order to meet his train schedule. He stayed just as long as he could. I am sure that everyone who has been here has noted his very intense interest. He has a comprehensive grasp of the problems presented.

Senator MURDOCK. State your name, please.

STATEMENT OF ROSS LEONARD, DIRECTOR, FISH AND GAME DEPARTMENT, SALT LAKE CITY, UTAH

Mr. LEONARD. Ross Leonard, director of the fish and game department. I am here primarily representing the Utah Fish and Game Commission, as well as the sportsmen of the State.

We were very much interested this morning in Mr. Brown's summary of the situation that these lands were being withdrawn for classification. If these lands are going to be classified in the national parks or national monuments, we of the fish and game department are vitally affected, because that would mean that the wildlife resources of that area would automatically be withdrawn from the supervision and control of the State and not be placed in a position

for hunting by the people of the State of Utah. There would be no hunting allowed, if they follow the precedent that has been set up in the control of wildlife and game.

We have a very bad situation in Zion Park right at the present time. We are in the process of harvesting some 300 head of deer in that area. They are suffering from malnutrition, and they have to be removed for the good of the wildlife in that section. This condition has arisen in the handling of wildlife in that vicinity. If that situation should arise in the area here involved, we would be faced with similar problems.

On behalf of the sportsmen and the Utah Fish and Game Commission, I wish to express a protest against this type of activity and this Executive order, withdrawing lands that the people of the various States are desperately interested in.

Thank you.

Senator MURDOCK. Mr. Leonard, while you are on the stand, due to the fact that our committee gave considerable consideration to S. 1152, which has to do with the giving to the Secretary of the Interior some say and some jurisdiction over the wildlife of the State, do you wish to say anything about that at this time?

Mr. LEONARD. Yes. Our commission has gone on record as being definitely opposed to that type of legislation.

In the first place, it places all the control of the wildlife of the State of Utah in the hands of the Federal agency involved. We have different Federal agencies, such as the Grazing Service, the Forest Service, and so on. We would have diversified administration there. That would not make for good administration of wildlife in Utah. Furthermore, it would provide for the commercialization of wildlife, the selling of licenses by Federal agencies, and would break down all of the present sportsmanship that has been set up.

We do not need any such bill as Senate bill 1152, because we have a bill in Utah that has been a model for other States. We have our board of big game control, of five members, representing, one, the cattle interests, one the Forest Service, one the Grazing Service, and one the Fish and Game Commission.

Under this set-up we have had more or less management of our natural resources.

With all of this public sentiment that has been expressed against big game throughout the Western States in the last year or two, we find there is a possibility that we are going too far in reduction in certain areas. It is time probably that we were calling a halt. But in all of the examples that have been held up by various people interested in the passage of Senator bill 1152, we find they are our States, such as Utah and Colorado.

For example, in Utah last year we harvested some 63,609 deer in the State. I don't know how any Federal agency could hope to harvest more game.

Senator MURDOCK. What was the figure?

Mr. LEONARD. Some 63,609 deer last year during our fall hunt. We do not have our figures compiled on our 1943 hunt.

Senator MURDOCK. What have you to say with reference to the present cooperation between the different Federal Government agencies, such as the Forest Service and the Grazing Service and the State fish and game administration, to rectify this rather bad situation?

Mr. LEONARD. I feel that if there was a cooperative feeling between the administrators of the various departments these problems of surplus game crops could be worked out satisfactorily to all concerned.

Senator MURDOCK. What would you say is the present attitude of the various services? Do they feel that they are getting the right kind of cooperation from the State fish and game department?

Mr. LEONARD. I don't think that they do. We have administered the board of big game controls and disposition of surpluses as effectively as possible, but there has been some feeling of friction between the fish and game department of the State and the various services.

Senator MURDOCK. Is that friction becoming less or greater?

Mr. LEONARD. It remains practically about static.

Senator MURDOCK. In your opinion, the State fish and game department is doing a fairly good job in the harvesting of our deer to the end that our surplus crop will be eventually eliminated?

Mr. LEONARD. Yes. In our fall hunting season this year, for example, our board of big game control extended the season on the Fish Lake National Forest. Our regular season was from October 16 to 26. This season that was extended from October 16 to November 7. There were 16,000 doe permits; allocated on that one forest alone there were approximately 12,000 or 13,000. We do not have the complete figures available. Twelve thousand or thirteen thousand of those doe permits were sold. That was this year. Last year we killed, during this extended season, some 30,000 deer on the Fish Lake Forest alone.

Last fall, in the LaSal area—we have a more congested area down there, and the season was extended for a total of 1 month, from October 16 to November 16. The purpose of these extended seasons and does grants were simply to take care of the surplus game crop that we have there. We feel that we are doing that in practically every area of the State. We have our game problem under control in Utah.

Senator MURDOCK. Are there any questions by anyone in the audience to propound to the fish and game commissioner?

Mr. Kneipp, do you have any?

Mr. KNEIPP. All I can say, Senator, is this: I did know, from earlier talks, there has been some difference of opinion between the Forest Service and the State fish and game commission as to the degree to which there have been surplus deer populations in certain parts of the State, and as to the amount of damage which was resulting, and as to the losses to deer which have occurred. I do not believe all the disagreement has been entirely reconciled, but I am not sufficiently familiar with all the details to discuss it. We have Mr. Olson here of the regional office at Ogden. He has been dealing with that situation. He might be able to offer some statement, or question Mr. Leonard.

Senator MURDOCK. Did you hear Mr. Leonard's statement, Mr. Olson?

Mr. OLSON. Unfortunately, I did not.

Senator MURDOCK. Then you are not in a position to interrogate him at this time. Is that right? Or do you want to ask him some questions? For your information, Mr. Olson, he was discussing S. 1152, with which you are very familiar, are you not?

Mr. OLSON. Yes, sir.

Senator MURDOCK. Do you care to make any brief statement on that bill, Mr. Olson, or in connection with the surplus deer or elk here in the State of Utah?

Mr. OLSON. I think our regional forester, Mr. Woods has already made that quite clear. It is a matter of record, the attitude with reference to the bill itself.

Now, as to the losses which have occurred in the region, due to overpopulation of game, I could make some statements in a rather general way. I haven't the exact figures with me, but for the past 10 years there has been quite a high mortality among our deer on overpopulated ranges in—I will not say in particularly hard winters but in moderate winters.

As a matter of fact, up at Logan, I think it was in 1936, we estimated we had 1,500 head of deer die from malnutrition. Losses since then have not been so heavy. However, last winter, which was not a severe winter, the mortality there was around 300 or 400 head, as I remember.

A year ago, the past winter, just east of Salt Lake City, I think the fish and game department figures show that out of about 3,000 deer, approximately 800 died that winter.

Down on the Fish Lake Forest, which is one of the most heavily populated area of deer that we have, losses have been going on there intermittently for the past 10 years.

We made intensive surveys on certain areas 5 or 6 years ago. The mortality ran on the most heavily populated, denuded areas as high as 102 per section, with an average of 41 per section, for the area around Cove Mountain and in there. It was proportionately less in other places. So we have had a high mortality among our deer, due to overpopulation and malnutrition, overgrazing of the ranges.

Senator MURDOCK. Don't you consider that the killing of does, in the last few years, has and will have a very material effect on this overproduction?

Mr. OLSON. That is correct, Senator. I will say, a year ago, when some—I have forgotten exactly how many—does were taken off the forest; a year ago some 63,000 deer were taken in the State, and that has reduced the deer in certain areas—Fillmore, Konosh, somewhat at Beaver, and no doubt also to some extent over in Salina Canyon. I do not agree however, that the herds have been unnecessarily reduced. I don't know whether the problem has been entirely cured or not. The range itself would have to determine that.

Senator MURDOCK. But you do consider that the fish and game department, at least in the last couple or 3 years, has been cooperating to the end of decreasing our overpopulation of deer?

Mr. OLSON. Yes.

Senator MURDOCK. And that if that policy is continued it will—in all probability—end that problem?

Mr. OLSON. I don't think there is any question but what the problem can be worked out and remedied. In some places, perhaps, it has already been cured. Certainly, it has taken off the current increase. Progress has been made throughout the State, with the cooperation of the State fish and game department.

Senator MURDOCK. I am satisfied that in the introduction of S. 1152, by Senator McCarran, it was introduced primarily, in my opinion, for the purpose of bringing to the front this very vital question.

From what has been said here this afternoon, and what was said over at the Denver hearing, the 2 days we were there, and at the previous hearing at Glenwood Springs, and also at Salt Lake City,

I am satisfied that the bill has accomplished the only purpose in a full discussion of the question.

I am inclined to oppose the bill; and I have concluded that for the present there is no need for it. But I do think that it has served a purpose; and I think that the end will be a satisfactory solution of this question; but I am really opposed to what appears to me to be an invitation to the Secretary of the Interior, and the different agencies to come in and control the wildlife of the State, which, in my opinion, is being handled rather efficiently at the present time by the State fish and game department.

Mr. OLSON. Personally, I feel that the problems can be worked out under the present set-up, with the present State fish and game laws, and our understanding of the regulations.

Senator MURDOCK. I am very happy to have you make that statement.

Are there any further questions of Mr. Leonard?

Mr. KNEIPP. I might remark that the purpose of the Forest Service and of Mr. Leonard seem to be identical. The only apparent difference, or lack of cooperation, has been, sometimes in the past, as to the degree to which control was necessary.

I might also say that the Secretary of Agriculture, in a report on S. 1152, or at least the report as prepared for signature, advocates a continuation under W-2 instead of legislation.

Mr. LEONARD. I wish to take this opportunity, as a matter of record, to express the appreciation of the Utah Fish and Game Department to the Grazing Service for the fine spirit of cooperation and the way they have worked with our department. They have been very cooperative. They have consulted our department before any drastic moves affecting the wildlife in the State of Utah have been taken. Thank you.

Senator MURDOCK. I want to make this opportunity of complimenting, also, Mr. Leonard, for his expressed desire to cooperate with the Forest Service, the Forestry Department, under the Department of Agriculture. I am quite sure that the three services will cooperate now and that probably we will not need additional legislation.

We have quite a list of names here yet, of people that we desire to hear from.

Mr. TAYLOR. May I ask one question?

Senator MURDOCK. State your name.

STATEMENT OF ELI F. TAYLOR, SALT LAKE CITY, UTAH

Mr. TAYLOR. Eli F. Taylor. I would like to ask if the withdrawal order precludes exchanges under section 8 of the Taylor Grazing Act.

Senator MURDOCK. Mr. Havell, can you answer that question?

Mr. HAVELL. Yes.

Senator MURDOCK. It will preclude it?

Mr. HAVELL. Yes.

Mr. TAYLOR. If it does preclude exchanges under the Taylor Grazing Act, one of the most important items affecting the State of Utah has been entirely overlooked at this hearing, and that is the exchange and grouping of State lands, and the rights of the individual land-owners and stockmen to group their holdings within the district.

From the map which has been exhibited on the wall, and under the procedure of the Department, and the regulations requiring that the State make its selections of groupings within the individual districts, you will note from the map that practically every bit of surveyed lands is covered by this withdrawal. That means that several thousand of acres of land of the State of Utah, upon which there has been an agreement with the Grazing Service, and I understand it has been worked out for the exchange and grouping of the State lands that will be immediately stopped.

I think that is a matter which should require a modification of this existing order. In fact, I think that the order of withdrawal that was made by the Secretary, shortly after the passage of the act for classification of lands, would probably be sufficient, under which this exchange arrangement could be worked out. I take it that the interpretation of this order would determine entirely whether or not that could be done. There is nothing in the order that says an exchange can be made, or a trade perfected or initiated, and I think that probably an interpretation of the order, by the Secretary, would permit the consummation of those exchanges.

Mr. HAVELL. Perhaps I had better qualify my answer to your question by saying this, that it will unquestionably prevent the taking of any lands in this area through the process of exchange; but it would not prevent the giving up by the State of lands in this area and selecting lands elsewhere.

Mr. TAYLOR. Mr. Havell, may I not ask this: Do not the amended act, and the regulations thereunder, preclude the State from grouping from one district to another district?

Mr. HAVELL. The Taylor Grazing Act requires that the selected lands and the offered lands must be in the same grazing district.

Mr. TAYLOR. All right; if that is true, I would like the Grazing Service, or yourself, to tell me where the State can get these lands. The lands must be first surveyed. There are no surveyed lands left in the district where the State can make its selection. That is the point that I want to make.

Mr. HAVELL. I don't know as to the status of that. This has not been brought into the record as yet—between one-third and one-half of this withdrawn area is unsurveyed, and, therefore, no claims, such as homestead entry, or the like, could be initiated anyhow.

Mr. TAYLOR. I think, Senator, that the matter of this hearing, if that is the interpretation that is going to be put on this, should be left open, so that the State of Utah might file its protest, and be heard in the matter of this particular withdrawal or some action taken for modification.

I am not acting in any way for the State, but only as a citizen, realizing what this is going to mean in that program.

Senator MURDOCK. The committee thoroughly appreciates, Mr. Taylor, the statement you have made, and thanks you for calling it to our attention.

I might say this, that if there is any virtue in the withdrawal order at all I personally have been unable to see it up to this time.

Mr. TAYLOR. I will agree with that.

Senator MURDOCK. Mr. Plumbhof, of the Publicity and Industrial Development Commission of Utah, has a statement.

There is a long list of people here yet to be heard from. So far as I am concerned, I will remain here until every person who wants to be heard is heard from.

Senator MURDOCK. State your name.

STATEMENT OF H. J. PLUMHOF, COMMISSIONER, DEPARTMENT OF PUBLICITY AND INDUSTRIAL DEVELOPMENT, STATE OF UTAH, SALT LAKE CITY, UTAH

Mr. PLUMHOF. My name is H. J. Plumhof. I am a member of the commission of the Department of Publicity and Industrial Development of the State of Utah.

This department was created in 1941 by the legislature, and charged with the responsibility of publicizing and industrializing the State, and to look after the welfare of our wage earners.

Contained in the 2,977,700-acre land withdrawal area in Grand and San Juan Counties, Utah, is some of the Nation's most outstanding and distinctive scenery. These attractions are totally unlike anything else found in North America, and if not withdrawn from free use by the citizens of those counties in particular, and the vacationing public in general, offer an excellent means of increasing the earning opportunities of the residents of that area.

Beyond a few mining properties, and some sheep and cattle enterprises, sparsely populated Grand and San Juan Counties have little to fall back upon to give a living to their citizens. Yet, on all sides, is a profusion of scenic grandeur, awaiting a flood of post-war travelers, who will spend freely for food, shelter, transportation, and supplies. Such expenditures, naturally, will fall directly into the hands of the established business people of the area, forming the nucleus of a sound and deserved prosperity, based on the one great natural resource of the region.

Should the scenic attractions of Grand and San Juan Counties fall under the restraining hand of the land withdrawal order, such as in the recent case of Jackson Hole, Wyo., there would be created, either a number of smaller national parks and monuments, or one huge project, blanketing a large portion of the area. There are already four scenic districts, in the two counties, administered by the National Parks Service. They are Arches National Monument, Grand County, and Hovenweep National Monument, Natural Bridges National Monument, and Rainbow Bridge National Monument, San Juan County.

Citizens of Grand and San Juan Counties know only too well the restrictions placed on grazing, water, mineral, and oil activities, by the existence of this national park administration of such areas.

In recent months, the Utah Department of Publicity and Industrial Development has made valuable contacts with the motion-picture industry, in Hollywood, and has succeeded in bringing several important filming projects to this State, with a value to Utah business people of many hundreds of thousands of dollars. Without exception, as these motion-picture executives extend their knowledge of Utah, their attention and interest becomes ever more firmly focused on the photographic splendor of these two counties, much of which is covered by the 3,000,000-acre land withdrawal.

Under the provisions of the Department of Interior Order No. 1472, regarding the filming of motion pictures on lands under the jurisdic-

tion of the National Park Service, a prohibitive fee of \$500 per day is placed on each company. Even though the film companies could well afford to pay such a fee, on a \$1,000,000 to \$3,000,000 budget picture, it is their policy to remain well away from any such arrangement, which they consider high-handed and unfair.

Now, as to the actual loss, to our citizens and taxpayers, through any land withdrawal move which would exclude the motion-picture industry from specific areas, let us refer to expenditure records of recent date.

Twentieth Century-Fox, which made the technicolor film *Buffalo Bill* in Kane County this summer spent with trades-people, labor, and services, nearly \$300,000. Almost all of this sum was placed directly in the hands of Kane County citizens. Total cost to the studio for the Utah work, over a period of several weeks, was approximately \$30,000 a day.

Many other pictures made in Utah have left in excess of \$100,000 directly in the hands of the citizens of the counties in which the films were made.

Several studios have discussed the possibility of constructing studio facilities in or near the more spectacular scenic areas of Utah to enable them to extend their working season throughout several months of the year.

Other organizations are planning two or more pictures in succession, in which they would utilize the natural picture settings of the southern and southeastern counties of Utah. The widely increased use of color film makes the colorful countryside of this region ever more attractive to the picture industry.

A land withdrawal, which would endanger the free use of Utah's scenic resources beyond the present 12 national parks and monuments, which are already forbidden property, would nip in the bud a highly lucrative industry and deny to millions the thrill of seeing on the motion-picture screens of the world this magnificent and unspoiled country.

As to the many individual attractions, such as cliff-dweller communities, geological wonders and historical sites, contained within the 3,000,000 acres under discussion, the Utah Department of Publicity and Industrial Development, which is charged with the creation of a system of State parks in Utah, will carry on that obligation. Where protection from the elements or vandals may be required, we hope to obtain funds for such requirements. We proposed to designate certain scenic areas as State parks, but at the same time leave them unspoiled by administration buildings, and other man-made additions, which will add nothing to the charm of the attractions of nature. We hope to see grazing, water development, and the like continue with no ironclad rules to exclude valuable natural resources from the free use of the citizens of this State and Nation.

In this connection, Senator, I would like to call attention to the fact that Chairman Brown, of our commission, communicated with you, and asked your assistance in connection with the charge now made by the motion-picture industry; and under date of March 30, 1943, you received a letter from Abe Fortas, which you passed to Mr. Brown. With this information I made a trip to Los Angeles and during that trip I interviewed the eight principal producers of the

motion-picture industry, and three of them made serious protests about this charge.

I also took the matter up with the National Parks Service, and under date of May 14, 1943, I received a communication from Mr. Hillory A. Tolson, Acting Director of the United States Department of the Interior, National Park Service, Chicago, Ill.

I am going to file copies of these two communications for the record. I think an examination of them will show that apparently, when appeals are made to the Secretary of the Department of the Interior, that they have a blueprint answer that they hand out to all of us, which are supposed to satisfy our protests as citizens of Utah.

As a citizen of the United States, I would like to say that I recognize that the National Park Service has built up a system of parks and monuments that will stand as an asset to posterity. I think, in many respects, they have done a very splendid job.

I think the men who are serving in these governmental bodies—such as the Grazing Service and the National Park Service and the Forest Service, and these other bodies that we have occasion to contact—that they are splendid public servants. They are entitled to the confidence and the good will and respect of all right-thinking citizens; but I do respectfully submit that in many instances the administrators—for instance, the Secretary of the Interior and his organization—that they perhaps have gone a little far afield, and they have forgotten that there are certain interests lodged within these various States that are vitally interested economically in what they do. It seems to me that there should be the closest type of cooperation between the gentlemen administering these various national activities and our own legislative representatives in Washington and the representatives within the State of Utah and its citizens.

Mr. MURDOCK. I concur fully with that statement.

(The letters referred to in the preceding statement are as follows:)

THE SECRETARY OF THE INTERIOR,
Washington, March 30, 1943.

Hon. ABE MURDOCK,
United States Senate.

MY DEAR SENATOR MURDOCK: I have received your letter to Secretary Ickes, enclosing a telegram received by you from Mr. A. S. Brown, of the Department of Publicity and Industrial Development of Utah, with reference to the requirements of this department for the filming of commercial pictures in the national parks.

The established policy of this Department governing the taking of motion pictures in the national parks and other areas under its jurisdiction is set forth in order No. 1472, a copy of which is attached. In conformity with that policy and after a careful analysis of motion-picture productions in the areas administered by this Department, it is deemed advisable and in the interest of the Federal Government that where the national parks are used for filming scenes of a strictly commercial nature for distribution and exhibition where an admission charge is made by the motion-picture industry, the Federal Government should realize a fair remuneration for the use of its areas, administered by this Department. It is my understanding that charges also are made for the use of certain State, county, and municipal park areas for the taking of motion pictures thereon. The city of Los Angeles, Calif., for instance, has established a schedule of fees for the use of its park areas by motion-picture companies.

This Department is appreciative of the desire of localities in proximity to national park and monument areas to profit from the money expended in those areas in motion-picture undertakings. If, however, the national parks in Utah

were eliminated from the operation of order No. 1472, or the existing fees modified for that State, this Department in all fairness would be obliged to give favorable consideration to similar requests in connection with areas situated elsewhere, with the ultimate result that all parks and monuments might be withdrawn from the operation of the enclosed order. Such an eventuality would, in my opinion, be an unwarranted step toward the defeat of the policy of making, so far as possible, the national parks and monuments self-sustaining.

Mr. Brown's telegram is being returned herewith.

Sincerely yours,

ABE FORTAS,
Acting Secretary of the Interior.

UNITED STATES DEPARTMENT OF THE INTERIOR,
NATIONAL PARK SERVICE,
Chicago, Ill., May 14, 1943.

Mr. H. J. PLUMHOF,
*Commissioner, State Department of Publicity and Industrial Development,
Dooly Building, Salt Lake City, Utah.*

DEAR MR. PLUMHOF: I have received your letter of May 6 to Director Drury with reference to the filming of commercial pictures in the national parks.

The established policy of the Department of the Interior governing the filming of motion pictures in the national parks and other areas under its jurisdiction is set forth in order No. 1472, a copy of which is attached. In conformity with that policy and after a careful analysis of motion-picture productions in the areas administered by the Department, it has been deemed advisable by the Department and in the interest of the Federal Government that where the national parks are used for filming scenes of a strictly commercial nature for distribution and exhibition where an admission charge is made by the motion-picture industry, the Federal Government should realize a fair remuneration for the use of the areas. It is my understanding that charges also are made for the use of certain State, county, and municipal park areas for the taking of motion pictures thereof. The city of Los Angeles, Calif., for instance, has established a schedule of fees for the use of its park areas by motion-picture companies.

The Department of the Interior is appreciative of the desire of localities in proximity to national park and monument areas to profit from the money expended in those areas in motion-picture undertakings. If, however, the national parks of Utah were eliminated from the operation of the enclosed order, or the existing fees modified for that State, the Department in all fairness would be obliged to give favorable consideration to similar requests in connection with areas situated elsewhere, with the ultimate result that all parks and monuments might be withdrawn from the operation of the order. Such an eventuality would be an unwarranted step toward the defeat of the policy of making, so far as possible, the national parks and monuments self-sustaining.

Sincerely yours,

HILLORY A. TOLSON, *Acting Director.*

Mr. PLUMHOF. It seems to me that one constructive step that might be taken, if I am correctly informed, is that this Antiquities Act is very well named. It has served its purpose, and ought to be removed from the statute books of the Nation.

Senator MURDOCK. Are there any questions to be asked of Mr. Plumhof?

I wonder, now, if we can ask everyone remaining in the audience who still want to make a statement to hold up their hands, so we can determine whether a night session is necessary.

Evidently we only have two persons left. I think we might just as well let you go on right now.

Mr. PATTERSON. I would like to make my statement right now.

Senator MURDOCK. All right, Mr. Patterson.

STATEMENT OF KNOX PATTERSON, ATTORNEY AT LAW, SALT LAKE CITY, UTAH

Senator MURDOCK. State your name.

Mr. PATTERSON. Knox Patterson. I have listened all the afternoon to the various theories advanced as to why this order originated, Senator, and I don't think we have touched upon any part of it.

I am sorry the map has gone. Two years ago, or a little more than 2 years ago, the Government made the withdrawal of the Navajo Reservation. Anyway, you can see, from the bottom of the map, you go down to the end of San Juan County. Two years ago, the Government made a withdrawal of the area below the south end of San Juan County. Why? Because of the vanadium deposits. There can be no question about that.

Now then, of the area withdrawn, we have been talking about magnesium and potassium and all of those things, all afternoon. In my opinion, they have nothing to do with the situation. The reason the Government made this withdrawal was on account of the vanadium deposits. Why? Because the Government has expended—by the way, I represent the Vanadium Corporation of America—I know that they expended something like \$1,750,000. We are trying to get the money. All of this country, Senator, you know it, from the Book Mountains clear down south, extending beyond the border of Utah, is vanadium area. This area was withdrawn because of the vanadium production, not because of magnesium or any of these things, for this simple reason, Senator—it is just as simple as falling off a log; every possible acre that can produce magnesium or phosphate has already been taken up—just scores and scores of acres of that land, that can never be utilized. That has all been taken up.

If there is anything to this proposition of a withdrawal, subject to vested rights—I don't think there is, insofar as Secretary Ickes is concerned, not a thing—but if there is anything to it, they have initiated their title to that property under the laws of the Government that prevailed at this time, before the withdrawal. So, there is nothing to protect, so far as magnesium is concerned.

I started out, Senator, in 1909, with 36 head of horses. I went down in the San Juan County, and with the first drilling outfit that ever came into Grand County. We drilled a well on the Klondyke Ridge, now named the Klondyke Gas Co. We discovered gas there; we discovered a lot of gas; but we did not analyze it. We did not know anything about that. We went on till the day the Leasing Act came into effect. We were standing at the depot at Thompsons, Utah, to find out exactly when the President was going to sign that bill, and when we got the word, when this bill went into effect, that he had signed it, we sent riders all over that country to stake this land, under the Leasing Act. There the Big Six Oil Co. was organized. I was the secretary of it.

The way we got the name of the Big Six Oil Co. was because I was sitting back in my swivel chair, and the picture of Christy Mathewson was hanging there. I said, "Let us call it the Big Six."

I will tell you, Senator, we owned the original rights—the Big Six Oil Co. Talk about the fellows that came in later—the Big Six Oil Co. brought \$5,000,000 into that territory, and we still own those rights.

That was in 1909, '10, or '11. As the time extended on—no, that was the Klondyke Oil Co. In 1910 or '11, the Big Six got into it.

As soon as the leasing bill passed, we had all this area. We had the Ohio Oil Co., the Utah Southern, the Utah Oil, and five major oil companies went in there to drill those wells.

We analyzed the water that came from those wells, and we discovered that it carried magnesium, phosphate, and all those things. It meant nothing to us. We did not know what it was all about; but we maintained our rights, and we paid out our money to maintain those rights.

So, I started with this proposition in 1909 and, by virtue of the discovery of the gas that we made in the Klondyke well, we brought the future developments. Everything in the country was staked. So it went, up to the time of this magnesium development. The Crescent Eagle came in there in the meantime. We had prospectors and promoters, believe me, Senator. I always said we had to have the promoters and prospectors. Without them we could not get capital. That is because of the fact that, while a lot of these fellows come in here and belittle these promoters and prospectors, you could get nothing without them. No major company will spend any money; but that is neither here nor there. I will go back to the question here.

This act was passed—I will tell you exactly why. Between 2 and 3 years ago they made this withdrawal on the Navajo Indian Reservation, which is a similar withdrawal to this, exactly; and God knows, you hear these fellows tell—with due respect to Mr. Havell here; he attempted to interpret this bill. He does not know, you do not know, Senator, nor does Senator McCarran, nor any other Senator, what the meaning of this law is. You don't know a thing about it; because they write rules and regulations to administer this law, and that has the force and effect of law. No one knows exactly what it means. I did not mean to say "exactly"—they can't even approximate what it means.

Take the Taylor Grazing Act—with due respect to Mr. Leech, and these fellows; I have done my best to humanize them, and they are going to be human beings; but if someone did not labor with them all the time, I don't know what the result might be.

They withdrew this area below the San Juan County line. Why did they cover this whole area? I will tell you the way they covered it. It is the area that produces vanadium and carnotite and that class of ore.

Down in Monticello I represent the Vanadium Co.; but I am not appearing for them. I am just appearing as Knox Patterson. But the Government has spent, I don't know how much it amounts to now—we started out with a million and a quarter; I think it amounts to two and a quarter millions of dollars up to this time.

We have two chief vanadium companies—the Vanadium Co. of America, and the United States Vanadium. Those are the two big institutions; until the Government came in and went to buying on their own accord.

These fellows are not in favor of this law; absolutely not. A lot of fellows tell you they are the same companies, but they are not; they are competitive interests.

When we come to the Navajo Reservation, I can tell you exactly what occurred down there, and that will continue to occur. The Government very readily saw that, from the amount of production from vanadium, that this area was going to be a great source of revenue. It will be. Senator, you would be surprised if you went down to Monticello. In a mile there they have from 300 to 400 people working; they are all getting good wages. They are even unionized, and they are all getting good wages.

The way the vanadium is developed in this area—all the deposits come under the Dakota sandstone where it breaks off. It breaks from the desert into canyons and ledges and little plateaus standing there. Mr. Brown, you can see that sandstone everywhere over that country where you find vanadium. Some places there is vanadium, and other places there is no vanadium; but it takes a prospector to develop that; and no vanadium company wants that burden thrown upon their shoulders. Why? Because they have an exclusive market. There is competition between these two people; but neither one of them wants this bill. As the V. C. A. said, they have dumped this law in our lap. So, when they withdrew the Navajo Reservation down there this year, there was more revenue than all this magnesium. I don't care how much they claim it is worth, but the vanadium and uranium and the byproducts will furnish more revenue to the Government than all the magnesium you have ever heard of. I am like Mr. Havell—you will have to take my word for that.

What form of lease did they propose? They are going to withdraw it. They are going to put it out under the Leasing Act. We have a pattern. We think they are going to follow the pattern of the prospector that went down there.

Senator MURDOCK. Do you take the position that vanadium and uranium are not metalliferous ores?

Mr. PATTERSON. I take the position they are.

Senator MURDOCK. They are excepted.

Mr. PATTERSON. That exception amounts to nothing, Senator. Let me show you why.

Senator MURDOCK. All right.

Mr. PATTERSON. It is my opinion, because it comes out as a metal. That is my idea of it. I am not posted on metals. You can't examine me on the character of metals, because I know nothing about that. But here are the bids they put out to mine the Navajo Indian Reservation, since this withdrawal [reading]:

Sealed bids will be received at the Navajo Indian Agency, Window Rock, Ariz. until 2 p. m. August 3, 1943, for an exploratory mining lease for carnotite and related minerals on the following described Navajo Indian tribal lands.

This is somewhat of a diversion, Senator. These Navajo Indians are the poorest people on earth. This contract prescribes that they shall employ Navajo Indians; but the Navajo Indian tribes, so far as I know, are the only Indians in all the world that the Government has apparently deserted. That is why I will gamble a million to one that the Navajo Indians never get a penny out of it.

Now, again, for what purpose? Let us see for what purpose. "For an exploratory mining lease for carnotite and related minerals." That means prospecting. That is what you have to do. I don't care what category you get it into; you first have to apply and get a lease.

Now, what are the provisions of that lease? You must pay a 10-percent royalty; but in the bid you must bid for the royalty plus the bonus. You must pay a bonus, and you must pay in 20 percent of the bonus. It gives the character or the grade of the material, and everything like that, and what they must do to qualify.

Senator. I want to tell you that the man who prepared this had no more idea of what it is about than the man in the moon. That is a fact.

Now we come over here—they deposit 20 percent of the bonus on the bid, and a filing fee of \$5 must accompany the bid, a certified bank check or draft on a solvent bank. I think they were all solvent in those days.

The lessee shall be required to furnish a \$15,000 bond. Does the prospector come in there, gentleman? This is an exploratory lease.

What has happened down in this reservation, down there? My company said: "They have dumped this in our lap;" and every other company would feel the same way, because, obviously, Senator, no big company can mine vanadium or uranium for the simple reason that it is a pockety ore. You would not know today whether you were going to employ three men on a mine or a dozen men on a mine; but I would vouchsafe this remark, that at no time have there been over 25 employed in any one mine over a period of 60 days. It is so uncertain. You go around under this sandstone ledge, and you find these deposits.

Let us see what further the bill provides [reading]:

It will be further provided in the lease that: "The lessee shall have expended by March 1"—

Now, remember, they are starting this in July, 1943—

It will be further provided in the lease that: "The lessee shall have expended by March 1, 1944, not less than \$1,000 on preliminary prospecting."

He can bid on that. Let us get down to that point:

Upon the completion of this prospecting the lessee may surrender the lease. If the lease is not so surrendered the lessee shall have expended by September 1, 1944, in prospecting and developing a total of not less than \$7,000.

Then it goes on to provide you must expend so much every month.

Now, we are going out to prospect for vanadium—a couple or three men. That is all that is required. We find a deposit. We dig in there, and it may broaden out. It may develop into a mine; but the chances are 10 to 1 that it pinches out. These "birds" know; and no else knows. The Secretary of the Interior does not know anything about the character of this ore. If it pinches out they must go on and explore another place, see how good a prospect it is, and go into that. You are developing the thing that has made the whole United States, or, at least, the West.

Senator MURDOCK. I am free to admit, from what you have said and read, and what Senator Melich said, that the regulations on the Indian Reservation, with reference to leasing these vanadium deposits, absolutely preclude the prospecting.

Mr. PATTERSON. It throws it out entirely.

Senator MURDOCK. That is conclusive, from what you have said; but I can't understand this: You say that the big vanadium companies do not want it.

Mr. PATTERSON. No, they don't want it. Why? Because they can't prospect it. But the area now in the Navajo Indian Reservation, the only indication I have ever seen where there was any community interest, the whole area is covered by the U. S. V. and the V. C. A. They have two leases down there. Neither one of them want it. Why? Because they would rather have the prospector to go there and develop his own prospect. They can't afford to mine it, and they will not mine it. They will not make the necessary exploratory work to develop it. That is the point.

Senator MURDOCK. I can't believe, Mr. Patterson, that regulations will be imposed on this land involved in this withdrawal order, similar to those under the Indian reservation. I just can't believe that.

Mr. PATTERSON. You must think that. We think of that all the time. I do.

I would like to answer Mr. Havell now, in reply to that suggestion as to the meaning of the withdrawal by the Secretary of the Interior.

What do we have in the Indian reservation? We have the Secretary of the Interior stepping out there and attempting to withdraw lands that they have no interest in, and then trading with the Grazing Division as to their rights in those lands. It never was intended.

Why does the sheepman come up here and pat himself on the back and say: "It is not going to affect the Grazing Service"?

Mr. Havell O. K.'s that, and I believe my friend Joe Leech O. K.'s that; but they know nothing about it, because no one knows anything about it except the Secretary of the Interior, at the time the question arises. That is right; they don't know what effect this will have. But if I step up here under this competitive bidding for a certain area, and I claim that under the mining laws of the State of Utah, as vouchsafed by the Government of the United States, that they control the surface area, I promise you now that neither Mr. Leech nor anyone else can lease to the Grazing Service or to any committee the surface grazing of a valid existing mining location.

Senator MURDOCK. I don't think anybody takes the position that they can. I think Mr. Havell very emphatically took the position, in discussing that feature today, that whoever locates a valid mining claim has the surface rights.

Mr. PATTERSON. I think that is right, but I am not sure that Mr. Leech agrees with that.

Senator MURDOCK. He very emphatically took the position here today that under the Mining and Leasing Act the grazing privileges did not pass, and that the Department has protected the grazing rights.

Mr. PATTERSON. Well, Senator, you and I know that the one with the mining claim has the surface right.

Senator MURDOCK. Yes; exactly. That is what I said.

Mr. PATTERSON. Now, in the mining claim, what do you have? You have to lease those rights.

Senator MURDOCK. Yes.

Mr. PATTERSON. Can't you extend that privilege? I was impressed with the statement by the secretary of the woolgrowers association, saying: "Thank God it does not control the grazing."

I think Mr. Havell and Joe Leech agree with him; but I am not sure that they know, because no one knows, till they write the rules and regulations. That may be such a departure from the law of the

case that no one will recognize it. We have that in connection with the Indian Department; but, Senator, we have passed that.

You promised these people here today that if there is any attempt to regulate the surface rights you will be on the job. Senator, you can't be on the job. You could not be on the job when this was enacted. Did you know anything about it? I will guarantee you did not.

Senator MURDOCK. I have tried to be on the job since.

Mr. PATTERSON. What chance have you to protect the people of the State of Utah against an order of the Secretary of the Interior? No Senator has. So now we come to the remedy. We are talking about something that is already put over. It is a past question. We have argued about a lot of things which are not pertinent here now. The pertinent thing here, now, is: "What is the remedy?" That is the only question before the Senate committee. That is the only question before you, Senator: How are we going to get out from under this thing? And now I have a remedy, I think, which will work.

Senator MURDOCK. I will be interested.

Mr. PATTERSON. Yes; you will be interested to know it will work; and we are trying to make it work. We are trying to get the State of Utah to try to take jurisdiction over the unwarranted acts of a Federal officer. That is what we are trying to do. The acts are unwarranted. Our State should have jurisdiction. There cannot be any question about it. They should have jurisdiction. It is a question as to whether they do; but our State should have jurisdiction on all of these matters.

Now, mind you, you are dealing with the great West, where the arm of democracy is extending day after day.

Senator MURDOCK. As I undersand it, the present witness has already commenced a suit involving this very custom.

Mr. PATTERSON. Yes, Your Honor.

Senator MURDOCK. You have caused a State court to take, at least, jurisdiction up to the point of issuing a temporary restraining order.

Mr. PATTERSON. We have that. When I walk back to my office this evening I will get a writ of certiorari to certify my case to the Federal court. I don't know what will be the result. We are trying to proceed under the supreme court decision of Nevada, which went on up to the Supreme Court of the United States. We are trying to establish the jurisdiction in the State courts; but we need the aid of legislation. We may lose that suit. Then what does it mean? On all of these questions that come up before any of these bureaus, what is the situation? You or your brother, your friend or your neighbor, owning a few head of cattle, a few head of sheep, trying to maintain his right to the public domain, most go to the courts of Washington, D. C., to get a hearing. That is unfair. It is contrary to the very thing that made us an independent nation—the right to be heard in our own forum. We must attack that in that way, and give the State jurisdiction over questions that arise affecting local people. They know we can't go to Washington, D. C., to litigate, because that is prohibitive.

Senator McCarran stated they had a bill introduced to cancel out or withdraw, so to speak, the creation of this Wyoming reserve. That is not more objectionable than the order with respect to the reserve that

they have withdraw down here. Did they mean that bill to include this reserve down here?

Senator MURDOCK. When you speak of "this reserve," what do you mean?

Mr. PATTERSON. This withdrawal.

Senator MURDOCK. You mean the withdrawal of the 3,000,000 acres!

Mr. PATTERSON. That is right. They introduced a bill to cancel that Wyoming withdrawal.

Senator MURDOCK. What they did was to repeal a section of the antiquities law, under which the Secretary acted. You can depend on this: Before that bill is ultimately passed, there will be amendments offered, in my opinion, to absolutely wipe out and nullify the withdrawal of lands by these executive officers.

Now, the question you raise as to this court action, about all this committee can do is to wish you luck.

Mr. PATTERSON. That is all you can do.

Senator MURDOCK. To wish you luck in the venture you have undertaken. If you are unsuccessful—I don't think the witness thinks he will be unsuccessful, but if he is, then, of course, the question of legislation will come up.

Mr. PATTERSON. Certainly if we lose, we must be aided by legislation. That is the way to totally destroy bureaucracy. We hear more criticism against bureaucracy than we do against the sands of Satan, but what are we doing about it? Just as you and Senator McCarran stated, it is tough to tackle. We don't know what to do, but we have to get going. We have to throw in all our forces to destroy it; that is all we have to do. We are opposed to bureaucracy here, because democracy and bureaucracy cannot exist in any republic.

Senator MURDOCK. May I interrupt? Mr. Havell has also made his plane reservation. I understand he has to leave by 6:30.

Mr. HAVELL. We are traveling, we have to get away soon.

Senator MURDOCK. Is there anybody here that wants to ask Mr. Havell any questions before he leaves?

Mr. PATTERSON. I would like to ask him this general question: how he knows this bill is not going to affect the Grazing Service? Isn't it a fact they may claim anything, and go along and write rules and regulations that will put your theory out entirely?

Mr. HAVELL. I have said I know of no regulation contemplated under this withdrawal order. I do not see the necessity for any. The withdrawal order does not affect grazing. I have explained that. It would be a repetition, if I went now into that matter. The withdrawal order does not affect grazing.

Mr. PATTERSON. That is your interpretation?

Mr. HAVELL. Yes.

Mr. PATTERSON. But, you do not deny the power of the Secretary of the Interior to, at any moment, write rules and regulations having the effect of law, that would entirely destroy your theory of it?

Mr. BROWN. Let me ask you one question, Mr. Patterson: Why is the Department of the Interior undertaking the control of vanadium deposits?

Mr. PATTERSON. Because it is a great source of revenue. That whole country is blanketed with that vanadium. It is a coming product. It means more resources to the Government than all of the magnesium.

Mr. BROWN. By putting it under Federal leasing?

Mr. PATTERSON. Yes.

Mr. PLUMHOF. May I ask you a question?

Mr. PATTERSON. Certainly.

Mr. PLUMHOF. You are quite a student of this novel situation. I wonder if you have any suspicion who put up to the Secretary of the Interior this withdrawal? That did not originate with him. It originated with some of these men around the development of this State, or some other State.

Mr. PATTERSON. There seems to be an implication it originated with some of these fellows dealing in phosphate, these rare metals; but in my opinion that is not the reason for it.

Mr. BROWN. Don't you mean "potash" when you say "phosphate"?

Mr. PATTERSON. Yes, I mean potash and magnesium. I don't see anything to it.

Let me tell you why the Secretary of the Interior would not promulgate this order, with reference to these products: because every acre of land, where it is possible to produce it, has already been taken; and if there is anything to this theory, the bill says: "Subject to existing rights."

No one knows what that means. I know, with the Secretary of the Interior, it means nothing; but, subject to the existing rights, there is no purpose in the withdrawal, because that land is already taken. Just multiply the applications. So it could not be for that reason.

That is a very small area that produces this magnesium and potash, or whatever it is. It extends up and down Salt Valley, then extends up and down the Colorado River. They could have made the withdrawal with one-half of one percent and covered the area, but instead, they withdrew the whole area from the south end of the Book Mountains clear to the Navajo Reservation. So the purpose was to place the control of magnesium under the Leasing Act. It could not have been otherwise; because any geologist knows, Mr. Brown knows, that all of this magnesium area—not magnesium, but potash and these other things, they lie on a structure like a secondary structure.

The way this development came up, is this: Back in 1909, with 36 head of horses, I went down to San Juan County and drilled the first well. Then after that the Big Six Oil Co. was organized, and we went down there and drilled. We happened to have a man there who analyzed this salt content, and he found there was magnesium there. It all sprang from that. It developed after that. It did not develop till the war came on, so you have to look for a little structure to get that product.

You know the old story at Moab. That is a biblical character. What is it, that story about the pillar of salt; they turned to a pillar of salt? All that country is underlain with a layer of salt. Where they find salt they find this magnesium. You could cover that by a cover on the Salt Valley and the Colorado River.

That is my story. I am sorry to take up your time.

Senator MURDOCK. That is all right, Mr. Patterson. Now, Mr. Blackner.

Mr. BLACKNER. There was one statement. I made reference to one this afternoon, and that was concerning the bidding. That is not clear in my mind yet. If I understand the bill that was put before

the Senate recently, in the original form it contained about this language—maybe I am not conversant with it, to put it verbatim, but it was to this effect, that this would be up to the highest bidder. That means an auction sale.

Senator MURDOCK. I think, Mr. Blackner, that Mr. Havell, quite in detail, explained that; but, could we ask you again, Mr. Havell, to explain that to Mr. Blackner?

Mr. HAVELL. The potash regulations?

Senator MURDOCK. Is it potash you refer to, or oil?

Mr. BLACKNER. I am referring to the withdrawal from this act here.

The reason I bring up this question, let me go further, is because I am concerned with properties in four States, and if it could exist here, it could affect the properties that I am concerned with in four States. If they can withdraw that land without notice to anyone, just arbitrarily withdraw it—that is the question.

Senator MURDOCK. I don't think there is any question but what they can do that. Whether they do it with proper legal authority is a question; but, in this instance it is already something that has been done.

Mr. BLACKNER. I realize that.

Senator MURDOCK. Now, as I understand your question, it is this: Under the laws that are now applicable to the withdrawal of territory, is there any custom of bidding?

Mr. BLACKNER. That is right.

Senator MURDOCK. Will you answer that question, Mr. Havell?

Mr. HAVELL. Senator, I was trying to get hold of the regulations here, the potash regulations.

Mr. BLACKNER. I am not asking for regulations, I am asking for the law. I am not asking for some rule or regulation laid down by the Department. I am asking for a specific law, passed by the Congress and Senate of the United States. I am not concerned with any department's rules and regulations. I want the law.

Mr. HAVELL. The potash regulations now govern, and the orders provide that, for the issuing of prospecting permits for potash, there is no bidding in connection with the securing of a prospecting permit for potash. On the discovery of potash a lease follows. There is no bidding for the lease that follows.

That is as specific and as definite as I can make the statement.

Mr. BLACKNER. I thank you.

Senator MURDOCK. Is there anyone else in the audience who desires to be heard? If not, it seems to the present chairman, or the acting chairman of the committee, that there is no necessity for an evening session, nor for a session tomorrow.

I think that we have accomplished something this afternoon in accumulating the facts on this very crucial question.

I want to thank everyone who has taken part as a witness, and everyone who has attended the hearings.

If there is no one else who desires to be heard this evening, we will close.

I may state this, however, that Chairman McCarran and myself decided, before he left, that Mr. Haskell, our investigator, will be left on the job here in Utah for a few days, to see what he can dig up for

us; and if, between now and the time we leave for Washington again, we decide that further hearings are necessary, it will be a reconvened session.

With that explanation, and again thanking all of you, and thanking Chairman Brown of the Publicity and Industrial Development Commission, and Mr. Leech, we will recess for the present.

Mr. PATTERSON. Just a minute. We want to thank Senator Murdock for fraternizing with us and doing all he can for us.

Senator MURDOCK. Thank you.

(The hearing was closed in Salt Lake City, Utah, at 6:37 p. m., November 19, 1943.)

ADMINISTRATION AND USE OF PUBLIC LANDS

THURSDAY, NOVEMBER 4, 1943

UNITED STATES SENATE,
SUBCOMMITTEE OF THE
COMMITTEE ON PUBLIC LANDS AND SURVEYS,
Reno, Nev.

The subcommittee met, pursuant to call, at 9:30 a. m., at Reno, Nev., Senator Pat McCarran presiding.

Present: Senator Pat McCarran, Nevada, chairman.

Also present: Mr. E. S. Haskell, special investigator.

The CHAIRMAN. This meeting will come to order. Those who are in attendance will kindly move forward, this way, so that you may be heard and may make expressions in any way that you see fit.

Let the record show that the Committee on Public Lands of the United States Senate, acting through a subcommittee authorized by Resolution 241, Seventy-sixth Congress, of the Senate of the United States, is conducting this hearing and is presenting to those who are interested the opportunity to express themselves on legislation, proposed legislation, or other matters pertaining to the open public domain of the United States.

In holding these hearings we regret that more members of the committee are unable to attend. The Senate of the United States consists of 96 Members, and each Member is a member of many committees, and they find themselves, from time to time, so tied up in conflict between the respective committees that they are unable to be present always at some of these hearings. We had hoped that the Senator from Oregon, Mr. Holman, and the Senator from Utah, Senator Murdock, would be present, but a wire late last night indicated that it was impossible for them to get away from other official duties, and, further, impossible for them to get reservations for transportation. The Members of the Senate have trouble in getting reservations just the same as everyone else; in fact, I think we have more.

There are a number of measures in which those who utilize or make use of the open public domain may be interested. The use of the open public domain of the United States has been augmented in recent years by several acts of Congress. It is the desire of this committee, being the Committee on Public Lands of the United States Senate, to bring the Government out to the people, because we realize that the people are unable to go to Washington and present their problems; and especially is that true of those who are engaged in agriculture throughout the country. Hence, we try as best we can to give an opportunity to everyone who utilizes the open public domain to express to the Senate of the United States and to Congress themselves as to problems that they have in the use of the open public domain, and as to what

Congress might do to make more facilitous the use of the open public domain along an economic line. We want you to be at ease in this hearing, as we have always urged you to be at ease in the various hearings we have held. We realize that men who are engaged in the stock business out on the open range do not, as a rule, participate to any great extent in public speaking; hence, we realize that sometimes they are very much disinclined to make their wants known. We wish, in attending this hearing, you would regard it just as though we were sitting out with you on your back-yard fence somewhere, discussing your problems with you. Just use your own ordinary way of expressing things. If you feel like swearing, we have a reporter who is entirely deaf and uses an asbestos ribbon, so you don't have to worry about that. Just tell us your problems, so that we may, in our limited way, try to be of assistance to you.

I do want to say this, that in the hearings that we have conducted during the past 3 years under this resolution—and I believe that the representatives of the Federal Government representing the various services will agree with the chairman of this committee—we have not only aided those who use the open public domain in solving their problems but we have aided those who administer the use of the open public domain in many respects. We have with us here representatives of the Grazing Service, duly designated by the Chief of the Grazing Service and by the Interior Department. Mr. Dierking sits here today as the representative of the Interior Department representing the Grazing Service.

We have with us here a representative of the Department of Agriculture, especially that branch of the Department of Agriculture having to do with the Forest Service. Mr. Kneipp is sitting here, authorized by his Department to represent the Department of Agriculture. We have Mr. Havell with us, representing the General Land Office; and we have Mr. Graham, Assistant Solicitor of the Department of the Interior. Mr. Waddell, of the General Land Office, is also here in company with Mr. Havell.

We attempted to hold this meeting at a time when it would be convenient for the greatest number of those who might be interested in wildlife in this country to be present. We have sent out special invitations and requests, both by public notice and by private invitations, for wildlife organizations and those interested in wildlife to come before this committee and discuss what is known as Senate bill 1152. We have tried to divide up the work, because we cannot remain here longer than 1 day. We have tried to divide up the work so that that which pertains to the use of the open public domain by the stockmen may come on this morning before noon, and those who desire to discuss S. 1152 may be heard this afternoon. We regret exceedingly that the chairman of this committee must leave here late this afternoon for Elko to be present at Elko tomorrow morning, and hence will not be able to remain longer than perhaps 4:30 or 5 o'clock. We think we can cover the work and the hearings within that time.

Any stockmen who wish to be heard with reference to S. 1152 will be heard this afternoon. In other words, we will devote as much of the afternoon's work to S. 1152 as may be necessary, as the interested parties may appear.

Those of you who utilize the forests in livestock operations may have had in the past brought to your attention what was known as the

Johnson bill, introduced by Senator Johnson of Colorado, which, in very brief expression, would provide for the election under the law of advisory boards about the same as advisory boards are now elected under the Grazing Service. It would also provide for doing away with the transfer cuts that take place in the Forest Administration, and also the distribution cuts that take place in the Forest Administration.

Now, if there are those here who care to be heard with reference to that bill, let me say the bill is not before the Congress now, because when the Congress adjourned in which the bill was introduced, the bill died with the passing of that Congress. But there is in the making and in the offing a bill of similar intent, and those who wish to discuss the correction of transfer cuts and distribution cuts and the question of the election of advisory boards in the Forest Service may be heard now, if you have any thoughts either for or against it. This committee wants to hear your thoughts.

Is there anyone here who has given any study to the subject of the use of the forest? I notice we have one or two representatives here from our neighboring State of California. We want them to feel at home here, and feel that we will be glad to have them give us their expression and advice on any matters.

Mr. Dressler, have you any matters which you desire to present to this committee?

STATEMENT OF W. F. DRESSLER, GARDNERVILLE, NEV.

Mr. DRESSLER. Mr. Senator, and gentlemen, I came here to listen. I don't know anything about any of these bills. I have heard about them, but I have nothing to offer. I am simply here to listen.

The CHAIRMAN. You utilize both the forest and the grazing territory, do you not?

Mr. DRESSLER. I do. I am very much interested in the Johnson bill that you mentioned. It strikes me that something like that would be very fine for the stockmen.

The CHAIRMAN. With reference to the election of advisory boards in the Forest Administration; have you given any thought to that?

Mr. DRESSLER. I think it would be a fine thing. I am just thinking about it now.

The CHAIRMAN. Let me say to you frankly that the hearings conducted by this committee have reflected expressions both for and against. In some sections, in some States, we found the stockmen not unanimous for the setting up of the election of advisory boards.

Mr. DRESSLER. I want to say, to express, if you understand what I am thinking about, I believe in getting closer. That is, I think that too much Government regulation is already here. We should kind of break it down. That is my thought. That is my reason for expressing it that way. I want to get away from too much Government control, which I have no objection to, but I think they are bending over too far and leaving us stockmen—sort of forgetting us, in a way.

The CHAIRMAN. Are you a member of the advisory board in the Grazing Service, Mr. Dressler?

Mr. DRESSLER. I am a member of the Taylor Grazing Service; yes, sir.

The CHAIRMAN. You approve of the election of the advisory board in that Service; do you not?

Mr. DRESSLER. I do.

The CHAIRMAN. Is there anyone who wishes to discuss that advisory board matter with reference to the Forest Service to any great extent?

STATEMENT OF VICTOR F. CHRISTENSEN, LIKELY, CALIF.

Mr. CHRISTENSEN. Senator, I think we should show you how well our Modoc men attended your meeting here. I would like to have the stockmen from Modoc rise, so that the Senator may see how many of us came down.

The CHAIRMAN. We are very glad to have you here.

Mr. CHRISTENSEN. Senator, some 3 years ago the Forest Service had quite a bit of trouble with our stockmen in Modoc County. The boys became very dissatisfied with the administration. I wouldn't say they were entirely right in all cases, but some of the reasons for complaint were justified; and at that time several of us who were much in the frame of mind that advisory boards might be a fine thing in the Forest Service, not only from the stockmen's point, but from the administrators' viewpoint; that they may be a buffer between the administrators and the stockmen; could possibly have it expressed in the way of complaints of the stockmen to the administrators better than the average man can express his complaints. So we urged the setting up of an advisory board for our Forest Service, similar to the advisory boards under the Taylor Grazing Act. At the present time, we have a system of electing advisers in our Modoc National Forest, which I think has helped a great lot, and I personally would be very pleased if that could become a part of your law, requiring the setting up of the advisory boards.

The CHAIRMAN. You recall, Mr. Christensen, that when the Taylor Grazing Act was first set up, the Department of the Interior voluntarily wrote in—not into the act itself, but into the regulations—that advisory boards would be selected to confer with the administrators of the law. Later, we amended the act by making the election of advisory boards compulsory under the law, under certain conditions and limitations, as it is now. That would be the spirit and intent of what is known as the Johnson Act, if it became a law.

Mr. CHRISTENSEN. I really believe that it would be the finest thing that could happen in the administering of the lands under the Forest Service. It would iron out many of the difficulties that now arise, and would be helpful to both the stockmen and to the administrators.

The CHAIRMAN. Let me bring to your attention, and to the attention of the group here, some objections that have been made in other sections of the country. We have had it presented to us rather vehemently, in some places, that even the advisory boards under the Taylor Grazing Act were not the best; and this argument has been presented, that the advisory boards are composed of individuals who utilize the open public domain in the Grazing Service, and they are rather inclined to look out for themselves, rather than for the other users of the open public domain. I make mention of that, because it has been put into our record in various places.

Mr. CHRISTENSEN. Senator, most of the men here today could express themselves as to whether they thought the advisory board in our county has been fair or not. We have some three hundred and eighty applicants in our district, and at the present time we only have one applicant, that I know of, that is not entirely satisfied with his share of the use of the range in Modoc and Lassen Counties, which comprise California Grazing District No. 2.

The CHAIRMAN. Let me ask you, is your section of the country part of a grazing district, part of which is in Nevada?

Mr. CHRISTENSEN. The regional office is in Reno.

The CHAIRMAN. Is that district No. 2?

Mr. CHRISTENSEN. No. 2.

The CHAIRMAN. Is there anyone else here who wants to discuss this matter of the election of advisory boards under the Forest Service? Will you please state your name for the record?

STATEMENT OF FRED A. ASH, FORT BIDWELL, CALIF.

Mr. ASH. I happen to be a member of the forest advisory board on the Modoc National Forest. I think we were first chosen by the Forest Service about 7 years ago, and for the first 2 or 3 years it seemed as though we weren't of much support to the Forest Service. We had meetings and gave some of our time for range surveys and made recommendations, but that is as far as they ever got, but 2 years ago we had a change in the personnel in that office, and we have had very fine cooperation. They have cooperated with the advisory board very finely since, and we have made three range surveys.

In the fall of the year the entire committee got together, and with private automobiles and automobiles furnished by the Forest Service we made a 3- or 4-day tour of the range, and any and all recommendations, almost, have been carried out that were recommended by the advisory board. The personnel there at the Modoc National Forest now seemed to be very glad to work with the board. I was in the office only last Saturday, and the supervisor wished us to call a meeting. He had some problems that seemed a little too much for them to handle, and they would like the advisory board to get together and assist them in handling those matters, as we have done before. You get permittees, sometimes, right out on the range, and you appoint a committee to get out there and thrash out their difficulties, right out on the range, and it has worked out very satisfactorily.

While the method of electing them has not been worked out—they simply have mailed out a questionnaire to the stockmen, asking them in each district to make a selection and send it back by a letter vote to the office. I think there ought to be some method set up of electing from the various districts, electing them under a system such as the grazing system—although the grazing system is all wrong, too; they require nominations from precincts, but they vote on them as a whole. I happen to graze in Oregon, California, and Nevada, living right close to the corner of the State of California. We graze more in Nevada No. 2, really, than the others, and in Oregon No. 2, and in California No. 2. I was able in the last year to get a resolution in each of the three States trying to get a change in the method of electing the advisory board members, and have them elected from the precincts.

The CHAIRMAN. Let me say to you that, throughout our hearings in the various sections of the public-lands States, we have been confronted with complaints just as you have presented here. In other words, that while the member of the advisory board is nominated from a precinct, the advisory-board members are elected by the district as a whole, and it has been conducive of considerable complaint.

I am not altogether certain that we can work it out, but I know the complaints have followed, just as you present it now. That was true in Arizona in particular.

Is there anyone else here from California who wishes to be heard on this subject? We have here mimeographed copies of the proposed new bill bearing on that subject. There are two versions of it. One has the tentative and unofficial approval of the Forest Service. The other has not. In the matter of advisory boards they are identical. These mimeographed copies will be passed out, through your membership here, so that you may see them; and if, during the day, you desire to make any further comments, we would be glad to hear them.

At this time I think it not out of place, in order that you may have a very full discussion of the subject, bearing on what we choose to term the Johnson Bill, we will impose on Mr. Kneipp, as we have in other places, to discuss the bill and discuss these two versions, if he will please do so, in brief, or otherwise, as he sees fit.

STATEMENT OF L. F. KNEIPP, ASSISTANT CHIEF FORESTER, UNITED STATES DEPARTMENT OF AGRICULTURE, WASHINGTON, D. C.

Mr. KNEIPP. The Johnson bill, so-called, S. 1030, divides itself into three phases. One part is to authorize the election of advisory boards; the second is to provide for the definition and prescription and publication of commensurability standards; and the third is to provide that no permanent permit, of anybody who had complied with the regulations, would be subject to any reduction by the Secretary of Agriculture, except for three, I think, specified purposes, none of which was to provide range for new applicants or for increases to small permittees.

The attitude of the Department of Agriculture, with regard to the bill, was this: With respect to advisory boards it pointed out that, practically, the advisory board concept originated with the Forest Service in 1905. I might correct that—the group of stockmen who came to Washington in 1905 to help the Secretary of Agriculture formulate the rules and regulations urged the advisory board principle and it was very promptly adopted; so that, from the very beginning, from 1906, the advisory board has been a definite and very valuable part of the Forest Service management of the range; and even right now, I think, there are almost 800 recognized advisory boards. So the attitude of the Department was, that while it saw no need for a Statute specifically providing for the establishment of advisory boards, since they have long been in existence, nevertheless it saw no objection to it and had none to offer.

As to the commensurability standard, one feature of the bill was that it would require the publication each year, by grazing districts, of all of the standards. The Department's opinion was that that was in large measure unnecessary; that the commensurability standards in each grazing district or forest were very well understood; they didn't

change from year to year, and consequently their annual publication in detail would serve no useful purpose.

Nevertheless, if it was the desire of the stockmen and the decision of Congress that that be the procedure, the Department had no objection to that.

When it came to the third aspect of the bill, there was a decided issue. I might say the Johnson bill did not forbid the transfer cuts. The stockmen have argued that inasmuch as the Forest Service has made very few distribution reductions since 1935 the bill would merely legalize the present policy. It is true that since 1936 the general policy has been to stabilize the grazing use, to try to get the poor range in better shape, in other words, not to modify allotment lines too much, to give the permittees the benefit of any care they have exercised in development of the range; not to regard surplus of grass as grounds for a cut in range areas; and, on the other hand, not to let a man abuse his range and then make up for it by changing his allotment at the expense of his neighbors. So it is true that there have not been very many distribution cuts since 1936. But one reason why that has been true has been that the needs in the critical cases, for a range for small permittees or for new applicants, have been met by the cuts on transfers. That principle has actually exempted the permittees who wished to continue to use the range from some reductions that might otherwise have been necessary. Nevertheless, the viewpoint of the Department is that current range use is not now so stable and so well defined as to justify leaving it unchanged.

Throughout the country there are many places where the present distribution is difficult of justification. For instance, at Phoenix we had three communities—Greer, Alpine, and Nutrioso—very ably represented by Judge Udall, where the whole structure of grazing use is out of balance, and the Forest Service and the United States generally cannot permanently justify a condition of that kind. At Albuquerque there were similar citations made of similar conditions in northern New Mexico. Now, the feeling of the Department is, where the whole complex of social and economic conditions makes it clearly to the public interest to effect redistribution, the hands of the Secretary of Agriculture should not be tied. It is not contemplated that there will be any wide-scale distribution or repeated and heavy cuts on the larger permittees, but it is realized here and there, and the places are quite numerous, there will be instances where sooner or later some adjustment is going to be necessary. For that reason the Department has quite strongly opposed that feature of the Johnson bill and, I think, will strongly continue to oppose it; and, I think, will be supported by general public opinion if the matter ever becomes an active issue.

The larger part of the national-forest range is occupied by a small proportion, relatively, of the national-forest permittees. The 64 percent of the permittees who hold permits for less than 100 head of cattle or 1,000 head of sheep graze much smaller proportions of the permitted stock and use much less of the range than do the 36 percent whose permits are in excess of those figures. That comparison is quite striking, and I have sometimes wondered whether the permittees were really smart in agitating the question, or bringing it to an issue.

Anyway, that is the attitude of the Department of Agriculture. It does dissent to that phase of the Johnson bill which restricts reductions in grazing preferences. It does agree to the other two features,

and the bill which we have suggested, as an alternative to the other bill that is being distributed to you, is a bill that the Department feels it could go along with. The merit of that bill would be that it would correct one deficiency in present law.

The stockmen have contended from the first that they have been behind the eight ball, as regards legislative recognition of their use of the national-forest range. Congress never has specified grazing as a statutory purpose, and the stockmen have felt that fact was a disadvantage, which it is. The bill which the Forest Service proposes would meet that condition. It would be an expression by Congress that in certain circumstances the use of the national forest forage by domestic livestock was a logical and desirable use. It would recognize the statutory position of advisory boards and would fix a general policy. One criticism of the Johnson bill is that while the stockmen contend that all they want is a declaration of policy, this bill actually, with regard to the cuts, is not proposing a declaration of policy but a rigid rule of law. The bill that the Department of Agriculture is willing to support would be a definite declaration of policy, and to that extent it would largely meet the past justified desire of the stockmen to have legal recognition of their place in the national forest scheme.

That is the way the matter stands. One bill, the Department goes along with; the other it feels it must oppose. I think that will very definitely continue to be the Department's attitude.

The CHAIRMAN. Are there any questions that anyone would care to propound to Mr. Kneipp?

Now, gentlemen, while you are here, and while we have the Federal officials in charge of an industry, and who affect an industry in which you are interested—we have them here that you might discuss matters with them, and that you might get advice and counsel and suggestions from them. Do not hesitate for a moment to propound questions to them and make known your own problems. If you do not, you will miss an opportunity that is afforded you by this committee meeting, and you may not have the opportunity again for some considerable time in the future. Now, it doesn't make any difference how you word your questions, or what your language is, or your method of expression; you know what your problem is. If you care to interrogate the gentlemen—for instance, Mr. Kneipp, Mr. Havell, Mr. Dierking, or others who are here—we would be glad to have you do so right now, or at any time during the day.

By the way, I apologize for having omitted to state that Mr. Robert Rose is here, officially representing the Park Service, designated and authorized by the Department of the Interior to represent that service.

Mr. Wardwell of Las Vegas and Mr. Hansen of Reno are both here, officially designated to represent the Fish and Wildlife Department of the Federal Government. We are glad to have them here.

Are there any questions that you wish to ask of Mr. Kneipp?

Mr. DRESSLER. I would like to ask a question in regard to this: He speaks of New Mexico and Arizona. Our conditions here are not the same as they are there. What is being done, how are you going to arrive at something that will fit all these different problems in these different States?

Now, the States of Nevada and California are kind of, that is, one. We have our forest permits, some of us that live in the State of Nevada;

some of us in California have Nevada permits; but I can't see any place but what there should be something where the stockmen would have something to say, and especially, not have to go to Washington for everything we want. I think there should be some regulations taken away and given to these different States, and give back the State's rights. For instance, New Mexico has their problems, Arizona has their problems, Nevada has their problems, and California their problems. How can you mess them all together and make one definite law to pass for all of them, and make it fit for all the different States? That is the point I am trying to get through my head.

The CHAIRMAN. Mr. Kneipp, we would be glad to hear from you.

Mr. KNEIPP. Well, I think the answer is this: All authority over the public domain rests in Congress. Congress has complete control of all the public lands and, of course, Congress cannot exercise that control in minute detail. It has to delegate it; so, by acts of Congress, it sets up certain basic laws, establishes certain basic principles and objectives, and delegates to the Secretary of Agriculture the authority to carry them out.

Now, those laws, of course, have got to be such as to meet the most extreme condition, but where extreme conditions don't exist, the provisions of law designed to meet them do not make any difference. Now, the Secretary himself does not try to handle all details of administration from Washington, nor does the Chief of the Forest Service, as you know. Ever since 1908 there have been districts or regions in charge of regional foresters, to each of whom is delegated largely the authorities of the Chief of the Forest Service, including those which he has received by delegation from the Secretary of Agriculture; and I should say that, offhand, probably 95 percent of all the grazing business is handled in the field; in this case in San Francisco, for California and western Nevada, or in Ogden for eastern Nevada. Only the major questions come to Washington for decision at all. As a matter of fact the regional forester does not try to handle all of the administrative work. He delegates a considerable part of his authority to the forest supervisors. So that is the general practice. Congress evolves or prescribes the policies, objectives, and limitations, and delegates to the Secretary the authority to execute them. He, in turn, delegates a great deal of it to the Chief of the Forest Service, who, in turn, delegates to the regional forester. So you do get a stepping down to the condition right on the ground, with power vested in the men on the ground to exercise a high degree of decision. I don't know how else you could do it. The trouble is if the statutes do not meet an extreme condition then it cannot be met administratively except by going back to Congress and asking for more laws.

Now, there are two sides to this thing. We want to establish stable and constructive range use. But the stockmen often don't realize if there are sore spots that keep building up there will be public resentment against the established order, and such public disapproval is apt to result in drastic changes in the established order. In other words, no matter what the Forest Service might think of conditions on the forest ranges, changes might be made anyhow if the people became convinced conditions were bad and expressed extreme disapproval. For that reason the Secretary feels that the Johnson Act, or the acts taking its place, ought not to be so narrow that really acute conditions cannot be met.

The CHAIRMAN. Are there any other questions that you would care to propound to Mr. Kneipp, bearing on any subject having to do with the forests?

I am simply drawing to your attention again the fact that if you have these questions, now is the time to present them and get a clear statement.

The chairman of this committee, who has offered a number of bills pertaining to the open public domain and its utilization, wishes to say that he personally favors the setting up of advisory boards for the Forest, as well as he favored the setting up of advisory boards by law for the Grazing Service. The reason for my views, in that respect, is to meet the very problem that Mr. Dressler presented. In other words, to try to get back into the hands of the people of the respective districts as much opportunity to govern themselves, within their respective districts, as was at all, or is at all, possible.

It is my theory that where the people of a district select their representatives, those who are engaged in the same line of business, to speak for them with the Federal Government, speaking through their representatives, that then we have the closest thing to a democracy that we can work into the administration of the open public domain. If cattlemen have a representative who sits around a table with the local grazier, who is the representative of the Interior Department; if sheepmen have a representative who sits around a table with the local grazier; they can speak in terms of what they know to be the needs of their particular districts, and try to work into it a general understanding, and set up the solution of the problems that present themselves in that particular district. That is why I favored the setting up of the advisory boards by law for the Grazing Service, and that is the reason now that I favor the setting up of advisory boards by law for the Forest Service.

In other words, it works into the administration the expressions and understandings of the fellows and the people who actually use the forest, and who use the open public domain. After all, there are nearly a billion acres of land in the United States in open public domain. To my mind it is the greatest asset that the Federal Government now has. Its administration and its use by the people, especially along agricultural lines—certainly there can be no higher use made of that great asset of the Government than along those lines; to encourage agriculture on the open public domain, to give encouragement to it seemed to be necessary; and it was necessary that the people who use the open public domain should be heard and understood. That is the theory on which we are proceeding in all of these matters.

Is there anyone else who wishes to discuss that subject?

STATEMENT OF F. P. CRONEMILLER, ASSISTANT REGIONAL FORESTER, SAN FRANCISCO, CALIF.

Mr. CRONEMILLER. My name is Fred Cronemiller, assistant regional Forester of the California region, United States Forest Service.

The CHAIRMAN. Where are you stationed?

Mr. CRONEMILLER. San Francisco. Before coming to the meeting I contacted the secretary of the California Wool Growers Association and the secretary of the California Cattle Growers Association, and there are so many things in connection with meat marketing, livestock, and so forth, that they were unable to be here. They were interested

in the curtailed use of public lands by military uses, and some of those problems, which, I understand, the wool-growers' association has presented to you, in connection with the Mojave.

The CHAIRMAN. In that regard may I say that we have here before us now a copy of a letter dated October 25, 1943, on the letterhead of the California Wool Growers Association, 595 Mission Street, San Francisco, Calif. We also have the original of the same letter which presents, as we understand it, the views of that association with reference to the taking of open public domain by the military authorities. This especially addresses itself to San Bernardino County. We had that San Bernardino problem presented to us at a meeting in Arizona. This letter and enclosure will go in the record at this point.

(The letter and enclosure are as follows:)

CALIFORNIA WOOL GROWERS ASSOCIATION,
San Francisco, Calif., October 25, 1943.

Senator PAT McCARRAN,
Chairman, Senate Subcommittee on Public Lands and Surveys,
United States Senate, Washington, D. C.

DEAR SENATOR McCARRAN: We shall appreciate the matter discussed in this letter relative to aerial gunnery range, Marine Corps Air Station, Mojave, Calif., being made a part of your hearing to be held on November 4 at Reno, Nev.

A group of members of our association, who are also members of one of our branch associations, the Kern County Wool Growers Association with headquarters at 531 Sumner Street, Bakersfield, Calif., have leased from the Southern Pacific Land Co., in San Bernardino County, on the Mojave Desert, for a number of years a portion of the land which is contained in this new firing range.

We are wondering if arrangements could be made to use some other area of the desert for an aerial gunner practice, using live ammunition, than the area mentioned above during the 2 months, March 15 to May 15 of each year while the 50,000 sheep are grazing on the area. If at that time of the year there was feed available in other districts we, of course, would not bring this matter to your attention. However, with some 200,000 sheep originating in Kern County each year it is necessary to find food for these sheep 12 months of the year. The lambs are fattened off of the Mojave Desert. During a portion of the year the sheep are on alfalfa pasture. Other seasons of the year they range up the Owens River Valley through Bishop to Mono Lake, and in the fall they are on vineyards. For over 80 years the Mojave Desert has been utilized for the spring period—March 15 to May 15.

While the sheepmen who utilize this desert feed only graze it for 2 months, they depend on it to fatten their lambs. Unless this seasonal utilization is possible, many feeder lambs and not fat lambs will result. These feeder lambs then must be shipped to the Middle West, utilizing long distance transportation en route, and grain in the Middle West which otherwise could be used for human food or other animal uses.

The fat lambs fattened on the Mojave Desert are marketed direct to Los Angeles by truck. Continued utilization of the Mojave Desert feed from March 15 to May 15 means a real contribution to the war effort in conserving transportation, meat, feed, and concentrates.

Sincerely yours,

W. P. WING, Secretary.

COMMANDANT'S OFFICE,
ELEVENTH NAVAL DISTRICT,
San Diego, Calif., October 13, 1943.

CALIFORNIA WOOL GROWERS ASSOCIATION,
San Francisco, Calif.

(Attention: W. P. Wing, Secretary.)

Subject: *United States v. Certain Parcels of Land in San Bernardino County California*, No. 3129-PH Civil. Aerial gunnery range, Marine Corps Air Station, Mojave, Calif.

GENTLEMEN: Your letter of September 27, 1943, has been referred to the undersigned for reply.

At the time the subject proceeding was commenced we did not have notice of your interest in the area and consequently you were not contacted. We enclose a copy of a form letter sent to the persons known to be interested in the subject area and also a copy of the order for possession made in the subject proceeding. They will be in part explanatory of what has transpired.

Please be assured that the difficulties of the situation explained by you are sincerely appreciated. The subject area, however was selected only after careful consideration of all possible areas and was determined also only after it had been concluded that it was the most logical site both from the standpoint of operations out of the Marine Corps Air Station, Mojave, and consideration of the effect such acquisition would have upon private interests.

There is no way by which the aerial gunnery operations could be transferred to any other area. For your information the use of the area for such gunnery practice would not be inconsistent with the use of the land for sheep grazing subject to the limitation that no individuals could be permitted upon the range during daylight hours. If the sheep can graze unattended it would still be possible, probably, to run the sheep during the portion of the year mentioned in your letter.

We shall appreciate hearing from you at your earliest convenience.

Very truly yours,

GEORGE A. LAZAR, Jr.,
Lieutenant, United States Navy Reserve.

SEPTEMBER 11, 1943.

Subject: *United States v. Certain Parcels of Land in San Bernadino County, California*, No. 3129-PH Civil. Aerial gunnery range, Marine Corps Air Station, Mojave, Calif.

DEAR SIR OR MADAM: The subject proceeding was filed September 2, 1943, to acquire a leasehold interest in the land described in the order for immediate possession made on the same day, of which a copy is enclosed. You may or may not have been requested heretofore to permit use of your land included therein.

To expedite payment of any compensation to which you may be entitled you are requested to furnish the following information in detail:

1. The exact description of the property in which you are interested, and the areas thereof.
2. Nature of your interest—ownership, lease, grazing permit, or what.
3. Full description of improvements and their location.
4. Taxes paid for 1942-43.
5. What annual compensation should you be paid?

(NOTE.—If your property is east and south of the Barstow-Goldstone Road, possession of your property is not presently required but you are requested to answer items 1, 2, and 3.)

Possession of the area described is required for aerial gunnery practice—namely, machine-gun firing from airplanes at high altitudes. This should not result in any damage to improvements on the ground but does make the area unsafe for humans. Should any improvement be damaged, proper adjustment will be made subsequently.

If you desire to remove any personal property, you may find out from the commanding officer, Marine Corps Air Station, Mojave, Calif., on what days gunnery practice will not be conducted. Any other questions should be directed to the undersigned, whose address is room 300, Public Works Department, Eleventh Naval District, San Diego, Calif.

The enclosed envelope requires no postage. A prompt reply is requested.

GEORGE A. LAZAR, Jr.,
Lieutenant (Jr. Gr.), United States Naval Reserve.

IN THE DISTRICT COURT OF THE UNITED STATES—SOUTHERN DISTRICT OF CALIFORNIA
CENTRAL DIVISION

No. 3129—PH Civil

ORDER FOR IMMEDIATE POSSESSION

UNITED STATES OF AMERICA, PLAINTIFF

v.

CERTAIN PARCELS OF LAND IN THE COUNTY OF SAN BERNARDINO, ETC., ROY J.
ALEXANDER, ET AL., DEFENDANTS

Upon a reading of the Complaint in the above-entitled action, and upon the affidavit of George A. Lazar, Jr., Lt. (Jg) U. S. N. R. and of Irl D. Brett, and upon application of counsel for plaintiff for an order granting immediate possession of the property described in said complaint, pursuant to the Second War Powers Act of 1942, approved March 27, 1942 (Public Law 507—77th Congress), and good cause appearing therefor:

IT IS HEREBY ORDERED, ADJUDGED AND DECREED that plaintiff United States of America is hereby granted immediate possession of all of the hereinafter described property.

The property affected by this order is described as follows:

That certain real property situated in the County of San Bernardino, State of California, and more particularly described as follows:

Beginning at a point on the North line of said San Bernardino County, said point also being the Northwest corner of Section 6, Township 25 South, Range 44 East, Mt. Diablo Base & Meridian; thence Easterly along said North line of San Bernardino County to its intersection with the San Bernardino Meridian; thence South along the San Bernardino Meridian to the Southeast corner of Section 34, Township 32 South, Range 47 East, Mt. Diablo Base & Meridian; thence Westerly along the South line of Township 32 South in Range 47 East, Range 46 East, Range 45 East, and Range 44 East, Mt. Diablo Base & Meridian, all Mt. Diablo to the Southwest corner of Section 31, Township 32 South, Range 44 East, Mt. Diablo Base & Meridian; thence Northerly along the East line of Range 44 East, said line being also the East line of Townships 32 South, 31 South, 30 South and Township 29 South in said Range 44 East, Mt. Diablo Base & Meridian to the Northwest corner of Section 6, Township 29 South, Range 44 East, Mt. Diablo Base & Meridian, thence Northerly approximately 16 miles across unsurveyed land to the Southwest corner of Section 31, Township 26 South, Range 44 East, Mt. Diablo Base & Meridian; thence continuing Northerly along the line separating Range 43 East and Range 44 East, Mt. Diablo Base & Meridian, said line also being the Easterly line of Township 26 South and Township 25 South in said Range 44 East, to the point of beginning.

DATED: September 2, 1943, at 3:45 o'clock P. M.

PEIRSON M. HALL,
United States District Judge.

Presented by: Irl D. Brett, Special Assistant to the Attorney General.

REUBEN ROSENWEIG,
Special Attorney, Lands Division.
By IRL D. BRETT,
Attorney for Plaintiff.

Mr. CRONEMILLER. The two State livestock associations, in annual conventions, have endorsed the Johnson bill form as of 2 years ago. However, among our national forest advisory boards we have 8 active, and if the Johnson bill is enacted so that by law the Secretary would set up advisory boards, upon the request of over 50 percent of the permittees, we probably won't have more than 12 in the 18 national forests of California.

Of the eight active association advisory boards, only one has expressed itself on the Johnson bill. It is hardly a problem in the

California region, in that practically all permits are protected by the various limits from reductions for distribution and so forth by the upper limit, or by special ones.

The CHAIRMAN. How about your transfer reductions?

Mr. CRONEMILLER. We have applied that, probably, in less than one-third of the cases; and I have used it only for protection of the range, in practically all cases—I wouldn't say 100 percent—but where the range was overstocked, we have used the transfer reduction for protection of the range. The grazing advisory board of the Sequoia National Forest did prepare a resolution opposing the Johnson bill in two respects; first, that they did see some monopoly in their local area that they did not believe was socially and economically the best for their community. The second point was that in the Sierras there is such heavy use by recreation, there is timber use, important watershed uses, and they feared, if legislation was enacted that would fix grazing privileges, that there would be pressure from reclamation and other groups, and strong pressure, that would lead to the exclusion of livestock from some large areas of national forests which have considerable recreational value.

If you please, Senator, I will present the original copy of that resolution to you.

The CHAIRMAN. It will go in the record at this point.

(The resolution is as follows:)

RESOLUTION

We, the grazing advisory board of the Sequoia National Forest, composed of the elected representatives of the 120 grazing permittees running cattle on the Sequoia National Forest, do hereby go on record as opposing the enactment of the Senate bill No. 1030, known as the Johnson bill, which has been presented to the Seventy-seventh Congress now in session.

Whereas section 27 of this bill has evidently been designed to protect a few large preference holders of grazing privileges against reductions, it would in our minds, be discriminating against the bulk of the forest permittees who are trying to build up their herds so as to make a decent living, and would also prevent any new operator from getting a start regardless of how great his need may be, and

Whereas the distribution of grazing privileges in our area has been worked out to the advantage of the industry and to the Government in the past, we see no advantage to be gained through the enactment of specific legislation as set forth in section 27 of the above bill, and

Whereas the present distribution policy is for the most part satisfactory and is working toward the betterment of the industry, we feel the unstabilizing features of past policies have been eliminated, and

Whereas, should legislation of this type be passed, giving special protection to specific forest users such as the grazing men, it would most certainly lead to similar demands from other special groups which we feel would in turn place the livestock interests at a disadvantage.

Now therefore in the interest of proper administration of the forest lands within the Sequoia Forest which are used by cattlemen which we represent, be it—*Resolved*, That S. 1030, the Johnson bill, be not enacted.

Copies of this resolution are to be forwarded to our two Senators, the Honorable Hiram W. Johnson and Hon. Sheridan Downey, and also to Hon. Alfred J. Elliott of the House of Representatives, all of Washington, D. C.

JULE E. VILLARD,

Chairman, Grazing Advisory Board, Sequoia National Forest.

Resolution passed: May 1, 1941.

Mr. CRONEMILLER. One of the stockmen that hoped to be present today, one of the local stockmen who is interested in the general policy, this point of distribution under the Johnson bill, will not be able to

be here before about 3:30. Would you care to hear him then, or would you like a written statement?

The CHAIRMAN. We will try to hear him. We will be very glad to hear him; we want to hear anyone who goes to the pains of coming to this meeting. They are all very welcome, and we will be glad to hear from them, and will hear from everyone we can possibly call, within the hours that we can devote to the work.

Mr. CRONEMILLER. Thank you.

The CHAIRMAN. Thank you. Are there any questions that you gentlemen from California, or anyone else, would care to propound to Mr. Cronemiller as representing the Forest Service?

Mr. CRONEMILLER. I want to say that Mr. Clark, the Chief of the Division of Range Management, and I have been actively working on this advisory board situation on the national forests, and we do have a number of splendid boards that are working actively. It is a difficult job, with very diverse conditions, to get agreement on policies on individual forests, because we have east side hay producers and west side winter pastures, and that type of thing.

Another thing is, where the forest has but small numbers of livestock, there is not sufficient number of problems of mutual interest to justify their forming an advisory board, and one, and possibly two, because of that fact, have decided to adjourn for the duration, in the interests of saving gas, tires, and time.

The CHAIRMAN. That brings to mind especially the letter from the wool growers' association which came to the chairman of this committee, and which we have touched upon. It brings forward the subject of the taking of open public domain and the method of taking by the military authorities. The Southwest especially has had some very serious problems along that line. I am wondering what California has had in that respect. Can you state that, Mr. Cronemiller?

Mr. CRONEMILLER. I haven't the figures in mind of the acreage taken by the military in California. It is between four hundred and five hundred thousand acres, I believe.

The CHAIRMAN. Where?

Mr. CRONEMILLER. Starting at the Mexican border, there are three fair-sized military reservations; in San Diego one quite large one of some 57,000 acres.

The CHAIRMAN. How much of a displacement of livestock did that entail?

Mr. CRONEMILLER. In total it was—I figured a year ago it was the equivalent of 25,000 head of cattle, year long; quite serious. Camp Beale area, over in the Valley, has been quite a problem, because the 60 or 70 ranchers displaced there have been unable to lease or find other places on which to operate. They have national-forest permits, Southern Pacific leased lands, and are unable to secure winter pastures, and probably will not be able to continue. Recently the Army is allowing some leases in Monterey, San Diego, and San Luis Obispo Counties. That is to come before the Monterey Cattlemen's Association at a meeting on the 9th of this month. I will be present, and we are working with the Army in trying to work out a scheme where livestock may be grazed on military reservations; and possibly after that meeting the association might address you in regard to their problems. It doesn't appear that it is not going to be worked out entirely.

The CHAIRMAN. Let me say to you this: This is perhaps an individual thought, but I have seen some intimation which gave rise to the thought that these military withdrawals, or withdrawals for military purposes, may have a longer duration than the war. Military withdrawals, like other withdrawals, may have a greater degree of continuation or permanency, and, to my mind, that is one of the serious questions that this committee and the stock raisers of the country may have to deal with in the future. We may be confronted with conditions where, by reason of the way and manner in which this war may terminate—I say this frankly; I don't think this war will terminate as any other war has ever terminated; I think it will be an entirely different nature and termination—I think this country is destined to have an outstanding, and very large, armed force for many, many years to come. I don't think we will ever see our Army reduced to the numbers that it had prior to the outbreak of this war. That being true, the stock raisers of this country are now confronted, or may be confronted, with the condition whereby lands that have been taken away from them for what they thought was temporary use they may find it taken away for a use so long that they individually may not live to see the return of the territory to the open public domain. It is a problem that I think we are going to have to deal with, perhaps by legislation.

Mr. THOMAS C. HAVELL (General Land Office, Washington, D. C.) Mr. Chairman, as of March 5, 1943, there were withdrawn for military use connected with the prosecution of the war about 15,000,000 acres, and, in addition to that, there were 17,000,000 acres on which permits were granted for maneuvers. That is not a withdrawal but a use or occupation of the land permitted.

Concerning your last statement as to the duration of these withdrawals, except for some of the earlier withdrawals, we have written into every one of the orders setting land aside for military use, that the withdrawal shall be for the duration and 6 months thereafter; and we have done everything we can to see that the lands are returned, after the emergency and the 6-months period, to their former status.

I might say, in addition to that, that some time ago we entered into some correspondence with the War Department looking to an agreement whereby the War Department would not only return the public lands to their former status but would turn back with them whatever scattered tracts of privately owned lands that they had acquired for their military use. We have not worked that out as completely as we would like to, but it is a matter that we are giving attention to.

The CHAIRMAN. I am very, very glad to have that statement go into the record. It relieves the committee of some concern that the committee has had and has discussed.

With reference to your clause, "for the duration and 6 months thereafter," I am reminded of the two Negroes, who, after the last World War met over at a point of embarkation in Europe. One said to the other, "I enlisted for the duration of the war, and I's getting pretty tired, cause the war's over, and I want to go home." The other answered him and said, "Yes; the war am over, but that there duration, that am still going on."

I am wondering how long the "duration" may be going to continue.

Mr. CRONMILLER. In order to clarify the record, the land I referred

to is all of the land—mostly it has been acquired by the Army from private ownership in the State of California.

The CHAIRMAN. Yes; that is going to present the intricate part of the problem. I am glad to have Mr. Havell make the statement which he has made, that the Department is interested in having the Army, or military authorities, turn back the acquired lands which they bought and hold into private ownership, because those acquired lands will be the property of the respective military authorities. Just how rapidly they turn them over to the open public domain is quite an interesting question; and just how essential those sections are to the livestock industry, you can scarcely estimate, unless you would have sat with this committee in hearings that we have had in northern Arizona and in Phoenix, Ariz., and in New Mexico, where the committee itself went on record here just a few weeks ago, and over the signatures of the members of the committee, wired the military authorities, requesting that they do not take over certain tracts of land that it looked to us in New Mexico would almost destroy the livestock industry in a particular section.

Mr. CHRISTENSEN. I was wondering if the Johnson bill, or the other bill, providing for advisory boards in the forests, provided for a wildlife representative on these boards?

The CHAIRMAN. I am advised that the new draft would make such provision; something of that kind.

Mr. CHRISTENSEN. That has been one of the causes of concern with our district, with our board. We feel that the largest user of public lands in our district is the wildlife. We possibly have some 25,000 antelope and deer in our district. That is about correct, isn't it Mr. Dierking; is that right?

Mr. DIERKING. I think that is about the figure; yes.

Mr. CHRISTENSEN. So that is by far the largest permittee that we have; and we have been concerned with the lack of interest from the fish and game commission of California. We have a wildlife representative on the board, but he has not been active. We would like to have him more active from the board members' standpoint. I would say we would very much appreciate more cooperation from the fish and game commission in California from the interests of the wildlife.

After making quite an observation, a good deal of observation of wildlife ways of living, I think there has been a very definite change in wildlife habits. One outstanding change is their need of salt. They have learned to use salt that has been put out by the stock growers during the months that the livestock are on the range; and in the months when the livestock are not out the deer and antelope, the deer especially, will gather at the salt licks and salt boxes and eat the ground that the salt was placed on, which might have some flavor of salt from the evaporation and what not of the salt placed there during the grazing months. We feel that the fish and game commission of the State of California, which is definitely a heavy tax-gathering agency, should stand in with us for their game, providing salt.

We would like to have closer cooperation from the fish and game commission on the advisory boards. I hope Mr. Dierking will not feel that I am out of place in expressing the advisory board's opinion.

The CHAIRMAN. While you are on your feet, Mr. Christensen, how do you find the wildlife population and the carrying capacity of your

range with reference to wildlife population in your district, say, at the present time?

Mr. CHRISTENSEN. We have made quite a study of it with our district grazier and officials from the Grazing Service, and we have areas where quite a heavy percent of the forage is used by the wildlife; some places, possibly 75 percent of the forage in the higher mountains, is used in the summer, mostly by wildlife. There is not so much conflict of the feed in the summer months, but there is a very definite conflict in the winter. There would not be so much of a definite conflict if the wildlife habits would permit the wildlife to change their wintering places and move to new areas of feeding, which they do not seem to do. They concentrate in their old wintering spots; and we have many places in our district, or several, where the wildlife have crowded the domestic livestock out almost entirely. Very often that is the case on private lands. They stay in these concentrated areas to such an extent that they weaken the physical condition, and when we do have a severe winter here, which will happen—we haven't had one for 10 or 12 or more years—but then we can expect to lose many thousands of the 25,000 wildlife that we have in our district.

We definitely have overpopulated places; and we don't seem to get any recognition of that from our fish and game commission. We see very little of them. If you go into the cities and towns, you will see them. You can't go to Alturas but what you will see one or two fish and game wardens walking up and down the street with a revolver at their hip. I don't know why.

The CHAIRMAN. As the wildlife population has increased, Mr. Christensen, what have you noted as to the domestic livestock population?

Mr. CHRISTENSEN. I believe that the sheep population—and that is the part of the sheep that were run by people who had little or no adequate base property—they have been reduced to something like 40,000 sheep. Is that right, that have gone out of the district?

Mr. DIERKING. I believe so.

Mr. CHRISTENSEN. And the cattle numbers are possibly up some. Before we had administration in our district people without adequate base properties were using the public lands to such an extent that they were crowding the owners of these lands off the ranges. The cattlemen and people who had investments in ranch property were becoming weakened in cattle numbers. The owners of ranches, base property, have come back to a stronger financial position and the stronger position as to the numbers of livestock and their use of the ranges, so I think that our cattle numbers are possibly up 10 or 15 percent, or something like that.

Our sheep numbers are down, possibly 50 percent.

The CHAIRMAN. While my question was propounded to you, the record of the hearings of this committee had, in the various sections of the public lands States, disclosed in some sections that as the wildlife population increased, the domestic livestock population decreased. We have a very pronounced record in that respect. For instance, in Colorado and southern Utah, the increase of deer noted also reflects a decrease of domestic livestock.

Mr. CHRISTENSEN. I wouldn't say that that condition has been reached in our district at the present time; but with the steady increase

in numbers of wildlife, that soon will happen, especially with antelope. When I moved to Modoc County 20 years ago it was a rare thing for us to see an antelope; in fact, I think I lived there 2 years before I saw the first two antelope in Modoc County; and now the count by the Grazing Service and Fish and Game Commission reveals that we have some seven or eight thousand antelope. The stockmen feel that we might have as much as 15,000 antelope in that district—and they are very detrimental, especially to our small ranches that lie in isolated places where the isolated ranches are. Antelope cannot be kept out of the fields, eating the hay and grain, and the gardens.

The CHAIRMAN. Let me ask you, Mr. Christensen, is the antelope a browse-eating animal?

Mr. CHRISTENSEN. I think they eat grass most of the year.

The CHAIRMAN. Deer is largely a browse-eating animal?

**STATEMENT OF GEORGE P. MILLER, EXECUTIVE SECRETARY,
CALIFORNIA DIVISION OF FISH AND GAME, SAN FRANCISCO.
CALIF.**

Mr. MILLER. My name is George P. Miller, and I am executive secretary of the California Division of Fish and Game. I cannot let go unchanged the two or three statements made by my friend Mr. Christensen.

The division of fish and game is quite cognizant of the situation in the section of the country to which he refers. We have made competent surveys of it, not only over one year, but over a number of years. Each year before holding a special antelope season, we have taken a census of antelope in California, by the best and most approved method of doing it. Last year we took it by airplane, which we have done before. We have sent other biologists into the hills, and they are familiar with every foot of the ground. So we do have some knowledge of the country, and our estimates are not in agreement with those of the Grazing Service, nor necessarily the Forest Service. We estimated between five and six thousand head last year, cropped off about 400, and this year we took a number quite comparable to that.

For his information, at the present time the chief of the bureau of game conservation, with a representative of the Forest Service, is right today, riding over the Devil's Garden area making those surveys; so I don't like to let the statement go unchallenged for the record.

Another thing for the record, Mr. Christensen said that the division of fish and game was a great tax-gathering agency. I want to say that not 1 cent of the money collected by the division of fish and game comes out of the general funds of the State, or is paid for in any other way, by any other interest, than the sportsmen of the State of California.

The CHAIRMAN. Your antelope population, referred to by yourself and Mr. Christensen, has, as he stated, very materially increased in the last few years?

Mr. MILLER. I would say that the increase has been steady. I believe that at the time—I am speaking from memory, and somewhat hearsay—at the time the antelope hunt was closed in the State of California the present herd was down to less than 100 animals, and it had increased in California. There is a movement into Nevada and California of some of those animals common to both States. But in

making the survey—and at the time it was made, we accepted the border-line cases in our counts in California, in order to justify the cropping off of some of these animals. It is only in the last 2 years that we have had authority to do that; that a season has been opened in California. I may say that it is not too popular with the rank and file of the people, particularly the sportsmen in California.

The CHAIRMAN. Well, your territory, your region in which your antelope range is through part of California and part of Nevada?

Mr. MILLER. The problem is in Lassen and Modoc Counties.

The CHAIRMAN. Well, I think from what the committee has heard, and from the record that has been made, the problem is also in northern Washoe and some in Pershing counties. I think, if I am not mistaken, Nevada opened the season to taking antelope this year. Am I correct in that, Mr. Dierking?

Mr. DIERKING. That is correct.

The CHAIRMAN. And the statement has been made unofficially to members of the committee that the antelope were becoming no numerous in that country up there that it was going to be necessary to do something, in the not far distant future, to take care of the excessive antelope population.

Let me say, in that respect, that that information came to the chairman of this committee, not as a member of this committee, but when the Wildlife Department sought my assistance to get an appropriation, which we did put through in the Appropriations Committee of the Senate, and it is the law to purchase private holdings in northern Washoe and Pershing Counties for the antelope range. That was because the antelope, so we were advised, were taking possession of private property anyway, and they had to purchase it or else there would be trouble up there.

Mr. MILLER. Senator, the State of California is willing to help you in a small way. We have made arrangements to trap some of the antelope out of the Sheldon Refuge, and replant them in other parts of California.

The CHAIRMAN. All right, if you can get them to stay there.

Mr. CHRISTENSEN. I believe we have had several thousand transplanted in our district without trapping. The antelope is no respecter of State lines. I have heard that.

Mr. ASH. I have something to say along that line, but I thought probably we would take that up this afternoon under the Senate bill.

The CHAIRMAN. I think that would be better.

Mr. ASH. This refers to the grazing as well. I don't think that the fish and game commission are running their livestock in compliance with the Taylor Grazing Act. In Modoc County, on the Modoc National Forest they take approximately 1,600 four-point bucks out of there annually, and I believe the life of a deer is not to exceed about 10 years. If you take 1,600 bucks out of there each year, I would like to know what becomes of 1,600 does that naturally must have reached maturity and died.

Now, that was what brought about the passing of the Taylor Grazing Act, to see that we would care for our livestock, not run them hither and thither, and go out to some other men's desert in the winter and let the stock die. It is provided that we should have base property, and take care of that stock annually, and I don't believe that the fish and game are complying with the Grazing Act. I know they are

not, in the way Mr. Christensen referred to, in providing salt for them. We have borne down considerably in our country to try to get that done, but we haven't reached any place yet.

I would like for the gentleman from the fish and game commission to say what he would like to do about taking care of them in the winter. We have an area in the garden country, northwest of Alturas, 7 or 8 miles wide and 10 or 15 miles long, stripped of every vestige of browse they can reach. All the little twigs are eaten from the juniper trees. They got in there a few winters ago when the winter was severe, migrated from Oregon down there. There is another inconsistent thing; Oregon has open season on doe, and California hasn't, right there on the line where the deer population is about in the same balance.

The CHAIRMAN. Speaking of the juniper trees being browsed off as high as the deer could reach, I saw a cartoon some time ago in which a deer was standing on his hind legs reaching up to browse off the limbs of a tree, and the little deer said, "Dad, let me get on your shoulders, so I can get a little of that up there."

STATEMENT OF E. A. SETTLEMAYER, RENO, NEV.

Mr. SETTLEMAYER. Mr. Christensen mentioned that there has been a reduction of 40,000 head of sheep from his district. I am wondering what use is being made of the range that these sheep used before?

Mr. CHRISTENSEN. Mr. Settlemyer, that has pretty much gone back to a cattle use, and the area that was used by these sheep is used by cattlemen. I might also state that the cattlemen have been very, very grand in our district, to attempt to buy the little isolated tracts of land that the sheepmen had, that they were using as base property, so as to round out the base property; and it has brought the use of the range back to the people who owned adequate base property. In some cases the people that had the base property had it in scattered pieces of land.

Also, at the time of our Taylor grazing administration our district was almost denuded of grasses. It was just about worn out. Even the men using that country without adequate base property were not successfully operating, because they could go to the wintering areas and still were not getting along any too well. The owners of ranch lands didn't have a range to go to. I wouldn't say there was a hundred percent use of that range as there was then, but the use of the range was in line with the carrying capacity of the range, and the use of the range is coming back to where we may increase the number, so that we have a little left over. Maybe the reason the antelope didn't come 20 years ago was because we didn't have anything for them to come to.

The CHAIRMAN. Mr. Dierking, would you care to discuss any phase of this problem that is being presented here? We have gone over a little bit into the wildlife question. I have wanted to reserve that subject. If you would care to discuss it now, Mr. Dierking, or this afternoon, you may express your own preference.

Mr. DIERKING. Senator, I think the questions raised here have been pretty well covered this morning. I might state that our antelope census for California No. 2 district is 6,000 head on the tabulation here, which I think is quite close to the figure presented by Mr. Miller, of 5 to 6 thousand head; so I don't feel that we are too far off on the ante-

lope in the grazing district. I think that the question propounded by Mr. Settlemyer was answered by Mr. Christensen, that a portion of that was taken up as a result of former overuse; and the other remainder of it was taken up by cattle use that has increased; and unquestionably there has been some increased demand from the wildlife.

Mr. MILLER. I would like to know just from a technical standpoint, for the benefit of some of our biologists who are here, just how and when you made your census. We would like to compare them, because they are a good deal in agreement. When did you take your census, and what method did you use?

Mr. DIERKING. I will ask Mr. Kirk to answer that.

STATEMENT OF JESSE L. KIRK, DISTRICT GRAZIER, HONEY LAKE DISTRICT, CALIFORNIA, NO. 2, SUSANVILLE, CALIF.

Mr. KIRK. That is putting me on the spot here. I am district grazier up there, and I am between all these fellows here. I have got to satisfy them all; but I have gained my information through livestock men, board members, through the fish and wildlife, and some by observation myself in the field. I think that is the only way we can get it. He made the statement that they made their survey by airplane. I think that is one of the best for antelope, because they do bunch up, and you can get over them in an airplane and count them by photograph. I think that is the way they made theirs, which is a very good way to make the count of antelope; but my files, as I say, I have gained through different agencies, observations of our men in the field, and estimated counts in some areas. We set off an area, and count them in that area; take the best time to count them, which is in the fall of the year, when they are bunched up in big bunches.

The CHAIRMAN. Are they, at this time, threatening any of the areas in your region? What I mean, are they threatening to devastate the areas of the grazers?

Mr. KIRK. The antelope in one or two areas that we have fenced, under section 4 permits of the Taylor Act, there are 50 to 150 antelope who bother these men in the alfalfa fields. In another area, at Fort Bidwell, antelope have destroyed a lot of grain each year. The fellows have tried to herd them out, dog them out. The antelope eat all the grain.

The CHAIRMAN. How about the open public domain, are they threatening the cover on grazing there?

Mr. KIRK. I wouldn't say so, personally. The antelope aren't as destructive in our area as the deer, because they range over a wider area of country, and their concentration is in the open area in the winter, where sheep also winter. A great number of them migrate from Nevada. In Nevada antelope are not doing as much harm as the deer.

The CHAIRMAN. Are the deer threatening the cover of the open public domain?

Mr. KIRK. In the concentration winter areas; yes.

The CHAIRMAN. To what extent? I wish you would discuss that at length, in your own way, if you please.

Mr. KIRK. Of the areas to which I have reference here, I think Mr. Miller and Mr. True know, the worst is the Doyle area concentration. We appreciate the fact that due to the highway, the railroad and

power lines and fences, the deer congregate there, where normally, I imagine, they passed into Nevada. Another thing, I think, that holds them, within the last 4 or 5 years we have had a lot of good winters; the bitterbrush has made a good growth there, snow brush, sagebrush, willows, wild plum, a number of browns there, hold the deer in that area. It is granite soil, doesn't get too muddy. That is another thing that holds them in there. It is more or less a dumping ground for Lassen, part of Modoc and Plumas National Forests. Those deer migrate in there in the winter. We have made several checks there on the utilization, also deer counts, and we find they have killed a lot of browse, though a lot of it is by natural death. I think, this year you will find there are long stringers on the bitterbrush, which have made a wonderful growth this summer. This fall you are going to see it taken by the deer.

At the present time we licensed in there about 1,200 animal unit months. That use consists of cattle and sheep, spring and fall and summer use. The deer come in there in the fall, and stay there until late in the spring.

The area I am speaking of has been burned over; several parts of it have been burnt. The natural forage that was there had been killed but it was coming back. That particular area is going to be hard to work out. I don't see any reason why the fish and game and the Grazing Service, or the individual stockmen, or any sportsmen, should get up in arms at the other fellow. I think that is a condition that we can get out and eliminate, as neighbors.

The CHAIRMAN. This is a condition in there, is it not?

Mr. KIRK. Yes, sir.

The CHAIRMAN. Unless it is dealt with by some method of cooperation, I take it that you and other men in your position, as you have testified, can see a serious problem to be dealt with in the future?

Mr. KIRK. That is right.

The CHAIRMAN. Does anyone else wish to discuss either of these subjects that we have touched upon?

There are those who are here from the Fallon region, and from Churchill and Washoe Counties, that expressed themselves to the chairman of this committee as having some problems to solve here.

Mr. Ceresola, do you have a problem that you wish to present to the committee?

Mr. CERESOLA. Not at this time.

The CHAIRMAN. Is there anyone else here? The trouble is that I find you gentlemen meet the chairman on the street and tell him your troubles; and when we want you to come here and tell them, because the committee must read the record, and the Congress of the United States must have the record to go on, before we can solve these problems, you will not do it. We wish you would be more at ease, and more free to speak on your problems.

There are some stockmen here from the area just discussed by the regional grazier. Do any of you care to be heard?

STATEMENT OF P. S. HALL, DOYLE, CALIF.

Mr. HALL. Well, I don't believe there is much to add to what Mr. Christensen and Mr. Kirk have said. We have a very serious problem there that is going to continue to get worse, unless something is done.

The CHAIRMAN. That is the problem with reference to wildlife?

Mr. HALL. With reference to deer. We are right in that winter concentration of deer, and the bitterbrush, in my opinion, has only been able to stand this overuse, due to the good seasons we have had, so far as moisture is concerned.

The CHAIRMAN. Now, in that respect, it is your observation, as the committee has had presented to it elsewhere, that the deer is a browse animal; isn't he, largely speaking?

Mr. HALL. Largely, they are; but in the spring they eat considerable grass.

The CHAIRMAN. The bitterbrush is a browse brush?

Mr. HALL. Yes.

The CHAIRMAN. You find in your region that the bitterbrush is suffering by reason of overgrazing by the wildlife. Is that it?

Mr. HALL. I believe it is.

The CHAIRMAN. I may say to you I wish there was someone here from White Pine County. Is there anyone here from White Pine County?

Mr. JAMES RIORDAN. Yes, Senator.

The CHAIRMAN. I don't know whether you are familiar with this. Mr. Riordan, but are you familiar with what is known as the Duck Creek Reserve?

Mr. RIORDAN. That's right, Duck Creek Reserve. The sportsmen have been feeding their deer during the wintertime there, and last winter they had, at one time, over 600 head in one flock that they were feeding, and they come out in the spring very nicely. Of course, they run over the public range during the summertime, but I don't think that they have overstocked it. They have overstocked it to a certain extent this year. They have allowed them 200 does out of that district, and I think they are getting along very nice; but if it weren't for being winter fed, it would be a different proposition.

The CHAIRMAN. May I say to you, Mr. Riordan, that the chairman of this committee went out over that region with the regional supervisor, and we found there that you could stand on almost any hill and look as far as the eye could reach, and see the juniper and other browse brush browsed off about as high as a deer could stand on its hind legs. Then, in accordance with that, we noticed that the State of Nevada has had a very progressive statute. I think, at the last session, in which it made arrangements for the setting up of a committee in which it would call in a representative of the Grazing Service, a representative of the Forest Service, a representative of the Park Service, and a representative of the Wildlife Service, to act in cooperation with the State authorities wherever there was an overpopulation of wildlife, to eliminate or reduce the population.

Mr. RIORDAN. I think they are very right.

The CHAIRMAN. Here is what happened when we held the hearing at Ely. It was disclosed that that group had already arrived at the conclusion that the population in the Duck Creek Reserve must be reduced, by the number of 500; and they were going in to reduce that population by at least 500, because it was overpopulated. Undoubtedly, an observation of the district would prove that to anyone.

Mr. RIORDAN. That is right; and give the hunters 200 does to kill this year. I think they are getting along very well. I have heard very little complaint from the stockmen in regard to the summer range. Of course, the winter range, the stock all goes out, but the wildlife has

fed those deer there during the winter. I think maybe you know that yourself.

The CHAIRMAN. Yes; otherwise the territory would not sustain the population.

Mr. RIORDAN. Oh, no; it would not begin to.

The CHAIRMAN. That is true in that district.

Thank you, Mr. Riordan.

Mr. RIORDAN. Very well.

The CHAIRMAN. In view of the fact that the committee is really anxious to hold this subject of wildlife down until all of the sportsmen who desire to be present here this afternoon can be present, it may be well to go into another subject right now. That is the subject that is very vital to the State of Nevada, especially, and to the agricultural interests of the State.

There is present here at this hearing the representative of the land department of the Southern Pacific, Mr. McAllaster.

There is also here, Mr. Havell, of the General Land Office.

There is what is known as the Transportation Act of 1940, that involves, in one way or another, the restoration, or the possible restoration, of the checkerboard land to the Government, the checkerboard land being the land that was granted to the Central Pacific, now Southern Pacific Railroad, at the inception of that railroad.

The question of how that land should return, if it does return, to the Federal Government; the question of its control and supervision and dominance thereafter; as to whether or not the transfer would take place; what notions are on foot; it does seem to this committee to be a vital question, especially to the tax structure of the State through which his checkerboard belt passes.

Now, if Mr. Havell, of the General Land Office, would care to discuss this matter, for the enlightenment of those who are present here, the committee would be exceedingly pleased to have him discuss it, in his own way, and just so much as he cares to be committed to. He may limit himself to what he cares to state. We will appreciate his discussion of the subject in general.

STATEMENT OF THOMAS C. HAVELL, GENERAL LAND OFFICE, WASHINGTON, D. C.

Mr. HAVELL. Mr. Chairman, when the land grants were made to the railroad companies, as inducements to the construction of the lines, there was imposed a condition that the Government would have the benefit of a reduced rate for the freight, for troops, and for mail.

In 1940 Congress felt that the railroad companies were perhaps entitled to some relief from this burden, so they passed what is known as the Transportation Act of 1940, which enabled the railroad companies to charge the full commercial rate, the same as any citizen would be required to pay; but added a section to the act which provided that the increased freight rates would not go into effect until the railroad companies had released to the Federal Government all of their claims to lands under the grant. There were three exceptions to the requirement as to this claim to lands. The first did not require the companies to release any lands that had been patented to them. Second, it did not require the release of any lands sold by the companies to bona fide purchasers; and third, it did not require the release of any lands, the

selection of which had progressed to the point where the companies were entitled to their patents.

The act, however, failed to state what would be the status of these released lands. Unlike many of the other public-land statutes, where title to lands was taken back in exchange and other methods, wherein Congress usually stated that the lands should become public lands, or become a part of whatever reservation they may be within, it merely stated that the railroad companies would release these lands to the Federal Government.

We, in the Land Office, felt that since they were originally public lands, and since the lands had not been patented to the railroad companies, although admittedly as to the lands in the primary limits, titles had vested in the railroad companies, though without the evidence of a patent, nevertheless, the lands came back to the Federal Government as public lands. There was some uncertainty, however, as to that; and in order to remove the uncertainty, the Secretary of the Interior submitted to Congress a bill designed to remove the uncertainty of these lands that had been released to the Government. It was a very simple bill, so stated that the land would become public land of the United States, and be affected by whatever reservation they may be within; that is, if part of the lands were within national forests, they would become a part of the national forest; if in an Indian reservation, they could become a part of an Indian reservation, and so on. We felt perhaps that was necessary for another reason. Congress has prohibited the adding of any lands to Indian reservations, to the national forests, with the exception of three States, and to the national parks; and so that in order that there be no question as to these lands becoming a part of the reservation of that category, we felt that the legislation would clarify that subject. The bill was drafted and submitted to the Congress, with a favorable report from the Secretary of the Interior. I think that bill is H. R. 838.

When the bill was under consideration by the Public Lands Committee of the Senate it was amended by an added provision that the lands be granted to the States, and if they fell within the boundaries of any reservation, then the State would be entitled to the selection of other lands for those that were within the reservation. I am not sure as to what prompted the Senate to add those two sections to the bill. I think that the tax problem was part of the reason because we understood that at least the lands within the present primary limits that had been released to the Federal Government had been paying taxes to the counties and to the States. I think that was so stated at our Phoenix meeting, as far as the Santa Fe is concerned.

Mr. McALLASTER. That is correct—surveyed primary lands were taxed.

Mr. HAVELL. In the surveyed primary land, the titles of which were vested in the companies, though the patents were not actually issued. I don't know at the present time whether the Secretary has reported on the amended bill, S. 978 and companion bill, H. R. 2785. However, I believe I am safe in saying that if the report has not been submitted it will be favorable as to that part of the bill that would legislate these lands to be public lands of the United States, or, shall I say, remove any doubt as to whether they are public lands of the United States.

The CHAIRMAN. I think, Mr. Havell, right there, it may as well be brought to your attention that the Senate committee had presented to

it the question of whether or not certain departments, when the land was returned to the open public domain, would immediately seize the lands as being a part of the land of the respective departments. I think we had in mind at that time the question of how much of this would be claimed by the Indian Service, as belonging to Indian reservations, under Indian jurisdiction, and how much under other departments. We sought to try to direct that the land returned would go back into the open public domain, without any claim from any department whatever.

It is not a matter of secrecy at all; we have certain departments that are forever and always reaching out to grab more of this land and put it under their respective jurisdictions, and the chief one in that respect is the Indian Bureau. There is no hiding that because it is true.

Mr. HAVELL. Senator, perhaps I should have touched upon that feature because I do know, of course, the situation in Arizona in connection with the Hualpai Reservation, where half the lands were claimed by the railroad companies; and if released, and they have been released, the question as to whether they are to be enjoyed as being part of the Indian reservation, or being a part of the open public domain. I perhaps should have touched upon that as another reason why, perhaps, the bill was amended in the Senate. The Department submitted the original bill, with favorable recommendations as to the status of the lands, and to their being affected by whatever reservation may be involved.

I am not sure that the Department has submitted a report on the amended bill, but I am quite confident that it will be adverse because I don't believe there is any reason why the land should be granted to the States as public lands. Public lands are the property of all the people, not the property of the people in the State in which they may be located.

Furthermore, Congress has made very large grants of lands to the States for educational or other purposes. I think the total grant to the States amounts to over 200,000,000 acres; and in addition to that, if these lands come back as part of the public lands, they will contribute to the State treasuries. If the lands contain leasing minerals, 37½ percent of the revenue from the Mineral Leasing Act will go to the State. If they become part of grazing districts, 50 percent of the proceeds will go to the States, and so they will not fail to contribute to the States, but that is a long way from a grant. It is also different from the reasons why the lands themselves should be granted to the States.

As to the tax problem, the Public Lands Committee of the House is now studying that problem, not only with reference to these lands, but to all lands that have been taken off the tax rolls. The tax problem is one perhaps much larger than we will have time to discuss here, but the tax element is an important factor.

The CHAIRMAN. The tax element is an exceedingly important factor, especially in our own State here, because of the belt 40 miles wide, running clear across the State, with every odd section belonging to the railroad, most of which is now taxed to the railroad, and the taxes paid by the railroad. The question, in many respects, is one of what will be the effect on the tax structure on some of our smaller counties, and, indeed, on some of our larger counties. It is a very serious problem.

I wanted to ask you, Mr. Havell, how far has the matter proceeded? Is that as far as it has proceeded? In other words, the bill is now pending, is it not, before the Congress?

Mr. HAVELL. The bill—

The CHAIRMAN. In other words, under the first bill?

Mr. HAVELL. The bill is before the Congress, unless something has happened since I checked on it last. It is before the Senate in its amended form. It is before the House Public Lands Committee. They have not had any real formal hearings on it. I was before the House Public Lands Committee twice, and they still have the bill in the committee.

The CHAIRMAN. That is the bill which the Secretary of the Interior set up to clarify the Transportation Act of 1940?

Mr. HAVELL. That is the bill and, of course, coupled with it now is the new bill.

The CHAIRMAN. Mr. Kneipp, do you have any observations on that?

Mr. KNEIPP. To a certain degree, Senator. Actually, as I understood that Transportation Act, it would not apply in the belt to which you are referring, those lands which have been patented to the railroad company. My understanding has been that the large part of the acreages was released merely from unsatisfied claims to acreage. So far as the national forests are concerned, we know of only about 360,000 acres which actually was relinquished. That was land in Montana and Washington which the Supreme Court found the Northern Pacific Railroad Co. should have been given patents to and which they had not received. That was specifically identified land. As to the remainder, we are not aware of it affecting the national forests very markedly, and for that reason, our attitude has been merely one of awaiting the action of Congress. But we believe that where interests in lands consisted only of unsatisfied claims, which never have been taxed, never have been classed as railroad lands within the national forests, but where their status, up to this time, has been that of national forest lands, that status should be continued.

The CHAIRMAN. Mr. McAllaster, representing the Southern Pacific, we would be very glad to have you give us your views on this whole matter.

STATEMENT OF T. McALLASTER, LAND COMMISSIONER, SOUTHERN PACIFIC CO., SAN FRANCISCO, CALIF.

Mr. McALLASTER. Mr. Chairman, insofar as the lands relinquished to the United States under the Transportation Act of 1940 are concerned, in the States of California and Nevada and Utah, those owned by the Southern Pacific interests, I don't think that the matters have any material interest, as to whether these lands remain under the jurisdiction of the Federal Government, or whether they are relinquished to the State. There was a very small acreage that was relinquished. At the time that act was passed there were unpatented lands, within the primary limits of the grants, to which the company may have asserted a claim, of about 136,000 acres, which is a small acreage. There was less than a thousand acres of that that was on the tax rolls. The bulk was unsurveyed, or land which the company

had voluntarily relinquished, as being mineral in character, and therefore not patented. There was a claim to land in one of the grants, on account of losses in primary limits, of something over a million and a half acres, for which there was practically no indemnity available to make selection. If we had selected all the indemnity, which we could not do at the time, because it was either unsurveyed or within forest reserves, there would still have been in excess of 1,500,000 acres for which there was no land to satisfy the losses. I don't have the amount of taxes that the company was paying, in the last years before the relinquishments were made, but I can give you those figures this afternoon. I don't think it is of material interest, insofar as California, Nevada, and Utah are concerned.

The CHAIRMAN. How much does the company now hold, or own, within the checkerboard belt; that is, the company property at the present time?

Mr. McALLASTER. In the three States?

The CHAIRMAN. In the State of Nevada?

Mr. McALLASTER. Approximately 4,000,000 acres.

The CHAIRMAN. How much does the Southern Pacific Co. pay to the State of Nevada in taxes for the land?

Mr. McALLASTER. For that 4,000,000 acres, Senator, I can't give you those figures. I'll try and have them this afternoon.

The CHAIRMAN. Could you give us a pretty good guess at it?

Mr. McALLASTER. I think it is about \$140,000 in the State of Nevada.

The CHAIRMAN. That is in toto?

Mr. McALLASTER. Yes.

The CHAIRMAN. That of course is paid into the respective counties through which the belt runs?

Mr. McALLASTER. That is correct.

The CHAIRMAN. How much of the land that was originally granted in the checkerboard belt has been released, by either contract or out and out conveyance, from the company to private individuals or concerns? About what percentage would you say?

Mr. McALLASTER. Oh, I would say between 50 and 60 percent.

The CHAIRMAN. And you now have about 4,000,000 acres?

Mr. McALLASTER. That is correct.

The CHAIRMAN. So you have disposed of, in round numbers, approximately 4,000,000 acres?

Mr. McALLASTER. In Nevada; yes.

Mr. HAVELL. Senator, I might supplement that statement. We submitted to your committee recently a tabulation of these released lands in Nevada. It was 139,929 acres. That maximum could be affected by a release. While I am on my feet, may I read from the Transportation Act the language under which the releases were made? It dovetails with what Mr. Kneipp said a few moments ago: "Release of any claim it may have against the United States to lands, interests in lands, compensation or reimbursement on account of lands or interest in lands which have been granted claim to, have been granted, or which it is claimed should have been granted to such carrier, or any such predecessor in interest—" and so on.

You can see from the language of that section of the act dealing with the release, that it was not merely lands that were the subject of release, but it covered the matter that Mr. McAllaster just spoke

about, the deficiencies that might have been the basis of the claim of the railroad company, the unsatisfied deficiencies, so that the release went beyond the question of lands——

Mr. McALLASTER. Mr. Havell, may I ask one question? You said about 130,000 acres in Nevada?

Mr. HAVELL. 139,929.

Mr. McALLASTER. I have a total in Nevada of 65,222.89. I think your figures must include the claimed land based on the right of the company to select lieu land for lands which should have been patented to the company, but which were erroneously patented by the General Land Office to individuals, after the rights of the company had attached. We had an area of 65 or 70 thousand acres in Nevada in that class, which would be in the claimed lieu land.

Mr. HAVELL. There must be filtered out, those lands sold by the company to bona fide purchasers or lands the companies are entitled to patent under section 2 of the act——

Mr. McALLASTER. Where some areas that had been sold to a bona fide purchaser.

Mr. HAVELL. We are processing those now. I should be able to find a tabulation of the lands that were released to the Government, and I would be very happy to submit it for the record if you would care to have it.

The CHAIRMAN. We would like to have it in the record.

(The tabulation is as follows:)

Railroad grant land claims released by railroad companies to the United States pursuant to the Transportation Act of 1940

² Includes 160.00 acres unsurveyed.

³ Includes 50,034.22 acres unsurveyed.

The CHAIRMAN. Are there any taxpayers here who would care to say anything? Anything that affects the taxpayers of Nevada is a very vital question as is everything that affects your taxable property, for the taxable property is exceedingly limited. Are there any questions from anyone else? Is the matter clear to you at this time, as to what the effects will be if the grants are turned back to the Federal Government?

Mr. McAllaster, how would the complete return of these lands to the Federal Government, so much of them as would be returned—how would it affect the amount of taxes which your company has been paying to the State of Nevada?

Mr. McALLASTER. Well, Senator, we are now paying to the State of Nevada in taxes on all patented lands, and the patented lands are not affected by this legislation. I will have the figures for you this afternoon showing the taxes we were paying on those unpatented lands.

The CHAIRMAN. That is, the tax that would be affected?

Mr. McALLASTER. We haven't paid those taxes since 1940.

The CHAIRMAN. You expected them to be turned back?

Mr. McALLASTER. We relinquished them; have no further claim. We relinquished them to the United States.

Mr. HAVELL. There is no question but what the lands have already been turned back; releases have been filed by every land-grant railroad for all their interests or claims to lands, pursuant to the Transportation Act, so that the title of the land now is with the Federal Government. It is a question of whereabouts, what branch of the Federal Government has the jurisdiction.

Mr. DRESSLER. You say the patented lands, and the unpatented. What becomes of the patented lands?

Mr. McALLASTER. The patented lands are still owned by the company.

The CHAIRMAN. They are not affected by this legislation.

Mr. DRESSLER. They will hold them and pay the taxes on them?

The CHAIRMAN. Or turn them over to some other poor devil, who will have to pay the taxes.

We have arrived at a quarter after 12. The chairman of the committee has been approached by a number of people who want to see him on various matters, and we are going to devote the noon recess to seeing those who have come in here to see us on other matters. I think it would be well if we would recess now until quarter of 2.

(Recess until 1:45 p. m.)

AFTERNOON SESSION

The CHAIRMAN. The meeting will come to order.

The chairman regrets exceedingly that Governor Carville is unable to be with us and to participate in this hearing. A letter from Governor Carville explaining that he has been unable to cancel appointments previously made, will be made a part of the record.

The letter is as follows:

STATE OF NEVADA,
EXECUTIVE CHAMBER,
Carson City, November 3, 1943.

HON. PAT MCCARRAN,
United States Senator, Reno, Nev.

MY DEAR SENATOR: I have tried to arrange to be at the meeting being held by you in Reno tomorrow but I have not been able to cancel the appointments I had

made as I thought I might be able to do. I shall have a member of the Nevada Fish and Game Commission present to take part in the meeting.

Thanking you and with my kindest regards, I am,

Sincerely yours,

E. P. CARVILLE, Governor.

During the morning hours certain matters were referred to, and there were those who wished to put matters into the record. Mr. McAllaster, of the Southern Pacific land department, who has done us the courtesy to be here, had some data that he wished to put in the record that the chairman called for.

Mr. McAllaster, if you will, kindly put that in the record now.

Mr. McALLASTER. Thank you, Senator.

The taxes assessed to the land relinquished by the railroad company under the Transportation Act of 1940, the last year for which they were paid, for the year 1940, on the lands in Nevada amounted to \$1,075.62; and on the lands in California the taxes amounted to \$2,099.48. The total taxes on the patented unsold lands owned by the company in Nevada for the year 1942 amounted to \$130,299.33.

The CHAIRMAN. Just one question; I think I know the answer to it, but I want to clear it for the record. The taxes on the patented lands will remain practically as they are?

Mr. McALLASTER. That is correct, Senator.

The CHAIRMAN. The taxes on the unpatented lands, which you recede to the Government, so to speak, would not be paid by the company?

Mr. McALLASTER. The taxes on the unpatented lands have not been paid since 1940.

The CHAIRMAN. That is because of the Transportation Act of 1940?

Mr. McALLASTER. Because of the Transportation Act of 1940, and the relinquishment by the company of all the claims to the unpatented lands.

The CHAIRMAN. Are there any questions that anyone here who is interested in the tax side of this matter would care to propound to Mr. McAllaster? Mr. McAllaster is the representative for the Southern Pacific land department, and if I may say so, he is a very worthy and very able and very capable representative.

Mr. McALLASTER. Thank you, Senator.

The CHAIRMAN. Very well, thank you, Mr. McAllaster.

Now, at the conclusion of our morning session there was presented to the chairman of this committee a problem that involves a grazing district in Douglas, and perhaps a part of Mono County, Calif. It is the pine-nut region, in the vicinity of Coledale, in Douglas and Mono Counties. Mr. Dangberg and others are here, a representative of the Indian Service is here, Mr. Foster. We would like to have you three gentlemen come forward and make the statements, giving a full history of the situation, and any suggested solution of the problem. We would be glad to have it.

Will Mr. Foster, Mr. Dangberg, and Mr. Park come forward?

Our understanding of it, for the record, is that under the Indian allotment law certain allotments have been taken up by individual Indians in the pine-nut region in Douglas County, Nev., and part of it may be in Mono County, Calif.

Mr. DON C. FOSTER (superintendent, Carson Indian Agency, Stewart, Nev.). Could I correct you, Senator? It is Ormsby County and Douglas County; nothing in California.

The CHAIRMAN. Thank you for the correction. These allotments have been blocked in, as the record shows, and interspersed with these allotments are private holdings. In times past the stockmen in this region have leased these lands from the Indians. In most instances, the chairman is advised, the Indians are not using the lands at all but, nevertheless, they are in possession of the lands by reason of the allotment law. At this time, for one reason or another, the Indians either refuse to permit further grazing on these allotments or place the value of the grazing so high as to make grazing impossible. With that rather short statement of facts, as the chairman understands them, we would like very much to have Mr. Foster, of the Indian Service, make a full statement of the whole problem.

**STATEMENT OF DON C. FOSTER, SUPERINTENDENT, CARSON
INDIAN AGENCY, STEWART, NEV.**

Mr. FOSTER. Mr. Chairman, you covered the picture pretty well. It does create quite a problem, both for the livestock growers, operators, as well as for the Indian Service. It is not a one-sided picture at all. In handling these leases, the cost of the handling of the leases is more than what we can actually receive from the allotments.

The CHAIRMAN. Would it not be well to begin in this wise: How many Indian allotments are there involved in this problem? How much acreage is there involved?

Mr. FOSTER. Sixty-four thousand acres, in round numbers. These were 160-acre allotments; so you can see, that is about 400 allotments.

The CHAIRMAN. To what particular tribe, if it applies to a tribe, does this address itself?

Mr. FOSTER. Entirely to Washoes.

The CHAIRMAN. How many are there in the population of the Washoe Tribe, if you know?

Mr. FOSTER. Around 600.

The CHAIRMAN. How many allotments have they?

Mr. FOSTER. About 400.

The CHAIRMAN. Very well.

Mr. FOSTER. Now, we have a suggestion to make. Now, this is just my own personal suggestion, and I cannot commit the Department on that, neither can I commit the Indians on it, for the Indians own the allotments, but I think it could be done, that those lands either be sold, Senator, or a land exchange worked out to where that land could go back into the public-domain lands and be operated by the Taylor Grazing Service.

The CHAIRMAN. Go back a little bit to clarify it further. For a considerable number of years, as the chairman is advised, the stockmen of Douglas and Ormsby Counties have run their stock over these lands?

Mr. FOSTER. That is correct.

The CHAIRMAN. And they have paid certain rentals for the use of the lands?

Mr. FOSTER. Yes; running from 3½ cents per acre to 10 cents per acre.

The CHAIRMAN. For what length of time has that custom gone on?

Mr. FOSTER. At least 25 years.

The CHAIRMAN. So that some, what we might call established rights have been set in over those lands? It could scarcely be called "established rights," but custom?

Mr. FOSTER. Custom-usage rights.

The CHAIRMAN. That's right. Very well, go ahead.

Mr. FOSTER. Our suggestion would be, and we have discussed that with the members of the Livestock Growers Association, particularly Mr. Dangberg, Mr. Park, and Mr. Dressler, at one time, that either a land exchange be worked out to where these Indians would be given a solid block where there would be no white lands interspersed within them, or that the allotments be sold outright, and those funds be used to purchase some good agricultural lands for these Indians. I would not be in favor of the money going directly to the Indians, where it would probably be dissipated.

However, in that way you could work out a good grazing unit in there, and eliminate this continual and constant trouble of arranging leases for these boys, that leaves them up in the air every year.

The CHAIRMAN. What is the nature of the lands and the territory?

Mr. FOSTER. Just those pine-nut lands, that Pine Nut Range. It is a spring range, and I don't believe you get more than about 2 months on it every year.

Mr. D. W. PARK (Gardnerville, Nev.). That is about right, Mr. Foster.

The CHAIRMAN. Two months' grazing?

Mr. FOSTER. That is in the spring.

The CHAIRMAN. How many Indians are there actually living in or being subsisted by these lands?

Mr. FOSTER. Practically all those 600; with a net income ranging from 7 or 8 cents to not exceed \$30.

The CHAIRMAN. Seven or eight cents per year?

Mr. FOSTER. That's correct.

The CHAIRMAN. And not to exceed \$30 per year?

Mr. FOSTER. That is correct.

The CHAIRMAN. Go back to the question again, how many Indians actually live on these lands?

Mr. FOSTER. None.

The CHAIRMAN. The land, as I understand it, produces nut pines?

Mr. FOSTER. Pine nuts; yes, sir.

The CHAIRMAN. And the Indians, to some extent, harvest the pine nuts?

Mr. FOSTER. That's right, and get their wood there.

The CHAIRMAN. Their wood?

Mr. FOSTER. Yes.

The CHAIRMAN. Where do those Indians live, as a rule?

Mr. FOSTER. At Dresslerville; up around Markleeville, Calif.; and some down around Coleville. They are scattered around in various groups.

The CHAIRMAN. Is there any competition between groups of livestock raisers for the use of these lands?

Mr. FOSTER. We never had a competitive bid.

The CHAIRMAN. So there is no such thing as two groups, one bidding against the other?

Mr. FOSTER. No, sir.

The CHAIRMAN. At the present time, do you know any reason why the Indians are not leasing the grazing rights to the white livestock growers?

Mr. FOSTER. Now, the old people, Senator, the older Indians, are all perfectly willing to lease their lands. I think these boys will bear me out in that; but the younger fellows have interposed objections to it, feeling they could use it in connection with those ranches that they bought down there, which is absolutely out of the question under present conditions. They just can't do it.

The CHAIRMAN. Have the Indians, the Washoe Indians that have these allotments, any livestock of their own?

Mr. FOSTER. Yes.

The CHAIRMAN. About how many?

Mr. FOSTER. They have about 350 head of sheep now, and possibly about 40 head of Holstein cows, a few horses, and quite a number of hogs. No beef cattle.

The CHAIRMAN. Does the opposition to leasing the lands, as has been customary, does that opposition come by reason of the government of the tribal council, or anything of that kind?

Mr. FOSTER. I wouldn't say that. I think it is more an individual proposition, of certain individuals who have probably two primary motives. Some of those boys are plain, outright trouble makers, and others feel that probably they could use those allotments to a good advantage in connection and conjunction with the operation of the ranches. Well, they have 2 months' grazing there; no other grazing rights anywhere else.

The CHAIRMAN. Are there any questions? Does anyone here care to question Mr. Foster?

Mr. DRESSLER. I would like to ask a question. Isn't there another reason why the stockmen in there own practically all the springs and water rights, and the feed, and it just happens these allotments are all interwoven in there, and if you take the patented land that belongs to the stockmen out and the water rights, there wouldn't be any feed for anything there but a lizard; isn't that right?

Mr. FOSTER. There probably would be some feed there, Mr. Dressler, but there wouldn't be any water. I guess you know it as well as I do. When those lands were allotted they were allotted from a desk instead of the fields.

Mr. ASH. You are speaking of these allotments in this one particular area, are you not?

Mr. FOSTER. That's right.

Mr. ASH. It looks to me like the same thing would be applicable in all these allotments clear through.

Mr. FOSTER. Through Ormsby County, right across Douglas County, to the California line.

The CHAIRMAN. That is the problem that comes to the committee here, from the locality just south of where we are sitting, but I may say to you that this committee was confronted with this allotment problem in New Mexico, especially, and some in Arizona, and we know that it exists in the Northwest, to some extent. It is a problem that we must deal with, and deal with comprehensively. We hope, by some legislative solution, in the not far distant future, that we can solve it, because it affects the Indians and it affects the white stockraisers, as

well, and it very much affects the open public domain and its administration.

Mr. Park, we would be glad to hear from you. You are a stock-raiser in Douglas County.

Mr. PARK. I think, Mr. Chairman, Mr. Foster has pretty well covered it. These allotments are all interwoven with the Taylor grazing domain lands and privately owned lands, and I think when the bill was introduced, the Indians applied for their timber and their pine nuts. As far as the grazing area was concerned, I don't think it was considered in those days at all. Since then they took control of it, and they have been paid a certain amount, from time to time, per acre on the amount, 64,000 acres. There are portions of it that are alkali flats, adobe flats; those allotments are covered all over those flats, as well as their pine-nut trees and pine-nut lands.

The CHAIRMAN. Have you ever known of the Indians, or any of them, to live on any of these allotments?

Mr. PARK. Not unless it was temporary, going out there and cutting a little wood, probably.

The CHAIRMAN. In other words, they do not make a subsistence out of any of these allotments?

Mr. PARK. No.

The CHAIRMAN. And the picture that has been presented by the records here indicates that the land itself is not capable of making a subsistence for the Indians?

Mr. PARK. That is correct.

The CHAIRMAN. Is there anything further?

Mr. Dangberg, do you care to be heard?

Mr. DANGBERG. I think everything has been pretty well covered. I don't think there is much more to say. Of course, I feel that the white people that own those lands that are mingled in with the Indian land would be perfectly willing that the Indians could have all the pine nuts. I think it has got to be a kind of business now, as far as that is concerned. I don't know as there is much more to say. It is a very difficult thing for us to get our leases now, as long as the Indian council has so much to say. We have quite a good deal of trouble getting our leases every year. It takes a couple or 3 months to work the thing out.

The CHAIRMAN. The plan that Mr. Foster has suggested here, has anything been done to initiate that plan with the Department, or with any department?

Mr. FOSTER. No, Senator, it has not. It has been in a period of discussion with these boys of the livestock association.

The CHAIRMAN. Is there anything to prevent the initiation of the plan?

Mr. FOSTER. Not that I know of. You might ask Mr. Dierking over there.

The CHAIRMAN. Mr. Dierking, can you throw any light on this? We would be glad to have it.

STATEMENT OF C. F. DIERKING, REGIONAL GRAZIER, RENO, NEV.

Mr. DIERKING. There were two suggestions put forth by Mr. Foster. One was the outright purchase of those lands, which I presume would return them to the public domain, and they would be admin-

istered in connection with the grazing district, which would continue the livestock operations in that district, as they are now set up.

The second proposal, of an exchange, would have to be investigated and given thorough consideration for this reason: We have a certain area in which are located those lands, and in that area the range is used by the pine-nut association. Now, should the Indians desire to block their lands in another area, remote from the area in which they are now located, I can see where it would possibly result, and would probably result, in the dislocation of some of the users of the other lands.

Now, what the possibilities would be of blocking off a portion of the pine-nut area proper and exchanging that with the Indians, I am not in a position to say; but that would cause the least disturbance in any livestock operations. However, even if that were done, it would still be removed from grazing use by the association; the 64,000 acres, assuming that the Indians would make use of that, if it was blocked in a certain area, that is to say.

I have discussed this informally with Mr. Foster, and asked that the possibilities of making an exchange be looked into, but the discussion phase is as far as it has ever gone. We would be very glad to work with them in connection with any proposal that might seem feasible.

The CHAIRMAN. Does any of that land, would it fall into the Forest Service jurisdiction if it were returned to the Federal Government?

Mr. DIERKING. Mr. Foster could answer that. I believe not.

Mr. FOSTER. No.

The CHAIRMAN. Mr. Kneipp?

Mr. KNEIPP. I think not, Senator. There was some discussion a number of years ago regarding this same Indian land, by some lady Indian agent who explored the idea of turning it over to the Forest Service for management, but nothing ever came of it. We understood that the Indian's primary interest in the lands is as a source of timber and piñon nuts. I heard some story about one of the leaders deliberately picking out land producing piñon nuts because with such land he would never go hungry, while on any other kind of land he would not be able to make a living. But the administration by the Forest Service was tentatively discussed only by the local agent.

The CHAIRMAN. Mr. Foster, it has been brought to the attention of the chairman of this committee, through the press, and otherwise, that the head of the Indian Service was in this locality in the not far distant past. Was the matter discussed with him at all while he was here?

Mr. FOSTER. Yes; it was. And I took him down and showed him the territory.

The CHAIRMAN. Did you make your suggestions to him at that time?

Mr. FOSTER. I did.

The CHAIRMAN. I won't ask you what his reaction was.

May I respectfully suggest, and this would be the committee's suggestion, that the Grazing Service, and the Indian Service, and the stock growers of that region cooperate as much as possible on this and see if a solution cannot be worked out. This committee will attempt to be of such service to you as is within our power.

Mr. HAVELL. Mr. Chairman, may I suggest, if exchanges are to be considered, in view of the fact that the exchange would have to be processed by the General Land Office, that a representative of the General Land Office be made a party to the problems, so that when it is all worked up, then it won't come to a stone wall and find some obstacle in the way of putting it through?

The CHAIRMAN. Thank you for that suggestion. It is, indeed, a proper suggestion, and we are very grateful for it. If while you are here, Mr. Havell, you would take it up with Mr. Dierking and others here, we would appreciate it.

Mr. HAVELL. Mr. Waddell will be available to Mr. Dierking at any time.

The CHAIRMAN. Thank you very much.

Are there any questions on the subject?

Are there any matters here now pertaining to the problem, grazing problem, either on the grazing land or on the Forest Service that anyone wishes to bring forward? We would be very glad to have your suggestions before we go into further matters.

Now, again I draw your attention to the fact that not all who are here have registered, and there will again be passed among you the cards for your registration, giving your name and post office address and your official position. The reason for that is that, unless you sign these cards, we will not be able to mail you printed copies of the hearings of this session, and it is natural that you would want those copies.

(Those who registered are as follows:)

PRESENT AT HEARING HELD AT RENO, NEV.

H. V. Agee, District Grazler, Grazing Service, Minden, Nev.
 Fred A. Ash, director, California Cattlemen's Association, Fort Bidwell, Calif.
 Henry W. Atcheson, Forest Service ranger, Wellington, Nev.
 Dr. Gordon C. Baldwin, 636 California Avenue, Boulder City, Nev.
 Charles E. Banfe, Colonial Apartments, Reno, Nev.
 W. O. Bay, director, Western States Federated Sportsmen (vice president, Washoe Fish and Game Association), Post Office Box 5, Reno, Nev.
 A. E. Bernard, deputy inspector of mines, Post Office Box 1078, East Ely, Nev.
 W. L. Blackwell, Coleville, Calif.
 Oliver J. Carter, State senator, fifth district, Redding, Calif. (representing Joint Interim Committee of Senate and Assembly of California Investigating Fish and Game Problems in California).
 Victor F. Christensen, chairman, California Grazing Board No. 2, Likely, Calif.
 G. M. Clark, Alturas, Calif.
 Lyle Cook, Cedarville, Calif.
 R. P. Conway, Mono Lake, Calif.
 Ressie W. Croxdale, Box 1323, Reno, Nev. (president, Coppereld Iron Mines, Inc., and Croxdale Coal Co.).
 F. P. Cronemiller, United States Forest Service, San Francisco, Calif.
 R. E. Curtis, refuge supervisor, California Division Fish and Game Commission, Berkeley, Calif.
 J. B. Dangberg, Minden, Nev.
 O. C. Dickinson, Box 2523, Reno, Nev.
 C. F. Dierking, Grazing Service, Box 751, Reno, Nev.
 Gilbert B. Doll, United States Forest Service, district forest ranger, Carson City, Nev.
 Paul E. Dorman, vice president, First National Bank of Nevada, 640 West First, Reno, Nev.
 Robert A. Drake, 450 Marsh Avenue, Reno, Nev.
 W. F. Dressler, Gardnerville, Nev.
 L. J. Fee, Fort Bidwell, Calif.
 Peter L. Ferguson, 73 Sierra Street, Reno, Nev. (president, Washoe Fish and Game Commission).

- Dr. W. F. Fisher**, Post Office Box 2522, Reno, Nev.
Harry S. Foote, Box 2401, Reno, Nev.
Don. C. Foster, Superintendent Carson Indian Agency, Stewart, Nev.
Ivy Freeman, Nevada State Journal, Reno, Nev.
Derrel S. Fulwider, district grazier, Pyramid district, region 3, Winnemucca, Nev.
Robert W. Gardner, United States Forest Service, Minden, Nev.
Leland O. Graham, assistant solicitor, Interior Department, Washington, D. C.
P. S. Hall, Doyle, Calif.
G. H. Hansen, United States Fish and Wildlife Service, Reno, Nev.
Thomas C. Havell, General Land Office, Department of the Interior, Washington, D. C.
Arthur L. Hensley, refuge supervisor, California State Division of Fish and Game, Ferry Building, San Francisco, Calif.
E. H. Herman, assistant secretary, Nevada Fish and Game Commission, Post Office Box 678, Reno, Nev.
Charles L. Hill, secretary, Associated General Contractors, Post Office Box 406, Reno, Nev.
Charles T. Hohenthal, field examiner, General Land Office, 355 Federal Building, Salt Lake City, Utah.
Bert Ithurburn, 1111 Arnold Street, Susanville, Calif.
William A. Justo, Morgan Hotel, Reno, Nev.
Stewart Kern, regional range examiner, Grazing Service, Reno, Nev.
Jesse L. Kirk, district grazier, Honey Lake district, California No. 2, Susanville, Calif.
L. F. Kneipp, Assistant Chief, Forest Service, Department of Agriculture, Washington, D. C.
Martin Lartirigoyen, Cedarville, Calif.
A. B. LeBlanc, Post Office Box 431, 69 Washington Street, Reno, Nev.
Paul A. Leonard, Reno Evening Gazette, Reno, Nev.
E. F. Lunsford, attorney at law, Reno, Nev.
Eugene C. Martin, Box 1712, Westwood, Calif.
T. McAllaster, Land Commissioner, 65 Market Street, San Francisco 5, Calif.
Jack J. McNutt, Acting Forest Supervisor, Toiyabe National Forest, Reno, Nev.
Harriet M. Metcalfe, Box 1949, Reno, Nev.
George P. Miller, executive secretary, California Division of Fish and Game, Ferry Building, San Francisco 11, Calif.
C. B. Morse, assistant regional forester, United States Forest Service, California-Nevada region, San Francisco, Calif.
Matt Murphy, State mine inspector, Carson City, Nev.
D. W. Park, Gardnerville, Nev.
E. J. Phillips, chairman, Nevada Fish and Game Commission, Post Office Box 678, Reno, Nev.
Charles H. Pefley, Commander of Thomas H. Barry Camp No. 7, Spanish War Veterans, Reno, Nev.
Roy Pizorno, 358 North Virginia Street, Reno, Nev.
F. G. Renner, Soil Conservation Service, Department of Agriculture, Washington, D. C.
James Riordan, 279 East Taylor Street, Reno, Nev.
Robert H. Rose, superintendent, Boulder Dam National Recreational Area, Boulder City, Nev.
C. C. Rowland, Doyle, Calif.
E. A. Settelmeyer, 204 South Center Street, Reno, Nev.
Gene Shoupe, 582 Walker Avenue, Reno, Nev. (director, Washoe Fish and Game Commission).
Roger Teglia, Post Office Box 33, Reno, Nev.
Gordon H. True, Jr., secretary, Western Association of State Game and Fish Commissioners, Ferry Building, San Francisco, Calif.
George M. Tierney, Cedarville, Calif.
Joe Ugalde, Gerlach, Nev.
N. F. Waddell, regional field examiner, General Land Office, Salt Lake City, Utah.
E. H. Walker, manager, Reno Chamber of Commerce, Reno, Nev.
G. E. Wardwell, Fish and Wildlife Service, Las Vegas, Nev.
S. S. Wheeler, 777 Forest Street (Reno Evening Gazette), Reno, Nev. (secretary-treasurer, Washoe Fish and Game Association).
W. B. Williams, member California Fish and Game Commission, Alturas, Calif.

The CHAIRMAN. We stated publicly and privately that we would, following 1:30 today, assign the time to the consideration of statements that might be made by those who are interested in Senate bill 1152, known as the wildlife bill. It has been widely dealt with, and we think it would be well for us to consider it now.

We would like to have come before the committee Mr. Gene Phillips, who has always been very active in wildlife matters, pertaining to our open public domain. Mr. Phillips is with us, and we would be very glad to hear from him.

Will you come forward, please, Mr. Phillips?

I have stated in your absence, Mr. Phillips, and I state this now for the benefit of all who may be here, that we ask you to be at ease in the making of your statements. We ask you to be frank in the making of your statements, and to be entirely impartial, to give this committee the best light that you have in your judgment, bearing on a very vital subject, which is the subject of the open public domain of the United States. You may proceed, Mr. Phillips.

STATEMENT OF E. J. PHILLIPS, CHAIRMAN, NEVADA FISH AND GAME COMMISSION, RENO, NEV.

Mr. PHILLIPS. Mr. Chairman, I am here to represent the Nevada Fish and Game Commission.

The CHAIRMAN. You are a member of that commission?

Mr. PHILLIPS. I am a member of that commission, and I am very sorry that it was not possible for all of our commissioners to be here; and I might state before I go on, that I have hoped that Mr. George Vargas, who has made a very thorough study of this Senate bill 1152, will be here sometime this afternoon, and we will then go into final detail respecting the bill. This is not an excuse on his part, it just happens that he had a jury case in Carson City today. He hopes to get through with it early enough to be with us here a little later.

You probably noticed the absence of Governor Carville, who telephoned to me yesterday afternoon that due to very important appointments, he would not be through until late this afternoon, so would not be able to attend this meeting.

There are a number of people here, representatives from the State of Nevada, representatives from the State of California, who have some very interesting discussions with respect to the bill mentioned. Among them will be Senator Carter of California, representing the subcommittee of the California Legislature; and, I believe, George Miller, who is executive secretary of the California Fish and Game Commission, and who has been delegated as a representative at this meeting of the Western Association of Game and Fish Commissioners.

There is also Mr. Gordon True, who is the economic biologist of the California Fish and Game Commission, and a number of representatives of the various sportsmen's organizations, and other organizations, of the State of Nevada.

Being identified with the Nevada Fish and Game Commission, my purpose in being here is to obtain a better understanding of Senate bill 1152, with which everyone here is, of course, more or less familiar; and I am also one of the audience who will be interested in listening to objections to the bill by those who are interested in its defeat, or possibly in asking the Senator not to go any further with it.

The body I represent is on record, and we are definitely opposed to Senate bill 1152, or an amended form that will take from the State of Nevada any of its present powers or rights in the administration of wildlife on public lands.

With further reference to conservation of wildlife on public lands in the State of Nevada, administered by the Nevada Fish and Game Commission, the commission has always attempted to give very careful consideration to its duty in that respect. The commission takes the stand that it has been successful, by reason of the fact that there has not been any criticism brought to its attention, or any substantial objection to its procedure respecting wildlife conservation.

While bill 1152 is of great concern to the Nevada Fish and Game Commission, there is also involved, and of much importance, the matter of States' rights that should be considered. By this bill, as our commission understands it, our State rights would be terminated. Do we then know what might follow in future attempts to take from Nevada, by reason of Federal control, other rights that our State now enjoys?

Our commission, however, does recognize the fact of the splendid cooperation that it has received, and is receiving, from the present Federal agencies located in Nevada, that have assisted us; and anything I may have said is not intended as a reflection upon that body.

Now, you can very well see that I have not gone into very much detail. I have given the facts, as our commission has requested me to give them to you, and I know there is very much more speaking to be done, or talking, by those who have more complete data than I have at the present time.

Senator McCarran did ask that we state our position, insofar as the commission was concerned. I have tried, to the best of my ability, to do so.

Thank you very much.

The CHAIRMAN. Are there any questions?

Mr. Kneipp, do you care to interrogate; or Mr. Dierking?

Mr. KNEIPP. No, sir; I do not.

Mr. DIERKING. I believe not, Senator.

The CHAIRMAN. Very well, thank you, Mr. Phillips.

STATEMENT OF GENE SHOUPÉ, DIRECTOR, WASHOE FISH AND GAME ASSOCIATION

Mr. SHOUPÉ. Senator McCarran, and gentlemen: I am representing the Washoe Fish and Game Association, and as director of that organization; while the bill is very obnoxious to me, as a member of that organization, I will carry on further where Gene Phillips left off, in that the bill strikes very vitally to us, as citizens of Nevada.

As Mr. Phillips has just stated, there has been no complaint from the various Government agencies of Nevada to the Fish and Game Commissions, as to the management of game upon the ranges and public lands. Nevada has machinery, which was enacted at the last legislature, which provides that at any time when there might be an overabundance of wildlife upon the public domain, it shall be taken care of, and that was no doubt brought out, that has been followed out during the present hunting season. We have in Nevada here opened our antelope season upon information gathered from the

various Government agencies, and those men who are closely contacted on the antelope question.

Also, it has applied to the deer situation in several of our counties where the doe problem is becoming acute. A certain number of these deer were killed, doe tags were issued, and the herds reduced; and the same thing applied to the antelope.

We have here in this audience men who range cattle in northern Washoe County, who are very familiar with our entire situation; but going back to the bill, there is something there so vital, that means so much to the citizens of Nevada, it is pugnacious to us all, the fact that a Government agency can, without any question to the people of a sovereign State, come in and reduce their herds and get by with it. That is beyond the thinking of any citizen of Nevada. The substitute for that bill practically is the same bill, or a little bit different wording, in my opinion. So, as a citizen of Nevada, and as a member of the Washoe Fish and Game Commission, I have nothing whatever to say in favor of this bill.

The CHAIRMAN. Are there any questions?

Thank you very much, Mr. Shoupe. Is Mr. Bill Bay here?

STATEMENT OF W. O. BAY, RENO, NEV., DIRECTOR, WESTERN STATES FEDERATED SPORTSMEN

Mr. BAY. Senator McCarran and members of the hearing, I travel around the State of Nevada and northern California, down as far as Inyo County, and up into part of Oregon; and one of the questions that is asked me almost all the time in these travels is—well, I fail to find anyone who believes that S. 1152 is anything but an encroachment on State's rights. Any time we stand by and allow our fish and game rights to be taken away from us, there is nothing to assure us that it will not be the beginning of the end of all State rights.

The question that is constantly asked me by persons interested in this bill is: Who drafted the bill; who sponsored the bill; and why did Senator McCarran introduced the bill? Frankly, I don't know the answer to this, although I have tried very hard to find out. Therefore, Senator, we would ask you to answer these questions, if you will, and ask you to enlighten us in these matters.

You are no doubt acquainted with section 66 of the Nevada Fish and Game laws, which gives ample means of taking care of these overpopulated areas, which leads the Nevada sportsmen to more than believe that S. 1152 is a direct encroachment on State's rights.

The title of this bill, "To Provide for the Conservation of Wildlife on Public Lands and Reservations of the United States," seems inaccurate, as it reads in part:

Wherever the head of a department or agency of the Government having supervision and control over any public lands or reservations of the United States shall determine that a reduction in the wildlife population of such lands or reservations is necessary to prevent injury to the soil, plant life, or to any wild or domestic animals dependent upon such lands or reservations for sustenance, he is authorized to request the appropriate officers of the State in which such lands are situated to take such action as he deems necessary and proper to bring about such reduction.

Now, should he be wrong in his demands, this bill will give him the absolute authority for his act, even though wrong.

It appears that this bill is mainly to give the Government the right to transport and sell intrastate, or interstate, these game animals, which could result in the animals taken in Nevada, Montana, and the Far Western States, ending up in the markets of New York and Boston, and so forth. Federal control of these big game animals would no doubt end up similar to the once wonderful Pyramid Lake spotted trout. Here is a good example of control by a Government agency. This agency stood by and allowed the lake to become void of fine fish; none of them have been seen for years; and it is now the opinion of everyone that they have become extinct. The sportsmen feel quite certain that would not have been the case, had the lake been under the State control.

The Sheldon Game Refuge is an example of the Federal agency. They wanted the antelope taken off the lands in northern Nevada. However, I am informed, they did not want to open the refuge to hunting to the extent of taking off the desired number to reduce the herd.

Mr. FOSTER. I happen to represent the agency which you said stood by and let these trout disappear. For your information, sir, we called in specialists from the State of California and from the Federal Government and took up this matter before it reached the crucial stage. We tried to protect those trout, perhaps more than others interested, as you are probably, as we were more interested because the means of subsistence of the Indians on the reservation depended on those trout.

If you have at your fingertips a remedy for that situation, we would appreciate having it.

Mr. BAY. The only thing I recall is that you will find in the records of 40 or 45 years ago that the sportsmen cried, took up with the agencies here the matter of stopping this spearing of trout, and to do something about putting a bypass, so that water could come out of the lake. If you are going to wait until the fish are gone, it would be impossible to take care of it. If that had been done years ago, and something had been done about the Pyramid Lake situation, it would have been one of the greatest western lakes today.

The CHAIRMAN. I may say to you that you have not brought in a point of history into the Pyramid Lake matter that is vital to that. In 1920 there was passed by the Congress of the United States at the behest of the arid and semiarid West what is known as the Newlands Reclamation Act. That reclamation act provided that the waters of the streams of the West might be impounded and diverted for the reclamation of the semiarid regions.

In 1930 the legislature of this State, by specific act and resolution, requested that the Newlands reclamation project in Churchill County be set up. Pursuant to that, the first reclamation project under the Newlands Reclamation Act was set up, which project contemplated the use of the waters of the Truckee and the Carson Rivers, to be impounded and diverted for the reclamation of the arid country. That took all of the surplus waters off, over and above the waters then appropriated in the Truckee River and the Carson River; and impounded them by direct act, and by court decree.

Later, they went into what is known as the Lahontan Lake which, of course, took the water out of its natural channels and reduced the level of the lake, Pyramid Lake, until at the present time it has become

so impregnated with soda that fish life cannot exist there, or will not exist there very long.

Now just remember when you are speaking of States' rights, that the States, especially the States of the West, have called upon the Federal Government time and time again for the use of the Government money to reclaim, or to build, or to improve, and when we reclaim the desert we have to use the water. There was little or no consideration given by the respective States to the matter of wildlife, because tame life and human life was the uppermost thing, and human life will be the uppermost thing in the years to come, because as we reclaim the desert land, we must use the waters, and in using the waters we will divert them from their natural course, and in diverting them from their natural course, we will reduce bodies of water such as Pyramid Lake. So you omit a chapter in legislative history and in western history that is quite vital in the consideration of the fish life of Pyramid Lake.

That is not an argument, nor do I offer it as an argument to the conditions prevailing in Pyramid Lake. I think that there are, and there have been, times when the floodwaters of the Truckee River could have been turned into Pyramid Lake to better maintain the level of that lake; but it has not been done. The natural thing under the Newlands Reclamation Act was to divert the water from a place where it would be absorbed by the sun, or by other agencies, to a place where it would sustain human life, and that has led to the very question of which you complain.

Thank you very much.

Mr. BAY. It might be appropriate at this time, if we continue, to have an answer to those three questions that I propounded. If you could give them to us, I think it would clarify in many of our minds exactly why this came about. I understand that the subcommittee had been considering this problem which led to 1152 for about 2 years.

The CHAIRMAN. Nearly 3 years.

Mr. BAY. I would like to know, and I think there are many of us here who would like to know, what brought that about, what caused it to finally find the form it was presented in. You must have had very good reason for introducing it.

The CHAIRMAN. I don't think you will have any trouble finding that out before the hearing ends.

The CHAIRMAN. Mr. Carter, will you come forward, please?

We are glad to see you here, Senator.

Mr. CARTER. I am happy to be here, Senator.

The CHAIRMAN. You may make any statement you desire to make with reference to this bill or any other bill.

STATEMENT OF OLIVER J. CARTER, REDDING, CALIF., STATE SENATOR, FIFTH DISTRICT OF CALIFORNIA

Mr. CARTER. I am here representing the joint interim committee of the Senate and Assembly of California, investigating the fish and game problems of the State of California during the interim of the sessions of the State legislature.

As a member of that committee I have been instructed by the committee to appear in opposition to Senate bill 1152. We base our opposition upon fundamental grounds that this bill, if it is enacted

and becomes a part of the Federal law, will be an invasion of the sovereign rights of the State of California; to administer and control the natural wildlife in the State of California also.

Now, the State of California controls its wildlife through an administrative agency known as the Fish and Game Commission of the State of California, subject, however, to the acts of the State legislature, vesting authority in that agency. We feel that specifically this legislation would lead to chaos in the administration of fish and game problems in the State of California.

As I understand the purpose of this bill, and also the purpose of the suggested alternative, is that wherever a certain governmental agency, Federal agency, determines that there is an overpopulation of wildlife in any particular area or section of the public lands within the various States of the United States, that that agency can then either direct the State or request the State to take care of that problem, or that agency itself can then administer taking care of that problem.

Well, in the State of California, approximately 40 percent of the second largest State of the Union is in public ownership; that is, is owned by the United States Government. That will create a tremendous problem in that State.

We have here the representatives of several different agencies—the Forest Service, a unit of the Department of Agriculture, the Public Lands Division of the Department of the Interior, the Indian Service, which is another division of the Department of Interior. If the heads of each and every one of these agencies could himself, through the agency, determine that a condition existed, and then force upon any of the States involved in the enforcement of this particular bill, his decision, you can see not only would there be confusion with the State authorities but there will be confusion between the Federal agencies themselves.

Facing that problem, I know that the Fish and Game Commission of California will be beset on both sides by the people of the State and by the Federal agencies involved.

Now, I come from a section of the State where a great portion of the land is owned, is in the public domain. My home county, Shasta County, has approximately 40 percent in public ownership. A portion of this is controlled by the Bureau of Reclamation of the Department of Interior, a portion by the United States Forest Service of the Department of Agriculture, and—no, there is none in the Indian Service, that is in the other county I represent, Trinity County. That county is 74 percent controlled by the United States Government; and not only do we have the Bureau of Reclamation, we also have the Forest Service and the Indian Service in control there. I can readily see the residents of Trinity County, if there happens to be an overpopulation of game, facing three different types of rules and regulations in taking its game; four, if the State of California is taken into consideration.

Now, gentlemen, it is my idea that the only way you can ever have proper administration of the wildlife in the State of California is to have it administered by one agency. That agency is already in the field; that is, the State of California recognizes that, because I come from a country where there are a great many stock raisers and a great many livestock owners. There are encroachments by the game, I

believe, true; but there are various and many reasons for that problem, depending upon the area of the country, the area of particularly my counties, that that problem arises.

Now, I know that in the eastern part of Shasta County, the range land that has formerly been accessible to the stock owners, that is, on the public domain, 30 percent of it has grown up with brush, so that it is not now available for stock-grazing purposes. A jack rabbit couldn't go through it and come out without scratches on him. That problem has been brought about by various reasons; as a consequence of the cutting off of the range land, not only for the livestock, but for the wildlife, you have driven your wildlife down to places where they now range that they would not ordinarily have ranged. That is one problem that we face.

You have the problem of the wildlife increasing, because of protection, and they should be harvested. Under our law, that is the law of the State of California, enacted by the 1941 session of the California State Legislature, the State fish and game commission now has the authority to provide for a means and method of harvesting an oversupply of wildlife; and, if the wildlife is doing damage, then it is, in my opinion, the duty of the citizens who are being damaged to come before the fish and game commission to have their problem remedied, if possible. We have also long had in our law a provision whereby permits could be issued for the landowner himself to correct any nuisance caused by wildlife. We believe there are sufficient provisions in our State law to cope with that problem; and we believe an imposition of rules and regulations from a number of Federal agencies will not tend to solve the problem, but will cause untold chaos and will lead to a destruction of the wildlife, and will cause difficulty among large stock owners themselves.

The CHAIRMAN. Very well, are there any questions?

Mr. KNEIPP. I would like to ask the Senator a question. These conditions you have described, you concede to exist only where there was an overpopulation of game. If that basic condition did not exist, then S. 1152 would not be applicable there, and there would be no confusion.

Then, why could not the State practically exempt itself from S. 1152 by merely taking appropriate steps; by keeping the game in balance?

Mr. CARTER. If the Federal Government will permit the State of California to do it, I assure you that it will be done.

Mr. KNEIPP. You say the State has complete authority now to do it.

Mr. CARTER. Since 1941.

Mr. KNEIPP. That is, on the national forest there is no restraint on the State; the State laws are wholly operative?

Mr. CARTER. Correct; and we want to keep it that way.

Mr. KNEIPP. All you have to do is bring the numbers of deer or antelope into balance, and the rest all fades out of the picture.

Mr. CARTER. I assure you plans are in process to do it in areas where we have overpopulation.

Mr. KNEIPP. You were discussing an area this morning, and conceded there were 6,000 antelope. I presume the rate of increase in antelope is about the same as deer, roughly, 30 percent a year, so, minus

what would be lost by disease and predators, you would assume from the herd of 6,000 antelope that you could take 2,000. Yet, the State is taking only 400. Now, that means, then, minus the natural loss, you have 1,600 added to the 6,000, so that in a few years you will have a definite problem.

Mr. CARTER. Yes; but if that problem becomes more pressing, then the State has authority, under the 1941 act of the legislature, which would take care of that problem.

Now, I have heard the various stockmen here from that country. There are very few antelope in my district. There are a few; but very few. They create no problem; but, as I understand it, the antelope is not the particular problem, although it may be in the future; and I think that is a problem for the State of California to handle, not a problem for some Government agency to direct from Washington, D. C.

The CHAIRMAN. If the State of California handled the problem, then S. 1152 would not come into effect in the State of California.

Mr. CARTER. In the opinion of the officials of the State of California—that, in my opinion, is where the determination of the question should be made, not by the director of the Department of Agriculture, or the Secretary of the Interior, or any agency acting under him. That is what Senate bill 1152 will do.

The CHAIRMAN. Who owns the public domain, Mr. Carter?

Mr. CARTER. Who owns it? Well, it is technically in the title of the United States Government.

The CHAIRMAN. It isn't technical at all. How did the open public domain come into existence in the State of California?

Mr. CARTER. It was opened at the time the State became a State.

The CHAIRMAN. How did it get to be in existence at the time the State became a State? How did it get to be in existence at the time California came into the Union?

Mr. CARTER. You are as familiar with that problem as I am. We were not a populated State at that time.

The CHAIRMAN. How did the public lands of Nevada, California, Utah, Idaho, Montana, Wyoming, parts of Colorado; how did they come to be lands of the United States Government at all? Now, you have made a study of this subject. Let's have some light on the subject.

Mr. CARTER. How did they become lands of the United States Government? It is because, at the time the States came into the Union, they were public domain at that time and have remained such ever since.

The CHAIRMAN. How did they become public domain, the property of the United States Government? You live in California; you were born and raised in California; you are a State senator in the State of California. How did the United States Government come into possession of those lands?

Mr. CARTER. Came into possession by the act creating the State.

The CHAIRMAN. Not at all. It came into possession of those lands by the Treaty of Guadalupe-Hidalgo, which settled the Mexican War. That is what distinguishes our States, your State and my State, from the Thirteen Original States that came in under the Constitution. They came in with all of their lands belonging to the

respective States. The State of Nevada and the State of California were carved out of lands that the Federal Government acquired by war; acquired by treaty; and they became the sole possession of the United States Government; and your State and my State were carved out of these federally owned lands.

From 83 to 86 percent of the land of the State of Nevada belongs now to the Federal Government. It never passed into the hands of the State of Nevada, nor to the ownership of the State. You say a certain percentage of the lands of the State of California belongs to the Federal Government, because they were the lands of the Federal Government when the State of California was set up. Now, you have got to distinguish between the lands sovereignly owned by sovereign States, and the lands owned by the Federal Government when the States were set up. I draw your attention to that, because it is a part of the answer to the very problems that you raised, Senator.

Mr. CARTER. Senator, that is true. It is the legal answer to the problem, and we do not question the authority.

The CHAIRMAN. It is the legal and the factual answer to it.

Mr. CARTER. Not the factual answer to the people of the State of California. They have a position to maintain, and it is not a factual answer to us. It is a legal answer.

The CHAIRMAN. You acknowledge it every day of your life; so do the people of the State of Nevada. The people of the State of California have asked the Federal Government to assist in the building of public roads. Now, by the ratio that the Federal Government owns public lands, the Federal Government contributes to the building of public roads. The State of Nevada has asked the Federal Government to build reclamation projects on the open public domain. Why? Because the Federal Government owned the open public domain. When we sit in the Appropriations Committee, making appropriations for the Interior Department, as I sit once or twice a year, if we were to fail to make an appropriation for the extermination of wildlife on the open public domain, the predators, both the Representatives of the State of California and the Representatives and the Senators from the State of Nevada would be crucified. If we did not make an appropriation for the eradication and elimination of wildlife, mind you! Be fair about this thing; and look at it candidly and frankly and fairly. After we have looked at it, let us, in place of saying, "Kick something out; destroy, do away with it," let's get our heads together.

You are a State senator. I am glad you are here, representing a sister State. You are making a study; you came here, by authority of your State legislature, to speak for this committee, and we are delighted to have you here. It is just your type of men that we want to come before us, to give us guidance, to the end that we may formulate legislation that will do the very thing that your State wants to do.

The State of Nevada has taken a very forward step; and it took that forward step long after the hearings, before this committee, were started, and became public. I want to read it to you now:

[Assembly Bill No. 59]

AN ACT To amend an act entitled "An act relating to and providing for the protection, propagation, restoration, domestication, introduction, purchase, and disposition of wild animals, wild birds, and fish; creating certain offices, providing the method of selecting the officers therefor, defining the powers and duties of certain officers, and other persons; defining certain terms; providing for the licensing of and regulating of hunting, trapping, game farming, and game fishing, authorizing the establishment, control, and regulation of private fish hatcheries, state recreation grounds, sanctuaries, and refuges, and the closing, opening, and shortening of hunting and fishing seasons; regulating the transportation and possession of wild animals, wild birds, and game fish; providing for the condemnation of property for certain purposes; providing for instruction in the game laws of this state in the public schools of this state; establishing certain funds and regulating expenditures therefrom, providing penalties for violation thereof, and repealing certain acts and parts of acts in conflict therewith, approved March 29, 1929, together with the acts amendatory thereof or supplemental thereto," approved March 28, 1941

The People of the State of Nevada, represented in Senate and Assembly, do enact as follows:

SECTION 1. Section 66 of the above-entitled act, being section 3100 N. C. L. 1929, is hereby amended to read as follows:

Section 66. It shall be unlawful to hunt deer at any time during the year other than during such forty-five (45) day period, to be known as the open season, between October 1 and December 1, of each year, as may hereafter be designated for the respective counties by the board of fish and game commissioners, under the provisions of this act: *provided*, that during such open season of each year it shall be unlawful to kill, catch, trap, wound, or pursue with the intent to catch, trap, injure, or destroy more than one deer, except under rules and regulations prescribed by the fish and game commissioners as hereinafter provided: *provided further*, that the open season for deer in district No. 1 shall extend between October 1 and December 31 of each year; *provided*, that the county commissioners of any county in the state, upon the application of any person, persons, organization, or governmental department may appoint a committee of one each, sportsmen, livestock, U. S. forest service, fish and wildlife service and grazing service to consider the advisability of reducing the number of deer, antelope, elk, and bighorn sheep in any district or specified portion of such county; and whenever in the judgment of said committee, big game have increased in numbers in any locality to such an extent that a surplus exists, or to such an extent that such animals are damaging public or private property, or are overgrazing their range, said committee shall make appropriate recommendations to the state fish and game commission as to the area or areas being damaged, the extent of damage, and the number and kind of deer, antelope, elk, or bighorn sheep to be removed; upon the recommendation of the committee, the commission may determine the area or areas within such county from which said deer, antelope, elk, or bighorn sheep shall be removed, the number of hunting licenses to be issued, the number of sex of deer, antelope, elk, or bighorn sheep that may be killed by each license holder, the special license fee to be paid to the county clerk, the hunting season, which may be separate from or concurrent with the regular open season, and prescribe such other rules and regulations necessary to properly conduct the hunt.

SEC. 2. All acts and parts of acts insofar as they conflict with the provisions of this act are hereby repealed.

SEC. 3. This act shall become effective from and after its passage and approval.

I draw your attention to the fact that, in the judgment of this committee, this is a far-sighted and appropriate step in legislation, and that step itself was started, was initiated into law, after this committee had held its hearings in various sections of this country; and that section itself, if carried out, if the spirit of it is carried out, you could enact S. 1152, 10,000 times over and it would not affect the State of Nevada, nor would it affect the State of California if a similar statute was enacted.

Mr. CARTER. I don't know whether you are familiar with section 39.1 of the California Fish and Game Code, which invests in the fish and game commission of the State of California practically the same authority.

The CHAIRMAN. There is no doubt about it. That brings you back to the question propounded to you by Mr. Kneipp. It is a perfectly appropriate question, and solvent of the whole situation, that if there be no overpopulated districts in any State, then any Federal legislation such as S. 1152 would not impinge. You would not be troubled with it at all. Your State fish and game commission would regulate the whole question, and the Federal agency would be out.

Mr. CARTER. That is true, just depending upon who makes the determination. I will read you the language of section 39.1 of the Fish and Game Code of the State of California.

39.1. Whenever after due investigation the commission shall find that big game animals and upland game birds have increased in numbers in any fish and game district or refuge to such an extent that such animals or birds are damaging public or private property, or are overgrazing their range, the said commission, with the approval of the director of the Department of Natural Resources and with the consent of the Governor, is hereby authorized and directed to provide for a special hunting season for such animals and birds, additional to, or concurrent with any open season specified by law; or to provide for increased bag limits; or to remove sex restrictions specified by law. The Fish and Game Commission may fix a license fee for special hunting, designate the number of special licenses to be issued, the area in which such hunting will be permitted, the number and sex of animals or birds that may be killed by each holder of special license, and the conditions and regulations to govern such hunting. The money received from the sale of such licenses shall be paid into the State Fish and Game Preservation Fund.

That is a statute of the State of California.

The CHAIRMAN. It looks like the State of California was almost keeping abreast with the State of Nevada. We are very glad to know that.

Mr. CARTER. I want to say one thing further. There is an additional problem that is arising in California. The public land holdings are not decreasing in the State of California, they are increasing. In other words, the situation that was present some time after this treaty was signed, and after the State came into the Union, of decreasing public lands had stopped, and acquisition of public lands is on the increase, so that the problem is going to become more acute, unless that tendency goes the other way. I say, and I am representing the State of California, that the joint interim committee of the State legislature—we all feel that the problem of the determination of whether or not any of these problems that exist, that have been mentioned, is a question that should be determined by the State of California. We agree that the State should, and I am sure that it is ready to, act in cooperation with any of the Federal agencies in the field.

The CHAIRMAN. Let me ask you a question. I don't mean to be captious, you understand?

Mr. CARTER. No.

The CHAIRMAN. Supposing you own in fee simple, 10,000 acres of land out here on the open public domain, and that you are grazing domestic livestock on that land, and someone else permitted his stock to graze over to the destruction of your land. Who should determine whether the number of stock running over your land was excessive or not, you or the fellow who owns the transgressing livestock?

Mr. CARTER. I'd say neither one of us.

The CHAIRMAN. Neither one? You would be the loser, wouldn't you?

MR. CARTER. No; we in America have a method to determine such disputes, Senator. If we follow that system, we are going to reach justice.

The **CHAIRMAN.** If you followed that system, you would lose all the grass on your land. That very matter that I have propounded to you here has been taken through the system that you refer to.

In the State of Montana, during the closed season on elk, the owner of a great ranch there sustaining a domestic livestock population, sent a wire to the Wildlife Commission of the State of Montana that read as follows: "We are killing elk on my ranch." The wildlife commissioner of the State of Montana came up. The owner of the ranch took him over to where the dead bodies were and showed him where he had killed the elk; showed him where the elk had grazed over his land and destroyed the cover of the land. He was arrested under the laws of Montana for killing elk out of season.

The case went through the courts, and the court of last resort of the State of Montana laid down that which many people have known was a fundamental principle of law, that he had a perfect right to remove trespassers that were destroying the grass that would sustain his own domestic animals.

So the question that I propounded to you in a simple way has been answered through the very agencies that you would refer it to, namely, the courts of the land. The court determined that those elk had no more right to run over and be trespassers on that land than private animals owned by some individual; and that the owner of the land had the right to protect his property from trespassers.

Now, who owns the open public domain of the United States? It belongs to the Federal Government unquestionably, without hesitation, without equivocation.

The stockmen of your State, Senator, have applied to the Federal Government to set up grazing districts, because they recognize the fact that the Federal Government owns the open public domain; and in order to have grazing rights on the open public domain, grazing districts must be set up. The stockmen of your State and the Stockmen of my State have recognized the sovereignty of the Federal Government over the open public domain; and they are recognizing it every year, when they pay a 5-cent-per-head-per-month fee for cattle to graze on the open public domain and 1 cent per head per month per sheep to graze on the open public domain.

If you were here this morning you heard the Johnson bill discussed. The Johnson bill has to do with the question of whether or not the Forest Service has the right to limit the number of livestock that will run on any particular area in the forest. The rights of the Forest Service to limit the number, the carrying capacity of any region of the forest, have been recognized by your people, by my people, by the people of every one of the public domain States. I refer always, Senator, to the public domain States, because the law applicable to the public domain States is different from the law of the Eastern States. Some of the propaganda that has come out with reference to legislation of this kind has emanated from the States where there was no public domain.

The State of Texas came into the Union following the Mexican War with an absolute declaration in its own constitution, and a provision in its enabling act, that held all of the land of the State of Texas to be

the property of the State of Texas. Such States are entirely different. Your State and mine, the Western States generally, are entirely different from the Eastern States as to the sovereignty over the open public domain; so we have to distinguish between the two.

Now, let me draw your attention—I want you to take this back to your State.

Mr. CARTER. I think they know it pretty well.

The CHAIRMAN. They are going to know it better. It is much better that they know it better, and to be able to solve the problem.

Mr. CARTER. Well, perhaps they feel a little more bitterly about it.

The CHAIRMAN. If you don't do something, you are going to feel a lot more bitterly. That is what we are trying to avoid.

What does S. 1152 do? It says:

that wherever the head of a department or agency of the Government, having supervision and control over any public lands—

Mr. CARTER. That is my first objection, right there.

* * * Having jurisdiction over any lands or reservations of the United States should determine that a reduction in the wildlife population of such lands or reservations is necessary—

for what?

* * * to prevent injury to the soil, plant life, or to any wild or domestic animals dependent upon such lands or reservations for subsistence.

That is the very first expression of the bill.

The CHAIRMAN. What is the law now, Senator? You know the law.

Mr. CARTER. What law?

The CHAIRMAN. What is the law now that gives the ownership in the Federal Government the right to protect the public land? What is the law?

Mr. CARTER. What is the law?

The CHAIRMAN. Yes, now?

Mr. CARTER. Right now?

The CHAIRMAN. Yes; right now.

Mr. CARTER. Well, it depends upon which agency has jurisdiction.

The CHAIRMAN. Not at all.

Mr. CARTER. They made their own rules and regulations. You have already stated the authority from which the power flows. That flows from the acquisition of the land under the treaty with Mexico.

The CHAIRMAN. But what is the law governing the right of the Federal Government to go in and reduce the wildlife on the open public domain? What is the law now? Forget 1152.

Mr. CARTER. There is none that I know of.

The CHAIRMAN. That is exactly what I thought.

Mr. CARTER. That is, there is none, other than we are not up against anything except rules and regulations that are laid down by the Department of Agriculture through the Forest Service or the Department of the Interior through its other agencies.

The CHAIRMAN. All right. You believe in the Federal Government?

Mr. CARTER. I believe in the American system of government.

The CHAIRMAN. All right. Then you believe in the judicial department of the United States as being the infallible, and the last word, in the interpretation of the law, don't you?

Mr. CARTER. I don't believe they—

The CHAIRMAN. The law says they are infallible, and you say you believe in the law.

Mr. CARTER. The law doesn't say they are infallible, and I don't believe in it.

The CHAIRMAN. Anything that has the supreme word is infallible.

Mr. CARTER. They are the final word.

The CHAIRMAN. Let me read you something, and see if you ever heard about it. I don't think you ever did.

Mr. CARTER. Well, if it is a law of the United States, there are so many of them——

The CHAIRMAN. This is only one.

Mr. CARTER. And I don't think, Senator, that you know all of them, either.

The CHAIRMAN. I don't know all of them. That is the reason I am here, to be advised.

Mr. CARTER. The State of California had 4,000 bills before it last year. Being a senator, I am frank to admit, I don't know much about any of them.

The CHAIRMAN. All right. Let me give you a little history. History is always a good thing to know, when you come to deal with the reason for a law.

There is, in northern Arizona, a great forest known as the Kaibab National Forest. It is in what is sometimes known as the Arizona Strip. It is that great territory lying between the north bank of the Colorado River and the north boundary of the State of Arizona. That territory was set up as a forest because it is in the public domain for the United States and is covered by a forest.

Some years ago the deer population in the Arizona Strip, or rather what is known as the Kaibab Forest, became so overpopulated that it was destroying the browse and underbrush, and destroying the forest, and destroying not only domestic life, in that it made the forest worthless for the grazing of domestic animals, but it was also destroying the wildlife itself, by starvation.

The United States Forest Service applied to the State of Arizona, drew the attention of the State of Arizona to the conditions that prevailed there. Nothing was done about it. The State of Arizona either could not do anything or refused to do anything. Conditions became such that the domestic animals were withdrawn, and of the wildlife, many of them died and hundreds upon hundreds of the bodies of dead deer were found each springtime. The Forest Service in charge of the Arizona Strip, or the Kaibab National Forest, employed Federal employees who went into the Kaibab National Forest and killed off the deer to reduce that population.

The Governor of the State of Arizona, Governor Hunt, threatened to arrest those who were in there killing off the deer during the closed season of the State of Arizona. Mr. Richard Rutledge, who is now in charge of the Grazing Service, was then in charge of the Forest Service in that region. He sued out an injunction to enjoin the Governor of the State of Arizona or its agents from interfering with the work of the Federal Government in reducing the deer population. That case was carried to the Supreme Court of the United States, and that case is the law now.

The decision in that case, by a unanimous Court, was written by Mr. Justice Sutherland, a resident and native of the State of Utah,

than whom there never was a more profound westerner, than whom there was never one more interested in wildlife, and than whom there never was a better jurist on the court of last resort.

Now, you say there is no law. I am going to read the law to you, so you may be enlightened. You will find this law in the 278 U. S. Supreme Court Report, beginning at page 96. It is a very short decision; it is by Mr. Justice Sutherland. He says:

The Kaibab National Forest and the Grand Canyon National Game Preserve, covering practically the same area, are situated north of the Colorado River in Arizona. They were created by proclamation of the President under authority of Congress. During the last few years deer on these reserves have increased in such large numbers that the forage is insufficient for their subsistence. The result has been that these deer have greatly injured the lands in the reserves by overbrowsing upon and killing valuable young trees, shrubs, bushes, and forage plants. Thousands of deer have died because of insufficient forage. Attempts were made under the direction of the Secretary of Agriculture to remove some of the deer from the reserves to other lands, but these entirely failed, as did other means. The district forester, acting under the direction of the Secretary of Agriculture, proceeded to kill large numbers of the deer and ship the carcasses outside the limits of the reserves. That this was necessary to protect the lands of the United States within the reserves from serious injury is made clear by the evidence. The direction given by the Secretary of Agriculture was within the authority conferred upon him by act of Congress. And the power of the United States to thus protect its lands and property does not admit of doubt (*Oamfield v. United States*, 167 U. S. 518, 525-526; *Utah Power & Light Co. v. United States*, 243 U. S. 389, 404; *McKelvey v. United States*, 260 U. S. 353; 359; *United States v. Alford*, 274 U. S. 264), the game laws or any other statute of the State to the contrary notwithstanding.

Appellants interfered with these acts of the United States officials and threatened to arrest and prosecute any person or persons attempting to kill or possess or transport such deer, under the claim that such officials were proceeding in violation of the game laws of the State of Arizona, the observance of which would have so restricted the number of deer to be killed as to render futile the attempt to protect the reserves. Three persons who have killed deer under authority of United States officials were actually arrested. Thereupon suit was brought to enjoin appellants from continuing or threatening such interference, arrest, or prosecution. The court below, after a trial, found for the United States and entered a decree in accordance with the prayer of the bill, with the limitation, however, that the decree should not be construed to permit the licensing of hunters to kill deer within said reserves in violation of the State game laws (19 F. (2d) 634).

While the Solicitor General does not concede the authority of the court to make this limitation, he is content to let the decree stand. We, therefore, pass the matter without consideration and accept the opinion and decree below, with the modification that all carcasses of deer and parts thereof shipped outside the boundaries of the reserves shall be plainly marked by tags or otherwise in such manner as the Secretary of Agriculture may by regulations prescribe, to show that the deer were killed under his authority within the limits of the reserves.

Do you doubt for a minute that the Federal Government under that law has a right to go into any public lands and reduce the deer population? Mr. Carter, doesn't that settle the question of law for you?

Mr. CARTER. If it does, there is no necessity for 1152, using the same argument that you would.

The CHAIRMAN. I read the language of 1152 to you because I wanted to draw to your attention that, under the Kaibab decision, the Federal Government could go in, without hindrance, to a State, and reduce the deer population; but 1152 says that before they can go in to reduce the wildlife population, they must first go to the sovereign State and bring their attention to it, and if the sovereign State does not do it, then, but not until then, can the Federal Government go in.

Now, do you want the law to remain as it is, with the right of Mr. Kneipp, or Mr. Dierking, or Mr. Whoever-it-may-be to say, "There are too many deer out here in White Pine County," and to go and hire hunters to go in and kill them off, without going to the Governor of the State, or to the wildlife commissioner of the State? Or, do you want the Federal Government to have, first, to come to the State and say, "Gentlemen, you have too many wildlife on a certain section out here; you should reduce it, because it is the open public domain of the United States, and we own the land, and the land is being destroyed?"

Now, you may have your choice. You may throw out 1152. I'll be frank with you that, under present conditions, I wouldn't vote for 1152, and I'm the author of it; but I have done one thing, Senator, I have brought the attention of the people of this country to a condition. I had to bring you here in order to tell you what the law was and is.

Mr. CARTER. That may be true.

The CHAIRMAN. I at least have done some good with 1152.

Mr. CARTER. Senator, if the law is as you have stated it, with 1152— isn't it still possible for any of the Federal agencies involved to go to the State, the particular State involved, and then, if the State doesn't, proceed to take care of the problem? They can do it under the present law, anyway.

The CHAIRMAN. I want it made mandatory that before they come into my State and destroy the life on the open public domain, they first must come to my Governor, or wildlife commission, and say, "Gentlemen, there is too much wildlife out there in some certain place. We would like to have you join with us in a process whereby we will eliminate a number of these wildlife overpopulated areas."

I think until we have enacted some law that will go along that line, we stand in a precarious position, where some Secretary of the Interior will say, "There are too much deer out there in Nevada. We own 84 percent of all the interior of the State of Nevada, and we are going to close the whole 84 percent of all of the interior of the State of Nevada, and I am going to send my Grazing Service in there to reduce the wildlife."

I don't want that to occur, and no public-lands State wants it to occur. I want the authority to be in the sovereign State as much as we can get it, but you cannot put it all in the sovereign States until the sovereign States own all the land. As long as somebody else owns the public domain, the sovereign State cannot go further.

Mr. CARTER. Well, I believe I have stated the position of our committee. I was in discussion with the director of natural resources of the State of California before I came to this meeting, and—

The CHAIRMAN. Did he bring to your attention the decision of the *Kaibab case*?

Mr. CARTER. He did not.

The CHAIRMAN. Had you ever heard of the *Kaibab case*?

Mr. CARTER. I have heard of the condition that existed down there, I have heard of the case; but I have never had either the necessity or the opportunity to read it. The problem has never presented itself to that extent in our territory.

The CHAIRMAN. I want to say to you, Senator, that in my judgment, the statute enacted in 1941 by the Legislature of the State of Nevada

will go a long way toward eliminating the necessity for Federal legislation, anything like S. 1152; but the hearings of this committee, Senator, have been exceedingly illuminating. We have been at it now for 3½ years, and we have sat in nearly all of the public-lands States. Mr. Kneipp, who sits here, and who represents the Forest Service, will check me as I go along in this statement.

We have here the records that were available to you from several States. There are at least 19 districts in the State of Colorado—I think it has been stated as 21, but for safety's sake, I will say 19—where the testimony coming before this committee is that the deer are not only running the domestic animals out of these districts by reason of overpopulation, but they are actually destroying themselves by starvation.

Let me illustrate to you: After the snows went off of one of these districts in Colorado last spring, 2,500 bodies of deer were found along the roads—not outside, where people don't go, but along the roads. They were dead deer, starved to death because of overpopulation and starvation. In one district in southern Utah about 40 dead deer to the square mile were found last spring, by reason of overpopulation and starvation. That is a condition that prevails on the open public lands of the United States. Where that condition prevails, they are undoubtedly crowding off domestic life.

I can tell you, first of all, that those in charge of those districts are not required to wait for an Executive order. They could have gone into those districts and reduced the deer population; but they did not do that. But the day is in the offing, and it is not very far in the offing, when Mr. Secretary Ickes, or Mr. Secretary Wickard, or some other Secretary of the Interior or of Agriculture, will walk up to the White House with an Executive order already prepared, and will receive the signature of the President, wherein it will direct that in these various areas a Government agency shall go in and kill off; and they won't even address themselves to the States. The Executive order will be made; and you won't even know that it is made, until you happen, by chance, to get hold of the Federal Register. That is the only place the thing is published.

I have just been requested to announce a hearing in the State of Utah, and we're going to try to request a hearing in the State of Utah in the next week or so, because of an Executive order that withdrew from the public domain of the State of Utah 3,000,000 acres of land. Even the congressional delegation of the State of Utah didn't know of it until they found it in the Federal Register some months thereafter.

We are doing business in this country largely by Executive order recently, and I am anxious, and you should be anxious, and everyone who is interested in wildlife should be anxious that we do something by legislation, through our chosen representatives, rather than by an Executive order coming from a department.

Let me draw your attention to something else. There is a regulation of the Forest Service, regulation W-2, I think it is. I think I can recite it in substance to you, without waiting for it.

Mr. CARTER. I am familiar somewhat with that.

The CHAIRMAN. That regulation provides that where there is an overabundance of wildlife in any particular district, the representa-

tives of the Forest Service may confer with the State authorities involved. I will read it, so we will have it right:

The Chief of the Forest Service, through his regional foresters and forest supervisors shall determine the extent to which national forests or portions thereof may be devoted to wildlife production in combination with other uses and services of the national forest.

You drew my attention to the fact that in 1152 one man determines it.

The Chief of the Forest Service shall determine—

This is a regulation, and this regulation, Senator, was, if I am not mistaken, and Mr. Kneipp will correct me if I am, promulgated after conferences with representatives of those who utilize and use the forests for grazing purposes. Am I correct in that, Mr. Kneipp?

Mr. KNEIPP. Yes; Senator. We had regulation G-20-A in effect in 1934, which was comparable to S. 1152. That was objected to strenuously; the wildlife interests and State conservation commissions objected; and in view of their objections, it was rescinded and this regulation was discussed with them, and was substituted.

The CHAIRMAN. Let me read it to you again:

COOPERATIVE WILDLIFE MANAGEMENT

Regulation W-2: The Chief of the Forest Service, through the regional foresters and forest supervisors, shall determine the extent to which national forests or portions thereof may be devoted to wildlife production in combination with other uses and services of the national forests and, in cooperation with the fish and game department or other constituted authority of the State concerned, he will formulate plans for securing and maintaining desirable populations of wildlife species, and he may enter into such general or specific cooperative agreements with appropriate State officials as are necessary and desirable for such purposes. Officials of the Forest Service will cooperate with State game officials in the planned and orderly removal in accordance with the requirements of State laws of the crop of game, fish, fur-bearers, and other wildlife on national forest lands.

OBJECTS OF THE REGULATION

Regulation W-2 is designed to provide a means of cooperative management of wildlife and of protecting the forest resources from damage from overpopulations of game. The States have assured the Forest Service of full cooperation, and it is expected that this cooperative approach will be fruitful. In case it is found after full investigation that the forest resources cannot be adequately protected from damage by overpopulations of game, such cases should be reported to the Chief of the Forest Service who will submit recommendations with supporting factual material to the Secretary of Agriculture for such action as may be necessary to safeguard the national forest property.

HOW APPLIED

The State Forest Service agreements now in effect or that may be developed in the different national-forest regions will specify in such detail as is appropriate the basis for such wildlife controls and management as may be required for the area involved. "Cooperative Managed Areas," discussed under that topic in another section of the wildlife manual, should be employed as rapidly as the State laws and regulatory provisions permit of progressive refinements in wildlife management. The Chief of the Forest Service will enter into such agreements.

Before a cooperative agreement is negotiated for a particular area, the regional law officer for the region in which the area is located, or the Office of the Solicitor, Washington, D. C., should be advised of the proposal so that a determination can be made, in each instance, as to whether the proposed cooperative agreement can be carried out under State laws or regulations having the force

and effect of laws, and if not what State action is necessary to supply the deficiency.

There again, we have the Chief of the Forest Service. That is a regulation.

What would 1152 do? I am not for 1152, excepting the fine thing that it did do. It brought you here, that we might discuss it as man to man. I think 1152 is entirely too drastic. I introduced 1152 after members of this committee had written to the Secretary of Agriculture and suggested that the Army be called in to reduce the wildlife population. I am going to read that to you in a minute.

Mr. CARTER. We are very familiar with the Army, over in California.

The CHAIRMAN. There were members of this committee who wrote to the Secretary of Agriculture and suggested that the Army go into the open public domain, in these overpopulated districts, and reduce the wildlife. One suggestion was that it would make better marksmen of our soldiers.

I am showing you to what extent the overpopulation of the districts in the public-lands States has impressed the members of this committee; and we are content that something must be done. What we are trying to do, Senator, is to have men who occupy the official place that you do, and others who have been heard from here, join with this committee, and with the Congress of the United States, and give us some thought looking to a law that will preserve, as much as possible, the sovereignty of the several States, and at the same time protect the grazing on the open public lands of the United States.

Mr. CARTER. We join with you in that statement.

The CHAIRMAN. This is not at all one-sided. It is a difficult law to draft, and the more difficult it is the better it is to study. I am bringing these things to you. I don't intend to unload the whole proposition; but your coming here from the State of California, occupying the position of prominence which you do, inspired me to bring your attention to the law as it now exists, which has no limitation on it whatever.

Mr. Kneipp can order his hunters to go in on the forests and reduce the deer population, whenever and wherever he sees fit, and there isn't a Governor in the United States that can dare interfere with him. Mr. Dierking or Mr. Rutledge could do the same on the grazing lands. Those are the conditions, that is the law, that is a problem that we have to deal with.

Why won't you fellows who represent the sportsmen of this country get in here, and in place of saying, "Kick S. 1152 out," let's get together; let's have your constructive thought on amendments to 1152, and your substitutes for 1152, so that wildlife may prosper and the public domain may prosper, and the sportsmen of the country may have the right to govern themselves as far as possible?

Mr. CARTER. As far as kicking 1152 out, Senator, is concerned—

The CHAIRMAN. Let me tell you something, Mr. Carter: I introduced 1152, and then I referred it to my own committee, and it is snuggling in this committee now. It will rest here until we can get constructive legislation, such as you want, and such as the authorities of the United States want.

Mr. CARTER. I will be happy to convey that message to our interim committee, and I might say we will make suggestions along that line.

We have some definite ideas as to that, and I might say that one of the members of our committee is a stockman himself and represents the interests of the stockmen. I represent a large group of stockmen, because stock raising is the principal industry. Livestock and mining are the principal industries of the country from which I come, and I know in Shasta County we have three or four Government agencies, Federal agencies, alongside of one another. I don't want to see three or four different sets of rules and regulations arise for the taking of wildlife.

The CHAIRMAN. You won't have rules or regulations. You will have each agency going into the open public domain and killing off, unless the deer are reduced. Your State is probably not affected. The State of Nevada is scarcely affected. But the State of Colorado is very much affected. The State of Utah is very much affected, and there are other States that are affected by reason of which evidence coming before this committee gave rise to this rather drastic proposed legislation.

Mr. CARTER. I think the problem is acute. I agree with you, and recognize it. We have it in our State, in isolated areas, isolated because it is a large State, and it covers large areas. In some places we have it, but I think that with the new legislation that the State legislature enacted, the Commission is given some authority to dispose of that problem.

Now, how far this Commission will go, I cannot say, but we are hopeful that a program will be laid down whereby all parties concerned will get together to solve the problem.

The CHAIRMAN. Yes, sir; and every State in the Union should go forward with the same method of legislation, and probably there would be no necessity of complaint for that.

Mr. E. F. LUNSFORD (attorney at law, Reno, Nev.). Senator McCarran, may I be heard?

The CHAIRMAN. Yes, Mr. Lunsford, we would be very glad to hear from you.

STATEMENT OF E. F. LUNSFORD, ATTORNEY AT LAW, RENO, NEV.

Mr. LUNSFORD. For the benefit of the record, my name is E. F. Lunsford, attorney at law.

Senator, and members of this committee, I have been very impressed indeed with the explanation which has been made by you, Senator, and, too, I might say, the motive for the introduction of this bill.

Since you have read the Kaibab decision, I take it that this bill has been introduced for the purpose of overcoming and meeting the effects of the Kaibab decision. According to that decision there exists in the Government at the present time, in the absence of contrary legislation, the right, power, and authority to do the very things which it is authorized to do as set forth in this Senate bill, No. 1152.

The bill, in my opinion, in its present form, merely emphasizes that right which the Government now possesses. It in no way cooperates with the States, because instead of reading in effect that before this action should be taken, the permit to destroy the game is set forth in the act, and it can be done only by the terms of this act. In other words, the context of the act is that, wherever the head of a depart-

ment or agency of the Government, having supervision and control over any public lands or reservations of the United States, shall determine that a reduction in the wildlife population of such lands or reservation is necessary to prevent injury to the soil, plant life, or to any wild or domestic animals dependent upon such lands or reservations, he is authorized to draw this to the attention of the heads of the State departments, or to the Governor of the State, and if the State takes no action, then he may go ahead and take the action which he deems necessary.

At the moment, under the Kaibab decision, that authority does exist.

If the purpose of this bill, or the contemplated legislation, is to hear the State first upon the question, then the whole framework of Senate bill 1152 should be so changed as to make it prohibitive for the Government, through any of its agencies, to do these things until the State itself has failed to act. This present form of the bill does not, in my opinion, have such an effect.

I hope I am submitting this by way of something constructive, Senator. I take it from your remarks that it is your desire that the States be given more of a voice in this particular question than is now existent, as a result of the Kaibab decision. If that be true, then, it seems to me, that the legislation should be predicated upon the premise that this authority should not be exercised until the State is given the authority to act.

The CHAIRMAN. I want to say, Judge Lunsford, that we appreciate very much your criticism. We think it is a constructive criticism, just such a criticism as we have been asking for.

There are many other phases in the bill that are subject to constructive criticism. If we had introduced this bill so smooth and unobjectionable as to meet the approbation of Congress and the departments, the bill might have become a law before even the interested parties would have known about it. This bill has aroused magazine articles, editorials, public statements; it has even aroused some very eloquent luncheon speeches. It has been worth while, in that it has gone to men like yourself, and it has drawn the attention of men like yourself to the subject.

The author of this bill, acting by and for his committee, and not unmindful of the whole situation, has tried, from time to time to work out something that we thought would be a little more acceptable and a little more along the lines that you suggest. We have distributed about 500 mimeographed copies to those who are interested here in the last few days. I am not saying that that suggested substitute meets with my own approbation. In coming out on the train, having the matter very much in mind, I attempted to pencil out another draft that I thought might meet with general approbation, that the rights of the States could be preserved.

You have got to remember, Judge Lunsford, that, as we try to protect the rights of the States, we take from the now existent authorities of the Federal agencies. In other words, the Kaibab decision gives to the Federal agencies the right to go into the States and where they find the wildlife population excessive, reduce it. Now, every Federal agency, the Forest Service, the Grazing Service, the Park Service, the Wildlife Service, every Federal agency has filed an ad-

verse report to S. 1152. Why? Because 1152 in its present form reduces the present power of the Federal agencies. They don't want their power reduced.

Mr. LUNS福德. Isn't that so only by implication?

The CHAIRMAN. You can call it implication, or call it whatever you like. They read it in there, and it is there. There is no question in my mind but that it reduces their authority, and they see it as plainly as I do; and I think any court in construing the first sentence of the present existing 1152 would say that before they could go in, as they did in the *Kaibab case*, they should first go to the State.

You will note that in the *Kaibab case* Judge Sutherland said that. He recited as fact that the Forest Service first went to the State agencies and tried to get cooperation and were unable to do so. He undoubtedly took that into consideration. At least I construed that he did in writing his opinion.

Now, I have had mimeographed the penciled copies that I tried to work out on the train, and I am going to distribute those through the audience here, that they might be studied by those who are interested. Perhaps out of that we may get something worth while. However, remember this: We have two horns of this dilemma. The one is the Federal agency holding the land, sovereign in its ownership, and the other is the State, seeking to maintain control over the wildlife within its boundaries. The one is the agency that owns the real estate that is being trespassed upon, or might be trespassed upon. The other is the agency that would, by its police power, regulate the taking of the wildlife. So we have those two phases to pass through, in order to formulate legislation to meet the objections that would come out of the matter from the Federal agency and from the State. We must do this as best we can by language least offensive to the Federal agencies and at the same time protect the rights of the States.

I think your observation is well taken. I think the observations made here a moment ago by the Senator from California is exceedingly well taken. In other words, you might have an order by the Forest Service to go in and kill off in a certain area, and you might have an order from the Grazing Service not to kill off on an adjoining area. The wildlife population would run back into the forest, and they would continue to kill off; so you have conditions that are very difficult to deal with. However, dealing with a difficult problem makes an interesting study, especially when we are seeking all in the same direction.

Mr. LUNS福德. Senator, if I may make this observation, I think you and I agree that the rights and duties, in respect to public domain lying within the borders of the State, are reciprocal as between the State and the Government. I think you so held in the case of *Ex parte v. Crosby*. Do you recall that case, Senator?

The CHAIRMAN. That's right.

Mr. LUNS福德. You specifically held in that case that the State laws are operative upon Government reservations; and that is much stronger where the Government has specifically withheld from entry and set aside and dedicated a portion of land as a reservation? You so held that.

The CHAIRMAN. That is correct.

Mr. LUNS福德. So I think that there are reciprocal rights and duties, which I am quite satisfied this committee, in the formation of an act of this character, will recognize.

The CHAIRMAN. Of course, Judge Lunsford, the doctrine which I applied in considering the Crosby decision was scarcely recognized in the Kaibab decision. The Kaibab decision knocked that into a cocked hat.

Mr. LUNSFORD. I might say, Senator, you were not of counsel in the *Kaibab case*. It might have made a difference. Thank you very much.

The CHAIRMAN. Thank you, Judge.

Now, gentlemen, we will take these names as they come to us. We have no particular order. Is Mr. Arthur Hensley, from California, here?

**STATEMENT OF GEORGE P. MILLER, EXECUTIVE SECRETARY,
CALIFORNIA DIVISION OF FISH AND GAME, SAN FRANCISCO,
CALIF.**

Mr. MILLER. Senator, for the record, I am Mr. George Miller, the executive secretary of the California State Commission. I think, in the interests of time, before proceeding—I would like to renew the invitation that I made to you. I realize the press of time. You so graciously answered my letter, explaining that you would try to sneak in a day or two and hold a meeting of your committee in California, where the 700,000 sportsmen of the State may have an opportunity of personally coming before the committee and express their thoughts upon this bill.

The CHAIRMAN. I would be tickled to death to meet 700 or 700,000 of them.

Mr. MILLER. I also want to say that I have just come from the North, and my office has informed me since I left I have a letter from Mr. Kartchner, the president of the Western Association of State Game and Fish Commissioners, asking me to represent him here. I shall be very glad, upon my return, to furnish you a copy of the letter for your files.

The CHAIRMAN. All right. Thank you.

Mr. MILLER. I also want to say on behalf of the California Division of Fish and Game we subscribe to everything Senator Carter has said. We feel this is a particularly vicious piece of legislation in its present form, because it gives the State no opportunity to cooperate, or to have any say in the determination; no one but the heads of any Federal agencies having control of lands over the wildlife on that land.

I am not going into the legal aspects of the thing. I do not happen to be a lawyer; and I leave that to men like yourself and Senator Carter. But I will cite a very practical incident that is less than 24 hours old, as far as the division of fish and game and the Federal agencies are concerned. We have a law, in the State of California, setting a season for the taking of muskrat. This season is not satisfactory to a Federal agency. The agency in the past has asked us to extend the season. This year the same thing came in. As a matter of fact, they served notice on us that they would issue certain permits to take muskrats beyond the close of the regular California season, flaunting, in our opinion, the California law. We held a conference with some of these members, and we found the reason the law didn't suit them was that their ditchriders could work into the middle of

December, and in order to afford the ditch-riders additional remuneration, to make the job attractive for them, it was necessary to extend the California season some weeks after the mating season of these little animals had taken place, for their convenience.

Needless to say, we met the thing; and I am satisfied that, if that is the case, this time we shall have some recommendations to make to the Commission. That, if put into effect, would again act as a test for State's rights arising in the matter.

Let me point out, sir, that in California we have numerous Federal agencies. If the Director of the Veterans' Administration, under this law, felt that there were too many deer adjacent to the grounds, the grounds of the veterans' facilities in Alameda County, he could take them off. We feel that the wildlife of the West is held in trust for the citizens, and that we are the administering agency, as far as California is concerned, of those laws, and that they are paramount in this issue. We do not concede that even the decisions that have gone before are necessarily final, and they do require the invocation of certain legal action that would not be necessary in this case.

I am mindful, too, that in the Kaibab and some of the related cases the pressure of public opinion, let us say, caused the change of the very drastic G-20-A Regulation. I believe that is what we started out with; wasn't it, Mr. Kneipp?

Mr. KNEIPP. G-20-A. Now it is W-2.

Mr. MILLER. It was G-20-A that was rescinded, and W-2 that put the thing on a cooperative basis; came into being. We haven't any desire to refrain from cooperating with any Federal agency. We do cooperate with them, but when we do cooperate with them we want to feel that the matter of determination is one of mutual effort, and if they don't see eye to eye with us, that our case fails.

The CHAIRMAN. Very well, sir.

Mr. G. H. Hansen, district agent of predator-rodent control; does Mr. Hansen care to be heard? Mr. Hansen, you are of the Fish and Wildlife Service, are you not?

Mr. G. H. HANSEN, Reno, Nev. Yes, Senator. I don't have anything to say.

The CHAIRMAN. Mr. S. S. Wheeler, secretary-treasurer of the Washoe Fish and Game Association?

Mr. S. S. WHEELER, Reno, Nev. I have nothing to say.

The CHAIRMAN. Mr. Gordon True, Jr., secretary of the Western Association of State Game and Fish Commissioners.

STATEMENT OF GORDON TRUE, JR., SECRETARY, WESTERN ASSOCIATION OF STATE GAME AND FISH COMMISSIONERS, SAN FRANCISCO, CALIF.

Mr. TRUE. I believe the Senator already has a copy of the resolution adopted by the Western Association and its resolution committee last June. All I can do is reiterate our unalterable opposition to S. 1152, or any amended form thereof.

The CHAIRMAN. You would rather have an Executive order, I take it?

Mr. TRUE. We are not afraid of that, or afraid of any minor official of the Federal Government invoking the Kaibab decision, anyway.

The CHAIRMAN. Very well, I admire your courage, anyway.

Mr. Hensley, from California.

Mr. ARTHUR L. HENSLEY, San Francisco, Calif. I have nothing to say, Senator.

The CHAIRMAN. Let me say to you gentlemen that if any of you whose names we call here desires to file statements for the record, you may do so after the committee has adjourned, within a reasonable time. We would be very glad to have your statements, and hope that they will not be made too extensive but sufficiently extensive to cover the subject. We do hope that somewhere in the study, which is much more threatening than some of you believe, some of you will offer constructive suggestions for Federal legislation.

Mr. R. E. CURTIS, refuge supervisor, California Division of Fish and Game, Berkeley, Calif.

Mr. R. E. CURTIS, Berkeley, Calif. I think everything has been said by our Secretary, Mr. Miller.

Mr. MILLER. Senator, since those cards were made out, Mr. W. B. Williams, a member of the California Fish and Game Commission, has arrived here from Alturas.

The CHAIRMAN. We would be glad to have him come forward.

Mr. WILLIAMS. I have nothing to say at this time.

STATEMENT OF ROGER TEGLIA, RENO, NEV.

Mr. TEGLIA. I am representing the National Wildlife Federation.

The first remark I want to make, you have had a lot of criticism. and I think a bill of this kind has done a lot of good; and I also, in behalf of myself and some of the people that I do represent, we want to thank you for taking your time in coming before us and in letting us have a chance to oppose the bill, or clarify it, if it is possible. But a question that I would like to have answered: Is there a possible chance of the State—due to the fact that you stated this bill will die in committee—the State organizations and the State fish and game commissions, after studying these other acts that are in, entering into State's rights, that there is a possibility of drawing a bill, together with your committee, that might meet the sportsmen's requirements, and the Federal agencies, and the State commissions also?

The CHAIRMAN. That is exactly what the committee wants you to do; exactly what the committee wants you to do; but I don't want to lose this number, this "1152." It has become so famous now that I want to have it in a statute.

Mr. TEGLIA. I see that you like to either improve it or have more thought about it. As I say, you are to be commended, because in the past there have been very few Senators or Congressmen from our State that have gone ahead and drawn bills that interfered with State's rights, who have as much as given us a chance to oppose it, or agree with it. I think that you are to be commended in taking your time, in these hard times, to come to Reno to give all these sportsmen a chance to voice their opinions.

Mr. Shoemaker of the Wildlife Federation states that every State he has contacted is naturally opposed to this S. 1152. They have studied it, and it does not give the States any rights, or reason to cooperate with the Federal agencies in exterminating game off of some of the refuges.

The CHAIRMAN. You have made this a study, to your certain knowledge, for a long time?

Mr. TEGLIA. I certainly have.

The CHAIRMAN. Before today did you ever hear of the rule in the Kaibab decision?

Mr. TEGLIA. I certainly had; and I knew that the Government has a lot of rights, where they can step into the States, especially where it is publicly owned, and kill off game, at the present time, without any authority from the State or the Governor. I believe that is really a forward step in this bill, not in the manner that it is written, but in the manner it can be drafted in, to give the States some rights that they will be protected; because it seems like the Government has more of a tendency, each year, to grab into State's rights; so that today these rights are going to be exercised. I hope that, through 1152, it can be written in such a way that the Government will be required to cooperate with the States before ordering the killing of these game animals in any of their public domain.

I think there is a lot of food for thought; and it certainly must not be allowed to die, being that it has brought out a lot of criticism and comments, not only in Nevada but throughout the United States. I think that through this bill something can really be written that the State's rights will be protected. They are not protected at the present time. If you check the United States laws pertaining to forestry, Biological Survey, which is in the Forest Service, or the Agricultural Department, you will find they have lots of power, if they want to exercise it. We have been fortunate that some of the States do have the Federal agencies, as we have in Nevada, cooperate. But some day we may get someone not so cooperative, who may use his authority to go ahead and may do the right thing by some stockman or sheepman and forget the sportsmen altogether. I do hope that through this hearing it has enlightened or awakened us to the fact of what we have to confront in the future, as the game and hunters increase, and the stockmen's business, the feedmen's business increases. Naturally, there is going to be more and more dependence upon public domain by both sides.

I think we ought to thank Senator McCarran for coming to Reno to give us this hearing.

The CHAIRMAN. Thank you.

STATEMENT OF W. B. WILLIAMS, CALIFORNIA FISH AND GAME COMMISSION, ALTURAS, CALIF.

Mr. WILLIAMS. The California Fish and Game Commission have opposed the passage of your bill, and I would like to reiterate that we can handle the situation over there. We get along pretty good with the Forest Service and the Reclamation Service, as Mr. Miller has pointed out in a very recent case. Our problems are not so tough but what we feel like we can handle them in the State, under the existing rules and laws that we have; and we would be very happy if this bill did not become a law.

Thank you.

The CHAIRMAN. Very well, thank you.

Mr. ASH. Senator, this man is a particular friend of mine, and at lunch time I happened to meet him, and he said, "This is a day of

ceiling"; and then he said that the deer population in our country hadn't reached a ceiling yet, because he hadn't been able to kill one.

The CHAIRMAN. You'd better turn him over to the O. P. A. How would that be?

Are there any others here who care to be heard?

It might be gentlemen, that there are those who would care to be heard, who are deprived of the privilege of being here; but I want to say to you that the chairman of this committee, sitting here today, must be in Elko tomorrow morning early; and from there must go to other places. We are anxious to terminate these hearings.

Anyone who cares to may file a statement of reasonable length, with reference to this bill, and we will be very glad to have it inserted in the record. We would like very much to have all those who are interested in this proposed legislation read the record that has been made, before this committee, in the States of Utah, Colorado, Arizona, New Mexico, and Nevada. They are available to you. They are printed and will be sent to you free if you will send for them, and if you will read them. And if you do read them, you will be greatly enlightened, as this committee has been enlightened.

With that in mind, if there is no one else to be heard on any subject, any stockmen who wish to be heard on any subject, we are about to terminate the hearing. We regret very much that this meeting must be ended at this time.

There is one other thing before we terminate the hearing. Mr. Kneipp is here, the Forest Service representative, and he has made some interesting statements on 1152, in other sections of the country. I wonder if he would care to reiterate those statements? They are printed and available, but if Mr. Kneipp would care to make further statements on the wildlife situation, we would be glad to have it.

STATEMENT OF L. F. KNEIPP, ASSISTANT CHIEF, UNITED STATES FOREST SERVICE, WASHINGTON, D. C.

Mr. KNEIPP. Thank you, Senator. You have heard me make these statements for so long that you may want to take a recess while I make them once more.

The Forest Service is not opposed to game. At a time when game-law enforcement was very sketchy, strongly opposed in practice, the Forest Service, through its field organization, exerted every effort to enforce the game laws. It was a pioneer in working with the States in setting up State game refuges within the national forests, which finally reached an area of more than 20,000,000 acres. The Forest Service cooperated in transplanting the first elk in various parts of the country. Perhaps that ought to be kept a secret now, because it is not so popular as the idea was when it was first started.

The Forest Service has worked consistently to develop the wildlife resources, which, in 1905, were pretty sketchy, because of hunting, overgrazing, and other factors. Certainly the Forest Service recognizes the importance of the wildlife research in national forests, as a part of what the scientists call the biologic complex. The combination of animals, plant life, and soils, and everything else that goes to make up the forest. In later years it has been forced by painful necessity to suggest there were occasions upon which wildlife

might be reduced. It has not done so through prejudice, but only through the painful facts.

As time went on this wildlife revival was somewhat analogous to the forest movement itself. Earlier aspects had been largely sentimental and emotional, and the sentimental and emotional groups when once started are not always easy to stop. In connection with wildlife, for years it was preached that the females, for instance, ought not to be killed because they were so essential to the development of the resource. It was necessary to limit the numbers of game that could be taken because if people were allowed to have their own way too many others could not get their proper share. There was a very strong sentiment in support of wildlife conservation, developed largely by people whose interest was only sentimental, and who were not very fully conversant with all the facts.

Then there came a time when the situation changed in some places because the deer, for instance, will increase at the rate of 30 or 35 percent a year, and if all their natural enemies are destroyed—the mountain lions and coyotes and bobcats—and if they are safeguarded from hunting, and if the competition of domestic stock where it occurs is restricted, they multiply about as fast as sheep do. I guess you folks here don't have to be told how fast they multiply under favorable conditions. As a result, in time, problem areas began to develop throughout the country.

Stockmen complained that the ranges were going down; and while the deer and elk and antelope do not eat quite the same food as the sheep and cattle, nevertheless, the range condition was bad. The common assumption was that it was due largely to the domestic livestock, and very, very heavy reductions have been made over the years where this range damage occurred. However, even that did not stop the damage. The evidence of excess game was in increasing soil erosion, the trimming up of trees as high as the deer could reach, the destruction of aspen and other hardwood shoots, the nipping of buds of young trees and conifers. It became more and more apparent, even where domestic livestock had been considerably reduced, that the damage was going on.

It finally dawned upon the Forest Service that the excess number of game animals in these areas must be the cause, and that the only correction would be to hold them down to the numbers that could be properly supported. We came to the painful conclusion that too much of a good thing was as bad in relation to the wildlife as it was in anything else; where you had too few deer more were quite desirable; where you had too many, more were a catastrophe. Where these situations were developed, they were taken up with the States. The State commissions were not always free agents; the sentiment against any killing, the sentiment in favor of small bag limits, the sentiment against the killing of doe, the sentiment against permitting residents from other States to come in and share in the game, except upon payment of a very heavy license fee, was so strong that the State game commissions could not always do what their own experience and judgment told them ought to be done.

Instead of the conditions being corrected, they continued to grow worse, until finally, first in the Kaibab case, and more recently in the Pisgah case in North Carolina, there was no alternative to the loss of

these game herds and damage of their environment, except to authorize heavy shooting.

Now, as the Forest Service's attitude with regard to game, from the very first, was one of cooperation with the States, finally, where this condition developed that I have just described, and where State cooperation was not obtainable, the Secretary of Agriculture promulgated the much discussed regulation G-20-A, the conditions of which were not very different from S. 1152. That was a sore spot. All the State game officials and all the sportsmen, especially the State game officials, complained that we were a little bit inconsistent in pleading for cooperation, on the one hand and threatening coercion on the other. Regulation G-20-A did cause a stagnation of the cooperative spirit, there is no doubt about it. After it had been in effect for possibly 6 years, and after further and quite extended discussions with the State game interests generally, this new regulation that the Senator read to you was substituted. Under that new regulation there had been better cooperation, or I might say that in some States that regulation has been all that was needed. In other States it has been ineffective, there has not been cooperation.

In the meanwhile, this subcommittee has, for the past 3 years, been told in extended hearings throughout the West about this problem of excess game. At hearing after hearing spokesmen have gotten up and described the occurrence of these conditions.

Now, despite the very drastic reduction in the numbers of domestic livestock, there has nevertheless been a progressive deterioration of some of the ranges, so that winter feed, spring and fall feed is less and less available, and there is coincidentally tremendous waste of wildlife itself.

The carcasses of scores, of hundreds, or perhaps even thousands of deer are found dead on the ranges in the spring. Those are deer that should have furnished good sport and lots of valuable meat. There doesn't seem to be any point in allowing a 150-pound buck to die of starvation in January or February, when some hunter could have taken him home in November and made his family and friends quite happy with several messes of venison stew. This all came to the attention of the subcommittee at place after place, until in Glenwood Springs last November, it was possibly the highlight of the whole hearing, the 2-day hearing held there. As the Senator says, some of his committee were so impressed by the conditions recited that they have actually suggested rather drastic means of meeting the situation.

Now, I am not the author of this bill, 1152, nor, of course, the sponsor of the bill; but, when the bill did take legislative form the first reaction of the Forest Service was that it would provoke thought and stimulate a great deal of attention; it would bring into the picture a great many interests that had not been vocal on the subject in the past, and it would have the result of creating a broader and more comprehensive viewpoint, and that, after all, in those States which were cooperating and where there are no surpluses, or where surpluses are quickly curbed by State action, the bill will not make any difference, might just as well not be in the statute books. On the other hand, in those several States where the condition is still acute, the bill would have a valuable influence.

Nevertheless, considering all the agitation and criticism which the bill has inspired, when the Secretary of Agriculture finally had to

report on the bill, the gist of the report was, first, a recitation of the conditions that seemed to dictate some corrective action. The report referred to the past experience of the Department; and to the new approach under regulation W-2; to the desire to proceed by the co-operative method, and to the fact that partial success by that method had been achieved. The final conclusion was that after all this new cooperative regulation was of comparatively recent origin, it had only been in effect for about 2 years, so all things considered, the Secretary's judgment was that it would be better to work a little longer under W-2, to go ahead under the present method of cooperation, without new legislation, and see whether actually it would work. If it did, legislation would not be necessary. If cooperation under regulation W-2 prove finally not to meet the situation, then such legislation as is necessary should be enacted.

Now, the sole interest of the Forest Service is to bring about on the national forests the conditions for which the forests were created; that is, to minimize to the least practicable degree, the erosion of soils, to promote valuable vegetative covers that conserve the productivity and economy of the forest ranges, and otherwise to perpetuate the natural growth of trees. You can't do that, when you have thousands of deer eating all the young trees as fast as they appear above the ground, or destroying the ground cover to such an extent that the wind and rain is washing away the soil.

Now, there has been some question about the right of determination by the head of the executive department. After all, in relation to one of these reservations, he is charged by Congress with the accomplishment of certain public objectives. In the national forest he is charged with the responsibility of maintaining a given area of land in timber production and stabilized stream flow. That is his primary responsibility. If he finds some element or agency such as an excess of wildlife is making it impossible for him to redeem his responsibility, he really ought to have some voice in saying what ought to be done in regard to that element that is frustrating redemption of his obligation.

I don't contend that he should have the exclusive voice, and I don't believe that under this bill, actually, he would have the exclusive voice. I don't believe that it would be a matter of whim or caprice, or just personal judgment. I think in any case, the head of a department would have to definitely and convincingly demonstrate that the excess of deer or elk or antelope, whatever it might be necessary to eliminate, was so great that it was absolutely necessary to take the steps which he recommended. He cannot say, "I am so sick of looking at deer that I never want to see another one of the damned things," or anything of that kind. After all, he is a servant of the people. He would have to present some grounds for any action that he proposed, and do it convincingly.

That is the present position of the Forest Service, and that is the way by which we have arrived at that position.

The CHAIRMAN. Thank you, Mr. Kneipp.

At this point it might be well to insert in the record an exceptionally sane and informative magazine article dealing with the wildlife problem.

(The article is as follows:)

[From Harper's Magazine, August 1943. Reprinted by permission of Harper's Magazine and James C. Wilson]

DON'T WASTE THE GAME CROP!

(By James and Alice Wilson)

What would you think of a cattle rancher who harvested only half his annual beef crop year after year and kept the rest to increase until his herd destroyed the range and starved to death?

America is doing just that with much of its wild game. And lest you think the game crop is a mere drop in the bucket of our wartime meat shortage, consider that in 1942 American hunters harvested more than a quarter of a billion pounds (full dressed) of wild meat, most of it produced on forage which domestic animals don't eat, and harvested in people's spare time as a byproduct of their recreation. Hunters harvested almost a fifth as much food, by weight, as all the commercial fisheries of the United States and Alaska.

That harvest could have been increased, in many areas, from 50 to 500 percent with actual benefit to game herds and flocks, and this would have added at least 100,000,000 pounds to the Nation's dwindling meat supply.

Spectacular game surpluses—that is, unharvested crops of wild animals and birds—exist in almost every section of the United States. The species whose overcrowding has become a problem in spots include deer, elk, antelope, reindeer, ducks, pheasants, and rabbits. They innocently interfere with wartime food production in the most unlikely places. Virginia last year declared an open season on elk, which were damaging hay and forage. As for the Western and Lake States, they contain hundreds of problem areas where deer or elk exhaust their winter food supply, encroach on crops and livestock range, and finally die of starvation by thousands.

This state of things—combining as it does an appalling waste of food, destruction of a basic natural resource, and cruelty to animals—is intolerable and must be ended.

You may wonder where all the game has come from, for only yesterday everyone was saying: "Hunt with a camera instead of a gun." Most people still think all species of game are dying out. But they are about 10 years behind the facts.

During the last century, when American hunters were not restricted by game laws, they harvested not only the annual game crop but most of the breeding stock as well. Suddenly sportsmen realized that the game was almost gone. The passenger pigeon and heath hen had already just about disappeared for good. The bison in its wild state was gone. Of the bighorn sheep and mountain goat, only a few head remained. The antelope, which once had roamed the plains in seemingly inexhaustible herds, was practically extinct. In a few years even deer and elk would be gone.

And so the conservationists appeared—in the nick of time. The public was converted. Legislators passed game laws. We established refuges, killed off such predators as coyotes, mountain lions, and wolves, and restocked areas where game had been killed out. We spent millions of dollars to restore northern breeding grounds for ducks. Newspapers, magazines, clubs, schools, Boy Scouts, Izak Waltonites all preached the gospel of conservation: "No true sportsman ever kills a female."

Not only was the campaign successful; in recent years it has been so extra-successful that the chief topic of discussion among game administrators at the North American Wildlife Conference of 1943 was: "How on earth are we going to harvest all this game?" The big-game population of the United States has doubled about every 10 years since 1908, increasing from an estimated 500,000 head to six and one-half million head in 1943. (Of these, about 6,000,000 are deer.) Pheasants, introduced from China in 1881, last year supplied a harvest of 15,000,000 birds. The duck population of North America, which hit an all-time low of 27,000,000 in 1934-35, has bounced back up to 120,000,000 and is climbing at the rate of 10 to 20 percent a year.

Game is like domestic stock in one respect. There is an annual crop, and, if it isn't harvested, herds and flocks eventually outstrip their food supply. Drastic protection of all game everywhere was necessary to restore the depleted breeding stock. It isn't necessary any longer. Harvesting of crops is now just as important as protection of breeding stock in maintaining a balance between the game population and its food supply, despite the fact that a nation with a 50-year-old tradi-

tion of indiscriminate protection cannot bring itself to believe that there could possibly be too many deer in Michigan, too many elk in Jackson Hole, too many pheasants in South Dakota, or too many ducks in western Washington.

The problem has been serious enough during the past few years. Now that the war has brought a shortage of hunters, ammunition, and gasoline, it has become desperate indeed. For game won't stop breeding just because there's a war. Yet the conception of wild game as producing an annual crop that needs harvest is hard for the public to accept. For instance, a few years ago the people of Colorado discovered that deer and elk in certain areas were starving by thousands on the threadbare winter range. Unwilling to see the animals killed, they shouted: "Feed 'em hay." The State of Colorado has spent almost \$200,000 feeding them hay and concentrates. But the deer couldn't live on such fare, for a deer digests hay about as well as you do. His natural food is browse—shrubs, bark, twigs, and leaves. Pittman-Robertson studies indicate that a deer's digestive apparatus to function properly for any length of time needs a diet of 80 to 90 percent browse, an elk's about 50 percent.

This spring the Colorado Game Department burned the carcasses of 2,400 dead deer near the feed grounds in the Gunnison area alone. This loss was 40 to 50 percent of the deer that were fed. For several years, over Colorado as a whole, more deer have lost their lives during the winter than have been killed by hunters. Obviously you can't save them by feeding them. The only way to salvage the meat that is going to waste is for hunters to harvest it. If hunters don't, starvation and predators will.

But the public cannot yet believe that this is true. Popular demand still insists that other States follow Colorado's lead and spend tens of thousands of dollars feeding deer artificially.

There is no general surplus of game—yet. But there are hundreds of specific local surpluses which will develop into a general surplus if not harvested. Colorado alone has about 2 dozen perennial problem areas.

Our national forests contain some of the most crowded game "slums" in the world. For example, while the 1½ million acre Fishlake Forest in Utah will carry 30,000 deer through the winter, the present population is 60,000. Fishlake bucks are so thin you can "slit the hide and shake out the bones." Last year's winter loss on the Fishlake was 42 animals per square mile—about 4,000 pounds of meat, dressed—on 25 percent of the range. And this in a time of meat shortage!

In Malheur National Forest in eastern Oregon the deer range had been worn down to the fabric before Oregonians would agree that the herd should be cut. Even the presence of 1,200 dead fawns on 6 square miles wasn't evidence enough. The Forest Service sought relief from the State game commission, but it in turn had to wait for public support. If waited 4 years. Malheur Forest is still grossly overpopulated, despite repeated efforts to whittle down the herd.

Conditions are almost as bad in the Lake States. Even in the Allegheny and Pisgah National Forests of the East, says the Forest Service, the deer population "should be cut down somewhat."

The 1942 census of all our national forests showed a total of 2,000,000 deer and 165,000 elk. Under favorable conditions a deer herd will double in 2 to 3 years, an elk herd in 3 to 5. The annual national-forest crop is about 600,000 animals. Last year an estimated 300,000 died of malnutrition or were killed by predators; hunters took only 180,000. And still the big-game population increased by 120,000—all destined for future harvest by hunger and predators. Dr. H. L. Shantz, Chief of Game Management of the Forest Service, says: "A reasonable estimate would suggest that at least 600,000 deer and 30,000 elk should be harvested from the national forests by hunters, besides those taken by predators and starvation, to restore the balance between animal life and range."

Conditions are even worse in certain areas outside the national forests. In the West most national-forest land is high altitude summer range, of which there is plenty. The losses from starvation occur on low altitude winter range—mostly private, State, and other Federal lands—of which there is a much smaller acreage available to big game. Much of this lower range is preempted by domestic stock. Much of it is grass—unpalatable to game animals—instead of the shrubs and brush which they prefer. More important still, dry, dormant winter forage does not renew itself until spring.

Since 1927 hunters have harvested only about one-third of the annual deer crop and about two-thirds of the elk crop. If wartime conditions make an adequate harvest impossible next fall it is thought that almost half the deer and elk in the United States will face hunger and possible starvation next winter. Before they starve they will destroy the range for years to come. After the tragic loss

of seven-eighths of the Kaibab Forest deer herd from starvation in the twenties. It took 15 years before the range could again support a normal complement of game. It will never be as good as it was because many of the best forage plants were permanently killed out.

Yet the efforts of State and Federal authorities to control game herds have met with the bitterest kind of public opposition. Although artificially fed elk in Jackson Hole die of starvation at a rate of from 600 to 1,000 annually, local people have fought every effort to reduce this herd. A Wyoming sportsman quoted in the *Elks Magazine*, flatly accuses the Forest Service of lying, under pressure from "big livestock interests," when it reports that elk in the Bighorn National Forest have outstripped their food supply and are starving to death.

As a matter of fact, livestock interests are jealous guardians of the welfare of big game; every rancher knows that the best way to maintain a good cow range is to keep enough deer and elk to prevent the browse from crowding out the grass. But a rancher who loves 50 deer may hate 500.

Under normal conditions there is little competition between big game and domestic stock for food. In general, stock eats grass, while game prefers browse. Stock and game can eat happily at the same table, and should. But if there are too many deer—or elk, antelope, cattle, or sheep—on a range, the dominant species cannot select its diet, and has to rob other animals of food. If browse is gone, deer will turn to grass or anything else to postpone starvation. Starving cattle will eat browse. If the whole range is worn threadbare, famished animals will fight indiscriminately for whatever food is left.

It is where such conditions prevail that big game is damaging crops and livestock range. Fourteen States report deer damage to range, orchards, truck crops, corn, small grain, stacked hay, and gardens. Seven report damage by elk, four by antelope. Imagine the feelings of the rancher near Denver Mountain Parks who counted 845 elk on his ranch at one time, stripping the forage and tearing down haystacks. As for antelope, they were near extinction not so long ago, but recently 27,000 of them were counted in a Wyoming county which had been thought to have only 5,000.

Even ducks can make a farmer swear. In 1941 a quarter of a million mallards wintering on the Jumbo Reservoir in northeastern Colorado took about 50,000 bushels of corn on 15,000 acres—enough to fatten 1,200 steers. Last fall the ducks moved in again. An S O S to the Federal Government by the authors of this article brought Fish and Wildlife Service agents to scatter the flock with high-powered rifles, flares, skyrockets, searchlights, dynamite bombs, and tracer bullets. The farmers estimated that as a result \$20,000 worth of corn was saved.

Nobody claims there are too many ducks in all of North America—yet. But there are too many in spots, scattered over 12 Western and Midwestern States. As with big game, huge "cities" of ducks in underhunted areas, especially unregulated refuges, outstrip their winter food supply and settle down like a Biblical plague over forage and crops. In western Washington ducks all but took last season's cabbage crop. Many Sacramento Valley truck and rice farmers say they will have to move out if damage by ducks isn't controlled.

Of all upland game, rabbits and pheasants are the hardest to control; 23 States report damage to crops by rabbits; 17 report damage by pheasants. So fast have these birds multiplied in the United States that, although 15,000,000 were killed last year, that was not enough to stop the increase. Thousands of bushels of grain were eaten by pheasants that will probably die of natural causes. That corn would have made a lot of pork chops.

Please do not conclude from this evidence of game surpluses that all wildlife should be slaughtered indiscriminately to win the war. A few species, such as bighorn sheep and mountain goats, have not "come back" as yet, and still need drastic protection everywhere. Most native upland birds especially quail and grouse, will profit from wartime's partial moratorium on hunting. Even deer are scarce in some places. But more hunters by the thousands are needed this season to harvest the surplus game in the overcrowded areas.

The paradox of the situation is that, although our game authorities have plenty of power to deal with scarcities of game, many of them haven't the power (to say nothing of not having enough hunters) to control surpluses.

Authority to effect removal of excess domestic livestock from range that was being destroyed has enabled the United States Grazing Service to put the livestock industry, on Federal lands, on a permanent sustained-yield basis. Game authorities want to do the same thing with game. But they can't do it.

The main trouble is that the public and politicians, after choosing their game managers supposedly for expert knowledge and ability, insist on telling them

what to do and how to do it. Half the game commissions in the United States are hamstrung by meddling legislatures, ponderously meeting once in 2 years to pass inept, tardy, blunderbuss laws in a highly technical field they know nothing about.

The inflexibility of existing laws often leaves game managers powerless to cope with emergencies. California has 400,000 deer, cherished by a doe-loving legislature. Last year Army dim-out and fire-prevention regulations cut the hunting season short. Result: A paltry 17,000 bucks were harvested—only 4.3 percent of the herd. The harvest should have been at least five times as large. Seven and a half million pounds of meat wasted—enough to ration San Francisco for 6 weeks! A bigger bag limit would have saved the meat; a doe season would have checked the mounting surplus; a winter hunting season would have complied with Army orders. The game commission had authority to order none of these. (Since then, happily, the authority has been granted.)

This brings us to the sanctity of the doe. If there is one thing of which the uninformed public is sure, it is that does must never be killed. But every livestock raiser knows you can't control the breeding potential of a herd by harvesting males alone.

Game managers are at last beginning to persuade sportsmen, if not the general public, that this is true. When the New Mexico Commission, facing an acute surplus of deer in the Black Canyon area, first declared an open season on does, placards flamed from telephone poles and trees: "No sportsman ever shoots a doe!"—and no sportsman did. But now they do—educated by a persistent game commission.

Pennsylvania, long a bright spot in game management, has had 11 doe seasons since 1923, 2 for does only. Does are sanctified by the legislature in Michigan. With one-fifth less deer range than Michigan, and a herd about the same size, Pennsylvania has harvested in the past 11 years almost 300,000 more deer than Michigan, and has just as many left. That's more than 30,000,000 pounds of meat as a bonus for good management.

Game managers don't want to slaughter does. They just want to manage game. Is it good sense to accuse them of trying to wipe it out, when most of them depend on hunting-license revenue for their salaries?

Another legal obstacle to good management is the absolute inviolate type of refuge. It is not needed any longer. But we are still establishing new refuges of this type. In 1941 the Colorado Legislature created two. Presidential proclamation has just added 221,000 acres (one-third of the area of Rhode Island) to a Wyoming elk refuge which has been added to four times and still has starving elk!

Private preserves are a still harder nut to crack. Duck-hunting rights on Barr Lake, northeast of Denver, are leased by wealthy sportsmen. Neither the State nor the Federal Government can legally control these ducks without permission of the lessees. The only recourse of the farmers is to bring damage suits if the ducks ruin their crops. Damage suits against whom? Are the sportsmen liable for damage done by ducks which legally belong to the Federal Government? Is the Government liable, when it has no legal right to control the ducks?

Many administrators feel that individuals or clubs controlling exclusive hunting privileges in choice game resorts should be required to make use of those privileges—at least to the extent necessary to keep the game from damaging other people's property. There is a Scottish precedent for this: Anyone leasing grouse-hunting rights to a moor has to harvest a stated number of birds from that moor.

All of this adds up to one very simple thing—the need for more flexible control of game by experts competent to administer it.

Perched on a pyramid of inflexible policies a decade out of date, most game commissions have been left high and dry and forgotten by a public and lawmakers intent on phases of war winning more obvious than saving meat and range. Meanwhile a thousand changes requiring quick action have taken place overnight. A third of the hunters have gone to war or are too busy to hunt. Most of the rest cannot get gas and have to hunt near home. Ammunition is scarce. Military regulations have affected game control.

Part of the chronic confusion lies with a system which makes for hopeless division of authority between 6 independent Federal agencies and 48 States commissions—besides the legislatures and the public. Each agency determines its own policy, which is often at odds with that of another. They have never got together on a consistent program of management.

But we have muddled through with these chronic ills for years. The crisis of 1943 is caused by the scarcity of hunters, ammunition, gas, and guns.

As we write this, it appears that hunters are to be allotted no ammunition beyond what is already in dealers' hands. This despite Lieutenant General Somervell's statement of April 27 that, of all war goods, there is a reserve supply of only one, and that is ammunition. If hunters cannot go into the woods next fall millions of acres of range will be "scorched earth" by spring—not only for 1 year, but for years to come. The only remaining means of preventing this will be for State and Federal authorities to harvest surplus game—though conservationists bitterly oppose this except as a last resort.

To meet the present emergency and cure the chronic ills the authors of this article advise: (1) Release of as much ammunition to hunters as is consistent with military needs; (2) liberalization of seasons and bag limits in game-surplus areas, as far as present legislation permits; (3) repeal of statutory obstacle by legislatures that can meet; (4) a committee of game authorities, cooperating with the Food Administrator perhaps, to work out a unified wartime program for surplus game control and utilization which might be adopted by all agencies; (5) as a very last resort, harvest of surplus game by State and Federal authorities in areas where hunters cannot do the job. As a long-range measure we suggest also the eventual relinquishment of legislative authority to State game commissions.

Game, wisely handled, can help win the war, and better its own estate in the process. We need the meat desperately. We need the forage, grain, and gardens destroyed by surplus game animals. And we need the byproducts of hunting—hides, furs, fats, and feathers. We used to import a million deer hides a year, while American hunters threw away almost half that many, under State laws forbidding the sale of any wild game product. Salvage is a new word in our national economy. These laws should be modified accordingly.

So if you have given up hunting because you thought it was unpatriotic, forget your qualms. It is about the most patriotic fun you can have. But before you go, drop your game commission a card and ask them where the surpluses are. Go where they send you.

The CHAIRMAN. If there is nothing further to be said, and no one cares to be heard further, the meeting is now closed and adjourned.

We are very grateful to you all for coming here and discussing this matter frankly and fairly. It is the committee's desire to have constructive discussion of the problem that is on our hands. In closing, I will only say that this problem must be dealt with legislatively, or else it will be dealt with by an Executive order, wherein you will have no say; and then it will be too late to do anything legislatively.

Thank you all for your attendance.

(The following statement was issued by the chairman of the subcommittee at the close of the hearing:)

STATEMENT AT RENO HEARING BY SENATOR McCARRAN

The committee of the United States Senate having to do with public lands and surveys, acting through its subcommittee and by authority of the Senate, has been, for some 3 years now, investigating the administration of the open public domain of the United States. This subcommittee, chaired by the senior Senator from Nevada, has held hearings in many of the open public domain States. These hearings have resulted in proposed legislation covering many subjects having to do with the administration and use of the open public domain, as problems affecting public lands have come before the committee. The committee has sought, as was its duty under the resolution, to formulate and propose legislation in an attempt to solve the several problems.

At the outset, let it be remembered that the open public domain, sometimes called the Federal domain, sometimes called the public lands, is the property of the United States Government. The Federal Government exercises the same powers and rights over these lands as

would an individual landowner, in looking to the preservation, the protection, and the improvement of this vast domain, amounting to nearly 1,000,000,000 acres.

The ownership of this land is conceded to rest in the Government by the States within which the land exists, and by the people thereof. This recognition has been evidenced in many ways and by many acts. For instance, the people of the several States of the West have applied to the Federal Government to set up grazing districts within their respective borders. The agriculturalists of these States and those engaged in the livestock industry are paying the Federal Government for the use of the open public domain; that is, they are paying for the right to graze their livestock on the open lands. The public lands States, in recognition of the ownership of these lands in the Federal Government, have demanded, in times past, that the Federal Government should contribute to the building of public roads and highways and, indeed, were it not for the contribution of the Federal Government made on the basis of its ownership of the public lands, there are some States in the intermountain country where it is highly doubtful that public roads such as now exist could have been constructed. The several States and the people thereof have recognized the Federal Government as the owner of public lands in that all minerals taken from the public lands are pursuant to Federal statute. The right to remove minerals from the public lands is based entirely upon Federal statute. There are many other instances of recognition whereby and wherein the people and the several States have recognized the ownership of the public lands to be in the United States of America.

In dealing with the question of wildlife sustained in and upon the open public domain, the question of the ownership of the wildlife itself is of little or no importance. It may be conceded, for present purposes, to be in the States or the people. The committee of the Senate, in holding these hearings, has had presented to it the serious problem with reference to and having to do with the overpopulating of the Federal domain by wildlife, particularly deer and elk. In considering the wildlife problem on the open public domain, it is a condition and not a theory that confronts us.

The record of this committee, made in the several States at open public hearings, disclosed that in many areas in some States, deer have become so numerous on the open public domain as to be highly destructive of grazing, so much so that in many places the deer not only make grazing of domestic animals upon the public lands impossible, but become greatly weakened and diseased and actually destroy themselves by starvation. For instance, we find that in the Fishlake Forest in Utah the dead bodies of deer, following the last winter season, approximated 40 to the square mile. In one area in the State of Colorado, as last winter's snow melted away, some 2,500 dead bodies of deer were found along the roadways in this district alone. These bodies were piled up and burned, or otherwise destroyed, by the Colorado Game Department. Some 19 areas in the State of Colorado alone present serious problems by reason of an overpopulation of deer and other wildlife, and this number is increasing. The testimony before the Senate committee is to the effect that vegetation in these areas is being tramped out. Underbrush and browse is being devastated and killed

off, and the very food upon which the deer themselves subsist is being destroyed, even to the roots.

What pertains in certain sections of Colorado and Utah pertains also in other States. We may make reference to the fact that in White Pine County, Nev., a State reserve, or deer refuge, as it may be called, is admittedly so overpopulated with deer that at least 500 must be killed off or removed promptly.

Other States have similar problems existing within their boundaries on the open public domain, and the number of problems areas is rapidly increasing. The deplorable condition growing out of an overpopulation of wildlife on the open public domain in Colorado and southern Utah has been repeatedly brought to the attention of these States by the Federal Government.

It has been presented to this committee that efforts made by some of the respective States to remove the excess wildlife by the issuance of additional licenses and by the removal of restrictions have not brought adequate results. The overpopulation of deer in these areas of open public domain is going forward to the destruction of the open public domain and to the destruction, by disease and starvation, of the deer themselves.

These are some of the facts presented to this committee:

What is the law applicable to the right of the Federal Government to protect public lands from serious impairment or trespass, either by wild or domestic life? What is the law now? We think this inquiry is pertinent because it has been openly and unguardedly stated that S. 1152, introduced by the chairman of this committee, the senior Senator from Nevada, would bring about something new in the way of conferring authority upon the Federal Government to impose itself on the States and the people thereof.

S. 1152 is opposed by written statements filed in the record by both the Department of the Interior and the Department of Agriculture, and by the bureaus of those departments having to do with the open public domain. If S. 1152 would give greater powers to the Federal Government or to the agencies thereof than the Federal Government or its agencies have now, we should not expect the Federal Government to oppose this legislation.

The real truth of the matter is that the Federal Government has now, by law, powers greater than those which would be conferred upon the Government by S. 1152 if it became a law. S. 1152 curtails the present powers of the Federal Government.

The conditions that prevail with reference to the overpopulation of wildlife in the several States has been found to exist in the past in certain sections of the public land States as, for instance, in what is known as the Kaibab National Forest in northern Arizona. There the deer population so increased some years ago that the Forest Service called upon the State of Arizona to join and take steps to reduce this population, that the wildlife, and domestic life, as well, might continue to prosper within the Kaibab Forest. The State of Arizona either found itself unable to comply with the requests of the Federal Government or unwilling to join in the effort to reduce the deer population. Let it be remembered that the Kaibab Forest is a part of the open public domain, and the property of the United States Government, and is also a game reserve.

The United States Forest Service finally took definite steps, employed hunters, went into the Kaibab and proceeded to kill large numbers of the deer and shipped their carcasses outside the limits of the reserves. This was during the closed season fixed by the laws of Arizona. The State of Arizona threatened to arrest and prosecute any person or persons who might kill, or possess, or transport such deer. Action was brought by the Federal Government to enjoin the State of Arizona or its representatives from interfering with the acts of the Forest Service in killing off deer, and from arresting or prosecuting those engaged by the Federal Government in this pursuit.

Mr. Justice Sutherland wrote the opinion of a unanimous decision of the Supreme Court of the United States. The Court there laid down the law that now exists, and the law that prevails with reference to the right of the Federal Government to go into any State where public lands exist, and reduce wildlife population on those lands when it appears necessary to the Federal Government to protect the lands and possessions of the United States from serious injury resulting from overgrazing or devastation. The opinion and decision of the Supreme Court of the United States, which is a clear statement of the present existing law, is so brief and so clear and so emphatic that we quote it in full:

The Kaibab National Forest and the Grand Canyon National Game Preserve, covering practically the same area, are situated north of the Colorado River in Arizona. They were created by proclamations of the President under authority of Congress. During the last few years deer on these reserves have increased in such large numbers that the forage is insufficient for their subsistence. The result has been that these deer have greatly injured the lands in the reserves by overbrowsing upon and killing valuable young trees, shrubs, brushes, and forage plants. Thousands of deer have died because of insufficient forage. Attempts were made under the direction of the Secretary of Agriculture to remove some of the deer from the reserves to other lands, but these entirely failed, as did other means. The district forester, acting under the direction of the Secretary of Agriculture, proceeded to kill large numbers of the deer and ship the carcasses outside the limits of the reserves. That this was necessary to protect the lands of the United States within the reserves from serious injury is made clear by the evidence. The direction given by the Secretary of Agriculture was within the authority conferred upon him by act of Congress. And the power of the United States to thus protect its lands and property does not admit of doubt (*Camfield v. United States*, 167 U. S. 518, 525-526; *Utah Power & Light Co. v. United States*, 243 U. S. 389, 404; *McKelvey v. United States*, 260 U. S. 353, 359; *United States v. Alford*, 274 U. S. 264), the game laws or any other statute of the State to the contrary notwithstanding.

Appellants interfered with these acts of the United States officials and threatened to arrest and prosecute any person or persons attempting to kill or possess or transport such deer, under the claim that such officials were proceeding in violation of the game laws of the State of Arizona, the observance of which would have so restricted the number of deer to be killed as to render futile the attempt to protect the reserves. Three persons who have killed deer under authority of United States officials were actually arrested. Thereupon suit was brought to enjoin appellants from continuing or threatening such interference, arrest, or prosecution. The court below, after a trial, found for the United States and entered a decree in accordance with the prayer of the bill, with the limitation, however, that the decree should not be construed to permit the licensing of hunters to kill deer within said reserves in violation of the State game laws (19 F. (2d) 634).

While the Solicitor General does not concede the authority of the court to make this limitation, he is content to let the decree stand. We, therefore, pass the matter without consideration and accept the opinion and decree below, with the modification that all carcasses of deer and parts thereof shipped outside the boundaries of the reserves shall be plainly marked by tags or otherwise, in such

manner as the Secretary of Agriculture may by regulations prescribe, to show that the deer were killed under his authority within the limits of the reserves.

Hence, we find that the law now, as is stated by the Supreme Court of the United States, is that the Federal Government may, without let or hindrance from any State in which public lands of the United States exist, go in upon such public lands and remove or reduce the wildlife population.

Together with this existing law, the committee finds that in many areas of the public land States there now exists a destructive overpopulation of wildlife. So emphatically has this fact been presented to the committee that members of this committee have suggested, after hearings held at Glenwood Springs, in Colorado, that the problem of overpopulation of wildlife on the open public domain should be dealt with by having the Army given the job of killing off the excess deer. Senator Gurney, of South Dakota, after participating as a member of this committee at the Glenwood Springs hearing, wrote to the Secretary of Agriculture as follows:

DECEMBER 8, 1942.

MR. CLAUDE R. WICKARD,
Secretary of Agriculture, Washington, D. C.

DEAR MR. WICKARD: I attended a 2-day hearing of a Senate committee held at Glenwood Springs November 19 and 20. At that hearing information was obtained and there is an increasing population of wild deer and some elk. The livestock men of that territory feel that the numbers of big game should be cut down.

I am sure this could be in line with the program decided upon by the Forest Service. I am thinking that some sort of a plan could be worked out whereby the State fish and game commissions could cooperate with the Federal Government in a plan to kill off the surplus deer and elk now during wartime, when we are in need of extra meat.

My idea would be to make the arrangements with the several States that have excess wild-game population, and because the Army has men stationed now in nearly all of these States, the Army could be given the job of killing off the deer—one no one to be allowed to shoot except men in uniform who had been given the job to hunt through the forests. It would not only give the men a chance to try out their shooting eye but would also cut down on the amount of beef and other meat that it would be necessary for the Quartermaster Corps to purchase.

For your convenience I attach hereto a report by the United States Department of Agriculture, dated May 8, showing the excess deer in each of the States.

Sincerely yours,

CHAN GURNEY.

So aggravated has the problem become that Mr. Albert Day, the Assistant Director of the Fish and Wildlife Service, at the session of the committee held at Albuquerque on the 9th of September of this year, stated as follows:

In effect, it is felt that the Federal Government now has the authority to undertake reductions of wildlife in the States if the States fail to refuse to do so.
* * * The authority * * * does exist, as exemplified by the very famous *Kaibab deer case*. * * *

MR. RUTLEDGE. * * * What about Jackson Hole? Right now, young man, you have got somewhere about 30,000 head of elk. You fellows don't know what game congestion is. They come down on your refuge there to the extent of 10,000 head, and you can only feed 7,000 head. What are you going to do about that? That has been going on, to my knowledge, for the last 20 years, and no action has been taken on the reduction of that herd. Now, I think it is time we looked these things square in the face.

MR. DAY. We are. I have made several trips to Wyoming. Mr. Gatlin and I, in working with the game department—at that time we were at loggerheads, and even reached the point where at one time the newspapers said it was Federal domination; we were telling the State what they must do. We continued to work with them, and I insisted it was their right to reduce that herd; and the result was they paid out \$50,000 last year for feed; and they have taken the position that

they have to pay out again this year, unless they reduce the herd. I think they are going to reduce. However, if they don't, we still have the authority to go in and make the reduction ourselves.

Mr. RUTLEDGE. On what basis?

Mr. DAY. The Kaibab decision.

For the sake of a full understanding, we respectfully, at the hazard of repetition, state that the conditions presented to the committee are such that the Federal agencies are threatening to take definite action for the reduction of wildlife on the open public domain in certain sections of the public-lands States. That they have this right cannot be disputed. That the Federal agencies, under law, may do as they did in the *Kaibab Forest case*, appears to the committee to be imminent.

The introduction of S. 1152 by the subcommittee of the Public Lands Committee of the Senate, through its chairman, was for the purpose of bringing these facts, and the law applicable to the facts, to the attention of the Representatives of the several States and the people interested in the subject, to the end that some form of progressive future-looking legislation might be enacted, whereby the States in which public lands exist might retain the greatest degree of sovereignty, and at the same time, permit the Federal Government to protect its property within those States. If no legislation is enacted, then it is clear and manifest that for the protection and preservation of the open public domain, the property of the Government, the representatives of the Government can, acting under existing law, go into the several public-lands States where overpopulation of wildlife exists, and they can and will reduce the same. It is the duty of the Federal Government to protect its own property. If the representatives of the Federal Government in the several departments fail to protect the property of the Federal Government, the open public domain, then it is clear and manifest that an Executive order, emanating from the President, will direct action by the departments.

Those interested in the propagation and preservation of wildlife have an opportunity to render a great service by joining with this committee in the formulation of legislation that will obviate the necessity for legislation by Executive order. The committee realizes that S. 1152, in its present form, is exceedingly drastic. Were it not so, it would not have aroused the attention that it has aroused, out of which the committee hopes legislation may ensue by way of amendment or substitute to S. 1152, which will cope with the actual conditions to which we have made reference, and will, at the same time, insure to the public-lands States a reasonable measure of protective sovereignty over wildlife within their respective confines.

In conclusion, we state, a condition actually and undeniably exists that demands, for the protection of the open public domain, that wildlife population be reduced in certain regions of the public-lands States. We further state the law now to be as pronounced by the Supreme Court of the United States in the *Kaibab case*, that the Federal Government, the owner of the open public domain, has the right, and it is its duty, and the duty of the agencies, to protect the open public domain by reducing the wildlife population.

This committee would seek to deal, by legislation, with a problem involving a condition on the open public domain before the condition results in the promulgation of an Executive order. Such an order cannot be repealed or modified, by the people interested. S. 1152, now

being considered by this committee, should be and will be changed before it is at all approved by the committee, but those interested in the subject should make constructive suggestions, rather than indulging in mere unguarded expressions of condemnation.

(The following statement was released by the chairman on December 3, 1943:)

STATEMENT OF HON. PAT MCCARRAN

Because there is, apparently, still some misunderstanding concerning the reasons for the introduction of Senate bill 1152, and for the course which I have pursued in connection with the measure since its introduction, I have been asked to make a statement covering these points.

It should be understood that, prior to the introduction of this bill, uncontroverted evidence was presented to the Senate Committee on Public Lands that an overpopulation of wildlife existed in many areas in the public-land States.

This evidence came from numerous sources, including stockmen and other users of the open public domain, livestock associations, the Forest Service, and the United States Grazing Service. The facts were plainly stated. This overpopulation of wildlife, the existence of which everyone admitted, was having results of a serious nature. In some localities, thousands of deer starved to death for lack of forage. In one district in Colorado, 2,500 dead bodies of deer were found after the snow melted last spring. Overpopulations of deer and elk in several localities were accomplishing not only the destruction of plant life—graze and forage—but also beginning to present the threat of serious soil erosion by reason of the destruction of cover.

This situation was, on the one hand, obviously such as to call for corrective measures; on the other hand, it was being used as an argument for extension of Federal control over wildlife; and there was growing danger that it would be further used as an excuse for executive orders or other administrative directives expanding Federal jurisdiction over the public domain, or over wildlife, or otherwise interfering with State rights in this regard.

Indicative of the trend was the decision of the United States Supreme Court in the so-called *Kaibab Forest case* (*U. S. v. Hunt, Governor of Arizona, et al.* 19 Federal 634, May 16, 1927, affirmed, 278 U. S. 96, Nov. 19, 1928), which held that the Federal Government, acting through its agencies, had the right to go on the public domain and reduce the wildlife population by killing.

Senate bill 1152 was introduced to bring this decision and its implications to the attention of the people of the country; to bring to attention also the urgency of the problem presented by the existing overpopulation of wildlife; and, by arousing and focusing public opinion on the issue, to forestall any Executive action inimical to State interests.

Through the introduction of S. 1152, and the mature consideration which the bill has had, including a number of public hearings, several results have been accomplished. As demonstrated by testimony at recent hearings of the Public Lands Committee, these results include the following:

1. Public sentiment against increased Federal control of wildlife on the public domain has been aroused and concentrated to such an extent that it now seems unlikely that any Executive action along such lines will be taken.

2. Substantial cooperation between individual States and the Federal Government has been achieved. Some State legislation on the general subject has been enacted. More important, both State and Federal agencies have been led to a more rational consideration of the intricate problem of the proper use of the open public domain, particularly where excessive wildlife populations are concerned.

3. Largely as a result of the increased cooperation between State and Federal Governments, substantial reductions have been accomplished in the wildlife populations in areas where such populations were excessive. Literally thousands of deer have been removed from certain areas, by killing and otherwise, under State law and with Federal cooperation.

With the attainment of these results, the major purposes for which S. 1152 was introduced now have been achieved. There is therefore no longer necessity to persevere in the presentation of legislation looking to the reduction of wildlife. The law as announced by the Supreme Court in the *Kaibab* decision still prevails, but enlargement of this doctrine does not appear imminent.

With its purposes accomplished, S. 1152 will be tabled, and I do not plan introduction of any other or further legislation on this subject.
