ADMINISTRATION AND USE OF PUBLIC LANDS

TUESDAY, FEBRUARY 16, 1943

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON
PUBLIC LANDS AND SURVEYS,
Vernal, Utah.

The subcommittee met, pursuant to call at 10 a. m., at Vernal, Utah, Senator Pat McCarran presiding.

Present: Senators McCarran (chairman), Abe Murdock.

Also present: E. S. Haskell, investigator.

The CHAIRMAN. The committee will come to order. The Committee on Public Lands of the United States Senate is meeting here at this time, meeting under and pursuant to Senate Resolution 241 of the United States Senate to investigate the administration and proprietorship of the open public domain.

Let me say at the outset that this hearing was called at this particular time because of certain contingencies that have arisen in the past and because of the fact that the Secretary of the Interior, acting through the Second Assistant Secretary, and the chairman of this subcommittee have had an agreement that as soon as possible these hearings would be conducted. It appears from a preliminary and rather imperfect view of the situation that there are a number of questions involved. The committee will be unable to give more than 2 days to the hearing at this time. We will proceed as rapidly and with as long hours as is possible, consistent with our ability to hear those who wish to be heard. If we are unable to conclude the hearings by tomorrow night we will have to recess and take them up at a later date. The committee is compelled to leave here on the following morning to take its course on to Washington. Certain important matters are calling us back there and we cannot give more than 2 days to the hearings at this time. For that reason it may be necessary to work longer hours than ordinarily is cared to put in at this line of work.

We have had in the field here for some days our special investigator, Mr. Haskell. We have his preliminary view and observations made on the grounds. From that view the committee hopes that it has formulated a plan of procedure to expedite and to hear as consistently as possible the problems involved.

It is our view that a concise and somewhat brief history of the Indians and Indian activity in the locality would be an opening subject. The committee therefore calls Mr. Wright, superintendent of the Indian reservation, at this point.

The witness will not be sworn unless something arises where the committee deems it necessary. As a rule, we find men tell the truth, and if they don't, they usually get caught at it. If they get caught at it, it is just going to be too bad.

STATEMENT OF C. C. WRIGHT, SUPERINTENDENT, UINTAH AND OURAY INDIAN AGENCY, FORT DUCHESNE, UTAH

Mr. WRIGHT. My name is C. C. Wright, and I am superintendent of the Uintah-Ouray Indian Agency at Fort Duchesne, Utah.

The CHAIRMAN. How long have you been connected with the Indian Service?

Mr. WRIGHT. About 13 years now.

The CHAIRMAN. How long have you lived in this locality?

Mr. WRIGHT. Seven years.

The CHAIRMAN. Seven years?

Mr. WRIGHT. Seven years the 1st of March.

The CHAIRMAN. How long have you been acquainted with this locality?

Mr. WRIGHT. Seven years, sir.

The CHAIRMAN. Where were you located prior to that?

Mr. WRIGHT. On the Pima Indian Reservation in Arizona, out of Phoenix.

The CHAIRMAN. Has anyone indicated to you what would be a proper course of procedure or proper line of statement for you to make?

Mr. WRIGHT. No, sir; I think it has developed over all these years. I intended to make a statement similar to that I made before Mr. Haskell and the Indians the other day, and we prepared that ourselves.

The CHAIRMAN. You may proceed in your own way.

Mr. WRIGHT. Thank you, sir. May I refer to the map as I proceed?

The CHAIRMAN. You may refer to any exhibit as you go along.

Mr. WRIGHT. I thought it might be well to start with the time when the first Indian reservations were set up in Utah. That, according to our records and information, was about 1850 and 1851. Brigham Young was then Territorial Governor and Indian agent in this part of the country. He set up a number of Indian reservations in what was then the Utah Territory. Among those was a reservation which has later become known as the Spanish Fork. I don't know the exact size of that reservation. It has been reported as all the way from 15,000 acres to 300,000 acres, but there was a band of Ute Indians that lived on that reservation, and they were fairly close, of course, to the settled communities in Utah at that time.

Difficulties arose from time to time because of the constant migration of the whites into this Territory and the taking of the lands, as the Indians looked at it, so there was raiding on the white communities as in other parts of the western country. So a treaty was made with this particular band of Ute Indians that lived on the Spanish Fork Reservation in about 1865. That treaty provided, among other things, that this band of Indians, who later became known as the Uintah Utes, should move out here to the Uintah Basin. The Uintah Basin had been set aside by President Lincoln in 1861, previous to this treaty by 2 or 3 years.

I might point out what that reservation consisted of at that time. It is shown on this map by this yellow line, and comprised about 2,039,000 acres.

Senator MURDOCK. May I interrupt there before you go on? When you refer to the treaty regarding the—as I understood it—the Spanish Fork Reservation, you refer to a treaty between whom?

Mr. WRIGHT. A treaty at that time that was promoted by an Indian agent whose name was Irish, and we understood by the records which we consulted that Brigham Young and other leaders of the Territory at that time sat in on it. But the treaty was never ratified by Congress.

Senator MURDOCK. That is the point I had in mind, whether or not you were referring to the treaty that was not ratified.

Mr. WRIGHT. It took about 3 years after 1865 for that treaty to get to Washington, where it failed to be ratified. But in the meantime the Uintahs had moved from their Spanish Fork country, and, in the terms of the understanding they had with the white people, if it should not be called a treaty, was that they were to get paid for this Spanish Fork reservation, so many cattle, so many sheep, so many blankets and provisions, if they would move out to this reservation. When the treaty was not ratified they did not receive payment for that Spanish Fork country, did not receive all of the provisions that they expected. But nevertheless from their standpoint they carried out their part of the agreement, and under old Chief Tabby they moved out to this country and stopped at the Strawberry Valley. You gentlemen came through there on your way out.

Senator MURDOCK. Let me ask this question: In the treaty that you speak of, did that in any way refer to the acreage of the Spanish Fork Reservation?

Mr. WRIGHT. I don't know. I could not find that in the records I read, Senator.

They stopped the first winter in the Strawberry Valley and almost froze to death, suffered a great many hardships. Then they moved over to what is now Tabiona, named after the old chief, and he and his people remained there ever since. They founded a little camp there. The community has since been named after that chief. Chief Tabby and his Uintah band then began to spread somewhat and settled throughout the entire Uintah Basin, down the Duchesne River. Scattered bands of Ute Indians lived at what we call Whiterocks now—they called it Uintah, meaning "the edge of the pines," where two rivers come together. Other bands of Indians lived there, and apparently always had, or made their headquarters there. At least, the Spanish fathers who came across the Green River here in 1776 found Indians here, Ute Indians. They called them Utahs, and that is where our State got its name.

The Uintahs were living here and they lived here then, and do until the present day. In fact, they stayed here continuously after that. Then, during the meantime, many other bands of the Ute Indians lived and covered this whole territory, this whole western territory of Colorado, and used to roam clear up to the Canadian line, through Montana and down to the Colorado River. Many of them made their homes in Colorado, and in 1869 a large reservation in Colorado was set up for the Ute Indians containing 15,000,000 acres altogether. In 1874, only 5 years after its creation, that reservation

was diminished by about one-half, through an act of Congress and cessions by the Indians.

The next event, perhaps, of significance in this discussion, was what is known as the Meeker massacre, which occurred in Colorado in 1879. N. C. Meeker was an Indian agent who was appointed a year, I think, or a short time, at least, before he was killed by the Indians. Like many other Indian agents he had a lot of ideas, and some of them were cockeyed. He thought the only way to make a good Indian out of the Indians was to make good farmers out of them and settle them down on allotted land, plow up their lands and teach them how to farm. The Indians said, "That's no way for a man to live. We have lived by the chase, roamed this country, and you cannot tie us down to an 80-acre tract of land. That is like being in prison." They did not agree on that, but Meeker tried to enforce it as much as he could, and did a good deal of plowing and cultivating of lands in and around Meeker.

The Indians opposed it all the time, and they began to become bitterly opposed to it and said, "Now, we are going to have trouble if this continues. You are going down there on our race track and on our gambling grounds and starting to plow that up, and there is going to be trouble. That's going to be the last straw and we are not going to stand for that." They began to gather up ammunition from the traders, what guns they could. Meeker, in the meantime, saw trouble coming and sent for the United States troops and a fairly large contingent of them headed toward Meeker, Colo. In the meantime he plowed a few furrows up around this race track, or what would now be called Bear Dance grounds and Rodeo grounds. They ambushed the troops, killed Major Thornberg, at about the first shot. Altogether, 27 officers and men were killed, and 150 horses and mules were killed. Meeker and all his employees were captured, his women folks, too, and the Indians made them prisoners. I mention these things to indicate there was perhaps provocation for the way the Indians acted there. Naturally, that created a great deal of trouble in Colorado and a great deal of excitement. The general statement in Colorado was "We are going to run the damned Indians out of this State; we've had enough of them." They almost did it, too. There are only about 800 Indians in Colorado at the present time, I believe; fewer than in any other State. Utah has the second lowest number.

That Meeker trouble, by the way, occurred, according to Indians, principally through the activity of the White River Band and the Capota Band. The Uncompahgres were not involved in it at all, nor the Uintahs. But old Chief Ouray was a similar character to Chief Washakie of the Shoshones of Wyoming. He was peace loving and wanted to get along and try to do what the Government wanted him to. So he was sent over and he helped settle this difficulty, and a treaty was made in Washington in 1880. That is rather a famous treaty among the Ute Indians. That treaty provided: That the White River Indians should be moved to the Territory of Utah; that the Southern Utes, who included that Capota Band, should go down to the mouth of the La Plata; that the Uncompahgres should go down to the mouth of the Gunnison River in Colorado; and, provided it was good land, would cede all the balance of this

reservation, which was created in 1869, to the Government. I don't know what happened exactly, but good and sufficient land was not found in Colorado for the Uncompahgres nor the White Rivers, so they were brought over to the Territory of Utah. The White Rivers were brought over and allotted on some of this blue-colored land that you see on this map, brought over under military escort against their will. The Uncompahgres were brought over by a commission. They were a peaceful band and apparently did not need military escort.

When the White Rivers were brought in here, the Uintahs who had been here under old Chief Tabby felt resentful and said, "Where are we getting off at? After all, we lost the Spanish Fork Reservation through a treaty with your people, and never got paid for that, and now you are making us divide it up with the White Rivers, and we never did like them. You are bringing them over, and we don't like it. We don't think it's right." But in the language of this proclamation of this reservation, it said, "for the occupancy and use of the Indian tribes." It did not say, while it was perfectly legal, I suppose, what tribes were indicated. It was done. There has been a rift between the bands of Indians ever since, and it still exists at the present time.

The CHAIRMAN. That is, between the Uintahs and the Uncompahgres?

Mr. WRIGHT. And the White Rivers.

The CHAIRMAN. There are three groups?

Mr. WRIGHT. Three bands; yes, sir, that make up the present Indian tribes in Utah. The Uncompahgres came from Colorado a year after the White River Band, and were located here at Ouray. It was in 1881 that they were brought in under this commission that I speak of. There were about 600 of them, and they were very peaceful people, very trustful Indians, and cooperative, and they said, "How are we going to live when these provisions run out, and so forth." The Government said, "Well, it is a pretty good cattle country. We will allot you a lot of land in here where it can be irrigated. You can make homes here, and we will set up a reservation for you." So they set up this Uncompahgre Reservation in 1882 under President Arthur.

Senator MURDOCK. Will you indicate the colors?

Mr. WRIGHT. That is indicated by this orange-colored line which contains approximately 2,000,000 acres; I believe, 1,800,000 in round figures. That was set up for the Uncompahgres in 1882.

Then the Government proceeded, as time went along, to make what allotments they could within that reservation to the Indians. The allotments, if I remember right, consist of 160 acres to each head of a family.

The CHAIRMAN. Let me interrupt you there, please. This territory bounded by the orange line that you are now speaking of was set up as a reservation for the Uintah—

Mr. WRIGHT. No; for the Uncompahgre Indians; and called the Uncompahgre Reservation.

The CHAIRMAN. What became of the Uintahs in the meantime?

Mr. WRIGHT. They are still living on the Uintah Reservation.

The CHAIRMAN. And the White Rivers?

Mr. WRIGHT. Still living with the Uintahs in the Uintah River Basin.

Now, as I say, the Government, with allotment commissions, proceeded to make allotments within the Uncompahgre Reservation. One hundred and twenty-two allotments were made; but later all of them were canceled, except 83, considered unfit for the type of agriculture that could be carried on in this area. I might mention in passing, as most people present know, it is pretty rough in this area, and the only places for the cultivation of crops is along the streams, and much of that is unsatisfactory. The allotments shown in blue along the White River are a greasewood type of land, heavily alkaline, and none of them has ever been developed into agricultural production except a small tract here at the mouth of the river. So, these 83 allotments were made. Then in 1897 the Government restored this entire area to the public domain except the 83 allotments, and the Indians said, "Well, what about the rest of us? There are about 600 of us Uncompahgres. What are you going to do with the rest of us?"

"Well," the Government said, "we will allot you along the Duchesne River up in the Uintah Basin; find some allotments for you up there." Then both the Uintahs and the White Rivers objected. They said, "Here we are asked the third time to divide our reservation. We had nothing to do with the Uncompahgres and this trouble over in Meeker; but here you sent those people back to us. Send them back to where they came from down on their own reservation. We don't want them up here."

The Government said, "That's the best we can do. As a compromise, we will have the Uncompahgres pay for their allotments. They will pay \$1.25 an acre out of their tribal fund into the Ute tribal fund."

The CHAIRMAN. That was in about what year?

Mr. WRIGHT. Between 1897 and 1902.

So that took care of the Uncompahgres land situation in that fashion up until that time; and, of course, this Uncompahgre Reservation was then opened to homestead and sale of lands under the public land laws of the United States.

The CHAIRMAN. In that regard, going back to that Uncompahgre country, that had, as I understood you to say, been set aside by a treaty duly ratified?

Mr. WRIGHT. No, sir; that was set aside by proclamation of the President, and was never ratified at all.

The CHAIRMAN. It was made by proclamation?

Mr. WRIGHT. That's right, under Chester A. Arthur when he was President.

The CHAIRMAN. Then it was returned to the open public domain after the allotments were fixed?

Mr. WRIGHT. That is right.

The CHAIRMAN. And that was done also, I take it, by proclamation?

Mr. WRIGHT. Yes, sir; I think by an order of the President.

In the meantime State sections were set aside here, as usually is done on the public domain, and the white people began to homestead some of the lands on the creek bottoms here in different places.

The next event that followed which seemed significant was what is referred to always now as the opening of the Uintah Reservation. After the allotments were made for the Uncompahgres here, and from 1902 until 1905, allotting procedures were going on, and the allotments were pretty well completed for the entire group of Ute Indians, all

three bands. The Government then said, "Now, the rest of this reservation we will declare surplus and open it to homestead and sale under all the public-land laws. But before we do that we will set aside certain areas for other purposes." So, they first set aside this green area. There are a little over a million acres in the area taken from the Indians and made into the Uintah National Forest. It has since been renamed from here over as the Ashley National Forest; and from there over to this point on the map is the Wasatch National Forest; and this down here is still the Uintah National Forest.

The CHAIRMAN. You say it was set aside. By whom? In what manner?

Mr. WRIGHT. By an act of Congress.

The CHAIRMAN. A congressional act?

Mr. WRIGHT. Yes, sir; a congressional act. At the same time it set up this area shown as yellow on the map as a grazing reserve for the Ute Indians. That was also done by act of Congress.

These areas in blue were already allotted. The rest of the entire reservation inside here, which is shown in the uncolored and in the purple, was opened for homestead and sale and entry under the public-lands laws.

The CHAIRMAN. Let's get this down. You now have been speaking of three tribes or groups of Indians.

Mr. WRIGHT. We refer to them as three bands.

The CHAIRMAN. Three bands; the White Rivers, the Uintahs, and the Uncompahgres?

Mr. WRIGHT. Yes, sir.

The CHAIRMAN. They may all be classed now as the Utes?

Mr. WRIGHT. That is right.

The CHAIRMAN. So that gets them. Now, all those in that territory are the Ute Indians?

Mr. WRIGHT. That is right.

The CHAIRMAN. Now, you have brought it down to a point where it is the territory surrounded by the yellow line, to which you first made reference in the very opening of your statement?

Mr. WRIGHT. Yes, sir; that is right.

The CHAIRMAN. So that all of that territory bounded by the orange line, say, except the allotments, is now open to entry and is part of the open public domain, and all of the Indians of all the groups have been pushed up into that territory surrounded by the yellow line?

Mr. WRIGHT. Theoretically; yes, sir. Actually, the Uncompahgres—I will come to that a little later—actually, the Uncompahgres did not move up into this territory, nor did they participate to any great extent in the use of this territory. But, theoretically and legally, they exist and have their holdings here, what they do have.

I might mention at this point that between 1861 and 1905 the acreage that belonged once to the Ute Indians had shrunk to 360,000 acres, from approximately 20,000,000 at the beginning of that period.

Now, the opening of the reservation, as I say, occurred officially in 1905, but in 1903—

The CHAIRMAN. Let me catch you there, please. The opening of the reservation—by "the reservation" you mean what territory?

Mr. WRIGHT. I mean by that the Uintah Reservation, surrounded by this yellow line, diminished by the forest reserve, of course.

Senator MURDOCK. The yellow is the reserve for the Indians?

Mr. WRIGHT. Yes, sir.

Senator MURDOCK. Let me ask this question; there is the land that is now indicated on the map in the yellow, known as the Indian grazing reserve. The title to that is vested in the tribe?

Mr. WRIGHT. That is my understanding, that it is—no; that was by an act of Congress. If I am correct, it was set up as an Indian grazing reserve for the benefit of the Ute Indians by an act of Congress.

The CHAIRMAN. Now, of two tracts of land, or two pieces of territory set up by congressional act, one is the forest lands embraced within the yellow line and the green, and the other is the grazing land embraced within the yellow line and in yellow. Those are both definitely fixed by congressional acts for the benefit of the Ute Indians?

Mr. WRIGHT. That is right—well, not the forest reserve.

The CHAIRMAN. That does not come into that category?

Mr. WRIGHT. The forest reserve is not for the benefit of the Ute Indians. The agreement was that the Indians at that time were to be paid for the forest lands at about \$1.25 an acre, and for the coal lands it contained. The Indians were to be paid the appraised value of these coal lands whenever that appraisal was made. They were paid for this green land taken from them for the forest reserve about 30 years afterward. In fact, they were paid in 1934, and received a million and a quarter dollars. I might point out also in passing, during that interval the Department of Agriculture, through the Forest Service, collected a million and a half dollars in grazing fees on that former Indian land. That will come up in the discussion a little later.

The CHAIRMAN. In any event, they were paid for the land in accordance with the agreement?

Mr. WRIGHT. They were, except the coal lands under that national forest.

The CHAIRMAN. As far as the coal lands are concerned, I take it, that is a matter still in abeyance?

Mr. WRIGHT. Yes, sir; that act passed Congress, I think, in 1938, permitting—it was a large sum—\$860,000 for those coal lands. Most of those coal lands exist in this part of the forest here [pointing to the map], but there are some small holdings in here, some coal mines in there at the present time, 36,000 acres. The President vetoed that bill because he said the amount was exorbitant. That is still in abeyance, and of course the Indians are conscious of that, especially since this bill passed both Houses of Congress.

Now, when this reservation was opened, a man by the name of McLaughlin was sent out here to consult with the Indians. It seemed that the Government wanted to have the consent of the Indians, if possible. He held meetings for about a week with the Utes down there, which were very well attended, according to the report I have, the old reports. He told them that they were just going to be allotted land for farming purposes, and he came to get their consent to it and to the opening of the reservation. They were unanimously opposed to it, 100 percent. Some of the speeches they made and some of the replies they made to this Commission for not wanting to open the reservation are prize documents, it seemed to me. They said, "Look what has happened to us already in the last 40 years. Look at the deals we have got already; and now you ask us to give up the remainder of our reservation."

Anyway, he held these meetings for many days. He was supposed to get the signatures, apparently, and on his report he had

82 signatures, out of all of the Indians who lived on the reservation, and 20 or 30 of those were school boys, and so on. It looked like rather a perfunctory sort of thing. He told them finally: rather a perfunctory sort of thing. He told them finally: "It doesn't make any difference; Congress already passed a law, and we would like to have your consent; have you move all to your allotments and start the work and farm them. But the law is passed and you must accept it anyway. The reservation is open and the white people are now going to come in and occupy these lands."

In protest to that act, from three to six hundred of the Utes assembled up here at what is now called Bridgeland, with their horses and wagons. They said, "We are leaving this country." They left and they started marching toward Wyoming. When they got into Wyoming they ran out of food. They killed some cattle to eat, and United States troops were sent after them and they had a brush with the soldiers. Apparently the Army contingent was kind to them, and led them over into South Dakota. They stayed on the Pine Ridge Sioux Reservation for 2 or 3 years. At that time, through the auspices of the Indian Office, they rented about five townships of land on that reservation in South Dakota, and paid, I believe, \$1.25 an acre for a 5-year lease. Those people who remained here in Utah did not all approve of this departure; they kept sending emissaries, and the Government sent interpreters to South Dakota and asked them to come back.

A few of the Utes died up there. The Sioux didn't like them, and said: "We don't want you up here on our reservation." So the remaining Utes at last trekked on back. Those who came back were deeply dejected. They had lost their horses and what goods they had taken with them, and they felt pretty badly about it. Many of these old fellows are living today among the Utes, and often refer to that period. They look around and see how the white people have moved in and occupied this reservation. At the present time they are inclined to say, "I told you so."

Many of the white people now think it was a mistake also. That is what happened at that time.

Immediately after that, in 1906, the Government passed an act authorizing the construction of the Uintah Indian irrigation project. Out of the proceeds of these land sales that began to be homesteaded here, and also out of the sale of the Ute Indian lands, they appropriated \$600,000 to build this Uintah Indian irrigation project. Various appropriations were added to that from time to time, until now it has run into more than a million dollars. This irrigation project covers approximately 80,000 acres, and it contains 22 canal systems. These 22 canal systems divert water from all the streams. No storage facilities were created at all, just diversions from the streams to irrigate these blue-colored lands [pointing to the map] wherever they happened to lie next to the tributaries of the Duchesne and Uintah Rivers. A land-subjugation program was initiated by the Government to level and clear and plow and fence the tribal allotments. Tribal funds on a reimbursable basis were used for that purpose. There are a number of those blue lands at the present time that have as much as twelve or sixteen hundred dollars against them for the subjugation work which was done at that time to get these lands in cultivation and into the hands of the Indians. At

the same time it was permitted that the Indians could sell these lands as soon as they moved upon them; so they proceeded to do so.

It has hardly been one generation since the Indians knew anything about private property in land. They had been a nomadic people, and felt they had certain rights to the entire Rocky Mountain region here. If they could get five or six hundred dollars for the land, that looked like a big price. So, out of the 77,000 acres left—I said 80,000 awhile ago, but it was 77,000 acres and a little over—out of that area within the irrigation project 25,000 acres approximately were sold to the white people as they came in. That diminished the land the Utes still owned. Then the Strawberry Valley reclamation project was authorized. I forget what year that was, but it was in this interval after the reservation was opened up until 1930—I think it was 1909, I am not sure. Anyway, it was in that interval. The farmers farther west needed a reservoir site out here in the Strawberry Valley. The Reclamation Service came to the Indians and said: "We need a reservoir site over here. We will give you \$1.25 an acre. Our engineers have said we need 56,000 acres." That is shown by this line here [indicating], and it would take in this area here. They said: "We will pay you \$1.25 an acre."

The Indians said: "No, we don't want to sell the land. We never have wanted to sell any land, never wanted to dispose of the land at all. That is our grazing country; we get grass money from that." The Indians call it grass money; the white people used the range and paid them grazing fees. Those used to be paid out to them per capita. It was stacked up in piles of hard money; not paid to them by check. They knew where that silver came from; that grass money.

The CHAIRMAN. By the way, that was lawful money, too.

Senator MURDOCK. I might add this, Mr. Chairman, these Indians evidently know very much more about the value of money than a lot of white people. They know that silver money is good. A lot of white people don't realize that yet.

Mr. WRIGHT. The Reclamation Service said: "We have got to have a reservoir site, and we don't know how much territory it is going to cover. Our engineers say we can use the right of eminent domain against it if you don't sell it." The land was sold, and they paid for it in five annual installments.

The CHAIRMAN. Was eminent domain exercised?

Mr. WRIGHT. I don't think it was necessary. The tribe had no authority in those days. It was scattered.

The CHAIRMAN. Right on that point, as regards this particular land and other lands within that yellow line, what was the status at that time as to any act of Congress affecting it?

Mr. WRIGHT. The proclamation of President Lincoln was ratified in 1864 by the Congress.

The CHAIRMAN. It had been ratified?

Mr. WRIGHT. Yes, sir.

The CHAIRMAN. So that land to which you now make reference, that was to be used for a reservoir site, was a part of the land that had been actually assigned, by congressional act, to the Indians for reservation purposes?

Mr. WRIGHT. Yes, sir; but it had been opened for sale and disposal under the public-land laws.

The **CHAIRMAN**. You probably have referred to this, and I have not caught it. In other words, after the act of Congress which set aside that land within the yellow border there was another act turning it back into the open public domain?

Mr. WRIGHT. Not exactly that, but opening it up for white settlement. That was in 1905.

The **CHAIRMAN**. Still retaining it in the status of Indian reservation?

Mr. WRIGHT. Yes, sir; until such time as it was sold to the white people.

The **CHAIRMAN**. In other words, white people could come in and acquire title in fee simple within that territory?

Mr. WRIGHT. Yes, sir.

The **CHAIRMAN**. So that your reclamation people who came in and took that piece of ground for reclamation purposes, reservoir purposes, came in under that provision, I take it?

Mr. WRIGHT. I understand so; yes, sir; and they paid \$71,000 for that—\$56,000—and it was a good investment. Aside from the actual reservoir site they now collect \$21,000 a year in fees from it. The Strawberry Water Association—

The **CHAIRMAN**. The Strawberry Water User's Association is an association of white people having lands that are served by that reservoir?

Mr. WRIGHT. Yes, sir; down around Provo, and that part of the State.

The **CHAIRMAN**. Does that serve any Indian lands for reclamation purposes?

Senator **MURDOCK**. Pardon me, but all lands within the yellow—there are some lands still remaining white. Is that all used today by white people?

Mr. WRIGHT. Yes, sir; all the uncolored land within the yellow line is now white owned.

Senator **MURDOCK**. And all blue lands are still in Indian ownership?

Mr. WRIGHT. That is right.

Senator **MURDOCK**. The square in the Uintah Forest Reserve to the south, what does that represent?

Mr. WRIGHT. I'm sorry, I don't know the exact history of that little square there, but it is in private ownership. I don't know exactly who owns it.

Mr. BERT LUSTY, of Duchesne, Utah. That particular piece was sold during the Indian sale.

Mr. WRIGHT. It apparently was sold at public auction.

Senator **MURDOCK**. I was just going to refer to this; in the opening of the Ouray-Uintah Reservation to white settlers, at least the Government reserved to the Indians the proceeds from all sales of that land to the white men?

Mr. WRIGHT. Yes, sir.

Senator **MURDOCK**. Now, when the Uncompahgre Reservation was returned to the public domain—that is the area within the orange line?

Mr. WRIGHT. Yes, sir.

Senator MURDOCK. The Indians gave up entirely and absolutely all rights to that and have never received anything in the way of cash proceeds from the sale?

Mr. WRIGHT. That is right. They retained, as far as I know, no legal claim on that.

The CHAIRMAN. Going back now to the legend, as you started it, the white is now held by white settlers in fee simple?

Mr. WRIGHT. Yes, sir.

The CHAIRMAN. The yellow is the Indian grazing land?

Mr. WRIGHT. Yes, sir.

The CHAIRMAN. The green is the Forest Service land?

Mr. WRIGHT. Yes, sir.

The CHAIRMAN. And the purple is what?

Mr. WRIGHT. I am coming to that right now, Senator.

I might mention, in the meantime, however, that in 1910 what was called the Ute judgment fund was paid to these Utes. It was really paid in '13, but the act was passed at the end of 1910. That paid them for the coal reservation that had been ceded; that portion of it that had been converted into national parks and national forests, and offsets were made against that claim until about 3,000,000 and a little over was left to the Indians. That was to be used under the discretion of the President for their benefit. With that Ute judgment money they built that reclamation project that I speak of, this Indian irrigation project, and they built roads throughout the basin here, and subjugated this land. These bridges that you came over on Highway 40 were built with those funds. Certain small doles, totalling \$80,000 a year, were paid out per capita to the Indians for a number of years, out of those funds. I mention that because I would like to refer to it later.

Then the total loss of the land by the Utes up to this period that I have been mentioning, including these losses here, reduced the area to about 360,000 acres. The lands shown in purple on the map are the lands opened for entry but which nobody would buy. They remained open lands, unsold, and are now commonly referred to as "the ceded Indian lands."

The CHAIRMAN. That is, now?

Mr. WRIGHT. They are now still unsold, still unhomesteaded, or, as I say, are perhaps erroneously referred to as ceded Indian lands. As I understand it, no cession was ever made or called for by the Indians, but they were opened by the Government for entry and never entered.

The CHAIRMAN. That is part of that tract that was opened?

Mr. WRIGHT. That is right, part of the whole thing.

The CHAIRMAN. The purple lands, then, I take it, are lands that those seeking land would not care to take up, and they remain open land yet, and are still subject to entry?

Mr. WRIGHT. They were, up until 1933, or approximately that.

That brings us up to what we might say is the present era. In the meantime, I'd like to repeat that the Uncompahgres did not feel like fraternizing very much with the other Indians. When they tried to move up there and occupy some of their allotments, or move cattle up on this Uintah range, or anything of that sort, the other Indians said that they had better go back to their own country. "This is our

country. What business have you got up here?" They said, "Oh, we know a law of Congress has been passed, yes; but that does not make any difference to us. This is our country, given to us back in 1861 before you ever had any trouble." Those kinds of remarks are pretty keenly felt by the Indians, and as a result of those things and other things the Uncompahgres almost entirely used this part of the country, the public domain.

The CHAIRMAN. That may be designated for the purposes of the record—you said the Uncompahgres use almost entirely this part of the domain. You refer to what?

Mr. WRIGHT. To the former Uncompahgre Reservation, and even lands that extended beyond it down into what is now Grand County.

The CHAIRMAN. They do now, you say?

Mr. WRIGHT. Yes, sir.

The CHAIRMAN. So that the Uncompahgre are south of the blue lands to a considerable extent? That is the only way I can designate it.

Mr. WRIGHT. Yes, sir; and have always remained there.

Now, during this interval white people came in and homesteaded these lands that are colored in dark red and light red here, 75 miles south of Ouray, way up into the Book Cliffs region, and began to operate livestock outfits in that country during that entire period. The Indians, what few livestock they had, they also operated down in this country as best they could. But the competition was pretty keen. In fact, some of the Indians relate having been driven out at the point of a gun by some of their white neighbors. For that matter, white people were driven out by white neighbors.

Senator MURDOCK. Have the relations between the White River people and the Uintahs become better so they are living together now in harmony on the land allotted to the White Rivers?

Mr. WRIGHT. I'm afraid not. But they are living there, and have intermarried some. There was only a small number of White Rivers, about 250 as against 600 Uintahs, approximately. There is not presently a serious problem there, but there is a constant rift between those people right up to the present moment.

Then the white people, as I say, homesteaded these lands, began operating livestock outfits in this country, and the Indians tried to operate also. As an illustration of how difficult it became for the Indians to operate in there, as well as some of the white people, our Uncompahgre Indians, with headquarters at Ouray, formed a little livestock association, and they made a lease with two of the operators in here. The land owners, including a fellow by the name of Myrup, leased that land to the Indians for 4 months. They paid \$2 a head for their cattle and 50 cents a head for their sheep to this private land owner in order to run their sheep in this country on the public domain. That lease is on record in 1935, and similar leases existed previous to that.

The CHAIRMAN. How many months?

Mr. WRIGHT. Four months.

The CHAIRMAN. Those were summer months?

Mr. WRIGHT. Yes, sir; and that illustrates how difficult it was for the Indians to get grazing privileges in this area, their former reservation. In 1933 came the so-called withdrawal order of 1933 by the

Secretary of the Interior. The white stockmen operating customarily in this area felt the need of regulation, of protection against the trespass and exploitation of the public domain by transient stockmen. This competition by outsiders was pretty keen, and so they, I believe, applied for the organization of a grazing district, under the 1928 act, which, they later found out, only applied to Montana, so they could not organize under that. As a result of this proposal, and also because of the demands of these Uncompahgre Indians that they had no place to run their stock, that they were being pushed around by the nomadic sheepmen, and that they were about to go out of the stock business, that withdrawal was made in 1933, September 26, withdrawing the entire old Uncompahgre Reservation from further disposal. I believe it said "in aid of Indian legislation."

The CHAIRMAN. Was that following the announcement of the Taylor Grazing Act?

Mr. WRIGHT. No, sir; that preceded it by a year.

The CHAIRMAN. How was that withdrawn, by Executive order?

Mr. WRIGHT. By secretarial order.

The CHAIRMAN. Secretarial order?

Mr. WRIGHT. Yes, sir; by the Secretary of the Interior. When that was withdrawn a good deal of correspondence passed back and forth about it. A year later the Taylor Grazing Act was passed, and the Grazing Service began to get organized under that act. The local people here in Vernal wished to have this area organized into a grazing district.

Senator MURDOCK. You are referring again to the land within the orange line?

Mr. WRIGHT. Yes, sir; referring to that, and, in addition, there was land outside of the orange line that they wished to bring into the district, too, which was later done. A meeting was held here at Vernal, as a culmination of these things, and the situation was discussed pretty thoroughly. The Indian Service representatives were here, as well as the local stockmen, and they arrived at an agreement that, in order to take care of the Indian situation, they would recommend and agree to legislation that would set up an Indian Reserve within this heavy black line. That was July 10, 1935. Following that agreement very shortly—

The CHAIRMAN. Right at that point, the chairman has in his hand what purports to be a copy of an agreement of date July 10, 1935, entitled: "Agreement, Vernal, Utah," and signed by A. D. Keller, for Brown Livestock Co., and others.

Mr. WRIGHT. That is the one I refer to; yes, sir.

The CHAIRMAN. That copy may go into the record at this point. (The agreement referred to was as follows:)

AGREEMENT, VERNAL, UTAH, JULY 10, 1935

The entire withdrawn area of the old Uncompahgre Reservation, including the entire proposed reservation, is placed under the Taylor Grazing Administration up to and including December 31, 1936, or until the passage of the bill creating the new reservation if that occurs prior to December 31, 1936. The Commissioner of Indian Affairs shall concur in all matters effecting policy relative to administration under the Taylor Grazing Administration or until said bill is passed. The Commissioner of Indian Affairs further agrees that if he believes that the people of the Utah Grazing District No. 8 have in all good faith been working for the passage of this proposed bill and it has not passed by December

31, 1936, that he will continue the administration of the old Uncompahgre Reservation under the Taylor Grazing Administration until such time as the proposed bill does pass or until he may feel that the people of Utah Grazing District No. 8 have ceased to work for the proposed bill. At the same time the people of Utah District No. 8 agree that they will work for the passage of the proposed bill.

A. D. Keller, for Bown Livestock Co.; H. A. Brown; W. R. Hazelbush; C. A. Meadows; Earl Leech; James Luster; A. M. Myrup; E. S. Birchell; J. Harold Reader; N. A. Taylor; Veone Taylor; Alva L. Hatch; Golden Hatch; Abraham Hatch; Gilbert Wild; Leo Wild; Carlos Wilcox; B. H. Stringham; J. M. Stewart, Chief, Land Division—Indian Office; Richard B. Millin, Associate Range Supervisor, United States Indian Service; Mark W. Radcliffe, field agent; Robert Marshall, Chief, Forestry and Grazing Division, Indian Office; Hugh W. Colton; Robert L. Bennett; Oran Curry; Henry E. Harris; L. W. Page, superintendent.

Mr. WRIGHT. Yes, sir. I might say that the Indian Service has a statement to present for the record, to cover what I am trying to say, which includes that and all other documents. I think I can verify it.

The CHAIRMAN. What I am trying to get, in as orderly a way as best we can, are all of these documents. I thought, in view of the fact that your statement had arrived at that point, that the copy which is in the possession of the chairman might properly go into the record at that place.

Mr. WRIGHT. Yes, sir.

The CHAIRMAN. We will try to put these instruments into the record as we come to them in the discussion. I think perhaps that will segregate them, and designate them more intelligently.

Mr. WRIGHT. Since this agreement was reached here in Vernal, to set up an Indian grazing reserve, more or less within that black line [indicating] the local people have made the statement that the facts were misrepresented to them; they have said that the Indian Service double-crossed them and represented to them at that time this entire Uncompahgre Reservation was subject to being restored to the Indians, all of it, and therefore that they were willing to make the compromise settlement and recommend the small area out of Grand County and the small area out of the original Uncompahgre Reservation for Indian use. But it is a fact that they endorsed that agreement. In fact, the livestock association members, some of them are here, two of them, and the county commissioners, they endorsed it; nearly everybody endorsed it. They state now that the reason they did this was because this was misrepresented to them, but I don't know whether it was or not. I wasn't present at that time. But I might point out that this withdrawal order took effect September 26, 1933, and that was a year before, almost a year before the Indian Reorganization Act was passed and that is the only act, I understand, which gives the Secretary authority to restore any ceded lands to the tribe, so it could hardly have been possible that that withdrawal order contemplated the restoration of that land to the Indians.

The CHAIRMAN. I understood you to say when you first mentioned the withdrawal order embracing the lands within the orange line, when you mentioned it here a moment ago, that it was a withdrawal order for restoration to the Indians?

Mr. WRIGHT. No, sir. I meant to say, if I did not, I believe the order stated that it was in aid of Indian legislation.

The CHAIRMAN. That is correct; that is exactly what you did say.

Mr. WRIGHT. So there has been that misunderstanding, and that disagreement about this area ever since. That is probably why the legislation has not been passed, or has not been supported in recent years. That is my understanding of it.

To get back to this agreement, part of the terms of that agreement were that the Indians with their tribal funds and Government funds which might be appropriated under the Indian Reorganization Act would go into this area here, surrounded by the black line, and buy out all of the private properties there. There were even some discussions at the time about buying the cattle that were owned by these private operators, but as I understand it, that was made contingent upon whether or not they could obtain the money or not. So the tribe put up \$200,000 and the Government said they would match it and go in there and buy these private properties. This was the beginning of the land-acquisition project.

The CHAIRMAN. In other words, in order that the record might be clear on that, the private properties to which you are now referring are the private properties within the black line, the black irregular line on the map, which private properties are on the map designated in red?

Mr. WRIGHT. Yes, sir; that is right. In order to make it clear to those who are looking at this map, the sections of land that are colored in brown here are State land sections. They, of course, were not purchased and still remain State sections.

The CHAIRMAN. I am trying now to clear my mind on this point; you brought us up to the point where they have purchased or are about to purchase the land designated in red within the black lines. Now, how are the other lands affected within the black line?

Mr. WRIGHT. At the present time?

The CHAIRMAN. Yes.

Mr. WRIGHT. They are still, with the exception of a few little blue spots here, Indian allotments, the rest of them are public-domain lands, but two or three townships in here are also a naval oil reserve, but it is being administered, I understand, the same as public lands.

The CHAIRMAN. But the black line refers to the agreement of July 10, 1935?

Mr. WRIGHT. Yes, sir.

I meant to say, following that immediately, in July of 1935, officers of the Indian Service and officers of the Grazing Service met in Washington and drew up another agreement, and to put it in rough, uncouth terms, it said, this is not public domain land here within this old Uncompahgre Reservation that has been withdrawn, so the Grazing Service have no authority to administer it. All they can administer is public-domain lands, hence this being withdrawn in aid of Indian legislation, an agreement is necessary between the Indian Bureau and the Grazing Service to permit the Grazing Service to administer it. That agreement was drawn on July 19, 1935, a week or so later.

Senator MURDOCK. Mr. Chairman, Mr. Woehlke has referred to me some communications, topics of communications between Mr. Collier, the Commissioner of the Bureau of Indian Affairs, and T. A. Walters, First Assistant Secretary of the Interior, and D. K. Parrott, Acting

Assistant Commissioner of the Land Office, which cover the withdrawal in 1933, the recommendations there for the temporary withdrawal in aid of legislation.

The CHAIRMAN. Withdrawal within the orange line?

Senator MURDOCK. It might be well at this point to insert that into the record.

The CHAIRMAN. The date of this is June 12, 1933, and let the record show that it has designation "copy; L-A 22512-33," and the word "map" here, under it, and it purports to have been signed by John Collier, Commissioner, and another letter or note attached thereto purports to have been signed by T. A. Walters, First Assistant Secretary, General Land Office, and another attached thereto purports to have been signed by D. K. Parrott, Acting Assistant Commissioner, United States Department of the Interior, General Land Office. The letter is of date September 23, 1933. It may go in the record at this place. I think perhaps it is a proper place. Is there any objection to this going into the record?

Mr. KNOX PATTERSON, Salt Lake City, Utah. I would like to ask, Mr. Chairman, is that some kind of withdrawing pursuant to the law of 1933? Is that what it purports to be?

The CHAIRMAN. I have not read it and I can't answer that. You may look it over if you please.

We are going to pause here for just a moment, if you please. It has been customary in the hearings of this committee that we fix a record of those who attend the hearings and who are interested in the subject matter. At this time we will have passed among those who are present with us cards, on which card you will kindly write your name, your address, and your official position or designation as you see fit. If you belong to any of the services you will designate the service to which you belong and the capacity in which you serve. That, then, constitutes the record of the attendance before the committee.

(Recess until 10:35 a. m.)

The CHAIRMAN. The committee will be in order.

Will you kindly have the cards passed forward so that they may be turned over to the committee?

As the hearings go on, if new parties come to the hearings we would appreciate it very much if they would sign these cards and file them with the committee. That is the only way we have of keeping designation as to who is present. We especially invite the Indians who are here to make known their presence by the signing of these cards.

LIST OF PERSONS ATTENDING VERNAL, UTAH, HEARINGS

H. L. Allred, Roosevelt, Utah.
L. M. Angus, secretary, Dry Gulch Irrigation Co., Roosevelt, Utah.
Daniel B. Beard, custodian, Dinosaur National Monument, representing National Park Service, Jensen, Utah.
Austin Beebe (stockman), Altonah, Utah.
Lester Bingham, Uintah County assessor, Vernal, Utah.
Lafe Bowne, (woolgrower), Provo, Utah.
Frank A. Brewer, T & X Ranch, Jensen, Utah.
Jack Brewer, Ouray, Utah.
Harry A. Brown (cattleman), Ouray, Utah.
Mrs. Harry Brown, Ouray, Utah.
Marvin Broome (farmer and stockman), Ouray, Utah.

- Orleis Butters (sheep business), 548 South Twelfth East Street, Salt Lake City, Utah.
- J. A. Cheney (banker), Vernal, Utah.
- Steve Cheturas (user of unit G, District No. 8), Ouray, Utah.
- B. O. Colton, member Duchesne County Planning Board, Roosevelt, Utah.
- Ed Conklin, (stockman), Altonah, Utah.
- Dan Cuch (Indian), Tridell, Utah.
- Oran F. Curry, chairman, Ute tribal committee, Fort Duchesne.
- George C. Davis, director, Ashley Woolgrowers Association, Vernal, Utah.
- Willard A. Day, chairman, Duchesne County Planning Board and Duchesne County commissioner, Roosevelt, Utah.
- Ray E. Dillman, Moon Lake Water Users Association, Roosevelt, Utah.
- Clarence E. Favre, Chief of Range Management, Intermountain Region, Forest Service, Ogden, Utah.
- Dorr Finicum, deputy assessor, Vernal, Utah.
- W. C. Foy, representing Duchesne Livestock Association, Duchesne, Utah.
- C. S. Gardiner, field supervisor, Farm Credit Administration, 307 City and County Building, Salt Lake City, Utah.
- Louie Galloway, superintendent, Moon Lake Water Users' Association, Roosevelt, Utah.
- L. J. Gilbert, Arcadia, Utah.
- Fred Goodrich, ceded land committee, Bluebell, Utah.
- DeWitt C. Grandy, Soil Conservation Service, Vernal, Utah.
- Leland O. Graham, Assistant Solicitor, Interior Department, Washington, D. C.
- Iowa J. Hall, Vernal, Utah.
- Mrs. Clarissa S. Hanson, Box 123, Roosevelt, Utah.
- Paul S. Hanson, board member in district No. 8, Roosevelt, Utah.
- Joseph Haslem, chairman, cattle section, advisory board, district No. 8, Jensen, Utah.
- Abraham Hatch, Ouray, Utah.
- Golden Hatch, Ouray, Utah.
- Loran Hatch, Vernal, Utah.
- Thomas C. Havell, supervisor, Branch of Adjudication, General Land Office, Washington, D. C.
- Paul Hazelbrush, Grazing Service, district clerk, Vernal, Utah.
- Don F. Hill, Vernal, Utah.
- Charles T. Hohenthal (assistant to Mr. Haskell), field examiner, General Land Office, Salt Lake City, Utah.
- Lorena D. Iorg, acting secretary of Uintah and Ouray tribal business committee, member Uintah Band of Utes, Fort Duchesne, Utah.
- Howard M. Ivory, Soil Conservation Service, Vernal, Utah.
- Dee Jenkins, farmer, Vernal, Utah.
- Marve Jenks (Indian), Fort Duchesne, Utah.
- Tom Jenks (Indian), Fort Duchesne, Utah.
- Dewane E. Jensen, district grazer, United States Grazing Service, Nephi, Utah.
- Alfred L. Johnson (cattleman), Vernal, Utah.
- Clyde S. Johnson, attorney at law, Vernal, Utah.
- H. C. Jolley, Vernal, Utah.
- Russell R. Keetch, county extension service, Vernal, Utah.
- Dan Kutch (Indian), Fort Duchesne, Utah.
- Sab Kutch (Indian), Fort Duchesne, Utah.
- Ray G. Labrum, Uintah County board member, Moon Lake Water Users' Association, Vernal, Utah.
- Milton Larson, Arcadia, Utah.
- Joe H. Leech, Chief of Lands Grazing Service, Department of Interior, Salt Lake City, Utah.
- Elmer Lind, president, Ashley Woolgrowers' Association, Vernal, Utah.
- Bert Lusty, president, Duchesne Livestock Association, Duchesne, Utah.
- Clifton W. McCoy, Vernal, Utah.
- W. M. McCoy, Vernal, Utah.
- Harvey McKee, Vernal, Utah.
- J. R. McKee, president, Moshay Stock Association, Tridell, Utah.
- McKewan, member, Uncompahgre Group, Ouray, Utah.
- Harold Madson, Meeker, Colo.
- N. J. Meagher, banker, Vernal, Utah.

Heber Moon, Hanna, Utah.
 Nephi Moon, Hanna, Utah.
 Charles F. Moore, acting regional grazier, region 2, Salt Lake City, Utah.
 H. D. Moulton, field examiner, General Land Office, Department of Interior, Salt Lake City, Utah.
 Glen Murray, Vernal, Utah.
 O. W. Nielson, Ouray, Utah.
 N. A. Ogden, manager of land department, Salt Lake City, Utah.
 Knox Patterson, attorney at law, Boston Building, representing M. A. Smith, Salt Lake City, Utah.
 Pawwinne, Uncompahgre committee member, Ouray, Utah.
 Charles A. Perry, Vernal, Utah.
 Stephen C. Perry, Rural Free Delivery No. 1, Vernal, Utah.
 J. Fred Pingree, member, Utah State land board, Salt Lake City, Utah.
 W. N. Preece, secretary-treasurer, Ashley Woolgrowers' Association, Vernal, Utah.
 Alma Preece, Uintah County commissioner, Vernal, Utah.
 J. Harold Reader, advisory board member, Vernal, Utah.
 Red Fingernail (Indian), Fort Duchesne, Utah.
 Glenn Reed (Indian), Ouray, Utah.
 W. B. Rice, United States Forest Service, associate regional forester, region 4, Ogden, Utah.
 Carl R. Richens, Arcadia, Utah.
 Louis D. Roberts, Vernal, Utah.
 Laren Ross, Mosby Mountain Stock Association, member, Ashley Forest Cattle and Horse Growers Committee, Tridell, Utah.
 Ernest Saltee, assistant land field agent, Indian Service, Land Division, 909 First National Bank Building, Salt Lake City, Utah.
 Earl C. Sanford, forest supervisor, Ashley National Forest, Vernal, Utah.
 Jack Santos, Ouray, Utah.
 Seeje (Indian), Fort Duchesne, Utah.
 D. R. Seely, Vernal, Utah.
 H. E. Seely, vice chairman, grazing board, district No. 8, Vernal, Utah.
 Dave Siveaap (Indian), Fort Duchesne, Utah.
 Henry Slauch, fish and game warden, Vernal, Utah.
 Emory C. Smith, 1835 Yale Avenue, Salt Lake City, Utah.
 Marvin F. Smith, Vernal, Utah.
 Moroni A. Smith, 1205 East Third South Street, Salt Lake City, Utah.
 Royal M. Smith, 1842 Michigan Avenue, Salt Lake City, Utah.
 Waird G. Smith, 1078 South Twentieth East, Salt Lake City, Utah.
 Walter Smith, 1660 Harrison Avenue, Salt Lake City, Utah.
 Olive Sprouse, Ouray, Utah.
 R. S. Squire, Ouray, Utah.
 Willis Stevens, Ouray, Utah.
 Austin B. Taylor, Altonah, Utah.
 Louis M. Thorne, Ouray, Utah.
 Arthur Tomlinson, Ouray, Utah.
 Harry E. Tomlinson, Ouray, Utah.
 H. A. Tyzack, Vernal, Utah.
 Marie Villard, Craig, Colo.
 Joe A. Wagner, assistant range examiner, United States Indian Service, Uintah and Ouray Indian Agency, Fort Duchesne, Utah.
 Leo Wild, Vernal, Utah.
 Reed H. Wilson, grazier aide, district No. 8, United States Grazing Service, Vernal, Utah.
 Walter V. Woehlke, assistant to Commissioner Office of Indian Affairs, Chicago, Ill.
 Arthur Wooley, Vernal, Utah.
 C. C. Wright, Superintendent, Uintah and Ouray Indian Reservation, Fort Duchesne, Utah.

The CHAIRMAN. Very well, Mr. Wright. Mr. Wright, I have here in my hands the instruments that were handed to me by Senator Murdock which purports to be a letter over the signature of John Collier, of date of June 12, 1933—has that letter been brought to your attention?

Mr. WRIGHT. Not wholly; I am familiar with it—

The CHAIRMAN. Will you tell us to what land it refers?

Mr. WRIGHT. It refers, as I understand it, to the old Uncompahgre Reservation within the orange line.

The CHAIRMAN. I wish, before this goes into the record, to make certain about it. I wish you would familiarize yourself with it at this time. It will be withheld from the record at present.

Senator MURDOCK. As I understand it, Mr. Wright, someone who will follow you will have in his possession in their chronological order all orders, proclamations, and other communications with respect to the withdrawals of these different tracts?

Mr. WRIGHT. Yes, sir. Mr. Woelke has a complete statement on that, including all those things you mention and many others.

Senator MURDOCK. I ask that question, Mr. Chairman, for this reason; I am sure we do not want to duplicate the record.

The CHAIRMAN. I want to say, Senator, that in trying to make a study, following the investigator's proceedings here, personally I have come to this conclusion, subject to change: Following Mr. Wright we would call Mr. Leech to get into the record all of the historic matters pertaining to these lands. That is the program I had tentatively outlined, subject to change at all times, simply to get before the committee as best and as clearly as I could the history of it. Mr. Wright is giving the history of the Indians themselves, as a group, and then the history of the lands from their legal historical features should follow. So, with that in mind, is that satisfactory?

Senator MURDOCK. Yes, that is perfectly satisfactory.

Mr. WRIGHT. I believe I was at the point where I was going to describe this land acquisition project within this black line shown on the map. That started in 1935, immediately after that agreement that was mentioned; at least the purchase negotiations were started. The completion of the first purchase was in 1937. That has proceeded all along until the present time. We consider it complete at present with the exception of three or four small holdings; four, to be exact. Two of them are down here on the Green River, and one of them at this point here, and another was way back up in the summer range. We haven't been able to acquire those tracts because the owners were not able to give satisfactory title up to the present time.

The CHAIRMAN. Let me ask you this, although it is a little beside the question; growing out of the experience I have had as a member of the Appropriations Committee, referring to the appropriations for land, do you hold those lands under option?

Mr. WRIGHT. No, sir. One of them we do; the other three we do not.

The CHAIRMAN. The experience I have had, I am sorry to say, is that the Indian Service in making these purchases frequently gets an option, frequently gets the exercise of the option, removes the optioner and he grows old and his grandchildren are old by the time they are paid for the lands that were optioned. It has been a practice I don't approve of very much.

Mr. WRIGHT. We have told all of our vendors, Senators, if they were older than 40 years we did not wish to deal with them.

To continue, that land acquisition has been practically completed, and the Indians appropriated, as I say \$200,000 and the Government, through the Indian Office, agreed to match it. But it did not take that much, quite. In round figures it has cost \$300,000; \$296,515 to

be exact, 32,697 acres have been purchased. During this time, during this interval, while this land has been in process of being purchased, which, as you say, is always plenty slow, the entire area has been administered under the Taylor Grazing Act by the local grazing service, and that has been done under this agreement of July 19, 1935. I can submit that for the record at this time, or, if you wish—

The CHAIRMAN. I have here a copy of what purports to be an instrument signed as of date July 19, 1935, purporting to be signed by John Collier, Commissioner of Indian Affairs, and John S. Deeds, Acting Director, Division of Grazing Control, purported to be approved and signed by Harold L. Ickes, Secretary of the Interior. If there is no objection that will go into the record at this point. I think it illustrative of the witness' statement.

(The instrument is as follows:)

UNITED STATES DEPARTMENT OF THE INTERIOR,
OFFICE OF INDIAN AFFAIRS,
Washington, D. C., July 19, 1935.

The Honorable, the Secretary of the Interior.

MY DEAR MR. SECRETARY: Representatives of the Division of Grazing in the Interior Department and the Indian Office met in conference July 18 and agreed on a plan for the management of the unentered lands within the ceded Uncompahgre Reservation, Utah.

It was agreed that any action taken to place these lands under range management should be consistent with any prior valid withdrawal from entry, including the withdrawal from homestead entry by the Secretary of the Interior dated September 26, 1933, of the ceded Uncompahgre lands in Utah. This withdrawal was prior to the Executive order of November 26, 1934, promulgated pursuant to the Taylor Grazing Act approved June 28, 1934 (48 Stat. 1269).

Under these conditions we recommend that the ceded Uncompahgre lands in Utah which were temporarily withdrawn from homestead entry on September 26, 1933, be placed temporarily under range management in accordance with the provisions of the Taylor Grazing Act until December 31, 1936, or until the passage of the bill by Congress creating the new Uncompahgre Reservation if it occurs prior to that date. If the Commissioner of Indian Affairs believes that the people of Utah living within or interested in grazing district No. 8 have been working in good faith for the passage of the bill reestablishing an Uncompahgre Reservation and it has not been passed by Congress by December 31, 1936, he agrees to continued administration of the ceded Uncompahgre lands by the Grazing Division of the Interior Department until the said bill has been passed by Congress or until he believes the above-mentioned people have ceased to work for the enactment of said bill. The Commissioner of Indian Affairs shall concur in all matters affecting policy relative to the administration of the ceded Uncompahgre lands. We understand that the stockmen and other interested parties who attended a meeting at Vernal, Utah, on July 10, have agreed to the above conditions.

It is further agreed that these lands now in grazing district No. 6 in Utah, which it is proposed shall form a part of the Uncompahgre Reservation, shall be included with the ceded Uncompahgre lands in grazing district No. 8 in Utah; that only temporary grazing licenses which do not create in the licenses vested rights of any kind in and to these lands shall be issued for grazing livestock within the modified grazing district No. 8; and that the right, title, and interest of the Indians in and to the ceded Uncompahgre lands shall in no way be jeopardized.

Should there be any Indians within the ceded Uncompahgre Reservation who desire the use of these lands for their own livestock, it is agreed that they be given prior right to an allocation of range within grazing district No. 8, irrespective of what their technical commensurability may be.

Respectfully,

HAROLD L. ICKES,
Secretary of the Interior.
JOHN COLLIER,
Commissioner of Indian Affairs.
JOHN F. DEEDS,
Acting Director, Division of Grazing Control.

Mr. WRIGHT. That, no doubt, Mr. Leech, will cover.

I might just refer briefly to one or two items in that agreement. One is that the Indians should receive grazing privileges without cost and regardless of their technical commensurability during the time that this legislation is pending to set up this as an Indian grazing reserve. In addition to that it says that nothing but temporary licenses will be issued. Therefore on account of that agreement the Grazing Service is now unable to issue 10-year permits until this matter is settled.

The CHAIRMAN. That is within the territory embraced within the orange line?

Mr. WRIGHT. Yes, sir. It does not affect the other parts of the district.

The CHAIRMAN. Going back to your former statement as regards the understanding that the Indians had that they might use the range without setting up a commensurate base; is that correct?

Mr. WRIGHT. Yes, sir.

The CHAIRMAN. In other words, they might use as much land as they wanted to, regardless of what their commensurability might be?

Mr. WRIGHT. Well, I don't know as it implied that strong an arrangement. They might use as much land as they wanted to, but they might be granted licenses upon proper applications for whatever livestock they had to run. I might say that has been done as far as that is concerned, but as we acquired these properties—by “we” I mean the Indian Service—we removed the livestock that belonged to the vendors. We called them the vendors, the private owners, and as they sold out they moved off. Then we applied at various times for nonuse licenses pending the time when the Indians could build up their herds and use the area themselves, and also for the conservation and rehabilitation of the range. It is unfortunate for us that those privileges were not granted, and it seemed to us that almost as fast as we moved out the livestock of the stockmen to whom these properties had belonged, someone else moved in with a license from the Grazing Service. Because of this the area has been pretty fully stocked during this interval, both with Indian and white livestock. There is a considerably larger proportion of white stock, however.

The CHAIRMAN. Right at this point, what is the largest holding that any Indian has on the lands purchased from the white people within the black line?

Mr. WRIGHT. The largest holding that was purchased?

The CHAIRMAN. What is the largest holding that any one Indian has?

Mr. WRIGHT. Well, it was purchased, Senator, in the name of the United States, in trust for the Ute Indian tribe.

The CHAIRMAN. Then I take it, and you can see if I have the correct picture, if not you can correct me—I take it the Indians were moved into the properties and lands from whence the white settlers moved out?

Mr. WRIGHT. Yes, sir.

The CHAIRMAN. Was there any limitation to the amount of land any one Indian could have of the lands purchased from the white settlers?

Mr. WRIGHT. No limitation was set up. But there were about 11 homestead ranch holdings in here, and the remainder was home-

stead grazing land, out on the range. All of the homesteaded land shown in this scattered area here, and a large part of this, in fact, on the creek, is just range land, is used in common by the Indians as a tribe, as a whole. But the buildings of the 11 ranch properties are now occupied by Indian families. One pretty good example, what we can refer to as the Jigg Taylor holdings, consisted of a total of 630 acres, approximately, and a little over a hundred acres of that was in cultivation. Three Indian families live on that now.

The CHAIRMAN. If we were to look upon this entire matter from the same standpoint that we would view it under the Taylor Grazing Act, generally speaking, would you say that the lands designated in red would be base lands for commensurate rights on the open public domain?

Mr. WRIGHT. Definitely; yes, sir.

The CHAIRMAN. That is the way I have grasped the situation.

Mr. WRIGHT. Yes, sir.

The CHAIRMAN. Now, if that be base land for commensurability on the open public domain, and if we regard the land within the orange border as open public domain for purposes of this discussion, what would be the largest holding of base land any one Indian would have in there?

Mr. WRIGHT. That is a pretty difficult question to answer. For instance, the A. M. Myrup property we purchased consisted of 8,000 acres of patented land. He had two home ranches there. Three Indian families are on one, and three on the other. They occupy those home ranches with their families. On the remaining 8,000 acres.

The CHAIRMAN. Were the commensurate rights of the white settlers determined under the Taylor grazing system, prior to the time the white settlers were bought out?

Mr. WRIGHT. Not all of them. There were two large holdings that were purchased, and as I say, the options were taken before the grazing district got under organization here. They were the two largest holders, and they never had a license from the Grazing Service. I believe all the remainder did, I am not sure, that is about all of them, but most of the remainder did have a license.

The CHAIRMAN. Where are the base lands in this area upon which the Indians who took over the white settlers' lands sustain their cattle or livestock when the livestock are not on the open public domain?

Mr. WRIGHT. They are now on the creek bottoms, which are shown on this part of the map here colored in red, and along these blue allotted lands, up and down the White River, and, to some extent, up and down the Duchesne River, on these blue and purple lands in here.

Mr. PATTERSON. Is that winter or summer grazing he is talking about?

The CHAIRMAN. We have not gone into that yet. I am wondering—I don't want to go too far into it right now. I don't want to get too much involved here. I want to get the history.

Senator MURDOCK. I would like to ask this question, Mr. Chairman: Is it contemplated by the Indian Service, Mr. Wright, that any Indian other than an Uncompahgre Indian should have any rights within the

grazing reserves or proposed grazing reserve within the black line?

Mr. WRIGHT. Yes, sir. In fact, one herd of sheep belonging to a Uintah has been grazing there for 2 or 3 years.

Senator MURDOCK. So would it be correct to say this, that it is the proposal of the Bureau of Indian Affairs to use as base properties the lands in green, or the lands in blue, or some of them, within the old Uintah Reservation?

Mr. WRIGHT. I might answer that in two ways, Senator. It has been our judgment and our contention all along that these purchased properties would absorb the commensurate lands in this area within the green line, not the black line, but the green line.

Senator MURDOCK. That is, the base properties within the black would be sufficient to have all the grazing lands within the black line allocated to them as base properties?

Mr. WRIGHT. Yes, sir; that has been our contention. It has not been accepted. We also included, however, the small number of blue allotments within this area [indicating].

Senator MURDOCK. Are you informed as to how title originally vested in the white owners to the lands indicated in red, within the black lines?

Mr. WRIGHT. Almost wholly by homestead.

Senator MURDOCK. Would that be the smaller homesteads of 160 acres, or the grazing homestead?

Mr. WRIGHT. Many of them were grazing homesteads, 640 acres.

Senator MURDOCK. But some of them were smaller?

Mr. WRIGHT. Yes, sir.

To answer that former question, Senator, for the record, especially, the Uncompahgre Indians desired this area for their use, and there has been, particularly recently, considerable discussion of trying to obtain that for their sole use, on the ground that the Uintahs and the White Rivers had their grazing lands up here [indicating]. The Uncompahgres thought they were entitled to this area exclusively.

The CHAIRMAN. You are now referring to the area within the black line?

Mr. WRIGHT. I am referring to what is within the black-green line.

The CHAIRMAN. The green line is a kind of an amendment to the black line?

Mr. WRIGHT. Yes, sir. For the record's sake I might make that a little clearer.

That property cost the Indians \$170,000, and the Government paid \$130,000 more to purchase those private lands. Our land field agent appraised the value of those private properties on the basis of a formula that was developed by a good many experienced men. An agricultural land bank agent helped on it. Our land agent would go out to a piece of that property and apply the formula to it, considering the number of acres of alfalfa, the number of acres of pasture and corn, or whatever grew on the property, and then set up the number of livestock that private property would carry. As an illustration, if the property would carry 30 head, then he gave not that value, but after consultation with the Grazing Service, who informed him that a fair ratio of use was 9 months on the public

domain to 3 months on the base property, so he would multiply the 30 head that the fellow could carry on the home ranch by 3 and get 90 head that should run on the public domain, making a total operation there of 120 head year long. The rate of payment was established for most of these properties on an average of about \$45 per animal unit of the properties total carrying capacity. At that rate, the properties cost the Indians approximately \$300,000 and provided carrying capacity in the area of nearly 65,000 animal-unit-months or about 5,400 animal-units year long. From those figures it was contemplated that that base property would absorb all of the public domain in the area, even if nothing else was taken into account.

The **CHAIRMAN**. When you say, "the area" you refer to the black line?

Mr. WRIGHT. Yes, sir; I refer to this green line in this black line.

Now, I might say that in the course of negotiations for purchasing all of this property there were some properties, particularly here on what is called Willow Creek, that we were not able to buy. The price seemed too high, and so it was decided later to modify the boundary, and leave out some of this Willow Creek territory. There are some rather sharp topographic barriers at that point; it is a survey line, so it can be described. This is Willow Creek for the most part coming down there, so the boundary was modified and this area was included on account of topography again. There is a ridge around here and this was the new line that was drawn.

The **CHAIRMAN**. You are referring now to the green line?

Mr. WRIGHT. Correct, so when I am talking about the carrying capacity I am now talking about the lands within the green line instead of the black line.

Now, that is a pretty high carrying-capacity figure, and if they use what has later been determined by the Indian Service range men as the carrying capacity instead of the 5,400 we get about 3,300, and that would run the cost of the animal units on this private property up to about \$88 a head that the Indians paid for it. If we use the Grazing Service's figure which, by the way, has been interpolated from their estimates, they have not actually produced an official figure on this area, then the cost of the carrying capacity per animal-unit purchased in there would be about \$67.

Now, we take the position that from an historical, equitable, and a moral standpoint the Indians are entitled to this area, but aside from that—

The **CHAIRMAN**. Again referring to the area within the black and green line?

Mr. WRIGHT. Yes, sir. But aside from that standpoint we feel quite sure that they have purchased it outright, and from a business standpoint they are entitled to it, even forgetting the whole history that I have attempted to describe.

The **CHAIRMAN**. Well, they purchased it outright, as far as they could purchase, transferring title in fee simple to the purchasers. You call it a purchase. It has to come by recognition of a commensurate right.

Mr. WRIGHT. Yes; that's right. I realize there is some question on that point.

Senator MURDOCK. Are we correct in coming to this conclusion, Mr. Wright, that there is a difference between the estimate of the Grazing Service which, as I understand you to say, was 5,400 animal unit months.

Mr. WRIGHT. No; that figure was the estimate of our land purchasing agents.

Senator MURDOCK. I thought you said it was the Grazing estimate.

Mr. WRIGHT. No; there was an interpolated figure which resulted in an animal-unit cost of \$67.

Senator MURDOCK. What was this 3,300?

Mr. WRIGHT. The estimate the area's conservative carrying capacity made by our Indian Service men.

Senator MURDOCK. Do you refer to that as 3,300 animal-unit months?

Mr. WRIGHT. No, sir. That figure means 3,300 animal units year-long.

Senator MURDOCK. As the carrying capacity of the grazing lands plus the base properties within the green line?

Mr. WRIGHT. Yes, sir; that is my understanding.

The CHAIRMAN. That is on the basis of how many months?

Mr. WRIGHT. The year long.

The CHAIRMAN. Twelve months?

Mr. WRIGHT. Yes, sir; and the Grazing Service has a somewhat higher estimate, that is true.

Now, I don't know as I am entirely clear on the effort to get legislation that would set this up as a reserve, but I might mention that during this interval of 7 years while this has been pending and been in controversy between our own service, and, to some extent, the Grazing Service, and the local stockmen here, and various organizations among the white people here, controversies have arisen all the time in this area and it has been very difficult to administer with any degree of fairness, or any feeling of permanency at all, or any ability on the part of anyone to make any permanent future plans. They have disagreed about rates, and about who should be in there, and who should be out, and about who had the rights and vested rights, and about where the Indians should go, and the white fellow should go, and it has been a very difficult situation. As I understand it, Mr. Murdock introduced a bill to set up this area as a grazing reserve.

Senator MURDOCK. Let me see if I can set you right on my position. About 3 or 4 years ago my conclusion was that our experience with the setting up of Reservations had convinced me that that was not the proper way to handle the Indian grazing situation. Now the proposal that I made, and the bill that I introduced, contemplated setting up an Indian grazing district, under the formula of the Taylor Grazing Act. Now, my attitude is that the Indian citizen is entitled to grazing rights on exactly the same basis as the white citizen, and that has been my idea of the solution of this problem, giving the Indian exactly the same grazing rights commensurate with his base property that the white livestock owner has; and the objections that I had to the bill that passed the House during the last session was that that bill, without my knowledge at all, contemplated again setting up an Indian reservation.

Now, the reason that I object to a reservation is this: I think that as the Indians grow in the livestock business, it is certain that they are entitled to grazing rights; but I can see no reason and no justification in setting up a great large reservation for the Indians, unless they have some beneficial use for it.

Mr. WRIGHT. Of course, as far as my statement is concerned, I had better not try to trace the legislation's history. You, of course, know it better than I do.

I want to make one more point, however, if I may. Some sort of legislation has been pending here for a long time, and it has not been accomplished, and it has made for a difficult situation here for all of us. Everybody in this room knows that. So the Secretary of the Interior thought that he had authority to set up a special grazing district. I don't mean he thought he had that authority. I suppose he was sure about it, so that an order has been prepared, and I understand signed by the Secretary of the Interior, to set up this area as a grazing district for the Indians. That is, within this green line, approximately. But that order has not been issued, and it is hoped that out of the discussions here at your hearing today and tomorrow some sort of an agreement might be reached, by which this order can be issued, and legislation following it, to make it permanent, and to settle this matter, so that we, all of us here, will know where we are.

Senator MURDOCK. May I ask this question, What is the number of Uncompahgres, now, that are involved in this matter?

Mr. WRIGHT. Approximately 600, Senator.

Senator MURDOCK. Is that men, women and children?

Mr. WRIGHT. Yes, sir; Uncompahgres. There are 1,422 Ute Indians in our reservation here.

Senator MURDOCK. That is including children as well as adults?

Mr. WRIGHT. That is the entire tribe.

Senator MURDOCK. Now, is it the intention of the Indian Bureau to locate the entire 600 Uncompahgres within the area within the green line?

Mr. WRIGHT. Well, with rather few exceptions, yes, sir. Some of the Uncompahgres have intermarried, during the years with these other people, and live—I don't know the exact number that live up there, but there are relatively few.

Senator MURDOCK. Could you break the 1,422 down to adult males, adult females, and so on?

Mr. WRIGHT. I could give you that, sir; I don't have it with me.

The CHAIRMAN. I would like to have that if you can get it.

Now, just one question as regards the Ute Indians, other than the Uncompahgres. They have the land embraced within the yellow on the map for grazing purposes, is that correct?

Mr. WRIGHT. Yes, sir.

The CHAIRMAN. How much land is embraced in the yellow?

Mr. WRIGHT. Approximately 270,000 acres.

The CHAIRMAN. How many livestock have they, other than the Uncompahgres?

Mr. WRIGHT. Approximately 3,000 head of cattle, about 4,000 head of sheep.

The CHAIRMAN. And the Uncompahgres have about how many livestock?

Mr. WRIGHT. About 1,290 head of cattle and 7,000 sheep.

The CHAIRMAN. And the land embraced within the black and green lines surrounding the red, indicating what has been purchased, comprises about how many acres?

Mr. WRIGHT. About 650,000.

The CHAIRMAN. I notice a space there that seems to be out of the survey. Am I correct in that?

Mr. WRIGHT. That is unsurveyed land; yes, sir.

The CHAIRMAN. That is all contemplated to be included in this?

Mr. WRIGHT. Yes, sir.

Senator MURDOCK. I wonder if you will give me the figures on the cattle and sheep holdings of the White Rivers and Uintahs?

Mr. WRIGHT. White Rivers and Uintahs combined, about 3,000 head of cattle and 4,000 head of sheep.

The CHAIRMAN. Now, do the White Rivers and the Uintahs range those cattle now along the yellow lands?

Mr. WRIGHT. Yes, sir.

The CHAIRMAN. And they have their base lands in the blue?

Mr. WRIGHT. Yes, sir.

The CHAIRMAN. And I am interested in knowing what crops are harvested on the red lands that have been purchased from the whites.

Mr. WRIGHT. There is only about 1,100 acres in this entire 32,000 acres that was purchased, that is cultivatable. The rest of it is open range land. The crops grown on that approximate acreage of eleven hundred consists chiefly of alfalfa hay, some timothy and grain. Things of that kind are raised, corn and garden crops, some wheat, and other small acreages of beans.

The CHAIRMAN. Well, of the stock that would be ranged on the open lands—when I use the term “open lands” I mean other than land held in fee simple—of the stock that would be ranged on the open lands, where would the base lands be for their sustenance for the winter months?

Mr. WRIGHT. They would be, as I mentioned a moment ago, Senator, chiefly on the creek bottoms of what is known as the Hill Creek; up and down here for about 50 miles. There is one holding here on Willow Creek; an Indian has 170 head there now. He put up two stacks of hay, and has river bottom meadow. Then on this White River land here, they flooded some of these lands here last year, by putting obstructions in the river, and the natural western wheat grass is as high as this table; and many hundred head, I should say five or six hundred head, of cattle are wintering there now.

The CHAIRMAN. They winter on the land without harvesting the crop?

Mr. WRIGHT. This kind of winter; yes, sir.

The CHAIRMAN. Does that come to this district each year?

Mr. WRIGHT. Well, this is an unusual winter, like California; but it is quite common. Of course the advocated practice is to have some hay for reserve purposes. Of course, that is very necessary.

The CHAIRMAN. Referring now to the yellow lands, which I understand are used by the White River and the Uintahs for grazing, do they lease to whites?

Mr. WRIGHT. Not lease, Senator, but permit.

The CHAIRMAN. Permit?

Mr. WRIGHT. Yes, sir.

The CHAIRMAN. About how many?

Mr. WRIGHT. Forty percent white users, last year, and 60 percent Indian, on the yellow lands.

The CHAIRMAN. And as regards the lands surrounding the red, and within the black and green borders, are there permits issued by the Indians there?

Mr. WRIGHT. No, sir. The Grazing Service have been issuing permits there for the white use.

The CHAIRMAN. What is the percentage there between the whites and the Indians?

Mr. WRIGHT. Forty-nine percent white and 51 Indian, in this area at the present time.

The CHAIRMAN. How much grazing by the Indians is there on the national forest?

Mr. WRIGHT. As much as we can get, which amounts to about a thousand head now. We have an old agreement with the national forest, that was developed in 1906, which said that 1,200 head of Indian horses and cattle could run for 6 months, upon the national forest; and we have been getting about a thousand head of that for the last few years.

The CHAIRMAN. Are there any sheep up in there?

Mr. WRIGHT. That includes sheep. It is the equivalent of 400 head of cattle in all; in the equivalent of sheep on this area.

Senator MURDOCK. The life on the forest is fixed at the 1,200 head of cattle?

Mr. WRIGHT. Yes, sir; cattle and horses, it said.

Senator MURDOCK. What was the consideration, Mr. Wright, for that right that was given to the Indians?

Mr. WRIGHT. When this national forest was created in 1906 either the Indians or Captain Hall of the United States Army who was the Indian superintendent said, "Now, this is a funny way to lay out a grazing area. This is spring and fall range, instead of spring and fall and summer range, and the Indians' horses and cattle have been running up here and back, covering both areas. There are no fences, no barriers or anything, and you cannot keep the Indian stock off that forest. It seems like they are entitled to run there. What are we going to do about it?"

The Forest Service said, "Count up what you have got there, and we will make some sort of an arrangement." So Captain Hall counted them, and he got 2,400 head that grazed up in here. They said, "They will drift up and back; we will split the difference and call it 1,200 head on the forest for the summer season." I believe they mentioned 6 months, although it may have been just the summer season. As a matter of fact they only range there for 4 months, at the present time; and in consideration for that the Indians will allow the white permittees who take their cattle on the national forest to cross this yellow

land free of charge, whenever they have to take their herds off the national forest. In addition to that the Indians waive the regulation of advertising to the highest bidder for any surplus grazing the Indians may have; waive that regulation and permit the four permittees to have that privilege of going up and down, and they can be the ones using the surplus range on this land, instead of being subject to the bidding process, which might eliminate them.

Senator MURDOCK. When a cut is made on the forest, as I presume that it has been made, what happens to the Indians' right of grazing on the forest, the 1,200 head? Has that been cut?

Mr. WRIGHT. We have contended that nothing should happen to that right; but actually during the 30 years or more that the Forest Service has been in operation, the use by the Indians on the national forest dwindled from that 1,200 head to almost nothing in 1936. There were only 300 or 400 head of grazing up there at that time. The Forest Service personnel had changed from time to time, and were not aware of this old arrangement. They said, "We have now issued permits to the white permittees, which have almost completely stocked this range; and we don't know that there was any such agreement as that. But in order to be cooperative we will do the best we can with you. But we cannot give you any 1,200 head." They made some shifts, as best they could, and took care of whatever they could that first year. It increased a little each year, until they got up to a thousand. But we have been anxious to have a review of that old understanding, and have it placed on a permanent basis, so that we can plan. For instance, at the present time we have had quite an increase in this Indian stock, and we don't know where we are going to put them next summer. It creates a problem. We have either got to take some of the white stock off of here, for spring and fall use, and take care of these Indians' stock, or the Forest Service has got to reduce some permittee there to take care of it.

Senator MURDOCK. A stockman at Heber City yesterday referred to a cash item that is being held for a number of years. I think he said \$300; as the result of this Indian right on the forest. He did not explain fully to me about it, and I wonder if you know anything about that. He did suggest that something should be done.

Mr. WRIGHT. No, I don't know a thing about that.

Senator MURDOCK. He simply hurriedly told me about it; referred, I think it was, to an item of \$300 in cash.

Mr. WRIGHT. I recall the record in going through the file there. Ten years ago a man over there was charged a crossing fee. I don't know whether he paid it and expects to have it refunded. I am not familiar with it, but there was a mistake made some 10 years ago on a crossing fee.

Senator MURDOCK. If I may refer to the base properties within the green and black lines, title to that has been taken collectively, has it not?

Mr. WRIGHT. Yes, sir; that is right, the Ute Indian Tribe.

The CHAIRMAN. That is taken by the Government for the Indians?

Senator MURDOCK. It is held collectively now. Is it the plan, do you know, to divide that up individually between the Indians?

Mr. WRIGHT. No, sir; no such plan as that now, except for the home properties, where they live in there, little cabins that are there, and

make a garden and put up their hay for that home operation. That is assigned to individual families; yes, sir; but, as I say, there are only 11 of those.

The CHAIRMAN. Where do the greatest group of Uncompahgres live?

Mr. WRIGHT. Here at Ouray.

The CHAIRMAN. Is that the reservation?

Mr. WRIGHT. Yes, sir; that is the headquarters for the reservation.

The CHAIRMAN. What is the income? What is the amount of the income derived by the Indians from their agricultural pursuits, referring now first to the White Rivers and the Uintahs? What is the annual income, say, for a period of 3 to 5 years back?

Mr. WRIGHT. Family income?

The CHAIRMAN. Break it down into the family, or you can take it as a group, just as you like. Perhaps you would prefer to break it down. But I wanted, first of all, what is the income from that group known as the White River and Uintahs, from their agricultural pursuits? I take it all of their income, aside of what comes from the Government, comes from agricultural pursuit.

Mr. WRIGHT. Agricultural and labor.

The CHAIRMAN. Hold it down to agricultural pursuits. What have they derived from any period of years you see fit?

Mr. PATTERSON. Including livestock as agriculture.

Mr. WRIGHT. I don't have it broken down between the bands, Senator. We have it only as a tribe.

The CHAIRMAN. Take the whole three groups as a tribe.

Mr. WRIGHT. Yes, sir. Our reports show it as the tribe as a whole.

The CHAIRMAN. If you could break it down for us—we are dealing with a question here which seriously involves one branch of your tribe, which is the Uncompahgres, and you have dealt with them separately here in your discussion. I would like to know what the agricultural income, the income from agriculture embracing livestock, of the two groups, the Uncompahgres as one and the White River and Uintahs as the other. Then, if you care to break it down by units of families, that would be all right.

Mr. WRIGHT. That will be easy to obtain. I will have it for you tomorrow morning.

The CHAIRMAN. The committee would like to have a break-down of the income from agricultural pursuits of the respective groups, and the income derived by the respective groups from the letting of permits to white settlers on these tracts.

Mr. WRIGHT. Yes, sir.

The CHAIRMAN. If you would be so kind as to get that for us we would appreciate it. Have you about concluded?

Mr. WRIGHT. I believe I have, sir.

Senator MURDOCK. One other item, Mr. Wright, would be informative. What is their income from leasing water rights? Do they lease any water at all?

Mr. WRIGHT. No, sir.

Mr. PATTERSON. May I ask for a couple of documents, first the agreement of July 12, 1935, between the Indian Service and the Grazing Service in relation to cooperative agreement; that is, July 20, 1935.

November 20, 1936, that was extended. I would like to have the extension agreement.

The CHAIRMAN. I have in my hand here the first instrument you called for. It has been admitted in the record. Further extended, November 20, extending the agreement of July 20?

Mr. PATTERSON. That was taken from a letter written to Mr. Seeley on March 4, 1940. I would like to see the first two.

Mr. WRIGHT. I have the first one. I don't know whether I have the others.

The CHAIRMAN. Before you leave, Mr. Wright, we should like to have one expression from you. I caught, at the early part of your discussion, that you did not regard from the history that you know of this tribe, speaking now of the three groups of one tribe, you did not regard them as an agrarian tribe?

Mr. WRIGHT. No, sir; not originally at all.

The CHAIRMAN. They were more given to the chase, and so on?

Mr. WRIGHT. That is right.

The CHAIRMAN. They made their living that way?

Mr. WRIGHT. Yes, sir; distinctly so.

The CHAIRMAN. Now, how has the population increased or decreased in the past decade?

Mr. WRIGHT. A slight increase in the last decade, Senator, from about 1,350 to the present population of 1,422.

Mr. PATTERSON. Will we be permitted to ask him a few questions after lunch?

The CHAIRMAN. Yes. We will now recess until 1:15.

(Recess until 1:15 p. m.)

The CHAIRMAN. The committee will be in order.

I understood there was someone who wanted to interrogate Mr. Wright. Are there any questions? Does anyone wish to propound any questions to Mr. Wright?

Let the Chair make it clear now that at any time during the hearings, if anyone in attendance cares to propound a question to anyone who is testifying, if they will stand and make known their name, so that the record may be clear we will be glad to have them propound the questions. It is the view of the committee that those who are on the ground, and who know the problems from their respective standpoints, are best qualified to interrogate in many instances; and the committee is here for the purpose of getting all the enlightenment it can, on every phase of the subject. So let no man hesitate to propound any question. Simply rise, and give your name, so the record will disclose who you are, and propound your question. Is there anyone in the audience who desires to interrogate Mr. Wright now while he is on the stand?

Very well, we will call Mr. Leech. Before we do that, I would like to ask one question myself of Mr. Wright.

Mr. Wright, I think we asked you to get for the committee, during the course of the hearings here, the data as to the amount received by the tribe from agricultural pursuits, and also the amount received by the tribe from permits?

Mr. WRIGHT. Yes, sir.

The CHAIRMAN. Make that broad enough to cover both lease and permit, as those terms apply. In other words we would like to ask for those.

Mr. **RAY DILLMAN**, attorney-at-law, Roosevelt, Utah. Might we ascertain the income that is derived from the ceded lands themselves, south of the Duchesne, and break it down also north of the Duchesne; the two units?

The **CHAIRMAN**. Can you do that?

Mr. **WRIGHT**. We can do that, yes, sir; I think by tomorrow morning.

The **CHAIRMAN**. Any other information desired from Mr. Wright while he is before us? Mr. Wright, did you intend to give the committee the benefit of your knowledge as regard the attitude of the Indians with reference to the ceded lands south of the Duchesne?

Mr. **WRIGHT**. I would be glad to do that if you desire it.

The **CHAIRMAN**. Yes; we would like to have it.

This "ceded lands," that is a misnomer, in reality, isn't it?

Mr. **WRIGHT**. Yes, sir. The proper name for those lands is the opened, unsold lands in the Uintah Reservation. But, if I may, I have always been calling them ceded lands.

The **CHAIRMAN**. Very well, that is all right.

Mr. **WRIGHT**. About 4 years ago, as I recall it, a proposal was made that this Uncompahgre area or what we have called the Ute extension area, which is shown on the map within the green and black line there, should be set up as a reserve, or a special grazing district for the Indians; but, if that were done, that the ceded lands, within the old Uintah Reservation, should also be disposed of; that such disposal should be made so that it would benefit the users, white users particularly, in Duchesne County. Those ceded lands have been used for years as a sort of no-man's land, with no administration on them, scarcely, and they lay in such locations that they had to be used by the Uintah National Forest permittees and by the white owners of their lands interspersed among them. So a proposal was made to the Indians that they consent to giving up at least a large portion of those ceded lands, in order to make the use among the white people more logical, more convenient; and, also, as a part of a trade, to get this Uncompahgre area for their Uncompahgre neighbors. The Indians replied in effect as follows: "We don't think it is right that we should be asked to give up some of our ceded lands on the Uintah Reservation, in order to see that Uncompahgre area established for the Uncompahgres. We have heard a good deal already about the laws that have been passed, and orders by the President, and so forth; but we always thought that country belonged to the Uncompahgres anyway. That is our understanding; it was promised to them in the beginning. When the Uintah Reservation land was taken away from us, the white people paid \$1.25 an acre for it when they homesteaded it. We have gone into the old Uncompahgre area as a united tribe, and paid much more than that to get the land back. Now we are being asked to give up the ceded lands. But if that is the only way it can be done—it is true we are not using much of those ceded lands—we will consent to let those ceded lands south of the Duchesne and Strawberry Rivers go, on five conditions:

"First, that the Uncompahgre Reservation is set up for the Ute Indians. Second, the mineral rights be reserved, on those ceded lands, to the Indians. Third, that we get paid for whatever the value is of those ceded lands. Fourth, that we collect the grazing fees on those ceded lands while we are waiting to get paid. We remember it took 30 years to get paid for the forest lands. Fifth, that the Avintaquin

Canyon country which runs down through those ceded lands be reserved to us as a special hunting ground, in order that we be allowed to have exclusive hunting privileges on that canyon country."

Well, those conditions were submitted to Washington. Some of the attorneys for the Indians visited the reservation and explained in a meeting of the Indians that those conditions were hardly feasible, that the mineral rights already belonged to the Government, they would have to repeal existing laws; that the Uncompahgre Reserve could be set up as one condition, and they would probably get paid for the lands if they were taken. That would be fulfilling two conditions, and they probably would get paid in such a short time that they would not realize a great deal even if they did collect the grazing fee. They could not have the Avintaquin country for exclusive hunting grounds, because the white people owned lands in there already, and they could not exclude any man from his own land. So this proposal could not be fulfilled except as to two of their conditions. Even so, the Indians who met in these meetings said, "Well, if that's the best we can do you go ahead and do what you can with it, and we'll be content."

That is about the way in which they consented to the disposal of their ceded lands, in a trade to have this Uncompahgre Reservation set up for the Uncompahgres, or for the Ute tribe as a whole; and it was the understanding that the ceded lands north of those two rivers would be restored to the Indians.

The CHAIRMAN. Thank you, Mr. Wright.

Mr. PATTERSON. Could we ask Mr. Wright some questions?

The CHAIRMAN. Yes; I called for you before. Do you wish to interrogate Mr. Wright now?

Mr. PATTERSON. Mr. Wright, I take it you are supporting this House bill 837?

Mr. WRIGHT. Not necessarily, sir.

Mr. PATTERSON. You are supporting legislation of that character, I take it?

Mr. WRIGHT. Well, I suppose I could go that far; yes, sir.

Mr. PATTERSON. That is the purport of the bill; to make a withdrawal of that specific area for the benefit of the Indians?

Mr. WRIGHT. Yes, sir; to that extent we are supporting it.

Mr. PATTERSON. And as I understand it you present two points: First, that the Grazing Division has no jurisdiction over the area in question; that is, the black area, the area bounded in black as modified by the green lines on the east; that they have no jurisdiction by reason of the fact that the land was withdrawn by the act of 1933. Is that correct?

Mr. WRIGHT. Well, that they have jurisdiction by virtue of the agreement between the Indian Office and themselves.

Mr. PATTERSON. They have jurisdiction by virtue of it?

Mr. WRIGHT. Yes, sir.

Mr. PATTERSON. Then you claim nothing now under that theory that it was withdrawn, and, therefore, the Grazing Division has no jurisdiction?

Mr. WRIGHT. No; we don't claim that at all.

Mr. PATTERSON. Then your other point is that the Indian Department has gone into this area and purchased certain base property, and

with that base property you purchased the grazing rights that went with it?

Mr. WRIGHT. Yes, sir.

Mr. PATTERSON. And that the Indians are entitled to enjoy those rights?

Mr. WRIGHT. That is right.

Mr. PATTERSON. That is your main point, is it not?

Mr. WRIGHT. Yes, sir.

Mr. PATTERSON. Now, you referred to an agreement or two here, copies of which, one, at least, was put in evidence. This document of July 10, 1935, where you say the grazing board here, and the stockmen of this area, all agreed, that this, whatever this agreement is—I hand it to you. Is that the agreement you referred to?

Mr. WRIGHT. I referred to that; yes, sir.

Mr. PATTERSON. Now, at the time you had that meeting, where was that meeting held, here?

Mr. WRIGHT. I believe here in this room.

Mr. PATTERSON. You were present?

Mr. WRIGHT. No, sir.

Mr. PATTERSON. Who represented the Indian authorities at that time?

Mr. WRIGHT. Their names are on there. I could not identify them. If you would hand it to me—they were James M. Stewart, Richard B. Millin, Mark W. Radcliffe, Robert Marshall, and L. W. Page.

The CHAIRMAN. They represented the Indian Service?

Mr. WRIGHT. Yes, sir.

Mr. PATTERSON. Were you here following the transaction at the time?

Mr. WRIGHT. No, sir; I was not here.

Mr. PATTERSON. You were not here at that time?

Mr. WRIGHT. No, sir.

Mr. PATTERSON. Did Mr. Page have charge of the reservation at that time?

Mr. WRIGHT. That is right.

Mr. PATTERSON. Do you know that at that time they agreed in great detail as to how this particular area should be operated? Do you know that?

Mr. WRIGHT. I don't know in how great a detail, but there was a good deal of discussion, I know, and I have heard—

Mr. PATTERSON. The stockmen were all interested in the transaction. Did you know that Hugh Colton represented the white users of the range at that time?

Mr. WRIGHT. I understood so.

Mr. PATTERSON. Do you know at that time that a committee was appointed to draft a bill to be sent to Senator Murdock to be introduced in the house at that time?

Mr. WRIGHT. Well, I don't know that I know that. I may have heard of it; yes.

Mr. PATTERSON. Have you since ever gone over the bill that was sent to Mr. Murdock?

Mr. WRIGHT. There have been so many, Mr. Patterson, that I don't know whether I really saw this particular one you are referring to or not. Seems to me there have been quite a number of bills and

orders during this last 7 years. I could not say that I am familiar with that particular one.

Mr. PATTERSON. If you have looked over their bill, I ask you to state if you observed in paragraph—

The CHAIRMAN. To what bill are you referring?

Mr. PATTERSON. To the one prepared by Mr. Colton, pursuant to the meeting of July 10, 1935; prepared by him, at the instance of this meeting, to present to Senator Murdock for introduction, subject to such revisions as he might care to make.

The CHAIRMAN. What was the date on it?

Mr. PATTERSON. Identify it by the letter sent on the 19th of July 1935. Did you know that meeting agreed upon a bill which contained the following paragraph:

And all persons who have established a right to use the public domain in the said area under provisions of the Taylor Grazing Act will be permitted by the Office of Indian Affairs to graze upon the land upon which they have been licensed to graze by the Division of Grazing at a charge not to exceed that which they would be charged for similar privileges under the rules and regulations of the Division of Grazing until such time as said licensees or their successors in interests shall sell their holdings within the said area to the United States Government for the use and benefit of the Indians entitled to use their reservation.

Mr. WRIGHT. I think we had that understanding.

Mr. PATTERSON. Those were the inducements which caused this alleged agreement to be signed?

The CHAIRMAN. How can he testify to that when he wasn't here?

Mr. PATTERSON. Well, I think he has a general understanding of it.

Mr. WRIGHT. I don't know about that.

The CHAIRMAN. I am wondering how you can testify to it.

Mr. PATTERSON. Unless he knows the history of the—

The CHAIRMAN. I don't want to be captious; the rules before the committee are rather lax in that respect; and I don't want to put someone in a position where he has to testify to something he doesn't know.

Mr. PATTERSON. I appreciate that, Mr. Chairman.

It was your understanding at that time and in your later dealings in connection with this matter that in your later dealings with the Grazing Division that the United States, or the Indian Agency, would go in there and purchase all of the livestock owners of that area?

Mr. WRIGHT. Do you mean the area within the green and black line there?

Mr. PATTERSON. Yes.

Mr. WRIGHT. Yes; that was our understanding.

Mr. PATTERSON. They were not only to purchase the base property, buy the cattle, and even give them a bonus on the cattle?

Mr. WRIGHT. No; I don't recall that I have heard of it, but I don't know whether it was agreed upon or not.

Mr. PATTERSON. It was never done?

Mr. WRIGHT. The cattle were not purchased; no.

Mr. PATTERSON. Pursuant to the provisions of the Grazing Act, your department, I take it—you are familiar with the so-called Taylor Grazing Act?

Mr. WRIGHT. Maybe not from a lawyer's standpoint.

Mr. PATTERSON. I don't know of anyone else that is, from a lawyer's standpoint. It provides that no lands withdrawn or reserved for any purpose shall be included in any such district so organized by the Secretary of the Interior. Let me go back a little farther. It says:

That in order to promote the highest use of the public lands pending its final disposal, the Secretary of the Interior is authorized, in his discretion, by order to establish grazing districts, or additions thereto, and/or to modify the boundaries thereof, not exceeding, in the aggregate, an area of 80,000,000 acres of vacant, unappropriated, and unreserved lands from any part of the public domain of the United States (exclusive of Alaska), which are not in national forests, national parks and monuments, Indian reservations, revested Oregon and California railroad grant lands, or revested Coos Bay Wagon Road grant lands, and which in his opinion are chiefly valuable for grazing and raising forage crops: *Provided*, That no land withdrawn or reserved for any other purpose shall be included in any such district, except with the approval of the head of the Department having jurisdiction thereof.

Now, I take it, you spoke this morning of having several agreements with the grazing division in relation to this matter. I take it that you were acting pursuant to this provision of the Grazing Act which permitted your Department to cooperate with the Division of Grazing for the administration of these lands, were you not?

Mr. WRIGHT. That is a long drawn-out question. I don't know whether I am answering right or not when I say "Yes" or "No." Furthermore, we don't have any department. We are in the Interior Department.

Mr. PATTERSON. But this primary agreement that was signed, the third agreement, was signed by Collier, was it not?

Mr. WRIGHT. I think so.

Mr. PATTERSON. Without a doubt you thought you had authority to negotiate those agreements?

Mr. WRIGHT. When you say "you," do you mean the Bureau?

Mr. PATTERSON. The Indian Department.

Mr. WRIGHT. No such thing.

The CHAIRMAN. That is, the Bureau of Indian Affairs.

Mr. PATTERSON. Are you familiar with the agreement of July 20, 1935?

Mr. WRIGHT. Which agreement do you refer to?

Mr. PATTERSON. It is the one you put in evidence here between the Grazing Service—

The CHAIRMAN. Mr. Patterson, do you refer to the one put in the record of date, July 19, and approved on July 20?

Mr. PATTERSON. I have, I believe, what is the final agreement between the Indian Department and the Grazing Department, which recites that there was such an agreement on July 20, that they entered into a cooperative agreement involving the lands in question, and this agreement, July 20, 1934, was further extended by another agreement of November 20, 1936. Now, I don't have that agreement. Do you know anything about that?

Mr. WRIGHT. I have seen it, yes sir. I think I have it in my brief case here.

Mr. PATTERSON. Will you produce a copy of it for us?

Mr. LEECH. Here is a copy of it, Mr. Chairman.

The CHAIRMAN. Do you wish it at this time?

Mr. PATTERSON. Yes, sir.

(Thereupon the chairman read the following letter into the record:)

UNITED STATES DEPARTMENT OF THE INTERIOR,
OFFICE OF INDIAN AFFAIRS,
Washington, November 17, 1936.

The honorable the SECRETARY OF THE INTERIOR.

MY DEAR MR. SECRETARY: Reference is made to the agreement of July 19, 1935, signed by the Commissioner of Indian Affairs and the Acting Director of Grazing and approved by the Secretary of Interior, July 20, 1935, relative to placing the unentered lands within the ceded Uncompahgre Reservation, Utah, temporarily under range management in accordance with the provisions of the Taylor Grazing Act. In view of the fact that final action in completing the proposed new Uncompahgre Reservation has not been taken by Congress, it is agreed that the above-mentioned agreement be hereby extended until such final action has been taken by Congress * * * with the understanding that in the meantime grazing fees for Indians are to be waived, retroactive to July 19, 1935.

Sincerely yours,

WM. ZIMMERMAN,
Assistant Commissioner of Indian Affairs.
JULIAN TERRETT,
Acting Director of Grazing.

Approved: November 25, 1936,

OSCAR L. CHAPMAN,
Assistant Secretary of the Interior.

Mr. PATTERSON. Are you familiar with that?

Mr. WRIGHT. I don't know that I've seen that one until right now. There was one later agreement that extended the July 1935 agreement further, for the following year. That's the one I had in mind. It is a different one from the one you mean. We had that understanding, that the agreement had been extended.

Mr. PATTERSON. And it was, and you operated under those instructions until you received a further instruction under date of about March 4, 1940.

The CHAIRMAN. What are those?

Mr. PATTERSON. I don't know. Senator Murdock, I don't know whether this is the document you referred to this forenoon or not. You were going to hold it up for identification. If it is, it is the document I would like to put in evidence.

Senator MURDOCK. No, this isn't the one that I referred to.

Mr. PATTERSON. I ask you to take a look at a letter dated March 4, 1940, addressed to Mr. C. P. Seeley, 503 Federal Building, Salt Lake City, Utah, and signed by E. N. Kavanagh, which identifies a copy of a joint instruction agreement, and ask you to examine the instruction agreement, and ask you to state if you have been instructed in accordance with that instruction. You may examine the letter if you wish, too.

The CHAIRMAN. In order to be clarifying here for the record, this morning we held up a proposed exhibit looking for it to be checked for correction, and we think perhaps it might go into the record now to aid council in interrogating. It is of June 12, 1933, over the signature of John Collier, attached to which is an instrument purporting to have been signed by T. A. Walters, First Assistant Secretary, and also attached to which is an instrument purporting to have been signed by D. K. Parrot, Acting Assistant Commissioner of the General Land Office. If it will be of any assistance to you, you may

have it in the record now, unless there is some objection to it. I think it would be clarifying, perhaps.

(The documents referred to read as follows:)

JUNE 12, 1933.

The honorable the SECRETARY OF THE INTERIOR,

(Through the Commissioner of the General Land Office).

MY DEAR MR. SECRETARY: By Executive order of January 5, 1882, a tract of land in central eastern Utah, adjoining the then Uintah and Ouray Reservation, was reserved for the Uncompahgre Ute Indians. The order is set out below, which embraced approximately 78 townships, or about 1,800,000 acres:

"It is hereby ordered that the following tract of country, in the Territory of Utah, be, and the same is hereby, withheld from sale and set apart as a reservation for the Uncompahgre Utes, viz: Beginning at the southeast corner of township 6 south, range 25 east, Salt Lake meridian; thence west to the southwest corner of township 6 south, range 24 east; thence north along the range line to the northwest corner of said township 6 south, range 24 east; thence west along the first standard parallel south of the Salt Lake base line to a point where said standard parallel will, when extended, intersect the eastern boundary of the Uintah Indian Reservation as established by C. L. Du Bois, United States deputy surveyor, under his contract dated August 30, 1875; thence along said boundary southeasterly to the Green River; thence down the west bank of Green River to the point where the southern boundary of the said Uintah Reservation as surveyed by Du Bois, intersects said river; thence northwesterly with the southern boundary of said reservation to the point where the line between ranges 16 and 17 east of Salt Lake meridian will, when surveyed, intersect said southern boundary; thence south between said ranges 16 and 17 east, Salt Lake meridian, to the third standard parallel south; thence east along said third standard parallel to the eastern boundary of Utah Territory; thence north along said boundary to a point due east of the place of beginning; thence due west to the place of beginning."

From 1882 to 1899, 105 allotments were made on the Uncompahgre Reservation. However, between 1899 and 1905 some of these were relinquished for other lands on the Uintah and Ouray Reservation, to the end that only 83 allottees kept their lands on the Uncompahgre Reserve. The lands not included in individual allotments were restored to the public domain in accordance with the provisions of the act of June 7, 1897 (30 Stat. 87).

These particular Uncompahgre Indians are strictly a stock raising people and their livelihood depends on obtaining additional grazing land, as their present land holdings do not provide sufficient range for their cattle. To meet this situation and in a strong belief that the lands legally belong to their tribe, the Indians are vigorously urging that their original reservation be returned to them, subject, of course, to all existing valid rights to lands heretofore disposed of therein.

Section 4 of the act of March 3, 1927 (44 Stat. 1347), permits the temporary withdrawal of lands for Indian purposes but prohibits permanent withdrawal except by act of Congress. Therefore, legislation will be required before a withdrawal as proposed herein can be made permanently. However, it is essential that the lands be withdrawn temporarily from disposition under the public land laws pending consideration of the matter by Congress, and also so that the range may not be destroyed by bands of sheep now driven in from Colorado and parts of Utah outside of the land in question.

It is, therefore, recommended under authority contained in section 4 of the act of March 3, 1927, *supra*, and subject to all existing valid rights, that all vacant, unentered, and undisposed-of public lands within the area that was embraced in the Executive order of January 5, 1882, be temporarily withdrawn from all forms of entry under the public land laws in aid of proposed legislation permanently reserving the lands as a grazing range for the Uncompahgre Ute Indians and for white stockmen within the area, with the understanding that pending the enactment of legislation as hereinabove referred to this temporary withdrawal shall not deprive the other Indians or the white stockmen of Utah who have been utilizing any of the public lands within the withdrawn area from the continued use of such lands for grazing purposes, under approved permits from the Commissioner of Indian Affairs.

Respectfully,

JOHN COLLIER, *Commissioner*.

GENERAL LAND OFFICE,
Washington, D. C.

(See G. L. O. memo of 9/23/33 herewith.)

There are no reasons appearing in the records of this Office why the foregoing recommendation should not be approved.

Acting Assistant Commissioner.

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
September 26, 1933.

The foregoing recommendation for the temporary withdrawal of vacant and unentered lands within the area embraced in Executive order of January 5, 1882, as a grazing reserve, in aid of legislation to make the withdrawal permanent, is hereby approved and the matter referred to the Commissioner of the General Land Office for appropriate notation upon the records of his office. This withdrawal is made subject to all existing valid rights and withdrawals affecting any of the lands embraced therein.

T. A. WALTERS,
First Assistant Secretary.

DEPARTMENT OF THE INTERIOR,
GENERAL LAND OFFICE,
Washington, September 23, 1933.

Memorandum for the Secretary.

Referring to the attached draft of temporary withdrawal order recommended for departmental approval by the Commissioner of Indian Affairs on June 12, 1933, I have to advise that as amended by adding "This withdrawal is made subject to all existing valid rights and withdrawals affecting any of the lands embraced therein" there are no reasons appearing in the records of this office why the recommendation of the Commissioner of Indian Affairs should not be approved.

D. K. PARROTT,
Acting Assistant Commissioner.

The CHAIRMAN. We have been using a map that is on the wall. Is there anyone here who cares to object to the correct portrayal of that map for the purposes for which it is used, namely, to portray the lands by metes and bounds and general territorial position in controversy? Does anyone object to that?

Senator MURDOCK. I believe it might well be stated, Mr. Chairman, that the map is prepared by the Bureau of Indian Affairs, and has been used in a number of hearings concerning this same subject. It was brought out here by Mr. Haskell.

The CHAIRMAN. Is it agreed that it correctly portrays the lands involved in this hearing, and sets forth correctly the legal subdivisions?

Mr. PATTERSON. We agree to that.

Mr. LEECH. The Grazing Service accepts it, Mr. Chairman.

The CHAIRMAN. We have an agreement here; we are making headway. We have got one agreement.

THOMAS C. HAVELL, Supervisor, branch of Adjudication, General Land Office, Washington, D. C. Mr. Chairman, may I say that I was requested by Mr. Haskell to look the map over with reference to statistical data on file in the General Land Office? I found it, in all the checks that I applied to it, to be correct and in conformity with the records of the Land Office, as far as it goes. But there are some things that are not shown. What it does depict, I've found to be correct.

Mr. PATTERSON. Is that correct, Mr. Wright, that those are the instructions you have been operating on since November 17, 1936?

Mr. WRIGHT. Yes. I might say, however, that I did not understand that that in any way superseded the original agreement. But it was a set of joint instructions for operational purposes.

Mr. PATTERSON. I would like to get this in the record some way. I have but one copy.

The CHAIRMAN. I take it we can get other copies. Mr. Leech, have you other copies?

Mr. LEECH. Yes; I have copies right here.

The CHAIRMAN. Well, we will get the copies from Mr. Leech, and it will go in the record.

(The letter and instrument are as follows:)

DEPARTMENT OF THE INTERIOR,
DIVISION OF GRAZING,
Washington, March 4, 1940.

Mr. C. P. SEELEY,
Salt Lake City, Utah.

DEAR MR. SEELEY: Attached herewith are three copies of the joint instructions agreed upon by the Indian Service and the Grazing Service for administrative action in the area in Utah grazing district No. 8 that is of mutual concern to both agencies.

It is believed that these instructions clearly define the objectives and the action to be taken. It is anticipated that the respective representatives of the two Services will be able to get together and work out the problems here in a manner that will be satisfactory and will eliminate further need for special consideration here in Washington.

Very truly yours,

E. N. KAVANAGH,
Acting Director of Grazing.

OFFICE OF INDIAN AFFAIRS,
Washington, November 17, 1936.

The honorable the SECRETARY OF THE INTERIOR.

MY DEAR MR. SECRETARY: Reference is made to the agreement of July 19, 1935, signed by the Commissioner of Indian Affairs and the Acting Director of Grazing and approved by the Secretary of the Interior, July 20, 1935, relative to placing the unentered lands within the ceded Uncompahgre Reservation, Utah, temporarily under range management in accordance with the provisions of the Taylor Grazing Act.

In view of the fact that final action in creating the proposed new Uncompahgre Reservation has not been taken by Congress, it is agreed that the above-mentioned agreement be hereby extended until such final action has been taken by Congress, with the understanding that in the meantime grazing fees for Indians are to be waived, retroactive to July 19, 1935.

Sincerely yours,

WILLIAM ZIMMERMAN, Jr.,
Assistant Commissioner of Indian Affairs.
JULIAN TERRETT,
Acting Director of Grazing.

Approved November 25, 1936.

OSCAR L. CHAPMAN,
Assistant Secretary of the Interior.

DEPARTMENT OF THE INTERIOR,
Washington.

JOINT INSTRUCTIONS TO THE FIELD PERSONNEL, OFFICE OF INDIAN AFFAIRS, AND THE
GRAZING SERVICE, DEPARTMENT OF THE INTERIOR

UTAH

Recent developments indicate that there is some misunderstanding and confusion in the field concerning the status of certain lands and of certain agreements

between the Office of Indian Affairs and the Grazing Service with regard to the administration of these lands.

The lands in question, involving approximately 1,800,000 acres of land now within the boundaries of Utah grazing district No. 8, were withdrawn from entry or disposal pending legislation by order of September 26, 1933. This order is still in effect.

Subsequent to the passage of the Taylor Grazing Act and because the conservation and rehabilitation plans of the Office of Indian Affairs and of the Grazing Service were so closely related, these agencies, on July 20, 1935, entered into a cooperative agreement involving the lands in question. This agreement of July 20, 1935, was further extended by another agreement of November 20, 1935. The agreements refer to the area as ceded Indian lands. It was later determined, however, that the lands were not of the character contemplated for restoration to tribal ownership under section 3 of the Indian Reorganization Act, and instructions accordingly were issued under date of August 22, 1939.

The specific area regarding which misunderstanding and confusion appear to exist is an area of approximately 700,000 acres within which the Office of Indian Affairs has purchased and is continuing to purchase certain base properties for the benefit of the Indians. Subsequent to the completion of the purchase of these base properties, it was the understanding of both agencies that grazing privileges would be accorded to the respective Indian owners under the terms and provisions of the Federal Range Code, and, further, that the Grazing Service, in cooperation with the Office of Indian Affairs, would endeavor to rehabilitate the Federal ranges, which admittedly were overgrazed.

The following joint instructions are issued under the authority of the agreements above referred to and which are still in effect:

1. It is understood by representatives of both services that certain areas are seriously overstocked and that steps should be taken as promptly as possible to relieve this condition.

2. In areas where there exists any dispute or controversy concerning the condition of the range or its carrying capacity range examiners of the Office of Indian Affairs and of the Grazing Service should make joint field examinations and arrive at an understanding regarding the range condition and its carrying capacity.

3. Nonuse licenses issued to the Office of Indian Affairs or to individual Indians owning base property for the purpose of conservation and rehabilitation of the range shall actually be nonuse licenses and the Grazing Service will not issue use licenses to other applications for grazing privileges on the areas covered by any nonuse licenses approved for the purpose of conservation and rehabilitation of the range.

4. Base properties acquired by the Office of Indian Affairs shall be rated and classified in accordance with the provisions of the Federal Range Code approved by the Secretary of the Interior.

5. Grazing fees are not to be charged or collected from Indians operating under license from the Grazing Service in Utah grazing district No. 8.

6. In the event the Office of Indian Affairs leases acquired base properties to white stock operators and such operators receive licenses for use of Federal range, such licensees will be required to pay grazing fees in accordance with section 8 of the Federal Range Code.

7. Funds received as grazing fees from use of these lands will be applied under section 10 of the Taylor Grazing Act.

8. The local offices of the Office of Indian Affairs and the Grazing Service should work very closely in the handling of all problems concerning this area.

JOHN COLLIER,
Commissioner, Office of Indian Affairs.
R. H. RUTLEDGE,
Director of Grazing.

Mr. PATTERSON. Now, as I understand you, Mr. Wright, you feel that the Indians are entitled to sit in on this area and enjoy the rights that would be enjoyed by the sellers of this land had they not sold?

Mr. WRIGHT. Yes, sir.

Mr. PATTERSON. Let me ask you further, since the Indians have acquired these rights, what percentage of that land has been leased out, or rather leased; the livestock being leased by the white settlers?

Mr. WRIGHT. None has been leased.

Mr. PATTERSON. Have the livestock of these Indians been leased by the white settlers, in which they pay so much in wool, and so many lambs?

Mr. WRIGHT. Indian livestock?

Mr. PATTERSON. Yes.

Mr. WRIGHT. One herd; yes, sir.

Mr. PATTERSON. How much money have you received from this area, as a result of leasing to the Indians?

Mr. WRIGHT. Leasing to the Indians?

Mr. PATTERSON. Leasing this area of the Indians to the whites?

Mr. WRIGHT. We haven't made any leases whatever. You may be referring to permits, or something like that.

Mr. PATTERSON. You may call it permits. How much have you received in the interest of the Indians, from the white settlers, in using this land; say, in the last 3 years since this agreement has become effective?

Mr. WRIGHT. I could give you the exact figures by looking on the records, but we received 1 year 2 cents per sheep months, for approximately—well, I have forgotten the number, somewhere around twelve hundred dollars, as I remember it.

Mr. PATTERSON. What is the basis of the lease charge. Is it on the acre, or per head?

Mr. WRIGHT. Per head.

Mr. PATTERSON. Could you get us those figures, say for 1942, 1941, and 1940; the amount the Indians have received to their account, by reason of the use of their permit lands from the whites?

Mr. WRIGHT. Yes, sir.

Mr. PATTERSON. Isn't it true, generally, that the Indians, when they acquire these rights, immediately sublease to the whites, and the whites use their rights?

Mr. WRIGHT. No, that is not altogether true; they do some, to some extent; and not always immediately. It takes quite a little period of time, you understand, for a man to get into the stock business himself, and the Indians are very reluctant to get into the stock business before they have some land to put them on. It is natural with them, if they have some surplus feed, to sell that. They will sell it.

Mr. PATTERSON. You have been on this particular reservation, had control of these Indians, for how long?

Mr. WRIGHT. Seven years now.

Mr. PATTERSON. Hasn't it been your experience with the Indians that, as quickly as they get livestock, land, property of any kind, that they lose it very quickly?

Mr. WRIGHT. Oh, no; not at all. They have made every effort it seems humanly possible to prevent themselves from losing their lands.

Mr. PATTERSON. Now, as a matter of fact, it is only so many years that the Indians have to be restocked with more livestock, isn't it, after they get in the business? Of course you would not be familiar with it here, unless you have been here. I take it you would not know what the results may have been for these particular Indians.

The CHAIRMAN. Do you want an answer to that question?

Mr. PATTERSON. If you know.

Mr. WRIGHT. Will you ask it again?

(The reporter read the last question.)

Mr. WRIGHT. Let me answer that with statistical facts. In 1938 our Uncompahgre Indians, whom we have been talking about, had approximately 600 head of cattle. Today they have 1,390; all from natural increase, practically. There are one or two exceptions, where they have bought a few to add to this basic herd. On the other area, there is a small group up there; 3 years ago they had 250 cattle, and now they have 471, from natural increase, no purchases, no assistance from any outside funds whatever.

Mr. PATTERSON. Do you know of any others who have lost their stock?

Mr. WRIGHT. Yes; in 1936 and 1937, a severe winter here, the Indians lost half of their stock. So did the white people, many of them.

Mr. PATTERSON. Do you know the condition of these lands purchased from the whites in this area, at the time of the purchase?

Mr. WRIGHT. Which area do you mean?

Mr. PATTERSON. The black area we are talking about.

Mr. WRIGHT. To some extent.

Mr. PATTERSON. Have you observed them recently?

Mr. WRIGHT. The land?

Mr. PATTERSON. The conditions of the farm improvements, and so forth?

Mr. WRIGHT. During the past summer?

Mr. PATTERSON. Have they receded, deteriorated, in condition?

Mr. WRIGHT. It depends on what interpretation you put upon that.

Mr. PATTERSON. Haven't the properties generally run down, the farms deserted now, compared to the time you got it?

Mr. WRIGHT. No; it is being farmed as intensively as the white people farmed it. I think we can say that, all right.

Mr. PATTERSON. How many white settlers did you purchase from up there?

Mr. WRIGHT. Twenty-eight, I think. I have forgotten the exact number.

Mr. PATTERSON. Not all within this area.

Mr. WRIGHT. Yes; all within that area.

Mr. PATTERSON. Did you purchase 28 within that area?

Mr. WRIGHT. I forget the exact number, somewhere in that neighborhood; yes, sir.

Mr. PATTERSON. Now, you knew at that time that the users, under the Taylor grazing bill, were using that area, did you not?

Mr. WRIGHT. Some were and some were not. The first purchases we made of two big outfits, as I mentioned this morning, A. M. Myrup Livestock Co., never had a license from the Taylor Grazing.

Mr. PATTERSON. I'm referring to the others who have been using that area there for the past 30 years, the past 25 years.

Mr. WRIGHT. They were the biggest users.

Mr. PATTERSON. I'm not talking about those that you purchased, but about other livestock men who have been there for 25 years, and are still there. You knew that condition obtained when you went in there to purchase those lands?

Mr. WRIGHT. Not in that particular area; no, sir.

Mr. PATTERSON. You don't know that Mr. Smith went in there in 1927, for instance? And has been there ever since?

Mr. WRIGHT. Not in that particular area; no, sir.

Mr. PATTERSON. Not in the black area?

Mr. WRIGHT. No, sir.

The CHAIRMAN. Get that answer clear, because it is somewhat important here. Is it your intention to answer that Mr. Smith was not ranging that particular area? Is it your intent to answer that you do not know?

Mr. WRIGHT. My intent is to answer I did not know he ranged that particular area. I wouldn't go so far as to say he did not, at any time.

Mr. PATTERSON. In that area, isn't there a brown shading there, representing school sections?

Mr. WRIGHT. Yes, sir.

Mr. PATTERSON. The red represents patented acreage and the brown represents school sections?

Mr. WRIGHT. That is right.

The CHAIRMAN. Are those brown areas still under State control?

Mr. WRIGHT. Yes, sir.

The CHAIRMAN. They have not passed into private control?

Mr. WRIGHT. No, sir.

Mr. PATTERSON. Usually leased by white settlers or users, are they not?

Mr. WRIGHT. Many of them are; yes, sir.

Mr. PATTERSON. You gave considerable to the early history of the Indians throughout this country. I take it that you have not personal knowledge of those things?

Mr. WRIGHT. Well, I was not living in 1861.

Mr. PATTERSON. Here?

Mr. WRIGHT. I was not; no, sir.

Mr. PATTERSON. You would not have personal knowledge of the settlement of the Indians in that particular locality?

Mr. WRIGHT. Not at that time; no, sir.

Mr. PATTERSON. You don't know, then, as a matter of fact, that these Ute Indians you have described as occupying this particular area have occupied all of the area, clear from here south to the San Juan River?

Mr. WRIGHT. Only from the record and histories, and so forth, of course.

Mr. PATTERSON. The full length of Grand County and San Juan County.

As I understood you this forenoon, you stated that the act of 1897, whereby these lands were restored—I believe you said that they were restored for a particular purpose. They did not become a part of the public domain after restoration. Is that correct?

Mr. WRIGHT. No; I did not mean to say that, if I did say so.

Mr. PATTERSON. What are the facts? Did they become a part of the public domain after the act of 1897?

Mr. WRIGHT. Yes, sir; I understand so.

Mr. PATTERSON. And the Indians ceded that land with the idea they were going to be paid \$1.25 per acre?

Mr. WRIGHT. No, sir.

Mr. PATTERSON. Didn't I understand you to say that they were to be paid by the Government at the rate of \$1.25?

The CHAIRMAN. Which lands are you referring to, Mr. Patterson?

Mr. PATTERSON. All of the land which he described from here west, clear out to the summit.

Mr. WRIGHT. Within the Uintah Reservation?

Mr. PATTERSON. Yes.

Mr. WRIGHT. I thought you were referring to the Uncompahgre Reservation.

Mr. PATTERSON. This other area in yellow and white, and possibly some of the green; that had the land restored under the act of 1897?

Mr. WRIGHT. No; 1905.

L. O. GRAHAM, Assistant Solicitor, Interior Department, Washington, D. C. The act of 1897, Mr. Patterson, deals with the Uncompahgre Reservation.

Mr. PATTERSON. Then the act of 1905. Did that restore these lands to the public domain?

Mr. GRAHAM. I don't understand it so; no, sir.

Mr. PATTERSON. Let me get my understanding, then. It was turned over to be sold by the Government for the benefit of the Indians?

Mr. GRAHAM. Yes, sir.

Mr. PATTERSON. They were to be paid \$1.25 an acre for it.

The CHAIRMAN. Let me see if I got it clear. The lands to which Mr. Patterson refers, now, are outside of the boundary of the black and green. Those lands, as I recall, it was stated today, constituted the reservation up to a certain point, and at that point it was fixed, so that white settlers might come in and acquire the land. Is that right?

Mr. WRIGHT. Which area is he talking about?

The CHAIRMAN. I am talking about the area within the yellow line.

Mr. WRIGHT. Yellow line, the old Uintah Reservation; yes, sir; that's right.

Mr. PATTERSON. I think it would include some of the white area below, would it not?

The CHAIRMAN. No.

Mr. WRIGHT. No.

Mr. PATTERSON. That land was restored, with the idea that the Government would sell the land for the Indians?

Mr. WRIGHT. Yes.

Mr. PATTERSON. The Government immediately announced sale, and sold a great deal?

Mr. WRIGHT. Yes, sir.

Mr. PATTERSON. Presumably paid the money over to the Indians?

Mr. WRIGHT. Yes, sir.

Mr. PATTERSON. Is it your understanding that was ceded to the United States Government, and became a part of the public domain?

Mr. WRIGHT. No, sir; my understanding was it was simply open for settlement and sale of homesteads.

Senator MURDOCK. Would it be correct to put it this way: That the land within the yellow line, within the Uintah Reservation, was restored to the public domain, subject to entry under the public-land laws, but with a trust imposed on it that, when, if and when, it was sold, the proceeds, at least to the amount of \$1.25, were to go to the Indians?

Mr. WRIGHT. I don't know; that is a rather technical matter. Without looking it up, I would not know.

Senator MURDOCK. The point I cannot get clear in my mind, is how you can open the public lands to entry under the public-land laws without restoring it as public domain.

The CHAIRMAN. Or, how you can open an Indian reservation to entry, under the public-land laws, without wiping out the Indian reservation entirely, and making it public domain. In my opinion as a lawyer, that is what was done; but it was done with a trust imposed, or a right reserved, in the Indians, to the proceeds of sale.

Mr. WRIGHT. And also was there not a right reserved to all of that that was not sold?

Senator MURDOCK. I say not. The reason I say not is this: We come along to the Wheeler-Howard Act, and we find in that act a provision providing for the restoration of that land to tribal ownership, by the Secretary of the Interior; so we must, in my opinion, come to the conclusion that when we say it was opened to entry, it was restored as public domain, subject, in case of sale, to having the proceeds go to the Indians. Now I think when you come to the Uncompahgres, you have exactly the same thing happening, except that all rights of the Indians were terminated, even to the proceeds of sale. They had nothing reserved for the Uncompahgres; and the only right they had to reserve in the Uintah, when it was thrown open, was the right to the proceeds after sale.

Mr. WRIGHT. Well, that, of course, involves some things I would not know. I would not set my opinion up against yours, Senator Murdock, at all. One of these public-land-office men might clear it up for us.

The CHAIRMAN. We will have the acts themselves put in the record, and we will have to determine what it is. The acts will speak louder than we can.

MORONI A. SMITH, Salt Lake City, Utah. Mr. Chairman, I would like to state and prove what Senator Murdock says. I have had a long continued experience, and read, and been active in it, and you are generally right, and testimony is that substantiates your statement. It was open to the public land, absolutely; the public domain, with the proceeds to come of it to go to the Indians, less the expense of conducting these sales.

The CHAIRMAN. I think maybe Mr. Leech's testimony will give us some light on that particular question.

Mr. CLYDE S. JOHNSON, attorney at law, Vernal, Utah. I am Clyde Johnson, Vernal, Utah, attorney at law. I represent Steve Cheturas, Dave Seely, and H. A. Tyzack. I would like to ask Mr. Wright some questions.

The CHAIRMAN. Very well.

Mr. JOHNSON. You indicated that at the time the forest reserve was set up, which is the area on the map in green, that there was also set up an area designated as Indian grazing ground, which was for the sole benefit and use of the Indians. Is that right?

Mr. WRIGHT. That is it generally; yes.

The CHAIRMAN. That is, the yellow?

Mr. JOHNSON. Then you also indicated that the Indians were given a right to run 1,200 head of horses or cattle upon an area, in the green area, known as the forest reserve?

Mr. WRIGHT. Yes; not by any congressional act, but by understanding between the Secretary of Agriculture and the Secretary of the Interior.

Mr. JOHNSON. Then you stated that when the Indians came to a realization that they were cut down to 400 head—that is right, in the green area?

Mr. WRIGHT. That may be correct; yes, sir.

Mr. JOHNSON. Now isn't it a fact that the Forest Service cut the Indians down because of nonuse, and failure to use the 1,200 head, in the forest area?

Mr. WRIGHT. No, sir; that is not a fact; no, sir.

Mr. JOHNSON. Do you know why the Forest Service cut the use of the Indians within this area, and issued other permits, if it were not nonuse?

Mr. WRIGHT. It was understood, at least by our Bureau, that this agreement was not subject to lapse by nonuse. It was not a permit at all, as the Forest Service issues permits, but it was an agreement; and whether the Indians use it or not was not mentioned at all. It was provided as a part of the arrangement when the original Forest Service lands were set apart.

Mr. JOHNSON. But the Forest Service, in their control of the green area, known as the forest reserve, did cut the Indians, through nonuse?

Mr. WRIGHT. They did not cut them, as I understand it, but the use dwindled to about three or four hundred head, for other reasons, and due to various other causes.

Mr. JOHNSON. Do you know whether or not other permits were issued to other permittees, by reason of the lack of Indian livestock within the area?

Mr. WRIGHT. We were advised by the Forest Service that they were.

Mr. JOHNSON. Therefore, you would conclude that the Forest Service did cut the Indians down, through lack of use?

Mr. WRIGHT. Well, it actually worked in that manner; yes, but, technically, there were so many things that occurred that I know of—

Mr. JOHNSON. Technically, you mean, from the standpoint of the Indian Service?

Mr. WRIGHT. The standpoint of the Forest Service. No notice was given, no written word was made, not even any oral advice was given that they were cutting the Indians down.

Mr. JOHNSON. However, they were cut?

Mr. WRIGHT. Well, they were not cut; they just did not use it themselves, for various other reasons.

The CHAIRMAN. As, for instance, what are those various other reasons?

Mr. WRIGHT. Well, in the first place, they owned mostly horses, back in that period, 1906; and, during the period from 1906 to 1930, they began to own more cattle, and get rid of many of their horses. The horses occupied that forest in the first place. As they got rid of those horses, that use was diminished, on that account. That was one reason. Another reason is that they began to make use of that yellow area, that projects down on the map, there, to the Uintah River; and they began to settle on their farms, during that period; and some of their cattle, as well as their horses, were pastured, and obtained feed,

on those farms; and that is another reason they did not use it so much on the forest.

Mr. JOHNSON. While they were selling their horses, did they increase in cattle proportionately to their sale of their horses?

Mr. WRIGHT. To some extent they did; and the population of the cattle and sheep, for instance, fluctuated over this period.

Mr. JOHNSON. But you would say it was rather stabilized; as they sold a horse they replaced it with a cow?

Mr. WRIGHT. No; I wouldn't say that.

Mr. JOHNSON. Over how long a period was it, that the Forest Service took away these Indian rights, and issued other permits? Over how long a time?

Mr. WRIGHT. From 1906 until 1936.

Mr. JOHNSON. Now, as they purchased these cattle they began to use the yellow area, which is Indian grazing land. Is that right?

Mr. WRIGHT. Yes.

Mr. JOHNSON. Therefore they had ample room for their livestock, besides using the forest reserve?

Mr. WRIGHT. At times they did; and at times they did not. That is, one sheep outfit, according to the records, and this was before my time, you will understand, had a free crossing permit. He had 6,600 head of sheep, that crossed lengthwise of the reservation, almost, instead of sidewise, and it took them all summer to do it. There was not much left for the Indians to use.

Mr. JOHNSON. However, the conduct of the Indian livestock industry would indicate that, if such a thing you just mentioned did not happen, they could run their cattle and their horses and their livestock over this green area.

Mr. WRIGHT. Well, as you appreciate yourself, being a resident of this country, that land in yellow, there, is more suitable for spring and fall range than it is for summer; and it is no good at all, of course, in the winter. To make a balanced operational unit there it is almost necessary to have some other land for summer use.

Mr. JOHNSON. However, many of the whites do operate, to your personal knowledge, within an area very similar to the yellow one, known as Indian grazing ground; right in this country, do they not? Many of the whites operate in such an area every spring and summer?

Mr. WRIGHT. Well, I don't know as I am aware of that, many of them. There are some exceptions.

Mr. JOHNSON. Isn't it a fact, Mr. Wright, that the Indians that were set up in the cattle business traded most of their cattle; then the Indian Department started them out in the sheep business thinking they would take better care of them; would not wander out over the area?

Mr. WRIGHT. No such history.

Mr. JOHNSON. Did they lose their sheep, and they are now putting them back into the cattle business?

Mr. WRIGHT. I have no such history as that at all.

Mr. PATTERSON. These Indians are regarded, or rather they are, wards of the Government, are they not?

Mr. WRIGHT. That is right.

Mr. PATTERSON. They pay no taxes, do they?

Mr. WRIGHT. No real estate tax or private property tax. They pay a good many taxes, on their automobiles, and so forth.

Mr. PATTERSON. But they don't pay land taxes?

Mr. WRIGHT. They don't pay on the land.

Mr. PATTERSON. Now, the south end of this area in black here is actually summer range, is it not?

Mr. WRIGHT. Yes, sir.

Mr. PATTERSON. It recedes down into fall and spring, and, on up into the winter range, doesn't it; at the north end?

Mr. WRIGHT. Yes, sir.

Mr. DILLMAN. In reference to the ceded lands, Mr. Wright, by reason of the fact that all of the watering holes and water courses are privately owned, on the south of the Duchesne River; those lands that are called "ceded lands" have no practical value for use by the Indians, have they?

Mr. WRIGHT. Well, there are 28 percent of these lands now being used by the Indians; but it has to be done, as I indicated, by a combination of arrangements, by which the white lands can be used in conjunction with the Indians' lands, in order to get water.

Mr. DILLMAN. You say 28 percent is now being used?

Mr. WRIGHT. Yes, sir.

Mr. DILLMAN. Now, you refer to the ceded lands, north, which it is contemplated should be retained by the Indians. Have they any practical value for use by the Indians generally?

Mr. WRIGHT. I might answer that this way: They perhaps would have the same practical value for use by the Indians as they would anyone else, if the Indians owned the adjoining properties.

Mr. DILLMAN. If you look at them, they are interspersed with the white-owned property, and isn't it a fact their value is largely a nuisance value to the Indians? You may lease a little part to someone, or to a group of persons, not by reason of the fact they use it themselves?

Mr. WRIGHT. I don't like the word "nuisance value." We have in the Arcadia district a permit issued to the Arcadia Livestock Association, a group of white people using this ceded land, in conjunction with their own lands. That is the natural, practical use of those lands, surely; but if the Indians owned those white lands, there is no reason why they could not use them as practically as the white people.

Mr. DILLMAN. As the geography exists, and the ownership exists, they can make no practical use of those lands north of the river.

Mr. WRIGHT. Not without exchange.

The CHAIRMAN. I believe there was someone here who wished to propound a question; wanted to ask Mr. Wright a question.

Mr. H. R. ALLRED, Roosevelt, Utah. I want to ask Mr. Wright if it was not your understanding, in the beginning, that these Indian permits on the forest were issued to individual Indians?

Mr. WRIGHT. No; I never understood that.

Mr. ALLRED. I got that understanding from the forest people; that originally the permits were issued to individual Indians, up to numbers numbering the 1,200 head.

Mr. WRIGHT. I never heard that before.

Mr. ALLRED. I had that idea; and that they had gradually dropped out, until there was one Indian that has kept the right intact, for use.

Mr. WRIGHT. I think that is a mistake. I have never seen anything on it.

Mr. ALLRED. That has been my understanding.

Senator MURDOCK. If I understood Mr. Dillman's question, Mr. Wright, it was this: Your answer was that, on the ceded lands south of the Duchesne River, the Indians were using only about 28 percent of the area.

Mr. WRIGHT. That is right.

Senator MURDOCK. And it would be impossible for them to use even the 28 percent, if they were unable to make some arrangement with the white owners of the water holes and water courses; is that right?

Mr. WRIGHT. Well, I would not say impossible, but rather impractical; yes, sir.

Mr. PATTERSON. May I ask one more question? As I understood you to state that, if those Indians in that black area, within the black area, as modified by the green line on the east, are given the permits that go with the base property, that has been purchased by the Government for the Indians, your Department will be satisfied?

Mr. WRIGHT. Well, it depends on what you call—you said "a commensurate property?"

Mr. PATTERSON. Yes.

Mr. WRIGHT. It depends on what you would call a commensurate property.

Mr. PATTERSON. That which was purchased by the Government for the Indians, and that which the Indians had, in addition to the Government purchase.

Mr. WRIGHT. If I get your question clearly, I might answer it this way: That it was our understanding in the beginning, when this thing started, in 1935, that, if the Indians purchased those private properties, they would get exclusive use of that entire area, regardless of commensurability, or anything of that sort.

Mr. PATTERSON. You say you had that understanding. I asked you if there were not two points of interest to you, upon which your claims rested; first, by reason of the withdrawal of 1933, and, second, by reason of the fact you had purchased a base property; and you received from the first, that you claim nothing for it, but you do stand upon the second. If you stand upon the second, your rights will vest in the base property, which you purchased, together with the permits you have got on the base property; and you stated that is what you are standing upon.

Mr. WRIGHT. What I meant to say, if I misstated anything, we don't claim that the Indians need legal or technical rights to that old Uncompahgre area, that was restored to the open public domain. But we do claim, through agreements and understandings and negotiations, here, for this period of seven-odd years, that it was thoroughly understood that that area, approximately within the green line, would be the Indian's property, for use if he bought the private property within it.

Mr. PATTERSON. How could you have an understanding of that kind when here is one man, who, with his associates, runs 15,000 head of sheep in this area, and he never heard of that transaction?

Mr. WRIGHT. That was made with the stockmen here.

The CHAIRMAN. In what form was that? Did it ever take a written form?

Mr. WRIGHT. Well, the only written form is that record of July 16, 1935.

Mr. PATTERSON. You don't know how that arose? You were not here?

Mr. WRIGHT. No; furthermore, there is some question about these men running 15,000 head, or even 1 head in that area.

Mr. PATTERSON. Whatever the Grazing Division recognizes; that would be the way to put it, would it not?

Mr. WRIGHT. No; whatever can be determined on a fair, impartial, thoroughgoing investigation.

Mr. PATTERSON. Likewise, your rights to be determined by the fair, impartial investigation?

Mr. WRIGHT. That is right.

The CHAIRMAN. Mr. Wright, you have answered one question two ways, or else I have misunderstood you. I want it cleared up. Some-time ago Mr. Patterson asked you a question to this effect: If the Indians who now own the land in red, within the black area, received the same commensurate rights, on the surrounding open public domain, as their predecessors in interest had, that would be satisfactory?

Mr. WRIGHT. Well——

The CHAIRMAN. You answered that with a nod of the head.

Mr. WRIGHT. What I meant by that nod, Senator, is that it is our information and our understanding, that at the time of the purchase of these properties from the previous owners, these owners operated far more livestock in that particular area, than the commensurability and its carrying capacity would allow. Therefore, I nodded when you asked me the question in that way. In other words, if the Indians are permitted to run as many livestock in that area as those previous white owners ran, there will be a good many more than the carrying capacity of the area. Therefore it would absorb it all.

The CHAIRMAN. Are there any further questions?

Senator MURDOCK. Mr. Chairman, I have the law before me now, the Uintah Reservation. It is rather brief.

The CHAIRMAN. Read it into the record.

Senator MURDOCK (reading):

That the Secretary of the Interior with the consent thereto that the majority of the adult male Indians of the Uintah, the White River Tribes of the Ute Indians to be ascertained as soon as practicable by an inspector, shall cause to be allotted to each head of a family 80 acres of agricultural land which can be irrigated and 40 acres of such land to each other member of said tribes said allotment to be made prior to October 1, 1903, on which date all the unallotted lands within said reservation shall be restored to the public domain: *Provided*, That persons entering any of said land under the homestead law shall pay therefor at the rate of \$1.25 per acre: *And provided further*, That nothing herein contained shall impair the rights of any original lease which has been approved by the Secretary of the Interior, or any permit heretofore issued by the direction of the Secretary of the Interior, to negotiate with certain things for mineral lease, but any person or company having so obtained such improvements or lease or such permits to negotiate with said Indians for said lease on said reservation pending such time and up to 30 days before said lands are restored to the public domain aforesaid shall have in lieu of such lease or permit a preferential right to locate under the mining laws not to exceed 640 acres of continuous mining land except the Raven Mining Co., which, in lieu of its lease, may include 100 mining claims, of the character of the mineral mentioned in its lease, and of the proceeds for the lands so restored to the public domain, shall be applied first to the reimbursement to the United States for any moneys invested to said Indians to carry into effect the foregoing provisions and the remainder under the direction of the Secretary of the Interior shall be used for the benefit of said Indians.

I believe the rest of it is not necessary, Mr. Chairman. I think that clearly indicates there was a complete restoration to the public domain, except for those provisions.

The CHAIRMAN. Mr. Leech, I think we can go on with you now.

**STATEMENT OF J. H. LEECH, CHIEF OF LANDS, GRAZING SERVICE,
DEPARTMENT OF THE INTERIOR, SALT LAKE CITY, UTAH**

Mr. LEECH. Mr. Chairman, Director Rutledge wished me to express to the committee his regrets at not being able to get here. He would have been here except for present work and illness that prevents him, so he designated me to represent him and the Grazing Service at this hearing.

Now, Mr. Wright's testimony this morning concerned the area outlined by the yellow line, taking in part of the Ashley Forest and Indian grazing area, and the Strawberry Valley. The undisposed of lands opened by the act of 1902 are covered by numerous acts, and I thought I would merely give the citations, Mr. Chairman; and if anyone wishes to read any of the acts, we have them here, in the various statutes.

The CHAIRMAN. I am wondering if, in giving the citations, it would be convenient for you to give the substance of the provision. Would that take too long?

Mr. LEECH. I will try to, in a few brief words.

The Executive order of October 3, 1861, is what established the Uintah Reservation embraced in that yellow line on the map. Then it was ratified and created by Congress by the act of May 5, 1864, volume 13, page 63, of the Statutes at Large; and other adjustments made concerning the disposal, or the payment to the Indians, for the Uncompahgres, by the sale of the Strawberry lands, to the Reclamation Service, were included in the appropriate act, and the act Senator Murdock just read, the act of June 19, 1902, volume 32 of the Statutes, page 263. Also, I have a reference to page 744, provided these lands could be opened to entry and disposed of, and the Utes receiving the \$1.25 per acre. That about covers the area included in the yellow line.

The CHAIRMAN. Right there, Mr. Leech, I wish you would clear up a matter for those listening to the statutes being read. The statute of 1902, read by Senator Murdock, referred to now by yourself; in that statute it looked as though all of that land had been involved in the executive order, later involved in the act of Congress, which set up the territory as the Uintah Reservation, bounded by the yellow line. It would look as though the Congress had intended that it should all be restored as open public domain, with certain limitations. Now, that being true, what will we say about the purple lands? Are they in part of the open public domain; or what is their status under the statute?

Mr. LEECH. They are undisposed of lands, that were opened to entry, under the act of 1902, but have never been disposed of under the public land laws; and the Indians have not received \$1.25 an acre.

The CHAIRMAN. But the statute is clear that the whole territory was turned over to the open public domain; there is no question about that. It was all turned back into the open public domain. Now, it further

provided as to what the Indians would receive from the sale or settlement of the open public domain. They will receive \$1.25 per acre for all lands settled, or sold, by the Government; settled upon or sold. Now, that being true, isn't it a fact and that it follows, as a matter of subsequence, that the purple land is open public domain?

Mr. LEECH. Yes; open public domain; but, if anyone should obtain it, they would have to extinguish that Indian trust, which is attached to it.

The CHAIRMAN. What trust?

Mr. LEECH. Providing for that payment.

The CHAIRMAN. Well, certainly; but all they have to do is pay \$1.25 an acre, to extinguish the trust.

Mr. LEECH. That is right.

The CHAIRMAN. That is what they had to do with all the other lands now in private ownership.

To be perfectly frank with you, the only term of the trust is that, if, when, and as it is sold, that the Government will see that the Indians will get \$1.25 an acre; but otherwise it is part of the open public domain.

Mr. LEECH. That is right, Senator.

The CHAIRMAN. You would not hold that the Government is obligated to pay the Indians now \$1.25 an acre for holding that land?

Mr. LEECH. Not until they dispose of the land; no, sir.

Senator MURDOCK. Carry it one step further. In order to get the picture, I have in mind, if it were open to—entered by somebody, and a patent were issued by the Government to the person that entered it, it would take no action at all, collectively or individually, on the part of any Indian, in order to vest title in the patent?

Mr. LEECH. No, sir; if the United States issued a patent on it; would place so much money to the credit of the Ute Indians; they would collect it from this person.

Senator MURDOCK. That is the point I want, if the patent issued, notwithstanding the trust we have referred to, the Indians could make no claim whatever against the patentee, but their only redress and remedy is against the United States of America, for reimbursement of \$1.25.

Mr. PATTERSON. When the Government disposes of this land, then, and places it under the jurisdiction of the Taylor Grazing Act, isn't that sum of money due to the Indians, because it is withdrawn from sale, in a sense?

The CHAIRMAN. No.

Mr. LEECH. I think you're getting into section 11 of the Taylor Act, which would cover that feature. Lands of that character are placed in a district, and 50 percent of the returns collected in grazing fees would go to the tribe, but this is not in a grazing district.

Senator MURDOCK. Look at the forest reserve, which is in exactly the same status as the purple land is today, before it was made a part of the forest reserve; but when it was made a part of the forest reserve, by the Government, then the Indians were paid on the basis of \$1.25 an acre for this forest reserve.

Mr. LEECH. Yes, sir.

Senator MURDOCK. So Mr. Patterson's question, if now the purple land was made part of the grazing district, it is my opinion that, under

the statute I read, the Indians would have a good cause of action against the Government for \$1.25 an acre. That is the point you had in mind, wasn't it, Mr. Patterson?

Mr. PATTERSON. Yes; that's right.

The CHAIRMAN. I might say it has been drawn to my attention, by the special investigator of the committee, that is the position which the Bureau of the Budget has taken, and that is the objection they raised to one of the bills that was introduced.

Senator MURDOCK. I may add that that is the position of the attorney, Mr. Wilkinson, representing the Indians; if and when any of that land is made a part of the Grazing District, then the Indians immediately have a cause of action against the Government for \$1.25 an acre, and I agree with that position.

Mr. LEECH. That is a question I would have to refer to Mr. Graham, of the Solicitor's office, for the reason we have administered other ceded lands, under section 11 of the Taylor Grazing Act, and made a payment to the Indians of 50 percent of the collected fees; and their title, of course, is not extinguished. The land is not disposed of.

The CHAIRMAN. I am at a loss to reconcile that question, along that line. It seems to me, if we follow the spirit of the statute, which was that all of that land was made part of the open public domain, we had an implied trust there, all the way through, for \$1.25 an acre. But until it is sold it is open public domain. The trust may attach, but, if the purple land was put into a grazing area, I am at a loss to reconcile the statement that immediately the trust would become operative, to the extent of \$1.25 per acre. I cannot get that.

Mr. GRAHAM. I never heard that position advanced, Mr. Chairman. I am at a loss to understand how it can be successfully advanced.

Senator MURDOCK. I am taking the statement based on what has been done in the forest lands.

The CHAIRMAN. In the forest lands they took over absolute sovereignty. But in a grazing district you don't take sovereignty.

Senator MURDOCK. What's the difference? The Grazing Service administers your Taylor Grazing land, with the same sovereignty, the same control, that your Forest Service administers to your forest lands.

The CHAIRMAN. One is absolute ownership, absolute sovereignty. The other is administration of the Grazing, of the surface.

Mr. GRAHAM. I should like to point out also, Mr. Chairman, the Congress itself has made a provision by which the Indians, in the case of ceded lands, will realize a benefit, from proceeds of the grazing fees, in grazing district lands. However, section 11 of the Taylor Grazing Act provides that the Indians will receive 50 percent of the fees collected.

Senator MURDOCK. I'm perfectly willing to say, if that provision in the Taylor Grazing Act applies to this type of Indians, then that probably has superseded the statutes that I refer to, on that particular question.

Mr. GRAHAM. The understanding of the Interior Department is, if it were done that would be the result, 50 percent of the fee.

Mr. B. O. COLTON, Roosevelt, Utah. Considerable importance has been attached to the fact of the value of \$1.25 of those Indian lands. Nothing has been said of three Government town sites, within that

area, where a sale of lots was made, under some order, just what, I don't know. Then later, after a certain period of time had elapsed, for the entry of homesteads, there were some land sales authorized. As I remember it, two were held at Provo, one at Duchesne. It was provided those lands should be sold at auction, for not less than 50 cents per acre, and as high as anybody might go; and quite a large area of land was sold, at those sales; so that the value of reservation land that is open to the public would range from 50 cents per acre up to \$1.25 for homestead. Beyond that, any value that a range man might bid for those lands, and to the value of town-site lots, in those three town sites, and the lands that were not sold at all were those lands that are now called ceded lands.

Mr. LEECH. Two thousand one hundred acres was set up in town sites, divided into town sites, and sold. I don't know what the price was.

Mr. JOHNSON. That was under the town-site law.

Mr. LEECH. The territory included in the orange lines, known as the Uncompahgre Reservation, that was set up by an Executive order of January 5, 1882. Here is a copy of the order for the record.

The CHAIRMAN. It will go into the record at this point.
(The instrument reads as follows:)

EXECUTIVE ORDER JANUARY 5, 1882

UNCOMPAHGRE (UTE) RESERVATION

It is hereby ordered that the following tract of country, in the Territory of Utah, be, and the same is hereby, withheld from sale and set apart as a reservation for the Uncompahgre Utes, viz: Beginning at the southeast corner of township 6 south, range 25 east, Salt Lake meridian; thence west to the southwest corner of township 6 south, range 24 east; thence north along the range line to the northwest corner of said township 6 south, range 24 east; thence west along the first standard parallel south of the Salt Lake base line to a point where said standard parallel will, when extended, intersect the eastern boundary of the Uintah Indian Reservation as established by C. L. Du Boise, United States deputy surveyor, under his contract dated August 30, 1875; thence along said boundary southeasterly to the Green River; thence down the west bank of Green River to the point where the southern boundary of the said Uintah Reservation as surveyed by Du Boise, intersects said river; thence northwesterly with the southern boundary of said reservation to the point where the line between ranges 16 and 17 east of Salt Lake meridian will, when surveyed, intersect said southern boundary; thence south between said ranges 16 and 17 east, Salt Lake meridian, to the third standard parallel south; thence east along said third standard parallel to the eastern boundary of Utah Territory; thence along said boundary to a point due east of the place of beginning; thence due west to the place of beginning.

CHESTER A. ARTHUR.

The CHAIRMAN. I want to say right here that the committee is anxious to make this record as complete, in detail, as we can without making it cumbersome, because the whole committee will want to review the entire proceedings, and it will be more advantageous if the record is fairly complete.

Mr. LEECH. That roughly embraced eight-hundred-and-some-odd thousand acres. From the record it appears here 12,540 acres were allotted to 83 Indians, and that the remainder of the land was re-

stored to the open public domain, by the act of June 7, 1897. That is found in volume 30, page 62.

The CHAIRMAN. Right at that point, the Uintah Reservation, within the yellow lines, was created. That reservation was created by an act of Congress, in addition to the Executive order?

Mr. LEECH. Yes, sir.

The CHAIRMAN. Now, the Uncompahgre, within the orange line, was only created by an Executive order, or was there an act of Congress?

Mr. LEECH. It seemed to have followed the act of Congress, March 6, 1880, volume 21, page 199, referred to by Mr. Wright this morning, in the moving of two bands from Colorado.

The CHAIRMAN. Was that set aside by an act of Congress?

Mr. LEECH. That act provided that an area would be established in the Utah Territory, for the Uncompahgres.

Then, 2 years after that, in 1882, is when the Presidential proclamation was issued.

The CHAIRMAN. You have to associate them by analogy; the Executive order followed the act of Congress?

Mr. LEECH. Yes, sir.

Now, after the act of 1897, restoring the orange area, or the area outlined in orange, to the public domain, it was opened to all of the public-land laws. The next withdrawal that I note was in 1933, the order referred to here a number of times, approved by the First Assistant Secretary, Walters, on September 26, 1933. It withdrew everything that was in the original Uncompahgre withdrawal, of 1882, which was shown there in the orange line. This withdrawal of 1933 was made in accordance with section 4 of the act of March 3, 1927, 44 Statutes 1347, which permits the Secretary of the Interior to temporarily withdraw lands for Indian purposes, in aid of securing legislation. Now, I believe a copy of this is already in, but there is an additional copy. After the withdrawal of 1933, of course, the Taylor Grazing Act was passed in June of 1934; and then in June of 1935 we established the grazing district, Utah No. 8, and it covered the public lands north of this orange line, and around the forest, in Daggett and this part of Uintah County. That was the original boundary of grazing district No. 8. Then, after the meeting here of July 10, 1935, the Grazing Service and the Indian Office entered into an agreement that this within the orange would be added to it, and this area south, in Grand County, would be made a part of Utah district No. 8.

The CHAIRMAN. That made all of that east side of the map in district 8?

Mr. LEECH. Everything in that orange line, Senator, and this black line south, in Grand County, plus the part already in northern Uintah and Daggett Counties, grazing district No. 8. That was the order of July 20, 1935.

After that, joint instructions, that were mentioned this morning by Mr. Patterson and Mr. Wright, were issued in 1940. They were merely instructions to the local offices of the Indian Service and the Grazing Service, as to administration in this area covered, outlined, with the black and green lines, or what will later be referred to in the testimony as unit G.

The CHAIRMAN. What I would like to know is, how did unit G come into existence in the first place?

Mr. LEECH. Well, in the administration of grazing privileges, in Utah district 8, the advisory board and the district grazier determined on administrative units, and they called them A, B, C, D, E, F, G, and they are purely administrative units set up; trying, however, to follow, I believe, topography. But I will put a witness on later to testify to that.

The CHAIRMAN. Those instructions you have been referring to, have they been put in the record?

Mr. LEECH. I think we can put them in now. Those were arrived at between the Grazing Service and the Indian Department.

The CHAIRMAN. And those instructions applied to the lands in orange, on the map, because those lands had been withdrawn by the order of the Secretary?

Mr. LEECH. Yes, sir; that is right.

Mr. ALLRED. May I ask Mr. Leech a question on those boundaries?

The CHAIRMAN. Just a moment until we get those exhibits in here.

Mr. PATTERSON. That agreement, Senator, was signed by Collier and Rutledge.

The CHAIRMAN. That is the agreement that is going in now.

Mr. LEECH. I would like to put in one, and substitute it later, because this is not an endorsed, official filed copy. I would like to substitute it later with another.

The CHAIRMAN. Very well.

[A copy of the instrument above referred to entitled, "Joint instructions to the field personnel, Office of Indian Affairs and the Grazing Service, Department of the Interior, Utah," was previously inserted in the record and will be found on page 81 of the transcript.]

Mr. PATTERSON. Apparently that instrument is not dated, but it is attached to a letter dated March 4, 1940.

The CHAIRMAN. Then the letter of transmittal will go in with it.

Mr. LEECH. The date was February 15.

At this point, Mr. Chairman, I think I have gone over pretty thoroughly the historical background. If you wish at this time we can call Mr. Jenson, a man that has examined and rated these properties indicated here in red or in green that have been purchased by the Land Office. He could give the results of his examination, the privileges that go with various properties, under three or four different tabulations that he made.

Mr. ALLRED. Mr. Leech, in describing the boundaries, as usual, you omitted the country we are supposed to make a living on, unit H. It may confuse some of our discussion later if unit H, on this side of the river, is known to be part of district 8. You did not describe that as a part of district 8.

Mr. LEECH. That is part of district 8.

Mr. ALLRED. If you expected to tie in that discussion on ceded lands, it would have a bearing on that.

The CHAIRMAN. What is this, now, please?

Mr. LEECH. This is unit H, of Utah district 8; we did not have the district boundary line. It is that part of Uintah and Duchesne Counties south of the old Indian reservation boundary, down to the Carbon

County line. Mr. Chairman, we can put in another map indicating all of the units in Utah district 8. Mr. Larson will refer to that map.

Mr. L. WAYNE LARSON, district grazier, Duchesne Grazing District, Utah. The other part of grazing district 8, Mr. Allred refers to, is that part of Uintah and Duchesne Counties west of Green River and south of the Indian reservation boundary line, to the Carbon County line.

Senator MURDOCK. Is that the Uintah Reservation boundary line?

Mr. LARSON. Yes, sir.

Senator MURDOCK. The south boundary of the Uintah Reservation?

Mr. LARSON. That is right.

The CHAIRMAN. Any further questions, Mr. Allred?

Mr. ALLRED. That is all.

STATEMENT OF DEWANE E. JENSON, NEPHI, UTAH, DISTRICT GRAZIER, UNITED STATES GRAZING SERVICE

Mr. JENSON. My name is Dewane Jenson, and I am district grazier at Nephi, for the Grazing Service.

I was in this territory during the summer of 1941, in charge of base property studies and adjudications. The problem we have here today, the Indian problem, was part of that study. I take it that is the part you want presented here.

Mr. LEECH. Do you want this witness qualified, Senator?

Senator MURDOCK. I think it would be helpful.

The CHAIRMAN. You may state your background.

Mr. JENSON. I started in with the Grazing Service in February of 1938, as junior range examiner. Three years ago I was made assistant range examiner, in charge of base property investigations and adjudications. Within the last year I have been a district ranger.

The CHAIRMAN. What was your business before?

Mr. JENSON. Soil Conservation Service, for a year and a half, as soil technologist.

The CHAIRMAN. What is your background from a grazing standpoint?

Mr. JENSON. Prior to that I taught at Delhi High School for 5 years, agriculture. I went 5 years to the College of Agriculture, and I was born and raised on a ranch in Cache Valley.

The CHAIRMAN. The committee is especially interested in one or two angles. First of all, the commensurate rate allocations made on base property, in the running of cattle and sheep in this particular locality. The commensurability, as I understand it, is not always uniform, but depends largely on those others; depends on range conditions, so that on this locality we would like to know what rule was established and set up for commensurability.

Mr. JENSON. Of course, our directions would be set up to try to conform to the provisions of the Taylor Grazing Act and the Federal Range Code.

Along in the summer of 1941 we were directed to come into this area and make a complete study of this entire district 8. That study was completed from two standpoints, complete detailed range

surveys were made by one crew in which they used aerial photographs, as nearly as they were available, and the other crew we call our base property, or dependent property, crew. We had eight or nine men in this crew, of which I was in charge. We made dependent property studies, on all base lands submitted by all applicants in grazing district 8. Then later on, in the fall and winter seasons, we took these studies, of course, and listed them, and made what we called our adjudications; and for this particular area we speak of here as unit G, which is bordered here by Willow Creek and the Green River and the Grand County line; we knew we had a particular problem in there. We were directed to make a cooperative study on that. There was an agreement, I think it was the one inserted into the files here, in 1940, whereby that study would be made in cooperation, a cooperative study with the Indian Service and the Grazing Service. A number of our Grazing Service examiners started on this field investigation early in the spring of 1941, just got a good start, and were called off. Some of this legislation stopped it. Along in the fall we were directed to proceed with that study, and a range survey crew consisting of nine members completed that study, and then the base property crew went into the area, I think, in October; two men from the Grazing Service and two range examiners from the Indian Service.

Our procedure on this base property study was to go to each and every one of these properties purchased by the Indian Service, which has been shown in these maps in red, in that Hill Creek country; went over each piece of property, that is, of course, the legal descriptions; platted all that land on the map, measured each laystack over each meadow, and each piece of alfalfa ground, and the adjacent grazing lands, and, by their methods, estimated the forage production and the carrying capacity of those lands.

The CHAIRMAN. In that work, will you clarify the record; who was engaged cooperatively?

Mr. JENSON. The Grazing Service examiners and Indian Service examiners.

The CHAIRMAN. Were they working jointly?

Mr. JENSON. Jointly; worked jointly in the field together, and, as my statement was made, on the carrying capacities, important production of any lands—not examiners from each organization, but initialed the rating given that property. Of course, that would be the basis to build up a study.

Then after the field examinations were all completed we began to analyze all the studies that had been made and found in the past years, before we made this study, there had been a number of other studies made—the study was made at the time the Indian Service made purchase of the properties. All the properties were rated at that time as to their production. Another study was made along in 1940 by the Grazing Service examiners, taking the Indian Service ratings, which had been placed on the lands and comparing those ratings with a State average of production of lands of similar character. Then the certain study came along.

That would be the study we made in the fall of 1941.

Senator MURDOCK. A joint study?

Mr. JENSON. Joint study. We have all of those comparisons of each of those studies here, in case you desire to go into them.

The **CHAIRMAN**. Right there, I understood you to say that the Indian Service and the Grazing Service worked together; that is, their representatives, and that, when they agreed, they initialed a conclusion or agreement?

Mr. JENSON. That's right. When in the field the two examiners made an estimate, measured the stacks of hay, went over the field, and any rating they gave at that time was initialed by both examiners.

The **CHAIRMAN**. Who held those initialed instruments?

Mr. JENSON. I have them here.

The **CHAIRMAN**. Are they voluminous?

Mr. JENSON. No; we have copies of them here, if the record wants them.

Mr. LEECH. Copies of the individual examinations?

Mr. JENSON. Examinations in the field.

Mr. LEECH. Of each property?

Mr. JENSON. Yes; individually.

The **CHAIRMAN**. The initials indicate agreement?

Mr. JENSON. That is right. We were instructed when going into the field to decide on the rating of that property and initial that rating before they left the property.

The **CHAIRMAN**. Supposing they did not agree?

Mr. JENSON. I don't think anything very serious came up; there was not much of a question.

Senator MURDOCK. Do you mean by that there was no difficulty in the Grazing Division representatives agreeing with the representatives of the Indians?

Mr. JENSON. That's right. It was a matter of give and take; agreed before they left there as to the rating on that property.

Mr. WALTER V. WOHLKE (assistant to Commissioner, Office of Indian Affairs, Chicago, Ill.). May I ask who the Indian Service examiners were that participated in that?

Mr. JENSON. Gutzman and Krause.

The **CHAIRMAN**. Those two were the representatives of the Indians?

Mr. WOHLKE. May I ask another question? Were the results of this survey ever submitted to the Indian Office, to the regional forester or the superintendent of the reservation here at Uintah Reservation?

Mr. JENSON. The field men made the investigations. All those studies were put up in this form and presented to Mr. Zimmerman and Mr. Arnold from the Indian Service, and Mr. Rutledge, of the Grazing Service, in April of 1941, and at that time the Indian Service representatives took photostatic copies of all these records.

Mr. LEECH. Now, Mr. Jenson, you have these results tabulated on these charts, do you not?

Mr. JENSON. Yes, sir.

Mr. LEECH. I wonder if you can proceed to explain the charts?

Mr. JENSON. Well, I have to give a little background here before you can understand that.

We made these studies, then we took the results gained from the field and tried to apply them to the provisions of the Taylor Grazing Act and Federal Range Code, and based these studies entirely around the priority claims, base ratings of the property, on the date the land was submitted, as specified by the code, and the use being made of the base. Then the study was compiled jointly with the

representatives of the Indian Service, during the winter of 1941 and 1942 I was in charge of this work. I will go ahead and present this to you.

Mr. LEECH. Mr. Chairman, we will substitute this with photostats for the record.

Mr. JENSON. Going into the records we found, of course, you have to stick to priority and base rating on each property the date the lands were submitted.

The CHAIRMAN. In order to tie this in once more, this study is a study of project unit G?

Mr. JENSON. Yes.

Then, on this sheet here, I have a summarization of that study, summarization of the acreages, A. U. M. rating on all lands submitted to date by the Indian Service in district 8. We broke that down, first, into the group of lands the Indian Service presented to the Grazing Service. This grouping is merely based on the priority claims of those lands, by groups, and, in all cases, we found priority claims greatly exceed base property ratings introduced.

Now, I can go to the map here. This first group we have, across here, are the lands in unit G, along Hill Creek and Willow Creek, which are the purchased properties, that is, the red on the map. We found a total acreage of 3,145. The total for forage production, or A. U. M. rating, on that, made by the survey, 6,023 A. U. M.'s. Broke that down further to determine what type of land that production comes from. Of that, 3,568 comes from farm land, 1,748 A. U. M.'s comes from summer grazing, and 707 A. U. M.'s from winter grazing; if necessary, break it down from character of production to show dependency. We broke it down further into how much of that is inside of district 8, and how much outside of district 8. The purpose of breaking it down, there was a lot of controversy as to whether the lands outside the district had any priority; so we broke it down from that standpoint.

Now we come to totals. The first, that is the property along Hill Creek. Then this other is some Indian allotments, Wash and Harris Indian allotments, Indian reservation and tribal lands. These others are Indian names of properties legally described on the map, and we go down here to subtotals. We find in the Indian Service and the Grazing Service a record of some kind or other of 67,132 acres before June 28, 1938. That June 28, 1938, is the date set in the Federal Range Code as the time the land should be submitted in order to show any dependency.

Then, since 1938 we have lands not submitted to Grazing Service prior to June 28, 1938. Then we have another 10,128 acres, so this 10,000 acres really came into the picture after the deadline, the date set for the submission of lands. After that we took this summarization and this chart here is a summarization of the lands submitted, and when submitted and whether in the district or out of the district. Then they took those lands and worked on what we call an adjudication, here, on the basis of the rating of those lands and on priority claims, and whether they were submitted or not. Briefly going over this chart, a summarization of the ratings on base properties, Federal Range Survey carrying capacity, and yearlong livestock operations on Indian properties, and Federal range unit G, district 8, Utah. The basic thing back of this adjudication was to work out a practical,

sensible operation from the standpoint of handling the stock. So we set up a form where we worked out the summer operation, the winter operation, combined that; made a year-round operation and then divided that into your carrying capacity. We proceeded to study, and were unable to get a definite estimate as to what policy and what lands were going to be given consideration. So we set this up under 10 possibilities with the hope that the policy adopted would fit one of those possibilities. In each of these we are dealing with entirely the same lands and show the results under different possible policies.

Now, I will take you through this very slowly and see if we can get in from here over to summer operations. Take this first one, where we consider all base lands submitted by the Indian Service regardless of date of submitting, and using the 1941 survey.

MR. PATTERSON. Is that number one possibility?

MR. JENSON. That's right. These are the possible considerations. This first one takes in all the base lands, regardless of whether they came in before June of 1938, or regardless of where they are located; all lands in the Indian Service ever submitted; under that provision, 77,953 acres. Now, the first thing we are going to work out here is the summer operation.

Senator MURDOCK. Is that all in this district 8, unit G?

MR. JENSON. No; I can show you. All these red lands down here on Hill Creek, the lands over here on White River, and the lands up on Bitter Creek, lands outside the Indian Reservation, and anywhere they have been submitted. That is the first consideration.

Senator MURDOCK. Whether in district 8 or unit G?

MR. JENSON. That is right.

On that 77,000 acres, the range, we broke that down as they show you on that chart, whether it came from farm lands, summer lands, or winter grazing lands. Working out a summer operation as to A. U. M.'s, on the base farm lands, plus base A. U. M.'s on the winter grazing, amounted to nearly 12,000 A. U. M.'s—11,943. Took the base rating which would be used in the wintertime, plus the winter grazing, and equalled it here. It gives the qualifications, the Federal range A. U. M.'s, opposite to the base A. U. M.'s, of 11,943; then the A. U. M.'s, summer base, is 6,498. Add that for the summer operations, and you would have available 18,440 A. U. M.'s. Divide that by 6 months, the total base lands and the total grazing lands that can be used during the summertime, would take care of 3,073 cows, at which time during the summer they would be on the base land, the summer grazing, 35 percent of the time, and on the Federal range 65 percent of the time.

MR. PATTERSON. May I interrupt him on one or two points here? What do you mean, this number of A. U. M.'s on how many acres?

MR. JENSON. 77,953.

MR. PATTERSON. That would run what? Was it 3,000 cattle or sheep?

MR. JENSON. Three thousand cattle. That is just for the summer part. I will go into the winter next.

MR. WRIGHT. That is using the Federal range with it?

MR. JENSON. Using the basis that can be used in the summer and using the Federal range that can be used in the summer.

Did the same thing here for the winter operation. On the summer lands, 6,498 A. U. M.'s gives a dependence for winter operation. So, if the dependency produced on their own base is 11,943 A. U. M.'s,

which would be used in the wintertime, along with the winter grazing on Federal range, that, then, is a total resource of 18,000 A. U. M.'s, which would take care of the same number of stock during the winter months.

Senator MURDOCK. That is "animal unit months"?

Mr. JENSON. Yes.

Senator MURDOCK. Based on cattle?

Mr. JENSON. On cattle, that is right; or 5 sheep are included. In the wintertime it shows it would be on the base 65 percent of the time, and Federal range 35 percent of the time. Bring that together and make a 12-month operation, adding the summer and winter available for both Federal range and base, which would make a year-round operation for this, 3,073 cows.

Now, from here back, we have just set up a possibility, according to the survey made by the examiner. The next thing, we take a carrying capacity which you arrive at by the range survey crew, find on the summer area that the estimated carrying capacity is at 11,943 and on the winter estimated it at 6,497; or, if we work this through the way we have here, the Indian Service would get 85.16 percent of the summer range and 25.96 percent of the winter range, or, to average off the whole thing, 47 percent of unit G in carrying capacity.

Senator MURDOCK. On that 77,000 acres you have received nothing but your base property?

Mr. JENSON. That's right.

Senator MURDOCK. Now, you are talking about the carrying capacity on the range?

Mr. JENSON. This is the carrying capacity of the Federal range in the area.

Senator MURDOCK. That is, unit G?

Mr. JENSON. Yes, sir. We did it in the first way, took that first possibility; all the Indians wherever they are located, took the ratings that the examiners placed on them, put it against the carrying capacity of the range. The Indian Service would get 85 percent of the summer area in unit G, and 26 percent of the winter area in unit G; that is, putting all the base qualifications against the area of unit G.

Senator MURDOCK. May I ask you—Unit G includes the area between the black and green lines in Grand County?

Mr. JENSON. Here is the boundary of unit G, right down here. This is Willow Creek clear down here.

Senator MURDOCK. But you include all of that?

Mr. JENSON. Yes, sir.

Senator MURDOCK. I was wondering if you went down to the boundary between Uintah and Grand Counties?

Mr. JENSON. No; this part up here, being the summer range approximately all through here, and down here is the winter range.

Is there a question on this? This shows you what share of the feed out there they would get, providing we took all of the probable land in, and gave them a right, whether they fit into the code or not.

Mr. PATTERSON. Now, that is assuming that the areas of the grazing under the Taylor bill is allocated to this particular area?

Mr. JENSON. Will you state that again?

Mr. PATTERSON. That is on the computation you have made, there where you purchased, take the rights of Myrup, for instance; part of

his grazing rights are within unit G and part out. You are assuming all of those rights are within unit G, aren't you?

Mr. JENSON. That is right, assuming wherever the land is it has a right in there.

Mr. PATTERSON. You allocate it to G?

Mr. WRIGHT. What was your carrying capacity figure, Mr. Johnson?

Mr. JENSON. It totaled 39,049 A. U. M.'s, which is on a surface area of 426,000 acres, which is an average of 10.9 acres; carrying capacity of 14,024 on the summer range, 25,025 on the winter range.

The next step here, we divided that range up to how much the Indians took against all that acreage, broke it down to A. U. M.'s. Total Federal range carrying capacity remaining to the white settlers, in the summer area, was 2,081, or 14.8 percent of the area, less to the whites, conceding all that acreage to be qualified.

Senator MURDOCK. You mean giving the Indians everything they would be entitled to, unit G, on the base property you have described, regardless of whether they were allotted or not? That would still leave the white stockmen on the summer 14.84 percent?

Mr. JENSON. That's right. Leave the white users on the winter area some consideration, 74 percent.

Senator MURDOCK. Giving the Indians everything entitled to a base property, it would leave 74.04 percent for the whites?

Mr. JENSON. Or in total it would leave 52 percent of the total area for the whites. A comparison here in A. U. M.'s granted the white users in years before, 4,000 here in the summer, then under percentages over here, "percent of white users use remaining A. U. M.'s will permit." In other words, the white users still go on 49 percent of what they had been getting the year before, in summer area, and 69 percent of what they had been getting in the winter area. They could continue to that extent, or 66 percent of the total of what they had been getting to carry on full consideration of all lands ever submitted.

Then the next, if you have got that—as I say, I don't know just which way things were going here—

The CHAIRMAN. Let's take these considerations one at a time, or the policies one at a time. There are 10 conjecturals here. Does anyone care to interrogate as to the first conjectural policy?

Mr. LEECH. Mr. Chairman, I would like to say in connection with Mr. Jenson's testimony, they have set up these 10 possible ways, and all of these matters are still being considered by the two agencies, and the two agencies have not as yet determined on which one of those policies—

The CHAIRMAN. That is the reason I want anyone who wishes to interrogate now, on the conjectural policy, to do so as we go along. It will save time.

Mr. WRIGHT. I have a question. Do you have any information, Mr. Jenson, that would show the carrying capacity, or rather the grazing privileges that are granted at the present time on the purchased properties along Mill Creek?

Mr. JENSON. Not attached to this as purchased property?

Mr. WRIGHT. Yes.

Mr. JENSON. Yes.

Mr. WRIGHT. What is that figure?

Mr. JENSON. For the season 1940-41—this is considering the purchased properties, that is what you mean?

Mr. WRIGHT. Licenses that now exist.

Mr. JENSON. I will have to refer you to the district grazier. I don't know the licenses at this time.

The **CHAIRMAN.** We will pause here for 10 minutes.

(Recess until 3:45 p. m.)

The **CHAIRMAN.** The committee will come to order.

Mr. Jenson, you may proceed. Was there a question pending?

Mr. WRIGHT. Yes, sir, I had a question. I believe you said you did not have the figures on the number of livestock that are now being licensed on the base properties which were purchased by the Indians within unit G?

Mr. JENSON. No, I don't have that.

Mr. WRIGHT. Do you know how many livestock were run by the previous owners on that base property within unit G?

Mr. JENSON. That would be just the red on the map?

Mr. WRIGHT. Yes.

Mr. JENSON. I can give it to you in A. U. M.'s, not in stock. Summer area, they were getting—this would be the previous owners of the lands which the Indian Service purchased—getting 9,749 A. U. M.'s, summer area for the year 1940-41.

Mr. WRIGHT. They were all bought out by that time, nearly.

Mr. JENSON. Bought out, but there was that much stock running from the bases of that land.

Mr. WRIGHT. I meant to ask, do you have any figures on how many cattle the previous owners ran in that unit while they owned the property?

Mr. JENSON. No, I don't have that. We can dig it out, in some of this detail stuff. It can be secured. I have it, but I do not have it on this.

Mr. WRIGHT. We have a figure, for instance, of 75,000 A. U. M.'s. Do you recall whether that is correct or not?

Mr. JENSON. For the whole unit G?

Mr. WRIGHT. Yes.

Mr. JENSON. The carrying capacity of the range survey is the one I can give you; 39,000 A. U. M.'s.

Mr. WRIGHT. We have a figure, given to us by your Service, that the original owners ran 75,000 A. U. M.'s.

Mr. JENSON. May have been priority.

Mr. WRIGHT. Of course, before reductions began at that time, on the purchased property alone. Do you have the figure on the acreage of the purchased properties?

Mr. JENSON. Yes, the total acreage, 426,843—no, wait a moment—of the purchased properties, 31,045.

Mr. WRIGHT. And 31,045 acres of base property when in white ownership ran 75,000 A. U. M.'s, but under the present—

The **CHAIRMAN.** Is that true?

Mr. JENSON. I don't know.

Mr. LEECH. I believe you would have to refer to the dependent property surveys of this base property to see what priority rating was established through obtaining affidavits concerning the priorities. Are those records here, Mr. Moore?

Mr. JENSON. I think we would have them, but we would have to go back into the detail.

The **CHAIRMAN**. The committee is going to be very much interested in knowing that figure as authentically as possible. That will have some considerable weight with the committee.

Mr. LEECH. I will have that compiled, Mr. Chairman.

Mr. JENSON. The way we get that figure from the priority affidavits of the stock run on that base line before the Indian Service purchased it—

The **CHAIRMAN**. Wasn't that somewhere reduced to a conclusion by those who investigated? I know when claims are put in for stock permits, especially in the earlier part of the administration of the Taylor Grazing Act, the affidavits ran pretty high, sometimes.

Mr. PATTERSON. There was a difference between the claim and what was allowed.

The **CHAIRMAN**. What were the facts?

Mr. JENSON. The priority claims are as much as 10 to 20 percent higher than what the base property could probably do, so in all of this the priority claims exceeded the production of the base property. Therefore the production of the base property would be the limiting factor, controlling the qualification of each applicant.

Mr. WRIGHT. What I would like to point out in this connection is the comparison between the amount of cattle that were run from these base properties, when white-owned, and the total amount that will be allowed, not only by the purchased properties, but by that total of 77,000 acres, which, under one category, might be allowed as Indian base property. It is considerably less than 77,000 acres, considerably less public domain than the 31,000 alone earned when it was in white ownership.

Mr. JENSON. Then the 31,000 alone claimed priority use, is that what you mean?

Mr. WRIGHT. No; I mean the actual figures. I want to bring that out, as to whether that is a fact or not.

Mr. JENSON. I could not say the priority claims would greatly exceed what the 31,000 acres would support.

The **CHAIRMAN**. I suppose into that comes range conditions. It must, of necessity—of whether a certain number were actually supported, or whether it was an over-grazed area. A lot of those things, I think, would come into that consideration.

Mr. WRIGHT. Yes; that is very true. But it refers back to our position that the Indians at least thought they were buying the area that was being run by these white operators when they bought it.

Mr. JENSON. The second consideration given here, the second possible consideration which may be chosen, is to consider all base lands submitted prior to June 28, 1938, and using the range survey rating.

The **CHAIRMAN**. Isn't that the third consideration?

Mr. JENSON. This really is the next. The second is a comparative—the only difference is in the third item here, you only consider lands submitted in accordance with the specification of the code. It would be a difference of approximately 10,000 acres between the first and second. That is the 10,000 acres I showed you over here, that had not come into the record.

The **CHAIRMAN**. Does that fall in the category of being out of the base period?

Mr. JENSON. Out of the base period?

The **CHAIRMAN**. Yes.

Mr. JENSON. Well, it was not admitted as having a dependence for a grazing right.

Mr. LEECH. Under the code, Mr. Chairman, Mr. Jenson is talking about, these properties were not offered in application before June 28, 1938.

Mr. JENSON. Take it on that basis; the total of 67,132 acres, working out a summer operation, a winter operation, combining that into a year-long operation, the Indian Service lands which were submitted before June 28, 1938, would take 9,809 A. U. M.'s, or 69.95 percent of the summer range, 25.96 of the winter range, or 41 percent of the total range, taking that into consideration. That would leave 30 percent of the summer area for the whites, 74 percent of the winter area for the whites; or a total of unit G of 58 percent would be left to be divided up among the qualified white users.

Mr. WRIGHT. In other words, Mr. Jenson, on a comparison between those two categories, the white operators would have the same percentage of the area in the winter?

Mr. JENSON. In the winter it is exactly the same.

Mr. WRIGHT. The 10,000 acres would not count for the Indians?

Mr. JENSON. That is right. It would leave for the white 99.8 percent of what they have been getting for the previous years, in the summer area; and 69 percent of the winter area, that they would be getting. For a total, they would get 73.2 percent of what they previously had. That consideration summarizes down to just the land that came in before the closing dates for making applications.

Mr. WOHLKE. That 10,000 acres eliminated from this third consideration, was that Indian land, bought by the Indian Service, for the Indians, and which was not applied for before June 28, 1938?

Mr. JENSON. That is this acreage here, Indian allotment in unit E, Uncompahgre Indian Stockmen's Association land, ceded Indian lands, Ouray subagency Indian allotments in units D, E, F, and G, and amounts to 10,821 acres.

Mr. WOHLKE. That was not submitted by June 28, 1938?

Mr. WRIGHT. Mr. Jenson, you spoke of a code there. Would there be any difference in those figures if you used the 1935 code, or the 1940 code, or the present code?

Mr. JENSON. Are you talking of this part, a day of summation? My understanding is that all of the codes have that clause, June 28, 1938, of that date for submission.

The next one here worked out exactly the same way, only in this one we consider group A purchased lands only, and using the 1941 range survey. What I mean by group A, I referred to this map. That is the purchased lands which show here in red, the lands they purchased for the Indians. So this is the land we are mostly talking about. We worked out the amounts to some 31,045 acres they purchased. We got the summer operation, the winter operation, the year long. Over here, the carrying capacity, which controlled the whole thing. The Indian Service would get under that consideration 4,275 A. U. M.'s, or 30 percent of the summer area; would get 6.99 percent of the winter area, or 15.42 percent of the total area; leaving 69.51 percent of the summer area for the whites, and 93.01 percent of the winter area left

for white use, or 84.58 percent of the total unit G would be left for the white use, if you only take the lands that were purchased.

Here the whites would get an increase in the summer area, and 86 percent of what they have been getting in the winter area, or, in the total, 6 percent increase from what they have been getting in the past.

Mr. PATTERSON. A number of men called my attention to the fact, Mr. Chairman, that some people have come in this afternoon who have not filled out a card.

The CHAIRMAN. Anyone who came in this afternoon will kindly sign these cards so that the record may be clear.

Mr. WRIGHT. Mr. Jenson, would you mind repeating that same thing as to what the Indians would get under that arrangement?

Mr. JENSON. The Indians, under that arrangement, would get 69.51 percent of the summer range. On just the purchased lands the Indians would get 30.05 percent for the summer range, 6.99 percent of the winter range, or 15.5 percent of the total in unit G.

Mr. WRIGHT. Fifteen and a half percent?

Mr. LEECH. That is just the purchased properties.

Mr. JENSON. Purchased properties against the carrying capacity of the unit.

Mr. WOELKE. That would mean that the Indians would have paid \$296,000 for 15 percent of the carrying capacity of that unit?

Mr. JENSON. That is strictly in accordance with the code.

In the next possibility here, a different consideration, considering only lands in district 8, and giving them consideration regardless of date submitted, and using the 1941 range survey. In other words, there was a controversy, and always has been, of whether any of the lands outside the district have priority or not. This leaves the lands outside of the district, out of the picture, and only takes the lands within the district.

In that case, considering it that way, the Indians get 59.95 percent of the summer range, 8.02 percent of the winter range, or 26.67 percent of the total unit G carrying capacity.

Your next possibility there is considering only lands in district 8, and only lands submitted prior to June 28, 1938, using 1941 range survey. In other words, in this one, only the land that got in before the closing date was considered, and only the lands in the district are considered. A lot of individuals claim those are the only lands that have priority in the area which the Indian Service controls.

Under that consideration, the Indian Service would get 56.40 percent of the carrying capacity of the summer area, 8.02 percent of the capacity for the winter area, or 25.39 percent of the carrying capacity of unit G.

I am going over this hurriedly, but these percentage figures will be borne out by the other figures here.

The CHAIRMAN. Are there any questions so far?

Senator MURDOCK. May I ask this, When these charts are copied, will they be reduced for us to such a size that they can be included in the record?

Mr. LEECH. Yes, sir; Mr. Senator.

Mr. JENSON. I might state that they have already been photostated and reduced down to a size 14 by 8 inches.

Mr. PATTERSON. Mr. Jenson, let me ask you one question on your tabulation there. You do not take into account, I think you explained it under your last possibility there, you did not take into account that base property on the outside of that area, where permits were issued for use within the area; that was not taken into account?

Mr. JENSON. Not on the last one; no. They were just possible considerations set up. On the last one, base property out of the district is not given any consideration; that is only taking base property in the district. There may be some land outside of that unit still within the district given consideration. There is nothing outside of the district on there.

Mr. WRIGHT. May I ask another question, please? Mr. Jenson, did the range-survey party take into consideration the rather abnormally wet year in which the survey was made?

Mr. JENSON. On the range survey, getting the carrying capacity of Federal range, under supervision of another individual, in their formula, set up for their carrying capacity, they did take that into consideration.

Mr. WRIGHT. Did the Indian Service man participate in the range survey?

Mr. JENSON. As I understand the program, in the spring of 1941 arrangements were made whereby the Indian Service and the Grazing Service would participate in the range survey. Our crew got out, and one or two members worked about in May, and the Indian Service examiners had not got on the job. Our men were in the field and had the job done before the Indian Service got there. The only way Mr. Wagner contacted the members in the field—I think all were contacted—the field work on the Federal range survey we did, except the compiling. The Indian Service men have worked with the fellows in Salt Lake City on all the compilation of the field data.

Mr. WRIGHT. At the meeting you spoke of where this material was presented to Mr. Zimmerman, Assistant Commissioner of Indian Affairs, Mr. Rutledge of the Grazing Service and Mr. Arnold of the Indian Service, was anything said about this being acceptable material, and being accepted, or what do you recall?

Mr. JENSON. As I viewed it, it was left hanging in the air, nothing accepted or rejected.

Mr. LEECH. I might say, Mr. Chairman, none of this has yet been accepted by the two Services. It is merely being given due consideration.

The CHAIRMAN. That interests me very much, because I understand, I gathered from that statement that this whole rather intricate subject is a subject of study at the present time by the departments, or by those in the field, for the departments. Am I right in that?

Mr. LEECH. That is correct, Senator.

The CHAIRMAN. Are those studies going forward?

Mr. LEECH. The review and examination of this work that has been carried on by the range examiners, yes; that will be further reviewed.

The CHAIRMAN. I take it that is true of the Indian Service? They

are continuing with the study jointly with the Grazing Service. Is that true?

Mr. WOEHLEKE. I doubt whether there was very much direct participation by the Indian Service, Forestry, and Grazing people in these studies.

The CHAIRMAN. Do you mean to say they did not participate?

Mr. WOEHLEKE. They didn't have much of a chance, in the range surveys, as he stated.

The CHAIRMAN. He says they did participate.

Mr. WOEHLEKE. On the property surveys they participated.

The CHAIRMAN. Oh, yes.

Mr. WOEHLEKE. Not on the range surveys.

Mr. JENSON. The only part the Indian Service examiners played, on the range survey part of it, was in the compilation, which they did a great share of.

The CHAIRMAN. Addressing yourself to the question of whether the two Services are now engaged on the review of the data collected, rather than the survey itself, can you answer that, Mr. Woehlke? What I am getting at, it has been intimated from the last few statements that the departments themselves are considering this. This is an intricate question and they are trying to solve the question. That is true, is it not, Mr. Woehlke?

Mr. WOEHLEKE. Correct.

The CHAIRMAN. The committee is interested in getting around so that the question may be solved without the enactment of what might be unjust and unfair legislation. That being true, we are glad to know it, because it is a matter of progress.

Mr. LEECH. I might say, too, Mr. Chairman, after Mr. Jenson presented this to Director Rutledge and Mr. Zimmerman and Director Rutledge had Mr. Moore check and review part of this, most of it, and made a field trip with Mr. Wright, which, later, we will develop, and Director Rutledge looked at the whole thing as a land-management proposition, something that should be worked out, if possible. He had no particular interest in the Indians or in the white stockmen. He was merely looking at it from a proper land management and use of that area, and Mr. Moore, and also Mr. Wright, will touch on that shortly after Mr. Jenson is through. It all is still under consideration.

Mr. PATTERSON. One more question, Mr. Jenson. In your computation you did not take into account the base property that is outside of this Indian area, the black-boundaried district? You did not take into account the base property which uses for grazing purposes land on the inside of this area?

Mr. JENSON. You mean what rights the white user would have that would be affected except here? Whatever consideration they accept here would leave a balance over here to go to the white user. So this is a study of the qualifications of the Indian base lands submitted and the balance which would go to the white user would be set up on similar adjudications for the users.

The CHAIRMAN. The white user would be a nonresident user, so to speak?

Mr. JENSON. In most cases they are. I don't know as any of them would be in the area.

Mr. WRIGHT. Up to date, Mr. Jenson, no similar property survey has been made on white-owned-base property for this area?

Mr. JENSON. All those surveys are completed. All the compilations the same as this is completed, taking the balance left here and putting it against the white user that are qualified; that is all completed.

Mr. WRIGHT. The white users now in the area?

Mr. JENSON. If he was in the area during the winter of 1941 and 1942.

The CHAIRMAN. Are there any further questions on this?

Mr. WOEHLEKE. I might say just this, Mr. Chairman: The results of the labors of Mr. Jenson and his colleagues were so startling at the time they were submitted to Assistant Commissioner Zimmerman and our Director of Forestry, Mr. Arnold, that they were almost completely flabbergasted when they considered the amount of forage production capacity which they thought the Utes had bought and which this particular application of the Range Code, and so forth, would finally leave them with.

The CHAIRMAN. Now, the Range Code had been set up some time before, hadn't it?

Mr. WOEHLEKE. I think it has been set up since 1935 with numerous changes.

The CHAIRMAN. Your Service had access to the Range Code, did it not?

Mr. WOEHLEKE. Yes.

The CHAIRMAN. Did it not at all times have access to the Range Code, the Indian Service?

Mr. WOEHLEKE. Yes.

The CHAIRMAN. You are not going to tell us that the Indian Service really, with their eyes wide open, bought a cat in the bag?

Mr. WOEHLEKE. No, Mr. Chairman; they did not proceed to buy a cat in the bag.

The CHAIRMAN. You're telling us that because you were startled, notwithstanding the fact you had time to look into this purchase, you made a study of it and then you purchased the land, the Indian Bureau, mind you, not the Indians—they purchased the land for the Indians. Now, do you want to say you were flabbergasted, that you thought you had purchased something that was not there?

Mr. WOEHLEKE. No; I would not say that.

The CHAIRMAN. I would not say anything if I were you.

Mr. WOEHLEKE. What the Indian Service proceeded to buy was the private lands within the red or green lines in that area.

The CHAIRMAN. You wouldn't have bought those lands if they stood bare of any rights on the open public domain, now, would you?

Mr. WOEHLEKE. Under an agreement that was arranged.

The CHAIRMAN. Answer my questions. You would never have purchased those lands if they stood bare of any rights on the open public domain, would you?

Mr. WOEHLEKE. Of course not.

The CHAIRMAN. Why didn't you know what rights they had on the open public domain before you purchased them?

Mr. WOHLKE. We did.

The CHAIRMAN. You did, but you were flabbergasted to find out afterward what you didn't know.

Mr. WOHLKE. Flabbergasted because this particular application of the Range Code diminishes that right far below that which those properties enjoyed at the time we bought them.

Mr. GRAHAM. There is a difference in point of time that is significant, Mr. Chairman. When were these lands acquired, or the program initiated, Mr. Wohlke?

Mr. WOHLKE. 1935.

Mr. GRAHAM. There has been a sort of a code in existence during that period. The first one applicable here came into existence in 1938. There may be some explanation for a portion of that.

The CHAIRMAN. I take it now from Mr. Wohlke's statement that the Indian Service made no attempt to set up rights on the open public domain based on any code; never took any code into consideration, whether it was the code prior to 1928, or at 1938, or subsequent to 1938. They just bought and took the base lands, on the theory that the whites had certain rights on the open public domain, and never sought to determine those rights. Is there any correction to that statement?

Mr. WOHLKE. Yes. We did try to determine those rights, in the appraisal of the properties as we bought them, and we referred back to the number of cattle which they had customarily operated. As, for instance, in the case of the Taylor property, where the 630 acres plus the waters, springs on the public domain, controlled a total of between 45,000 and 50,000 acres. We bought that entire right from the Taylor family, and paid them on the basis of approximately \$45 per A. U. M. of the carrying capacity of the entire operation as such, and he had a license from the Grazing Service for that amount. When later on, a new edition of the Range Code is applied to the Taylor property, the result is rather startling. Yet we did buy that which Taylor had customarily controlled through the use of his base land and of his water improvements on the domain.

The CHAIRMAN. Well, now, supposing there was no Indian in the situation at all. Let's say that the Taylor lands—Taylor is the name of an individual in this instance—supposing the Taylor holdings had been purchased by a white man, and then the new code had come in. He would have been reduced accordingly, wouldn't he?

Mr. WOHLKE. I suppose so.

The CHAIRMAN. So he could make the same complaint. He would be startled and flabbergasted, too.

Mr. WOHLKE. After all, we do maintain that the Indians in this case deserve special consideration. They had this complex, this reservation, a million eight hundred thousand acres, and it was taken from them again. It was also recognized that they had a moral claim to special consideration.

The CHAIRMAN. Now, Mr. Wohlke, analyze that just a minute. You are under the Interior Department. The Interior Department

set up that Uncompahgre Reservation, didn't it, by an Executive order of the Secretary of the Interior?

Mr. WOHLKE. No; that was an Executive order—Presidential order.

The CHAIRMAN. It doesn't make any difference. It came through the Secretary of the Interior, and then it was taken away from them by the same authority; is that right? So that if you gave them something and took it away from them you are responsible for it, not the Congress.

Mr. WOHLKE. I don't know the exact situation as to how the taking was accomplished.

The CHAIRMAN. I go on this basis—that the Secretary of the Interior would not do an injustice to the Indians, who are under him.

Mr. WOHLKE. The Executive order setting up the Uncompahgre Reservation in 1882 was carrying out an action by Congress, and I doubt whether the Secretary of the Interior had very much to do with it except to validate it and turn it over to Mr. Havell to place on the records of the Land Office.

Senator MURDOCK. May I ask a question along that line? I am reading now, Mr. Wohlke, from a letter signed by Oscar L. Chapman, Assistant Secretary of the Interior, which has to do particularly with the question of whether or not the Uncompahgre Indians ever had any equity in the reservation set up for them, and this is what the Assistant Secretary of the Interior Department says:

It will also be noted from the excerpts herewith that the Indians were charged \$1.25 per acre for lands taken within the Uncompahgre withdrawal area, which is a rather clear indication that no tribal rights or equities to this area were established in the Uncompahgres by the Executive order of January 5, 1882, establishing the reservation. The Indian withdrawal was listed in 1898, pursuant to the act of June 7, 1897.

Now, Mr. Chairman, at this point, if there is no objection to it, in answer to what Mr. Wohlke said, I would like to submit the letter for the record.

(The letter is as follows:)

DEPARTMENT OF THE INTERIOR.

Washington, February 3, 1939.

ERNEST L. WILKINSON, Esq.,

Washington, D. C.

MY DEAR MR. WILKINSON: Reference is made to the conference held in the Indian Office on December 28, attended by you, at which time there arose for reconsideration the question whether the undisposed-of lands within the former Uncompahgre Reservation are subject to restoration to the Ute Indians of Utah under section 3 of the act of June 18, 1934 (48 Stat. L. 984).

The reservation in question was established by Executive order of January 5, 1882, and embraced more than 2,000,000 acres. There are enclosed excerpts from the records of this Department which clearly indicate that this large area was withheld from settlement and entry so that there would be ample lands available from which to make allotments to these Indians, in accordance with an agreement with them, ratified by the act of June 15, 1880 (21 Stat. 199). Under this authority 105 allotments, embracing approximately 11,000 acres, were made to individuals of the Uncompahgre Band on the Uncompahgre Reservation. Subsequently, some of these allottees relinquished their lands in order that they might obtain more desirable lands on the Uintah and Ouray Reservation. This condition has advanced to the point where, according to the last allotment schedule submitted, con-

taining selections on behalf of 500 Uncompahgre Indians, 507 of the selections were for lands on the Uintah and Ouray Reservation and only 83 retained their selections on the Uncompahgre Reservation. It will also be noted from the excerpts herewith that the Indians were charged \$1.25 per acre for lands taken within the Uncompahgre withdrawal area, which is a rather clear indication that no tribal rights or equities to this area were established in the Uncompahgres by the Executive order of January 5, 1882, establishing the reservation. The Indian withdrawal was lifted in 1898, pursuant to the act of June 7, 1897 (Stat. 87).

In view of the record upon this matter, it is our belief that the undisposed-of lands within the boundaries of the former Uncompahgre Reservation are not of the class intended for restoration to tribal ownership under section 3 of the Indian Reorganization Act. Any withdrawal of public-domain lands within the said area for tribal purposes would require special legislation.

Sincerely yours,

OSCAR L. CHAPMAN,
Assistant Secretary.

Mr. PATTERSON. I would like to ask Mr. Woehlke a question. If you have any faith in this so-called reservation, why did you go up to the reservation and purchase that which you already had?

Mr. WOHLKE. Mr. Patterson, we never claimed that that was a reservation. As Oscar Chapman wrote in that particular letter, any rights that the Uncompahgres might have had in that Executive order reservation of 1882 were extinguished by an act of Congress followed by the Proclamation of 1897. After that there was no more reservation and the Uncompahgres only had a moral claim.

Senator MURDOCK. He says they have no claim.

Mr. WOHLKE. I maintain they have a moral claim.

Senator MURDOCK. In the opinion of the Assistant Secretary, they had no such claim. I don't think he uses the word "moral," but he says no claim whatever, and no equity.

Mr. WOHLKE. In the records of the Indian Office under date of 1929 there is a long memorandum, worked out in the land division, establishing the fact that there is no legal claim by the Uncompahgre Utes to these 1,800,000 acres. I think we are all agreed on that point.

Senator MURDOCK. As to that, I don't think you should refer to the Uncompahgres. That is the area once included in it. I don't think we should refer to it as a territory or area in which the Uncompahgres have some right, whether legal, moral, or what.

Mr. WOHLKE. I think there is a moral claim because of the long history of the shrinkage of the Ute holdings throughout these two States, in Colorado and Utah.

Senator MURDOCK. I think, in consideration of the setting up of Indian reservations, you must bear in mind, when created this was a wide-open territory set-up. White settlers came in, and some adjustments were necessary. We are confronted, we, as Senators, and these other people as officials of the United States, white stockmen and the Indians stockmen, are confronted, today, with making some disposition of these lands which is equitable to everyone, and certainly equity does not include the establishment of large reservations which cannot be beneficially used by the Indians. But they are entitled to, on the other hand, every acre they can beneficially use, the same as the white men.

The CHAIRMAN. I say this, and it is my own individual view, after some 2 or 3 years of study of this subject here in this committee; that if we would take the Indian of America today, and treat him as an equal, and give him his status as an equal in American life, we would do a great deal more for him than to make a pet, and pamper him, and try to build something up, build his future on something that does not exist. If we take the Indian and say, "You have the same rights, and the same privileges, as any American citizen, but you will not have any more," we would do a whole lot more to build the Indian for the future than to make a hothouse plant out of him. I'm telling you that is my personal view.

Let's get away from this subject and ask if there are any more questions of Mr. Jenson.

Mr. GRAHAM. Without undertaking to prolong this discussion on moral obligation, in fairness, it should be observed that the letter from Assistant Secretary Chapman, from which Senator Murdock read the excerpts, while it does use broad language in referring, in using the word "equity," it was addressed to the attorney for the Indians, and addressed to the sole question of whether these lands in the old Uncompahgre Reservation were subject to restoration under the Wheeler-Howard Act.

Senator MURDOCK. Certainly you do not want to imply that Mr. Chapman will write one kind of a letter to an attorney, and another to someone else?

Mr. GRAHAM. Not inconsistently; no, sir.

Senator MURDOCK. I think I have a right to take a letter written by an official of this Government, written to an attorney, or Senator, and rely on the facts he is stating, the fact as he knows it to be, and I hope we have an Assistant Secretary of the Interior back there who will not state a letter to a lawyer in one way, and state it in a different way to someone else. I don't think Oscar Chapman would do that.

The CHAIRMAN. Mr. Jenson, I have a few questions I would like to ask, that can be cleared up. I want to state, from what I have gathered here today, I would like to have cleared up in my mind certain things. My views are not crystalized by any means. As I have seen it to date, it would seem to me that if the commensurate rights that really belonged to the predecessors of the Indians on these red lands, so called, were established now to the Indians, that certainly justice would be rendered to them. In other words, if in a holding of 320 or 640 acres, there were commensurate rights on the open public domain, and the 320 or 640 acres being base lands, if the predecessors in interest had commensurate rights on the open public domain, it would seem to me those commensurate rights would properly pass into the land. Now, if we can by some method, arrive at what they were, we will have gone quite a way toward solving one intricate problem. Do you know of anything that will enlighten us on that?

Mr. JENSON. In our adjudication work in the State of Utah, that principle has been held to, the right would be attached to the land

any time that the property is transferred from one individual to another. That right goes with the land. That right is based on three factors, the carrying capacity of that land, the production of the base lands, the prior use, or the dependence of that base land for winter use to make year-round operation; and the third factor would be, was it submitted to the Grazing Service for the grazing right. Then those three factors, in all adjudications, are set up as a qualification of the property, and the controlling factor of all of that is to take all of the land submitted by all individuals, whether in one like unit G, in the whole district, put that total qualification, determined by those three factors, in the carrying capacity of the range, which is the controlling factor, after all. And then each piece of property got its proportionate share of the carrying capacity of the range. That is the way this is done, that is what we have worked throughout the State of Utah, grazing districts 6, 9, part of 4, and all of district 8. It is done by the field examiners making the appraisal on production, terms of priority, going into all the records, so on all it can be considered the same.

The CHAIRMAN. Now, that is the basis of your study with reference to this subject, is it?

Mr. JENSON. Yes, sir; that's it exactly.

The CHAIRMAN. In the carrying out of this study you were in part joined by the Indian representatives?

Mr. JENSON. On this unit G we were, as far as the base property goes. They were there on every rating of the base property, measuring the hay stacks, and measured it all together. Then on the Federal range carrying capacity, we were unable to work it out. As I explained a little while ago, we did most of that, but on the compilation of both the Federal range carrying capacity, and on these studies carried on in 1941 and 1942, the Indian Service examiners worked right with the range survey examiners of the Grazing Service.

The CHAIRMAN. How did you agree?

Mr. JENSON. Not too well; agreed to the field studies before they left the piece of property. On these studies, we all worked them out together. That is what I was in charge of, the business of setting up the method of how to do it, conform to the code and the act. The rest of the boys did most of the compilation.

The CHAIRMAN. I am trying to find out where there was a divergence of conclusion.

Senator MURDOCK. Haven't you got some charts dealing with the individual pieces of land?

Mr. JENSON. I have every piece of property here, Indian allotment.

Senator MURDOCK. I believe, Mr. Chairman, that would bring out the point. Have you got that Taylor piece?

Mr. JENSON. I think so.

The CHAIRMAN. What is the history? Does anyone care to query? The Indian Service field men did not participate—does anyone care to query as to why the Indian Service field men did not participate all the way through?

Mr. WOHLKE. I believe in many instances, as Mr. Jenson explained, the range examiners of the Grazing Service got there and completed the job before the Indian Service examiners knew anything about it, or else they could not at that particular time participate, because they were engaged in other work. But there was that divergence of opinion, Mr. Chairman, about many of the basic factors in this range survey. You know that usually the technicians differ in their methods of range survey. In this case there was a pronounced difference between our regional office forester and the regional grazer's office here, on various factors in that range survey; so they did not get together on it.

The CHAIRMAN. One of the funny phases to this from your present statement, if the Grazing Service and John Smith, who was the owner of a base property, and was running livestock on the open public domain, should disagree, that would be quite natural. But that a department should disagree with itself seems to me to be a little out of line.

Mr. WOHLKE. I believe, Mr. Chairman—

Mr. PATTERSON. I would like to know if there is any disagreement as to the standard employed in arriving at your final results?

Mr. JENSON. For our standards, we used the same standards on all these properties that were purchased, the same standards used throughout the rest of the district.

Mr. PATTERSON. Did you agree upon those things?

Mr. JENSON. The Grazing Service and Indian Service examiners may have had some little differences, but nothing material.

Mr. LEECH. You worked under the approved range survey standards for all Federal agencies, didn't you?

Mr. JENSON. Yes; they have the Bureau of Survey standards set up. That is the standard used in this study. All Government agencies use those surveys. They set up the standards, and they are the standards used for the study.

Mr. PATTERSON. May I ask you, down in the Grand County country, there at the lower end of that map, where some red area is, did you examine a piece of property purchased from a Henry Woodman?

Mr. JENSON. Yes; he is on here.

Mr. PATTERSON. He had no grazing rights. He was a miner up at the Carbon country.

Mr. JENSON. That is part of the property that the Indians purchased.

Mr. PATTERSON. But it had no priorities.

Mr. JENSON. No.

Mr. PATTERSON. But you awarded a priority.

Mr. JENSON. On that, we brought out here sometime ago, at times the priorities are inflated a great deal. Finally, it was either one of two things, to limit the qualifications of any individual, either by his priority in time against numbers, or the production of base land. So we got so involved on priorities on this stuff, said everything has got priority extended; the carrying capacity of the land controls this whole thing—the carrying capacity of the base, I mean.

Mr. MORONI A. SMITH. Did you have much disagreement on the carrying capacity of the base lands, as you did on the Federal range lands?

Mr. JENSON. No; I think not. I think there was more contention on that than anything else.

Senator MURDOCK. On your base lands you came to an agreement?

Mr. JENSON. Yes. I took his question as to the carrying capacity of the Federal range.

Mr. SMITH. As I understand, you agreed much closer on the carrying capacity of the base lands than on the carrying capacity of the Federal range lands.

Mr. JENSON. We used the accepted standard against the Federal range and here they actually agreed right on the ground, have to apply their standards against the Federal range, to get its carrying capacity.

The CHAIRMAN. I believe, Senator, you wanted to go into one case.

Senator MURDOCK. I thought it would be enlightening to the committee. As I understand it, Mr. Jenson, you have a complete list of all properties indicated in red on the map here on your chart?

Mr. JENSON. Yes, sir.

Senator MURDOCK. There has been considerable talk about the Taylor tract. Point out what happened with reference to the appraisals they made.

Mr. JENSON. I can do that, all right. Is it N. R. Taylor? Is that the one?

Mr. PATTERSON. Yes.

Mr. JENSON. That shows a total purchase of 638 acres. This study had been carried out here along in 1936 and 1935, while the Indian Service was doing their purchasing. Had a representative go in the field and rate all the properties they were purchasing, in order to arrive at the value of that property. From here over [indicating] we have that rating made by the Indian Service. That is broken down into the kinds of crops growing on the area at that particular time, and broken down into how much it produced per acre. Then the same standard, changing that alfalfa and hay over to the animal-unit-months, is used here as it is used on the last one. The whole difference in the three studies would be the difference in the production at the time the examiner was on the property, and this one shows that the Indian Service Representative rated 638 acres there; changed it over to A. U. M.'s of feed, at that time, when he rated it a production of 1,360 A. U. M.'s or animal months of feed.

As this study progressed we had one of the Grazing Service examiners, during the winter of 1939 and '40, take that Indian Service's figures and apply the state averages for production against these lands.

Senator MURDOCK. For the purposes of the record, the one on the left hand column there is headed "Pearson."

Mr. JENSON. He is the man who made the ratings for the Indian Service. Croft is our examiner, who made the average comparison.

The CHAIRMAN. Why was that made by the Grazing representative at that time?

Mr. JENSON. Apparently there was quite a controversy going on between the regional grazer and the Indian Service representative, in Salt Lake City, as to the production of those lands.

The CHAIRMAN. That was before the purchase of the unit?

Mr. JENSON. This was before the purchase was made. The Indian Service rating was made some time before the purchases.

Mr. WRIGHT. 1939 was still before the purchase.

Mr. JENSON. This is 1939 and '40.

The CHAIRMAN. Still before the purchase at that time. The Grazing Service representative gave animal-unit months, 992, and the Indian Service gave animal unit months 1360?

Mr. JENSON. Yes, sir. Then they made this study, in the fall of 1941, which was a cooperative study, between the range examiners, the Grazing Service, and the Indian Service. At the same rate of production they rated it 825, and this agreement they both signed as to production at that time.

The CHAIRMAN. Before purchase?

Mr. JENSON. That was 1941, following the purchase.

Mr. WOEHLEKE. Mr. Jenson, could it be determined, from those records that you have compiled, what the Taylor property was licensed for, at the time Pearson made his survey in 1938 and 1939?

Mr. JENSON. It could be determined if you apply the code, whether it is the first one or the last one.

Mr. LEECH. I think we have that, Mr. Chairman.

Mr. JENSON. Apply the code as linked by the production of the base land or the priority. In every case here, the priority greatly exceeds the production of the base property.

The CHAIRMAN. I am interested in one phase, and I want to know if I have gained a wrong conception of it. I would like to know, this plat and the Taylor purchase indicates this: Pearson's estimate, Pearson representing the Indian Service, gave a value of 1360 A. U. M.'s; at the same time, or thereabouts, and before the purchase was made, of the property, the Grazing Service examiner came in and made a study, and gave the property a value of 992 A. U. M.'s. Now, you certainly must have had advice on that before you made that purchase.

Mr. WOEHLEKE. I am not certain whether we did have advice on that.

The CHAIRMAN. Here we are again, with the same proposition, the same Department, and same group, making an estimate. One shows that it is worth 1360, the other shows it is worth 992. You certainly were advised.

Mr. WOEHLEKE. At the same time, when Pearson made his estimate he also gave certain value to the improvements, the water facilities, stock waters on the public domain, from which Taylor operated.

The CHAIRMAN. I take it that certainly Croft, of the Grazing Service, would not do less, would he?

Mr. WOEHLEKE. I don't believe they gave any consideration to that.

The CHAIRMAN. How about that, Mr. Jenson? In our colloquy, here, Mr. Woehlke says there was a different basis for the estimates made by the Grazing Service representative, in that he took into consideration other elements.

Mr. JENSON. I would say the Indian representative made his original estimate, and probably included what they considered was the

value of the grazing rights to increase the production there to justify it.

Mr. WOHLKE. That is right.

Mr. JENSON. Either that, or the base properties were in better production, at that time.

Senator MURDOCK. Is that what you attribute the disparity to, that there might have been a difference in the productiveness of the land, at the time Pearson examined it, and at the time Croft examined it, and then also at the time of the joint examination?

Mr. JENSON. Yes, sir; difference in production, same farmer was farming it under the Pearson appraisal and the Croft appraisal.

Senator MURDOCK. The farmer on it when Pearson was there was there at the time they purchased, and the time the others were there? The Indian families were on it?

Mr. WRIGHT. Mr. Taylor did not leave the property until the fall of 1941. But is not this true, Mr. Jenson, Mr. Pearson made his appraisals, which included the 13 springs on the public domain, rated as public improvements, and Croft did not take the springs into consideration?

Mr. JENSON. I don't think he made a consideration of the springs.

Mr. LEECH. Did he make a field examination?

Mr. JENSON. These are a comparison of the State averages, what the State does. It puts the State averages for alfalfa production and grain production against those properties.

Senator MURDOCK. Can you tell from the chart what Pearson took into consideration?

Mr. JENSON. I don't know as it will include the springs; shows what the production on the land was at that time—alfalfa, some grass, some hay, so much pasture, summer grazing, aftermath.

Senator MURDOCK. Isn't that an appraisal of the production of the farm land, without any regard to the range?

Mr. JENSON. Yes, sir. Now in that range and spring factors in there, if they are in there, it is within those figures and does not show.

Senator MURDOCK. Is there sufficient disparity between the Croft appraisal and the Pearson appraisal to be accounted for by Pearson including the water holes and stuff?

Mr. JENSON. That would account for part of it; and a difference in production, or the difference in the State average, would provide for most of it. Croft put a State average against it.

Mr. WOHLKE. Croft did not make a field examination; he merely applied the State averages of the productivity of certain kinds of land at his desk, and did not take into consideration the 13 springs.

Mr. JENSON. No; in this study made by the Indian Service, and the last study made by the joint services, those are the only two comparable. In both cases the men were out on the property.

The CHAIRMAN. Taking those, first, by Pearson, that shows 1,360, and the last one, made jointly, shows 842.

Mr. JENSON. Those two studies are comparable as on base property.

The CHAIRMAN. Well, I wanted to emphasize in this discussion here, which has gone far afield from the matter that the Indian Serv-

ice, when it purchased these lands, had already made a study of it, and had opportunity for guidance from others along similar lines, and could have had further advice. They were in a position that they need not be flabbergasted or taken by surprise. They, at least, had an opportunity to know what they were buying, and they had at their disposal their own grazing service, set up under the Taylor Grazing Act, with its ample facilities, as evidenced by splendid appropriations that would have been making a little more every year. All of these years these were at their disposal so they could know exactly what they were buying.

Mr. WRIGHT. May I suggest, Mr. Chairman, that it would be enlightening to continue that example by showing the grazing licenses that have been issued each year of those studies?

The CHAIRMAN. I think that would be. I think, carrying out that thought, I tried to express that understanding when I expressed these thoughts. These are the thoughts of the individual, and the committee is not bound by them at all. The thought I tried to express was this: In order to render justice, it would seem to me, a high degree of justice would be rendered to the Indians if we would say to them, "You have purchased these base lands, with whatever commensurate rights are there, rights which the predecessors had on the open public domain."

Mr. WRIGHT. You would not be far off on that.

Mr. LEECH. Mr. Chairman, I will have that prepared. I don't have it available right now, as to the licenses each year, in connection with the Taylor property. I have it for 1939 and 1940, but we will have to assemble the figures on the rest of it.

Mr. WOHLKE. We would be glad to submit also, if the committee so desires, a compilation showing the properties purchased, date of the purchase, the appraisal by the Indian Service land field agents, and the rated capacity of the ranch property, as it was at the time of appraisal.

The CHAIRMAN. There is a question of whether or not these lands were property to be considered as base property, because the picture given by Mr. Wright this morning would indicate they were rather doubtfully base property; rather doubtful as to whether or not they produced forage or grasses or hay sufficient to carry for a considerable period during the year. My conception of base property is property that will carry for a period when the stock must be removed from the open public domain. I think that is basic to the whole proposition, and some of the picture I caught this morning of some of these lands that were purchased was they were just wild grasslands that were not being farmed. Am I wrong on that conception?

Mr. WRIGHT. Many of the lands purchased, especially up in the summer range country, are only range lands, that is very true. But those that happen to be located on creek bottoms produce natural winter feed, not necessarily by raising tame hay. All of these men that live up there will testify to that.

The CHAIRMAN. How about open pasture land out on the open public domain? Does that stand as base lands under the general application of the rule, Mr. Leech?

Mr. LEECH. It would for grazing privileges of the opposite season.

The CHAIRMAN. But not for a year-round proposition?

Summarization of ratings on base properties, Federal range survey carrying Capacity and year-long livestock operations on Indian properties and Federal range unit G, district 8, Utah

Mr. LEECH. Summer range would not be entitled to more summer range; it thereby depends on the full use.

The CHAIRMAN. That is what I am driving at.

Are there any further questions on this?

Senator, I would like to know what your views are as to whether or not you think these should go in the record.

Senator MURDOCK. There are 28 of them; it seems to me they could.

Mr. JENSON. Yes, sir; we can give you copies to go into the record.

The CHAIRMAN. I think it would be enlightening to those who must read the record later on.

! This includes sufficient acreage to support 2,890 AUM's.
 * Plus tribal lands.

The CHAIRMAN. Mr. Wright, have you any questions to ask while Mr. Jenson is before us? Anyone else here?

Mr. WOEHLEKE. May I ask Mr. Jenson on what length of use of base property and of the Federal range the computations were based?

Mr. JENSON. What length of use?

Mr. WOEHLEKE. Was it 3 months on the base and 9 months on the range?

Mr. JENSON. The first thing that was done, the unit was divided into summer range and winter range. The summer range was used as being dependent upon winter rights, the winter base production for summer rights; therefore, completing 12 months use by using base and Federal rate.

Mr. WOEHLEKE. At the time the purchases were made, our appraisers proceeded to go on the formula of 3 months on the base property and 9 months on the public range; and, I believe, at that time the Grazing Service in 1935 and 1936 and 1937 was using the same ratio in the determination of its licenses.

Mr. JENSON. This has all been worked out on a 3-9, 4-8, 5-7 ratio. The thing that controls it is production of the base land divided into the carrying capacity of the range. Work it out the same way, and get the same answer. The only difference is if you use a 3-9 pyramid qualification, divide that into carrying capacity and get a lower figure; divide it out to reach the use of 5-7 or 4-8 you don't pyramid quite as high. All that 3-9, 4-8, 5-7 does is merely pyramid the qualification.

The CHAIRMAN. There was during the course, somewhere along here, a proposed agreement that seems to have been proposed or considered by Mr. Wright as superintendent of the Uintah-Ouray Indian Reservation and Mr. Charles F. Moore, regional grazier. I have here what purports to be a copy of that bearing the date, July 27, 1942. It sets out a provision, eight paragraphs. Mr. Wright, you are familiar with that, I take it?

Mr. WRIGHT. Yes, sir.

The CHAIRMAN. Would you care to discuss that, while we are on the subject?

Mr. WRIGHT. If you wish; yes, sir. May I have a copy of it to refer to, Mr. Chairman?

The CHAIRMAN. It is not in evidence yet because I want it to be identified as a foundation to some extent.

Mr. LEECH. This inspection, examination made by Mr. Moore and Mr. Wright was after this Jenson work was looked over by Mr. Rutledge and Mr. Zimmerman and the two local representatives were told to go out and look into the matter and come back with some recommendation to be considered by the two Services. That is what the Moore-Wright recommendations are, and it is supported by a map they prepared at that time. It has not as yet been adopted by the two agencies.

The CHAIRMAN. My understanding is that it has been approved by the Grazing Service, is that correct?

Mr. LEECH. It was approved, and submitted to Mr. Zimmerman. It has to be approved by both.

The CHAIRMAN. It has been approved by the Grazing Service?

Mr. LEECH. By Director Rutledge; yes, sir.

The **CHAIRMAN**. The reason for it being discussed at this time, I think it will enlighten those who have this matter in hand in the Department as well as the committee and will show that progress is being made. At least an honest attempt is being made to solve a rather difficult proposition.

Mr. LEECH. That is our position, Senator.

The **CHAIRMAN**. I wonder if you can put that little map up here somewhere? Perhaps Mr. Wright would care to have it up here as he goes along.

Mr. WRIGHT. Mr. Moore and I were instructed to go out and spend some time on this area, as Mr. Leech has said, to come back with some recommendations which we thought would work and maybe reach a solution of this problem. So we actually spent about 10 days out in the area examining boundary lines to see if we could recommend a boundary which seemed workable with reference to the people who are operating in any part of the particular area and to make a long discussion short, we came back with these recommendations: First, that the Ute extension area—what is within that black, modified by the green line on the big map—and unit G of Utah grazing district No. 8 should be identical, and that that area should be referred to as unit G or the Ute extension, either one, and to be represented by this red line on this map.

The **CHAIRMAN**. Which is the same as the green line on the big map?

Mr. WRIGHT. No, sir; it is different in this way: I will try to point it out so those in the room can see approximately the modifications. The boundary line goes something in this fashion, and leaves that lower area out of the proposed reserve. Then the line is approximately the same as this green line, except that it follows the topography and natural barriers all along this green line until it gets to this point here [pointing]. Instead of coming out here it goes on down to that point there and comes out about the same and then it coincides with the green line again. Now, that is approximately the area we delimited. It leaves out this township here and diminishes the reserve by about 40 sections.

Now, we recommended further that these scattered allotments that are out here in the public domain which belong to the Indians be released as soon as the Indians would consent to it, either to be purchased or exchanged for some of these base properties inside, and revert to public domain if any legal way could be worked out for that. We did that because many of the white operators out in this country find these allotments somewhat interfering with their operations. In discussing it with two or three of the Indian owners, they seemed willing to do that, since they are not using those lands themselves.

The basis of this new boundary line in this corner is a sharp precipice that follows that country all around there. You can drive in an automobile close enough so you can see a good deal of that and then you can drive about to this point [indicating] in an automobile. Then you have to take horses down in this country about 14 miles. We rode down to see this purchased property here, the Wilcox ranch or the old MacPherson ranch on Green River. This is a very rough country in here and both MacPherson and Wilcox have operated sheep and cattle from that base property in various numbers. I would not attempt to say the exact number, but it ranges all the way from 150

to 1,500 cattle in there. It is almost entirely independent of the rest of the area so far as the natural lay of the land is concerned and the use of it by cattle and sheep. You can get down in this country on a horse, and cattle have been driven from this area, I am told, down into this country. Also sheep, I believe, but it is very difficult to operate and very unmanageable to try to do that; and it has always been operated from Green River City down here by these owners. They stayed back up in there about 45 miles.

It seemed that might be cut off, logically, and used independently. The Indians would not necessarily lose the use of it at all because this is the only base property that controls that entire big block. It is very rough country and a lot of it is just bare rock and nothing in there at all. The Grazing Service in district 9 has already adjudicated the rights in there and issued a 10-year permit to the Indian Service for that property. It takes in most of that whole corner there, so from our standpoint the Indians would not lose any use or any right to that, and there has been some talk of selling it because it was so cut off. The reason it was bought was because the owner owned some of his homestead land on top here which is right in the heart of the Indian use, so he would not sell without selling the whole thing. That was purchased too. We always thought that Indian families might occupy that land, cut off by themselves and make very good use of it. But they have not seen fit to do it so far. Several of them have talked about it and said whenever this problem was settled they might run out there and consider it.

Other changes in the boundary line were made because of two reservoirs which have been built in this area [pointing] fairly recently, by the C. C. C. organization. They serve as watering facilities for the operators out in this area. It seems that the value of that land as grazing land is very poor. Since these reservoirs were there and served the operators out there we believed it might be excluded from the reserve also.

So that would limit the area that we recommended to be established as a grazing reserve for the benefit of the Ute Indians——

MR. PATTERSON. I would like to ask a question right there. You and Mr. Moore entered into these negotiations, as it were, with the idea you had a reservation there and that the reservation was going to be established by this proposed legislation? Of course, such an agreement would not be operative unless the Congress should confirm this reservation for you?

MR. WRIGHT. Of course we realized it had not been set up yet.

MR. PATTERSON. Up in the north end there you would be cutting out there and awarding to the Indians rights which have accrued there under the Taylor grazing bill.

MR. WRIGHT. No; we tried to arrange that so it would not interfere with any operators. It would either include certain operators or it would exclude them on natural barriers.

MR. PATTERSON. Have you conferred with the operators, the people to whom this land has been allocated?

MR. WRIGHT. We haven't even conferred with the Indians about it.

MR. PATTERSON. You represent the Indians.

MR. WRIGHT. We did not confer, because it had not been accepted.

MR. LEECH. I believe, Mr. Chairman, that more of these questions will be answered as the Moore-Wright proposal is read.

Mr. WRIGHT. The first one was that the two areas be identical. The second was that the Indian allotments be exchanged as soon as the Indians would consent to it and the State lands, totaling about 46,000 acres, within the area, be exchanged for ceded Indian lands, outside, for the lands in purple on the map.

Also, that a stock driveway should be recognized and maintained over lands both inside and outside the area. There are still three or four private land holdings within the area along Green River and one on Willow Creek that should be acquired for the Ute Indians, so that they would not remain inside the area. When the purchasing program was under way, they were not for sale, but they are now at the present time, as I understand. There are only three or four of these small properties. The southwestern portion of the area has always been used in connection with the Wilcox ranch at the mouth of Florence Creek. This portion should continue to be used with this old ranch now belonging to the Indians and could be operated independently of the proposed Uncompahgre reserve.

The grazing privileges within the area should be furnished to non-Indian folks, if legally qualified for such privileges, so long as the combined use of Indian- and non-Indian-run stock does not exceed the livestock carrying capacity of the range; the privileges to be granted to each qualified non-Indian stockmen to be in proportion to the use of the range for 1941.

Those are our recommendations. As I say, they were not accepted fully, and, therefore, they were not even discussed with the Indians, because they were still in suspension; they were not discussed with the non-Indian stockmen who would be affected, because we were not prepared to make them a proposition. We thought they could go to these gentlemen there—there are only about six of them affected, only six white men affected in here really—they are the Smiths, three or four Smith outfits. There are some of them here, I believe, and the men Mr. Johnson represents, Chuturas, Tyzack, and Crawford—six outfits altogether.

Now, I don't mean to say they are the men that have held this thing up all the time. Many things have held it up. But if they were provided for, this whole thing, we felt, could be settled amicably, and people would be able to use the area without confusion. So we propose to go to those men and tell them, "Here is the picture. You know the Indians as well as we do. Do you think they are going to use all that range in the next few years, maybe 10 or 20, we don't know what, and, if not, there are privileges for you; when the Indians do use it, there are no privileges for you." We thought perhaps they might be willing to bet on that proposition instead of running the risk of whether they could get permanent privileges under the Taylor Grazing Act in other places. We thought we could go to the Indians and describe the situation to them, and they perhaps would see it and say they thought it was a fair settlement, even an opportunity to increase their livestock up to the full capacity of that area if they had the opportunity and saw fit to do it, and it would stop the quarreling about carrying capacity and so forth. We thought it would work. I believe that is about the size of it.

The CHAIRMAN. We have a somewhat, not exactly similar, but somewhat similar, set-up over in Wyoming on the Padlock ranch. It is just similar enough that it might be referred to, but it is not analogous.

The whites were invited to come in and take up lands and cultivate them; and later the open public domain rights on which they had set up their agricultural units were cut off from them by the Indian Service. They were left with no outside rights, and hence they could not go forward with their agricultural activity at all. They just had to take what was given to them or leave it and get out. Most of them had to take it and get out. It is one of the saddest things I think I ever saw go into the public record and it certainly did not reflect any credit whatever on the Indian Service.

I am only thinking if you were to carry out this policy referred to in subdivision 8 here, and said to these six, "You come in and use these rights until the Indians have stuff enough to absorb the rights," how soon would they be cut off?

Mr. WRIGHT. That, of course, was the chance they would have to take; that is true.

The CHAIRMAN. It is only a question of whether the chance is to be taken or not. I don't care to indulge in it.

Mr. WRIGHT. I presume, Mr. Chairman, you will call Mr. Moore.

Senator MURDOCK. Let me ask you this question: What objections could you have to setting up the grazing rights of the Indians under the Taylor Grazing Act? Forget about the Indian reservation.

Mr. WRIGHT. We have no objections to that, if made a special grazing district. We think perhaps we could operate it better for the Indians than any grazing service could.

Senator MURDOCK. That is really my question; if it was set up under the Taylor Grazing Act, then you are giving the Indians the same kind of a proposition, the same deal that it gives the white livestock man; where, if you set up a permanent reservation, that is never needed by the Indians, you are depriving people of the use of it.

Mr. WRIGHT. We had in mind that this part of the grazing reserve, when legally established, will be administered by the Commissioner of Indian Affairs. It might be done under the Taylor Grazing Act, as a special grazing district, by Secretarial order, or any of those methods.

Senator MURDOCK. Of course the present Commissioner of Indian Affairs at one time took the very emphatic position on transferring what he described as "pygmy services," within the Indian Office, to the larger services. He particularly referred to the reclamation project, in the Indian Bureau, and said they should be transferred to the Bureau of Reclamation, and that forest lands in the Indian Service should go to the Forest Service. Of course, evidently, he has changed his mind since becoming Commissioner.

Mr. WRIGHT. I would say, on behalf of the Indians, they would naturally prefer to have the set-up as a reserve. They say the danger in the future is of some unfriendly Secretary taking in away from them. If it were set up by law they would feel more secure about it.

Senator MURDOCK. Experience certainly could not be worse than it has been with the reservation.

The CHAIRMAN. Right there, Mr. Wright, again, arises the suggestion—with all of your training and your natural interest in the welfare of the Indian, which is most commendable, do you see anything wherein the Indian would be injured by his having the same rights on the open public domain, commensurate with base property, as a white man would?

Mr. WRIGHT. Yes; I see some danger of that, Senator, in that it seems that the present Grazing Service organization, the district boards, practically control the actions of the Service, the issuing of licenses, and so forth, at least to a large extent; and they are composed of stockmen in the area who have interests in the area. Oftentimes it happens, maybe unconsciously or unintentionally, at least, they do not give the Indian quite the consideration that he deserves. That, at least, is my view of it.

Mr. PATTERSON. Mr. Wright, about the sum and substance of your proposal is, you and Mr. Moore have agreed to get together and work out an agreeable plan?

Mr. WRIGHT. Yes; I might say so.

Mr. PATTERSON. That is commendable, also.

Mr. JOHNSON. Did you have in mind the possibility of Indians losing their rights, under the Taylor Grazing Act, by nonuse, if they failed to stock this land? In other words, you could not have the Indians living on these lands purchased, they could not live there and operate them, and put up the hay unless—and lease these rights—unless the lessee controlled the ranch, and had control of all the hay and everything produced on that ranch. Isn't that really the theory? You would rather have it thrown into a private allotment for the Indians, under the Indian Service, so they will not lose their rights by nonuse?

Mr. WRIGHT. Yes; part of it.

Mr. JOHNSON. At this time they are not capable of stocking?

Mr. WRIGHT. Certainly not, suddenly.

Mr. PATTERSON. It might not apply to them if they pay no fees?

Mr. WRIGHT. It might not.

Mr. MORONI SMITH. Isn't the Indian able to finance to go into the stock business, almost any time now, go out and borrow money at any time with these loan associations, and borrow enough money on the cattle, and buy and stock this up next year, say?

Mr. WRIGHT. No; hardly that extensive. There is provision for credit to the Indians, yes; under—Mr. Woehlke will frown at me when I say it—forms about that thick, and questionnaires longer than the O. D. T., and so forth.

Mr. SMITH. Have you ever found out whether you have any right to go to the production credit association or the regional agricultural credit and get credit?

Mr. WRIGHT. We have attempted that a number of times and they have always turned us down as not being eligible because the land is not eligible for mortgage.

Mr. SMITH. Mr. Wright, I am a director and have been with the livestock credit association. With the credit the Indians have, I can't see why they can't qualify. It is all on his ability to operate livestock; consideration on the livestock themselves without a bit of land being mortgaged to him, practically.

Mr. WRIGHT. I don't know; these grazing boys have been telling us no matter how much land you have you can only run about 10 head.

Mr. SMITH. This is your idea right here. In the first place, the production credit association set up by the Government will make loans on the livestock themselves providing it is not too top-heavy and I don't see why they wouldn't make it to an Indian as well as a white man. Now we come out with the Reconstruction Finance going

to come back; want everybody, for the war purpose, to set it up again through the production credit. Hundreds of white men haven't the showing that your Indians have to get credit. Is it because, as an Indian, he cannot get it, or is it because——

Mr. WRIGHT. Well, it is chiefly that the answer to our request has been that their land could not serve as proper security.

The CHAIRMAN. It is a question of title.

Mr. WRIGHT. Question of title. 'We have not thought that was altogether sound. You can get yourself some clients, I believe, Mr. Smith.

Mr. SMITH. I was coming around to the point Senator McCarran made; in a little while, if they accept this thing you and Mr. Moore had arranged, I can see where we would be threatened for our existence; be extinguished from this unit G in no time. I think your finances could easily be obtained, probably within the next year or two. You could put us out of there, as far as the Indians——

Mr. WRIGHT. You told me, "These damned Indians will never have any stock." I thought you told me that.

Mr. LAKE BOWNS (Provo, Utah). Mr. Wright, don't you undertake in my judgment, to borrow money for these Indians, or anyone else, from them loan companies, or you're going to get yourself in trouble.

Mr. JOSEPH HASLEM (Jensen, Utah). I am Joe Haslem, chairman of the cattle section, advisory board, district No. 8. I would like to ask Mr. Wright a question, if I may. On this tour you and Mr. Moore made in July of unit G, you kind of was taking care more or less of the Indians in that area, as I understand—Indian licenses in that area?

Mr. WRIGHT. Ask Mr. Moore.

Mr. HASLEM. You stated there were six whites in there. How many head of livestock would that involve?

Mr. WRIGHT. Twenty thousand head of sheep, I believe.

Mr. HASLEM. You never with your recommendation recommended any more; there was a probability they could lease from the Indian department?

Mr. WRIGHT. That is right.

Mr. HASLEM. If they could not, what was your suggestion?

Mr. WRIGHT. I didn't make any.

The CHAIRMAN. As to this proposed agreement, I am wondering if it has any place in the picture at all. It has not been agreed to and really has only been tentatively innovated. I don't know as it plays any part in the picture, and don't know that it belongs in the record.

Mr. LEECH. Mr. Chairman, it is still being worked on.

The CHAIRMAN. Then I think perhaps it would be well to leave it off the record at the present time.

Are there any lands in this territory affected by any other rights than what we have listened to today?

Mr. THOMAS C. HAVELL (supervisor, Branch of Adjudication, General Land Office, Washington, D. C.). Mr. Chairman, this morning when I said I had examined the map on the wall and found it correct as far as the records of the Land Office is concerned but not complete; there is something in this area shown in the black line that was not touched upon. That is the naval oil shale reserve.

The CHAIRMAN. Where is that?

Mr. HAVELL. It numbers four townships.

The CHAIRMAN. When you say four, I wonder if for the record we could have them designated?

Mr. HAVELL. They are townships 12 and 13, south, range 18 and 19, east. I took that off the tax books of the Land Office in Salt Lake City day before yesterday. I understand that is a complete naval reserve but the grazing use of the surface has been assigned by the Navy Department to the Grazing Service; that is, they graze by permission, and it is probable that, as long as the oil shale is not developed by the Navy, that will remain so. That is part of the area under discussion today.

The CHAIRMAN. Now, Mr. Leech, have you anything to throw further light on that?

Mr. LEECH. That agreement with the Navy Department was made in 1935, turning over to the Grazing Service the grazing administration of those four townships. We collect the fees on the district under section 10.

The CHAIRMAN. To whom do you distribute them?

Mr. LEECH. Fifty percent to the State, twenty-five percent to the Treasury, and twenty-five for range improvements. The Navy gets no part of it.

The CHAIRMAN. I see; and you administer, you continue to administer this regardless of what the outcome of this might be, I take it?

Mr. LEECH. Unless some other arrangements are made we would continue to do so.

Mr. HAVELL. I would venture a guess, Senator, if that land should at any time be put into an Indian reserve it would be very natural that the administration of it would follow the use of the whole area. I venture that merely as a guess.

The CHAIRMAN. That is probably true.

Mr. HAVELL. That is, as long as the Navy permitted the use of the land for grazing and did not care to develop the oil shales.

Mr. SMITH. Mr. Chairman, could I ask him at what time they created that naval reserve; about what date?

Mr. HAVELL. I have the date, in fact, I have a copy of it—by order of the President, dated December 6, 1916.

Mr. PATTERSON. By reason of the oil shale location there, I guess?

Mr. HAVELL. Yes, sir.

The CHAIRMAN. Mr. Leech, have you something further that you wish to offer in explanation of those maps, or the studies made, or anything else, that would be enlightening to the committee?

Mr. LEECH. I believe not, Mr. Chairman, unless Mr. Moore wishes to add to it.

Mr. MOORE. I think Mr. Wright gave everything in detail.

The CHAIRMAN. You are with the Grazing Service as regional grazier of Utah, and have been since the 1st of May?

Mr. MOORE. Yes, sir; I think Mr. Wright gave it in detail. That is, our participation in this.

Mr. LEECH. In that study, Mr. Moore, you were merely going over it from the purely land use point of view, regardless of whether it affected the Indian Office or the white stockmen?

Mr. MOORE. Yes, sir.

The CHAIRMAN. Now, the whole trend of the afternoon's hearing, in fact, nearly all today, has pointed toward the regional unit G.

Does all of this controversy center on Unit G? Is everything else fairly in the clear? Are there any controversial matters pertaining to the old Uintah Reservation, or purple lands, or the white lands or the yellow lands or the green lands?

Mr. JOHNSON. There is this controversy which is coming up on that, as I tried to bring out from Mr. Wright; and a point, which he is well aware of, that the 1,200 head of cattle or horses which they were to graze on the forest reserve. The Indians could not maintain, and did not maintain, the number, and the Forest Service issued grazing permits or licenses to whites and during the last year it has been taken back. That is one of the points in controversy now. The thing which we are attempting to bring out, which I attempted to bring out through examining Mr. Wright, was this fact: the reason they are attempting to set up this, under Indian supervision, is they will not have to obtain their rights, but will have a windfall, or something to get money for the Indians, to lease out this property; at the same time not having to maintain those—don't have to farm or keep up the base property.

The CHAIRMAN. Right at that point, permit an interruption, please. We know from experience that the Grazing Service and the Forest Service and all of the services have, as time went on, looked to the betterment of the range; and on the basis of overgrazing there has been a continual curtailment in all of the service. Especially the Forest Service has rigidly curtailed every time a transfer is made; and they curtail for other reasons. Have the Indians sustained those same curtailments or have they not been sustained in their rights without curtailment? What explanation have we there, Mr. Wright? Would you care to answer?

Mr. WRIGHT. Yes, sir. In 1936, for instance, on that yellow land, the Indian and white stock were using 30,000 A. U. M.'s, and the grazing study showed that it would only carry about 15,000. Now, that was reduced to about 18,000 but the Indian stock, however, was not reduced. If that is your question, they were not reduced.

The CHAIRMAN. In other words, the white stock bore the reduction?

Mr. WRIGHT. It bore the reduction. The Indian stock has been increasing since that time, but I thought at first your question referred to whether the total stocking on the range had been reduced on the Indian lands, and that has been, materially, and wherever it has been overstocked with Indian stock it has been reduced.

The CHAIRMAN. Now, running through all of this, Mr. Wright, I gather this picture: The Indian livestock has not been sufficient, and is not now sufficient, to graze the territory; and they have, by reason of that, by permit or lease, or arrangements of some kind, given rights to the white settlers on all of these lands.

Mr. WRIGHT. I could not answer that by just saying "Yes." The western neck of that yellow land, for instance, is hardly usable by the Indians. It is 75 miles away from where most of them live, and it is a narrow neck of land, which can only be used in conjunction with the forest and adjacent lands.

The CHAIRMAN. Do you mean the western neck or eastern neck?

Mr. WRIGHT. The western neck of that yellow land. That has almost always been permitted to the white people. It could hardly have any value by itself.

The CHAIRMAN. Has it been a revenue producer to some extent?

Mr. WRIGHT. Yes, sir; that is one reason why the Indians don't use all of it. Another reason, as Mr. Johnson pointed out, is a rather loose arrangement with the Forest Service concerning Indian use of the summer range. Both the Forest Service officials and ourselves have to come to some decision on this question, but it seems that it must be decided in Washington, and it has not been. There has been a good deal of controversy about it, and that has discouraged the Indians to some extent. They don't know what to plan on for summer range. Outside of those two things, together with the competition that they have against the white people who use the Indian range, there is one other thing, which is minor—there are always a few scoundrels in the country who will oil the deal with the Indians with a bottle of whisky and get them to sell out their herds. We have had one experience of that kind, where an Indian family reduced their herd from 150 head to 40 head, over a period of 3 years, and I believe the man responsible for that loss is on McNeil Island now. There are a few cases like that. There are still a few ranges available for the Indian stock they are not using. They are permitted to whites.

The CHAIRMAN. Mr. Wright, while you are on that, are there not some of the irrigated allotments leased to the whites?

Mr. WRIGHT. Yes, sir.

The CHAIRMAN. About how much?

Mr. WRIGHT. Twenty-seven thousand acres this year.

The CHAIRMAN. What is the reason for that?

Mr. WRIGHT. As I mentioned this morning, the Indians—

The CHAIRMAN. What percentage of that is that of the total?

Mr. WRIGHT. About one-third. As I indicated this morning, perhaps the main reason is that the Indians are only removed by one generation from the time they were a nomadic people, instead of agricultural. Another reason is that the scatteration process aided a good deal, selling their lands; and another reason is the heirship problem we have in the Indian Service. It does not seem to work as it does with the white people. Usually white heirs sell to one member of the family, or in some way the land is kept together. That is the white custom. But among the Indians it is difficult to do that, as you know, for they cut it up into many small pieces, and it finally gets to the place where none of them have any interest in it and lease it and collect their money for it. I think those are the main reasons.

The CHAIRMAN. Are there any questions of Mr. Wright?

Senator MURDOCK. You say that condition is improving, at all, Mr. Wright?

Mr. WRIGHT. If you take it in terms of the amount of land, irrigable land, that has been leased, over the period of the last 7 years, and I am familiar with it, there is not as much leased now as there was before. But there has been more Indian lands come into use, at the same time, under their own stewardship. It seems to me there is a trend toward more farming by the Indians.

The CHAIRMAN. There is here submitted, pursuant to request from the Department of Interior, certain orders of restoration that have not yet been touched upon in this hearing. They are not in effect yet but have been formulated and signed by not promulgated. This goes quite at length and sets out, by legal subdivision, the lands affected. I take it you are familiar with this, Mr. Woehlke?

Mr. GRAHAM. Might I, at this time, offer for the record a letter from the Secretary of the Interior, transmitting these, with a brief explanation?

The CHAIRMAN. Would you care to explain what they are, and what their status is, and how they came to be in existence?

Mr. GRAHAM. I think Mr. Woehlke can explain better than I can the history of their formulation. Perhaps I can read the letter aloud. (Thereupon Mr. Graham read the following letter into the record:)

THE SECRETARY OF THE INTERIOR,
Washington, February 11, 1943.

HON. PAT MCCARRAN,
*Chairman, Subcommittee of the Committee on Public Lands and Surveys,
United States Senate.*

MY DEAR SENATOR MCCARRAN: In connection with the hearing to be held by the Subcommittee of the Senate Committee on Public Lands and Surveys at Vernal, Utah, on February 16 and 17, to consider H. R. 837, "A bill to restore and add certain public lands to the Uintah and Ouray Reservation in Utah, and for other purposes," you have informally requested that copies of two proposed orders signed by me on August 15, 1941, and September 16, 1941, pertaining to the subject matter of the proposed legislation, be furnished to your Committee. I am enclosing copies of the two papers for your committee's information, but I invite attention to the fact that for reasons which I will describe briefly they are not in effect, not yet having been released or promulgated as orders.

As you know, bills along the lines of H. R. 837, which would restore certain described lands to the Uintah and Ouray Reservation and which in addition would provide for the establishment within Utah Grazing District No. 8 of a special grazing reserve for the exclusive use of the Indians, have been introduced in several of the congresses. Throughout this period representatives of the Office of Indian Affairs and the Grazing Service have cooperated in devising arrangements by which the area represented by the proposed grazing service would be administered equitably for both the white stockmen and the Indians. Early in 1941 legislation appeared unlikely of enactment and representatives of the two agencies conferred for the purpose of reaching an agreement on definite boundaries of a reserve for the exclusive use of the Indians.

These conferences resulted in the preparation of the two drafts of orders. The first would restore to tribal ownership the undisposed-of opened surplus unallotted lands of the Uintah and Ouray Indian Reservation, under the authority of sections 3 and 7 of the Wheeler-Howard Act of June 18, 1934 (48 Stat. 984, 25 U. S. C. secs. 463 and 467), and was signed by me on August 15, 1941. The second would modify the boundaries of Utah Grazing District No. 8 and would temporarily withdraw and rewithdraw certain described lands under the authority of section 4 of the act of March 3, 1927 (44 Stat. 1347, 25 U. S. C. sec. 398d), in aid of the proposed legislation permanently to withdraw the lands as a grazing reserve for the exclusive use of the Indians of the Uintah and Ouray Reservation, including the Uncompahgres. This draft was signed by me on September 16, 1941.

Representations were made by and in behalf of the white stockmen that the lateness of the grazing season and the previous lack of specific information would make it impossible for them to arrange other plans for the coming winter grazing season and it was strongly urged that they be permitted to make their customary winter use in the unit. I therefore concluded on October 13, 1941, that promulgation of the orders should be withheld until May 1, 1942, which would permit further progress on the range and base property surveys then being made. In view of the apparent possibility that H. R. 5720, which had been introduced in the Seventy-seventh Congress, by Congressman Robinson and for which H. R. 7638 later was substituted, would be enacted, no formal action subsequently was taken to make the signed drafts of orders effective. In addition, from time to time Members of the Congress have requested the Department further to defer their promulgation.

As a consequence of all of the foregoing, I am retaining the signed drafts in my possession and the enclosed papers are to be regarded only as copies of proposals which have been made to me.

If the committee should, after the hearing, like any further information relating to H. R. 837, I shall of course be glad to supply a report.

Sincerely yours,

(Sgd.) HAROLD L. ICKES,
Secretary of the Interior.

ORDER OF RESTORATION—UINTAH AND OURAY INDIAN RESERVATION, UTAH

Whereas, pursuant to the provisions of the Act of May 27, 1902 (32 Stat., 263), as amended, the unallotted lands of the Uintah and Ouray Indian Reservation in the State of Utah, were made subject to disposal under the laws of the United States applying to public lands; and

Whereas there are now remaining undisposed of within said area approximately 217,000 acres of unallotted lands, which need closer administrative control in the interest of better conservation practices; and

Whereas, by relinquishment and cancellation of homestead entries within this area a limited additional acreage of land of similar character may later be included within this class of undisposed of land; and

Whereas the Tribal Council, the Superintendent of the Uintah and Ouray Agency, and the Commissioner of Indian Affairs have recommended restoration to tribal ownership of such undisposed-of surplus unallotted lands in the said reservation;

Now, therefore, by virtue of the authority vested in the Secretary of the Interior by Sections 3 and 7 of the Act of June 18, 1934 (48 Stat., 984), I hereby find that restoration to tribal ownership of all lands which are now or may hereafter be classified as undisposed-of opened lands of the Uintah and Ouray Reservation will be in the public interest, and the said lands are hereby restored to tribal ownership for the use and benefit of the Ute Indian Tribe of the Uintah and Ouray Reservation in Utah and are added to and made a part of the existing reservation, subject to any valid existing rights.

HAROLD L. ICKES,
Secretary of the Interior.

(As of February 11, 1943, this document is not in effect, never having been released or promulgated as an order.)

TEMPORARY WITHDRAWAL OF PUBLIC DOMAIN LANDS, MODIFICATION OF GRAZING DISTRICT NO. 8, AND REVOCATION OF TEMPORARY WITHDRAWAL OF SEPTEMBER 26, 1933, ALL RELATING TO LANDS IN UTAH

Under and pursuant to the provisions of the Act of June 23, 1934 (48 Stat. 1269, 43 U. S. Code, Section 315, et seq.), commonly known as the Taylor Grazing Act, and subject to the limitations and conditions therein contained, Utah Grazing District No. 8, as established by order approved June 22, 1935, as modified by orders of July 20, 1935, and April 13, 1938, is hereby further modified to exclude therefrom the following described lands:

SALT LAKE MERIDIAN

Ts. 16 to 18 S., R. 17, E., those parts east of Green River.

Ts. 16 to 18 S., R. 18 E., all.

Ts. 16 to 18 S., R. 19 E., all.

T. 16 S., R. 20 E., all.

T. 17 S., R. 20 E., that part northwest of the west rim of Willow Creek Canyon.

T. 18 S., R. 20 E., that part of section 3 west of the west rim of Willow Creek Canyon. Sections 4 to 8 inclusive; W $\frac{1}{2}$ and that part of NE $\frac{1}{4}$ Section 9 west of west rim of Willow Creek Canyon; W $\frac{1}{2}$ Section 16, Sections 17 to 20; W $\frac{1}{2}$ Sections 21 and 28, Sections 29 to 32 and W $\frac{1}{2}$ Section 33.

T. 19 S., R. 20 E., sec. 4, W $\frac{1}{2}$; secs. 5 to 8, incl.; sec. 9, W $\frac{1}{2}$; sec. 16, W $\frac{1}{2}$; secs. 17 and 18.

T. 15 $\frac{1}{2}$ S., R. 21 E., secs. 31, 32 and W $\frac{1}{2}$ of sec. 33.

T. 16 S., R. 21 E., sec. 4, W $\frac{1}{2}$; sec. 5, N $\frac{1}{2}$, N $\frac{1}{2}$ S $\frac{1}{2}$, S $\frac{1}{2}$ SW $\frac{1}{4}$; secs. 6 and 7, all; sec. 8, W $\frac{1}{2}$; sec. 17, W $\frac{1}{2}$; sec. 18, all; sec. 19, N $\frac{1}{2}$ and SW $\frac{1}{4}$; sec. 30, W $\frac{1}{2}$; sec. 31, W $\frac{1}{2}$.

(As of February 11, 1943, this document is not in effect, never having been released or promulgated as an order.)

It is further ordered that Departmental withdrawal of September 26, 1933, made pursuant to authority contained in Section 4 of the Act of March 3, 1927 (44 Stat. 1347), withdrawing temporarily certain public domain lands in the Southern part of Uintah County, Utah, that were embraced in Executive order of January 5, 1862, from entry in aid of proposed legislation permanently to reserve the lands as a grazing reserve for the benefit of Indians and non-Indian stockmen of that area is hereby revoked and under authority of Section 4 of the Act of March 3, 1927, supra, the following described public lands are hereby temporarily withdrawn and rewithdrawn from settlement, sale, location, entry, and other form of disposition, for Indian use, in aid of proposed legislation permanently to withdraw said lands as a grazing reserve for the benefit of the Indians of the Uintah and Ouray Indian Reservation, including the Uncompahgres:

SALT LAKE MERIDIAN

Administrative jurisdiction thereafter is hereby conferred upon the Commissioner of Indian Affairs, and like jurisdiction is hereby conferred upon the Grazing Service, as to the balance of the public lands embraced in the Uncompahgre Indian withdrawal of September 26, 1933.

This order is issued subject to all valid existing rights and withdrawals affecting any of the lands embraced therein. Any public lands within the exterior limits of the area included in this order, which are otherwise withdrawn or reserved, shall, upon the termination of such withdrawal or reserve, become part of this reserve, unless expressly otherwise provided in the order of revocation.

(Sgd.) HAROLD L. ICKES,
Secretary of the Interior.

(As of February 11, 1943, this document is not in effect, never having been released or promulgated as an order.)

The CHAIRMAN. I think, for the enlightenment of all interested, that someone should be prepared to indicate on the map exactly what lands are involved in this proposed withdrawal. Is someone here prepared to do that?

Mr. LEECH. The order referring to the Uncompahgre, Senator, refers to that in the green line. The other order refers to that purple there; in the old reservation.

The CHAIRMAN. Is that all the land involved?

Mr. LEECH. Yes, sir.

The CHAIRMAN. The one that would withdraw, for exclusive use of the Indians all of the white lands—I call them white, as they are so indicated on the map—within the black-green boundaries?

Mr. LEECH. Yes, sir; that is the order referring to the rest of the Indians.

The CHAIRMAN. So, if this order went into effect, no one not having a permit from the Indians would be permitted to graze livestock within the black-green lines?

Mr. PATTERSON. Mr. Chairman, let me ask you a question there; this proposed legislation now, this H. R. 837, what effect is it going to have upon these orders, if it were passed or rejected?

The CHAIRMAN. I don't know. I want to get at that.

We are going to take a recess here and, if there are no objections, we will have a night session. Then we will go on. In the meantime, whoever is interested in this order can explain to us exactly what it is all about. Then you can prepare your interrogatories and go ahead at that time.

Mr. DILLMAN. Mr. Chairman, may I request that the so-called Margold opinion be put in the record, in connection with the two orders just inserted?

(The document is as follows:)

**RESTORATION TO TRIBAL OWNERSHIP OF CEDED COLORADO UTE INDIAN LANDS—
OPINION, JUNE 15, 1938**

INDIAN REORGANIZATION ACT, SECTION 3—RESTORATION OF LAND TO TRIBAL OWNERSHIP—REQUISITES

For lands to be restored to tribal ownership under Section 3 of the Indian Reorganization Act (1) the Secretary of the Interior must find such restoration to be in the public interest and (2) the lands must be "remaining surplus lands of any Indian reservation heretofore opened, or authorized to be opened, to sale, or any other form of disposal by Presidential proclamation, or by any of the public land laws of the United States."

INDIAN REORGANIZATION ACT, SECTION 3—CONSTRUCTION OF TERM "LANDS OF ANY INDIAN RESERVATION"—APPLICATION TO CEDED COLORADO UTE INDIAN LANDS

Lands capable of restoration to tribal ownership are lands which were part of an Indian reservation at the time the lands were opened to disposal and need not be part of an existing Indian reservation or adjacent thereto. At the time the lands of the Confederate Bands of Ute Indians were ceded and opened to disposal under the act of June 15, 1880 (21 Stat. 199), they were part of the Colorado Ute Indian Reservation.

INDIAN REORGANIZATION ACT, SECTION 3—CONSTRUCTION OF TERM "SURPLUS LANDS"—APPLICATION TO CEDED COLORADO UTE INDIAN LANDS

In permitting the restoration to tribal ownership of remaining "surplus lands" of any Indian reservation, the statute refers to lands ceded to the United States to be disposed of for the benefit of the Indians, and particularly lands so ceded which were left as surplus lands after allotment of the reservation to the Indians. The Colorado Ute Indian lands ceded under the act of June 15, 1880, come within this construction.

INDIAN REORGANIZATION ACT, SECTION 3—CEDED SURPLUS LANDS—EFFECT OF DESIGNATION AS PUBLIC LANDS

Where surplus lands remaining after allotment have been ceded to be disposed of for the benefit of the Indians, the designation by Congress of such lands as public lands does not of itself affect the equitable interest of the Indians in the lands or the application of section 3 to the lands so designated.

INDIAN REORGANIZATION ACT, SECTION 3—APPLICATION TO CEDED COLORADO UTE LANDS

The remaining undisposed of lands of the Colorado Ute Indian Reservation ceded under the act of June 15, 1890 (21 Stat. 199) *held* to be capable of restoration to tribal ownership under section 3 of the Indian Reorganization Act.

KIRGIS, Acting Solicitor:

At the instance of the Commissioner of Indian Affairs you (the Secretary of the Interior) have requested the opinion of this Office on the authority of the Secretary of the Interior to restore to tribal ownership under section 3 of the Indian Reorganization Act (June 18, 1934, 48 Stat. 984), the remaining undisposed of lands in Colorado ceded by the Confederate Bands of Ute Indians under the act of June 15, 1890 (21 Stat. 199). In phrasing the question, the Indian Office has asked whether section 3 is applicable to these lands in Colorado, "not situated adjacent to the existing Southern Ute Reservation." While this phrasing appears to restrict the question, it is believed that the Indian Office intends to request that all angles concerning the applicability of section 3 of the Indian Reorganization Act be determined. It is my intent to determine the matter in a comprehensive manner in view of the fact that the land involved is unusually large in extent, consisting of approximately 4,000,000 acres, and in view of the complicated legal and practical problems involved.

Section 3 of the Indian Reorganization Act reads as follows:

"Sec. 3. The Secretary of the Interior, if he shall find it to be in the public interest, is hereby authorized to restore to tribal ownership the remaining surplus lands of any Indian reservation heretofore opened, or authorized to be opened, to sale, or any other form of disposal by Presidential proclamation, or by any of the public-land laws of the United States: *Provided, however*, That valid rights or claims of any persons to any lands so withdrawn existing on the date of the withdrawal shall not be affected by this Act: *Provided further*, That this section shall not apply to lands within any reclamation project heretofore authorized in any Indian reservation: * * *." (Further provisos deal only with Papago Reservation.)

This section lays down two prerequisites for the application of the section to ceded Indian lands. First, the Secretary of the Interior must find that the restoration to tribal ownership will be in the public interest. Secondly, the lands involved must be "remaining surplus lands of any Indian reservation heretofore opened, or authorized to be opened, to sale, or any other form of disposal by Presidential proclamation, or by any of the public-land laws of the United States." The finding of public interest, while a requirement of law, involves the determination of administrative questions which need not be discussed in this opinion. It is sufficient to point out that a restoration is not a mandatory but a discretionary act to be weighed as a matter of public interest. The second prerequisite involves the determination whether, as a matter of law, the description of the lands subject to restoration applies to these ceded Colorado Ute lands. In making this determination the applicability of the various terms used in the description will be discussed.

I. THE COLORADO UTE AREA AS AN "INDIAN RESERVATION"

Lands to be restored must be surplus lands "of any Indian reservation." Therefore a first question involves the history and background of the Colorado Ute lands as an Indian reservation. In the first 20 years following the Treaty of Guadalupe Hidalgo with Mexico in 1848, the United States entered into negotiations with various of the Indian tribes occupying the area acquired from Mexico. Among the treaties made was one with the "Utahs" (December 30, 1849, 9 Stat. 984) for obtaining free passage through the "territory of the Utahs." In 1863 a treaty was made with the Tabeguache Band of Ute Indians (proclaimed December 14, 1864, 13 Stat. 673), by which the band relinquished its

right and interest in all lands within the United States except a designated area. The treaty expressly declined to recognize any title or right of the band to the area ceded or reserved except that possessed by the Indians under the laws of Mexico. It has been claimed that the Indians had no title or interest under the laws of Mexico in the lands which they occupied and were not recognized by the United States as having the right of occupancy conceded to other Indian tribes in the United States. However, whatever may have been the interest of the Ute Indians in the lands occupied by them in this period, the treaty of March 2, 1868 (15 Stat. 619), with various bands of Ute Indians, who have since been commonly known as the Confederated Bands of Ute Indians, established a reservation for these Indians having the same status as any other Indian reservation in the United States. This treaty set apart a defined territory, consisting of approximately 15,000,000 acres, for the "absolute use and occupation" of these Ute Indians. The status of this territory, as a reservation, has been uniformly recognized by the Congress, the Court of Claims (*The Ute Indians v. The United States*, 45 Ct. Cls. 440), and the Department. The definition of an Indian reservation by the Supreme Court in *Minnesota v. Hitchcock*, 185 U. S. 373, 389, 390, that an Indian reservation is created when from what has been done there results a certain defined tract appropriated to Indian purposes, clearly covers the reservation of the Utes established by the 1868 treaty. In 1874 (18 Stat. 36), this reservation was reduced by approximately 3½ million acres through a cession by the Indians in consideration of a specified perpetual annuity, and the Indians retained no further interest in the lands thus ceded.

The reservation of the Confederated Bands of Ute Indians, as diminished by the 1874 cession, was the subject of the 1880 act under which the Confederated Bands ceded the lands involved in this opinion. The specific provisions of the 1880 act, its purpose, and legal effect will be set forth in some detail later in this opinion. The actual result of the 1880 act, however, was that the Confederated Bands were divided into three groups, the Uncompahgre and White River Utes being located in Utah and the Southern Utes remaining in the southern portion of the reservation. All of the remainder of the reservation has been sold, set apart as national forests, or otherwise disposed of, except the 4,000,000 acres which are the subject of this opinion.

It might be claimed that in view of the above-described results of the 1880 act, the reservation of the Confederated Bands was actually extinguished and that, therefore, the lands involved in this opinion are not surplus lands "of any Indian reservation." In my judgment, even if the reservation of the Confederated Bands of Utes were held no longer to exist, that fact alone would not negative the application of section 3 of the Indian Reorganization Act to the remaining undisposed-of lands of that reservation. The phrase "of any Indian reservation" must be used in section 3 to describe the character and location of the lands at the time they were opened to disposal under the public-land laws. The lands which may be restored to tribal ownership must be lands which were part of any Indian reservation, not of any forest or military reservation or of any other class of lands. Section 3 cannot mean that the lands must now have the character of Indian reservation lands, as they are not reservation lands but lands capable of being restored to reservation status under the Indian Reorganization Act. Nor can section 3 mean that the lands must be located within the geographical limits of an Indian reservation. In many instances of surplus land cessions entire portions of Indian reservations were cut off from the reservations and opened to disposal, while in other instances, by similar legal instruments, areas located within the reservations were opened to disposal. Whether the lands opened to disposal were cut off from or out of existing Indian reservation is a matter of historical circumstance and not of legal significance. Moreover, nothing in section 3 requires the remaining undisposed-of lands to lie in any particular geographic relation to an existing Indian reservation. Such a requirement would ignore the well-known facts that the location of such lands is purely fortuitous and that the lands, by their very nature, are scattered tracts.

II. COLORADO UTE LANDS OPENED TO DISPOSAL UNDER THE PUBLIC LAND LAWS

The surplus lands of the Colorado Ute Indian Reservation were opened to disposal in designated ways under the public-land laws by section 3 of the act of June 15, 1880. The relevant parts of the section read as follows: "all the lands not so allotted, the title to which is, by the said agreement of the confederated bands of the Ute Indians, and this acceptance by the United States, released and conveyed to the United States, shall be held and deemed to be

public lands of the United States and subject to disposal under the laws providing for the disposal of public lands, at the same price and on the same terms as other lands of like character, except as provided in this act: *Provided*, That none of said lands, whether mineral or otherwise, shall be liable to entry and settlement under the provisions of the homestead law; but shall be subject to cash entry only in accordance with existing law * * *."

This act was supplemented by the act of July 28, 1882 (22 Stat. 178), which provided that that portion of the Ute Reservation lately occupied by the Uncompahgre and White River Utes shall be "subject to disposal from and after the passage of this act, in accordance with the provisions and under the restrictions and limitations of section 3 of the act of Congress approved June 15, 1880 * * *." These provisions clearly bring the remaining undisposed of lands involved in this opinion within so much of section 3 of the Indian Reorganization Act as refers to remaining lands of an Indian reservation heretofore opened * * * to sale, or any other form of disposal * * * by any of the public-land laws of the United States."

III. CEDED COLORADO UTE LANDS AS "SURPLUS LANDS"

The key question in connection with the application of section 3 to the remaining Colorado Ute lands, is, in my opinion, the question whether these lands come within the designation of "surplus lands" in section 3. The word "surplus" means that which remains over and above what is required. It might be argued that practically all lands ceded by Indians were surplus lands according to this definition, since they were doubtless considered as not being required by the Indians. However, Congress could not have intended that all remaining undisposed-of ceded lands should be available for restoration to tribal ownership, as such lands would embrace practically all of the remaining public domain. The Interior Department has taken the position that section 3 is not intended to cover all ceded lands but those ceded lands in which the Indians have retained an interest by reason of the fact that the lands were ceded to the United States to be disposed of by the United States in specified ways, the proceeds of the sale to be held for the benefit of the Indians. This type of ceded land was evidently in the mind of Congress at the time of the passage of the Reorganization Act. The debates on the bill in the Senate show that section 3 was discussed as a provision making possible the restoration of the use of the lands to the Indians in place of the proceeds to which they were entitled from any sale. (Congressional Record, 73d Cong., 2d sess., p. 11135.)

The reference to surplus lands in section 3 of the Reorganization Act refers, however, primarily to surplus lands remaining after the actual or contemplated allotment of the Indians, such surplus lands having been ceded to be disposed of for the benefit of the Indians. The term "surplus lands" has been used commonly in connection with the allotment system and allotted reservations to refer to the lands not allotted or set aside for allotment and not reserved for administrative or tribal purposes. In the consideration of section 3 in Congress, the term "surplus lands" was defined in this manner (Senate report of the Committee on Indian Affairs on S. 3645, No. 1080, 73d Cong., 2d sess.; Congressional Record, 73d Cong., 2d sess., p. 11136.) The policy of the general allotment act and the allotment acts for specific reservations was to settle the individual Indians as farmers on individual tracts of land and to open the remainder of the reservation to disposal to white people. The purpose was different from that involved in previous disposals of Indian land, since it was aimed at settling permanently and civilizing the individual Indians and at the same time opening their existing reservation to the advancing white settlers. The difference in purpose and effect between the conditional surplus land cession involved in the allotment acts and the previous type of cession in which the Indians were removed to another reservation to be held in common in the same manner as their previous reservation in which they then lost all interest is analyzed by the Supreme Court in the case of *Minnesota v. Hitchcock*, *supra*.

The 1880 cession agreement with the Colorado Ute Indians is one of the early examples of conditional surplus land cessions; in fact, the provisions of the 1880 act set forth a plan of allotment and disposal of surplus lands which became stereotyped in later allotment acts. A commission was appointed to make a census of the Indians, to select lands to be allotted, to survey sufficient of these lands for allotment, and to cause allotments to be made. The provisions of section 3 of this act, quoted above, are significant in that they provide for the disposal only of those lands within

the reservation "not so allotted." The legislative history of this 1880 act makes clear that the chief purpose of the act was the immediate allotment within the Colorado Ute Reservation of the individual Indians of various Ute bands and the opening to disposal of the remaining surplus lands. The opening up of the surplus lands was described as essential in view of the thousands of settlers and prospectors on the borders of the reservation who could not successfully be kept from entering the reservation by military or other means. The plan of allotment of the Indians was favored and bitterly opposed as the entering wedge in the allotment of the tribes generally throughout the United States. In fact, a general allotment act was pending in that session of Congress. (See House debates on the 1880 agreement, Congressional Record, 46th Cong., 2d sess., June 7, 1880, pp. 4251-4253.)

From the foregoing it definitely appears that the fact that this cession occurred several years before other allotment-cessions does not mean that this cession falls within the earlier type of outright cession and removal. This cession was rather a forerunner and a model of later allotment acts and differs in no important respect from these latter acts. The fact that two of the three main groups of Indians were subsequently not allotted within the borders of the Colorado Ute Reservation does not alter my conclusion. The 1880 act did not provide for establishing new reservations, but for supplying the Indians with allotments, and where allotments occurred outside the reservation, the Indians were to be charged a price of \$1.25 an acre to be paid from the proceeds of the land sold from the Colorado Ute Reservation. The allotments off the reservation were, therefore, in the nature of lieu allotments and, in the case of the Uncompahgre Utes, were made only because of the fact that insufficient agricultural lands were found within the Colorado Ute Reservation. (See Report of the Commissioner of Indian Affairs, 1881, at pp. 19 and 325, et seq.)

There can be no doubt that the surplus lands remaining after allotment were to be sold for the benefit of the Ute Indians. The original agreement between the Government and the chief of the Confederated Bands of Ute Indians which preceded the 1880 act contemplated an outright sale of the surplus lands remaining after allotment in consideration of an annuity of \$50,000. In Congress it was pointed out that there would be realized in 1 year from one mine within the Colorado Ute Reservation nearly 20 times the entire principal sum from which these annuities to the Indians would be paid. The land was described as rich in minerals and of great value. As a result of the realization of the complete inadequacy of the annuity as a consideration for the relinquishment of the Indian right of occupancy in these lands, and in order that "full justice" might be done the Indians, the original agreement was amended by the 1880 act to provide that after the United States had been reimbursed the amount of the annuities paid the Indians and other expenses connected with the act, any further proceeds received from the sale of the land should be placed to the credit of the Indians (Congressional Record, 46th Cong., 2d sess., June 7, 1880, p. 4261; June 12, 1880, p. 4487). The amended agreement as embodied in the 1880 act was subsequently accepted by the requisite number of Indians of the Confederated Bands.

The amended agreement was described by the Court of Claims in the case of *The Ute Indians v. The United States*, *supra*, page 464, as entitling the Ute Indians to receive all the proceeds of the reservation after the reimbursement and as providing for a transaction which was of no benefit to the United States, except the indirect benefit of opening a desirable territory to civilization. In the Court of Claims case the Indians were awarded a judgment for the value of the lands within the reservation which had been set apart for public reservations and thereby been excluded from sale. The Interior Department has consistently recognized that the Indians are entitled to the proceeds from the disposal of these lands (3 L. D. 296); (7 L. D. 191); (47 L. D. 560). The jurisdictional act which authorized suit in the Court of Claims provided that upon the rendition of final judgment the principal fund from which the annuities of the Indians were obtained should be abolished and from that date no further annuities should be paid. As a result, therefore, since the 1910 decision the interest of the United States in the proceeds of the sale to the extent of \$50,000 annually has not existed and the remaining undisposed-of surplus lands within the reservation have been subject to disposal for the unencumbered benefit of the Indians.

IV. EFFECT OF DECLARATION OF LANDS AS "PUBLIC LANDS"

From the foregoing it is my conclusion that the remaining undisposed-of lands within the Colorado Ute Reservation are "surplus lands" within the meaning of section 3 of the Indian Reorganization Act. There remains only the question whether these lands must nevertheless be excluded from the scope of section 3 because of the fact that in the 1880 cession and in the subsequent act of 1882 it was provided that the lands not allotted "shall be held and deemed to be public lands of the United States." It has been urged that in the usual cession of surplus lands remaining after allotment no declaration that the lands ceded shall be public lands is made. As a consequence it is argued that these lands are not Indian lands in accordance with the holding in the case of *Ash Sheep Co. v. United States*, 252 U. S. 159. In that case the undisposed-of ceded surplus lands of the Crow Reservation were held to be "Indian lands" within the meaning of a statute requiring the consent of the Indians to the use of the land for grazing purposes. The lands involved were ceded under the act of April 27, 1904 (33 Stat. 352), which provided that a designated portion of the reservation should be sold to the United States but that the United States should serve as trustee for the disposal of the lands for the benefit of the Indian.

In my opinion, the declaration in the 1880 act that the surplus ceded lands shall be public lands does not alter the fact that these lands are remaining surplus lands of an Indian reservation heretofore opened to disposal under the public land laws, within section 3 of the Indian Reorganization Act, even if the declaration lessened the interest of the Indians in the lands ceded during the time they were held by the United States and before they were sold. However, it is also my opinion that this declaration did not make the 1880 cession different in legal effect from the Crow cession or other usual surplus land cessions where the Indians were to receive the proceeds of the sale. The significant legal effect of these cessions is that the United States becomes a trustee for the disposal of the land ceded. Regardless of the particular language of the cession, the result is that the Indians retain an equitable interest in the land until they have received the consideration bargained for, and the United States becomes a "trustee in possession." *Minnesota v. Hitchcock*, *supra*; *Ash Sheep Co. v. United States*, *supra*.

Surplus ceded lands to be disposed of for the Indians are frequently referred to in acts of Congress and departmental actions both as public lands and Indian lands. An example of the application by Congress of the term "public domain" to ceded surplus lands which would be "Indian lands" under the *Ash Sheep Co.* case, *supra*, occurs in the act of May 29, 1908 (35 Stat. 460), under which the Cheyenne River and Standing Rock Reservations in South Dakota were allotted. In this act it was provided that the Indians might use the timber upon the ceded surplus lands so long as these lands remained a part of the "public domain," and yet the act provided that the United States should act only as trustee for the Indians in the sale of the lands. In the act of Congress dismembering the Great Sioux Reservation, a provision that the unreserved lands shall be restored to the public domain is used in two places with obviously different meanings. In section 21 it is provided that the unreserved land shall be "restored to the public domain" to be disposed of to actual settlers only, the proceeds to go to the Indians. However, it is then provided that if the lands are not disposed of at the end of 10 years, they shall be paid for by the United States at a designated rate, and that the lands so purchased should then become "a part of the public domain." The first provision restoring the lands to the public domain could have had no legal effect to alter the equitable interest of the Indians in the land until sold or purchased by the United States.

The evident purpose of designating lands ceded for disposal for Indian benefit as public lands or public domain is to indicate that the lands are subject to disposal under public land laws. Lands so designated by Congress would seem therefore to be peculiarly within rather than without the scope of section 3 of the Indian Reorganization Act which refers to lands subject to disposal under the public land laws.

Surplus lands ceded to be disposed of for the Indians are in fact qualified public lands and also qualified Indian lands. They are public lands in that the United States has the legal title and has secured from the Indians a release of their right of occupancy and has arranged to dispose of them, but they are

not public lands in the full sense of the term as they are to be disposed of only in limited ways and upon certain conditions. *Minnesota v. Hitchcock, supra*. It should be noted that both the 1880 and the 1882 acts concerning the Ute land qualified the reference to the land as public land and subject to disposal under the public land laws by stated conditions and restrictions.

Surplus lands are also properly designated as Indian lands in view of the interest of the Indians in the proceeds of any disposal of the lands. This equitable interest is the significant condition attached to the lands which distinguishes them from the public lands generally as Indian lands. Since this condition was attached to the lands ceded by the Confederated Bands of Utes, the undisposed of lands may be as appropriately termed Indian lands as the lands ceded by other Indian tribes to be disposed of for their benefit. Under the regulations of the Interior Department of July 25, 1912, for governing the use of vacant ceded land (Regulations of the General Land Office, 1930, p. 669) it was contemplated that remaining surplus lands, the proceeds of the disposal of which were for the benefit of the Indians, would be cooperatively administered by the Indian Office and the General Land Office, the Indian Office retaining jurisdiction of the use of the lands before they were sold and the General Land Office administering the final disposition of the lands. It is true that this administration by the Indian Office has not occurred in connection with these surplus Colorado Ute lands. The reason for that, however, is not the result of any legal difference but the result of practical considerations, since the Indians were, in fact, allotted only in the southern part of the reservation and since the surplus lands covered a vast area.

V. SUMMARY OF CONCLUSIONS

In view of the foregoing considerations, and in summary of my conclusions, it is my opinion that the undisposed of lands in Colorado ceded by the Confederated Bands of Ute Indians under the act of June 15, 1880, subject to the provisions and conditions set forth in that act, come within the designation in section 3 of the Indian Reorganization Act of remaining surplus lands of any Indian reservation open to disposal by the public land laws, and that they are, therefore, available for restoration to tribal ownership, provided the Secretary of the Interior finds the restoration to be in the public interest. It is immaterial as a matter of law whether the area to be restored is adjacent to the Southern Ute Reservation.

Approved: June 15, 1938.

OSCAR L. CHAPMAN,
Assistant Secretary.

(Recess until 8 p. m.)

The CHAIRMAN. The meeting will come to order.

Mr. Woehlke, if you would care to be heard at this time the committee will hear you.

Mr. WOEHLEKE. Thank you, Mr. Chairman.

The CHAIRMAN. Will you please state for the record your name and your official position?

STATEMENT OF WALTER V. WOEHLEKE, ASSISTANT TO COMMISSIONER, OFFICE OF INDIAN AFFAIRS, CHICAGO, ILL.

Mr. WOEHLEKE. My name is Walter V. Woehlke, Assistant to the Commissioner, Office of Indian Affairs, Chicago.

I would like to state to the committee that our regional forester, our technician, R. B. Millin, who has been concerned with this particular project ever since its very start, and who knows all of the technical details, and who is as well qualified to talk about the technical details as Mr. Jenson, is unfortunately sick and could not attend at this time.

I would like to try and get off the hot spot on which the chairman put me and see if I cannot get the cat out of the bag.

The CHAIRMAN. We will be glad to see her when she gets out.

Mr. WOEHLEKE. It really is not quite true that the Indian Service bought a cat-in-the-bag, when it purchased these properties, within the area designated by the black and green lines.

If I may be allowed to go back briefly to the year 1935 when the project got under way, at that time the 1,800,000 acres of the former Uncompahgre Reservation which were then public domain had been withdrawn from entry in aid of legislation to create a permanent Uncompahgre grazing reserve for the benefit and the protection of both the Indians, the Uncompahgre Indians, and the white stockmen. That particular withdrawal order created quite an uproar.

In 1935 at this meeting that was spoken of here this morning, according to our records the proposition was made that instead of reserving the entire 1,800,000 acres there should be created a reservation of approximately 750,000 acres and that this reservation should be added to the Uintah Ouray Reservation; and that in return the Indians would give up their rights to allotments on the public domain itself. That particular proposition was ratified at this meeting as shown in this agreement, a copy of which is in the record.

The proposal to create this reservation was then translated into legislation, into bills which were introduced. I believe Representative Murdock introduced them in the House at that time and Senator King introduced them in the Senate. One of the conditions of this particular agreement was that the whole area would be turned over temporarily to the Grazing Division for administration and that this administration by the Grazing Division should continue until December 31, 1936, or until the legislation passed. The legislation did not pass, and in 1937 similar legislation was introduced as a departmental measure. At that time the people of Duchesne County apparently connected the other issue, that of the restoration of the purple lands in there, of the ceded lands on the Uintah Reservation with the passage of this legislation. At that time, in 1937, another meeting was held at which the people of Uintah County reaffirmed their support of the acquisition program that had been launched by the Indian Service in this area. I think Mr. Stringham and various others supported that legislation at that time.

One of the conditions for the local support the Indian Service received in the proposed establishment of the Uncompahgre Grazing Reserve, or addition to the Uintah Reservation, was the agreement that the Utes would buy all of the privately owned lands in that area. The Indian Service went ahead and with the Ute money and the gratuity appropriation proceeded to make these purchases of the private lands. In making these purchases the Indian Service sent out experienced appraisers who went into the area, who consulted with the Farm Credit Association and the other various technical institutions knowing values, and also consulted with the Grazing Service in making the appraisal. They fixed the values of these ranch properties as going properties as integrated operations. I would like to have the privilege of introducing tomorrow a compilation showing the appraisal of each purchased property, and also the rating of that property as to its carrying capacity, as to what it was doing as a going concern, together with a list of the licenses issued by the Grazing Service in the administration of that area to the owners of the properties during the purchase period, as to the amount of stock that

each one was licensed by the Grazing Service to carry. From that angle, I believe we can fully justify the prices that we paid for those properties, and I am quite certain that we did not go out and buy a cat in the bag, or that we overpaid the individuals. I might also say that no pressure was put on the individuals to sell, none of any kind or variety; it was all on an entirely voluntary basis. There was no reason, no opportunity, no cause for putting pressure on them because the legislation to establish that particular area as their reserve had not yet been passed and there was no chance of putting on the pressure.

The CHAIRMAN. Did the agreement of June 20, or July 20, purporting to have been signed by quite a number—did that precede the appraisal?

Mr. WOHLKE. Yes; that preceded the appraisal.

The CHAIRMAN. The appraisal was made after the agreement was signed?

Mr. WOHLKE. Yes.

The CHAIRMAN. And the agreement was the initial step in the program?

Mr. WOHLKE. That was the initial step; yes.

The CHAIRMAN. Now, your program having its initial step in the agreement went forward from there. Did the owners of the lands now designated in red constitute any part of the group that signed that agreement?

Mr. WOHLKE. I am not quite certain.

The CHAIRMAN. What is your answer to that, Mr. Wright?

Mr. WRIGHT. Yes; some of them were present and signed the agreement.

The CHAIRMAN. About how many?

Mr. WRIGHT. I can tell you by looking at the agreement there.

Mr. PATTERSON. About 28.

The CHAIRMAN. Twenty-eight of the signers were owners of the land?

Mr. PATTERSON. Twenty-eight all told, including the officials. Here is the list.

The CHAIRMAN. How many of the list were owners of the lands designated in red?

Mr. WRIGHT. Ten is all I can find, sir.

Mr. PATTERSON. Who were the owners?

Mr. JOHNSON. And the rest of them, out of the others that signed the agreement were not the people here protesting because the majority of them were people that were not in unit G, people entirely from Vernal.

The CHAIRMAN. Let me get that straight; I don't quite follow you.

Mr. JOHNSON. Outside of the number which Mr. Wright indicated that signed this agreement—

The CHAIRMAN. That was 10 in number.

Mr. JOHNSON. Out of approximately 30, the rest of them were officials and were not representing the people that you see here, in this group, and protesting the action of the Grazing Service and the Indian Service. They had no rights to represent the people whom we represent.

Senator MURDOCK. Did they have any rights whatever other than the 10 who owned property in unit G, as we call it?

Mr. JOHNSON. None whatever except as advisory board members and as governmental officials.

The CHAIRMAN. Advisory board members of the grazing district?

Mr. JOHNSON. That is right, sir.

The CHAIRMAN. Had the grazing district been set up at that time?

Mr. LEECH. The grazing district north of the orange line had been set up June 22, 1935, but the Uncompahgre area was not made a part of the district until July 10, 1935.

Mr. WOHLKE. As a result of this agreement.

The CHAIRMAN. What I was getting at, when I started out with this query at this point, without desiring to interrupt you, you emphatically state that no inducement or coercion, or threat of any kind was offered or made to the owners of these lands to induce them to sell. But the program had been set up, in which program they play the part.

Mr. WOHLKE. Do you mean as to the signers of that agreement?

The CHAIRMAN. Yes.

Mr. WOHLKE. Probably; yes.

The CHAIRMAN. And the program had been set up in which part of them played the part to the extent that the surrounding territory was brought into the grazing district.

Mr. WOHLKE. The entire area of 1,800,000 acres had been withdrawn in 1933. Under this agreement it was put into the grazing district in order to enable that district to function properly. That is right.

The CHAIRMAN. This agreement to which you refer, there, is this agreement of July 10?

Mr. WOHLKE. Yes; and that, then, was supplemented and given effect by the agreement of July 19, approved July 20, between the Division of Grazing and the Indian Service.

The CHAIRMAN. But following that the program worked out quite smoothly for the acquisition of these lands designated in red.

Mr. WOHLKE. It went ahead right from there. We began optioning right after that. Then, as I mentioned before, this acquisition program, that was launched in 1935 was reaffirmed by certain people in Uintah County in 1937.

The CHAIRMAN. I am sorry, Mr. Woehlke, that Mr. Millin is not here. He is the gentleman to whom you referred as being ill?

Mr. WOHLKE. Yes; he is our regional forester.

(Off the record discussion.)

The CHAIRMAN. What I have in mind, is this, Mr. Woehlke; I hope some of my experiences are not leading me along a certain train of thought, but when I see a thing work out and everything click, when somebody tells me there was nothing used to force the issue, force the thing along, I like to have him elaborate on it.

Mr. WOHLKE. The program apparently clicked, and went along; and the owners in the area in question apparently were perfectly willing to sell at the prices which were offered at that time. As I said before this acquisition program was supported again in January 1937 by Mr. Seeley, the president of the Ashley Forest Cattle Growers Association, and by Mr. John W. Weaver, chairman of the Board of County Commissioners of Uintah County, and by Mr. Stringham, president of the Ashley Wool Growers Association, and also Mr. J. M.

Stewart, the Director of Lands of the Indian Office. If the committee would like, I would like to offer these letters for the record.

The CHAIRMAN. If you wish them to go in, they may go into the record.

(The letters are as follows:)

VERNAL, UTAH, January 20, 1937.

Mr. J. M. STEWART,

Director of Lands, Bureau of Indian Affairs, Washington, D. C.

DEAR SIR: As president of the Ashley Wool Growers Association, an organization of the persons raising and roping sheep in Uintah County, Utah, I wish to endorse the proposed Ute project, which I understand, contemplates the purchase of all privately owned lands between Hill Creek and Green River in Uintah County by the Bureau of Indian Affairs for the use of the Indians within the jurisdiction of the Uintah and Ouray Agency and the creation of a reservation out of these lands, together with the public domain in the above-mentioned area, and in consideration thereof, the relinquishment by the Indians of any claim they may have to other lands now not included in the reservation or allotted ground.

This will stabilize the livestock industry in this country and end a dispute that has existed for the past few years.

It is the hope of all the wool growers in this county that this matter may be settled at once.

Very truly yours,

B. H. STRINGHAM,

President, Ashley Wool Growers Association.

(Original on file, Office of Indian Affairs, Washington, D. C.)

VERNAL, UTAH, January 19, 1937.

Mr. J. M. STEWART,

Director of Lands, Bureau of Indian Affairs, Washington, D. C.

DEAR SIR: As president of the Ashley Forest Grazers Cattle Association, I wish to endorse the land-acquisition program of the proposed Ute project in Uintah County, Utah, as recommended by the Uintah and Ouray Indians.

The settlement of this matter will end a controversy that has disturbed the livestock industry of this county for the past few years, and as a representative of the cattle interests, which I represent, I am glad to endorse the plan and urge the settlement of this matter as soon as possible.

H. E. SEELEY,

President, Ashley Forest Grazers Cattle Association.

(Original on file, Office of Indian Affairs, Washington, D. C.)

UINTAH COUNTY, STATE OF UTAH,
CLERK AND RECORDER'S OFFICE,
Vernal, Utah, January 20, 1937.

Mr. J. M. STEWART,

*Director of Lands, Bureau of Indian Affairs,
Washington, D. C.*

DEAR SIR: As chairman of the Board of County Commissioners of Uintah County, State of Utah, I have examined the land-acquisition project submitted by Mr. Mark W. Radcliffe, in connection with the proposed Ute project in this county. After careful consideration thereof, I wish to advise you that I favor it, insofar as it affects this county.

I feel sure the consequences to the livestock interests in this county will be serious in the event the compromise reached between the livestock men and representatives of the Bureau of Indian Affairs concerning the boundary line of the lands to be used by the Indians is not carried out.

I hope this plan can be approved as soon as possible and this matter settled.

(Sgd.) JOHN W. WEAVER,

Chairman, Board of County Commissioners of Uintah County, State of Utah.

(Original on file, Office of Indian Affairs, Washington, D. C.)

The **CHAIRMAN**. Will you kindly state, or will someone here who has the information, state what price per acre was paid for these lands?

Mr. WOEHLEKE. Mr. Sallee, our land field agent who has made a compilation of that subject, should be able to. Mr. Sallee, will you tell the committee what average price was paid for the land acquired in the so-called Ute extension area?

Mr. ERNEST SALLEE (assistant land field agent, Indian Service, Salt Lake City, Utah). We figured a little over \$9 an acre.

The **CHAIRMAN**. What was the high price?

Mr. SALLEE. We didn't strike the high—we made an average of the total acreage purchased and it figured a little over \$9.

The **CHAIRMAN**. Let's have that now if it is convenient.

Mr. WRIGHT. \$48.30 an acre was the highest; \$2.50 an acre was the low.

The **CHAIRMAN**. How many units were purchased at \$40 an acre? How many individuals sold out at \$40 an acre?

Mr. WRIGHT. I don't know; my memory is that one tract at \$48 was about the only one purchased above \$40. We have a list here. It does not give the price per acre, however.

Mr. WOEHLEKE. Could we compile for the committee a complete record of all the properties, the prices paid therefor, the appraised value, the carrying capacity per ranch unit, as determined in these appraisals, and, together with that, supply the committee with the compilation showing the amount of livestock for which these properties were licensed by the Grazing Service during the purchase period?

The **CHAIRMAN**. Yes, certainly, that will be all right. We would be glad to have it.

Mr. WOEHLEKE. We will be glad to supply that in the morning.

The **CHAIRMAN**. You don't need to; you may defer it and supply it later. We will put it in the record. I suppose those who are interested would perhaps like to have it while on the hearing here, but it is not necessary.

Mr. WOEHLEKE. That is about the total of my remarks, in my effort to get the cat out of the bag.

The **CHAIRMAN**. I can see her tail, but I don't know about the rest of her! Is that all you care to say at this point?

Mr. JOHNSON. Mr. Woehlke, who called the meeting of the land-owners the representatives of the Grazing Service and the representatives of the Indian Department together at these meetings?

Mr. WOEHLEKE. Which meetings?

Mr. JOHNSON. Any of the meetings whereby this agreement was made and reaffirmed in 1937.

Mr. WOEHLEKE. I think the meetings in 1935 were largely called together by Mr. J. M. Stewart, the Director of Lands for the Indian Service.

Mr. JOHNSON. Do you know whether or not notice was sent to the users, whom we represent at this time, to appear?

Mr. WOEHLEKE. Which users do you represent?

Mr. JOHNSON. The sheepmen who do not have land within the area designated as unit G, or the area in the black and green lines on the map. Where these operators of sheep in this area notified who did not own land within the area?

Mr. WOEHLEKE. I could not tell you that, Mr. Johnson, except that there is in our files correspondence with Mr. Hugh Colton, which indicates that he was very active, not only in 1935 but also in 1934 and in 1932, in an effort to organize a district for the protection of the operators in this area, the Vernal area, against the introduction of these nomadic, transient herds.

Mr. JOHNSON. I hand you what is marked here a copy of a letter, United States Department of Interior, which is a letter to the register of Salt Lake City, dated November 27, 1933, and entitled "Lands withdrawn for Uncompahgre Indians," and ask if your office received such a letter; or did you have notice of such a letter with drawing certain lands therein described? This letter is from the Commissioner of the General Land Office to the register of the Salt Lake City office, informing him of the Secretary's action, on September 26, 1933, approving the recommendation of the Commissioner of Indian Affairs for the withdrawal of the land in a former Uncompahgre Reservation. Now, that land, withdrawn and known as the former Uncompahgre Reservation, is all of the land included in the orange line?

Mr. WOEHLEKE. Yes, about 1,800,000 acres.

Mr. JOHNSON. Thereafter, the Indian Department laid claim, by the Secretary's action, to this land included in the orange line, did they not?

Mr. WOEHLEKE. The land was withdrawn, as it stated there, temporarily withdrawn, in aid of legislation—that was the phraseology there—

The land be temporarily withdrawn subject to all existing valid rights and withdrawals in aid of proposed legislation permanently reserving the lands as a grazing reserve for the Uncompahgre-Ute Indians.

The CHAIRMAN. That, that you now refer to, all of the land within the orange line?

Mr. WOEHLEKE. That is right.

The CHAIRMAN. Now, the lands you are contending for now, as being properly to be applied to the Indians, is the land within the black and green line?

Mr. WOEHLEKE. Correct.

The CHAIRMAN. Will you tell the committee why you made known to the stock users, here, that you were going to withdraw a million-and-odd acres from their use, when, as a matter of fact, you were only going to contend for the use of the smaller area within the black and green line?

Mr. WOEHLEKE. I believe that it was the original intention to try and obtain legislation to reserve all of the 1,800,000 acres for the Uncompahgre-Utes and for the white stockmen operating within that area.

The CHAIRMAN. Well, the white stockmen operating within that area had already had a grazing district set up, of which that was a part.

Mr. WOEHLEKE. No; this was in 1933, before the passing of the Taylor Grazing Act.

The CHAIRMAN. All right.

Mr. WOEHLEKE. And in 1932 Hugh Colton had endeavored to organize a Vernal grazing district, under the act of 1928, which allowed the Montana users to organize districts, but he failed in that because that act was applicable only to Montana. Finally he was able to reach his goal through the Taylor Grazing Act.

Mr. JOHNSON. My purpose of cross-examination here is due to the fact that you have indicated, and he has indicated, there was no coercion in forcing these agreements and in obtaining sales of property from the landowners, of which, I think, if this is introduced into evidence and made a part of the record, it will show at this point there is coercion.

Mr. WOHLKE. That is already in the record.

The CHAIRMAN. If it is not in the record, we will put it in.
(The letter is as follows:)

UNITED STATES DEPARTMENT OF THE INTERIOR.

GENERAL LAND OFFICE,
Washington, November 27, 1933.

Lands withdrawn for Uncompahgre Indians.

REGISTER,

Salt Lake City, Utah.

Sir: On September 26, 1933, the Department approved the recommendation of the Commissioner of Indian Affairs that the vacant and unentered lands within the area embraced in Executive order of January 5, 1882, reserving lands for the Uncompahgre-Ute Indians, and restored to the public domain by the act of June 7, 1897 (30 Stat. 87), be temporarily withdrawn, subject to all existing valid rights and withdrawals, in aid of proposed legislation permanently reserving the lands as a grazing reserve for the Uncompahgre-Ute Indians. The land is described in Executive order of January 5, 1882, as follows:

"Beginning at the southeast corner of township 6 south, range 25 east, Salt Lake meridian; thence west to the southwest corner of township 6 south, range 24 east, thence north along the range line to the northwest corner of said township 6 south, range 24 east; thence west along the first standard parallel south of the Salt Lake base line to a point where said standard parallel will, when extended, intersect the eastern boundary of the Uintah Indian Reservation as established by C. L. DuBois, United States deputy surveyor, under his contract dated August 30, 1875; thence along said boundary southeasterly to the Green River; thence down the west bank of Green River to the point where the southern boundary of the said Uintah Reservation, as surveyed by DuBois, intersects said river; thence northwesterly with the southern boundary of said reservation to the point where the line between ranges 16 and 17 east of Salt Lake Meridian will, when surveyed, intersect said southern boundary; thence south between said ranges 16 and 17 east, Salt Lake meridian, to the third standard parallel south; thence east along said third standard parallel to the eastern boundary of Utah Territory; thence north along said boundary to a point due east of the place of beginning; thence due west to the place of beginning."

You will make the proper notations on your records and be governed accordingly.

Very respectfully,

FRED W. JOHNSON, *Commissioner.*

The CHAIRMAN. Have you concluded, Mr. Johnson?

Mr. JOHNSON. Yes, sir.

Mr. PATTERSON. Do you know what the board of county commissioners has to do, the official connection between them and the stock users over here, in the southern part of the county? Do you know?

Mr. WOHLKE. I don't know what official connection they had with the stockmen's association, except that it has been the policy of the Indian Service in these acquisition projects of obtaining the consent and approval of all interested parties.

Mr. PATTERSON. The consent?

Mr. WOHLKE. Consent.

Mr. PATTERSON. Do you mean to say any man on the board of county commissioners can consent to anything of that kind of a public character?

The CHAIRMAN. Was that consent addressed to the acquisition of the land in red? Is that what you refer to?

Mr. WOEHLEKE. I think it was the entire acquisition project, and I believe that the letters of these men, that Mr. Patterson has in his hands, usually express the idea that this was a good settlement of a very vexing situation.

The CHAIRMAN. What was it, or do you know? What was the condition of the owners of the land now designated in red, the financial condition, at the time this transaction was first consummated?

Mr. WOEHLEKE. I believe that at that time the livestock business was not particularly prosperous.

The CHAIRMAN. That was in what year?

Mr. WOEHLEKE. We began to take options in 1935, through '36, '37, '38, and '39. The purchases were finally concluded, I believe in 1941.

The CHAIRMAN. Now, do you know, does the record disclose, or does your knowledge indicate, as to whether or not the ranches on those creeks were involved in foreclosure proceedings?

Mr. WOEHLEKE. I could not tell you.

The CHAIRMAN. Can anyone give us information on that? Had any of those ranches been taken over by the mortgagee, by either foreclosure or consent judgments?

Mr. JOHNSON. Several of the ranches were heavily mortgaged.

The CHAIRMAN. On these creeks, the land now indicated in red?

Mr. SMITH. Mr. Senator, the matter was in strenuous difficulties financially; could not stock his ground.

The CHAIRMAN. Who couldn't?

Mr. SMITH. A. M. Myrup, during this period of '32, '33, and '34. He got Burnham, from Salt Lake City, to buy sheep, and furnish him sheep, to run on shares, on this land, to the extent of about 2,000 head, and along in 1935 or something—this was in '33—maybe '34, and in '35, they had a few sheep, I think in '33—maybe '34—but in '35, they had a few cattle, added a few cattle, 100, 200, maybe, to that extent, ended up in a 3-weeks' lawsuit between Burnham and Mr. Myrup about the settlement of these leased—

The CHAIRMAN. We don't care to hear about that.

Mr. WOEHLEKE. I believe, Mr. Chairman, that Hugh Colton, the attorney who was also representing the Vernal and various stockmen's associations at this meeting, had powers of attorney from the largest owners in that area to settle. Now we can easily determine whether any of these properties were in difficulties, by examining the authority to pay, and see whether any of the money of the purchase price went to the mortgagors.

The CHAIRMAN. That would be interesting.

Mr. WOEHLEKE. Could we procure that for you?

The CHAIRMAN. Yes. The reason I asked that question is your introduction into the record of these letters coming from the county commissioners, who probably also sit—I don't know whether they do here or not—but they sit as a board of equalization, in their respective counties, and they know the conditions of their people pretty well. I have known of cases where people, after the crash of 1929 and '30, and in '32 and '33, were so embarrassed that the banks, and other agencies, were always boasting to have the Indian Service take over the land, because it looked like the only way out, and the people—well, you may not call it coercion, but you can call it by anything you

like—they went along because the banks told them if they didn't go along, they would go off.

Mr. WOEHLEKE. At that time, shortly after the depression of 1932, the Pacific Southwest Trust Co., of Los Angeles, owned practically all of the cattle ranches in northern Arizona, almost throughout the State.

The CHAIRMAN. We had the same thing all the way through the intermountain country.

Mr. JOHNSON. May I make a statement and properly clarify these letters? I was county attorney for Uintah County at the time the various members of the grazing board met and on the board of county commissioners. This meeting was due—and by reason of the fact, called there for this purpose—that under the paper, the letter which I just submitted to you, it was the thought of the board of county commissioners, of the grazing boards and the various stockmen that the Indians were going to take even the territory south of Vernal, here, under their 1,800,000 acres. For that purpose, and that purpose alone, these letters were written, and these letters were sent to Mr. Stewart, and I think Senator Murdock received them while he was in the House.

Mr. WOEHLEKE. May I call your attention to the fact these letters were written in January 1937, long after the agreement with the Grazing Division for the administration of the 1,800,000 acres had been made.

Mr. JOHNSON. We had various meetings, as men here in this room can verify, on his matter, and these letters arose out of those meetings.

The CHAIRMAN. They must have arisen out of something.

Mr. PATTERSON. May I ask another question?

The CHAIRMAN. Yes.

Mr. PATTERSON. Do you know anything about this transaction yourself? Do you know any more about it than what these letters imply?

Mr. WOEHLEKE. I was not here personally, Mr. Patterson. I merely offered these letters for what they are worth, and I cannot go behind them.

The CHAIRMAN. Who representing the Indian Service was here, Mr. Woehlke?

Mr. WOEHLEKE. In 1937?

The CHAIRMAN. Yes.

Mr. WOEHLEKE. Mr. Wright, superintendent of the Uintah Ouray Agency, and Mr. Millin was the Regional Forester, with headquarters in Salt Lake, and Mr. Stewart took a leading part in the negotiations. He was the Director of Lands for the Indian Service.

The CHAIRMAN. Where is Mr. Stewart?

Mr. WOEHLEKE. He is now the king of the Navajos, superintendent of the Navajo Reservation, his old love.

The CHAIRMAN. Located where?

Mr. WOEHLEKE. Window Rock, Ariz. He has inherited the job of endeavoring to reduce the livestock, the sheep of the Navajos, to a point close to the carrying capacity, in face of the fact that the number they have now is insufficient to give them even a subsistence living.

Mr. PATTERSON. And he is taking them all. I am defending them.

The CHAIRMAN. Where are these various proceedings?

Mr. WOEHILKE. Mr. Millin is sick at Salt Lake City, and Mr. Wright did not come until 1936. Is not that right, Mr. Wright?

The CHAIRMAN. Then he was not here at the initiation.

Mr. WOEHILKE. During 1935, no, he was not here then.

The CHAIRMAN. Let's see; when the options were first taken, they began to be taken in 1936, after Mr. Wright's coming here?

Mr. WRIGHT. Two, I think, were taken before I came, Senator.

The CHAIRMAN. Mr. Wright, do you know of your own knowledge or from matters brought to your knowledge what was the financial condition of the owners of the lands along these creeks that were purchased at that time, or optioned at that time?

Mr. WRIGHT. Well, the one referred to by name, Mr. Myrup, apparently was in financial difficulties all right. He is the only one I recall. The Bown Livestock Co. was surely a solvent concern, or seemed to be. Mr. Taylor, mentioned in the proceedings, was very prosperous. I think most of the others were. Mr. Hazelbush seemed to be getting along first rate. Some of the others were considered solvent.

The CHAIRMAN. Who actually took the options?

Mr. WRIGHT. Carl Pearson of the Indian Service.

The CHAIRMAN. You were never along when the options were taken?

Mr. WRIGHT. No; I was not. Several of the men who sold came to the office to see me about the matter several times.

The CHAIRMAN. And did they come to advise with you on the matter of giving the options?

Mr. WRIGHT. No, sir; the options were nearly always taken before they came to see me, and usually what they came to see me about was if we could not hurry it up a little.

Senator MURDOCK. Were they using any coercion?

Mr. WRIGHT. There was none that I know of. They were anxious to sell.

Senator MURDOCK. What I mean is, were they using coercion on you?

Mr. WRIGHT. All they could muster; yes, sir.

The CHAIRMAN. Where did they go, those who optioned and sold?

Mr. WRIGHT. Several of them retired here in Vernal, and I don't know about several. At least two, and many of those who owned homesteads, as I mentioned this morning, up in the summer area, did not live in this part of the country anyway and remained just where they were.

Mr. PATTERSON. One further question in reference to the cat in the bag. Would you take what you paid for it?

Mr. WOEHILKE. I couldn't answer that question, because that depends largely upon the Utes, who contributed approximately two-thirds of the money to buy these properties.

Mr. PATTERSON. Suppose you get the rights which the Taylor grazing bill allows you; would you take what you paid for it?

Mr. WOEHILKE. What do you mean? Would we sell again?

Mr. PATTERSON. Yes.

Mr. WOEHILKE. You would have to ask the Utes. It is their property.

Mr. PATTERSON. Don't you represent the Utes?

Mr. WOEHILKE. No; I don't represent the Utes.

Senator MURDOCK. In the purchase of the lands in red by the Indians, by the tribe; that resulted in those lands being taken off the tax roll; is that right?

Mr. WRIGHT. Yes, sir.

Senator MURDOCK. So the county commissioners might have had some interest in that aspect of the situation.

Mr. WRIGHT. I never heard it expressed, Senator. I don't know.

Senator MURDOCK. I am just trying to clear up in my own mind why the county commissioners would be participating. I can see the loss of that acreage to the tax rolls. That would certainly get the county commissioners interested in that phase of it.

Mr. WOHLKE. That is correct.

The CHAIRMAN. Anything further, Mr. Wohlke? Any questions from anyone in the audience?

Senator MURDOCK. I would like to ask this question, Mr. Wohlke; There is not a question at all, is there, Mr. Wohlke, but that the orders signed by the Secretary of the Interior, which have yet not been promulgated, were induced by the Bureau of Indian Affairs?

Mr. WOHLKE. I believe that these orders were presented to the Secretary with the explanation that they would remove obstacles from the path of the legislation which had been contemplated since 1935.

Senator MURDOCK. Certainly the Bureau of Indian Affairs must have convinced the Secretary of the Interior that it was for the best interest of all people concerned, in order to get him to sign those orders; isn't that right?

Mr. WOHLKE. I believe that would be correct.

Senator MURDOCK. He could not lawfully sign them without being so persuaded.

Mr. WOHLKE. He could not logically sign them.

Senator MURDOCK. He could not lawfully, unless he was convinced that it was in the best interest for all people concerned.

Now, the evidence introduced here today certainly has brought me to the conclusion that the problem has not been thoroughly studied, and that even the experts who have been handling it have been unable to come to a conclusion, up to this time, as to just what should be done.

Now, with those facts confronting me, it is very difficult for me to say myself how the Secretary of the Interior, unless a lot of persuasion was used on him by the Bureau of Indian Affairs, would sign such orders.

The CHAIRMAN. In the face of such a law——

Mr. PATTERSON. And in the face of the committee investigation.

Senator MURDOCK. I think I have stated the hypothesis.

Mr. WOHLKE. I believe that these orders were signed in 1941.

Senator MURDOCK. That is right; nearly 2 years ago.

Mr. WOHLKE. At that time there was no investigation by the Public Lands Committee.

Senator MURDOCK. And isn't it a fact, Mr. Wohlke, to be frank and candid, that the Bureau of Indian Affairs has used for the last several years the threat of the return of the ceded lands to the Indians in order to force through the type of legislation that you people thought was desirable?

Mr. WOHLKE. The legislation as to the Uncompahgre area?

Senator MURDOCK. The whole thing has been joined together. You have constantly used that threat, have you not, to cause the return of

the ceded lands to tribal ownership unless that legislation went through and went through in the near future?

Mr. WOEHLEKE. I don't believe that is quite correct, Senator. We have been discussing the return of the lands, the restoration of the ceded lands ever since 1934, and ever since 1934 the Ute Indians have been requesting that we fulfill our promise, and return, restore these lands to them. I believe that the restoration of these lands, these ceded lands on the Uintah Reservation, did not become an issue until 1937, when certain people in Duchesne County injected that particular issue into the problem of the Uncompahgre reserve.

Senator MURDOCK. I think that is true. But since that time it has been used as a means of persuasion, at least, with the Representatives in Congress from Utah, to get this thing done. I make that statement myself.

Now, I would like to ask this further question: There is no question at all, is there, but what the Bureau of Indian Affairs has at least used sufficient persuasion on the Secretary of the Interior to cause him at least to sign the orders that have gone into the record today?

Mr. WOEHLEKE. I believe that the Office of Indian Affairs or the Commissioner of Indian Affairs presented the desires of the Utes for the restoration of this land to the Secretary after the Bureau of the Budget had reported adversely on the legislation to restore part of them and take the other part, the two-thirds, and throw them into the public domain without the——

Senator MURDOCK. Let me conclude by saying this, that you know of no other agency or no other person that has been interested in persuading the Secretary of the Interior to issue these orders, do you?

Mr. WOEHLEKE. Except the Ute Indians.

Senator MURDOCK. The Bureau of Indian Affairs.

Mr. WOEHLEKE. And the Ute Indians.

Senator MURDOCK. And the Ute Indians. That is all.

The CHAIRMAN. I would like to dwell on one further thought here, on this subject, because this bill is pending before the Congress, and the whole committee will have looked into this matter. It has been touched upon by Senator Murdock.

I am quite reliably informed, Mr. Woehlke, that it has been stated quite freely that the return of the so-called ceded lands and the setting up of the lands within the orange boundary under Indian control has been definitely held as an item, a club over the heads that have this matter in hand, to force through this legislation.

Mr. WOEHLEKE. I could not agree with that statement, Mr. Chairman. I don't believe there was ever any intention of holding these orders or using these orders as a club or a means of pressuring for the passage of this legislation at any time.

Senator MURDOCK. I wish you could have sat in, Mr. Woehlke, and listened to several sessions at my office between Mr. Zimmerman and Mr. Wilkinson and myself. I am sure you would come to a different conclusion.

Mr. WOEHLEKE. I did not take part in those.

Senator MURDOCK. No; I know that you didn't.

Mr. WOEHLEKE. In fact, Senator Murdock, this thing was pushed off on me.

Mr. GRAHAM. Mr. Chairman, I have here in the files which I brought with me copies of two memoranda from the Commissioner of Indian Affairs to the Secretary dated June 19 and June 12, 1941, transmitting these two orders. If they will be of any interest to the committee, I should like to offer them for the record.

The CHAIRMAN. May we see them?

I should like to question Mr. Haskell, the investigator for the committee. Mr. Haskell, will you state your name? What is your position?

STATEMENT OF E. S. HASKELL, INVESTIGATOR FOR THE COMMITTEE ON PUBLIC LANDS AND SURVEYS

Mr. HASKELL. Special investigator for the Subcommittee on Public Lands and Surveys.

The CHAIRMAN. How long have you been in this locality, Mr. Haskell?

Mr. HASKELL. One week yesterday.

The CHAIRMAN. During that time what have you been doing?

Mr. HASKELL. I have been interviewing the parties here and in Roosevelt who have appeared to be mostly concerned in the matters before the committee.

The CHAIRMAN. Has anything been stated to you as to the motive or purpose of making known publicly the demands for the restoration of the so-called ceded lands with reference to pending legislation?

Mr. HASKELL. Yes, sir; by some of those who signed this agreement of July 10, 1935.

The CHAIRMAN. They made statements to you?

Mr. HASKELL. Two or three of them have made the statement that those signatures were obtained "under duress," to quote them exactly, and that they would so testify at this hearing. They intended to so testify at this hearing.

The CHAIRMAN. I have before me what purports to be some notes taken by you. Were they taken on the ground?

Mr. HASKELL. Yes, sir; in the bank building in Vernal.

The CHAIRMAN. In the presence of the parties making them?

Mr. HASKELL. Yes, sir.

The CHAIRMAN. Do you know Mr. H. E. Seeley?

Mr. HASKELL. I believe he is present.

The CHAIRMAN. Here is what purports to be a note taken by you of Mr. Seeley's statement which reads as follows—please tell me whether or not this is substantially correct:

They scared us with an executive withdrawal of the Uncompahgre lands, then later they found out that they did not have any ceded lands. I don't know if anyone here has a copy of the opinion, though; anyway, we decided then that they did not have the rights they claimed they had. Then they bought those ranches out, those lands were set aside already for the cattlemen. Yes; the cattlemen apparently were satisfied with the prices they got for the ranches and there was no coercion. They bought the Myrup and Bown lands in order to get control of the water there and that practically gave them the summer range. I heard they were only running 500 head of cattle where they could run 3,000 or 4,000. Those 800 acres per capita are exclusive of the lands in unit G.

Is that substantially the statement made to you by Mr. Seeley?

Mr. HASKELL. Substantially, yes, sir; it is not completely verbatim, but it is nearly so.

The **CHAIRMAN**. Has anyone else made a statement to you concerning the ceded lands?

Mr. HASKELL. Two or three. I think Mr. Tyzack did, I am not sure. He was one of those present.

The **CHAIRMAN**. I make mention of this while you are on the stand, in fairness to you, Mr. Woehlke, because I think the Department should know what the feeling of people in the community is. Personally, I know nothing about it, but I think the statement made by Senator Murdock must have weight, because he has stated here that the reason why those ceded lands were used—were stated to be used as a—and I use the term “club” to bring this whole matter about. Now, it is the atmosphere of this proposition that I want you to clear up, if you can, Mr. Woehlke, because the atmosphere, leaving it as it is now, is one that is—

Mr. HASKELL. If my memory serves me correctly, some similar statement was made at the meeting at Roosevelt. I think Mr. Dillman can check me on that.

STATEMENT OF RAY DILLMAN, ATTORNEY AT LAW, ROOSEVELT, UTAH

Mr. DILLMAN. May I make one statement? As you have indicated, that was the feeling that prevailed and was in discussion in the first meeting we had at Vernal. There were about three of us opposing it on the ground that we felt the illegality of it at that time. Mr. Colton who signed this agreement came to me and said he wished I would keep out of it because he was representing all of the stockmen over in that section and they were the ones that wanted to get rid of their land and did not want us monkeying or interfering with the proposed sale. I think it is only fair to the Indian Service, but all the way through our group have felt that this matter—these Executive orders and proposals have influenced the action that has been taken.

The **CHAIRMAN**. Do you care to say anything more, Mr. Woehlke?

Mr. WOHLKE. I believe both Mr. Seeley and Mr. Dillman referred to the early negotiations in 1935. Am I correct on that?

Mr. DILLMAN. Mr. Woehlke, that meeting in Vernal, the original meeting, came shortly after the withdrawal of the ground in question, the ground in yellow, and that proposal came across on the west side of Green River and would affect some of our users over that way. I was one of the persons operating sheep at that time. Now, we came to that meeting over here and it was pretty well unanimously the opinion of the livestock people at Vernal that they would consent to a withdrawal of certain areas down in the vicinity of unit G if they would release the east side of Uintah County. Our people felt that even the stockmen of Uintah County were trading us off to get a release from this Executive order for the east side of Uintah County which covered their range. Then we have held various meetings at other times, a meeting at Roosevelt; and I have been in on conferences in Salt Lake City in which Judge Reeves of the Indian Department and others were present when these matters have been discussed; and all the way through there is and has been a feeling that these Executive orders were coming if things were not conceded to otherwise.

Senator **MURDOCK**. May I ask you this question? The Executive order is a withdrawal that was made in aid of legislation. I imagine

you are thoroughly convinced, are you not, Mr. Dillman, that that is the purpose of the withdrawal, that the aid intended is that you better give us what we are asking for by legislation or we will take the whole thing by Executive withdrawal?

MR. DILLMAN. That is true to a measure. We had some time in convincing some of the local people to join us in the scrap, on the ground that probably it could not be done, that all of this yellow area, in the yellow and orange line, could not be taken by Executive order. Some of us contended that those measures which were dignified by congressional act would require congressional acts to modify them, but, if created originally by Executive order, that probably Executive order could modify them; and it was not until this had gone quite a ways that Mr. Stringham, and some of them over here, joined with us, and concurred in that thought.

SENATOR MURDOCK. After the Executive order is once made withdrawing the area, I know of no way you can get rid of it except by congressional action. So I think it is one of the greatest things of legislation that has been devised up to date.

THE CHAIRMAN. Anything further, Mr. Woehlke?

MR. WOHLKE. It seems to me that there was almost complete unanimity in Uintah County as to the proposal for setting up this grazing reserve, and supporting the land acquisition project. On the other hand, the people of Duchesne County who were not interested in Uintah County problems, proceeded to inject the other issue, that of the ceded lands on the Uintah Reservation. The injection of the Uintah ceded land issue tied up these two particular projects. The 1937 letters that were introduced, those by Mr. Seeley and Mr. Weaver, all of them from Uintah County, reaffirmed their support of the Uintah County project as against the opposition of the Duchesne County people, who had no direct interest in the Uintah project.

MR. DILLMAN. May I make one statement? I believe in fairness to the Indian Department, that the record should disclose that the people generally, especially the Uintah County people and generally the people in unit G, have somewhat endorsed the general proposition of that withdrawal. Now, may I—and I think the Indian Department and the Indians, I know the Indians themselves, because I have been quite closely associated with them—have followed that thought quite largely. Now, I believe that the acquiescence by Uintah County was caused largely by reason of the original withdrawal. May I say, however, that, so far as Mr. Woehlke states that the people of Duchesne County have no interests in that area, even across Green River, and that unit, and even to the west of Green River in Uintah County, that area was used by people of Duchesne County for winter range and otherwise just the same as it was by Uintah County people. So we had a direct and vital interest in this whole matter, all the way through.

MR. ALLRED. I thought possibly I should stay out of this Uncompahgre set-up. I am more concerned with the matter of the ceded lands over in the other county; but I believe I attended every early meeting when this matter was first discussed, unless it was back before the Taylor Act was passed. I remember there was an attempt made to set up some district here similar to the Montana set-up—I am not at all familiar with that—however, as soon as the Taylor Grazing Act was passed I was made a member of the advisory board and when

the Indian Department representatives, here at this meeting, came out with a statement that they practically owned the Uncompahgre lands, it never did strike me right.

It did not seem right that they owned those lands that one time had been given to the State, and the State had school sections all through them. I never could convince myself that that was the case, and I argued almost alone on the advisory board at that time that it did not seem reasonable. But here is the situation; you talk about coercion, I don't know whether it was or was not; but, at the time the Taylor Grazing Act was passed, you people, a lot of you know, that the first district set up was across the line in Colorado, number 6, I think, and Utah proceeded to set up the other, 7 district. On accounts of that withdrawal, we were only permitted to make a district of that small area up there. The thing that happened, transient herds from all over the country, immediately headed this way. The Vernal people were frantic, just about to be swamped by the transient herds; being pressed by the statements from the Indian Department that they practically owned this Uncompahgre, that unless you fellows get on the job and agree to this 75,000 withdrawal the Secretary will proceed to restore the entire 1,800,000, which, of course, you can see, would upset the Vernal people's livestock set-ups. This is my recollection. I may be cloudy on some of these things, but that is my recollection, and how it all came about. The reason these Vernal people, as I say, took the interest they did in trying to get this bill passed, the people on Hill Creek were willing to sell.

A number of the advisory board fellows have said to me at times, "why, they are just giving us—the rest of it all belongs to them—just giving it to us." I said I would never concede that. Finally it was ruled by somebody in authority that they did not. Then the support was withdrawn. Any number of these fellows here who were active at that time, will tell you what changed their attitude. As soon as they know that the Indians did not own that, had no claim on it, that is when the tide turned, and plenty of reason for that.

Mr. Woehlke talks about the ceded lands coming in pretty much the same condition that caused us people to be concerned over these ceded lands. As district 8 was set up, fellows were being chased off the district 8, and that is the one unregulated part of the country left. The people south of Duchesne, a lot of small cattle operators were getting in bad shape, didn't know what to do, and went to the Indian Department, and rather asked, "Can't you do something about it? Can't you get authority to administer those lands? We have to have some relief. The Grazing Service won't pay any attention to us." That is the reason it appears that the people in Duchesne County were asking the Indians to take these lands; wanted somebody to administer. For some reason it was not public domain and the Grazing Service did not seem to be in a position where they could do anything about it. But we have been told, the statement has been made, that down at Washington, I understand, the Congressman has made the statement the Duchesne people have agreed to these things, what are we crying about? Well, we agreed partly for the same reason these people over here have agreed. I can tell you more about it when you get through with the Uncompahgre. I don't care to say anything more about it at this time but I will take it up later.

The **CHAIRMAN**. Are there any further questions, while Mr. Woehlke is on the stand, from the audience? I don't want any of you to be afraid to ask questions, whether you ask them in nice language or otherwise. Just ask them and we will understand what you mean.

I guess that is all, Mr. Woehlke.

Senator **MURDOCK**. Mr. Chairman, may I ask Mr. Graham a couple of questions in reference to these letters that he submitted? I think by all means they should go into the record.

The **CHAIRMAN**. Very well.

Senator **MURDOCK**. Are we to assume, Mr. Graham, from this letter concerning the 217,000 acres, which is the territory in purple, there referred to as the ceded lands, that the basis for the return of those ceded lands to tribal ownership, under the Wheeler-Howard Act, is contained in this letter of the Commissioner of Indian Affairs to the Secretary? Is that your purpose in submitting it for the record?

Mr. **GRAHAM**. So far as I know, sir. I had no personal connection with the submission of those at all, but I offer that as the letter of transmittal which accompanied the submission of the order as the records disclosed.

Senator **MURDOCK**. Before the Secretary signed the orders that have been introduced in the record, would he not ask the opinion of the solicitor of the Department as to the law in the question?

Mr. **GRAHAM**. I cannot speak from personal knowledge, but I am confident those orders were routed through and approved by the office of the solicitor.

The **CHAIRMAN**. Do you refer to the solicitor of the Bureau?

Mr. **GRAHAM**. No; the solicitor of the Department of the Interior.

Senator **MURDOCK**. And I assume that the committee may assume that this letter here which has been submitted is the basis for the signing of the order with reference to the 217,000 acres?

Mr. **GRAHAM**. That is my understanding, sir, unless there is something in addition which is unknown to me.

Senator **MURDOCK**. Now, with reference to the withdrawal of the Uncompahgre territory I assume that the committee may assume that this letter of June 12, 1941, addressed to the Secretary of the Interior, by the Commissioner of Indian Affairs, John Collier, is the basis for that?

Mr. **GRAHAM**. I so understand.

Senator **MURDOCK**. I think the chairman would be interested in reading them.

The honorable the **SECRETARY OF THE INTERIOR**,

(Through the Commissioner of the General Land Office.)

MY DEAR SECRETARY: Transmitted herewith for your consideration is a draft of order designed to restore to tribal ownership, for the use and benefit of the Indians of the Uintah and Ouray Reservation in the Utah, all of the undisposed-of opened lands lying within the former boundaries of the Uintah and Ouray Indian Reservation, embracing approximately 217,000 acres, which lands were opened to entry under the act of May 27, 1902 (32 Stat., 263), as amended.

Section 3 of the Indian Reorganization Act of June 18, 1934 (48 Stat., 984), provides in part, that:

"The Secretary of the Interior, if he shall find it to be in the public interest, is hereby authorized to restore to tribal ownership the remaining surplus lands of any Indian reservation heretofore opened, or authorized to be opened, to sale, or any other form of disposal by Presidential proclamation, or by any of

the public-land laws of the United States: Provided, however, That valid rights or claims of any persons to any lands so withdrawn existing on the date of the withdrawal shall not be affected by this Act: Provided further, That this section shall not apply to lands within any reclamation project heretofore authorized in any Indian reservation: * * *

The lands proposed to be restored are primarily suitable for grazing purposes. Stockraising is the principal means available to these Indian people to maintain a livelihood. Only by increasing their grazing area will they be enabled to carry on the livestock industry on a scale sufficient to return a satisfactory measure of self-support. The lands involved, in their present status, are not susceptible of efficient administration. Apparently, the only manner in which proper administration can be provided is through return of the lands to the Indians.

On numerous occasions this matter has been the subject of discussions with the Indians, the superintendent and other interested persons. It is their belief that the lands should be restored to the Indians at once.

In view of the foregoing, it is recommended that all of the undisposed-of, surplus opened lands of the Uintah and Ouray Indian Reservation be restored to tribal ownership for the use and benefit of the Indians of the Uintah and Ouray Reservation, and that the lands be added to and made a part of the said reservation, subject to any valid existing rights.

Sincerely yours,

JOHN COLLIER, *Commissioner.*

GENERAL LAND OFFICE,
Washington, D. C., June 27, 1941.

There are no reasons appearing on the records of this Office why the foregoing recommendation should not be approved.

THOS. C. HAVELL,
Acting Assistant Commissioner.

DEPARTMENT OF THE INTERIOR,
OFFICE OF INDIAN AFFAIRS,
Washington, June 12, 1941.

The honorable the SECRETARY OF THE INTERIOR,
(Through Director of the Grazing Service.)
(Through Commissioner of the General Land Office.)

MY DEAR MR. SECRETARY: There is transmitted herewith draft of a proposed order withdrawing certain public lands in the State of Utah for the purpose of creating a special grazing use area for the benefit of the Indians of the Uintah and Ouray Reservation and in aid of proposed legislation permanently setting aside the lands as a reservation for these Indians.

The enclosed draft of proposed order will also partially modify the existing boundaries of Utah Grazing District No. 8 and cancel an earlier withdrawal made by the Department whereby the lands so withdrawn and not included in the proposed Indian grazing reserve will be administered fully by the Grazing Service.

The proposed Indian grazing reserve embraces the following-described area, and it is recommended that the area so described be approved as a grazing reserve for the exclusive use of the Indians above-mentioned:

SALT LAKE MERIDIAN

- T. 18 S., R. 16 E., sec. 25, lot 3; sec. 36, lot 1;
- Ts. 12 to 18 S., R. 17 E., those parts east of Green River, partly unsurveyed;
- Ts. 10 to 13 S., R. 18 E., those parts east of Green River, partly unsurveyed;
- Ts. 14 to 18 S., R. 18 E., all, partly unsurveyed;
- Ts. 9 and 10 S., R. 19 E., those parts east of Green River;
- Ts. 11 to 18 S., R. 19 E., all;
- T. 19 S., R. 19 E., sec. 1, NE $\frac{1}{4}$, unsurveyed;
- T. 8 S., R. 20 E., sec. 11, that part east of Green River; sec. 12, S $\frac{1}{2}$; sec. 13, all; sec. 14, S $\frac{1}{2}$ N $\frac{1}{2}$ and S $\frac{1}{2}$; secs. 21 to 27 and secs. 32 to 36 incl.;
- T. 9 S., R. 20 E., those parts south and east of Green River;
- T. 10 S., R. 20 E., all;
- T. 11 S., R. 20 E., sec. 3, lot 4, S $\frac{1}{2}$ NW $\frac{1}{4}$ and S $\frac{1}{2}$; secs. 4 to 10, incl.; sec. 11, SE $\frac{1}{4}$ NE $\frac{1}{4}$, W $\frac{1}{2}$ E $\frac{1}{2}$, W $\frac{1}{2}$; sec. 14, W $\frac{1}{2}$ E $\frac{1}{2}$, W $\frac{1}{2}$;

T. 11 S., R. 20 E., secs. 15 to 22; sec. 23, $W\frac{1}{2}W\frac{1}{2}$; sec. 26, $W\frac{1}{2}W\frac{1}{2}$; secs. 27 to 34, incl.

T. 12 S., R. 20 E., sec. 3, $W\frac{1}{2}$; secs. 4 to 6, incl.; sec. 7, $NE\frac{1}{4}$; secs 8 and 9, all; sec. 10, $W\frac{1}{2}$; sec. 15, $W\frac{1}{2}$; sec. 16, all; sec. 17, $E\frac{1}{2}$;

T. 13 S., R. 20 E., sec. 18, lots 3 and 4, $E\frac{1}{2}SW\frac{1}{4}$; secs. 19 to 21; sec. 27, $SW\frac{1}{4}$; secs. 28 to 33, incl.; sec. 34, $W\frac{1}{2}$;

T. 14 S., R. 20 E., secs. 3 to 10, incl.; sec. 11, $W\frac{1}{2}W\frac{1}{2}$; sec. 13, $S\frac{1}{2}$; sec. 14, $W\frac{1}{2}NW\frac{1}{4}$ and $S\frac{1}{2}$; secs. 15 to 36, incl.;

Ts. 15 and 16 S., R. 20 E., all;

T. 17 S., R. 20 E., secs. 1 to 11, incl.; sec. 12, $N\frac{1}{2}$, $W\frac{1}{2}SW\frac{1}{4}$, $NE\frac{1}{4}SW\frac{1}{4}$; sec. 13, $NW\frac{1}{4}NW\frac{1}{4}$; secs. 14 to 22, incl.; sec. 23, $N\frac{1}{2}NE\frac{1}{4}$, $SW\frac{1}{4}NE\frac{1}{4}$ and $W\frac{1}{2}$; sec. 26, $NW\frac{1}{4}$ and $NW\frac{1}{4}SW\frac{1}{4}$; sec. 27, $N\frac{1}{2}$, $SW\frac{1}{4}$, $NE\frac{1}{4}SE\frac{1}{4}$, $W\frac{1}{2}SE\frac{1}{4}$; secs. 28 to 33, incl.; sec. 34, $NW\frac{1}{4}NE\frac{1}{4}$ and $W\frac{1}{2}$;

T. 18 S., R. 20 E., sec. 3, $W\frac{1}{2}W\frac{1}{2}$; secs. 4 to 8, incl.; sec. 9, $N\frac{1}{2}NE\frac{1}{4}$, $SW\frac{1}{4}NE\frac{1}{4}$ and $W\frac{1}{2}$; sec. 16, $W\frac{1}{2}$; secs. 17 to 20, incl.; sec. 21, $W\frac{1}{2}$; sec. 28, $W\frac{1}{2}$; secs. 29 to 32, incl.; sec. 33, $W\frac{1}{2}$;

T. 19 S., R. 20 E., sec. 4, $W\frac{1}{2}E\frac{1}{2}$, $W\frac{1}{2}$; secs. 5 to 8, incl.; sec. 9, $W\frac{1}{2}E\frac{1}{2}$, $W\frac{1}{2}$; secs. 16 to 18, incl.;

T. 8 S., R. 21 E., sec. 7, lots 3 and 4; sec. 17, $SW\frac{1}{4}$; sec. 18, lots 1 to 4, $E\frac{1}{2}SW\frac{1}{4}$ and $SE\frac{1}{4}$; secs. 19 to 36, incl.;

Ts. 9 and 10 S., R. 21 E., all;

T. 14 S., R. 21 E., sec. 18, lots 3 and 4, $E\frac{1}{2}SW\frac{1}{4}$; secs. 19 and 20, all; sec. 21, $W\frac{1}{2}NW\frac{1}{4}$, $SW\frac{1}{4}$; sec. 28, $NW\frac{1}{4}$; secs. 29 to 32, incl.;

T. 15 S., R. 21 E., sec. 6, $W\frac{1}{2}$; sec. 7, $W\frac{1}{2}$; sec. 18, $W\frac{1}{2}$;

T. 15½ S., R. 21 E., secs. 31 and 32, all; sec. 33, $W\frac{1}{2}$;

T. 16 S., R. 21 E., sec. 4, $W\frac{1}{2}$; sec. 5, $N\frac{1}{2}$; $N\frac{1}{2}S\frac{1}{2}$, $S\frac{1}{2}SW\frac{1}{4}$; secs. 6 and 7, all; sec. 8, $W\frac{1}{2}$; sec. 17, $W\frac{1}{2}$; sec. 18, all; sec. 19, $N\frac{1}{2}$ and $SW\frac{1}{4}$; sec. 30, $W\frac{1}{2}$; sec. 31, $W\frac{1}{2}$;

T. 8 S., R. 22 E., secs. 19, 30, 31, and 32;

T. 9 S., R. 22 E., secs. 4 to 9, 16 to 21, and 28 to 33, incl.;

T. 10 S., R. 22 E., secs. 4, 5, and 6.

A recital of the facts leading up to the need and justification of creating this proposed reserve is as follows. By departmental order of September 26, 1933, all vacant and unentered lands within the area known as the Uncompahgre Reservation established by Executive order of January 3, 1882, comprising approximately the southern end of Uintah County, Utah, were temporarily withdrawn in aid of legislation to establish a permanent grazing reserve for the Indians. The Indian reserve now proposed embraces the southwestern corner of Uintah County, which is covered by the temporary withdrawal of September 26, 1933, and the northwestern corner of Grand County, which is not included in the 1933 withdrawal. The remainder of the public domain lands in Uintah County covered by the 1933 withdrawal not included in the reserve proposed at this time is being released from withdrawal and will be placed under the jurisdiction of the Grazing Service.

Subsequent to the temporary withdrawal of September 26, 1933, legislation has been recommended at different times to establish a permanent Indian grazing reserve, embracing the lands in Grand and Uintah Counties referred to above. The legislation proposed has not been enacted, although justified because of the fact that a land acquisition project was inaugurated in this same area under which practically all of the property of private owners therein has been purchased at a cost of over \$300,000, which money was made available from gratuity and tribal funds. On April 14 the Assistant Commissioner of the General Land Office advised us that there are approximately 615,590 acres of public domain lands within the two areas in Grand and Uintah Counties recommended for Indian grazing reserve purposes. As the lands in Grand County are included in grazing district No. 8, it is necessary to modify this grazing district to exclude these lands. Although the lands in Uintah County are within the exterior boundaries of this grazing district, the public domain lands in this county included in the proposed Indian reserve are covered by the 1933 temporary withdrawal mentioned, hence they did not become subject to the jurisdiction of the Grazing Service under the Taylor Grazing Act. However, under special agreement entered into on July 20, 1935, the administration of the lands was temporarily transferred to that Service.

It is necessary that the grazing reserve referred to herein be formally established and the proposed withdrawal of all public domain lands within that area be effected to protect the large investment of the Indians and the Government, as represented by the purchase of practically all non-Indian holdings and relative

commensurate grazing rights largely controlling the area. For this reason it further appears but proper that the entire area should be utilized by the Indians and be administered by the Indian Service. Accordingly, it is recommended that establishment of the grazing reserve referred to above be approved, that the enclosed draft of proposed order also be approved, which order will modify Utah grazing district No. 8 to exclude therefrom the lands in Grand County desired for Indian reserve purposes; revoke departmental withdrawal of September 28, 1933, and rewithdraw part of the lands temporarily under authority of section 4 of the act of March 3, 1937 (44 Stat. 1937) in aid of proposed legislation to make such temporary withdrawal permanent, and that pending enactment of such legislation, administrative jurisdiction over the public lands embraced within said area be conferred upon the Commissioner of Indian Affairs.

Sincerely yours,

JOHN COLLIER, *Commissioner.*

The records of this Office show the lands last described in the enclosed draft of proposed order to be vacant public lands covered by the Indian and Grazing Service orders referred to above, and there are no reasons appearing in the records of this Office why the foregoing recommendations should not be approved.

FRED W. JOHNSON,
Commissioner of the General Land Office.

I concur in the proposed modification of Utah grazing district No. 8 and in the administrative action recommended.

R. H. RUTLEDGE,
Director of the Grazing Service.

SEPTEMBER 10, 1941.

Establishment of a special grazing use area in the State of Utah for the benefit of the Indians of the Uintah and Ouray Reservation and the other recommendations contained in the foregoing letter from the Commissioner of Indian Affairs are hereby approved.

H. L. I.,
Secretary of the Interior.

The CHAIRMAN. Mr. Graham or Mr. Woehlke, is there anything further to offer?

Mr. GRAHAM. Nothing further; I would like to suggest at this time, Mr. Chairman, I might observe in connection with these memoranda, which have just been put into the record, as I stated a few moments ago, I am not in a position to state of my personal knowledge what attended the submission of these letters of transmittal, and I am speaking only on the basis of my experience in matters of that kind, of this substantial import—I should imagine these were attended by rather large amounts of discussions between the Indian Office and the Solicitor's Office and the Secretary. I do not, however, state that from my personal knowledge.

The CHAIRMAN. I take it from that, it is your belief that the letters alone were not the inducement for the orders to be signed by the Secretary.

Mr. GRAHAM. I personally feel rather confident of that, Mr. Chairman.

The CHAIRMAN. Are there any others who wish to be heard here at this time?

Oran F. CURRY (chairman, Ute tribal committee, Fort Duchesne, Utah). We have one of our old Indian chiefs here that would like to be heard.

The CHAIRMAN. Does he wish to be heard tonight?

Mr. CURRY. I will interpret for him.

STATEMENT OF PAWWINNEE, UNCOMPAHGRE COMMITTEE MEMBER, OURAY, UTAH, AS INTERPRETED BY ORAN F. CURRY

PAWWINNEE. Mr. Chairman, fellow citizens, I am going to convey my thoughts to you as I seem to gather by being here listening to you people talk.

I am Indian, as you can see. I have long lived upon this part of the country, which was in Hill Creek, Willow Creek, and the area which has been in question today, which has been in discussion today. However, I am originally from Colorado. My forefathers, rather, were from Colorado. Circumstances caused us to move into this country, of which, perhaps, the history has been disclosed to you.

The CHAIRMAN. Where was he born?

PAWWINNEE. I will come to that. I was born in Colorado.

I must have been very small boy. I cannot recall when my family moved here.

The CHAIRMAN. Ask him to what band he belongs.

Mr. CURRY. He will tell us that as he goes along.

PAWWINNEE. Migrated from Colorado, as I mentioned, because of circumstances. We came here, we moved upon this so-called Uncom-pahgre Reservation. I presume we came here because there was reason for coming here, and that at least we were led to believe that, among the things they had been promised, like all other promises made in the past by the Government. We came upon this reservation because of a certain act. They brought us here and made it possible for us to recognize this part of the country as our home.

The CHAIRMAN. Do you mind if I ask you questions as we go along? I notice you don't want to answer my question. Do you mind if I ask you questions? Does that interrupt you, or interfere?

Mr. CURRY. I will ask him.

PAWWINNEE. I am not at this time wishing to be interrupted. That is manner which white people have, to interrupt one another, and possibly cause a person to forget what he is going to say.

As I have said before, I came here while I was very small boy. Today you can see my hairs are turning grey. I have been on this reservation for a good many years. As I understand, I was led to believe that at the time we came here, or shortly upon our arriving here, this reservation was set aside and created, at which time it was a large tract of land. But up to shortly after, from what I again gathered, it was thrown open for the settlement, which I know very little about, only from hearsays; but as today, as I seem to understand, we are very proud of this little country which we have called our home.

Beginning 7 years ago, beginning with the time that we first negotiated for certain tracts of land, or holdings of these ranches, which have been discussed today, from each year, it seemed to be the same old thing comes up, for 7 years, continuously from one legislation to another, until up to date it would stand still just as it was 7 years ago. At that time a certain line was designated, upon which we, at least, we shall put our foot upon once more. That line hits down around somewhere that is called, designated, that part as the English name, "Oak Spring," within that area. How happy we were again, for once

more we were thinking that we were going, after all, to get this piece of land again, upon which we shall strive to become self-supporting, self-sustaining, again. But that seemed to be just another promise that fell at the wayside, like other things that the white men have done. We have stock, we have striven, through the encroachment of the white people, along in that country, we try to make our living all these years.

As I said before, these ranches were purchased at very high prices. I have seen nearly, possibly three hundred thousand or in the neighborhood of four hundred thousand dollars, there were certain tribal funds used, somewhere in the neighborhood of \$200,000; and likewise the appropriation funds used in order to make purchase of this land. We were led to believe, at the time these lands were purchased, that commensurate rights—or whatever the white man calls that—commensurate right of those base properties went with this land. Shortly upon the completion of these ranches, the white people who had promised they would vacate it, to give us that one more hope for our Indians to survive. I will point out how we have tried to manage this ranch. My son-in-law has occupied one of these places since that time, with only over a hundred head of cattle, and there are other Indians, my son, likewise, have cattle. This boy, and my son, happened to be one of the boys that is gone across the country to fight for you white people. I want to go into, briefly, just what is being done on these ranches, because of the remarks made that we want to live idly, and just hold that country. We are utilizing and making every effort to make those ranches pay. Every ranch that has been purchased has not been idled away, but there are people, Indians, who are making a go of those ranches. There are places there that you can see for yourselves. Some of you people doubt. You can see what has been done for the very short time that we have occupied those ranches. But it seems to me, since recently, we are just sitting there holding these ranches, and all around us are the white sheep men, who seem to take advantage of the fact, possibly, of the Taylor Grazing. We have been very fortunate, to a certain extent, to have the range, summer range, spring range, fall range, but we have no winter range. The white men are using the winter range which we are supposed to use. I am asking you, is it fair, after all we have done upon our own grounds, to which we have moral rights, that we have to beg, be as beggars? And here the white man all around us, who really does not own any property within this country, he can have the cream of that range. I would like to ask you, what do you think of it?

Here is another man, here, who has used his ranch up there, the ranch holdings, and it seems like he cannot go no place, because he is surrounded by the white sheep. Is that the way we were lead to believe? Is that the problem that was laid before us? This year finds me in very bad condition, so far as my sheep is concerned. The land that I have been allotted, it is just about like this floor here, you can imagine. Fortunately, there happened to be old Indian allotments up along White River, where we have to fall back on. If it was not for that, I don't know what I would have done this year. Is there any justice in that? I am asking you men, who seem to know everything, is there any justice in it, that the white man can go and take the cream of everything, and we, who originally lived there, and bought those places, had to go around and use land that has no feed? I suppose

that, however, the responsibility lies upon the grazing manager of this district. Likewise, over in our district it seemed to me that somehow we have been neglected. It makes my heart ache to think that we had to go through this again, when the white men can be glad at heart because he always seem to get what he wants. I am asking you men if that is a fair deal?

This winter it is very unfortunate for me, for us Indians, for the group there. There was no snow, and who got the cream of that range? Smith is a white man. He got the range where there was snow, and feed for their stock. But us Indians, we had to go out there where there was no snow up there. I trespassed, I believe, upon Smith's range, a little, but I had to get out of there because I know what the results would be. Likewise trespassed on another man. I don't want to get in trouble, therefore it is the same old story, I had to try to do the best I could. I went away from there. Therefore, this year, I suppose, my lamb crop will be way below, because my sheep starved this year, and while the white people, as usual, get the best, and they will have the lamb crop that we won't have. I am asking you again, is that a fair deal?

I would like to take you men out here investigating, like to take you over what we have to put up with. Today it seems to me the Indians, as a race, are a thing of the past. We know why. But then, at the same time, it seems to me we are still recognized as no one, nobody. There seems to be no adjustment in this matter. What are we to do? What is confronting us today?

The war condition, what does it mean? They speak to us and say, "Raise your foodstuff for the armed forces." Does not that speak for us to strive to raise all our foodstuff, to remember the war? Does that not speak that we ought to put forth every effort to do something to get behind the movement of our boys? It seems to me you men, who are well-educated men, can see things, can see these things, the bad condition which confronts not only you white people, but the Indian people.

Unfortunately I happen to have a son over in the Solomons. I likewise have two more boys who may be in the draft. And other boys, of other members, are going, possibly up into the hundreds. What are they fighting for? Who are they fighting for? You, everyone of you, and for all of us. What are they going over there to fight for? Why did they go? Why did they go? In support of this great war movement? Because they wanted to go? No; Uncle Sam called on them, and they went because they were asked to defend this country for freedom and democracy.

I mentioned awhile ago that, because of lack of funds, that we may never use that. They refer to us as the past. We are looking forward to tomorrow, not yesterday. We have funds available that are being used, and can be used, once this grazing set-up is complete. We have funds that we can stock with. Until it is settled we do not wish to enter into using our money for any purpose where we may have to lose, and in a final event be broke, because we are running on someone else's land.

I just wonder what reaction my little talk is having on you people. Just where did you picture us? Just who are we? Where do we stand, as Indian people? Have you not the heart to see the Indians have a little piece of this land? Or do you want to control it all,

like you have other surrounding countries? I understand you two men are from Washington, and you are in here for certain things which you know have been disclosed here. I am humbly speaking to you, and hearing such another man, one representative from Chicago, whom we happened to meet; but I did not happen to meet you men.

I have been fortunate enough to be delegated to Washington two times and three times just recently. I returned from there, and my trips have been seeking some way to better our condition; seeking some way that the white man, one time, at least, will wake up and open his heart, open his eyes, to the needs of the Indians. You white people, it seems to me, never hesitate, you never stop at anything, but what you get what you want. But while you get what you want, when an Indian wants it he has to beg for it.

Here I will go back to these men who we spoke of, who are not what you may call taxpayers in this country, but they are outsiders, not people of this country, not local people of this country, who seem to hold up this whole program; therefore, it seems to me you men who are here in the interests of our people should at least wake up and see what it is all about. Don't take it for granted that because you know everything there are some things beyond your reach. See for yourselves; don't take every body else's word.

That is all. Thank you.

The CHAIRMAN. Anyone else?

I think we will recess until 9 o'clock tomorrow morning at this point.

(Recess at 9:30 p. m.)

ADMINISTRATION AND USE OF PUBLIC LANDS

WEDNESDAY, FEBRUARY 17, 1942

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON
PUBLIC LANDS AND SURVEYS,
Vernal, Utah.

The CHAIRMAN. The committee will come to order.

Mr. Wright was to furnish us with some data for the record this morning.

Mr. WOEHLEKE. Mr. Wright has not arrived as yet, Mr. Chairman.

The CHAIRMAN. All right; it's just a question of his turning in some data that I thought was quite necessary at some period during the course of the proceedings.

Now, yesterday we had before us the exhibit used by the witness, Jenson, and it was agreed that those records, in small form, should go into the record. Does anyone know whether or not they have been prepared?

Mr. LEECH. They will be photostated, Senator, and filed with the reporter.

The CHAIRMAN. We want those in the record, because they are exceedingly important to the committee. They show the study made by the Grazing Service, and part of the study made by the Indian Service, prior to the time of the purchase of unit G.

Now, we were also to be advised by the Indian Service as to how many livestock now range in unit G.

Mr. WOEHLEKE. Mr. Chairman, all that information will come when Mr. Wright arrives.

Mr. LEECH. Mr. Chairman, we will have prepared, also, a tabulation of the licenses granted in connection with that property. That is not quite finished, but it will be available in the next hour or so.

Senator MURDOCK. That is, the licenses that were issued prior to the time it was taken over by the Indians?

Mr. LEECH. Both, Senator. The licenses issued before and also after.

Senator MURDOCK. Senator McCarran, as I understand, is particularly interested in the licenses outstanding, in connection with those base properties, at the time the Indian Service optioned the land.

The CHAIRMAN. That is right.

Mr. LEECH. That will be furnished, beginning with 1935 and 1936, on through 1942.

The CHAIRMAN. In that connection, Mr. Leech, I am now going to touch upon a phase of this whole hearing that does not apply to this hearing, but to all of it. It comes out of this thought: Yesterday I drew to the attention of Mr. Woehlke the fact that the Indian Service

could have known the estimated carrying capacity of that range, as it had been determined, so far as the Grazing Service was concerned, because the records of the Grazing Service were available to the Bureau. On several occasions, in the course of our hearings, we have run across the information that those records are not public records, and the Grazing Service meticulously guards those records. I wonder if you are still pursuing that policy.

Mr. LEECH. My understanding, Mr. Chairman, is that the records and surveys are available to anyone.

The CHAIRMAN. To any interested party?

Mr. LEECH. Yes, sir.

The CHAIRMAN. This is aside the question that is before us immediately, but it arises because of my remark to Mr. Woehlke, yesterday, that they have the records available. It has always seemed to the chairman of this subcommittee, and I think, to the other members of the committee who have given it thought, that the records of the advisory boards, as regard the number of cattle allowed, or the number of livestock allowed, by the Board to the users of the open public domain, should be a matter of record, in that particular section, for the users on the public domain. This has been brought up, and has been drawn to the attention of Mr. Rutledge, at Elko, and other places. I hope that policy may be modified, so anyone interested in how many cattle some other fellow is running on the same range can look into the record.

Mr. JOHNSON. It has been the practice, for the past 2 months, that anyone looking at those records had to have written consent from the licensee.

Mr. LEECH. From the licensee himself?

Mr. JOHNSON. That is right.

The CHAIRMAN. I certainly would not okey that policy. I don't think that is in keeping with the policy. I think it should be an open record.

Mr. LEECH. The only records, certain records, are considered confidential, and they are not open for public inspection; but any application, and dependent property report, or the numbers granted, are public information.

The CHAIRMAN. I would think that would be the proper policy. That is what we have contended for. You say they are not open?

Mr. JOHNSON. I do.

Mr. LEECH. I will look into that, Senator.

The CHAIRMAN. It might be well for you to look into that matter, and clear it up.

There is a phase of this question to which the chairman wished to draw your attention. We have now listened for one solid day to the history of the Indians, and the history of the lands, as regard the Indians. There must be, somewhere in this matter of the history of the utilization of the open public domain, involved here, records of who has used it, and for what length of time, and with what number of livestock; and, it seems to me, for the enlightenment of the committee, we should commence to touch on this subject.

Now, you gentlemen who represent these people here as counsel, we look to you to marshal that evidence, and put it before us, if it exists.

Mr. PATTERSON. We have it.

The CHAIRMAN. Very well; you may proceed. Call your witness.

Mr. PATTERSON. I don't know how many there are here; Mr. Johnson and myself represent substantially all of the people on this particular area in question.

The CHAIRMAN. That is what I thought.

Mr. PATTERSON. If I may make a statement to the record, I think we might shorten the time a little bit.

The CHAIRMAN. Very well; that is what we are looking for.

Mr. PATTERSON. Then I think I can state the approximate truth, verified by some of the witnesses.

First, I would like to register our protest against any legislation of this character for these reasons: First, that the users have a substantial right which may be construed as a vested right in the proposed area of withdrawal; second, that the need of such an area for the benefit of the Indians is entirely unnecessary; and, third, that a program can be worked out among the users and the representatives of the Indians that will be entirely satisfactory to both sides. Now, that goes to any legislation which has been before us, legislation which has for its purpose the withdrawal of the area in black.

Now, we have this other question thrust upon us of these proposed withdrawals which have not thus far been promulgated by the Secretary of the Interior, and I would like to have the advice of the committee as to how that may be attacked. Now, I take it that the Secretary of the Interior would be perfectly free upon his own initiative to promulgate those orders at his pleasure and, of course, if they are promulgated it will be contended that that is the law governing this particular area, all of which we would dispute.

The CHAIRMAN. The trouble is, your course of dispute is rather long after one of those orders has become promulgated; it can only be set aside, largely, by an act of Congress; otherwise it becomes the law as far as an administrative order can be made, and it is binding on you.

Senator MURDOCK. I wonder if you would let me interpose there, Mr. Patterson. I wonder, Mr. Chairman—let me ask Mr. Havell a question. Under the Wheeler-Howard Act, which is the basis for the return to tribal ownership of the surplus open former reservation lands, what is necessary in the way of issuing a patent in order to convey the title from the Government to the tribe? Will either you or Mr. Graham answer that?

Mr. HAVELL. Senator, I don't know that any patent or any instrument is necessary other than an order that the Secretary might issue under authority of section 3, I think, of the Wheeler-Howard Act, to put the land back in a reservation status.

Senator MURDOCK. We are confronted with this situation; here is your land which, without any question now, is a part of the public domain. The only string attached to it is the payment of \$1.25 an acre. That is Government land, the same as anything else. Now, when you restore it to tribal ownership it seems to me it would require a patent or some instrument in order to do it. I wanted to bring that out and then to suggest this: In my opinion if and when the Secretary of Interior acts legally under the Wheeler-Howard Act in restoring that land to tribal ownership I doubt, then, that Congress could upset that kind of a transfer. I think without any doubt, as the

chairman indicated, that the withdrawal of this land in the black and green certainly could be set aside by Congress; whether it could be set aside after the transfer to the tribal ownership, I doubt.

Mr. HAVELL. Section 3 of the Wheeler-Howard Act says that the Secretary of the Interior—

if he shall find it to be in the public interest, is hereby authorized to restore to tribal ownership the remaining surplus lands of any Indian reservation.

There is the authority of law for the transfer by the Secretary to tribal ownership of the surplus ceded lands.

Senator MURDOCK. They have construed that, without a doubt, to apply to lands of this type which are not now and have not been for years a part of any reservation.

Mr. HAVELL. I think, Senator, as we read yesterday in the statute opening the Uintah Reservation, the lands are restored to the public domain as public lands with the price of \$1.25 an acre for the Indians, but nevertheless they were ceded lands, lands ceded, and the Wheeler-Howard Act refers to the ceded land.

Senator MURDOCK. But once they become part of the public domain open to entry under the law certainly, then, they lose their status as reservation lands.

Mr. HAVELL. Correct.

Senator MURDOCK. We are agreed on that. Then, it seems to me that something would have to be done in the way of issuing patents in order to vest title in the tribe; and the reason I ask the question is just to settle my own mind as to what procedure you people have adopted in the restoration of these lands to tribal ownership.

Mr. HAVELL. Merely the order of the Secretary, predicated upon the Wheeler-Howard Act.

One other point you touched upon there, these ceded lands, while they are public lands, these lands are still ceded lands and, therefore, are not like the other public lands that never had a reservation status because the Wheeler-Howard Act, section 3, would not apply to any public lands but would only apply to public lands that had been in a reservation status and had been ceded, so while they are all public lands they are in a different category from the general run of open public lands.

Mr. GRAHAM. Mr. Chairman, I invite attention to a recommendation of the Commissioner of Indian Affairs dated August 10, 1934, to the Secretary of the Interior on this general subject. Senator Murdock, it was a listing of all of the lands in the United States subject to restoration under section 3 of the Wheeler-Howard Act. If the committee desires a copy it can be furnished for the record. It was approved by the Secretary on September 19, 1934, and constituted withdrawal of all of these lands, including the lands under discussion. That recommendation, as I recall, is printed in volume 54 of the Interior decisions. However, a copy can be furnished for the record if you so desire.

The CHAIRMAN. Did you say that constituted a withdrawal in 1934?

Mr. GRAHAM. Withdrawal from entry pending restoration.

The CHAIRMAN. Then these purple lands under your interpretation were withdrawn from entry in 1934?

Mr. GRAHAM. That is my understanding; yes, sir.

The CHAIRMAN. Did that follow the Taylor Grazing Act?

Mr. GRAHAM. Yes, sir; in the same year.

The CHAIRMAN. The Wheeler-Howard Act was passed that same year, wasn't it?

Mr. GRAHAM. The Wheeler-Howard Act, then the Taylor Grazing Act, and then this withdrawal.

Senator MURDOCK. I believe, Mr. Chairman, that the letters referred to might be helpful.

The CHAIRMAN. They may go into the record.

(The letter is as follows:)

DEPARTMENT OF THE INTERIOR,

August 10, 1934.

The honorable the SECRETARY OF THE INTERIOR,

(Through the Commissioner of the General Land Office.)

MY DEAR MR. SECRETARY: Section 3 of the act of June 18, 1934 (Public No. 383, 73d Cong.), enacted to conserve and develop Indian lands and resources and for other purposes, contains the following provision:

"The Secretary of the Interior, if he shall find it to be in the public interest, is hereby authorized to restore to tribal ownership the remaining surplus lands of any Indian reservation heretofore opened, or authorized to be opened, to sale, or any other form of disposal by Presidential proclamation, or by any of the public land laws of the United States: *Provided, however*, That valid rights or claims of any persons to any lands so withdrawn existing on the date of the withdrawal shall not be affected by this Act: *Provided further*, That this section shall not apply to lands within any reclamation project heretofore authorized in any Indian reservation."

During the early years of our dealings with the Indians, the custom was to have individual or combined nations, tribes, or bands relinquish or cede to the United States large areas claimed by them, for which there was usually a cash or other consideration, and also the settling apart or reserving of certain lands within such ceded areas or from lands belonging to the United States and located elsewhere. These reserved lands thereafter became the recognized reservation of a tribe or band. In this way the Indians lost all identity with the ceded areas and their rights and interest therein were recognized as having been completely extinguished. In many instances such cessions, taken as a whole, embraced practically all of the lands now comprising many of the States of the West.

In years following, for reasons varying on the different reservations, portions of these diminished or newly established reservations were also ceded to the United States, the Indians receiving from the Government in lieu thereof a cash consideration, and other benefits. Such transactions were also recognized as carving or separating a certain area from a particular reservation, operating as an extinguishment of the Indian title. In this way the exterior boundaries of a reservation was further reduced. The lands thereby separated from a reservation were no longer looked upon as being a part of that reservation.

This brings us up to the period of about 1890, at which time there was adopted the plan of opening to entry, sale, etc., the lands of reservations that were not needed for allotment, the Government taking over the lands only as trustee for the Indians. Under this plan the Indians were to be credited with the proceeds only as the lands were sold, the United States not to be bound to purchase any portion of the lands so opened. (Undisposed of lands of this class remain the property of the Indians until disposed of as provided by law (*Ash Sheep Company v. United States*, 252 U. S. 159). Such lands are usually referred to as surplus lands of Indian reservations opened to public entry, and undoubtedly comprise the class of lands from which restorations to tribal ownership are to be made under the said section 3, if in the public interest. It can safely be said that it would not be to the interest of the public to restore to the Indians all undisposed of public lands that at one time were in Indian ownership but afterwards became the property of the United States by outright cessions from the Indian owners, because, as stated above, such action would mean the withdrawal in many States of all lands now available for entry as public domain. Such action undoubtedly would raise strong opposition in the various localities affected and have an undesirable bearing on the new Indian legislation.

In connection with this matter, attention is invited to section 16 of the same act, which authorizes the formation of tribal organizations and provides that tribes and tribal councils shall have authority "to prevent the sale, disposition, lease, or encumbrance of tribal lands, * * *"; also to section 18, which authorizes the Indians of any reservation, by a vote of a majority of the adult

Indians on the reservation, to exclude themselves from the operation of the entire act, referendum election for such purpose to be held within 1 year after approval of the act. It, therefore, will be some time before it is known definitely whether the Indians of any of the reservations will exclude themselves from operation under the act, and until tribal organizations can be formed and thereafter definitely determine which of the "opened" Indian reservation lands still undisposed of should be permanently restored to tribal ownership. Tribal organizations should have a voice in deciding which lands should be withheld from disposition. It is understood from informal inquiry in the General Land Office that, although there are "opened" lands on various reservations, there are only a very limited number of reservations where sales can actually be made. Nevertheless, there is a possibility that in the meantime some desirable undisposed of "opened" lands might be entered or filed upon by non-Indians and thereby prevent the restoration of such lands to tribal ownership. For this reason, action should be promptly taken to prevent, for the present, the further disposition of any of such lands by public entry, sale, or otherwise. A withdrawal of this kind would be merely of a temporary nature.

The following is a list of reservations where lands have been opened, the Indians to receive the proceeds of sale only as the tracts are disposed of. As a matter of convenience, citations to treaties, agreements, or acts, under which such "openings" occurred, are also furnished:

Arizona: San Carlos, agreement of February 25, 1896, ratified by act of June 10, 1896 (29 Stat. 388).

California:

Klamath River, act of June 17, 1892 (27 Stat. 52).

Round Valley, act of October 1, 1890 (26 Stat. 658).

Colorado: Utes, act of June 15, 1880 (21 Stat. 199).

Idaho: Coeur d'Alene, act of June 21, 1906 (34 Stat. 335).

Minnesota:

Boise Fort, act of January 14, 1889 (25 Stat. 642).

Deer Creek, act of January 14, 1889 (25 Stat. 642).

Fond de Lac, act of January 14, 1889 (25 Stat. 642).

Grand Portage or Pigeon River, act of January 14, 1889 (25 Stat. 642).

Red Lake, act of January 14, 1889 (25 Stat. 642).

White Oak Point, act of January 14, 1889 (25 Stat. 642).

Leech Lake, act of January 14, 1889 (25 Stat. 642).

Montana:

Flathead, act of April 23, 1904 (33 Stat. 302).

Fort Peck, act of May 30, 1908 (35 Stat. 558).

Crow, act of April 27, 1904 (33 Stat. 352).

North Dakota: Fort Berthold, act of June 1, 1910 (36 Stat. 455).

Oklahoma:

Cheyenne and Arapaho, act of June 17, 1910 (36 Stat. 533).

Kiowa, Comanche, and Apache, act of June 5, 1908 (34 Stat. 213).

South Dakota:

Cheyenne River, act of May 29, 1908 (35 Stat. 460).

Lower Brule, act of August 21, 1906 (34 Stat. 124).

Pine Ridge, act of May 27, 1910 (36 Stat. 440).

Rosebud, agreement of September 14, 1901, ratified by act of April 23, 1904 (33 Stat. 254).

Rosebud, act of March 2, 1907 (34 Stat. 1230).

Rosebud, act of May 30, 1910 (36 Stat. 448).

Standing Rock, N. Dak. and S. Dak., act of May 29, 1908 (35 Stat. 460).

North and South Dakota, act of February 14, 1913 (37 Stat. 675).

Utah: Uintah and Ouray, act of May 27, 1902 (32 Stat. 263, as amended).

Washington:

Colville, act of March 22, 1906 (34 Stat. 80).

Spokane, act of May 29, 1908 (35 Stat. 458).

Wyoming: Wind river, agreement of April 21, 1904, ratified; act of March 3, 1905 (33 Stat. 1016).

As a matter of explanation, it may be said that the Klamath River Reservation, mentioned in the list of reservations herewith, was established by Executive order of November 16, 1855. The surplus lands were opened to settlement, entry, and purchase under the laws of the United States by the act of June 17, 1892 (27 Stat. 52). As a consideration for the lands so opened, the Indians were to receive allotments, village sites, and \$1.25 per acre for lands disposed of to certain settlers. Apparently the lands within this "opened" reservation remaining disposed of at this time are of the class intended for withdrawal and should be retained from disposition until their need for Indian purposes has been investigated.

The Ute lands of Colorado, the areas covered by the act of June 15, 1880 (21 Stat. 199), as amended by the act of July 23, 1882 (22 Stat. 178), were deemed to be public lands of the United States and subject to disposal as such. However, the lands were to be sold, the proceeds to be first applied to reimbursing the United States for expenses incurred in connection with the administration of the act and the remainder to be deposited in the Treasury of the United States for the benefit of the Indians. In view of this provision, such of these lands as remain undisposed of are also looked upon as being of the class to be temporarily withdrawn from further disposition, as proposed, and, therefore, have been included in the above list.

The act of May 17, 1900 (31 Stat. 179), provided for free homesteads for the benefit of actual and bona fide settlers, and that all sums of money so released from payment of collection, which if not released would have belonged to an Indian tribe, were to be paid to such Indians by the United States. It is, therefore, not intended that this withdrawal shall apply to any lands of this class where the Indians were reimbursed by the United States for the value of such lands in accordance with the said act of May 17, 1900 (31 Stat. 179).

If there are lands on any of the reservations named, other than the areas covered by the said citations, that were "opened," and for which the Indian receives the proceeds when disposed of, it is intended that they be included in the withdrawal. Areas within regularly authorized reclamation projects are to be excepted.

It is, therefore, recommended that all undisposed-of lands of the Indian reservations named above that have been "opened," or authorized to be "opened," to sale, entry, or any other form of disposal under the public-land laws, or which are subject to mineral entry and disposal under the mining laws of the United States, with the exception of areas included in reclamation projects, be temporarily withdrawn from disposal of any kind, subject to any and all existing valid rights until the matter of their permanent restoration to tribal ownership, as authorized by section 3 of the act of June 18, 1934, supra, can be given appropriate consideration. The intention is to withdraw only lands, the proceeds of which, if sold, would be deposited in the Treasury of the United States for the benefit of the Indians. In the event it is found that there are lands of other reservations that should have been included in this proposed withdrawal, appropriate recommendation will be made to have the withdrawal extended to embrace such lands.

Sincerely yours,

JOHN COLLIER, *Commissioner*.

GENERAL LAND OFFICE,
Washington, D. C., September 15, 1934.

There are no reasons known to this office why the foregoing recommendation should not be approved.

FRED W. JOHNSON, *Commissioner*.

DEPARTMENT OF THE INTERIOR

OFFICE OF THE SECRETARY

Approved as recommended, September 19, 1934.

HAROLD L. ICKES,
Secretary of the Interior.

Mr. PATTERSON. I know it is idle for me to present evidence briefly on the legal phase to you two gentlemen here. I am confident that you know all about it.

For the benefit of the committee, and for the benefit of our record, I would like to state briefly our position in regard to these matters.

Now, you take the Wheeler-Howard Act—and, in fact all of these acts which provide for withdrawal and the setting up of reserves, even H. R. 837, which provides they are subject to valid existing rights. Here is a question that develops that I think is pertinent. I think the committee should have it before them. What is a right—what is a grazing right? If the law of the country has not defined that right, then Congress should define it, and I call it to the attention of the committee. As it is now, it is most elusive. There are some things which get better with age, like apple pie, for instance. But that cannot be said of these stock-grazing rights. The longer you have them the more elusive they become. Now, if these withdrawals are subject to vested rights—let's go back and analyze the Taylor Grazing Act for just a moment. It is our contention, gentlemen, that the Taylor Grazing Act is nothing new to the stockmen of this country; that the Taylor Act is a recognition of rights that have always existed, ever since the West was settled. Without a doubt the Congress of the United States, in enacting the Taylor Grazing Act, knew that it was the livestock interests that brought life to the West. It was the livestock interests that caused the settlement of the West. It was the livestock interests that built up the farms, built up the schools, built up the churches. It was the livestock interests that built up the towns, if you please, and you know the matter of settlement here in the West; that the towns are composed of livestock men. They are the convenient points to live, from which they administer their property.

Now, the Congress of the United States knew that, and the Congress of the United States provided for these specific rights. Wherein did they do so? The bill itself gives a preference to the men who used these rights, and it gave a preference to that man out on his farm, and it gave him a preference to the use of that range, that territory within his district. Now, is that a substantial right? Is it something that may be wiped away by the ruling of one of these departments even without notice? Certainly, it is not. Certainly, we inherited in the Taylor Grazing Act a substantial right; and that was what was said for it by Judge Stevens in his *Red Canyon Sheep Co. Case v. Ickes*.

Now, we have to define that right. We don't know how to deal with these things unless we can define this right. What right have the Smiths or any of these people upon the public range or the Indian reserve or the public range proper unless we know the character of that right? Congress has never defined that; the Grazing Division has never defined it. They have construed it one way in this instance and another in this instance, and there is nothing so astounding to me, even flabbergasting, as to see a couple of these strawbosses under one outfit come in and attempt to adjudicate with reference to the rights of these users without letting the users know a thing about it. Certainly that is not the law. You must give some stability to the Grazing Act. The President of the United States declared it was for the purpose of protection of the soil and to stabilize the livestock industry. How are you going to stabilize the livestock industry under such a set-up as you have here, with two departments seesawing over them with utter disregard of the rights of the occupants? That is exactly what we have.

So I make that point to this committee, that if they are not satisfied with the definition of these terms as thus far established by the courts, then let the committee define the rights of an occupant of the

public range. Certainly, they have rights. Judge Stevens compares it with a water right. I think that is the best comparison you can get. It is a substantial right. You cannot come along, day after tomorrow, or some other time, and revoke that right. It must be something substantial; otherwise—take these boys out here; I will enumerate them to you. The Taylor Grazing Act provides department heads may get together and agree upon policy. They cannot agree upon a policy and put these men out on an area and permit them to go out and spend their money and develop that area for a week, or for a day. It must be a policy that will stabilize. That is the purpose of the act.

So when these men got together with this agreement of March 4, 1940, what did they say? They said, "Livestock men, go out now. The Taylor Grazing Administration, the Taylor grazing fellows, are going to administer this act. You have preferences by reason of your location here; you have preferences by reason of your investments, you have preferences by reason of the law which has recognized a right that existed from time immemorial. You go out upon that land, it is yours." Having thus agreed, they come along here weeks or months later and say, "We gave you nothing, get off. I'll take Smith off and give it to you, or I will take you off and give it to Smith." That is exactly what they proposed in amending that line-up. They are not taking into account either the giver or the taker, not taking into account those things. The straw bosses get together and regulate this thing but the right does not vest in them. The right vests in the users of this range under the Taylor Grazing Act; that is where it vests and certainly the Congress of the United States, if the question is still in doubt, should define those terms.

So, I say that if the Secretary of the Interior ever had a right under the act of 1927 or the act of 1934 to make withdrawals he lost that by reason of the fact that he permitted his straw bosses to go in here and compromise that situation and cause these men to go out on the public domain and build up their improvements and stabilize their industry. That is what it means.

The CHAIRMAN. Do not the rights of your users date back farther than that so called agreement? It goes way beyond that. I don't believe the agreement was so weighty to be considered in the matter. It seems to me the rights date from use. A right is a thing acquired by use. When you lose the use you lose the right. These rights have the same nature as what we knew in the early laws, incorporeal hereditaments, belonging to the owner of the base property.

You have a new situation under the American system because you have absentee right holders in the open public domain, and that is what you are coming to here. You have men living far remote from the domain in question but who have used it by travel, depending on seasonal conditions and the like, traveling great distances to use it for a season, and then they drift back again. You have those particular rights that you have to consider in here because if you base your rights exclusively on the land that is now in the ownership of the Indians, and that was formerly in the ownership of the whites in this area involved, then you have far more land, far more territory than is anywhere near utilization. You are now coming to the question of those who use and those who have from early years used that domain,

although they are not residents nor base landholders in the domain itself.

Mr. PATTERSON. That is right. We have had, though mentioned here, Mr. Chairman, that the stranger coming in here monopolizing this land—I don't think that obtains in this particular district. I think they are referring to the Smiths. We will show you that the base property comes up to this line, here, and show you other base property, outside of those lines, whose permits are granted within the area. Of course, these questions are administrative questions; but when the Grazing Division has agreed upon this, through the cooperation of the local boards, and through the cooperation of all interested parties, and they say, "John Smith, you have this right," that has been adjudicated, and that is their right; and I am not trying to go behind that adjudication. But I am trying to give it some sense, trying to define this right, so we will know how to deal with it.

The CHAIRMAN. The trouble, Mr. Patterson, in this case, is, as the chairman views it, right now you are going to have to deal with some rights that have not been adjudicated, but that do, in all probability, exist by reason of long years of use. The actual use of the facilities is the thing that determines the right.

Mr. PATTERSON. But in the adjudication, as based upon that use, you cannot very well go behind it.

The CHAIRMAN. Of course that brings it to a finality.

Mr. PATTERSON. That is right; and I say it is final as far as the Grazing Division is concerned, as far as the Indian Office is concerned, and the Secretary of Interior is concerned. So far as Congress is concerned, they cannot affect these vested rights. We are going to be in the predicament of these poor devils up here in Wyoming and Montana. Is it possible they can go up there and pick a man up, after he has spent his life's blood and his own earnings there, and move him out? Certainly that was not the spirit of the law and not the intention of the law. This thing must be stabilized. What do they mean when they say the purpose of this act is to stabilize the livestock industry? What does the President mean when he says it is the purpose of the act to stabilize? I emphasize the word "stabilize" to present this problem.

The CHAIRMAN. I think, Mr. Patterson, and I don't want to interrupt you, I think you could, with some degree of propriety, rest upon the knowledge that this committee has, based on experience and training and whatever knowledge we may have—we have to apply it to facts and I respectfully suggest, notwithstanding your argument, all of which we see and visualize, that we must have some facts. Theory we know, but the facts we must get. So I respectfully suggest that you prepare, and present to the committee as promptly as possible, the facts that will bear out your theory of the law.

Mr. PATTERSON. Very well. Now, yesterday my statement here may be slightly argumentative, as compared to the evidence given by Mr. Wright. However, I expect Mr. Wright and Mr. Moore—I know that Mr. Moore is the best grazing man they have had in Utah since the organization of the law, but now I will give you the names of those who have permits upon this area. It was stated yesterday, there were a few Smiths in there outside of the Indians, three Smith families. They are three brothers, and each of them with fairly good sized families; each of them were zealous, competent, energetic, industrious,

not associated together, except in a general way. Each owns their own outfit; about 10 or 12 individuals. If the sheep were divided up, according to actual ownership, they might have about 1,500 head each. But within that area we also have Louis Thorne—

Senator MURDOCK. Which area, within the black and green lines?

Mr. PATTERSON. Yes; then we have Marvin Broom, V. Johnson, O. H. Nielsen, Clive Sprouse, Bert Smith, Butters and Smith, M. A. Smith, Emory Smith, Blanche Smith, Dave Smith, Dave Seeley, Adair Tyzack, Steve Cheturas, Dommenick Erymande, Royal Smith, A. H. Smith, Est., Epr Burchell, Roy Bartholemew, and perhaps others. There are about 18 to 24 users of that area, and if their cattle were transposed into sheep there would be between twenty-five and thirty-five and forty thousand sheep. I take it you can get that specific information from the record which the Grazing Division will furnish.

The CHAIRMAN. That is what I called for this morning, and drew the attention of Mr. Leech that it had not gone into the record. How many livestock, of several kinds, have been using that range?

Mr. JOHNSON. That record is available now.

Mr. LARSON. The record he speaks of was for the past grazing season; and the other record that you called for will be here in a few minutes.

The CHAIRMAN. Pardon me for interrupting you. The records should go in at this time, perhaps after you make your statement.

Mr. PATTERSON. Now, then, as compared with the expenditures shown here by the Department, for the benefit of these Indians—I think it was around \$290,000—we will show that the expenditures, and I believe the record further shows that Indian rights approximating 35,000 sheep, that is, if they are cattle rights and were transposed into sheep rights, it would be around 35,000—as I recall, Mr. Wright's testimony; that is, that there is one thing that we call the Grazing Division's attention to, that we question their statement that they have twelve or thirteen hundred head of cattle. Now, as against those expenditures, in order to run fifteen or eighteen thousand head of sheep, the Smith brothers have spent in excess, or right around, three-quarters of a million dollars, and that all of these other users of this range have expended accordingly. That they own in excess of 100,000 acres of land in their own rights. They have purchased that land to fill out a year-around grazing unit.

Mr. WRIGHT. How many men own that much?

Mr. PATTERSON. The three Smith families.

Mr. WRIGHT. Three men?

Mr. PATTERSON. No; twelve or thirteen of them.

Mr. WRIGHT. That would be 8,000 acres average for each man.

Mr. PATTERSON. Taking them in a group, altogether—

Mr. WRIGHT. I am comparing it with the Indians, the Indians having an average of 300 acres of this.

Mr. PATTERSON. Well, if you feel that you were rooked in the purchase of these lands—

The CHAIRMAN. Now, gentlemen, let us avoid these little shots at each other. I'll do the shooting.

Mr. PATTERSON. They attempted to say here yesterday that they were deceived in this matter, and I don't think they were.

I think perhaps from here out we can use our witnesses, Mr. Chairman.

Mr. LEECH. Mr. Chairman, I will have Mr. Larson, the district grazier, read that report into the record and then turn it over to the reporter.

**STATEMENT OF L. WAYNE LARSON, DISTRICT GRAZIER, DUCHESNE
GRAZING DISTRICT, VERNAL, UTAH**

Mr. LARSON. The tabulation that I have here is a record of the licenses issued in unit G for the summer season of 1942, and the winter season of 1942-43.

The CHAIRMAN. That is licenses issued, and it gives the names of the parties?

Mr. LARSON. Yes, sir.

Roy Bartholomew, 20 cattle from May 1 to October 31, 1942, or October 31. E. S. Birchell, 15 cattle, from May 1 to October 31. Lafe Bown & Sons, has winter use of 5,000 sheep from November 1 to May 1.

Mr. WRIGHT. May I ask whether they are inside of the described area there?

Mr. LARSON. Lafe Bown's would be partly in and partly out, mostly outside of the area of the green line there.

Mr. PATTERSON. But he has one herd entirely within, of about 2,000.

Mr. LARSON. Five thousand; that would be off and on.

Mr. WRIGHT. Just on for watering purposes, isn't it, Mr. Larson?

Mr. LARSON. The allotment he has in there would go back across that line, in about three or four places, but the bulk of his allotment is outside of that green area.

Mr. LEECH. Mr. Larson, you have a map available, do you not, showing those?

Mr. LARSON. Yes, sir.

Mr. LEECH. That can follow this presentation.

The CHAIRMAN. Very well.

Mr. LARSON. Jack Brewer, 180 cattle, 10 horses, for the summer season. These are all for 6 months' periods, either winter or summer, and it would shorten the time if I just stated that.

The CHAIRMAN. Very well.

Mr. LARSON. Marvin Broome, 180 cattle for the winter season. Steve Cheturas, 1,350 sheep, from November 16, 1942, to April 15, 1943—that is shorter than the regular winter season. J. L. & M. L. Downard, 90 cattle for the winter season. That is 50 percent use in this unit, and 50 percent use in grazing district 7.

Mr. WRIGHT. May Mr. Larson tell, while he is reading these, whether they are inside of that area under discussion?

The CHAIRMAN. Of course, the presumption was that this was a presentation of rights within the area.

Mr. WRIGHT. Part of unit G is outside of this area, and that is why I asked that might be stated.

The CHAIRMAN. Part of unit G is outside of the area?

Mr. WRIGHT. Outside of the green line; yes, sir.

The CHAIRMAN. There seems to be an adjustment of those lines that has never been agreed upon by anybody, as far as the committee knows, up to date. We had the black line first, then the green line. Yesterday there was presented another set-up that had entirely different lines.

Mr. LARSON. I will explain those that are not licensed fully within the green and black lines.

Senator MURDOCK. With reference to the last one you read, as I understood you, you said they had 6 months within this area and 6 months in another grazing area?

Mr. LARSON. Yes, sir; in grazing district 7, across the river to the west.

Senator MURDOCK. That is a 12-month operation?

Mr. LARSON. Six months in this unit, and the other part in unit 7. In this particular case, he crosses on the ice during the wintertime, back and forth.

Dominique Eyhermandy, 1,500 sheep for the summer season and 1,315 sheep for the winter season. Alfred L. Johnson, 150 cattle for the winter season. O. W. Neilson & Sons, 50 cattle for the summer season and 45 cattle for the winter season. D. R. Seely, 1,800 sheep from December 1 to May 1. Albert Smith Investment Co., 2,500 sheep from November 15, to April 1. Blanche, Moroni, and Emory Smith, 2,500 sheep from November 1 to April 15. David G. Smith Estate, 4,500 sheep from December 1 to April 1. Louis Thorne, 150 cattle for the summer season and 150 cattle for the winter season. Sarah Hackford, 1,500 sheep summer season and 1,500 sheep winter season.

Mr. PATTERSON. What was that name?

Mr. LARSON. Sarah Hackford. This is an Indian.

Mr. PATTERSON. Are some of these Indians?

Mr. LEECH. Beginning right now, you are reading the Indians.

Mr. LARSON. I have read one that is an Indian license.

Mr. JOHNSON. Who is that?

Mr. LARSON. Dominique Eyhermandy. He has Indian grazing privileges.

Mr. PATTERSON. Is he an Indian or Spanish?

Mr. WRIGHT. Frenchman.

Mr. PATTERSON. He should not be classified with the Ute Indians for the purposes of this tabulation.

Senator MURDOCK. The Indians you refer to now, I assume, are Indians that own, individually, their own base property. Is that right?

Mr. LARSON. I cannot—

Mr. WRIGHT. Well, he has only read one, Sarah Hackford. She, individually, owns her own base property; yes, sir.

Senator MURDOCK. And has been awarded a grazing right, under the Grazing Act formula? I want to develop this. If I am right in my assumption, it is that there are some Indians who own their own base property, and who have been awarded grazing rights, under the Taylor Grazing Act, the same as a white operator. Is that right?

Mr. LARSON. That is right.

Senator MURDOCK. Is that so in the Sarah Hackford case?

Mr. WRIGHT. Yes, sir; that is right.

Senator MURDOCK. Is that right, Mr. Larson, that Sarah Hackford has been awarded a grazing right, under the Taylor Grazing Act, the same as a white operator?

Mr. PATTERSON. What number has Sarah Hackford?

Mr. LARSON. Fifteen hundred sheep.

Mr. JOHNSON. Isn't it a fact that Eyhermandy leases Indian property, and he has had a license issued, using the Indian property as base?

Mr. WRIGHT. He is one of the lessees. We took over from A. M. Myrup; it was a 5-year lease, and we considered it an existing right, when it was purchased. This Frenchman was leasing from A. M. Myrup, and the 5 years are not up yet, and he occupies the base property that Myrup formerly owned, and gets a license from the Grazing Service on the base.

The CHAIRMAN. The title has passed from Myrup to the Indians?

Mr. WRIGHT. Yes, sir.

The CHAIRMAN. You recognize the lease as binding, and carry it over?

Mr. WRIGHT. Yes, sir.

Mr. LARSON. The Ouray Cattle Association have 430 cattle, 55 horses, 280 sheep, for the summer season; and 850 cattle, 55 horses, 2,400 sheep, for the winter season.

Senator MURDOCK. That is an association?

Mr. LARSON. That is an association of Indians; yes.

Mr. PATTERSON. May I ask a question there? That is a use permit, without use, isn't it? They don't actually have that number of stock?

Mr. LARSON. Yes; from the reports that we get, I think they have that number; possibly a few more.

Mr. JOHNSON. Is this permit based on any land purchased from the whites by the Indian Department?

Mr. LARSON. This license has been issued since 1935, and is based on allotments, as I understand it, near Ouray; Indian allotments.

Mr. WRIGHT. My understanding is that it is based on that clause, in the 1935 agreement, which said that Indians should be issued licenses regardless of their technical commensurability.

Mr. JOHNSON. Mr. Wright, are any lands included as base property, in this license issued to the Ouray Cattle Association, which you purchased from the whites?

Mr. WRIGHT. Yes; quite a long list of them.

Mr. JOHNSON. In other words, you are receiving licenses, based upon this property, which you purchased in unit G from the whites.

Mr. WRIGHT. Mr. Wagner can answer that better than I can.

**STATEMENT OF JOE A. WAGNER, ASSISTANT RANGE EXAMINER,
UNITED STATES INDIAN SERVICE, UINTAH AND OURAY INDIAN
AGENCY, FORT DUCHESNE, UTAH**

Mr. WAGNER. We have, in the past, attempted to show that the Indians were using their base properties for their licenses, and at the same time to get a nonuse license on part of the property. Under that, what we were trying to do, was show that if an Indian family had 100 head of cattle, and they settled on one of the properties, that had a priority, or a base, built up, of 200 head, we asked for a 100 head, active head, and the 100 head nonuse.

Mr. JOHNSON. However, that does not answer my question. Is this license, granted to the Ouray Cattle Association, based upon any of the properties which you purchased from the whites? That is, the Taylor lands, or the Myrup lands?

Mr. WAGNER. I believe I can answer your question this way; we try to take base property, and the Indians living on that base property apply for the license. The Ouray Cattle Association used their 1935 agreement, and those allotments that they had used on their first application.

Mr. JOHNSON. Then the Taylor property and the purchased property was not used by the Ouray Cattle Association?

Mr. WAGNER. No; they were not.

Mr. LARSON. We have one more, the Sibelb Bros., Indian license, 35 head of cattle for winter use.

The CHAIRMAN. Are those Indians?

Mr. LARSON. Yes.

The CHAIRMAN. What is the total number of cattle there, for which licenses are issued, in that unit G? What is the total number of the cattle, and total number of sheep, for which licenses have been issued in unit G?

Mr. LARSON. I haven't that total, Senator.

The CHAIRMAN. It might be well if we had that.

Mr. LARSON. There is one I probably missed, H. A. Tyzack, 1620 sheep for the winter season.

Mr. PATTERSON. Did you mention Mr. Thorne?

Mr. LARSON. Yes.

The CHAIRMAN. Is there anyone here who has the permits or licenses, issued by the Grazing Service to the predecessors in interest to the Indians, on the red lands?

Mr. LEECH. That is being prepared now, Mr. Chairman, and it will be here shortly.

The CHAIRMAN. That, to my way of thinking—I speak as an individual—is exceedingly important in this whole matter, because, looking back, as I stated yesterday, it seems to me that this matter can be solved with a considerable degree of equity and fair play, if the Indians are given the commensurate rights which their predecessors in interest would have if they were now the owners and on the land. I think that you should forget all about color and race, and everything else. Supposing that a colonization outfit moved in, a group of Portuguese, say, moved in, and said, "We are going to colonize that, and we are going to buy these lands"? I think they would go about it more systematically and thoroughly than the Indian Service did. In other words, find out what they were going to buy, before they bought it; find out what rights those lands held on the open public domain. It seems to me that the Indians are entitled to the same situation. That is my individual view—they are entitled to the set-up; in other words, entitled to the same rights on the open public domain as their predecessors in interest were, or would have been entitled to. When you say that, it seems to me you have said it all. That gets down to the other proposition; I cannot, for the life of me, see why this problem is brought to a senatorial committee; why it has not been thrashed out and settled up a long time ago, by the two bureaus, the Grazing Service and Indian Service. If some of these bureaus would shake hands once in a while, and get together, it would save a lot of time.

Senator MURDOCK. I am in full agreement with your statement, Mr. Chairman.

Mr. JOHNSON. Mr. Larson, does that list of the licenses, and the numbers you have just read, disclose to this committee the hold-over licenses granted the Indian department by the Division of Grazing?

Mr. LARSON. No.

Mr. JOHNSON. There have been hold-over licenses granted at the request of the Indian Service upon lands purchased from the whites in unit G.

Mr. LARSON. I cannot say for sure, on that, although I do recall, in the records, or, in going through the records, where some were issued, but I think they were on the purchased property.

Mr. JOHNSON. If those hold-over permits were made active, it would tend to cut down each and every licensee within the area, in numbers.

Mr. LARSON. Undoubtedly it would affect the licenses there.

Mr. JOHNSON. The Indian Service has service through hold-over licenses.

The CHAIRMAN. Before you go too far into that the committee would like to know what hold-over licenses are.

Mr. JOHNSON. Where the individual has no cattle, he has sold his lands, his commensurate rights are for a thousand head of sheep, but he has only 500.

The CHAIRMAN. That is a nonuse.

Mr. JOHNSON. That is right, nonuse. However, this indicates that the Indian department does have nonuse licenses.

The CHAIRMAN. That was explained here a moment ago, by the gentleman who is now testifying. In other words, he used an illustration, if an Indian had a hundred head of cattle, and the base had been accustomed to serving 200 head of cattle, that the Indian would get a use permit for a hundred and a nonuse permit for a hundred. That is not unusual; that is practiced in many places.

Mr. PATTERSON. But it adds on to the total.

The CHAIRMAN. Of course, it adds on to the total, because it is an even balance to the open public domain. There is no question about that.

Mr. JOHNSON. This indicates, however, that the Indians have been granted nonuse permits and have been entirely protected.

The CHAIRMAN. Here is another thing in that nonuse permit; doesn't your range code, and your local agreement, cover that with a limitation?

Mr. LARSON. Yes, sir.

The CHAIRMAN. You have a limitation as to the length of time that a nonuse permit will be in existence. What is it; 2 years?

Mr. LARSON. Two years.

Mr. PATTERSON. That does not apply to Indians; does it? You can see the hazards of nonuse permits, as far as the Indians are concerned; they are not required to pay anything.

The CHAIRMAN. I didn't know anything about that; never had that brought to my attention before.

Mr. LEECH. Provision was made, Mr. Chairman, for the issuance of nonuse licenses, or permits, with a 2-year limitation, under the new code. However, showings can be made, and the actual conditions and facts that govern the particular nonuse permit, we take into consideration. We consider many things in that—climate, weather conditions, conditions of rain, the economic situation as to the length of time this nonuse would be in existence.

The CHAIRMAN. Under the new code, or the old code, what do you take as a basis for your nonuse consideration? In other words, do you say, "Well, this property did have and did carry at one time 200 head of cattle; the owner is now cut down to 100 head by reason of certain conditions; at one time it did have 200 head, therefore, we will grant a nonuse for 100 head"?

Mr. LEECH. That is correct.

The CHAIRMAN. Or do you take this other angle, and say, "This property would carry 200 head, but it never did have 200 head, and they only have 50 head now. Let him hang on indefinitely for 50 head nonuse"?

Mr. LEECH. He would be limited to the 50 head, Senator, because he was not qualified with more than the 50 head.

The CHAIRMAN. That is right. That seems to be in conformity with the general practice.

Mr. LEECH. That is the general practice.

The CHAIRMAN. Do you apply your base period applications to these Indian lands?

Mr. LEECH. The period of 1929 to 1934, the priority period, would apply to those lands, but they would be limited to the commensurate rating of those lands. We were perfectly willing to rate those on their commensurate ratings.

The CHAIRMAN. I don't know whether this statement is proper at this time, but I will make it anyway and take a chance on it.

It has never been my view that any great consideration, from the standpoint of use commensurability or the base period application, should apply to an Indian any more than it would apply to a white man. In other words, if, under the program that has been carried out here for the last 10 years, Indians, through the Indian Service, would purchase lands that had formerly been used by white settlers, they should be chargeable, with notice, before they purchase those lands, notice as to what the carrying capacity on the open public domain is, of their respective units to be purchased. I don't think any great consideration should be given to the Indian after he purchases; that is, any greater consideration than was given to the white man before he sold. I think the Indian, or the Indian Service, should be chargeable with notice, should know that land has been allotted a certain right on the open public domain, and that is all they are going to get. If you go otherwise than that, Mr. Leech, you go into a field that is just too unfathomable; you cannot come out with any system at all.

Mr. LEECH. The way all of these properties look to the Grazing Service, they are so much property.

The CHAIRMAN. That is all right; that is what I mean; that brings it back again to the proposition. I am talking too much again. I'll quit talking now. That brings us back to the proposition that I took up with my friend here yesterday, of the Indian Service. In other words, they were chargeable when they purchased these lands, chargeable with this notice that those lands had a certain carrying capacity on the open public domain, and no more; and they should have gone on the records, and, if the records were available, should have gone to those records and fortified themselves. With that in mind, well, if they did not, then they bought something that is a cat in the bag, as I said yesterday.

Mr. WOHLKE. May I state, Mr. Chairman, that is exactly the procedure that we followed. We consulted the records and asked the Grazing Service as to the licenses that were issued to these particular properties, and we ourselves estimated the carrying capacity of it, the productive capacity of the base property; and estimated the carrying capacity of the rights on the public domain. On the basis of all of these facts, which we would like to present by and by, we made our purchases. Subsequently we requested, in view of the depleted and overgrazed condition of the range in there, that we be issued nonuse licenses, in order to give the range a chance to be rehabilitated and to come back.

The CHAIRMAN. On the face of that, here is what you have come to now; you have requested an order for an absolute withdrawal of this whole territory; you have not only asked for the rights that you say you recognized as belonging to those properties before you bought them, but now you want those rights, and you want the rights of everybody else cut off, by this Executive order. That is what you are clamoring for now.

Mr. WOHLKE. Mr. Chairman, I do not quite agree with the suggestion that we want to cut off any other rights of white people within that area; that is supposed to withdraw——

The CHAIRMAN. You're asking for the withdrawal of everything inside that black line, using that black line for convenience.

Mr. WOHLKE. It is a fact the withdrawal now was covered by the withdrawal of 1933.

Senator MURDOCK. Still in existence?

Mr. WOHLKE. Yes; that is withdrawn now.

The CHAIRMAN. How does it come these people have rights in there?

Senator MURDOCK. It was withdrawn subject to valid existing rights.

Mr. WOHLKE. What really happened was that after the Grazing Service, the Division of Grazing, took over the administration of the entire area, including this area, that within the green lines, they were to administer that particular area, temporarily, until the legislation that had been agreed upon in 1935 could be passed.

The CHAIRMAN. That legislation, if it were passed, the legislation which is now pending in H. R. 837—what would that do to the existing rights of the white people?

Mr. WOHLKE. It would not do anything whatever. Existing rights would still be there, and we would have to recognize them. The question comes down to what are the existing rights, and so far as we can judge, a great many of the sheep that were dislocated in Colorado, because of the formation of the district there and the application of the Taylor Grazing Act, were then shunted into this area especially for the winter grazing. Later, our friends, the Smith family, who had claimed rights outside of this area, but still in district 8, were arbitrarily shifted by the Grazing Service from outside of this area, where they were customarily grazing, into this area which they had not utilized before. And now, as I understand Mr. Patterson's claim, that since they were shifted into this area, where they had no prior use, under the Taylor Grazing Act provisions, they have established certain rights, vested rights, as he claims, in unit G.

Mr. PATTERSON. I think you misunderstood——

The CHAIRMAN. Let me interrupt you right there. Isn't it true that the Indian Service, your office, is now trying to establish exclusive rights to the use of the public domain within the black and green lines, to the exclusion of all whites?

Mr. WOEHLEKE. No, no; we are not trying to do that. It is subject to all valid existing rights.

Senator MURDOCK. Now, Mr. Leech, if I may interrupt right there, is the statement of Mr. Woehlke true, that when the Smith people, as I understand his statement, were crowded out of certain grazing areas in Colorado——

Mr. WOEHLEKE. No; district 8.

Senator MURDOCK. I mean district 8. They then were shifted into this unit G; that is, into the area within the black and green lines. Is that true, Mr. Moore?

Mr. MOORE. Of course, I was not here at the beginning. I think Mr. Smith could answer that, whether he had been using this area there previous to this time or not.

Mr. MORONI SMITH. Yes; I will take that up when I go on the stand. If you would just as soon, I would say "Yes."

Senator MURDOCK. Well, here is a statement made by Mr. Woehlke. If you agree with him, that throws an entirely different light on the thing, to me.

Mr. PATTERSON. Mr. Smith has been there since 1912, continuously, within this area.

Mr. WRIGHT. Within the green lines? Do you claim that, Mr. Smith?

Mr. SMITH. Yes, sir; since 1912; that area up there, unit G; and we grazed in common, unit G, and have just east of it. We crossed the river from the west side. That is the first place we landed, in unit G. In order to get room, we had to extend over beyond those black and green lines, some 12, 15 lines over to them other creeks. Myself, I am speaking for my ownself, and we come back on to this other in the spring. We just took it, took the feed for all the other livestock and my own, to take care of that area, of all the feed on those two areas, to take care of the livestock that was on them at that time.

The CHAIRMAN. Boiling that down to a point, Mr. Woehlke, do you recognize the rights of stockowners, or stockgrazers, in unit G, outside, other than the Indians?

Mr. WOEHLEKE. Yes.

The CHAIRMAN. Do you recognize the Smiths' rights in there?

Mr. WOEHLEKE. No.

The CHAIRMAN. Do you recognize the rights of these other men whose names have been mentioned here by the graziers?

Mr. WOEHLEKE. No; that is, not those like Chuturas, Tyzack, Crawford, Seeley, and so forth.

The CHAIRMAN. Do you recognize those?

Mr. WOEHLEKE. No.

The CHAIRMAN. How many do you recognize out of the number mentioned by the grazer?

Mr. WOEHLEKE. Mr. Chairman, at the present time that area is administered by the Division of Grazing, and all we can do is to protest

against their actions in granting licenses to people who, according to the facts in the case, are not entitled to a license therein.

The CHAIRMAN. How many do you protest? How many of the licensees do you recognize as entitled to licenses or rights, and how many do you protest? I think that will boil it down.

Mr. WRIGHT. I think, to be as accurate as possible, we protested three and questioned two. Two of the Smith family outfits and three from Colorado. We protested three and questioned the other two. These other small users we have never protested, to my knowledge.

Senator MURDOCK. May I read section 3, Mr. Chairman, of the proposed bill, H. R. 837?

The Secretary is hereby authorized and directed, subject to any valid existing rights to establish an Indian Grazing Reserve within the boundaries of Utah Grazing District No. 8 by selecting and setting apart public lands adjacent to the base properties of the Indians of the Uintah and Ouray Reservation for the exclusive use and benefit in common for the said Indians.

Now, if I understand your construction, it is that you do recognize some of the rights that have been referred to as existing valid rights.

Mr. WOHLKE. We would have to, of course.

Senator MURDOCK. Which would have to be honored under this law. Of course, when you get down here to " * * * For exclusive use and benefit in common for the said Indians," it is ambiguous as to how it can be exclusive and at the same time recognize rights. It is a little difficult for me to understand.

Mr. WOHLKE. That particular bill has not come to the attention of the Department; no request for a report has been made.

Senator MURDOCK. This is the same bill that Robinson introduced, on the request of the Indian Office, during the last Congress. It was requested.

The CHAIRMAN. I don't think you should take that attitude, Mr. Woehlke. This bill has been before Congress; your Department has considered it. You tried to urge it through the last session of Congress. I think you ought to be fair with the committee. This thing of jockeying around, saying no report has been called for—this bill has been before Congress for a number of years. I don't like that attitude, to be frank with you. I want to know something; isn't it true that the only rights you recognize within this area, or propose to recognize, are mineral rights?

Mr. WOHLKE. I believe that the mineral rights were not—weren't they reserved to the United States by the terms of that bill?

Senator MURDOCK. Here is the provision on that:

The establishment of such a grazing reserve shall not restrict prospecting, locating, developing, mine entering, leasing, and patenting the mineral resources in such reserves under the mining and leasing laws applicable to the public lands of the United States.

That is one of the things that I insisted on in the legislation which, to my mind, should still be protected.

Mr. WOHLKE. Was not that same provision in the original bill which would have added that area to the Uintah-Ouray Reservation?

The CHAIRMAN. Mr. Woehlke, what do you mean in your interpretation? What do you mean by a "valid existing right"?

Mr. WOEHLEKE. A right which has been established through customary prior use and which has been recognized in the past as attaching to any particular area within that territory.

The CHAIRMAN. Let's get at this a little bit more, and see if we can get somewhere. Supposing that the Grazing Service, also a bureau in the Interior Department, were to establish the grazing rights on this area, unit G. That is, both as to the Indians and as to the whites based on the range code, and on everything else that they apply ordinarily to an ordinary case. Would you, without further comment, accept that? I am speaking now of you, as a representative of the Indian Service—when I say "you" I mean the Indian Service.

Mr. WOEHLEKE. The kind of a determination that was made under the present version of the range code is exemplified by the property survey and the compilation made by Mr. Jenson, for instance.

The CHAIRMAN. I don't know about Mr. Jenson, that was a way of presenting it. My question goes directly to this, you have the Bureau of Grazing set up within the Interior Department; you have the Indian Bureau set up within the Interior Department, coexistent, coexisting within the Interior Department. Now, the Interior Department looks to the Grazing Division to determine grazing rights; they have set up their codes and established regulations. If they were to say, "We will adjudicate the rights of whites and Indians within that area G," would you accept that adjudication and be ruled by it?

Mr. WOEHLEKE. May I answer that question, Mr. Chairman, in this way: As you stated before, that measure of the right of a ranch property to the use of the public domain should be that customary use which has been made and which has been established, so that it is our contention that on that basis we bought the base properties in that area, and with that base property we acquired and paid for, with the advice of the Grazing Service as to the commensurability of those properties at that time, the rights to the use of the public domain. We paid the price to cover that commensurability, as established at that time, and upon that basis we feel that we are entitled to that use of the public domain that was established at the time of the purchase, or in 1935, or during that period, and minus, perhaps, certain deductions in order to bring the stocking down to the estimated carrying capacity.

The CHAIRMAN. Now, as I understand it—either you or the Grazing Service will correct me if I am wrong—as I understand it, that was practically the study presented to us yesterday by Mr. Jenson.

Mr. WOEHLEKE. No; I hate to disagree with the chairman, but that was not produced at all. That was purely a rating of the base properties as to the productivity and an estimate of what that productivity would entitle them to as a year-round operation on the public domain. For instance, at the time when we acquired the base property the ratio was 3 months production for use on the base property and 9 months on the public domain. Under the Jenson computation, that ratio has been shifted, and it is now a 40-percent on the base property and 60 percent on the public domain, or a different ratio which cuts down the public domain privileges.

The CHAIRMAN. I take your analysis to mean this; you're not willing to accept the decision of your brother department.

Mr. WOEHLEKE. That particular compilation was presented to the Assistant Commissioner and to the Chief Forester of the Indian Service here last April, and they refused to take any action upon it.

The CHAIRMAN. Supposing, let's take a homely case. Supposing that I, as an individual in the stockgrazing business, had gone in there and purchased the lands along those creeks. I would be bound by the decision of the Grazing Service, wouldn't I, as to my rights on the open public domain?

Mr. WOEHLEKE. Yes.

The CHAIRMAN. Why should you take any different position from what you would apply to me as an individual?

Mr. WOEHLEKE. Because of the circumstances under which the original agreement in 1935 was entered into.

The CHAIRMAN. All right; that is your only reason, that is the only difference. Is that right?

Mr. WOEHLEKE. We proceeded, Mr. Chairman, on the basis of delimiting the area geographically at that time. That was the basis and everybody agreed to that basis. It was then proposed to erect this particular geographical area as an addition to the Uintah Ouray Reservation, provided we would go in there and buy out the private owners of lands and that then the area would fall under the administration of the Indian Service.

The CHAIRMAN. But you heard the testimony here yesterday as to the atmosphere that surrounded the making of that agreement, and then you have the outstanding feature, you are threatening with withdrawal of vast acreages, and so on and so forth, all of which enters into the spirit of that agreement; and you must not lose sight of that, and the committee is not going to lose sight of it. The committee is going to try to aid you in getting a fair solution of this thing, as best we can. We hope to be able to do it; we think it could be done. I am speaking now frankly. I think it could have been done a long time ago, if you would sit down with the Grazing Service, and have more confidence in the Grazing Service. I think the Grazing Service by and large, with minor exceptions here and there, is doing a pretty fine job of organizing the open public domain. If you would be governed by their efforts—the trouble with you is that you don't want to trust your codepartment. You want to set up a dynasty of your own in here.

Mr. WOEHLEKE. The Grazing Service were to administer the entire area and also the area in green there, temporarily, and all decisions, and actions affecting administrative policy in that area would be subject to the concurrence of the Commissioner of Indian Affairs.

The CHAIRMAN. Yes.

Mr. WOEHLEKE. We maintain that that agreement set that area apart from the rest of the district, and that we were entitled to a voice in the administrative decisions that were made in there. We have exercised that voice in the proposed adjudication of the commensurate rights.

The CHAIRMAN. Carry that to its final conclusion. If you do, then you will do exactly what I think you want to do, and that is that you will set this area, up inside of the black and green line, as an exclusive

area for the Indians to use, to exclude the whites. I think that is the ultimate end you are now discussing. In other words, the Grazing Service can apply all of their technicalities, their rules, and range codes, and, when they get through, the Commissioner of Indian Affairs will say "No," and keep on saying "No," until finally you have that whole area set up and the whites excluded from it. If that is your object, it does not impress the chairman as having that spirit of fairness that I like to see in range matters. The reason for that is, this country lives on agriculture, largely, and livestock raising is a part of agriculture. Indians have to be taken care of, and must be taken care of. But they must not be taken care of to the exclusion of the whites, or better than the whites. No one class should be set up against another. You agree with me that much, don't you?

Mr. WOELKE. Certainly.

Mr. LEECH. Mr. Chairman, Mr. Larson has the totals, and also is in a position to give you the licenses in connections with the purchased property.

The CHAIRMAN. Before the licenses—

Mr. LEECH. The licenses from the beginning of the Grazing Service.

The CHAIRMAN. I think that might go into the record, please. You are reading now the licenses issued to the original owners of the purchased property?

Mr. LARSON. I will read first to complete the record on the present licenses of operators in unit G. For summer use there is a total of 3260 sheep and 918 cattle and horses. For winter use, a total of 1,525 cattle and horses and a total of 22,420 sheep.

Mr. PATTERSON. Have you transposed all of that into sheep?

The CHAIRMAN. Do those include the Indian owners and the white inhabitants?

Senator MURDOCK. That is for the season, '42-'43, the summer of '42 and the winter of '42-'43?

Mr. LARSON. Yes, sir.

The CHAIRMAN. Will you give us, if you please, the licenses that were issued prior to, or at the time of, the purchase of the property, the base property by the Indians?

Mr. LARSON. Well, there is a record of the licenses issued to owners of the purchased properties.

The CHAIRMAN. That is, the predecessors of the Indians?

Mr. LARSON. That is right.

The Bown Livestock Co., we have no record of licenses being issued to them. Apparently that property was purchased before or taken out of the picture before licenses were issued in 1935 and '36.

The Albert Blank property, 1936, 1937, 900 sheep, 175 cattle, 15 horses for the summer season of 1936; 810 sheep, 159 cattle, and 13 horses for the winter season of 1936-37. For 1937-38, 159 cattle for the summer season, 810 sheep and 3 horses for the summer season; 159 cattle for the winter season of 1937-38. For 1938-39, 175 cattle, 10 horses for the summer season and the same number for the winter season.

Mr. PATTERSON. Are you still reading for Albert Blank?

Mr. LARSON. Yes.

The CHAIRMAN. That is quite voluminous. I think it would be well to file that in the record. We will have to consider that anyway.

(The tabulations are as follows:)

Licenses issued to operators of unit G for the summer grazing season, 1942, and the winter grazing season, 1942-43

Name	Number	Summer, 1942, use	Federal range	Animal-unit months	Number	Winter, 1942-43, use	Federal range	Animal-unit months

W. Asiums. (No record of license issued.)

N. Dalton. (No record of license issued.)

Mr. WRIGHT. Mr. Chairman, may I make one explanation? Take, for instance, the Bown Livestock Co. and A. M. Myrup; the options to purchase their lands were taken in 1935, before the Grazing Service got organized. These two operators had begun to liquidate their livestock for some time before the Grazing Service got organized; they were almost completely liquidated. No licenses show for those two larger outfits at the time. There are some other smaller outfits that were in the same category, for some other reasons.

The CHAIRMAN. I am interested in that larger outfit you mentioned. What is the name of it?

Mr. WRIGHT. A. M. Myrup.

The CHAIRMAN. You say they were liquidated, or did liquidate their livestock; is that right?

Mr. WRIGHT. Yes, sir.

The CHAIRMAN. Can you, or is there anyone here that can tell this

¹ Non-use.

committee whether or not they were liquidating or being liquidated?

Mr. WRIGHT. I would not attempt to tell that, Mr. Chairman.

The CHAIRMAN. Well—

Mr. PATTERSON. Mr. Bown is here. He would know about it.

The CHAIRMAN. Off the record.

(Off-the-record discussion.)

Mr. DILLMAN. I was representing Mr. Myrup, as his attorney, in several other matters during that time. He was not being liquidated.

The CHAIRMAN. The reason I make that remark is that I know of many cases where the bearing—where the Indian agencies were taking in assets and turning them into cash.

Mr. DILLMAN. A lot of that had been done by many, but not as far as Myrup. He was in a position where he could protect his land holdings during that period of time.

The CHAIRMAN. In order to do that, did he have to liquidate his livestock?

Mr. DILLMAN. Quite a while before this, I believe.

The CHAIRMAN. Did the dimensional situation enter into it?

Mr. DILLMAN. Partly; yes.

The CHAIRMAN. I am at a loss at this point to see who gave impetus to the sale in the first instances, to this program where the Indians bought the lands in the creek bottoms. No one has explained the sale to me.

Mr. DILLMAN. Myrup was not in a position where he had to sell at that time. He was getting in better shape, gradually was restocking.

Mr. JOHNSON. May I ask Mr. Larson one or two questions?

The CHAIRMAN. Surely.

Mr. JOHNSON. Mr. Larson, during the fall or most of November or December of 1942 the Grazing Service created boundaries throughout district No. 8 for the various licensees?

Mr. LARSON. When do you mean?

Mr. JOHNSON. 1942 and 1943, was it not, during November or December 1942?

Mr. LARSON. It was the fall of 1942.

Mr. JOHNSON. And those boundaries and private licenses, allotments, were established on a 10-year basis in the majority of instances?

Mr. LARSON. They were to be operative until the licenses themselves, or the interested people, got together to change them.

Mr. JOHNSON. And was a 10-year license or allotment granted unit G?

Mr. LARSON. Ten-year permit?

Mr. JOHNSON. Yes.

Mr. LARSON. No.

Mr. JOHNSON. Was any arrangement made to take care of Smith Bros., Tyzack, Chuturas, and others, if the Indian Service gains control?

Mr. LARSON. In other areas?

Mr. JOHNSON. Yes.

Mr. LARSON. No.

Mr. JOHNSON. What is the attitude of the Division of Grazing relative to these men, if the Indian Service takes it over?

Mr. LARSON. I believe Mr. Leech can answer that better than I.

Mr. LEECH. By that question, Mr. Johnson, you mean if they were not granted as grazing privileges in unit G where would they go?

Mr. JOHNSON. That is it.

Mr. LEECH. Well, I don't know.

Mr. JOHNSON. May I ask Mr. Larson one question; were you not present at a meeting, Mr. Larson, when Mr. Griswold explained to these individuals in unit G what would happen to them?

Mr. LARSON. Yes, sir.

Mr. JOHNSON. What was Mr. Griswold's explanation?

Senator MURDOCK. Who is Mr. Griswold?

Mr. MOORE. Mr. Griswold is a grazier, in charge of our range management.

Senator MURDOCK. He was representing the Grazing Service?

Mr. MOORE. In Utah.

Mr. JOHNSON. What was Mr. Griswold's explanation at this meeting?

Mr. LARSON. He said that if the area was taken from the Grazing Service administration, then they would have to deal with whoever took it over, and, as far as the Grazing Service is concerned, they would be out.

Mr. JOHNSON. Out?

Mr. LARSON. Yes.

Mr. JOHNSON. Therefore there is no plan to take care of them at all by the Grazing Service?

Mr. LARSON. Not as far as I know.

The CHAIRMAN. Well, we have the Grazing Service right here. We have Mr. Leech right here. Let us assume that these orders become effective, as they are now pending, or, let's assume that the legislation now pending should become the law. Where would the Grazing Service sit in the picture?

Mr. LEECH. It would not be the Grazing Service, Mr. Chairman.

The CHAIRMAN. It would be the Grazing Service *functus officio*, wouldn't it?

Mr. LEECH. As to privileges that were granted, that would have to be determined, under that act, by the vested rights that they had there.

The CHAIRMAN. It would be determined, not by the Grazing Service but by the Indian Service?

Mr. LEECH. Or the agency that was administering it.

Mr. PATTERSON. I would like to ask a question there. Supposing it should develop that this area was not a part of the public domain? What becomes of the inherent right of these people to share in the public domain?

Mr. LEECH. I would refer the question to Mr. Graham over here.

Mr. GRAHAM. Will you state the question again?

Mr. PATTERSON. Should it develop that this area was not a part of the public domain—

Mr. GRAHAM. You mean the area between the green and black lines?

Mr. PATTERSON. Yes; and that the Taylor Grazing Administration had no jurisdiction over it. What becomes of the right of these people who have gone and settled upon the public domain set-up there, put up improvements for the livestock business? What becomes of their right to share that public domain under the Taylor Grazing Act?

Mr. GRAHAM. The only answer I can give you is my understanding that these negotiations, which have been had between the two agencies, contemplated something in the nature of taking care of those people for some indefinite period of time.

Mr. PATTERSON. You don't answer my question.

Mr. GRAHAM. That is as concisely as I can give it.

Mr. PATTERSON. I agree with you on that.

Mr. GRAHAM. I think you are asking for an answer to an administrative question rather than a legal one.

The CHAIRMAN. There is involved here a so-called agreement that is in the record. You had that agreement in mind when you gave your answer?

Mr. GRAHAM. Yes, sir.

Mr. PATTERSON. Yes; that's right.

The CHAIRMAN. Of course, it is a question in my mind, under the terms of that agreement, what becomes of the agreement if this bill went into effect. The Grazing Service, as I understand it, was to administer until the matter was settled by law, by an act, isn't that right?

Mr. LEECH. That is right.

The CHAIRMAN. That is my recollection of the so-called agreement.

Mr. LEECH. That is right.

The CHAIRMAN. That being true, when this bill is passed, if it should be passed, then the Grazing Service would be automatically out. Is that right?

Mr. LEECH. This bill provides for the creation of a grazing reserve.

The CHAIRMAN. Under the Indian Service.

Mr. LEECH. Yes, sir.

The CHAIRMAN. So that the Taylor Grazing Act has no provision for your administration of a grazing reserve under the Indian Service?

Mr. LEECH. No, sir; that is right.

The CHAIRMAN. We have a somewhat similar condition that we investigated down in southern Nevada where a bombing range was set up, and the question of what became of the individual rights, mineral right holders, in the bombing range. The result was they simply moved in and condemned the property, appraised and condemned the rights, and moved the parties out. They simply were moved out, and that was all there was to it. That is what we might look for in a condition of this kind; these rights may be liquidated.

Mr. PATTERSON. They would have to be paid for, these rights that arise as a result of this contract.

The CHAIRMAN. The question would be the establishment of the rights and then so on and so forth. We are now getting into the realm of conjecture again.

Mr. GRAHAM. Mr. Chairman, I take it that the agreement to which we referred, as such, would be out, upon the enactment of H. R. 837. However, I suggest that the latitude which would be given to the Secretary of the Interior, under the language of section 3, would still afford discretion to recognize the same factors which are now in the agreement. I do not say they would be recognized. I don't know. I only point out that they could be.

The CHAIRMAN. The only trouble I note with that, and it is the same trouble I noted in the two letters of transmittal, Mr. Secretary Ickes is a very, very busy man. He has some very serious matters on his hands. He must necessarily rely upon many of the agencies under him. I don't think Mr. Secretary Ickes was fully advised as to the history behind this matter before he signed those orders that have not

been promulgated; and I don't believe that the letters that are in the record now, which were letters of transmittal, from the Indian Service to Mr. Ickes, at all fairly present the picture. I am sorry to say that. But from the picture presented yesterday, and that which is being presented today, I cannot help but say it.

I draw your attention, Mr. Graham, to section 3, the language in line 1: "For the exclusive use and benefit in common of the said Indians." Please note that it says "for the exclusive use and benefit." If that language remains in the bill it all works down to the point—you might as well take it by the two ears and look it right in the eye—it simply means, when this is set up, that exclusive use and benefit will be the ultimate object.

Mr. GRAHAM. I think that is contemplated.

The CHAIRMAN. I think we ought to be fair with each other here; be frank about it.

Senator MURDOCK. I am going to say this, Mr. Chairman: We find as I see the picture, the setting up of a communal ownership of your base properties, and a communal ownership, or at least a collective ownership, of your range rights. In my opinion that is quite contrary to what we want in the United States of America, even for the Indians.

Mr. PATTERSON. Mr. Chairman, may I make a statement into the record here for the benefit of all my clients?

I have talked to all of these boys with reference to cooperation with the Indians there, and there is not a single one of them that objects, in the least, to the Indians coming in there and having exactly the same treatment as they received under the Taylor grazing bill; and they are willing to cooperate in every way possible; and, if I might be permitted to emphasize another point, it would be of benefit to the Indians if they went in there and worked their livestock with these particular people, because they would have some incentive to go along and take care of the stock. As it is now, they have the rights and they farm the rights out to the white boys to run their stock for them. I think it would be decidedly of benefit to the Indians themselves, to go in there and cooperate with the fellows that know the stock business.

Senator MURDOCK. Mr. Patterson, I wonder if you would be willing to go one step further? Supposing we would take all of the base properties now owned by these Indians, whether individually or collectively, and then determine their range rights, on the basis of that base property, irrespective of their livestock holdings at the present time.

Mr. PATTERSON. Yes.

Senator MURDOCK. Would you be willing to do that under the Taylor Grazing Act?

Mr. PATTERSON. Yes; providing that the base—

Senator MURDOCK. That is the conclusion that I am coming to; that we should take all of the Indian base properties, regardless of their character, and regardless of present livestock holdings, and then, under the Taylor Grazing Act, or under that formula, award to them whatever grazing rights the base properties there support, and settle this thing on that basis.

Mr. PATTERSON. On that basis, of all base property prorated equally; yes.

Mr. JOHNSON. With the qualification, if those properties which while in the hands of their predecessors lost the rights by nonuse, that the Indians lose their rights by nonuse?

Senator MURDOCK. No; I would say this—regardless of whether the base properties lost their rights prior to acquisition by the Indians or not.

Mr. PATTERSON. Or had any rights.

Senator MURDOCK. Or had any rights. I would be willing, and I think it would be fair today to say that the Indian Agency—to say to them, "We will take all of the base properties that you have under the Taylor Grazing Act formula; we will set up your range rights, and settle this question on that basis." In my opinion, that would be equitable to the Indians and also to the whites. Then in the future, of course, whenever they bought base properties, whatever range rights were pertinent to the base property, they would get them.

Mr. PATTERSON. You are talking about unit G?

Senator MURDOCK. It seems to me, if we could come to a solution of that kind it would be equitable to everybody and we would have this rather difficult question out of the way.

STATEMENT OF N. J. MEAGHER, BANKER AND LIVESTOCK OPERATOR, VERNAL, UTAH

Mr. MEAGHER. Senator Murdock, to grant those rights that you suggest would be totally disproportionate to the great number of the whites.

Senator MURDOCK. I recognize that, but, as a white man, I am even willing to go that far.

Mr. MEAGHER. The law, it seems to me, Senator, as Senator McCarran has said, is for all. Let it be administered fairly, proportionately, for all. Nobody wants advantages over the Indians, none whatever, here in this area. But let me suggest to you, in one instance I am very well aware of, where an outfit has commensurate property, for 20,000 head of sheep, on the winter area, for the full 6 months; he is cut down 66 percent of that, there is only room for that 34 percent, they say. Why should, therefore, the full carrying capacity of the total lands owned by the Indians be considered as base property, and they be given, on the public domain, a 9 months' use?

Senator MURDOCK. If you are asking me that question, I think here is the answer; take this proposal here; the first one submitted by Mr. Jensen yesterday. Considering all base lands submitted by the Indian Service, regardless of date of submission, and using the 1941 survey, as defined there, under that proposal, 49.3 percent of the summer range would be available to the white man, 69 percent of the winter range would be available to the white man, or 66.3 percent of the total for the year would be available to the white man in unit G. Now, it seems to me that if Mr. Jensen is correct in this proposition here that the white man would not be too generous if he were willing to accept that proposition and settle this question.

I just saw Mr. Wright—I don't know whether he was nodding at the fairness of the proposition or not, but I thought he was. I would like to ask him if the proposition that I make would not be fair to the Indians.

Mr. WRIGHT. I agree with what you said formerly, Senator Murdock. I think I have consistently held that, too; perhaps not in full agreement with the other members of the Indian Service, but I have always been willing to accept the area for the Indians based on the same principles of adjudication that you would apply if white people owned them. If those properties that you mentioned there could be given that kind of a rating, I would not have any fear about Indians coming out all right on that proposition.

The CHAIRMAN. That formula there is not the accepted formula by the Grazing Service now?

Mr. WRIGHT. Not necessarily; and I would like to add this: That it seems to us that these ratings were made on the base properties about 1 year after the Indians began to occupy them. The Indians went on without equipment and without capital, and the places did look rather bad. We don't think it was quite fair to rate those properties as they existed at that moment and give them commensurability on that basis. But we thought, in view of the history we tried to present of those, that they should be rated on the license granted to the previous owners. If that could be done, for my part, I would readily accept it.

Senator MURDOCK. I think along those lines somewhere, Mr. Wright, is a solution of this problem.

Mr. JOHNSON. If he is sympathetic to having the same principles apply against the Indians as to the whites, under the rules and regulations of the Division of Grazing he should not expect this committee or the Grazing Board or any other authority to recognize the rights according to the estimate of Mr. Larson this morning of Myrup and the Bown Livestock Co.

Senator MURDOCK. I think we can go a little further with the Indians.

Mr. LEECH. Anyway, we can work it out as perfectly agreeable to the Grazing Service.

The CHAIRMAN. I want to say this, as regards your statement, Mr. Johnson; your statement runs along the theory that if certain use was not made for a certain period of time, the right was lost. That has worked havoc and, to my mind, injustice in many cases due to the fact that we passed through one of the most critical financial periods in the history of this country just about the time that base period drops into. I have known of a great many cases where I thought it was working a terrible hardship and unfairness. But it is a pretty difficult problem to solve, looking at it from any angle. My idea in this case is that the same doctrine and same rules and the same code be applied, forgetting the purchase by the Indians entirely. Supposing the predecessors in interest were still sitting there; the same rules and regulations that could now apply to them could apply. Who could complain?

Mr. JOHNSON. It does not apply because the rights of Mr. Smith were not taken into consideration. The Grazing Service themselves admit they do not recognize the rights of Chuturas, Tyzack, and the Smith family. The area is the same; it cannot be enlarged. By increasing the number of people, reinstating these permits of the Indians, you are decreasing the area and increasing the number of sheep, because you are putting more people in there and putting more sheep in there, and these fellows must suffer.

Mr. PATTERSON. They all suffer alike.

The CHAIRMAN. Haven't they been running in there for years?

Mr. JOHNSON. That is right.

The CHAIRMAN. Doesn't the Grazing Service have that before them? Do they not adjudicate on that?

Mr. JOHNSON. We had a license, over in Colorado district No. 1, for 600 head of cattle. It is true that the thing hit when we could not increase our numbers, and we have lost that right; and if we go back to them and ask for those rights, under the Taylor Grazing, come in to the Board, they will say, I am sorry, but there is that lapse of time. I think you are setting a precedent here that is dangerous.

Senator MURDOCK. You recognize that we are confronted here with a controversial question; confronted with two Executive orders that have been signed, but not promulgated. We are confronted with a proposition that needs compromise, and a little give and take on both sides. Are you willing to do that, representing the men that you do?

Mr. JOHNSON. I have not talked to the men.

The CHAIRMAN. Are you through Mr. Meagher?

Mr. MEAGHER. It seems to me, finally to determine what is fair for the Uncompahgre Indians, from the information that I got yesterday, I judge that the Uintahs and the White Rivers have been taken care of pretty well. But, as far as the Unitahs are concerned, if they had territory in Colorado, and this area down here was turned over to them, without more knowledge—and certainly without the knowledge of the President and his Executive order—as to the area they were given, it seems to me they were beaten. Now, if they were beaten on account of that, and if that land, the Government recognizing it, was thrown into public domain, then it seems to me that the homesteaders acquiring rights down there, those rights have been recognized, and so must the rights of the grazers, of the men who used it for livestock rights. In my opinion those are similar, and if the Indian Service goes in and buys the patented lands, I think they cannot well and fairly deprive the whites of the rights of grazing there, any more than the Government should say to the Indians, "We wipe you out." They are trying to correct an error made, and if the Government at this time—I mean the Indian Service—attempts to wipe out the rights of the white men there, they are doing a similar injustice as the Government has done in regard to the Indians.

The CHAIRMAN. There is no question about it, Mr. Meagher; there is no question about it.

Mr. MEAGHER. Therefore—this is not testimony, but it is a conclusion I have drawn—I don't know whether you wish to hear it.

The CHAIRMAN. Very well.

Mr. MEAGHER. My suggestion would be, if the Government made a mistake, that mistake must not be thrown on to the white grazer of this area. If the Government has made a mistake with the Indians and cheated them in any way, let the Government pay by an appropriation. Therefore, I would say this, if the Indians now desire an area to be held under their own jurisdiction, they must take only that which they have acquired, through purchase and the rights of grazing that go with them and also the rights that they had during the priority years. If they had, during those years, but 1,380 head of cattle and 4,000 head of sheep for the Uncompahgres those, it seems to me, should

be fully granted to them because if they wanted to they could apply that as a free grazing right for the small numbers that they have.

Now, another thing that you mention that has been detrimental to the owners of livestock during the hard years; the same applies to the Indians. Their hands are tied absolutely unless the Indian Service helps them, and how should the Indian Service help them? Take them by the hand and spend an enormous amount of money for it? Perhaps they have not got the stock to stock the range that those lands permit them to put on there. I would say that in all fairness there should be attached to the bill an amendment to grant them an appropriation of sufficient money, whatever the funds should come from, to buy the necessary stock at this time so that the range could be stocked for them for that proportion which they are entitled to.

The CHAIRMAN. Thank you, Mr. Meagher.

Well, Mr. Smith?

Mr. MORONI A. SMITH. While this question is on I would like to say Mr. Patterson had in mind that he had offered to settle on the basis of the Taylor Grazing; has been settling or trying to settle it with these equal rights to the Indians and us. But for them to go out and take in some of the allotments over in the Uintah and put them into this picture, that did not have priority, it greatly deprives the whites and unequalizes us unless it was scattered clear over the district No. 8. We are bunched into this part here, and, as the evidence showed, taken some from district 8 and want to bring them into this allotment here. You understand that vacates the land over in there and applies more stock into this area so that all these things would have to be adjusted with the service on the basis of what is fair in that line.

Mr. PATTERSON. Mr. Smith—

The CHAIRMAN. Let him be at ease. If he wants to stand up, that is all right; if he wants to sit, that is all right.

Mr. PATTERSON. Start in and give the set-up of yourself and your two brothers as you operate. Give us the dates and the amount of money that you have invested and the use you have made of unit G.

STATEMENT OF MORONI A. SMITH, SALT LAKE CITY, UTAH

Mr. SMITH. Would you like to have my name? Moroni A. Smith, born 1875, at Lehi City, 30 miles south of Salt Lake City.

I was born on a ranch, or farm, we called it, and haven't been away from that farm life. I have been following up that activity ever since; helped my father along on his farm, and began my business along early in my teens or later in my teens to accumulate some money to go into the livestock business, particularly the sheep business.

We entered business in 1897, I did, and my brothers just a year before that. We grazed our sheep at all times up in the public domain west of this boundary line until late 1900.

The CHAIRMAN. Just a moment. I have to tie you into the record. West of what boundary line?

Mr. SMITH. West of this Uintah Indian lands. It was public domain, and we operated there from the first, up until 1900.

Senator MURDOCK. West of the yellow line?

Mr. PATTERSON. On the Green River?

Mr. SMITH. Yes; and west of that, in public domain. There wasn't any forest reserve at that time.

In 1900 we secured a lease—myself, Alfred Smith, and David Smith, and four of the Austin boys, brothers, in Lehi, and about four people from Heber—500,000 acres, approximately, of the west end of this reserve, taking in about four or five townships there over to where you see this purple. I start there and running north it took about 5 or 6 townships and all of that in the reserve. That is now in the reserve, you understand; all that green in the reserve.

The CHAIRMAN. How about the yellow?

Mr. SMITH. Went to the Duchesne River, that river that you see running up there west of the yellow, and came right out and included all of this here. That was Indian reserve with that yellow boundary and all that open area. We held that from 1900 for a 5-year lease.

The CHAIRMAN. From whom did you get that lease?

Mr. SMITH. From the Indian department, and it was a 5-year lease that expired in the spring of 1905. That was renewed until the opening of the reserve, which was August 1905. We were on the reserve with the sheep at that time, and we had been issued permits by priority on that reserve, without any land owning by reason of our priority by which we now hold them permits.

When, after it was open they left them in the public domain; all that white area became public domain and we operated our sheep from 1905 or 1906. That was the first year that we became active on the public domain, and during all this time we had this leased. We come down onto this public domain that is now in district 8, and grazed it in common with various other herds.

The CHAIRMAN. Let me clear that up. During the time you had the lease from the Indians, which was 4 or 5 years, you grazed that basin in there and you also grazed down south of the yellow line?

Mr. SMITH. Yes, sir. This was all spring and fall range, this west end up here that we now own part of, and at least, it was more or less of a spring, fall, and summer range, and we came down on that district 8 here to do our wintering, more particularly—no; in the beginning not many sheep there until after 1905. We strayed on this part west of Green River. It furnished the feed for our people—nobody but Indians, and they had no stock. But as the settlements came in they brought a lot of fresh sheep with them, that is, a lot of herds, and it overcrowded that area. Along about 1907 one of my brothers went across the river and then another one went across the river a few years later. It was 1912 before I crossed the river, and I crossed with two herds.

The CHAIRMAN. Into what territory did you go, "across the river"?

Mr. SMITH. Either had to wait for the ice to freeze or we crossed down there, just about at the Nine Mile Ferry. It is about 10 miles south of Ouray, I guess; maybe it is 20. I crossed into this area that comes into the green and black.

The CHAIRMAN. Into unit G?

Mr. SMITH. Sometimes we grazed there all winter. Sometimes part of us would graze there. There was not room enough for any amount of sheep, hardly; and during the midwinter we would get over west there another 15 miles, and then back again, go back home, and put in a month or 6 weeks on this unit G. But in 1928 and 1929 I stayed in there with about thirty-three or thirty-four hundred sheep the entire winter—in 1928 and 1929 in this unit G—I never went out of it until springtime.

Mr. PATTERSON. Let me ask you a question there. Did you use that unit G every year to some extent?

Mr. SMITH. Yes; I think we could say we put in 40 or 50 percent of our use there maybe, and sometimes to the extent that we put in all the use if there was feed there to consume. If there was not feed and there was various other competition we had to move to find the feed, somebody else had been there—

Mr. WRIGHT. Mr. Smith, may I ask you a question to clear up some of the statements made here in the past? As to what you have said, as far as I am concerned, I am willing to take your word for it, of course; but how do you account for this statement getting into the records of the Grazing Service? It says:

In the file of Moroni A. Blanche and Emory G. Smith in the office of the district grazer, Grazing Service, Vernal, Utah, the first application for grazing license filed by Moroni A. Smith in 1935 states that his customary use of the public domain has been as follows: "All that part of public range south of Duchesne River, east of Antelope Creek, north of Nine Mile, and west of Green River in Duchesne and Uintah Counties, also on public ranges east of Green River, known as Bates Knolls, Sunday School Canyon, that area between Bitter Creek and Willow Creek, at times on Deadman and Coyote Basin north of White River."

Mr. SMITH. We was using it all in common; but I have two herds of sheep; one herd of sheep more or less on the west side of Green River sometimes, and sometimes took them both across; always landed on unit G. Either had to cross at Ouray Ferry or over on the Nine-Mile Ferry, on the east. We had access to that neck of the Uintah Indians there, and we came down through that to the Ouray Ferry, or just to this other south of it about 10 miles.

Now in 1910 they held their sales of this land at public auction.

The **CHAIRMAN.** What land?

Mr. SMITH. A public sale of the Ute Indian lands was offered for sale, practically all of them the white homesteaders; all that was not homesteaded was offered for sale. We purchased, but we were entitled to not very much; and, again, in 1912 they held some sales, and I don't remember that we purchased very much; and in 1917. But I purchased out a lot of my neighbors that did buy at these public sales, until, in 1920, I owned about twenty-five to twenty-seven thousand acres in the family.

Mr. PATTERSON. Your family?

Mr. SMITH. We, my family; which we own at this time.

Mr. PATTERSON. You go over and point out about where your commensurate property lies; your base property.

Mr. SMITH [indicating]. Right in here. I have 9,000 acres, this township; in this township here I have 36 or 37, maybe, and a little bit in here with a trail on it; and over in here I have 3,000 acres, some of it in green; not in green, right in here.

The **CHAIRMAN.** For the record, in order to get into the record how to indicate where you are pointing, I wonder if there is anyone to assist us in giving those locations.

Mr. PATTERSON. How would it do if we file a description?

Mr. SMITH. I can give it to you from memory, the townships.

The **CHAIRMAN.** Do you know the townships from memory?

Mr. SMITH. The townships, that is all you care about.

The **CHAIRMAN.** Very well; we would like to have a record of what the townships are.

Mr. SMITH. Right here, 3 south, 10 west, Uintah special meridian; and in 3 south, 9 west; also, some of it in 2 south, 9 west. Then it comes down to 3 south, 8 west, with about five or six thousand acres. There is 31,000 acres in this tract here, in 4 south and 5 south, 8 west. Then we came down here and purchased from people that did buy these, among the first sales, until we have had some three thousand acres in this area, right here, since 1915.

The CHAIRMAN. What number is that?

Mr. SMITH. That would be townships 2, 3, and 4 south, 1 and 2 west; also, 3 and 4 south, 1 and 2 east.

Mr. PATTERSON. How far is that from the line of unit G?

Mr. SMITH. Unit G? Well, I would say it was 10 or 12 miles from my land into this 5,000 acres I now own; bought some from the county and the Uncompahgres, up to 5,000; and I guess it would be 10 or 12 miles from here to unit G.

Mr. PATTERSON. Now, describe that area there as to the use, the seasonal use of that land.

Mr. SMITH. Use these lands through here to do our lambing on in May and June. We summer about 40 percent of our sheep on our own land here in township 3 south, 10 west; and we have a Forest Reserve permit right up in this area here where we now have 3,200, I think, thirty-one or thirty-two hundred.

Senator MURDOCK. That is on the Wasatch Forest.

Mr. SMITH. The Uintah Forest. Them was the permits we more or less got, by being prior users, when they put this Indian area into the Forest Reserve.

Mr. PATTERSON. That is the green immediately west of the yellow.

Senator MURDOCK. That is now called the Uintah or Wasatch?

Mr. SMITH. Uintah Forest Reserve have taken part of the Uintah up here north of the Duchesne River, here, and put it into the Wasatch and Uintah.

Mr. WRIGHT. Do you produce any hay or grain feed on those properties?

Mr. SMITH. Never attempted to cultivate any land. I am strictly in the grazing business which was what I went into it for. We buy our grain and buy our hay. We haven't done anything of that at all except put up a load or two.

Mr. WRIGHT. Did I understand you to say, when you first started to give the testimony that you did not think that the Indian lands up within the Uintah Reservation could be used as base properties for the grazing down in this Ute extension area?

Mr. SMITH. Not when they did not have this prior period. That would be unfair to the white man to have them using base properties against the priority periods. However, if the whole district would take the jolt I would be willing to. But I have confined us to in this—this Uintah District. If you confine it to that, I will say yes.

Senator MURDOCK. Let me understand you there. If all of the Indian lands, all of the base properties, are considered and their grazing rights would be spread out throughout the entire district 8, as I understand you, regardless of the priority situation, you would be willing to go on?

Mr. SMITH. To the extent of them occupying these holdings, here; not the whole tribe, but to the extent they are going to utilize this Unit G.

Senator MURDOCK. Then you are talking only about the base properties in Unit G?

Mr. SMITH. Yes; that is what I'm talking about, the base properties in Unit G.

Senator MURDOCK. Now, you are using, as I understand you, some grazing lands that you purchased from the Indians. You are using that as your base property. Is that true?

Mr. SMITH. Yes.

Senator MURDOCK. You take the position now, by reason of the priority factor, you are unwilling to allow the Indians to use the same character of land as base property?

Mr. SMITH. Under the grazing code they only went back to 1929.

Senator MURDOCK. I say, you are unwilling, because of the priority factor, to allow them to use the same type of land that you use as base property.

Mr. SMITH. Well, I would like to say this, that the Indians have got most of the farm lands cultivated, and I have had grazing lands. They did not operate the livestock nor have priority on them; and I don't think it would make very much difference; but it should not be the burden of this district, this little unit. If it was scattered all over the district, we might not be hurt very much, then.

Senator MURDOCK. That is the statement that I thought you had made; if the rights of the Indians be scattered throughout the entire grazing district 8, then nobody could be hurt very much.

Mr. SMITH. Well, I concede with you there.

Senator MURDOCK. I don't want you to concede. What I am stating, I am just trying to get at a solution of the thing.

Mr. SMITH. To the extent that if it affects these Indians in here, not to the extent that it affects me—ain't never asked for any rights; ain't doing it now. It is the ones involved in this area here.

Mr. PATTERSON. Now, Mr. Smith, tell us about your investments in there.

Mr. SMITH. In view of the fact we were restricted to very small purchases, individually I have purchased most of this from various other people that did buy and went out of the business. There was several people from the East come out and invested when the sales were on; and I bought out about three or four of my neighboring outfits; and it took that. But this was all done before 1915. I had practically all these purchases made from outside, except two purchases we made in the last 2 years, that I am not including in this twenty-six or twenty-seven thousand acres. But after it got into the drift land it cost more money than it would for sale. The restrictions to the sale prevented me from buying much; and I paid for these lands an average of \$3 per acre, when I bought them from other people; it cost me that. At the same time the whole average cost me \$3. I put the improvements on them to the extent of over a dollar an acre; fences, irrigated water developments, spread the water, little cabins to live in. I have spent over a dollar an acre on these improvements. That would be \$4 an acre on this twenty-six or twenty-seven hundred acres.

Senator MURDOCK. Are all of your privately owned lands fenced?

Mr. SMITH. No; just some of them.

Mr. PATTERSON. What are your other investments, there, in your business? What other investments have you?

Mr. SMITH. We have the sheep, and the horses, and the outfit and equipment.

Mr. PATTERSON. Exclusive of the sheep, what investments have you in forest or anything else; investments in order to run your sheep?

Mr. SMITH. We have our forest rights, and our Taylor grazing rights, that have been granted under this decree down there; thirty-one hundred of them in this area, and twenty-five hundred in this unit G. But in getting into this unit G, we were granted a permit in common the first year; and, in order to administrate it, these boys from Vernal were coming in there—naturally we come down across the river here and here. It would have been uneconomical for us to go any further here and we attempted, without any knowledge of these withdrawals being in effect, these agreements we spoke of. We accepted such parts for temporary allotments in here for administration purposes. It would not have been good administration for us people to come way over here; to go way over here some place, when we were running in common down here part of the time. We settled back into here; I did. But the brothers and their families will give you some of their own—

Now, these was about the usual routine of the three brothers. They purchased other lands up in this area. They will describe that themselves.

Mr. PATTERSON. Do you know about what acreage they have of the State lands; what patented acreage is in the State lands?

Mr. SMITH. I understand one of them had some 50,000 acres in the family estate.

Mr. PATTERSON. Do you know about what the other family had?

Mr. SMITH. I think they had some thirty-five thousand, around thirty or thirty-five thousand.

Mr. PATTERSON. What would be the aggregate of the three of you?

Mr. SMITH. The three of us?

Mr. PATTERSON. Yes.

Mr. SMITH. One hundred twenty-five thousand acres, or better.

The CHAIRMAN. Are you an association?

Mr. SMITH. No, no; we have never been—we have been running in the neighborhood, community neighbors. No; no more neighborly than any other operators in there.

Mr. PATTERSON. Generally, Mr. Smith, a plan of operation of your brothers was about the same as your own plan of operation?

Mr. SMITH. I would say up to 1920, anyhow.

Mr. PATTERSON. Up until 1920, did your brothers have rights in unit G, or their descendants?

Mr. SMITH. Yes; I saw by the records in their existence that they have some rights in unit G, in here.

Mr. PATTERSON. Have they used that over a period of years, to your knowledge?

Mr. SMITH. They have used it just a little longer than I had; a little earlier than me. I came across in 1912, here, and they came across a few years earlier than I did.

Mr. PATTERSON. What investment, if you have the knowledge now, what was the total investment of yourself and two brothers and their descendants in that area in the livestock business?

Mr. SMITH. I would say it run up toward \$800,000 to a million dollars, in sheep and lands.

Mr. PATTERSON. Exclusive of the sheep, if you misunderstood me. I want to correct myself—in order to carry on your sheep operations, what are your investments, aggregate?

Mr. SMITH. I would say it would be—without going into the figures—\$500,000 or better.

The CHAIRMAN. In land, and improvements on the land. Is that right?

Mr. SMITH. Yes; the cost of the lands, improvements.

Mr. PATTERSON. Forest rights?

Mr. SMITH. Oh, yes; probably exceed that, of the forest evaluation.

Mr. PATTERSON. And you and your brothers, or their descendants, have been operating in there continuously since about 1912?

Mr. SMITH. Since 1900.

Mr. PATTERSON. Do you know of anything else you want to state for the record here?

Mr. SMITH. Well, I don't know of anything about the holdings. Only we bought these holdings where they appeared to be the most useful to us, and we went along, and in the early beginning, not long after 1912 or 1915, I endorsed these bills, proposed bills that was before Congress, and particularly the Colton bill, to have it put in to some regulation. The Colton bill was picked up by Edward Taylor, in Colorado, and went into a law. But before that he was very active and the brothers were supporting Colton with his bill. In fact, maybe we had initiated a great deal of it.

Mr. PATTERSON. Take your use from the area confined in unit G; that represents the extreme inter-use, does it; that is, is that where you are in the dead of winter?

Mr. SMITH. Yes.

Mr. PATTERSON. Then the areas, including your private areas, from there clear up to the summit of the mountain, were used fall and spring?

Mr. SMITH. That's right; and summer.

Mr. PATTERSON. Going to and from the forest?

Mr. WRIGHT. May I ask one more question?

Mr. Smith, in this report of the field investigation, of the General Land Office, it is stated, in addition to what I read a moment ago, which indicated that you had not had any previous continuous use in unit G; it goes on to say, "None of the area described by Moroni A. Smith in his first application is located in what is known as unit G, Utah Grazing District No. 8, but is located in what is now designated as units F and H, outside the exterior boundaries of the proposed Ute extension area." In your testimony today you deny that, is that the idea?

Mr. SMITH. That—I did not include unit G, probably, in that early date; but we had to go through unit G, all the time, to get over into Bates Knolls, and put in such time as we—when I applied I had been using it in these drives.

Mr. WRIGHT. Priority period?

Mr. SMITH. Previous to 1933; from 1912 up to the present time.

The CHAIRMAN. I wonder, Mr. Wright, if you would care to tell us from what record you are reading and how that record was made.

Mr. WRIGHT. This record was an investigation concerning the claims of certain named stockmen to grazing privileges on the proposed Ute extension area, the former Uncompahgre Indian Reservation,

located within the Utah Grazing District No. 8; and it was made by the Office of Field Investigations of the General Land Office.

The CHAIRMAN. The General Land Office?

Mr. WRIGHT. Yes, sir.

The CHAIRMAN. Is that available for use of the committee?

Mr. HAVELL. That is available. I think the investigator already has a copy of the report. I might say that investigation was requested by the Indian Office about the time the special agents were transferred from the Secretary's office to the Land Office. We loaned our services to the Indian Office for the purpose of making that investigation.

Mr. PATTERSON. May I inquire; there would be no unit G at the time the application was made in 1935, would there, Mr. Wright? I don't see how you could have known a lot about it.

Mr. WRIGHT. Unit F, unit H, and unit G came into existence at the same time. The only purpose I had was to indicate the source of the information that the Indian Bureau had, to the effect that some of these men did not have prior use in this area.

Mr. PATTERSON. Let me ask Mr. Smith; you now have a permit in that area?

Mr. SMITH. Yes.

Mr. PATTERSON. Adjudicated by the Grazing Division?

Mr. SMITH. Yes, sir. I would like further—in a report that we made to the Grazing Department, by request, this is dated June 27, 1934—but it does not refer to that. We put this in the hearing. That was about 2 years ago, when they commenced investigating, or making a survey, of the Indian lands in this unit G. The Department came and kind of got another statement that they asked for, voluntary statement.

Senator MURDOCK. Which department?

Mr. SMITH. Well, the Grazing Department came and asked for this statement, some time along about 1940 or '41. This is the statement we made about the use of the range. I would like to read it into the record. It is on one of their forms. This is a copy they made out of that. We have their forms and their files—the Grazing Service.

Mr. PATTERSON. That is also a copy of a report that you made to the Grazing Service?

Mr. SMITH. Yes. Now, this was around 1940, the fall of 1940, or during '41. I said, "The area we use, all that part of district 8 west of Green River, district 8 west of Green River, also everything east of Green River to Bitter Creek that includes unit 8 and Bitter Creek is 6 or 8 miles." You can see it running down there. "Including Tabiola, the west bench in the north end of unit G, Agency Draw," that is on Pack Mountain, right along the borders of those lines, running around, through, and dodging around the Pack Mountains. "The east end of the Agency Draw"—that is over the hill on the Willow Creek—"Sunday School Canyon"—that and the Bates Knolls and west of Bitter Creek to White River. Bates Knolls was the south end, and that is about 15 or 20 miles south there. It is just in that neck; that is the center of unit H; that is the area that we use. We also were on the north side of White River, and used that part between Chapeta Grove and the Colorado State line. We were using that pretty well.

Mr. PATTERSON. Well, you can't say your report does not cover the entire area.

Mr. SMITH. No; it doesn't cover the entire area, it does not cover the east side of district 8. But the purpose of this report will show we would be entitled to an allotment, so desired, even to the extent of part east of this unit G; and these are temporary administrative allotments we have set up today. They have been set up for temporary and for administration purposes, but the use, in common, included all this. Now these Vernal fellows, they grazed all the territory from Vernal, here, down through here, to Watson, and winter range covered as much area as we did.

Mr. PATTERSON. Now, don't get into anything that does not concern your own affairs.

The CHAIRMAN. In my early experience I was a member of the Legislature of the State of Nevada. There was then pending a bill which provided that sheep should not graze within 5 miles of possessory holdings—the legislature moved to amend the bill by striking out the letter "R" from the word "graze."

We'll pause here and take a recess until 1:15.

(Recess until 1:15 p. m.)

AFTERNOON SESSION

The CHAIRMAN. The committee will be in order.

In connection with the statement of Mr. Moroni Smith, please state to the committee, Mr. Leech, whether or not the Taylor Grazing Service has set up commensurate rights for Mr. Smith and others in unit G.

Mr. LEECH. Yes, they have been issued licenses in there, Mr. Chairman.

The CHAIRMAN. For how long?

Mr. LEECH. Since the beginning of the grazing district. Mr. Larson will give the numbers and the periods of time.

The CHAIRMAN. And the names, would you do that, Mr. Larson?

Mr. LEECH. That is, of the three Smiths.

The CHAIRMAN. Have you others besides the Smiths?

Mr. LEECH. Yes; we have everyone in that unit.

The CHAIRMAN. That is what I mean. We have already placed that in the record this morning, the tabulation.

Mr. LEECH. He will read those of the Smiths now.

Mr. LARSON. The Albert Smith Investment Co. has 2,500 head of sheep from November 15 to April 1.

The CHAIRMAN. That is on what is known as unit G?

Mr. LARSON. Yes, sir. Blanche, Moroni, and Emory Smith have 2,500 from November 1 to March 1; and David G. Smith estate, 4,500 from December 1 to April 1.

The CHAIRMAN. That is all in unit G?

Mr. LARSON. Yes, sir.

Mr. EMORY G. SMITH, Salt Lake City, Utah. I think Mr. Larson read that on Blanche, Moroni, and Emory wrong. It is until April 15, instead of March 1.

Mr. LARSON. You say it should be April 15?

Mr. SMITH. Yes.

Mr. LARSON. That is right.

The CHAIRMAN. Whatever it is, they are adjudicated rights, as far as the Taylor Grazing Service is concerned, in unit G.

Mr. LARSON. Allotments have been set up for use, with the numbers of livestock.

The CHAIRMAN. Well, now, in arriving at your deductions in that respect—and either of you gentlemen may answer—I take it that you made a study of the use, and made the time during which it was made, and the number?

Mr. LEECH. Is that what you actually did? Is that the way you did it?

Mr. LARSON. Well, these are not a result of a study, such as Mr. Jenson presented, but they represent what they should have, based on the priorities, less deductions that have been taken by everyone.

The CHAIRMAN. But you took the physical facts, did you not, as you found them?

Mr. LARSON. Yes, sir.

The CHAIRMAN. And you went thoroughly into the record, as thoroughly as you could get from the records?

Mr. LARSON. Yes, sir.

Mr. PATTERSON. Mr. Chairman, may I state something here that I think perhaps the committee does not know? That is this; there has been an agreement between the Grazing Division and the Indian Department and the users, whereby they have divided up this area, defined the boundaries; they have all agreed to it and subscribed to it.

The CHAIRMAN. Where is that agreement? What form is it in?

Mr. PATTERSON. It may be only marked out, but they get a permit to graze a specified bounded area.

The CHAIRMAN. Who does?

Mr. PATTERSON. The users.

Mr. LEECH. Mr. Larson can explain that, Mr. Chairman.

The CHAIRMAN. Is it an agreement of record? How is it formed; so we may make it of record?

Mr. PATTERSON. Well, the users just accepted the decision of the two boards in relation to these matters.

The CHAIRMAN. What two boards?

Mr. PATTERSON. Indian and Grazing.

The CHAIRMAN. That is opening out another subject, I think. At least—I may not grasp it—

Mr. PATTERSON. It was new to me.

The CHAIRMAN. When did that come into existence?

Mr. PATTERSON. Mr. Smith or Mr. Moore can tell you.

The CHAIRMAN. Mr. Moore, you represent the Grazing Service, and you are the regional grazer for the State of Utah?

Mr. MOORE. Yes, sir.

The CHAIRMAN. Do you know of any agreement, acquiesced in by the Indian Bureau, the white users of the open public domain, and the Grazing Service?

Mr. MOORE. To designate the areas upon which these licensees would operate, we hold what you would call range-line agreement meetings, and those people involved meet and agree upon their boundary lines. Sometimes it is individual allotment, and sometimes—I notice this one here, we had three people in this allotment.

The CHAIRMAN. What allotment is that?

Mr. MOORE. Isaac and David Smith and Smith Investment Co.

The CHAIRMAN. Is that in unit G?

Mr. MOORE. Yes, sir. That is all unit G that I am speaking of. Then, at that meeting they go into a formal agreement, and the people present sign it.

The CHAIRMAN. Let's see that. Now, this looks to be a request made by the users.

Mr. MOORE. Yes, sir.

The CHAIRMAN. Do the Indians figure in this?

Mr. MOORE. N. Wagner, who signed here, was present.

The CHAIRMAN. Who is he?

Mr. MOORE. He worked for the Indian Service, assistant junior range examiner. He testified.

The CHAIRMAN. Have you gentlemen seen this?

Mr. PATTERSON. No; I just know the general form. I know of these organizations and meetings, going on down in the southern part of the State, with the graziers. They get all of the fellows together and say, "Here, agree upon a line." They usually agree. It is a progressive step they are making in the whole procedure. I assume this follows that. I drew some of the agreements myself. I am sure I did not draw this one.

Mr. MOORE. Yes; that is the usual procedure.

The CHAIRMAN. Perhaps, in fairness, we had better defer this until the Indian Service is here.

Mr. SMITH, you have testified to the length of time that you have been in this business and to the amount of land that you have acquired, during your tenure, and to the service that you put it to in Uintah County. What do you contribute in the way of taxes?

Mr. MORONI SMITH. Contribute?

The CHAIRMAN. Yes; what do you pay in taxes?

Mr. SMITH. My taxes; I am in three counties, in Wasatch—

The CHAIRMAN. Take Uintah first.

Mr. SMITH. Why, I think that Uintah would be \$2,000.

The CHAIRMAN. A year?

Mr. SMITH. Yes.

The CHAIRMAN. And you hold how much land?

Mr. SMITH. We hold 26,500 acres, previous, a long ways back, with an additional 8,000 acres; 35,000, a little better, altogether, in the three counties.

The CHAIRMAN. Now, in Uintah County I think you placed thirty-odd-thousand acres, didn't you?

Mr. SMITH. No, in Uintah, only about 5,000 in Uintah.

The CHAIRMAN. How much of your livestock is in Uintah County?

Mr. SMITH. Assessed in Uintah County during the winter time, practically. Two herds of my sheep, in Uintah County, costs around \$500 apiece, besides 5,000 acres of land and 3 cents per acre—that would be about the taxes.

The CHAIRMAN. You are assessed at the rate of 3 cents per acre?

Mr. SMITH. Three cents on the dollar, valued at a dollar an acre.

The CHAIRMAN. You have a standard value in the State of \$1 an acre on the land?

Mr. SMITH. No, only in Uintah County, excuse me.

The CHAIRMAN. State the assessment.

Mr. SMITH. What I have, that 5,000 acres in Uintah, value it at \$1 an acre, and 3 cents on the dollar.

The CHAIRMAN. Now, what do you pay in Duchesne?

Mr. SMITH. Our taxes amount there to around \$3,000, in the three counties.

The **CHAIRMAN.** In Duchesne how much?

Mr. SMITH. Well, I would say it is about \$400 in Duchesne; five to six hundred dollars in Wasatch.

The **CHAIRMAN.** How many livestock are you running?

Mr. SMITH. Six thousand in the winter time; breeding use.

The **CHAIRMAN.** Where do you run those, principally, in the winter time?

Mr. SMITH. I have a permit.

The **CHAIRMAN.** Never mind your permits; where do you run them?

Mr. SMITH. District H, west of Green River, 3,100; and this 2,500 in unit G.

The **CHAIRMAN.** How many sheep are you assessed on?

Mr. SMITH. For the full number. They go out and count them—

The **CHAIRMAN.** Why be evasive about it? Let's be frank. How many sheep are you assessed?

Mr. SMITH. Assessed for—I would like to ask my son, but it is approximately 95 to 98 percent of what we have, their count, assessed whatever their count is.

The **CHAIRMAN.** You have not answered my question yet. How many livestock are you assessed?

Mr. SMITH. I would say from fifty-eight to fifty-nine hundred.

The **CHAIRMAN.** In all of the counties?

Mr. SMITH. Yes; the assessment is made in the county area on the 1st day of January.

The **CHAIRMAN.** What county are you usually running in the 1st day of January?

Mr. SMITH. Uintah.

The **CHAIRMAN.** How many sheep are you assessed for in Uintah County?

Mr. SMITH. Assessed for 5,800 head, I would say, 5,900.

The **CHAIRMAN.** What is the value, for assessment purposes, of the head of sheep in Uintah County?

Mr. SMITH. It would be around \$3.50 and \$4 in the past—

Mr. PATTERSON. How are the sheep valued now for purposes of assessment?

Mr. SMITH. Have been in the past—I don't know as they made an assessment in 1943.

The **CHAIRMAN.** Will someone please answer this question? Why we are taking up the time here? The Indian who testified through an interpreter yesterday, does he hold a permit on unit G? Can someone else answer that?

Mr. LARSON. Pawwinnee does; yes.

The **CHAIRMAN.** For what number of livestock?

Mr. LARSON. No; I must correct that; he does not hold one in unit G, but he does within the area bounded by the green and the black lines.

The **CHAIRMAN.** That is unit G.

Mr. LARSON. Not all of it.

Mr. GRAHAM. That is not identical, Mr. Chairman.

The **CHAIRMAN.** I took it all as being in G. If we are going into the lines here, we are going to get lost.

Mr. LARSON. The boundary of unit G is down Willow Creek, goes into unit G here. Pawwinnee runs in this territory here.

The CHAIRMAN. How many sheep?

Mr. LARSON. I don't know as I have that here, but it is around a thousand head.

The CHAIRMAN. How much base land has he to run those sheep?

Mr. LARSON. I could not say.

The CHAIRMAN. Can anybody answer that? How much base property has Pawwinnee to run a thousand head of sheep? Has he any base property? Does anybody care to answer that?

Mr. CURRY. We'll have to wait until Mr. Wagner comes.

The CHAIRMAN. How much base property has the man for whom you interpreted last night?

Mr. CURRY. I couldn't tell you.

The CHAIRMAN. How many sheep does he run?

Mr. CURRY. Over a thousand head.

The CHAIRMAN. Has he any base property?

Mr. CURRY. I don't know; not from what I have gathered so far.

The CHAIRMAN. Certainly the Grazing Service should be able to tell us.

Mr. LARSON. I could not tell you—I could tell you to the extent of the original application, which listed some of the Indian allotments near Ouray.

The CHAIRMAN. Indian allotments, out of unit G?

Mr. LARSON. Yes; but within the black and green lines.

The CHAIRMAN. Does the Indian who testified last night, through an interpreter, hold those allotments as his allotments, or are they allotments of other Indians given to him by some process?

Mr. LARSON. I think they are in common, but I cannot answer that definitely.

The CHAIRMAN. I am just trying to figure out how the allotments are made, how you can give him a license to run. Have you any explanation of that?

Mr. LARSON. He had been using that part of the Federal range for a number of years, during the priority period, and, when the Taylor Grazing Act became effective, he went on using that range.

The CHAIRMAN. The Taylor Grazing Act, when it became effective, put its operation into effect on the basis of base property. There have to be rights that were based on base property. Am I correct in that?

Mr. LEECH. Under the agreement of 1935, Mr. Chairman, I believe that the use of the Indians could continue, without reference to the commensurate rating. That is under the agreement of July 19, 1935.

The CHAIRMAN. Have we that agreement in the record?

Mr. LEECH. Yes, sir; it was placed in the record.

The CHAIRMAN. Now, then, the user, in this instance, would require no base property?

Mr. LEECH. I would so apply the agreement; yes, sir.

The CHAIRMAN. Now how extensive does that agreement go? In other words, does every Indian have the right to run livestock, without base property?

Mr. LEECH. The agreement provided that privileges would be granted to the Indians that were operating there, without reference

to commensurate ratings. I believe I am stating it correctly, Mr. Chairman, without looking at the agreement.

The CHAIRMAN. Would that extend, in this case, all over this area represented by the map that we have on the wall?

Mr. LEECH. I would say in the orange line; yes, sir.

The CHAIRMAN. Within what?

Mr. LEECH. Within the orange line, covering the Uncompahgre withdrawal.

The CHAIRMAN. How about the rest of this area here, did they run livestock without base property?

Mr. LEECH. That would be the only part that is in a grazing district, that in the orange boundaries?

The CHAIRMAN. I see. In other words, that which is within the yellow line is not a grazing district?

Mr. LEECH. No, sir; that is the Uintah Reservation, in the yellow line; and the orange line is the part in the grazing district, under the agreement of 1935.

The CHAIRMAN. Does your jurisdiction at all extend into the territory bounded by the yellow line?

Mr. LEECH. No, sir; we have nothing to do with that.

The CHAIRMAN. It has never been formulated into a grazing district?

Mr. LEECH. Yes, sir.

The CHAIRMAN. The purple lands are not in the grazing district?

Mr. LEECH. No, sir; they are not in a district.

The CHAIRMAN. Do the Indians that live along the creeks, indicated by the red in unit G, have commensurate rights out in the territory along the black and green line?

Mr. LEECH. I will have to ask Mr. Larson.

Mr. LARSON. No, sir.

The CHAIRMAN. You have accorded them no rights beyond the black and green line?

Mr. LARSON. There are other Indians that have had licenses along Bear Creek and White River, but they are in the same status as Pawwinnee's case.

The CHAIRMAN. Now, does Pawwinnee belong to the group that is provided for within the black and green lines, or does he belong to another group? There are three groups mentioned in this hearing—the White Rivers, the Uintahs, and the Uncompahgres. I have some trouble trying to pronounce that last word.

Mr. LARSON. I understand he is an Uncompahgre Indian; yes.

The CHAIRMAN. Not holding any base property within unit G; is that right?

Mr. LARSON. Yes.

The CHAIRMAN. Well, then, what was this plea made for last night, that he used to evoke the tears of so many here? What was the plea made for? I thought we were dealing with the question of unit G.

Mr. JOHNSON. The plea was made, due to the fact that since the Indian department has purchased some of these ranches in the red, that Pawwinnee's son-in-law, and some of the member of his family, have been placed on those ranches.

The CHAIRMAN. Not for Pawwinnee himself?

Mr. JOHNSON. That is the way I got it yesterday, after talking to his son-in-law, after the meeting last night. I was so informed.

Senator MURDOCK. You don't mean Pawwinnee was not talking for himself, also?

Mr. JOHNSON. He may have been speaking for himself and his family.

Mr. LEECH. Mr. Chairman, reading from the agreement, this is what it reads:

Should there be any Indians within the ceded Uncompahgre Reservation who desire use of these lands for their own livestock, it is agreed that they be given prior right to an allocation of range within grazing district No. 8 irrespective of what their technical commensurability may be.

The CHAIRMAN. You use the words there, "within the ceded lands."

Mr. LEECH. I mean within that orange line.

The CHAIRMAN. But you read the word "ceded." What does that mean? I thought "ceded" referred to something outside of unit G. Am I wrong in that?

Mr. LEECH. Well, the word "ceded" appears in that agreement, but as used in this agreement it meant the area within the orange line.

Mr. WOHLKE. I believe, Mr. Chairman, it was used inadvertently.

The CHAIRMAN. There is so much in this that does not belong in here that I am not surprised.

Mr. JOHNSON. Mr. Chairman, what we were talking about yesterday is that the whites thought that this was Indian ceded lands that was used for the purpose of making this agreement with the Indian department.

Mr. PATTERSON. Well, it was restored in 1905; restored to the public domain. That is the equivalent of a ceded area.

Mr. JOHNSON. Which was not ceded technically.

The CHAIRMAN. I am only trying to get the matter by way of record somewhat clarified. It is an involved situation, and the more clarity we can work into the record the better off we'll be.

Mr. DILLMAN. There is one item that has not been brought out that probably should be brought out.

The CHAIRMAN. Does it pertain to the subject matter now?

Mr. DILLMAN. Yes; it does. The blue lands up in the Altonah area are allotments that belong to the Uncompahgres. I think that ought to be considered in connection with this use by the Uncompahgre group.

The CHAIRMAN. All right; that is off again on a different line.

Mr. SMITH. Could I ask Mr. Leech one question?

The CHAIRMAN. Yes; surely.

Mr. SMITH. Mr. Leech, in effect, you have been issuing these permits on the prior use of the number of livestock customarily used without any consideration to any land commensurability to the Indians?

Mr. LEECH. I would not know on the particular cases, Mr. Smith. Mr. Larson would be the one to say as to these individual cases.

Mr. SMITH. Your agreement states that out.

Mr. LEECH. That may be done; yes.

Mr. SMITH. And the priority use of the livestock.

Mr. LEECH. It doesn't mention the priority.

The CHAIRMAN. Who made that agreement?

Mr. LEECH. It is signed by the acting director of the Grazing Service, the Commissioner of Indian Affairs, and approved by the Secretary of the Interior on July 20, 1935.

The CHAIRMAN. Is that the one you referred to a moment ago?

Mr. LEECH. That is the one that I read from a moment ago.

(The agreement reads as follows:)

JULY 19, 1935.

The honorable the SECRETARY OF THE INTERIOR.

MY DEAR MR. SECRETARY: Representatives of the Division of Grazing in the Interior Department and the Indian Office met in conference July 18 and agreed on a plan for the management of the unentered lands within the ceded Uncompahgre Reservation, Utah.

It was agreed that any action taken to place these lands under range management should be consistent with any prior valid withdrawal from entry, including the withdrawal from homestead entry by the Secretary of the Interior dated September 23, 1933, of the ceded Uncompahgre lands in Utah. This withdrawal was prior to the Executive order of November 26, 1934, promulgated pursuant to the Taylor Grazing Act, approved June 28, 1934 (48 Stat., 1267).

Under these conditions we recommend that the ceded Uncompahgre lands in Utah which were temporarily withdrawn from homestead entry on September 23, 1933, be placed temporarily under range management in accordance with the provisions of the Taylor Grazing Act until December 31, 1936, or until the passage of the bill by Congress creating the new Uncompahgre Reservation if it occurs prior to that date. If the Commissioner of Indian Affairs believes that the people of Utah living within or interested in grazing district No. 8 have been working in good faith for the passage of the bill reestablishing an Uncompahgre Reservation and it has not been passed by Congress by December 31, 1936, he agrees to continued administration of the ceded Uncompahgre lands by the Grazing Division of the Interior Department until the said bill has been passed by Congress or until he believes the above-mentioned people have ceased to work for the enactment of said bill. The Commissioner of Indian Affairs shall concur in all matters affecting policy relative to the administration of the ceded Uncompahgre lands. We understand that the stockmen and other interested parties who attended a meeting at Vernal, Utah, on July 10 have agreed to the above conditions.

It is further agreed that these lands now in grazing district No. 6 in Utah, which it is proposed shall form a part of the Uncompahgre Reservation, shall be included with the ceded Uncompahgre lands in grazing district No. 8 in Utah; that only temporary grazing licenses which do not create in the licenses vested rights of any kind in and to these lands shall be issued for grazing livestock within the modified grazing district No. 8; and that the right, title, and interest of the Indians in and to the ceded Uncompahgre lands shall in no way be jeopardized.

Should there be any Indians within the ceded Uncompahgre Reservation who desire the use of these lands for their own livestock, it is agreed that they be given prior right to an allocation of range within grazing district No. 8 irrespective of what their technical commensurability may be.

Respectfully,

JOHN COLLIER,
Commissioner of Indian Affairs.

JOHN F. DEEDS,
Acting Director, Division of Grazing Control.

Approved, July 20, 1935:

HAROLD L. ICKES,
Secretary of the Interior.

The CHAIRMAN. Mr. Woehlke, before you came in a matter was referred to, which I thought it best to defer, in consideration of you gentlemen, until you had returned. It is apparently some kind of an agreement under date of October 12, 1942. It reads as follows:

We, the users of the Federal range in grazing unit G, Duchesne grazing district, request that we be permitted to make our own allotment boundary lines, both individual and group, for the reason that we think that we can better make more workable units due to our intimate knowledge of the area involved.

It is requested that these agreements be approved by the advisory board of this district after the range division and boundaries have been agreed upon by the users.

It is understood that these agreements can be changed by Grazing Service regulations, but it is requested that no changes be made until the range survey has been completed and the utilization checks have been made.

It is understood that should any differences arise relative to the division of Federal range, the Grazing Service representative will act as arbitrator, assisted by two disinterested Grazing Service employees.

This is signed by a number of people of whom, I am advised, a representative of the Indian Service is one.

Are you advised of that so-called agreement, and what does it mean?

Mr. WOEHLEKE. I am not familiar with that, but probably Mr. Wright is.

Mr. WRIGHT. Not just from the reading.

The CHAIRMAN. That is in 1942, this past year.

Mr. WRIGHT. Our grazing examiner, the young man who spoke here this morning, has signed it, that is true.

The CHAIRMAN. That would look as though it were an agreement, at first blush, at least. How many agreements up to date have we encountered?

Mr. WOEHLEKE. I would say that was a request, rather than an agreement. Apparently no agreement was reached on that request.

Mr. JOHNSON. Apparently that is a memorandum agreement, and another one follows it, which was signed at that meeting, after the division of the range was made.

The CHAIRMAN. Where is that one? Is there another agreement?

Mr. LEECH. I think you will have to have Mr. Larson and Mr. Moore on that, Mr. Chairman.

The CHAIRMAN. How about that?

Mr. MOORE. The procedure—I was not here at these meetings—that we followed, we call these users together and make this for them to agree on, an administrative line to set these fellows into administrative units, and if they sign, why, you have what you have here. If they don't, then it is up to us to establish this line. Of course, they always have the right to protest, which is under the Taylor Grazing Act.

The CHAIRMAN. Did they establish the line?

Mr. MOORE. Yes; these people established the line.

The CHAIRMAN. You agreed to it?

Mr. MOORE. Yes, sir.

The CHAIRMAN. You acquiesced?

Mr. MOORE. Yes, sir.

The CHAIRMAN. That all pertained to unit G?

Mr. MOORE. Yes, sir.

The CHAIRMAN. That was an agreement that affected the rights of the whites, as well as the rights of the Indians, within the district?

Mr. MOORE. Yes, sir.

The CHAIRMAN. Within unit G?

Mr. MOORE. Yes, sir. For the winter's operation.

The CHAIRMAN. Not alone for this winter's operation; nothing in here to limit it.

Mr. MOORE. No reason why that cannot continue.

The CHAIRMAN. Has this been observed by those in interest here?

Mr. JOHNSON. I signed that, representing some of the stockman.

Mr. PATTERSON. Mr. Smith signed it, acceded to it.

Mr. SMITH. We did not want to sign that; already had an allotment set up. We passed up to the Grazing Department for them to set up, and we acquiesced in what they set up.

The CHAIRMAN. When you acquiesced to what they set up, what did you think you were acquiescing to?

Mr. SMITH. The district lines, already drawn on the map; already discussed the thing in conference, and these boundary lines were set up from other years, on the map. We applied; we was to have that other three sections, extra, and it was left up to the Grazing Department to determine this, and we acquiesced, and accepted that.

The **CHAIRMAN.** Did you get the three sections extra?

Mr. SMITH. Yes.

By the way, give up three sections to the farmer, fenced their farm—that is the allotments of three given up, next to these farmers on the creek bottoms.

The **CHAIRMAN.** I regard this as somewhat significant, Mr. Wright, don't you regard it so?

Mr. WRIGHT. Well, as I recall it, it was for operational purposes, and regarded as temporary. It might be continued, by mutual concurrence, from year to year.

The **CHAIRMAN.** This does not limit it to a year.

Mr. WRIGHT. That was my understanding, however.

The **CHAIRMAN.** It does not limit it to a year, by its terms, at all.

Mr. WRIGHT. It was my understanding that it was for operational purposes, and I still think it is a good thing, the best way to get along.

The **CHAIRMAN.** You think it is a good way to get along?

Mr. WRIGHT. Yes.

Mr. PATTERSON. As they have been enforced in other areas, it is supposed to be permanent; a permanent outline for their territory, subject to any adjustments that the Grazing Division may care to make.

The **CHAIRMAN.** Let me ask the Grazing Division, when you ask for this accordingly, usually, not in this case particularly, but in all cases, do you look for it to be of a permanent nature?

Mr. MOORE. I certainly hope it is.

The **CHAIRMAN.** It settles a very vexing question, sometimes.

Do you see any objection, Mr. Woehlke, why this should not go into the record?

Mr. WOELKE. No objection at all to having it go into the record.

The **CHAIRMAN.** You acquiesce to it?

Mr. WOELKE. No, I do not; I don't know anything about it. I believe, with Mr. Wright, that it is operational, an agreement made for this current grazing season.

The **CHAIRMAN.** My dear sir, it does not show anything current about it.

Mr. WOELKE. But I believe that still is the case, that they will have to have another agreement next year.

The **CHAIRMAN.** There being no objection to it, and it seems to be authentic, it will go into the record at this point.

(The agreement is as follows:)

VERNAL, UTAH, October 12, 1942.

This agreement entered into on this date by users of the Federal range of unit G.

It is agreed that Otto W. Nielson shall have the Federal range within the following described boundaries for winter usage: Beginning at a point of the intersection of Willow Creek with Green River thence south and west down Green River to a point on the south end of Horse Bottom where sec. line common between sec. 4 in T. 9 S., R. 19 E., and sec. 9 in T. 10 S., R. 19 E., thence east along this section line to the SE corner of sec. 4, T. 10 S., R. 19 E., thence diagonally to the NE. corner of said section, thence east approximately 1¼

miles along sec. line to the divide of a prominent drainage thence southwesterly along the divide of the drainage for approximately 1 mile to the State line of sec. 6, T. 10 S., R. 20 E., thence east along this sec. line to its intersection with Willow Creek approximately one-half mile above the Humphries Place, thence northeasterly down Willow Creek to the point of beginning.

Mr. Otto Neilson and Mr. Clive Sprouse, E. F. Birchell shall receive for summer usage the Federal range along the bottom of Green River from the intersection of Willow Creek with Green River southwesterly along Green River to the south end of the long bottom located in sec. 31, T. 10 S., R. 18 E., Mr. Nielson will have a normal drift with his cattle to the south of this allotment during the winter.

Mr. E. F. Birchell shall receive the Federal range within the following described boundary for winter usage. Beginning at a point at the intersection of Hill Creek and Willow Creek, thence up Hill Creek to the township line between 10 S., and 11 S., R. 20 E., thence east along this line to its junction with Willow Creek, thence down Willow Creek to the point of beginning.

Mr. Ray Bartholomew shall use the Federal range within the following described boundary beginning at the intersection of the south township line of 10 south R. 20 E., with Willow Creek, thence west along this township line to a ledge on the top of the divide of the drainage between Hill Creek and Willow Creek, thence southerly along the east rim of this ledge to approximately the $\frac{1}{2}$ sec. line running through sec. 29, thence east on this line to east $\frac{1}{4}$ corner of sec. 9, T. 11 S., R. 20 E., thence following northerly along the top of the divide to the south sec. line of sec. 3, T. 11 S., R. 20 E., thence east along this section line to its intersection of Willow Creek, thence down Willow Creek to the point of beginning.

It is understood that Emory, Blanche, and Moroni Smith shall have watering privileges for their sheep on Bartholomew ditch located in the SW $\frac{1}{4}$ of sec. 2, T. 11 S., R. 20 E.

Mr. Marvin Broome shall receive the Federal range for winter usage within the following described boundary: Beginning at a point on Willow Creek where the SW $\frac{1}{2}$ sec. line in sec. 11, T. 11 S., R. 20 E., intersects Willow Creek thence west along this line to a point approximately one-third mile east of the W $\frac{1}{4}$ corner of above section thence southwesterly along the divide of the drainage between Carlyle Wash and short drainage into Willow Creek to a point approximately one-fourth mile west of the SE corner of sec. 14 T. 11 S., R. 20 E., thence from the SW corner of sec. 14 southeasterly to a rim on the divide of the drainage between Broome Canyon and short drainage into Willow Creek.

This line shall be posted by a member of the Grazing Service at a place that will be most practical for the use of this area. Thence south along this rim to approximately the S $\frac{1}{4}$ corner of sec. 23 thence east along this section line for approximately one-eighth mile to the east rim of Pack Mountain running approximately through the center north and south of sec. 26 T. 11 S., R. 20 E., thence south along this rim to a point approximately to a divide of the drainage of Small Canyon located in the NE corner of sec. 28 of the above township thence easterly and north along a divide of the drainage of the NE $\frac{1}{4}$ of sec. 26 NW $\frac{1}{4}$ of sec. 25 and SE $\frac{1}{4}$ of sec. 24 T. 11 S., R. 20 E., to its intersection with Willow Creek thence down Willow Creek to the point of beginning.

Mr. Louis Thorne shall receive the Federal range for winter usage within the following described boundary. Beginning at a point on Willow Creek approximately at the north boundary of Mr. Thorne's property thence SW along the divide of drainage to the east rim of Big Pack Mountain located approximately at the SW corner of the NE $\frac{1}{4}$ of sec. 26 T. 11 S., R. 20 E., thence south along the east rim of Pack Mountain to a point approximately at the SW corner of sec. 26, T. 11 S., R. 20 E., thence east along this sec. line to its intersection with Willow Creek thence down Willow Creek to the point of beginning. It is further agreed that Mr. Thorne shall have a normal drift with his cattle to the south of this allotment in sec. 31, T. 11 S., R. 21 E., sec. 36, 35 T. 11 S., R. 20 E.

Signed:

Louis M. Thorne.
E. S. Birchell.
O. W. Nielson and Sons.
S. L. Bartholomew.
Clive Sprouse.
Marvin Broome.

Witnessed:

Joseph Haslem (board member).

J. Harold Reader.

Hyrum E. Seeley.

It is agreed that the Federal range users in unit G shall receive the Federal range in the following-described areas.

Moroni, Blanche, and Emory Smith shall receive as a private allotment the Federal range for winter usage within the following-described boundaries: Beginning at a point on Green River where the north section line of sec. 9, T. 10 S., R. 19 E., intersects the river, thence east along section line to the N corner of said section, thence north and east diagonally to the NE corner sec. 3, T. 10 S., R. 19 E., thence due east along section $1\frac{3}{4}$ miles thence southeasterly along the ridge between drainages to a point approximately $\frac{1}{4}$ mile east of SE corner of sec. 1, T. 10 S., R. 19 E., thence due east along section line to intersection with Willow Creek, thence south and east along Willow Creek to the intersection of Hill and Willow Creeks, thence up Hill Creek to Brown Canyon water hole located in sec. 32, T. 10 S., R. 20 E., thence due west to approximately $\frac{1}{4}$ mile to a north rim of Brown Canyon, thence along said north rim to a westerly direction to a point where the rim stops, thence northeasterly along divide of drainage to the SE corner sec. 36, T. 10 S., R. 19 E., thence along the south section line of said section continue along section line to north $\frac{1}{4}$ corner of sec. 35, T. 10 S., R. 19 E., thence along divide north of King Canyon to north $\frac{1}{4}$ corner of sec. 27, T. 10 S., R. 19 E., thence along divide in northwesterly direction along divide to intersection of Green River approximately 15 chains SW. of corner common to secs. 29, 30, 19, and 20, T. 10 S., R. 19 E., thence in a northwesterly and easterly direction along Green River to point of beginning. It is further understood that Mr. Otto Nielson has a normal drift south of his winter allotment into the north part of the Moroni, Blanche, and Emory Smith allotment. Also that Clize Sprouse, Otto Nielson, and Ephrium Birchell shall have summer usage with cattle along the bottom of Green River following within the boundaries of the above-described allotment. It is also understood that should emergency arise that the Indian sheep on Wild Horse Bench will have a right to trail to water on Willow Creek through the above allotment to the water hole normally known as Squaw Crossing.

The Indian Service shall receive as a individual allotment for the herds run by Eyhermandy, Backford, Santio, and Contonuts the Federal range within the following described boundaries beginning at a point on Green River 15 chains SW of corner common to section 19, 20, 29, and 30 T. 10 S., R. 10 E., thence southeasterly along a ridge north of King Canyon at a point which is the N $\frac{1}{4}$ corner section 27 T. 10 S., R. 19 E., thence south easterly along a divide to the N $\frac{1}{4}$ corner of section 35 T. 10 S., R. 19 E., thence due east along section line for $1\frac{1}{2}$ miles to the NE corner of section 36 T. 10 S., R. 19 E., thence SE. along line to a point where the north rim of Brown Canyon thence along north rim of Brown Canyon to an easterly direction to Hill Creek at a point where Brown's Canyon empties into Hill Creek thence southwesterly along Hill Creek to a point where a road takes out on the east side of Hill Creek below Myrup's ranch thence up this road which is also up Big Pack Draw to a point where the road leaves Big Pack Draw which point is approximately 10 chains north of a east $\frac{1}{4}$ corner of section 19, T. 11 S., R. 20 E., thence along this road where the rim forms a divide between the drainage of Hill Creek and Big Pack Draw, thence southwesterly along the rim which is a divide between Hill Creek and Big Pack Draw to a point approximately the west $\frac{1}{4}$ corner of sec. 1 T. 12 S., R. 19 E., thence south along township line approximately $5\frac{1}{2}$ miles to the southeast corner section 36 T. 12 S., R. 19 E., thence north and westerly down Hill Creek approximately (7 miles) to a point where River Road Canyon empties into Hill Creek thence NW up the river road canyon to a point which is a bottom of Wild Horse Bench south dugway, which is approximately center of section 28 T. 11 S., R. 19 E., thence southwesterly down Cat Canyon to the west $\frac{1}{4}$ corner of section 6 T. 12 S., R. 19 E., thence around an area $\frac{1}{2}$ set as a watering hole known as No Man's Land to a point $\frac{1}{2}$ mile west to Tabyago Spring thence due west to the head of a canyon that flows into a watering place on Green River known as Dutches Hole, thence northeasterly and westerly along Green River to the point of beginning.

Dave Seeley and Steve Chuturas shall receive the Federal range in the following described area for winter uses. Beginning at a point on Green River known as Dutches Hole thence following down Green River to a point where the south section line of sec. 1 T. 13 S., R. 17 E., intersects Green River thence up a small canyon to a ledge of Petters Point in sec. 12 T. 13 S., R. 17 E., thence in a southerly direction traversing approximately to the center of sec. 12, 13, 24 to the south rim of Big Canyon at approximately the west $\frac{1}{4}$ corner of sec. 19 T. 13 S., R. 18 E., thence following south and east along the south rim of Big Canyon to its head in sec. 15 T. 14 S., R. 18 E., thence south and east to a rim of a point on the divide of the drainage of Big Canyon and Winter Canyon, thence easterly to Winter Canyon thence down Winter Canyon to SW corner of sec. 12 T. 14 S., R. 18 E., thence following east rim of Winter Canyon to a point approximately at the SW corner of sec. 36 T. 13 S., R. 18 E., thence northerly to a rim of Pine Canyon thence following along west rim of Pine Canyon to a point approximately on the SW $\frac{1}{2}$ section line of sec. 24 T. 13 S., R. 18 E., thence west to the east rim of west Tabyago Canyon, thence following down the east rim of said canyon to a point approximately in the center of sec. 36 T. 12 S., R. 18 E., thence north across neck of bench to west rim of east Tabyago Canyon hence following the west rim of east Tabyago Canyon to a point approximately $\frac{1}{2}$ mile east of Tabyago Spring thence west to Tabyago Spring, thence due west to the head of a canyon draining into Dutch Hole watering place on Green River to the point of beginning.

H. A. Tyzack, Smith Investment Co., and David G. Smith shall receive the following Federal range for use in common within the following-described boundary. Beginning at Tabyago Spring thence east to the rim of east Tabyago Canyon thence southerly following the west rim of said canyon to a point approximately in the center of sec. 36 T. 12 S., R. 18 E., thence to the east rim of west Tabyago Canyon thence south along this rim to a point approximately on east west $\frac{1}{2}$ section line of sec. 24 T. 13 S., R. 18 E., thence east to the west rim of Pine Canyon thence south along this rim to the head of Pine Canyon thence westerly to the north and east rim of Winter Canyon thence along this rim to approximately the SW corner of sec. 2 T. 14 S., R. 18 E., thence up Winter Canyon to a point east of a rim of drainage of Big Canyon and Winter Canyon, thence easterly to a rim of east Tabyago Canyon, thence south and easterly up this rim to a point approximately W. $\frac{1}{4}$ corner of sec. 19 T. 14 S., R. 19 E., thence east along head of Tabyago Canyon to the intersection of a road located on the east side of sec. 19 T. 14 S., R. 19 E., thence easterly along this road to the fork of the drainage of Cottonwood Canyon thence following north along the west rim of Cottonwood Canyon to west Squaw Canyon thence north down Squaw Canyon to approximately the NE corner of sec. 15 T. 13 S., R. 19 E., thence following north rim of west Squaw to Hill Creek thence northerly along west rim above Hill Creek to where the west Squaw road hits Hill Creek approximately NE corner of sec. 1 T. 13 S., R. 19 E., thence down Hill Creek to a mouth of river road canyon thence west up River Road Canyon to the intersection of Wild Horse Bench road, thence south and west along a road down Cat Canyon to its intersection of Tabyago Canyon thence down Tabyago Canyon to No Man's Land at Tabyago Spring it is understood that No Man's Land will consist of an area approximately $\frac{1}{2}$ mile wide on either side of Tabyago Spring for approximately 1 mile east of said spring this water shall be used jointly by Indian Service sheep to the north, Tyzack, Smith Investment and David G. Smith, Seeley and Chuturas sheep for watering.

Lafe Bown shall receive as an individual allotment the Federal range for winter usage within the following described boundaries: Beginning at a point approximately $\frac{1}{8}$ mile east of the northwest corner of sec. 6, T. 12 S., R. 20 E., thence south along the rim of Big Pack Mountain to the west $\frac{1}{4}$ corner of sec. 6, T. 12 S., R. 20 E., thence due south along township line to its intersection of Hill Creek at approximately the SW corner of sec. 31, T. 12 S., R. 20 E., thence up Hill Creek to the mouth of Green Canyon, thence south along the east rim above Hill Creek to approximately the west $\frac{1}{4}$ sec. 31, T. 14 S., R. 20 E., thence east along the rim to a point opposite the old oil drilling in sec. 32, T. 14 S., R. 20 E., thence east along the road across Flat Rock Mesa to the SE corner sec. 34, T. 14 S., R. 20 E., thence north along the road to the point on a rim at the head of Ute Canyon approximately west $\frac{1}{4}$ corner of sec. 24, T. 14 S., R. 20 E., thence north and east along a rim to the south section line of sec. 6, T. 14 S., R. 21 E.,

thence east along the section line to the SE corner sec. 6, T. 14 S., R. 21 E., thence due north to the northwest corner of sec. 6, R. 14 S., R. 21 E., thence due east along section line to its intersection with Willow Creek, thence north down Willow Creek to the south $\frac{1}{4}$ corner sec. 31, T. 11 S., R. 21 E., thence following the section line west to the south $\frac{1}{4}$ corner sec. 35, T. 11 S., R. 20 E., thence south following the rim of Big Pack Mountain to the north section line of sec. 15, T. 12 S., R. 20 E., thence west following section line to NE corner sec. 16, T. 12 S., R. 20 E., thence north down the main drainage of Big Pack Draw to the intersection of north section line of sec. 4, T. 12 S., R. 20 E., thence due west following the section to the rim of Big Pack Mountain, the point of beginning. It is also understood that Lafe Brown will have the watering privileges on Hill Creek at the mouth of Ernie Canyon, Green Canyon, Fairbanks Crossing, and above the Rock House Dam. It is also understood that Indians will have the normal use in east Squaw Canyon with cattle from the Jick Taylor ranch. It is also understood that Mr. Louis Thorne will have a normal trail right for his cattle to go from his ranch on Willow Creek to the summer range and return.

Moreni, Blanche, and Emory Smith shall receive an individual allotment of the Federal range within the following described boundaries: Beginning at a point on the west rim of Big Pack Mountain approximately $\frac{1}{4}$ mile east of the NW corner of sec. 6, T. 12 S., R. 20 E., thence east along the section line to its intersection with Big Pack Draw, thence southerly up this drainage to the northeast corner of sec. 16, T. 12 S., R. 20 E., thence due east along section line to its intersection of the rim of Big Pack Mountain, thence northerly along the rim of Big Pack Mountain to its intersection of the north section line of sec. 2, T. 12 S., R. 20 E., thence due east along section to its intersection with Willow Creek, thence down Willow Creek to the intersection of the south boundary of the Louis Torne property, thence due west along section line to its intersection of the rim of Big Pack Mountain to approximately the east-west $\frac{1}{2}$ section line in sec. 23, T. 11 S., R. 20 E., thence northwesterly to the northwest corner of sec. 12, T. 11 S., R. 20 E. (see note allotment for Marvin Broome), thence west to a ridge between the drainage of Carlyle Draw and small drainage of Willow Creek, thence north along this divide to a point approximately $\frac{1}{4}$ mile east of the west $\frac{1}{4}$ corner of sec. 3, T. 11 S., R. 20 E., thence due east to the intersection of Willow Creek, thence down Willow Creek to the south boundary of sec. 2, T. 11 S., R. 20 E., thence west along the divide of the drainage between this canyon and Carlyle Draw to the west $\frac{1}{2}$ corner of sec. 10, T. 11 S., R. 20 E., thence due west to a rim on top of Big Pack Mountain, thence north following the east side of this rim to its intersection of the north line of sec. 4, T. 11 S., R. 20 E., thence due west along section line to its intersection with Hill Creek, thence south along Hill Creek to the Myrup Ranch to the point approximately the west $\frac{1}{4}$ corner of sec. 20, T. 11 S., R. 20 E., thence westerly to the rim of Big Pack Mountain, thence south along rim of Big Pack Mountain to the point of beginning.

A. L. Johnson shall receive an individual allotment of the Federal range within the following described boundaries: Beginning at a point where the south township line of T. 31 S., T. 21 E., intersects Willow Creek, thence due west to the northwest corner sec. 5, T. 14 S., R. 21 E., thence due south to the SW corner sec. 5, thence due west on section line to its intersection of a high rim, thence south along rim to head of Ute Canyon in sec. 24, T. 14 S., R. 20 E., thence east to the rim of Ute Canyon, thence east along the north rim of Ute Canyon to Willow Creek, thence down Willow Creek to the point of beginning.

Indian cattle operated by Glen Reed shall receive the Federal range within the following described boundary: Beginning at a point opposite the north rim of the Ute Canyon on Willow Creek, thence west to the north rim of Ute Canyon, thence west along this rim to the east $\frac{1}{4}$ corner of sec. 24, T. 14 S., rim to the W $\frac{1}{4}$ corner of same section, thence south following a road to the north quarter corner of sec. 16, T. 15 S., R. 20 E., thence southeasterly along the south rim of Mail Canyon to its mouth, thence due east to the south rim of Dry Canyon, thence east along this rim to Willow Creek, thence down Willow Creek to a point of beginning.

It is agreed that the Federal range lying south of the above described allotment in unit G shall be used by Indian stock for spring and fall and summer usage

except that it is agreed that Louis Thorne shall use in common on the summer range with the Indian cattle.

VERNAL, UTAH, October 13, 1942.

This being an attachment to the request of the users in unit G that they be permitted to make their own allotment boundary lines, the undersigned users as shown on the request of October 12, 1942, were parties to the agreements and descriptions of allotments described under that authority. All other users of the unit who are not parties to the request were drawn off allotments by the Grazing Service and assistants and they acted as arbitrators in the matter, keeping in mind setting up workable units for these users.

L. WAYNE LARSON,
District Grazier.
EDMUND H. MURDOCK,
Grazier Aide.

VERNAL, UTAH, October 13, 1942

It is agreed between the Grazing Service and the undersigned users that if the agreements for allotments as outlined in the agreement of unit G on October 12, 1942, are in any way broken up by users not a party of the request to set up range allotments in unit G, or if readjustment is made, the undersigned users will not be bound by the agreement of October 12, 1942.

VERNAL, UTAH, September 10, 1942.

STEVE CHUTURAS,
Meeker, Colo.

DEAR LICENSEE: This is to notify you that a meeting will be held September 21, 1942, at Vernal, Utah.

The purpose of the meeting is to have the users work up their proportion of Federal range in unit G.

The following have been notified to be present: W. L. Bartholomew; Lafe Bown and sons; Jack Brewer; Steve Chuturas; J. L. and M. Downard; Dominique Eyhermandy; Alfred L. Johnson; O. W. Nielson and sons; D. R. Seely; Albert Smith Investment Co.; David G. Smith; Blanche, Moroni, and Emory Smith; Louis Thorne; H. A. Tyzack; Indians, care of C. C. Wright.

You will note the names as listed above. Will you please notify any other interested parties whose names do not appear?

This is an important meeting, and you are requested to be present. If you cannot be here, please give your power of attorney in writing to someone to act for you in your absence.

Yours truly,

L. WAYNE LARSON,
District Grazier.

VERNAL, UTAH, October 12, 1942.

We, the users of the Federal range in grazing unit No. G, Duchesne grazing district, request that we be permitted to make our own allotment boundary lines, both individual and group, for the reason that we think that we can better make more workable units, due to our intimate knowledge of the area involved.

It is requested that these agreements be approved by the advisory board of this district after the range division and boundaries have been agreed upon by the users.

It is understood that these agreements can be changed by Grazing Service regulations, but it is requested that no changes be made until the range survey has been completed and the utilization checks have been made.

It is understood that should any differences arise relative to the division of Federal range, the Grazing Service representative will act as arbitrator, assisted by two disinterested ~~advisory board members~~ Grazing Service employees [in writing].

Mr. PATTERSON. I would like to say this: The Grazing Service operates upon this, they notify a man this decision has been accepted and the boundaries set pursuant to the request.

We have two other short witnesses, Mr. Chairman.

The CHAIRMAN. I want to say to these counties that are affected by the district under consideration, that sometime before we conclude I think it would be entirely proper that some representatives of the municipal government might come forward to make such expressions as he deems proper, bearing on the subject of the tax structure and the economic set-up of the respective communities.

Senator MURDOCK. Mr. Chairman, I believe there are members of the boards of both Duchesne and Uintah Counties here. They have expressed a desire to do that very thing to me.

The CHAIRMAN. That is fine. However, we will not break in on this. Go ahead, Mr. Patterson. I just want to be reminded of that before we conclude.

Senator MURDOCK. There is also another group representing small livestock men, especially in Duchesne County, whom we must hear sometime before we finish.

Mr. PATTERSON. I'll call Mr. Thorne and Mr. Broome.

The CHAIRMAN. In my feeble way I'm trying to aline the Smith case, which is now running out to its conclusion.

Mr. Wright, in your investigation and your study of this subject, is there any doubt in your mind that the Smith people have utilized the territory embraced within unit G?

Mr. WRIGHT. Well, that doubt is based upon that investigation, made by the General Land Office, and it still exists. I do not wish to contradict or dispute what testimony Mr. Smith has given here today; but that was why we doubted whether they have sufficient rights, as they claimed, within unit G; and it seems to me it might be fair to ask that this entire report by the General Land Office go into the record.

The CHAIRMAN. It is quite voluminous. I think it can go on file with the committee without going into the record. While we have to try to make the record as complete as we can, we are still bound by the limits of the amount allotted to us for the transcript, and while we would like to have it go into the record to make our official reporter smile, at the same time we have to make someone else smile back in Washington.

(The report of the investigation referred to was filed with the committee and will be found accompanying the original copy of this transcript.)

Mr. WRIGHT. There is testimony of reliable men in this investigation; affidavits that say, in short, that these Smiths, not all of them, I think, if I may say so, the other Smiths said they did not have continuous use for 2 consecutive years during the priority period in unit G.

The CHAIRMAN. Have you those other men here?

Mr. WRIGHT. Gilbert Wild was one of them and David Seeley was one of them.

Mr. WOEHLEKE. Mr. Chairman, could I read into the record a few brief extracts from the report of the field examiner, Mr. Moulton?

The CHAIRMAN. I am wondering if it would not be better, in view of the fact that this is to become a record of the committee, to let it rest at that. I think it would be more enlightening to the committee. You might read a few extracts that serve your purpose and you will not read any that will not serve your purpose. If the committee reads them they will read them all.

Mr. WOEHLEKE. On the other hand, Mr. Smith here has given certain testimony, which is quite extensive, and which goes into the record, while we have been unable to offer anything so far.

The CHAIRMAN. What is to prevent you?

Mr. WOEHLEKE. May I offer this?

The CHAIRMAN. Why not the original? How about the maker of the record, is he unavailable?

Mr. WOEHLEKE. Yes; he is available.

The CHAIRMAN. The maker of the record is the best witness. Let him testify on what he made the record.

Mr. PATTERSON. I want to say—

The CHAIRMAN. Just a moment.

STATEMENT OF H. D. MOULTON, FIELD EXAMINER, GENERAL LAND OFFICE, DEPARTMENT OF THE INTERIOR, SALT LAKE CITY, UTAH

Mr. MOULTON. My name is H. D. Moulton, field examiner for the General Land Office.

The CHAIRMAN. Now, I understand that you made a record in this matter and we would like to hear from you.

Mr. MOULTON. Well, the report, Mr. Chairman, is rather voluminous.

The CHAIRMAN. I'm not talking about the report, Mr. Moulton, we want your findings, if you please.

Mr. MOULTON. Well, I made an investigation, in March and April last year, 1942, particularly as to the rights of three users of the range in unit G. The first one was Steve Chuturas, generally known as

"Little Steve"; and the second was Edmund Crawford and D. R. Seeley, either as individuals or operating as a partnership; and the third was H. A. Tyzack, whose claim to grazing permits was based on use from predecessors in interest, by the name of Spiros and John Charchales.

The CHAIRMAN. This investigation was made for what department?

Mr. MOULTON. As a field examiner of the General Land Office at the request of the Bureau of Indian Affairs. It came to me through the regular channels and was assigned to me for investigation.

The CHAIRMAN. Did you confer with the Grazing Service?

Mr. MOULTON. Yes; I conferred with the Grazing Service and with the Indian Service.

The CHAIRMAN. You may proceed.

Mr. MOULTON. Well, the licenses which had been issued by the Grazing Service in unit G to these several parties were based on properties used during the priority years by these parties or their predecessors in interest, in Colorado, for summer use in Colorado. My investigation disclosed that with regard to "Little Steve," that he had operated from certain properties, locally known as lime kiln, 15 miles south of Meeker, in Colorado; but that his operations from those properties did not cover any 2 consecutive years in the priority period from 1929 to 1934 or any 3 years which the range code in effect at that time required. The range code made the requirement that the base property must have been used in that manner, that is, for 2 consecutive years or for any 3 years in the 5-year period. His use of the lime kiln property, which was offered as a base for his grazing privileges in grazing district No. 8—and in 8 he had been assigned to unit G—did not commence until 1933. In other words, his use from that property in Colorado had not started until 1933 and, while he wintered that year in Utah grazing district No. 8, that was the extent of his use from that particular property in Utah No. 8.

The CHAIRMAN. Your base period is from '34 to '39?

Mr. MOULTON. No; 1929 to 1934. So he went into Utah No. 8 in the winter of 1933-34. Then the Taylor Grazing Act was enacted in June 1934, and his use subsequent to that, of course, was not taken into consideration in the adjudication of the grazing privileges. He has made representations to the Division of Grazing, to the advisory board here in Vernal, which did not coincide with what I found in my investigation with regard to his use of that Colorado property in connection with his winter grazing on unit G. In other words, he represented to the Grazing Service officials and to the advisory board of district No. 8 that he had operated from this lime kiln property in Colorado, the year preceding 1933-34, which, if my investigation had found was a fact, would have brought him within the requirement of the 2-year consecutive use. That is, it would have tied up the base property in Colorado with the winter use of the public domain in unit G. However, my investigation failed to disclose any use by him in Colorado with which he could properly be credited for the claim in Utah, or any other place as far as that is concerned, during the priority period. It had been confined to 1 year.

The CHAIRMAN. Did you take your findings up with the Grazing Service?

Mr. MOULTON. The Grazing Service was given a copy of my report, as I understand it, Senator, immediately after its submission. The

Indian Service was given a copy of the report and the Grazing Service was furnished a copy. During the course of my investigation I conferred frequently with the various Grazing Service officials and Indian Service officials with whom I came in contact, and it was necessary to contact them in order to obtain the information that I desired.

In that connection, I was given very full cooperation by the members of both services, and, as I say, immediately upon submission of my report to Washington, I understand the copies were furnished to the two Bureaus.

The CHAIRMAN. That is one case. Now, how about the others?

Mr. MOULTON. Well, then, with regard to Crawford and Seeley, my investigation showed they had established a right in Colorado from a property that appeared in the record as the Howard property, which is located in Rio Blanco County, on the corner of the Rio Blanco County line, Colo., which they have purchased from the Carbon Emery Bank, which had foreclosed a mortgage on the property along in 1932. Mr. Crawford at that time was connected with the Carbon Emery Bank at Price as assistant cashier and also as a field man for them. They have numerous loans to sheepmen scattered all over Utah and western Colorado, and Mr. Seeley had been associated with Mr. Crawford for a number of years in the Bown livestock property, which appeared in this hearing as one of the properties acquired by the Indian Service in their purchase program, in letters shown in red along unit G.

The CHAIRMAN. Unit G?

Mr. MOULTON. Unit G; yes, sir. As I say, Mr. Crawford was connected with the bank, the bank held a mortgage on the Howard property, foreclosed, and Mr. Crawford at that time was currently ready to get into the livestock business. He made an arrangement with the bank and took over the Howard property; was allowed to run it a year for the bank, and, in 1932, and early in 1933, they acquired the property. Well, with that property there were 1,200 sheep. Prior to that time—prior to the purchase of the property by Crawford and Seeley—the Howard sheep had always wintered in Colorado, on what is known as Colorado Grazing District No. 1, which is east of the Colorado-Utah line. After Crawford and Seeley acquired the property, their representations made to the Grazing Service were to the effect that they had brought those 1,200 sheep from the Howard property to the Bown Livestock property on unit G. In order to enlighten you further in that regard, Mr. Crawford at the time the Bown Livestock Co. property was acquired by the Indian Service, was president of the company, and Mr. Seeley was a stockholder in it—had been operating here on unit G on the property not owned by the Indian Service. When they bought the Howard property, in Colorado they still retained at that time their interest in the Bown Livestock property here in Utah and continued to operate them during the first year of the ownership of the Howard property in Colorado, and had been representing that these 1,200 sheep had been brought over to the Bown Livestock property on Hill Creek, and that they had entered on the public domain in unit G of district 8 in the winter of 1932–33, and came the winter of 1933–34, which would have established a priority for the 1,200 sheep on the public domain on unit G.

In 1934 they returned to Colorado, having acquired another property, in addition to the Howard property, with all of their sheep. About that time, I take it, was when the transfer of the Bown Livestock Co. property on Hill Creek was made to the Indian Service. Anyway, my investigation was conclusive that they had brought this 1,200 head of sheep over to the Hill Creek area in those 2 years, and the intimations were very strong that they had wintered on the same range that had been heretofore used by the same band of sheep while on the property of Howard during the first 3 years of the priority period. In other words, the 1,200 sheep had remained in Colorado, on the area that had been formerly used by Howard; and they had not actually entered on the public domain in unit G. Further, the only base property set up by Mr. Crawford and Mr. Seeley upon which they predicated their claim to privileges in Utah was the Howard property, in Colorado, and the allegation that these 1,200 sheep had wintered in Utah from that property.

In examining the records of the Grazing Service at Meeker, it developed that the Howard property had been surveyed—this dependent property survey—to determine the animal-unit-months carrying capacity. In the adjudication, the rights of Crawford and Seeley in Colorado got full credit for the commensurability of the Howard property which had been extended in granting them privileges in Utah, and in Colorado Grazing District No. 1. Hence any privileges granted them over here at that time made it appear that there had been a sort of a pyramiding of the base property; that is, to apply it in both places. So they had no base property for consideration in the adjudication, made in connection with the Colorado privileges, that were applicable to unit G of grazing district No. 8 in Utah.

In regard to Mr. Tyzack, his rights are predicated upon a purchase by him of three homestead properties on Nine Mile, 3 miles out of Meeker, Colo., formerly owned by three different individuals who, during the priority period, from 1929 to 1934, leased their properties to various operators who were summering their sheep in the area from Utah. Among them were these men, Spiros and John Charchales. They had two of the properties comprising approximately 1,300 acres under lease for at least 3 of the years in the priority period—4 years, in fact. They also had the third property leased for 2 years, but not consecutively.

In other words, Spiros and John Charchales had qualified those properties under the range code—two of those properties. They had entered the Charchales sheep; had wintered them on unit G during the time they were leasing these properties in Colorado. Therefore, that so far as Mr. Tyzack is concerned, my investigation disclosed that he had an established priority that his predecessors in interest had established a priority from these Colorado properties on unit G in Utah Grazing District No. 8, to the extent of approximately 900 to 1,000 sheep. They used the Colorado property about $3\frac{1}{2}$ months during the summer, lambled on other properties in the general area, and used the property, such as purchased by Mr. Tyzack, during the latter part of the summer until they started to trail back into Utah.

My investigation showed that Mr. Tyzack was probably in unit G of grazing district No. 8 in Utah, to the extent that his rights had

been established, from Colorado property, formerly leased by Spiros and John Charchales. That is the result of my investigation.

As I went along, my instructions in regard to the investigation were to cover these three parties first and to submit a report; and that it was the desire to enlarge the investigation to include other users in this area. It named the men that are included in this, the Smith group, as I recall, which included Mr. Moroni Smith, Blanche Smith, who was Mr. Moroni Smith's wife, his son, Emory Smith, and the Albert J. Smith Investment Co., David G. Smith estate, Smith & Butters, and David G. Smith, individually.

As I went along, knowing I would afterward be called on to complete the investigation—that the scope of it was to be enlarged, and I would ultimately have to report on these other men also—I obtained such information as I could. But I did not obtain complete information in regard to any of these other parties, and I am not in a position to state any definite conclusions in regard to their rights or privileges.

The CHAIRMAN. Right there, is there any note made by you in the excerpts that have now become a part of the files of this committee, or will be, pursuant to the suggestion the Indian Bureau has made—your last expression that you did not make a full and complete investigation as to the Smith holdings; is that correct?

Mr. MOULTON. Yes, sir; I am absolutely not prepared to come to any conclusion in regard to them. As I say, it worked in generally in connection with my investigation that I was engaged on. I did make query, but I have not any definite basis for any information.

The CHAIRMAN. Your conclusions are quite definite as regard the three whose names you have mentioned?

Mr. MOULTON. Yes, because I completed that investigation.

The CHAIRMAN. Those were the three assigned to you for investigation?

Mr. MOULTON. Yes, sir.

The CHAIRMAN. And you were advised to watch out as you went along?

Mr. MOULTON. Yes, sir; I knew these others were going to be assigned to me for investigation.

The CHAIRMAN. You would not want this committee to be influenced by any expression that you might make with reference to other than the three whose names you have given us?

Mr. MOULTON. No; I would not. The excerpt that was read was from the records of the Grazing Service here in Vernal. That is public property, and does show that when Mr. Smith first filed his application for a grazing license it restricted his customary use to a rather limited area and that as he filed successive applications he enlarged it considerably. But that is a matter of public record, no conclusion involved. I am just quoting from that. He stated in the application—

Mr. PATTERSON. May I ask a question? Don't you know it is a fact, Mr. Moulton, that the Grazing Division, in selecting the area, the rights of the occupants to the public range, is not required to select that user in a particular area? That is, where Mr. Smith really asked for an allotment in units F and H, the Grazing Service consistently placed him in G. They are not required to give him

the exact area that he grazed in the past; don't you understand that?

Mr. MOULTON. I am not qualified, Mr. Patterson, to say.

Mr. PATTERSON. I judge from your analysis of the *Tyzack* case that you predicated, did you not, on the fact that that was the specific area, in chief?

Mr. MOULTON. No doubt.

Mr. PATTERSON. In any of the others you base your doubt upon the fact they have some use of this specific area, whereas it is within the province and power of the Grazing Division to locate them in H, whereas he was using G in the past?

Mr. MOULTON. I'm not familiar with the rules of the Grazing Service in that regard, Mr. Patterson.

The CHAIRMAN. Any questions, Mr. Wright? Mr. Woehlke?

Mr. HAVELL. Mr. Chairman, I would like to say that it became necessary for Mr. Moulton to be taken off of this work in order that he might do special work in another State in connection with the activities of the war. So his failure to complete the examination is due to the war conditions.

Mr. WRIGHT. I might say, Mr. Chairman, that I believe the request was made of the General Land Office to make this investigation to bring out the facts just as Mr. Moulton has described them. There has been a good deal of controversy and a good many things stated as facts about a lot of these cases that are not facts; until it seems desirable to have a disinterested party investigate them. This is the first time I have heard Mr. Moulton give an oral report of it, and I think it is very enlightening. If all of the phases could have been completed, it might serve as a basis of dispelling a good many disputes. That is the purpose of it.

Mr. WOEHLEKE. May I ask him a question or two?

The CHAIRMAN. Certainly.

Mr. WOEHLEKE. As you went along in your study of the *Crawford* and *Tyzack* cases, you have said you gleaned by the wayside any information you could about the Smith family, and their particular applications and grazing privileges?

Mr. MOULTON. Yes, sir.

Mr. WOEHLEKE. And practically the only information about the Smith application was derived from their applications, as made to the Grazing Service?

Mr. MOULTON. That and unsupported statements. It is my custom—

Mr. PATTERSON. I do not understand that.

Mr. MOULTON. I say that, and unsupported statements of people. As I go along I have contacted the interested parties. I have never talked to Mr. Smith or any of the Smith group about what they are doing; all that was taken was the Grazing Service records and files.

Mr. WOEHLEKE. Then the Grazing Service files, according to your study of these files, indicated that the application from most of the Smith family, the prior use was usually placed in what is now known as unit H of district 8, and a very little of it was claimed in what is now known as the Ute extension area, that area included in the green lines?

Mr. MOULTON. That is what the applications show, Mr. Woehlke. On the other hand, that is not conclusive at all as to the prior use, be-

cause in the early years of the operation of the Taylor Act, to understand the full implications of it, oftentimes they did confine this customary use to a certain area which they afterward changed materially. That was nothing unusual in that it was done by a great number of applicants. I believe it was all new to them, and sometimes they would be entirely mistaken about where the original customary use was.

Senator MURDOCK. May I ask you, you say that was frequently done. Are you speaking from experience now?

Mr. MOULTON. I have had considerable experience; yes, sir. When the Grazing Service was initiated, I was at that time in the Division of Investigations of the Interior Department and we cooperated with the Grazing Service in getting started. I have had occasion to examine a large number of applications for grazing licenses and I note that the applicants would sometimes be very indefinite as to where they had had their customary use and it would be changed in other subsequent applications. There was nothing unusual about that.

Mr. PATTERSON. May I ask you a question there? When did you make that investigation with reference to Mr. Smith?

Mr. MOULTON. I have not made the investigation with reference to Mr. Smith.

Mr. PATTERSON. You referred to the prejudicial part of the record. When did you see that?

Mr. MOULTON. I made my investigation in March and April 1942.

Mr. PATTERSON. Did you see the statement which was read here this morning where he said he had used unit G consistently?

Mr. MOULTON. All of those statements are incorporated in my report, Mr. PATTERSON, from the first to the last.

Mr. PATTERSON. Then your report would clearly show that he did use unit G?

Mr. MOULTON. Show it was described in the later application on file.

Mr. PATTERSON. That was on file at the time you made your investigation for your report?

Mr. MOULTON. Of course it was, and I quoted all of the applications, in each instance, for each party, from the first application on through to the last application of record.

Mr. PATTERSON. Now, you understand he was applying in the first instance, for permit on F and H, and necessarily he gave the use of that particular area. But the Grazing Division placed him over in G, so he would be emphasizing what he wanted, his use of those particular units.

Mr. Chairman, I would like to make a statement to the record on that.

The CHAIRMAN. Just a moment; keep it straight. Mr. Moulton was called by reason of the Indian Service saying he was here, and the chairman thought it was best to have Mr. Moulton amplify his statement, or excerpts from his statements, as they appear in the record, read by the Indian Service. I think Mr. Moulton has, up to this point, clarified his statements.

I want to say this, now, individually, I don't think Mr. Moulton would care to be bound by the statement read by Mr. Woehlke from the record, nor does he care to have the committee bound by the statement he has just made with reference to the case of the Smiths.

Mr. MOULTON. I think I stated that, Senator. I don't want to be bound by this. I have not completed my investigation.

The CHAIRMAN. That is entirely clear, and the committee understands it entirely. I again draw the attention of the Indian Service to the fact that we do not want to be bound by mere excerpts. But we want the original matter, and the whole of it, as nearly as we can have it.

Senator MURDOCK. It is my opinion that the witness is being decidedly fair to the Indians, and also to Mr. Smith.

Mr. JOHNSON. Mr. Moulton, the first application from Steve Chuturas, was submitted by Mr. Chuturas through a protest, which was filed with the Division of Grazing, the grazing board of district No. 8, was it not?

Mr. MOULTON. As I recall it was; yes.

Mr. JOHNSON. And therein he alleged that, during the qualifying years of 1929 to 1934, he was engaged in the sheep business, to qualify in the area known or designated as unit G, and identified on the map as the lines between the black and green—

Mr. MOULTON. What is your question, Mr. Johnson?

Mr. JOHNSON. He alleged, in his protest, that he ran sheep within that given area, known as unit G, between the years of 1929 and 1934, for his qualifying years?

Mr. MOULTON. There was an allegation, yes, to that effect.

Mr. JOHNSON. And in that application he set up described lands, situated in the county of the Rio Blanco, State of Colorado, did he not?

Mr. MOULTON. As base lands, base property; yes.

Mr. JOHNSON. Now, did you, in making your investigation, check with the owners of the particularly described lands to determine whether or not they had been leased during those priority years?

Mr. MOULTON. I did not check with the owners of that property; no. Mr. Chuturas' license had been issued, according to the records, in the grazing office here in Vernal, on a showing by him, presented, I believe, by Mr. Hugh Colton, acting as his attorney, in which it was set up that he had operated from these properties, during the priority years, to the extent necessary to qualify for the privileges in Utah grazing district No. 8. My investigation disclosed that he had not operated from those Lime Kiln properties in those years; that he had then gone to Colorado, and, in about 1932, the first year, had leased the James ranch in Rio Blanco County, Colo., north of Meeker, and a considerable distance from the Lime Kiln property; that he had summered there, and had come over to Utah grazing district in the winter; and that in the following year he had leased these so-called lime kiln properties, south of Meeker, and had again come over to grazing district No. 8, in that winter and in subsequent winters. I do not believe I stated to the committee, in regard to his use in unit G, over here, that, while my investigation did show that he had wintered his sheep within the exterior boundaries of Utah grazing district No. 8, at least 3 of the 5 priority years or for at least 2 consecutive years of those priority years, it did not indicate that he had actually spent 2 consecutive years, or any 3 of the priority years, on the area which is now included in unit G. This investigation showed that Mr. Chuturas made a circle in his operations, circling in and out of Colorado, and coming out for wintering. He came down White River from Meeker. He also operated in the general vicinity of Meeker, from the time he went over into Colorado; and he would trail down the White River, through the

Colorado grazing district No. 1, in the fall. Some years he got caught in heavy snows, and he was a long time on the trail, and he really never got to unit G. The years he did get there, he was there just a short time. My investigation shows that, I think, very definitely; and that he did not actually have his sheep on what is now unit G for any 3 years in the priority period, or any 2 consecutive years; but that he did winter his sheep, during the priority years, sometimes on Utah grazing district No. 8, sometimes stopping around Watson, in that area, and not reaching unit G at all.

Mr. JOHNSON. Did you check the land to see whether his predecessors had operated in unit G or unit F?

Mr. MOULTON. We checked the records of the Grazing Service in that regard, and I could find no use by any predecessor of Chuturas in Utah. The winter use in Utah there had been brought to my attention—there had been a Basque on the property I—

Mr. JOHNSON. Nick Arimos, was that the name?

Mr. MOULTON. It could have been, it was a Basque name. This was at the time there was nothing available, no evidence I could find that there had been any use at all from that property during the priority period except by Chuturas. After I submitted my report it was informally brought to my attention in this area that this Basque had leased these Lime Kiln properties, and according to the information I received then, he had not entered in Utah, but it is possible that he did. I would not state definitely in that regard. In my investigation I made every effort I could to ascertain whether or not there was any priority attached to that land, and I was unable to find it.

The CHAIRMAN. Has a priority, has a right, been granted by the Grazing Service to this man in question?

Mr. JOHNSON. Yes.

The CHAIRMAN. What is his name?

Mr. JOHNSON. Steve Chuturas. I have been laying a foundation to introduce certain files in the possession of the Division of Grazing. They are the originals, and we will have to duplicate them by copies.

The CHAIRMAN. Division of Grazing has come to a conclusion on the matter and has granted a right. Is that right?

Mr. JOHNSON. That is right, sir; 1,500 head of sheep.

The CHAIRMAN. Is this committee going way back into these records?

Mr. JOHNSON. I see no necessity for it, but since the statement—

Senator MURDOCK. Who is questioning his right?

Mr. JOHNSON. The Indian Department, sir, is questioning his rights, stating they find out he did not run in this area designated as unit G, in district 8, and we are here qualified with the records, and the Division of Grazing office, if you see fit to go into it. It shows it has been determined by the Division of Grazing.

The CHAIRMAN. We are going to have to terminate this some place. I don't know; we do not wish to be unfair about it at all, but it seems to me we have to get to some conclusion.

Are there any further questions of Mr. Moulton?

Mr. PATTERSON. May I make a statement, in response to what he said, relative to the administration of the Taylor grazing bill? It is the practice of the officials of the Taylor grazing bill, although they try to say to all claimants in reference to prior use—and, of course, claimants would come in and say, "I want that particular area"—but it is entirely consistent for the administrator to say, "Well, this area is

taken up; you have used this area all your life, but that is pretty well taken up, and it will eliminate some difficulty if you will take this area, where you have never used it." The only pertinent fact is, Have they the basic rights somewhere within the area? I think that is the practice; that is admitted.

The CHAIRMAN. The chairman wishes to express commendation for your frankness. Mr. Moulton, in the matter. I think you have given us some light that is worth while, that has clarified a record that we think should have been clarified. That is all the comment we have to make right now on this matter.

Mr. PATTERSON. I'd like to call Mr. Thorne. Will you state your name for the record?

STATEMENT OF LOUIS M. THORNE, OURAY, UTAH

Mr. PATTERSON. Where do you live?

Mr. THORNE. Ouray.

Mr. PATTERSON. Is that within the so-called "Back area," or unit G, of district 8?

Mr. THORNE. Well, the post office at Ouray, Utah, but my holdings are up in this area here.

Mr. PATTERSON. Where do you run your stock?

Mr. THORNE. I have summered them in this area, in here.

Mr. PATTERSON. Where have you wintered them?

Mr. THORNE. Adjacent to the home ranch there in the foothills, in the feed yard.

Mr. PATTERSON. You have a permit in the southern part of that for the summer range?

Mr. THORNE. Yes, sir.

The CHAIRMAN. Is that a permit from the Grazing Service?

Mr. PATTERSON. Is it a permit from the Grazing Service?

Mr. THORNE. Yes, sir.

Mr. PATTERSON. What kind of ranch property do you have?

Mr. THORNE. Ranch property?

Mr. PATTERSON. Yes.

Mr. THORNE. Well, it is an ordinary ranch for producing hay, grain, and other crops.

Mr. PATTERSON. How many acres are in cultivation?

Mr. THORNE. One hundred fifty-four.

Mr. PATTERSON. What do you grow?

Mr. THORNE. Alfalfa, hay, oats, barley, wheat, and potatoes.

Mr. PATTERSON. How many ton of alfalfa do you put up in an average year?

Mr. THORNE. Average year, 200 ton.

Mr. PATTERSON. Do you know where you could go for summer range if you were excluded from that area?

Mr. THORNE. I do not.

Mr. PATTERSON. Did you ever talk with any of the grazing officials with reference to the sale of your rights?

Mr. THORNE. Yes; I have asked them a time or two. As I understood it, if they were to buy all property where range rights were involved—

The CHAIRMAN. Who was to buy?

Mr. THORNE. The Indian Department.

The CHAIRMAN. I don't think that is the question. The question, as I caught it, is did you ever talk with the Grazing Service with reference to your rights?

Mr. PATTERSON. I mean to say, the Indian Service. Go ahead and say what was said to you in relation to the sale of your property.

Mr. THORNE. Well, I asked Mr. Wright one time if they were going to purchase that part of the country in there. He said they were not. They had contemplated it in the start of the program, but the money has not been forthcoming, and they had had to drop certain areas and cut down on the areas they had contemplated purchasing.

Mr. PATTERSON. Did they ever indicate to you, Mr. Wright, or any of the other officials, that you were trespassing upon Indian lands and that it would be advisable for you to sell?

Mr. THORNE. No.

The CHAIRMAN. Are there any further questions?

Mr. PATTERSON. I believe that is all. I would like to call Marvin Broome.

STATEMENT OF MARVIN BROOME, OURAY, UTAH

Mr. BROOME. My name is Marvin Broome, and I live on Willow Creek.

Mr. PATTERSON. Will you indicate on the map where you live?

Mr. BROOME. Just about right in there.

Mr. PATTERSON. Right on the edge of this area we have been discussing?

Mr. BROOME. Yes, sir.

Mr. PATTERSON. Do you have grazing rights from the Taylor grazing bill within that area, the black and green?

Mr. BROOME. Winter grazing rights in unit G; yes, sir.

Mr. PATTERSON. Where do you graze in the summertime?

Mr. BROOME. White River in the summertime. I was to get a permit up here, in this part of the country, but I was advised not to go up there.

The CHAIRMAN. You were what?

Mr. BROOME. I was advised not to go up there until this trouble was settled.

The CHAIRMAN. Who advised you on that?

Mr. BROOME. Mr. Wright, and other officials over there.

The CHAIRMAN. Where does your permit exist? To what territory does it apply?

Mr. BROOME. You mean my home ranch?

The CHAIRMAN. Yes.

Mr. PATTERSON. Your permit to graze; he is asking you what area is it in?

Mr. BROOME. Well, I guess—do you mean winter grazing?

Mr. PATTERSON. Any time.

The CHAIRMAN. Any time you had a right to graze in there; what do you graze? Where do you graze?

Mr. BROOME. West of the Willow Creek foothills.

The CHAIRMAN. How many cattle?

Mr. BROOME. One hundred eighty.

The CHAIRMAN. How long have you run in there?

Mr. BROOME. Ever since 1911.

The CHAIRMAN. And how long have you lived there?

Mr. BROOME. All my life.

The CHAIRMAN. Was your family there before you?

Mr. BROOME. Yes, sir; got a family there.

The CHAIRMAN. Your father and mother lived there before you?

Mr. BROOME. No, no.

The CHAIRMAN. Did you come in there, at first, to take up that piece of property?

Mr. BROOME. Yes, sir.

The CHAIRMAN. You took it up when it was raw land?

Mr. BROOME. Yes, sir.

The CHAIRMAN. You broke it, and cultivated it?

Mr. BROOME. Yes, sir.

The CHAIRMAN. And utilized the territory surrounding it, for your cattle?

Mr. BROOME. Yes, sir.

The CHAIRMAN. How much land have you?

Mr. BROOME. I have 480 acres there.

The CHAIRMAN. Cultivated?

Mr. BROOME. Well, there is about 350 acres of cultivation.

The CHAIRMAN. What do you raise?

Mr. BROOME. Alfalfa hay and grain.

The CHAIRMAN. Do you feed your cattle during any part of the 12 months of the year?

Mr. BROOME. Yes, sir; that is one thing I do do; put up the hay; and I feed them cattle.

The CHAIRMAN. Is it alfalfa hay?

Mr. BROOME. Yes, sir.

The CHAIRMAN. You feed your cattle about how long during each year?

Mr. BROOME. Well, this was an uncommon winter; did not feed so heavy. The ordinary winter starts in along about Christmas and continues on to the 1st of April.

The CHAIRMAN. Then you turn them out along about that time?

Mr. BROOME. Begin to turn out, and feed a little, you know.

The CHAIRMAN. How many stock do you turn off, from 1 year to another, to market?

Mr. BROOME. Well, it depends on how we cut down on the herd. That is, in some years I sell more calves than in others; in other years I carry more.

The CHAIRMAN. Are you running a hundred all the time, stock cattle? Are you running more than 180? Do you run more than 180?

Mr. BROOME. No, no.

The CHAIRMAN. How many do you turn over a year? Would it be cows or heifers?

Mr. BROOME. There has been several years, there, that I have sold over a hundred calves, out of that, besides cutting down on some of the old cows and keeping some of the young stuff.

The CHAIRMAN. Do you have a family there?

Mr. BROOME. Yes, sir.

The CHAIRMAN. Of whom does your family consist? Your wife and how many children?

Mr. BROOME. My wife and four boys and one girl.

The CHAIRMAN. Are they living with you now?

Mr. BROOME. No; one boy is in the Army and the other boys—one boy is in school and the other two boys are with me on the ranch.

The CHAIRMAN. What do you pay in taxes to this county?

Mr. BROOME. I paid this year \$324.

Mr. PATTERSON. How many tons of hay do you produce?

Mr. BROOME. Between three and four hundred tons.

Mr. PATTERSON. A year?

Mr. BROOME. Yes, sir.

Mr. PATTERSON. Have you been over the area purchased by the Indian Agency, for the benefit of the Indians, in that country?

Mr. BROOME. Yes; I have been practically all over this country, except in this Moonwater country. I never did go in there.

Mr. PATTERSON. Had you observed the hay crop produced there in the past year?

Mr. BROOME. Do you mean in this area here?

Mr. PATTERSON. Yes.

Mr. BROOME. I could not vouch for that.

Mr. PATTERSON. Have you been up and down the creek?

Mr. BROOME. Up and down the creek, before the Indians thought of it.

Mr. PATTERSON. Since the time the Indians took that over, what would be your judgment as to which produced, as to who produced, a greater amount of hay, the people who owned them or the Indians, on all of those ranches that have been bought for the Indians?

Mr. BROOME. Well, I could not vouch for that.

The CHAIRMAN. I think I would excuse him on that one, if I were you.

Mr. PATTERSON. Have you discussed the probable sale of your property with any of the Indian officials?

Mr. BROOME. I did, at the time when Mr. Paige proposed this here reservation. He started in and he said, "We will take over to Willow Creek, and we will extend it over to Green River." But time went along, until it is now 1943, and he started in 1935. You can see this here crooked line—that number of years has caused quite a lot of conflict in drawing the lines and kept them down along these places.

Mr. PATTERSON. Did he ever canvass you for selling your property, ask you to sell to them?

Mr. BROOME. He called a meeting in here in 1935, and he says this, he says: "You fellows that want to sell out will sign an agreement; if you don't sell," he says, "we will not force you out of the country or cause you to sell out if you want to stay there, but," he says, "if you want to sell, why, you sign up the agreement." So we all signed up, and that is the reason my name is on that list.

Mr. PATTERSON. Did he say anything, offer you any inducement, say anything might happen, if you did not sell?

Mr. BROOME. No, sir.

Mr. PATTERSON. Then I misunderstood you. I thought there was something intimated that you were making use of the Indians' lands.

Mr. BROOME. He said if we wanted to sell we could sign up with him, but he said he would not force anybody to sell unless they wanted to.

Mr. PATTERSON. Was there anything to the effect that you were making use of Indian lands?

Mr. BROOME. No, sir.

Mr. WRIGHT. Mr. Broome, where do you summer, have your permit to summer range down on White River? Point out on the map where that is. That is, approximately.

Mr. BROOME. It would be up from my place, right in here, right about in there.

Mr. WRIGHT. Are you satisfied with that range and that permit?

Mr. BROOME. No; I was not, at the time. I had a little trouble with the sheepmen in there. They wanted to see me moved out if they could have arranged for me to get out.

Mr. WRIGHT. In our conversation, when you came down to my office, one time—I am trying to recall it, and maybe you can help me out—I am not sure, but it seemed to me you said you would rather summer where you had been accustomed to, on White River, than to move.

Mr. BROOME. Well, I made that statement because of this here; they wanted to move me up here, and this was not settled; and they said they would advise me not to go in there until it was settled.

Mr. WRIGHT. Did you ever run up on the Moonwater country?

Mr. BROOME. No, sir.

Mr. PATTERSON. You say Mr. Wright advised you not to go into this area?

Mr. BROOME. Yes.

Mr. PATTERSON. Did he say why?

Mr. BROOME. He said this was pending; this here case was pending, and was not settled, and he would advise me not to go into it until it was settled up.

Mr. PATTERSON. Not to go into that area?

Mr. BROOME. Yes, sir.

Mr. PATTERSON. Now, Mr. Chairman, if there is any dispute whatever about the period of time Mr. Smith has used that area, in unit G, there are at least 10 men that can testify to it.

The CHAIRMAN. I don't know what the other member of the committee may think, but I am going to tell you what my individual views are. I go on the general principle that when a matter has been adjudicated, by an authority that has jurisdiction to adjudication, I am going to follow that adjudication, unless something is shown that it should be upset. Now, the Grazing Service has adjudicated the matter, as I understand it, with reference to Mr. Smith, and that is in the record—if it is not, it will be in. Personally I am only one member of a committee here, please understand that. You may have to satisfy others. Personally, that would be conclusive with me. If you go beyond the adjudication, there is no limit to which you may not have to go.

Senator MURDOCK. I think you have stated the only position that the committee can take. Certainly the administrative body has jurisdiction, and, when that body is acting, I do not think a legislative committee has any business going beyond that.

Mr. PATTERSON. I think that is right. We accept their adjudication.

The CHAIRMAN. That adjudication, as regards the Smiths, and others, is in the record; is it not?

Mr. LEECH. I will have to ask Mr. Larson, Mr. Chairman.

Mr. PATTERSON. I understand they are putting it in the record.

Mr. LEECH. It is on the list Mr. Larson put in this morning.

The CHAIRMAN. All of the commensurate rights are in that list, and all of the other rights are on that list?

Mr. LEECH. Yes; the licenses that have been granted; yes, sir.

The CHAIRMAN. Are there others here who are contending for licenses, whose licenses have not been granted by the Grazing Service?

Mr. LARSON. Not to my knowledge.

Mr. PATTERSON. Unless there is some document, or something we would like to put in the record later.

The CHAIRMAN. Does anyone care to be heard on this subject, with reference to the rights? I am referring now to unit G, the territory embraced within the black and green line, which seems to be the principal territory under contention, here, on this map.

It looks as though we might be getting through this. Could it be possible we are getting toward an end here?

Has the Indian Service anything further?

Mr. WRIGHT. The items that you requested yesterday, Mr. Chairman, the income of the Indians, and another document that you requested a little later, that is not quite complete, the compilation on the purchased properties. If you recall, you said you would like to have that compilation of the ratings, on the purchased properties, by our land appraisers. It is not quite finished, yet, but we are getting that.

The CHAIRMAN. That will show the commensurability and value on the whole?

Mr. WRIGHT. Yes.

The CHAIRMAN. As regards the Grazing Service, have we completed the record, as far as you care to make it, Mr. Leech?

Mr. LEECH. Yes, sir, Mr. Chairman.

The CHAIRMAN. Mr. Johnson, have you anything further to offer on unit G?

Mr. JOHNSON. I do not believe so, Mr. Chairman.

The CHAIRMAN. Mr. Patterson?

Mr. SMITH, do you speak for the house of Smiths?

Mr. SMITH. I spoke up until 1920. Their activity was very much the same as mine until that date. They can come on the stand and state from that time on.

The CHAIRMAN. I take it that it might be conceded that the other members of the Smith family would run along the same line and corroborate your statement?

Mr. SMITH. I think that would be very much the same.

Mr. PATTERSON. I made a statement in the record this morning, and the boys are right over here.

Mr. JOHNSON. I take it that the record now discloses that the rights of Mr. Chuturas, Mr. Seeley, Mr. Crawford, and Mr. Tyzack are established by the Grazing Service, and—

The CHAIRMAN. If that be the fact you will have to confer. You have to make your own record here on this thing.

Mr. JOHNSON. I understand, Mr. Larson, the information you furnished shows that it has been established that permits were granted in these cases.

The CHAIRMAN. I think your question goes to this, if I am not mistaken, has a license been granted to the parties whose names you have mentioned by the Grazing Service within unit G?

Mr. JOHNSON. May I ask him those questions to make certain?

Mr. LARSON, has a license been granted to H. A. Tyzack in the area known as unit G upon the map, between the lines that are black and green?

Mr. LARSON. Yes.

Mr. JOHNSON. For how many head?

Mr. LARSON. The record I gave to the committee would show that.

Mr. JOHNSON. Has there been a license granted to Steve Chuturas?

Mr. LARSON. Yes.

Mr. JOHNSON. To David Seeley and Mr. Crawford?

Mr. LARSON. Yes, sir.

Mr. JOHNSON. Are those licenses in good standing at this time?

Mr. LARSON. I know nothing that would not put them in that standing.

Mr. LEECH. They are temporary licenses, Mr. Larson?

Mr. LARSON. Yes; that is right.

Mr. JOHNSON. By "temporary" you mean, pending this settlement?

The CHAIRMAN. No; all licenses are temporary licenses. The permits are 10 years. All licenses are for 1 year, and permits are for 10 years. Am I correct in that?

Mr. LEECH. That is right.

Mr. WRIGHT. Mr. Chairman, that leaves the impression that the last three named cases are entirely settled. What, if I might ask, was the procedure to conduct the case, the hearing, so that these men will have a fair chance to present all of their claims in the testimony that has been made and might be made in the future?

Mr. LEECH. The procedure is provided for in the Federal Range Code, under section 9. It provides for a local hearing, where the witnesses are brought in, sworn, testified, and are subject to cross-examination. The examiner renders a decision, from which an appeal may be taken to the Secretary of Interior.

The CHAIRMAN. That is the range-adjudication procedure?

Mr. LEECH. That is the code; yes, sir.

The CHAIRMAN. Of course, that is not in the province of this committee at all.

Now, I am going to again let what we might call the termination of this particular phase of our investigation end here, and I will make a personal expression again. I want to emphasize that it is entirely personal.

It does seem to me that this whole matter should be clarified, and concluded very promptly. It does seem to me that by heavy expense the Government of the United States has set up an administrative facility for its open public domain; that is, for the grazing rights on the open public domain. It does seem to me that with all departments of Government looking to the individual to submit himself to that jurisdiction, all departments of Government likewise should submit themselves to that jurisdiction. It seems to me to be a lost effort to say that while we recognize the Grazing Service and its rights to adjudicate and determine, at the same time some department of Government or some bureau will not recognize those rights.

I think this whole matter could have been settled a long time ago, and should be settled very promptly now by a conference between the Indian Service and the Taylor Grazing Service; and, if that is

done, it seems to me that legislation, if legislation be necessary, could go forward. If no legislation is necessary, and I doubt very much if any is necessary, as to the adjudication of the rights along the lines I have suggested, then the matter will have been closed. Now, that is a personal, individual view of the chairman of this subcommittee. I think it can all be settled and settled in 2 or 3 days by sitting around a table and recognizing the rights of individuals.

In that regard, I want to make this expression again, that the Indian should be regarded as an individual. If this was a group of any particular class moved into this territory—and today they, as individuals or their organization, have purchased the base lands—and we would look to the base lands to be the basis for rights on the open public domain, and this would settle that, it should settle it with reference to the Indians just the same. They should be treated as individuals. They should be treated fairly; but no more fairly than the individual who works by their side in this struggle for a livelihood in this community, because, when it is all said and done, the Indian gets the best of it anyway, because he does not pay taxes, he does not support the local community. That is a matter of gratuity extended by the Government to its wards. That is all right; no one should criticize that. But we should also, at the same time, look to the white man as the supporter of the community, as the taxpayer, and, therefore, the voter of the Government that pays the taxes, and, eventually, pays the taxes of the Indians. That is the thought of the individual no less than the expression of an individual.

We will pass on to some other phase of this question, if there are other phases to be heard.

Mr. ALLRED. In the interest of my own safety, I think I should explain why I am here.

The CHAIRMAN. Well, I'm going to tell you something, you are perfectly safe here.

Mr. ALLRED. A couple of weeks ago I received a letter from Mr. Haskell—I don't know how he got my name down at Washington unless I have such good friends in the Indian Department—advising me as to this hearing and asking if I would go to the trouble to notify the people in Duchesne who might be concerned with any features of this bill, and see that they knew about the hearing; also, to advise them that he would be in the country and would be glad to contact them and to attempt to help them out in any way in presenting views on these matters at this hearing. When Mr. Haskell arrived I got in touch with him and asked him if he thought we would be permitted to present some other matters not definitely tied to this Indian bill that we speak of.

The CHAIRMAN. May I interrupt you there? With reference to the purple lands, so designated on the map, they are lands that were not purchased by those who sought to acquire private ownership, and they are lands that either would be or have been returned to the Indian jurisdiction; am I correct?

Mr. ALLRED. Did you say they had been returned?

The CHAIRMAN. Have been or would be, under one of these orders.

Mr. GRAHAM. Under the orders; but not under H. R. 837.

The CHAIRMAN. Have they been returned?

Mr. GRAHAM. They have not.

The CHAIRMAN. They are the lands, as I try to grasp the picture, that after many years have not been acquired by private ownership. Is that right?

Mr. HAVELL. That is right.

The CHAIRMAN. I take it, from what I know from my experience and what I have heard here, that they are lands largely valueless. Is that correct?

Mr. WRIGHT. They are of some value, Senator.

The CHAIRMAN. For what purpose?

Mr. WRIGHT. Grazing purposes.

The CHAIRMAN. Are they not largely rocky tracts, or alkaline beds, and the like?

Mr. WRIGHT. No; not exactly.

The CHAIRMAN. I am wondering, now, how they escaped being acquired into private ownership?

Mr. ALLRED. Well, I will give you my opinion. I think this can be borne out. They were the lands that the purchaser did not see fit to pay 50 cents an acre for. They were offered for 50 cents an acre, and, it is my understanding nobody appeared to be interested. At a number of sales, I take it, they did not want to pay 50 cents an acre.

The CHAIRMAN. The proposition is, by this order, to take them back into tribal jurisdiction. Is that right? Under the Wheeler-Howard Act, they are to be taken back, if the orders go into effect; and they will go back to the jurisdiction of the Indian Service. That will then preclude those who have been using them in the past from using them in the future, excepting as the permit may be granted, by the Indian Service. Is that correct?

Mr. WOHLKE. That is correct, Mr. Chairman. They could be used under a continuation of the present system. They are now under permit; some 72 percent of those ceded lands are now under permit to the customary users.

The CHAIRMAN. In other words, the Indian Service is granting permits to white users, for whatever purpose they want them.

Mr. WOHLKE. For grazing; yes.

The CHAIRMAN. That system would be continued, as far as you know?

Mr. WOHLKE. Yes; we are now preparing to issue 5-year permits on these lands.

Senator MURDOCK. May I ask this question: Is the Government being given credit for the money that is being received by the Indian Bureau in leasing these lands?

Mr. WOHLKE. The Government?

Senator MURDOCK. I mean, as against the \$1.25 an acre which the Indians are supposed to get, in case of sale?

Mr. WOHLKE. No; the receipts from the permitting of those ceded lands go to the Ute Tribe.

Senator MURDOCK. That is what I understand. But the Government, as I understand it, gets no credit, as against the \$1.25, so-called "trust," which was reserved or imposed against them.

It is very difficult for me, Mr. Chairman, to understand under what law or under existing conditions, why the Indian Bureau has jurisdiction over the lands, and why they have any business whatever in permitting the use of them to someone else. But that is neither here nor there.

The **CHAIRMAN**. As I understand it, to clarify it as best I can, if the order is going into effect the trust is immediately removed; the trust obligations are immediately removed. The lands then return to the Indian jurisdiction, and the Indians may do with them as they see fit.

Senator **MURDOCK**. Under existing conditions they are doing that very thing; even though they belong to the public domain.

The **CHAIRMAN**. Although they belong to the public domain; but they are giving no credit to the Government under the rental return.

Mr. **WOEHLKE**. I believe Mr. Havell has explained the status of those lands. He could do that very much better than I could.

The **CHAIRMAN**. We would be very glad to hear from you, Mr. Havell.

Mr. **HAVELL**. Thank you, Senator. I think that there is very little that I could add to what has already been said.

The lands are the lands that were ceded when the reservation was opened, and they were not sold, not homesteaded. We have \$1.25 Indian burden on them. The lands have since been withdrawn.

Senator **MURDOCK**. How is that achieved?

Mr. **HAVELL**. By order of the Secretary, I think that was.

Mr. **WOEHLKE**. Yes.

Under the provisions of the Indian Reorganization Act.

Mr. **HAVELL**. Under the Wheeler-Howard Act. They were withdrawn from further disposition.

Senator **MURDOCK**. By the act itself?

Mr. **HAVELL**. Under authority of the Wheeler-Howard Act.

Mr. **GRAHAM**. Senator Murdock, I think the document I put in the record this morning included all these reservations.

Senator **MURDOCK**. Very well.

Mr. **HAVELL**. So that the present status is—they are ceded Indian lands with a burden of \$1.25 an acre, withdrawn under the authority of the Wheeler-Howard Act.

The **CHAIRMAN**. Of course, Mr. Havell, the \$1.25 obligation immediately disappeared when the withdrawals took place; you could not do it otherwise. In other words, the \$1.25 provision applied to the lands subject to sale. When they were not subject to sale, certainly the trust could no longer follow.

Mr. **HAVELL**. Well, Senator, I think that the lands are still impressed with the \$1.25 an acre. If the withdrawal is lifted, the \$1.25 charge still stays with the lands or until they are put in a permanent reservation status; whereupon the \$1.25 an acre would disappear.

Senator **MURDOCK**. My opinion is that the law restoring them to the public domain has been absolutely ignored. I don't know whose fault it was, whether it is because of the ambitious grasping of the Indian Department, in control of them, or whether it is the rather indefinite attitude on the part of the General Land Office.

Mr. **HAVELL**. Senator, as we said this morning, under authority of section 3, of the Wheeler-Howard Act, the lands have been withdrawn. There was legal authority for that, and the Secretary has acted within that authority by withdrawing them.

Mr. **PATTERSON**. Mr. Chairman, on behalf of myself, my clients, and I believe, all the stockmen in this country, especially those who have attended, we wish to express our appreciation for your coming here and giving to us a fair and practical hearing in this matter. We

believe you have accomplished something for the stockmen of this section of the country, and for the Indians as well.

The CHAIRMAN. Thank you very much, Mr. Patterson. I believe there are some other questions to be heard.

Mr. ALLRED. I did not expect to handle it. I called these fellows together, and lined up some fellows better able to handle these meetings than I am, but I am authorized to speak for the people of that country, and would prefer that the names I handed you this morning, that these men be asked to give the particular subjects. I really don't believe I have any authority other than calling them at Mr. Haskell's request to get this thing lined up.

The CHAIRMAN. Is Mr. B. O. Colton here?

Mr. ALLRED. He has been connected from the beginning and is familiar with the interests of these people here—how those things affect them. We prefer that he try to outline them for you.

Senator MURDOCK. May I ask you this question; From your knowledge of the use of the lands in purple there, which are referred to as the ceded lands, by the white people of Duchesne County, would it, in your opinion, serve the public interest if all of those lands were restored to tribal ownership?

Mr. ALLRED. I was going to suggest, Senator Murdock, before this hearing is through—I believe we would all be more than satisfied before the Secretary puts that order into effect if he would make a thorough investigation; and if he then determines it is for the best interests of the public, I think our objection would be withdrawn.

Senator MURDOCK. The point I wish to make is this, certainly Congress, in passing the Wheeler-Howard Act, contemplated that the term "public interest" not only included the interest of the Indians, but also included the interests of the entire public that might be interested in those particular lands.

Mr. ALLRED. I think when Mr. Colton gets through he will have thrown some light on that.

The CHAIRMAN. Will you state your name, address, and position, for the record?

STATEMENT OF B. O. COLTON, MEMBER DUCHESNE COUNTY PLANNING BOARD, ROOSEVELT, UTAH

Mr. COLTON. My name is B. O. Colton, and I reside in Roosevelt, Utah. I presume the official position from which I would speak would be as a member of the Planning Board of Duchesne County.

The CHAIRMAN. Any statement that you see fit to make, based on your knowledge, and experience, and observation, will be welcomed by the committee.

Mr. COLTON. I think I would prefer to say, Senator McCarran, that if the statement which you just made to the interested parties, with reference to the grazing area, in the black and green lines—well, as to getting around the table and discussing the differences that might obtain there, settling the question cooperatively, in a good neighborly way—could apply to this other area, that would be about all we would need to satisfy us.

Senator MURDOCK. You are referring to the lands designated in purple on the map?

Mr. COLTON. I refer particularly to those and the things that pertain to them and their effect upon the white population as well as the Indian population.

Senator MURDOCK. Inasmuch as the Grazing Division has assumed no jurisdiction whatever over those lands, in and around the table conference, concerning them. I assume, from the statement you have made, that besides the Indian Bureau and the Grazing Service there should be some representatives at the table of the people who have actually used the lands during the last 25 or 30 years, or whatever it has been, in order to get the full picture?

Mr. COLTON. When you say representatives of the people who have used them, do you mean the local residents?

Senator MURDOCK. Yes, surely.

Mr. COLTON. Certainly they would expect to be represented.

Senator MURDOCK. That is the point I want to bring out.

Mr. COLTON. I think in all past operations, as far as the governmental, the Federal governmental, agencies making the so-called Uintah Basin studies, that has not obtained. A brief statement of that development of those studies would probably clarify the position of the white group in that area.

This area, Uintah Reservation, in the yellow line, set apart as an Indian reservation in 1861 by Presidential proclamation and later by congressional action, was restored to the public domain, certain portions of it subject to entry under homestead law, with the exception of the Government town sites. That was the only way provided for the disposition of those lands for quite a period of time. After it appeared that homesteads would no longer be entered, or no further homesteads would be entered, then the so-called land sales were arranged. Two were held at Provo and one at Duchesne, and the provision for the sale of those lands was that they should bring at least 50 cents per acre, and as much above that as anyone would bid.

Senator MURDOCK. What department of the Government handled the sale, if you recall?

Mr. COLTON. I really do not know.

Mr. HAVELL. The sale of the ceded lands was handled by the General Land Office through the district land office at Salt Lake City.

Senator MURDOCK. In my opinion, it should have been by the General Land Office.

Mr. HAVELL. That is right.

Mr. COLTON. The lands in purple on the map are the remaining lands, as has been stated here before, that were not sold at either of those sales, and in total acreage aggregate about 220,000 acres or a little less than that. Now, those lands are scattered promiscuously throughout the area and, while the term was objected to yesterday, to our minds it has perhaps a more definite application as a nuisance factor in the relationships that obtained between the white and Indian peoples than its value might be to either.

Roads, canals, developments of any nature, or improvement of any nature in irrigation matters are all more or less related to what happens to those lands. Difficulties obtain and have obtained in various ways that make them really a nuisance factor, as stated. The people who entered the homesteads in this area are not there now, whose homesteads were entered under a withdrawing right, and few, if any, of the people who drew rights and entered the homesteads have remained.

Most of those were very much disappointed and soon sold, relinquished, or moved off their lands and left them, most of them selling their rights.

The difficulties obtained in the development of the area, particularly as to the development of irrigation canals, have been long and difficult for these homesteaders. They were handicapped, as no other people have ever been handicapped, in this area in Utah or the surrounding territory. I think in the matter of Federal and State regulations governing the use of timber, and obtaining water rights, rights-of-way, game laws, and in more other ways, which were detrimental to them, and really expensive to them, this holds.

They were led to expect in considerable degree some definite water supply. They were disappointed in that. Finally under decree of the Federal court, the water-right matter was settled. The Indian lands took practically all of the low water of the Uintah and its tributaries and the Lake Fork and its tributaries. The Duchesne River water supply was more ample and there is still some available water in the Duchesne that the Federal court decree has stipulated, in the final settlement, by representatives of the United States, for the Indians, and the representatives of the numerous irrigation companies and individuals. About the only thing they gained in the settlement of that water contention was a limitation placed upon the seasonal amount of water that the Indian lands were entitled to, a limitation of acreage of Indian lands entitled to water.

The CHAIRMAN. By your former expression, I take it, you mean what is sometimes called the duty of water?

Mr. COLTON. The actual acreage to which the Indians were entitled to water is definitely and specifically set up under State finance.

The CHAIRMAN. The amount of water necessary per acre was established?

Mr. COLTON. Yes; agreed to; yes. That left these settlers many years without any water excepting a meager supply in high-water time, many years an ample supply in high-water time, and in some years, the occasional better years, a pretty good supply throughout the year. But nothing to be depended on. They have been under the necessity of developing water rights, or water supply, rather, for supplemental means, that they could; and, with the help of the Government, now have, for a certain part of the area, succeeded in developing a good supplemental water supply in the area toward the eastern part of the reservation boundary line. Yet, as far as the white lands are concerned, without supplemental water supply they are dependent upon the high water and the water not used by and for Indian lands.

In the matter of rights-of-way, as yet an important factor in the development of that area, there is one specific instance where a right-of-way is needed in modification of the canal system. Foreseeing that need, the irrigation company began operations several years before the failure of a hazardous flume, which cut them off from a certain part of the water supply they had previously had. The interference of the claimed authority over the ceded lands affecting two 40-acre subdivisions, and authority which surely exists in the yellow area, the grazing area, over two subdivisions, I should say, three, because a very small corner of a third division is affected—that has materially and definitely stopped the development or the enjoyment of water supply that certain interests might have had.

Efforts were made to secure the consent of the Indian officials and the local tribal business committee and to secure that right-of-way, which was essential to the development of the needed modification. Finally, failing in results, a definite application was filed in June 1941 with the Salt Lake City land office, and forwarded to the General Land Office, covering particularly those subdivisions mentioned on the grazing lands, and on the two 40-acre divisions. Today no action has been taken on that application, which was made more than a year ago. That year has elapsed and in the past 2 years definite benefits have been denied those people, because of the fact they could not secure the approval of that right-of-way.

I should add here, also, that under the more generous operations of the local Indian Service officials, they were permitted to begin construction on a separate application for right-of-way across some Indian allotments to which the owners agreed. The appraisal was made and double the appraised value was deposited with the Indian Service at Fort Duchesne. On the statement of the superintendent the construction was begun at the hazard of the people themselves, was entered upon. They spent some \$3,600, a little over; had already acquired a water right which was in opposition to their own for a thousand dollars. A part of the benefit of the water supply, which has gone to waste and has been used excessively on other lands during the past two seasons, would have been obtained, I believe, if permission to have used that completed piece of canal had been granted. However, even that has not been granted.

I repeat, there is a nuisance factor here that is of more importance than the value of these lands. Consent has been granted or been given to the restoration of the purple lands south of Duchesne and Strawberry Rivers to be returned to the public domain. Sixty-one thousand acres of scattered lands over the remaining area, it is expected, under the order restoring those lands to Indian ownership, would go to the Indians, and these nuisance factors will continue to be a source of irritation between the white people and the Indian people indefinitely. If that 61,000 acres of land had been bought at the minimum price for which the lands were offered, it would have brought the Indian people \$30,500, an inconsequential sum when it comes to the constant irritation already between the two groups of people.

The group of white people there feel if they could have sat down with the Indian Service and the Indians themselves, or representatives of the Indians, and discussed this problem, as they have discussed their water problem or problems for the past 12 years, they may have gotten somewhere on an agreement. But as it is we are not agreed.

The CHAIRMAN. Let's go into that. Let me interrupt you there to go into that nuisance factor, as it pertains to the two 40's that you speak of. I take it that these are in a strategical position.

Mr. COLTON. At the end of it is, though it all is not; the strategical position is at the head of the canal.

The CHAIRMAN. Your statement is to the effect that application has been sent on for approval to Washington and has not been heard from?

Mr. COLTON. Yes, sir.

The CHAIRMAN. Now, the local administration has been consulted in this matter.

Mr. COLTON. Yes, sir.

The CHAIRMAN. And their tentative approval given?

Mr. COLTON. Yes; as far as the right-of-way across allotted lands—

The CHAIRMAN. All of these, of course, would have to be subject to approval from Washington.

Mr. COLTON. Not only subject to approval from Washington, but in the application made and filed in the Salt Lake City Land Office in June 1941 it was sent back to the Indian Service officers, officials on the reservation, for the action of the Indian business committee; and we met the same obstacle that had been met in appeal to them right at the outset.

The CHAIRMAN. That is, you met the objection of the business committee?

Mr. COLTON. I have been informed by the superintendent—I am the engineer for that particular company—and I have been informed by the superintendent that he rather expected the approval of the right-of-way, as far as crossing the allotted land is concerned, which is only one part of the line to be granted. But information was contained in the letter that the approval of the right-of-way from the river, which is the essential part of the matter, would probably be denied, because the Indian business committee had continued its unfavorable action on the matter.

The CHAIRMAN. What have you to say to that, Mr. Wright?

Mr. WRIGHT. I think that is about as Mr. Colton has stated the case, except if you try to interpret the way the Indian business committee felt about it and the reasons by which they arrived at their denial of the right-of-way he speaks of, over tribal lands, it would take an hour or so perhaps and I don't think you want that.

Senator MURDOCK. The tribal lands you refer to are what?

Mr. WRIGHT. The two 40's at the upper part of the canal.

Senator MURDOCK. Those are actually tribal lands, or subject to be transferred to tribal lands?

Mr. WRIGHT. No, sir; actual tribal lands, in the yellow, and the two ceded 40's are in the purple. Then there are three allotted lands, isn't that correct?

Mr. COLTON. Some 35 others to be applied for when we feel it is safe to go forward.

Mr. WRIGHT. Now, the business committee so instructed us, and has the authority to either grant or deny the lease in the first instance for a right-of-way. Mr. Colton was over two or three times, and some other men came with him, and presented the case to the committee themselves, and they denied it. They tried again and they denied it, I believe, three times.

Mr. COLTON. Three times; yes.

Mr. WRIGHT. They went into the matter, from their viewpoint, and discussed it a day at a time, very thoroughly. The burden of their objection, I believe, without trying to explain it all, was that they were afraid that if this right-of-way were obtained it would open an opportunity for the Ouray Park Irrigation Co. to get some of their water that was based on the right-of-way. First, the right-of-way went way up the country, considerably farther than the proposed one, and intercepted some important springs, up there, that are claimed by the Indians. Later the right-of-way route was changed to avoid

the interception of those springs, and the Indians were a little more favorable to it. But they did deny it, nevertheless, and our instructions now are that the canal right-of-way must be submitted to the General Land Office, and that the General Land Office—I am not clear as to whether the General Land Office has final authority to grant that right-of-way over the objection of the tribal business committee or not, but up to date they have not done it—so we have had quite a lot of correspondence, and requests for more maps, and more description, and more recommendations and so forth, and it is still pending.

The CHAIRMAN. How much land would the canal cover if it were constructed?

Mr. COLTON. Do you mean for the entire length of it?

The CHAIRMAN. Whatever it was constructed for, for a project.

Mr. COLTON. Oh, you mean the land it would cover. Well, that system, combined in the entire system of the company, covers some 16,000 acres of irrigable, classified lands, Nos. 1 and 2 in the recent soil surveys. Those surveys give a total of 20,000 acres, but we depreciate that.

The CHAIRMAN. That land is in private ownership?

Mr. COLTON. Yes, sir.

The CHAIRMAN. By the whites?

Mr. COLTON. Yes, sir.

The CHAIRMAN. There would be no benefit going to the Indians from the canal?

Mr. COLTON. No; except as it passes through allotments. The lessee on one allotment said if it were his matter he would be glad to grant a right-of-way on the 40 east. He would be glad to get it for water use, watering stock, but he was a lessee.

The CHAIRMAN. How many of those lands are now under cultivation?

Mr. COLTON. There have been, in the past, some 60 families living in that area. Today there are about 23. They are farming a little over 1,500 acres of land at the present time.

The CHAIRMAN. Those are white families?

Mr. COLTON. Yes.

The CHAIRMAN. This new project, under the canal, would accommodate how many families?

Mr. COLTON. It is not new; that is the point. The Ouray Park Irrigation Co. is the consolidation company of the two former irrigation companies, and is the same as the Ouray Valley Irrigation Co. and the former Colorado Park Irrigation Co. The two companies have since consolidated, and their interests are all one. Now, the old Colorado Park Canal, leaving the Uintah River, crosses the deep creek at a point which has developed into a very deep, hazardous crossing. After a number of years, the flume that has crossed that chasm has collapsed. It collapsed in 1940. This canal route was built on the enlargement of an Indian, a small Indian canal, and the same water rights that that canal had. It was finished and carried the water. The same water rights that supplied that canal are the water rights involved in the present modified right-of-way applied for. No other rights, excepting a small right on the creek, would be involved.

The CHAIRMAN. What inconvenience, or difficulty, is there as regard the Indian water rights?

Mr. COLTON. None whatever. That is a misapprehension, on the part of the Indians, because their water rights can be in no way legally

connected with the right-of-way. Their water rights are decreed, under Federal court decree, and stipulated and conditioned and limited; and the secondaries are all made to the Indian rights, so that they are prior entirely.

The CHAIRMAN. I don't know that we can do anything for you, by going into this matter at length. It largely addresses itself to the large question, namely, the jurisdiction of the open public domain. I can see a merit in your position.

Mr. COLTON. This is the point; we have had experience, time and again, in acquiring rights-of-way that cross Indian land, tribal lands, allotted lands, reservation lands, military lands, public lands, but we have never had difficulty like this before. Now we are throttled, by the action of a group of five Indians. I don't say that disparagingly, but I do assert that it is prejudicial. The action is not taken with the same consideration and concern that the project engineer who was on the ground and gave approval, nor the representatives of the Government, who have visited the area, had given it. They agree that this right-of-way should be granted, but still it is not granted, and nothing is being done about it, seemingly.

The CHAIRMAN. The right of eminent domain does not prevail?

Mr. COLTON. Apparently not, as far as the Indian Committee is concerned.

The CHAIRMAN. Have you tried it out in the courts?

Mr. COLTON. No; and we don't want to. That is about the last thing we want to try. With 20 families to meet that expense, we don't think anything like that should be necessary.

The CHAIRMAN. It would look as though it would not be, but sometimes you cannot tell.

Mr. COLTON. May I introduce, briefly, some things that pertain generally to this area?

The CHAIRMAN. Are there members of the Indian Business Committee here?

Mr. ORAN CURRY. I don't see any reason why we should ponder upon this at this time. We have a place of business. If Mr. Colton feels like he would like to meet with us again, we might be able to adjust the misunderstandings. I can't see any reason why he should expect you people to intercede for him.

The CHAIRMAN. I am going to tell you something. If you don't think the Congress of the United States has anything to do with the Indian agency, maybe you had better try us out, and you might change your mind.

STATEMENT OF MRS. LORINA IORG, ACTING SECRETARY OF UINTAH AND OURAY TRIBAL BUSINESS COMMITTEE

Mrs. IORG. For a number of years I acted as secretary of the Ute Indian Tribe. I would like to ask Mr. Colton if he is familiar with the objections that the tribal business committee had; why they were objecting. I would like him to state exactly his idea of what they were objecting to.

The CHAIRMAN. That is what we called for from other witnesses, although we were unceremoniously cut off.

Mr. COLTON. We were furnished, by the superintendent, a copy of the minutes of the tribal reaction, after our own appearance at their

hearings, and those minutes give to me the valid reasons which they had. They were, without exception, an expression of interference with water rights that the Indians had on other lands or lands of their own on which they could use the water. I say again, that is beside the question and that is really the main objection. There was, as Superintendent Wright stated at the beginning in a presentation to the office only, not to the committee, never to the committee, an intention to take the water from a certain group of springs. The water filing was made and that water filing still stands. The benefit of that water supply flowed down the river and can be taken at the head of the canal just as they could by being intercepted, except that certain losses in transit might be saved to the whole section rather than to this little group.

Mrs. IORG. No Indian could benefit from the use of this canal.

Mr. COLTON. I should perhaps qualify that by saying that the Colorado Park Irrigation Co., as such, entered into an agreement, for the purpose of carrying certain water rights, I presume with the Indian Service, or the United States, or Mr. Henry Harris and certain other Indians; under what head, I don't know—covering the carrying of between three or four hundred acres of water for Mr. Harris. After that agreement was affected, the stipulated price for it, the annual charge for carrying that water, was 13 cents an acre. They called the Ouray Irrigation Co., as a successor in interest to the Colorado Park Irrigation Co., for, by reason of the consolidation, they continued to carry that water for that stipulated price. Upon the failure of the flume across Deep Creek, which I have mentioned, the company made known, in its application, the impracticability of trying to supply the amounts to Mr. Henry Harris, and certain other Indians, under this arrangement, with water through that canal route. But they have expressed themselves as being willing to continue that agreement, although they have explicitly said they do not feel that is a fair price. But, under necessity, they would still continue to carry the water for those Indians, over the new canal, constructed on the right-of-way applied for, to the Indians, if required, at the same price, although they don't think this is fair. Mr. Henry Harris has definitely concluded, or at least, stated, and we were given to understand, that he did not want the other water that way. Then, as a matter of exercising good faith with that group of Indians, the company was asked to relinquish its right-of-way on the old canal, which they did without question, the good faith of the Indian business committee being exercised in their behalf in the new application. I don't know whether that covers the water as expected, but that is it.

I might state in connection with that relinquishment, it was made providing the company would be relinquished from any obligations to carry water to any—

Mrs. IORG. My understanding was that it was owned by Henry Harris, and it was up to them to pay for the upkeep of that canal and for the use of the way. After the flume was out of it, they wanted to move away and leave it up to the Indian to get his water the best way he could. That is the way I understand it.

Mr. COLTON. Well, the fact is that the company, as I said before, anticipated the failure of that flume long enough beforehand, and made application for the right-of-way. Had it been granted, provisions for supplying water to Mr. Henry Harris, and the other Indians—

they still wanted them to carry it through the line-up—would have been available; and it has been available, anyway, under the canal system of the Indian Service that supplied areas both above and below Mr. Henry Harris and the other Indian lands.

Mr. WRIGHT. May I amplify that a little, Mr. Colton? Don't you recall that the first application, which was made after the failure of that flume that you speak of contemplated going way up by the Uriah Heep Springs; and that the reason the Indians objected to the right-of-way was because it would take it up there? Later, when the right-of-way was modified, so as not to intercept those springs, the flume had failed.

The proposition was made that your company contribute something to the reconstruction of the old flume, and that Henry Harris contribute something himself, and perhaps the Indian Service contribute—help in what way they could—labor and trucks and so on, because he demanded his old ditch, and old right-of-way, and old flume. Your company said they could not do that unless and until the new right-of-way was granted. If the new right-of-way was granted, you might probably contribute something. Then, in the meantime, you would relinquish your rights to the old right-of-way. Furthermore, you expected Henry Harris and his family to use their influence with the business committee to get the new right-of-way. At that point they thought that was impolite, or something of that sort, and refused to do it. Isn't that about it?

Mr. COLTON. In part, that is right, Superintendent, but not accurate. The fact is, that the upper part of the canal route, involving the delivery from the springs, was never prepared in a form at all. It was submitted to you and the project engineer, as a matter of discussion, and it was thought to be inadvisable to present it that way. So the point of diversion was changed to flow down the river, expecting only to pick up the water that would reach that point, and then continue the construction on the line from there. Now, the fact is that the application, across the Indian allotments, that was actually filed, prior to the filing of the right-of-way, in the land office; was filed before the failure of the flume. It was filed in November of 1939, and the flume failed in September of 1940.

Mr. WRIGHT. I was sure of that.

Mr. COLTON. An expenditure of the thirty-six-hundred-and-some-odd dollars, I spoke of, was at the risk of these people, in the spring of 1940; and Mr. Henry Harris could have had the water, which flows down Deep Creek, through that ditch, even in 1940, if that right-of-way had been opened, across those two allotments, down to the Park Canal, across these two forties of ceded lands.

As to the other feature, we visited Mr. Henry Harris, after discussion with you folks, in the office with—I might intercede and say it was a matter affecting his own good, and the good of these people; and that if he wanted to remain in his own canal; if these people could be benefited; under the grant of the new application, for a new right-of-way, that they would contribute to the replacement of the flume, for him alone, without them in the picture, to the extent of \$100, as I remember.

Mr. CURRY. The fact of the matter is before the meeting, you went to my father-in-law, and took that matter up to him. It was through his protest that the committee did not grant that right-of-way. He

said you people had not lived up to your agreement to furnish the water. If you were to move your ditch, he said, he could not see any way to get any water, unless he got it out of No. 7, which he did not want to do. That is the answer to the whole problem.

Mr. COLTON. Mr. Henderson, the project manager, was taken over the line, and shown how the water could be delivered to Mr. Harris, without any difficulty. Mr. Harris never considered that, and, contrary to the statement that he would not use any influence to help us secure it, the truth was that he said he would be in bad grace with the tribal committee. I think they took that position.

Mr. CURRY. That was because of the fact that Mr. Harris said—that has been the only meeting we have ever discussed that with Mr. Harris, prior to our meeting. There have been no meetings, since he has changed his mind, at any other time. We know nothing about that.

Mr. COLTON. We do not care to continue this matter. We feel, in this situation, that the tribal business committee should not be vested with the right, or the authority, or privilege, to refuse grants of right-of-way. We feel that an application might be referred to them, for their opinion, that is okay. But not as a matter of obstruction, which it has been, in this case, and can be in any other improvement which is proposed, by any company. I know another situation in which the company is proceeding to use channels across grazing lands, with only a grant. That is, a verbal grant of the members of the tribal business committee.

Mrs. IORG. Are you insinuating that the members of the tribal business committee are not capable of making a decision?

Mr. COLTON. No insinuation of the kind.

Mrs. IORG. You have been coming out and saying it.

Mr. COLTON. I am the owner of a homestead of 150 acres. In the grant of my title there is no authority relinquished to me to refuse a right-of-way across that to anybody or any interest or anybody whose need is such that they need apply for right-of-way. They can apply, as far as I am concerned. I am subject to the order of the court. All the say I have is whether I will accept the damages or present my case to a court and let the court decide whether or not a grant for right-of-way should be given.

The CHAIRMAN. In that respect, I think anyone who is familiar with the law of the arid and semiarid States—and I take it to be true in Utah as it is in any one State—will agree that the realty is always subservient to the dominant estate of a right-of-way over it for the conveyance of water. I think it is true, undoubtedly, in this State, so that that principle is recognized in law; and while the intimation is not to be indulged in that this group are not capable of forming a decision on the thing, the question is, Does the spirit of the law and the spirit and policy that has prevailed in our system in arid regions prevail in the judgment of the business committee? The business committee may well take into consideration the spirit of the community in which it lives and within which it must apply, whether it be an Indian committee or white committee or an Indian individual or a white individual. That makes very little difference. The spirit of the law is the same all the way through. It impresses me that unless there is something more to it than what I have heard, reason and

justice should enter into the proposition to derive the greatest good for the greatest number.

Mrs. IORG. We have a number of rights-of-way that are granted for various purposes. Never has the committee objected to any right-of-way where it was beneficial to either the Indian or the white; always tried to cooperate with them, as far as I know, in working with them for a number of years.

The CHAIRMAN. I'm glad to hear that. That should prevail here. It seems to me there may be a chance to get together on this one, too, some of these days.

Mr. CURRY. The fact is, at the time this matter was called to our attention we were unaware of the details of the whole thing, the irrigation set-up that he speaks of. Therefore, we did not know just what to do and therefore I made that trip to my father-in-law. But during the course of our meetings one of the committee members got up and said he felt like it was a sad move for us not to comply with the wishes of the people who were striving to make their living but there were other members that overruled him. It was not all the committee that took that stand. Therefore, I feel like it is unfair when he seemed to think we were all opposed. There was consideration given, and I feel like it should have been his duty to come back to us and talk it over with us instead of corresponding like he has, continuously, back and forth, to get it through some other means of getting that right-of-way. I feel like we could have adjusted that; so I don't think he ought to lay the burden upon us.

The CHAIRMAN. No burden is laid upon anybody now at all. The committee does not regard a burden is laid upon anybody. There seems to be a controversy here. Get together and settle it and have it over with for the good of the community. What do you say to that?

Mr. CURRY. I have to wait to see what the committee says until he has a chance to meet with us again.

Mr. COLTON. Oh, I can always come back and come back. I got to the point where I thought it was no use.

Mr. SMITH. Mr. Chairman, in speaking about these purple lands, I am interested in them because I have lands adjoining them. I have studied out about what could be done there if this law had been followed out in the opening where the Government would have paid for all of those lands and took them over and executed this trust that you speak of; put them in the public domain. It would have been subject now to leases to the adjoining landowners or included in the Taylor Grazing, and the Indians can lease any of this public domain that lays next to the adjoining landowners under the Taylor Grazing Act which is in operation, to my knowledge, to a certain extent; and I think they're a fair service. But in the State of Utah there has not been lands enough that have been included in the Taylor Grazing and the section 15 leases to adjoining owners. Isolated tracts have not been put into effect and are very little understood in this State. If those come into the public domain and actually belonged to the public domain they would come under that section of the Taylor Grazing Act subject at least to the adjoining landowners or to purchase as isolated tracts or to be absorbed into the Taylor Grazing Service.

Senator MURDOCK. What, in your opinion, would be a fair price for the Government to pay?

Mr. SMITH. Well, I think those rough lands would be probably 50 cents; some lands worth \$1.25.

Senator MURDOCK. They were offered for 50 cents, were they not?

Mr. SMITH. Yes; they were offered at 50 cents, but nobody was interested in buying them. After the 1917 sale, for some reason, they did not care to put them up again, as they don't bring a very satisfactory price, and don't care to make any more offers of sale; and subsequently they are left there and us stockmen understand they did go to the public domain. We used them as such until here 4 or 5 years ago they attempted and tried to have Mr. Wright offer leases, and were leasing some of this land, paying a nominal lease, just to get along and keep good neighbors. I have been doubting very much whether the Indian Department really had a title to authority. But rather than contest this thing we have been willing to pay this nominal lease waiting for the development of something. The proposition was that the authority would go to the Indians, and this in the south would come into the public domain. So really it does not make much difference where that went through; but I would say that the Government should take a settlement on this trust you have been speaking of and take these lands over in the public domain and let section 15 of the Taylor Grazing Act take care of them so we could buy them or lease them to the adjoining property and preference. I think the thing would be settled up satisfactory.

Mr. WRIGHT. I was going to raise a question a while ago, Senator Murdock, when you said you had very great doubt about the authority of the Indian Bureau to administer these lands, or something to that effect. It has now been repeated. Now a great many of these people here today are getting permits for grazing purposes on those lands from us. My instructions were to administer those lands, let permits, do with them the same as we do with other Indian lands. We have been doing it since 1937. Is there anyone here that could make some kind of a definite statement that we do not have the authority, or that for the present, we do have it? I don't like to be put in a position, from now on, of these people coming to me and saying, "You are kidding us, you haven't got any authority." That is the question I would like an answer to.

Senator MURDOCK. I repeat again, anybody that can read the law under which the reservation was opened and can come to any conclusion other than the fact that the lands were returned to the public domain, must have a versatile mind, more versatile than I have. I can only read into that the fact that the lands were returned to the public domain. If they were, then they ceased to be Indian lands. Now the only string attached to the return of the Indian lands to the public domain was that, if and when they were sold, the Indians would receive \$1.25 an acre. I think, if the General Land Office had been as jealous of its own jurisdiction as the Indian Bureau is, it would be administering those lands today, and the fact that the sale of the lands was made, made not by the Indian Bureau—why? They were not Indian lands. The sale was made by the one agency that has jurisdiction over the public domain, and did exercise it at that time. That agency was the General Land Office.

Of course, that is just the opinion of a very humble lawyer, but it is my opinion.

Mr. ALLRED. May I clear up what Mr. Wright brought up?

The CHAIRMAN. Yes.

Mr. ALLRED. I don't think he would lease lands that he could not have authority to lease. I know him too well. But I know that the agent ahead of Mr. Wright—attempts have been made to acquire use of those lands, and two agents ahead of him told the fellows that went to them, "We have no jurisdiction over those lands." As I stated some time yesterday, when there came a need for somebody to come to the rescue of these Duchesne people, I have had the understanding that Mr. Wright took it up with somebody, and got authority to administer these lands. He has not mentioned that. I think that is one of the reasons where you got ability. I am positive Mr. Paige made that statement in my presence, that they had no jurisdiction over the so-called ceded lands. I am kind of one of the old-fashioned fellows who wondered whether the Indians do have a claim on it.

The CHAIRMAN. "Ceded" means "returned, or turned over to another authority by the controlling agency." What is the history of this piece of land? The history is that it was once a reservation, and by act of Congress it was thrown open to the open public domain. It was not ceded by the Indians; it was made the open public domain by an act of Congress. It was not a cession in any way that I can see. An act of cession had to be made by an act of the then jurisdictional power, and that was not done. It was done by an act of Congress. To call them "ceded lands" seems to me, and has seemed to me all the time, a misnomer. They became public lands of the United States, open public domain. The only provision was that when, as, and if they were sold, they would take an amount of money equal to \$1.25 per acre for all acres sold, and this would be turned over to the Indians that had formerly occupied the land. It was not a consideration; it was a grant. It was a grant made by Congress of \$1.25 an acre, not in consideration for the cession at all. The language of the law does not permit of such an interpretation; so I am at a loss to know how they are returned to the status that they are by the Wheeler-Howard Act, or by any other act. If they were part of a reservation, part of which had been ceded by the Indians, that would be one thing, but they were not. They were effected by the act of Congress, not by the act of the jurisdiction of the Indian people.

Senator MURDOCK. I don't believe that the ability of Congress can be set aside by the order of the Secretary. The only thing that rests in my mind is this: Whether or not, under the Wheeler-Howard Act—I know of no provision in it which would authorize the Secretary of the Interior to place it back under the Indian agency. The only provision of the Wheeler-Howard Act that I know is the provision that they may be returned to tribal ownership. Certainly that very provision contemplates that they are not lawfully in Indian ownership. If they be not in tribal ownership, certainly the status of tribal ownership does not exist, and the only way it can be accomplished is by the authority of the Secretary of the Interior acting within the authority of the Wheeler-Howard Act.

Mr. WRIGHT. Senator, don't you think, in the interest of the people of this basin, those affected, the white people and the Indians, this matter should be cleared up and decided and determined whether I have any authority?

Senator MURDOCK. I want to say this to you; I have never talked with you about any Indian affairs; never heard you before, but I am greatly impressed with the practical way with which you handle things, and the fairness with which you handle them. I am inclined to think, if you had more to say in the affairs of the Uintah Basin, nine-tenths of these problems and questions would be solved right here on the ground.

The CHAIRMAN. I have no disposition to go on with this discussion. I think, however, in order that the record may be clear, it would be well if I would read a portion of the withdrawal recommendation put into the record this morning. I will not read all of it. That recommendation sets forth a history of the procedures by which these things have been accomplished for a long period of years. I pick up in the middle of it [reading]:

This brings us up to the period of about 1890, at which time there was adopted the plan of opening to entry, sale, etc., the lands of reservations that were not needed for allotment, the Government taking over the lands only as trustee for the Indians. Under this plan the Indians were to be credited with the proceeds only as the lands were sold, the United States not to be bound to purchase any portion of the lands so opened. Undisposed-of lands of this class remain the property of the Indians until disposed of as provided by law (*Ash Sheep Co. v. United States*, 252 U. S. 159).

Mr. Colton, have you concluded?

Mr. COLTON. Mr. Chairman, there are features of this situation, covering its entirety, that was related to this unit G, and has a bearing on what has been said, and what may be done with these so-called ceded lands or unsold lands on the reservation, that I think others of the group I belong to would like to present, and expect me to say something in a short, general way.

Now, Mr. Woehlke said here yesterday that a group from Duchesne injected this matter of the ceded lands into this set-up in 1937. I don't know whether it had any appearance in any of the bills presented to Congress before that time or not. I presume, however, it had. The action of the Duchesne people in 1937, at a meeting in Roosevelt in October, was the subsequence of a meeting held in Salt Lake City on September 16 of the same year, at which members of the Indian Service were present, a goodly number of them. Among them were Superintendent Wright and Mr. Woehlke. I was present at that meeting, by invitation, it being a meeting of the so-called "steering committee" of the Uintah Basin—studies which were being conducted by governmental agencies to determine the resources, worth-while resources of this area. Preceding this time, in 1934, Duchesne County had got in such a status, economically, that an appeal was made to the government of the State, and it looked almost as if the county offices would have to be closed because of lack of resources and moneys to pay the serving officers. The Governor with some others visited the area and held a meeting at Roosevelt.

The outcome of that meeting was the appointment of a committee of one local man and two members whom the Governor appointed from outside the basin to consider ways and means to better the situation as it pertained to the economic situation in Duchesne County; not only pertaining to the county, but the people and the welfare, particularly, of the white people on these lands who were of necessity sustaining the county and paying the taxes. These men voluntarily accepted the

responsibility of trying to do something to solve that problem; and the outcome of that was easily attained because the Government of the United States was then proceeding under the Resettlement Administration and other agencies to ascertain the reasons for conditions in places such as this, the reason for them, and remedies to be made if possible. Soil surveys and economic studies and water supply and range studies were the result of that effort. This entire area, as to white lands, with the exception of a few very small units, was covered by soil surveys; and economic studies were made which ascertained that the income of the average farmer in the area was almost negligible, if charged for the benefit of the home plant that would come by reason of the occupancy. The income of the average farmer was almost a minus quantity.

Soon the Indian Service took part in those investigations. They had been appealed to at the outset, especially in water-supply matters, because it was thought by the local people that many of the Indian lands, which had been allotted, had so deteriorated that many water rights were really not being used; and that it would be preferable for them to sell them rather than to accept the small amounts they received as rentals in many cases for those lands. I myself have visited the project engineer and had spoken to him and asked him if a soil survey were attempted if the Indian Service would accept the results of an agency of the Government authorized to do that. He stated that he thought a good deal of good could be done from that.

Well, to cut the matter short, the final result was the organization of a steering committee to direct those basin studies. Mr. Woehlke and Mr. Wright were members of that committee. In late 1937 I was invited to become a member. This was the first meeting I attended, September 16, 1937. Things that were presented at the initial meeting—this was a 2-day conference—at the initial meeting, on the first day, really greatly surprised me. The morning meeting was occupied in the presentation of technical data along the lines presented by the Grazing Service here yesterday, supporting the idea that there were only grazing resources enough in this area to support the Indian program. Then a tentative Indian program was presented, a copy of which I have here. That was presented by Mr. Woehlke himself. When that was read I might best describe my feelings by the use of the word he used yesterday—I was flabbergasted. In that meeting, when range matters began to be discussed, I let it be known that this meeting, this other meeting, was being contemplated. The date had not been definitely set, but that Congressman Murdock would be present at that meeting. Immediately Mr. Stewart, who has been named here as an Indian Service representative having special assignments, arose and said, "It is too late for any such meeting."

That was a meeting called to consider range matters pertaining to the people who lived in this area. "It is too late for any such meeting; their consent has already been granted to accomplish the proposals of this program by the range interests of the Uintah Basin." I asked him when this happened. He referred to this meeting held here, at Vernal, in 1935. I knew nothing about it. I was not range-minded.

The CHAIRMAN. Did you say 1935?

Mr. COLTON. 1935; yes, sir. That meeting was held at Roosevelt. At that meeting the first thing we were confronted with was the read-

ing of a telegram from the Commissioner of Indian Affairs, offering the use to us, without rental fees, of these purple lands for a period of 5 years, if we would consent in that meeting to this legislation—the legislation then before Congress. Well, that, in and of itself, did not set well; and the action of our group was a refusal to ratify anything until these basin studies were completed. Now those basin studies have largely been completed.

MR. WOHLKE. May I interrupt to ask whether this second meeting, this meeting of which this telegram from the Commissioner of Indian Affairs was received, was not the steering-committee meeting?

MR. COLTON. It was a meeting of the residents of this area, at which Congressman Murdock was present, held in the Roosevelt Church Hall at Roosevelt.

MR. WOHLKE. It was not the steering-committee meeting?

MR. COLTON. No; it was a meeting of the residents interested in range matters.

Well, the matter finally went on and on and on, until in 1941 we were confronted with the same situation that others have been confronted with, the restoration of these lands, under threat, if this legislation was not acceded to; and under that, and under the influence of a letter from the Congressman, I with five other men, representative of Duchesne County Planning Board, then took action, following a meeting called for the purpose of securing the will of those who would come. We acquiesced by letter in the passing of this legislation, which meant the granting or returning of that 61,000 acres to the Indian people, and the returning of 159,000 acres to the public domain, and the creation of this area across Green River, which we understood at this time was to be limited to 500,000 acres instead of the area as contemplated now. I do not need to go any further there. There are others who can cover this matter from here on.

But the interests of these people who are handicapped by reason of the fact that all of these Indians were accumulated in an area—the Uncompahgres had been accumulated in the Uintah Basin Reservation. Western Colorado had largely gotten rid of its Indian problem, and it was concentrated in this Uintah Reservation; and here, surrounded by forest reserves, and special-use permits on forest lands and grazing lands, the range interest, or resources, of this group of people become very, very limited, almost nothing. People from over the Wyoming boundary come in from the forest to the north; people from the Ashley Valley area. I don't say this with any idea that they should not be licensed.

I was raised here, not born here; but I know this area. I know the needs of these people. They have extended their interests westward, and before the people got on the ground, and got it established, the stockman of the Ashley Valley were well over into the Ashley National Forest, the forest just north of the yellow lands on the reservation. The people from the west had taken the Strawberry area, people from Heber, Utah County; and people from the south could come in on the south. Now these people are to be limited, with almost no range resources. That, to me, was such a serious problem, because I was raised on a small farm, where my father depended on this small farm with what work he could secure on the side. He didn't know what it was to send a hoof on to the forest or range lands; and all other benefits were denied to him, general gratuitous benefits, until

they got to the point where sometimes special help had to be provided by legislation, and the Government, and its money expended by the Indian Service in the development of this area was almost, at times, the sole salvation of the well-being of these people.

Strange things have happened in that area. Today, despite the prediction we could never come back—of course we are under an unusual and perhaps not to be expected to be continued condition—but today we have a degree of prosperity that has never been equaled, unless it was in the height of the alfalfa feed period for these people.

Now, as to the value of those ceded lands, that 61,000 acres; it might have a trading value. But that trading value will become a nuisance factor more than any other thing. Thank you very much.

The **CHAIRMAN**. Thank you very much. Is there anyone else who wishes to be heard?

STATEMENT OF BERT LUSTY, PRESIDENT, DUCHESNE LIVESTOCK ASSOCIATION, DUCHESNE, UTAH

Mr. LUSTY. My name is Bert Lusty, Duchesne is my residence. I am representing the Duchesne Livestock Association, a small grazing association of 59 members, who graze 3,023 cattle on district 1, of the Uintah Forest. Those members own the big end of that part laying south of the Duchesne River, white on the map, and right north of a small green strip of forest. The privately owned land is mostly owned by the members of this association.

The **CHAIRMAN**. That is to the east of the reservoir; right?

Mr. LUSTY. The purple ground lays north of the green in the lower part of your map, between that and the Duchesne River. This is it [indicating]. Strawberry River runs down here, the Duchesne River down to this point, and down here and over to there, contiguous to this district 1 of the Uintah Forest. In that ground is about 110,000 acres of so-called ceded ground.

Members of our association have been using a big part of that ground for 32 years, to my knowledge. Up until the last 3 or 4 years, it was just run on. The privately owned ground contains practically every water hole, and the best of the grazing, in that ground. Now, in the last few years, we have been insisting on some kind of supervision of the so-called ceded ground. At the present time we are operating under permits, issued by Mr. Wright. Those permits are much more satisfactory than we were running under before; but we cannot see any permanency in them, under the Indian set-up. As we understand, the Indian Department is supposed to let out their grazing privileges by bid to the highest bidder. While there will not be too many come in and bid on some of that ground, from the way it lays, at the same time it is not a permanent set-up; and we would like, if this bill is contemplated, legislation that that could be transferred to some of the grazing set-up. Our preference, on account of location, and the set-up, has been that this part, in there, would be added to a district of the Uintah Forest. They already have issued permits to practically every fellow that runs in there, for the summer; and, without any expense to amount to anything, without any other set-up, they could still handle our spring and fall range there.

That is about all I wish to say, unless somebody wants to ask questions.

The CHAIRMAN. Are there any questions?

Mr. WRIGHT. I'll ask you to clear up one point. You implied, Mr. Lusty, that we were now advertising to the highest bidder.

Mr. LUSTY. Mr. Wright, I will illustrate that. Mr. Wright has been just as fair as any agency could be, with us, and has issued the permits, according to our commensurate property, there, without any competitive bidding at all.

The CHAIRMAN. That is the way we understood it.

Mr. L. J. GILBERT. I concur in what Mr. Lusty has said. That would be all I would have to say.

The CHAIRMAN. You are concurring in what he is saying. Didn't you care to add anything more? Your locality is a little different than Mr. Lusty's is it not?

STATEMENT OF L. J. GILBERT, REPRESENTING THE ARCADIA CATTLE ASSOCIATION

Mr. GILBERT. This blue ground, right in here, most of that is being leased by the white settlers.

The CHAIRMAN. What group do you represent? What do you call yourself?

Mr. GILBERT. The Arcadia Cattle Association.

The CHAIRMAN. Have the Indians, in that territory to which you pointed, any cattle or livestock?

Mr. GILBERT. None that I know of.

Mr. WRIGHT. They don't run in that locality.

The CHAIRMAN. They lease to you fellows?

Mr. GILBERT. Yes, practically all this ground is leased.

The CHAIRMAN. That is the blue ground that they lease?

Mr. GILBERT. Yes, most of it.

The CHAIRMAN. Indians living in there?

Mr. GILBERT. Yes; there is—I could not say—I think there are two or three families.

Mr. WRIGHT. That is right.

The CHAIRMAN. Do they live in there?

Mr. GILBERT. Yes.

The CHAIRMAN. The others are not living there?

Mr. GILBERT. No.

The CHAIRMAN. Where do they live?

Mr. GILBERT. I could not say.

The CHAIRMAN. When you arrange to get your lease, with whom do you deal?

Mr. GILBERT. With the Indian Agency.

Mr. LOUIE GALLOWAY, Roosevelt, Utah. How long had you been using that land that you spoke of, leasing from the Indians? You also leased the purple land you referred to first. I would like to know how long you had been leasing that land.

Mr. GILBERT. This purple land?

Mr. GALLOWAY. Yes.

Mr. GILBERT. Three or four years.

Mr. GALLOWAY. Did you use it prior to that?

Mr. GILBERT. Have been using it practically all the time ever since I have been here.

Mr. GALLOWAY. How long have you been there?

Mr. GILBERT. Thirty years, off and on.

The CHAIRMAN. We have another group here, Mr. Allred. Have you any others of that group? I have the name of Mr. Galloway here. Is he present? Will you please state your name and place of residence?

STATEMENT OF LOUIE GALLOWAY, ROOSEVELT, UTAH, SUPERINTENDENT, MOON LAKE WATER USERS' ASSOCIATION

Mr. GALLOWAY. My name is Louie Galloway and I live at Roosevelt. I am employed by the Moon Lake Water Users' Association, as their superintendent.

The CHAIRMAN. Please be seated, if you care to.

Mr. GALLOWAY. Practically everything has been said that is essential, in the way the ceded land affects the Moon Lake project. I might add that the Moon Lake project is a project constructed by the Bureau of Reclamation, to furnish supplemental water for all of the home steaded lands lying well, I will say, that are irrigated from the Lake Fork River, and from the west, south side of the Uintah River, except the Uintah Independent Irrigation Co., consisting of about 3,000 acres, and the Big Six Co., that takes care of, we will say, roughly, a thousand acres, I don't know exactly how much.

The project consists of about 50,000 acres of irrigated ground, cultivated, and it has been—the larger number of acres of that land is idle now. But our interest in this problem was mainly the 61,000 acres of the ceded land, that is proposed, under the bill, to be returned to Indian ownership; and we think that is vital to our water users, because, in nearly every case, they are using it now. They have used it; and it is a resource that is utilized by them.

No mention has been made here—in earlier days it was important to get cedar posts. Out there largely they used fire wood for heating purposes. Of late more coal is used; but that still has some value. Now, this area has been a source of supply, along with other areas, for this purpose. We feel like, as has been stated here, the value to the Indian Department is not great enough, but, in fairness to all concerned, it would be much better to have this land pass to the public domain. Then, in some instances, it really should be privately owned, rather than have it go to the Indian Department to be administered permanently by the Indian Department. I might add this: I view land that goes to the Indian Department as a part of the resources, that we have been depending on, as being permanently taken from us. I don't look at it as a permanent benefit long. True, we are leasing it, and may continue, but I cannot feel that we can depend on that feature. I have understood they contemplated developing the Indian utilization range lands, particularly to the point they use it themselves, and it is not available to whites.

I should like to ask Mr. Wright—I have never understood exactly—but I should like to ask Mr. Wright just what he does contemplate, as near as he understands the program of the Department; what he contemplates doing with the 61,000 acres, after they have possession. If they do not get possession, do they propose to continue to lease it?

Mr. WRIGHT. We propose to continue to issue permits on them for the present; it is nearly all under white use. It has been proposed to offer them in exchange, so as to consolidate the scattered Indian lands. A proposal has been made to offer them in exchange, together with a small western portion of the yellow land, there [pointing] for exchange of some green lands on the National Forest, to make a reasonable operating unit out of the Indian lands, instead of having only spring and fall range, and have this scatteration throughout the basin.

Mr. GALLOWAY. Now, changing to one other thought that has been expressed.

Mr. WRIGHT. Let me make that clearer, Mr. Galloway. That is only with our scattered ceded land, and other scattered allotted lands; not with the exchanges I spoke of with the National Forest. Of course, no applications have come in about that.

Mr. GALLOWAY. It was mentioned that, because of the period in which this land was homesteaded, the natural grazing resources surrounding the area had been acquired by other interests, not residing in the basin. That has been a problem that we felt should be stressed, even in this hearing, because we had hoped, when the Moon Lake Project was talked of, we were negotiating with the Government for the construction of this project. The expression was made, time and again, in my presence, by stockmen particularly, that the future was bright. They had been curtailed in their use of those natural resources, but the future was bright. They were thinking of the Taylor grazing lands in particular but the experience is that the improvements have not been realized in that particular. That does not necessarily bear with this particular—I don't believe I have anything more to say unless someone desires to question me.

Mr. DILLMAN. Mr. Galloway, from your knowledge of the general opinion and desire of people, if any of the purple, or ceded lands, are taken from the Indians, is it the general attitude they should be reasonably compensated for them?

Mr. GALLOWAY. Yes. Those with whom I work are very definite in their expression that they do not want to rob the Indians of any equity they have, whatever. I think we have a tendency to lean the other way—want to see the Indian receive a little more than his just dues, in this matter, in all justice. For my own part, I feel that way. They certainly should not be deprived of any equity they have, and should be compensated for it.

Senator MURDOCK. I make this observation for an attorney representing an Indian, before a court of claims, who takes the position—and not that it makes any difference, but I agree with him—that if the ceded lands, so-called ceded lands, are made a part of the grazing district, or made a part of the forest reserve, that he then would have a good cause of action against the Government for the \$1.25, the same as he did on the forest lands, and it is his intention, if such disposition of the land is made, to ask for that payment of \$1.25 an acre. As I look at it the Indians could not make a better settlement than to allow it to be made a part of either a grazing district or the forest reserve today.

Mr. DILLMAN. May I ask you a question on that? None of the area, within that former reservation, has been taken in under the Taylor grazing administration. Now, if we should follow the proposal that

the purple land should be—or follow it out that they are—a part of the public domain; but unless something is done to sell them, under your statement, where would the Indians ever get any compensation for those purple lands?

Senator MURDOCK. If they remain a part of the public domain, and do not either become a grazing district or a part of the forest district, I would say the Indians would never be compensated; but, certainly, the minute we get the Indian question settled and their interest extinguished, they will either be added to a grazing district or a forest reserve. The Indians, then, in my opinion, would be entitled to \$1.25 an acre.

Mr. DILLMAN. If the total area, under the Taylor Grazing Act, of 80,000,000, or whatever it is, is acceded to, then there won't be any possibility of putting it under the Taylor Grazing Act without some amendment or modification. If that condition prevailed, would it be your thought that, by the reason of the fact they have been arbitrarily by Congress, taken away from the Indians, they should be compensated for, through some appropriation?

Senator MURDOCK. Certainly there is no question about it; they certainly are entitled to compensation.

Mr. DILLMAN. In line with the thought they would be offered for sale. When those lands were offered for sale, at the Government sales, all of the water holes and water courses were bought up at 50 cents, or more, and the persons who purchased those felt that they could dominate and control the surrounding range. Now, had it been known at that time that they could not do it, and that the Taylor Grazing Act was coming into operation, very probably quite an acreage of that purple land would have been sold. But if they could dominate it without purchase, why, it was just as effective. Now, I believe that should be considered, in arriving at the value of some of these ceded lands.

Senator MURDOCK. I do, too. I might state this, that I got a bill through Congress; it was my bill that went through, providing, as I recall it now, for the payment of \$840,000 to the Indians for their coal lands, which was vetoed by the President. I think that indicated my position on compensating the Indians. I have never been able to understand that action on the part of the President; it is one of the things that was done that I never could understand.

STATEMENT OF HARVEY McKEE, VERNAL, UTAH

Mr. McKEE. I am Harvey McKee and my address is Vernal, Utah. We are a few farmers up here, at the upper end of the valley, west of here. We wish to appeal for some public domain. We feel that our rights have probably been taken a little there, in that we have run in that vicinity for the last 50 years, our stock and cattle; and we feel we should have some consideration in helping us take care of those stock. We have farming land there which is the heart of the valley, we figure; but due to no adjacent lands there that we can get to we are not able to feed many stock.

We have a little forest range in the summertime, which takes care of our cattle about $4\frac{1}{2}$ months out of the year.

The CHAIRMAN. What do you do with them the rest of the time?

Mr. McKEE. We feed them in the corral. The reason we are making this appeal is that we would like to have some public domain there

for our cattle, which we have run in there before this Taylor Grazing Act went in; and we have been cut out.

The CHAIRMAN. Do you know what is known as the base period?

Mr. McKEE. Yes; I understand the base period, from 1929 to 1935 or 1934—

The CHAIRMAN. Does that affect you?

Mr. McKEE. I will tell you how it did affect us. Right at that time our land, from drought, didn't have a means of raising crops at that time. About that time, I will admit, our stock were meager, didn't have any, although we did run on some of this public domain what stock we did have. Some years we were there and some years we were not; but, as I see it, those basic years were placed right at that time, and that was the time that we had a drought, and were unable to take care of many stock, and those basic or priority years are what cut us out.

The CHAIRMAN. We have had somewhat the same problem all over the western country presented to us. It is a very difficult problem to find a solution for. I have always hoped some solution would be found whereby those who were unable to use the public domain during that base period, or 2 years out of it, could find some solution; but I have not run across one yet. I don't know whether the Grazing Service has or not. It works both ways. If you open that base period to all you do an injustice to the others. It so happens that sometimes the present system is rendering an injustice.

Mr. McKEE. May I ask this, what is this younger generation going to do? For instance, I have a boy that will be 18 next spring. He is going to be called into the service. He is going in to fight for America's rights. As I see it, we haven't very much rights, as far as our stock industry is concerned here; and our farming activity and stock activity is all we have. We small farmers have no chance to grow at all or sustain our livelihood.

The CHAIRMAN. How many cattle did you run, formerly, on the open public domain?

Mr. McKEE. Thirty head was our permit allotment for the Ashley Forest. We used to run a little there, for the spring of the year, from 6 weeks to 2 months, then we gathered them up and put them onto the forest.

The CHAIRMAN. Now, the Taylor Grazing Service denies you rights to that?

Mr. McKEE. I haven't been able to get much response from your Taylor Grazing, and our division No. 8; not much cooperation on this.

The CHAIRMAN. Have you gone before the advisory board?

Mr. McKEE. The board was just elected here; I believe it was day before yesterday. We asked them to have a hearing, and they said they were so busy that we could not get a hearing with them before this meeting, so that is why we are trying to make an appeal here for ourselves.

The CHAIRMAN. What do you know about that, Mr. Leech?

Mr. LEECH. I imagine, Mr. Chairman; he is referring to the new board members who have just been elected. I would like to ask Mr. Larson.

Mr. LARSON. The first time that I have been acquainted with this problem was, I think, day before yesterday, or 2 or 3 days ago, when

he spoke to me about it. I was not aware that he had asked for a hearing, at any of the recent advisory board meetings.

The CHAIRMAN. Did you make application before—

Mr. McKEE. No; I went to make an application, and I was informed that there was no need; I might just as well forget it; that my chances were negligent.

The CHAIRMAN. Who gave you that information?

Mr. McKEE. I think it was the fellow that was in before this man Taylor; possibly it was Mr. House; some of the other fellows can verify.

The CHAIRMAN. Did your whole group receive the same advice?

Mr. McKEE. I know of two other fellows that claim they received the same advice.

The CHAIRMAN. Is there something wrong with that corner of the earth you have out there?

Mr. McKEE. They're the best lands in this valley, as far as farming is concerned.

The CHAIRMAN. Upon what theory did they say you had no chance?

Mr. McKEE. Did not apply for this through those basic years. I'll admit it was later that we asked for this grant.

The CHAIRMAN. In other words, you were shut out by the dead line. Is that it?

Mr. McKEE. Yes, sir.

Mr. LARSON. As I say, I have not been aware of this until 3 days ago. From what he says, that would be the case.

The CHAIRMAN. Why didn't you make application before the date to cut off applications?

Mr. McKEE. Well, as I said before, we were in a drought, and we did not have many stock, a few milk cows around the place, possibly a calf or two. I believe it was in 1932 I ran 10 head of cattle on Little Mountain; possibly should not have been there, but they were.

Mr. LEECH. I would suggest that he file his applications with Mr. Larson, and Mr. Larson will attempt to work it out.

The CHAIRMAN. It would be fine if he could meet with that whole group, if possible, and see what can be worked out as worth while.

Thank you, Mr. McKEE.

Mr. ALLRED. In the general summarization of all the range problems I would like to have 10 minutes for that purpose, if you please, Mr. Chairman.

The CHAIRMAN. Very well.

STATEMENT OF HORACE ALLRED, ROOSEVELT, UTAH

Mr. ALLRED. Mr. Chairman, the people of Duchesne County, that section, that have been doing all the hollering here today were concerned mainly with this area up in here. These advisory board fellows all told us in Vernal—but, anyway, we have a number of range problems here that we tried to explain to Mr. Haskell the other day and said we would like to present, if we had time.

In the first place, we discussed some of this 1,200 head permit that is claimed by the Indians on the forest up here, and I think it has been further explained that whatever concessions they get, whatever compromise is arrived at, whatever settlement, will be at the expense

of the people that are now using these ranges, namely, these people in here, except—

The CHAIRMAN. Just a moment on that, that 1,200 head, I think the statement was made here the other day, in substance at least, that that has not been used, perhaps only in part. What do you know about it?

Mr. ALLRED. My understanding is that, as Mr. Wright stated the other morning, there was an understanding between the people handling the Indian affairs and the forest people, at the time the forest was created, that certain Indians, and the Indians asked Mr. Wright if they were not permitted, but the forest supervisor felt the Indians were never permitted there—there were allotments made, privileges extended to certain Indians, and the number for each Indian was defined originally.

The CHAIRMAN. We have changed to 1,200 head, presumably having the right on the forest up there. This is all rather confusing. If there are some forest officials here, we would be glad to have their expression.

Mr. JOHNSON. Mr. Chairman, we were ready to present—when this matter was brought to our attention we looked into it, and we would like to have the representative of the Forest Service make a statement as to the history and what has happened in there.

Mr. ALLRED. I had not expected to get in the middle of a battle. That is just one of the items I expected to mention. I will go ahead until somebody stops me. That 1,200 head, as I understand it, in the beginning, was on there for a year or two, I don't know how long; but it appears not so very long. It was for some reason or another. It began as far as I remember, that dates back some 25 years. I don't remember of any cattle being recognized on the forest, Indian cattle, as having a right there, other than might have drifted on, except that belonging to the Wash permit, on the Dry Gulch division of Ashley Forest. That is undisputed, on the district I run on, and the Wash uses are there. They built a right, the same as the rest of us, and he is a good stockman. We have no objection to him being there; we are not attempting to say this does not belong to the Indians. I want to picture to you that if it is determined they are to have that 1,200 head, or 800 head, on this area it will simply mean that 800 head of white cattle must move off. That is one of the items that affect these people.

This has not been mentioned; I asked Mr. Leech to include this, I expected to be talking here. When the Taylor Grazing Act was set up, I was a member of the advisory board over here; thought this was public domain; knew this was; sent in an application for grazing permits and followed the program all the while, until it was determined, a few years after the act had been in operation, that priority was the thing to determine rights. Very few of us could qualify for rights, under that priority; so we rather dropped it, hoping some day to get strength enough to go in and have them give it some consideration again. But this area here [indicating], and possibly some of this other area, rightfully, we think, belongs to us.

There are some two thousand families in here. Sixteen hundred of them are making homes on ranches and farms, living out here a hundred miles from the railroad; no market for anything except live-stock products; and the only thing we can use—we contend we are

more dependent on the use of these ranges than if we were over somewhere else, and could raise other crops to sell. There is no question about our rights to the use of these ranges, by the Taylor Grazing people, except that the Secretary approved of these rules that included the priority period, which caught us off. We are still there, trying to make a living; and we are apparently going to have to give up so much of this country over here. We are being permitted to lease the Indian lands, to lease them the last few years, as somebody outlined. But, under an agreement with the forest people, we have been required to take care of a number of their cattle. It is not the reduction of our numbers so much as it is the shortening of the season, which means the same thing. That condition is getting tougher all the time, up here. On a part of the range there are Wyoming sheep, which belong over on the other side. They acquired that right early, before the people that settled this country. They have ranges we feel like we should have, and we would like to have some way of getting them back. That is another one of the things.

Now, coming up to the Johnson bill, I talked to Mr. Haskell a little about it, the other day, and he thought it might be all right to mention it. I understand they are going to freeze those permits, so they cannot be redistributed, under any conditions. That means these boys, this man who spoke a while ago, boys like his son, are going to come back and find out, while they were gone we sewed these forest rights up in the hands of the fellows that have them. There are lots of cases where large operators, in parts of the State, will have a thousand head, or even rights for two or three hundred head. Any number of people here would be tickled to death to get 25 or 30 head of good range cows on the range. They can raise 30 head of cattle, get them out every year, and just about double their income. There are lots of reasons why they should be given those little rights. Mr. Greenlea, president of the cattle association which I am a member of—if he had been here, he could have presented it better, in this matter, and go into details. Unless somebody wants to get up and enlarge on it, I want to leave you people with a clearer memory of why this group of people, in here, are so much concerned over what appears to be little things. They have their backs against the wall. If it had not been for W. P. A. two-thirds of us would have been gone.

Mr. DILLMAN. Mr. Allred, in reference to the Johnson bill, which you say contemplates freezing those rights, what is the general opinion and desire of the stockmen in that vicinity, with reference to that provision of the Johnson bill?

Mr. ALLRED. The local people that have considered it, that I have known of, were decidedly against it, although the American National Livestock Association is supposed to represent the cattle industry and does represent the large operators, and the last two conventions have passed resolutions in favor of it. I understand the wool growers were against it. The local people, of course, take exception to it for it will retard the further existence of these people here and give them little relief.

Mr. WRIGHT. May I ask one question there? Suppose you and your association had what you thought was an arrangement or an agreement with the national forest for 1,200 head on that forest. Would you be willing to give it up if somebody needed it worse than you did? Do you think you would do that?

Mr. ALLRED. No; I don't think so.

Mr. WRIGHT. Isn't that what you are asking from the Indians?

Mr. ALLRED. I am not authorized to speak for anybody. If we had not used those ranges for the last 25 years or 3 or 4 years we would have lost the right. We built those rights up with the permission following the regulations of the forest department, and all the time with the understanding that the continuous use is the establishing right. I think there is a lot of history to the land of the forest people there, that they want to have this matter discussed. But we contend, Mr. Wright, that along with the rest of the use, our contention, as I said in the start, and I don't say it disparagingly about the Indians, but I am trying to picture the effect it will have on these people here if they have to move off this range.

The CHAIRMAN. Is there a representative of the Forest Service here?

**STATEMENT OF C. E. FAVRE, CHIEF OF RANGE MANAGEMENT,
INTERMOUNTAIN REGION, UNITED STATES FOREST SERVICE,
OGDEN, UTAH**

Mr. FAVRE. I am chief of grazing region 4, of the Forest Service. I think we might discuss a little bit the background and how the permits came into effect.

The CHAIRMAN. That is, the 1,200 head?

Mr. FAVRE. I understand the 1,200 head are part of those that are now admitted on the Wasatch Forest, over on the extreme west side. But the people interested in here—now, I understand Mr. Allred wants to discuss the 800 head we put on the Ashley Forest.

It seems in about 1906, by an exchange of letter between the Secretary and the representatives out here, it was agreed there were certain named Indians that would get some permits free of charge. This letter which I have here, signed by Capt. C. V. Hall, then acting Indian agent, requested that free permits be given to certain named Indians. He said in the letter:

The following is a statement of the Indians with the number of head of cattle which would probably be affected if the free period could be arranged.

He goes on to explain who they are.

* * * On the head waters of the Uintah—

There is a little statement here before that, that I had better read:

Referring to your communication of the 3d instant, "Land 31494, 1906," relative to the securing of a free privilege to graze Indian cattle on the forest reserve recently created from the Uintah Reservation, I have the honor to report as follows:

"During the summer grazing months Indian cattle have been in the habit of grazing high up on the mountains on the headwaters of the following streams: North fork of the Duchesne River, Rock Creek, east and west forks of Lake Creek, Whiterocks, and Uintah Rivers.

The areas, therefore, that the Indians desired to utilize in summer grazing for their cattle would lie in townships—

He enumerates them here as shown on the board—

The Indian cattle would not graze over the entire portion of these townships, but principally along the banks of the streams heretofore mentioned and covering areas of a mile or two from such streams.

The following is a statement of the Indians, with the number of head of cattle which would probably be affected if the free permit could be arranged: Headwaters, Uintah and Whiterock River: Harry E. Harris, 125 head—

and so forth. He goes on, I don't know that we need to enumerate all of these. Here are some 2,400 head that were grazed, but I should say probably there are 30 names, Indians, together with the number of stock for each. Then he brings out:

While this number of cattle have been heretofore grazed on the upper reaches of the streams mentioned, I have been endeavoring to have the Indians understand that it is not absolutely necessary to graze all their cattle high up on the mountains, and in all probability if they were allowed free permits for 50 percent of the number of head shown in the above list it would be reasonably satisfactory to them.

That is where we get the 1,200 head.

The CHAIRMAN. Is that right a promiscuous right or individual right to the individual Indians?

Mr. FAYRE. The contention is, as I think these others also show, that there was the individual right, because it also points out specifically certain Indians, that is, in this letter, which is dated May 10, 1906.

The CHAIRMAN. What year?

Mr. FAYRE. May 10, 1906. Mr. Adams put in the names of the people concerned, and then in the Acting Commissioner's letter of May 25, 1906, he has this to say at the end—

Senator MURDOCK. Commissioner of what?

Mr. FAYRE. Office of Indian Affairs.

He says [reading]:

This Office renews its recommendation that the Indians named be granted free grazing privileges on the forest-reserve lands for 50 percent of the number of head shown in the report of the acting agent.

Then Secretary Wilson soon approved that, under date of June 1, 1906.

Senator MURDOCK. Secretary of which Department?

Mr. FAYRE. The Department of Agriculture, James Wilson. He says in part:

The forest officer in charge of the Uintah Forest Reserve has been informed that it is the opinion of the Forester that the request of the Indians to be allowed to graze about 1,200 head of cattle and horses in the Uintah Forest Reserve free of charge, should be granted unless there is some objection unknown to him, and the officer was directed to report by wire whether or not any material objection exists.

Then, again, on August 2, 1906, the Acting Secretary of the Interior, writing to the Secretary of Agriculture, says this:

Referring to your letter of June 11, 1906, relative to free-pasturage privileges on the Uintah Forest Reserve to certain Indians of the Uintah Reservation, I have the honor to transmit herewith a copy of a letter from the Acting Commissioner of Indian Affairs, dated the 25th ultimo, in relation thereto.

The Indian Office reports that the matter was submitted to the acting agent in charge of the Uintah and Ouray Agency, and that he reports in substance that there is no objection to the arrangement suggested in your letter, and that a driveway has been agreed upon and established.

I, therefore, have the honor to request that you will issue instructions to the forest inspector in charge of the Uintah Forest Reserve to allow the 1,200 head of cattle owned by the Indians to graze on the reserve free of charge in exchange for the right to cross Indian lands.

So that is the basis, some of the principle bases, of why we think the permit to specific Indians that the Secretary agreed to—as you go on through this, follow the administration from then on through, there are about two more instances where this same matter is brought up.

In a letter from Ranger Adair, of the Indian agency here, on October 15, 1916, Adair again refers to it, using the words "certain Indians of the Uintah Reservation." That is, he refers to them by name. In 1917 Supervisor Jepson, who then had charge of that portion where the 1,200 are running, over on the Wasatch, again refers to the individuals that he had been talking about. That is about all there is in the record. That shows specifically that they might have been talking about individual Indians.

As the administration has gone on, however, I think there has been no doubt but what they have gradually drifted; both the Indian Service and the Forest have gradually drifted into a consideration of any Indians who might want to graze cattle there, to the number indicated here. Whether that is not according to secretarial regulations, if they had in mind—I will leave it to you men and your judgment—the permit was granted to individuals. So much for that phase of it.

Senator MURDOCK. Let me ask this: There is nothing in those letters to indicate anything but individual permits were considered?

Mr. FAVRE. You notice some reference where they may say "the Indians." Specifically, the parts I read to you indicate in their approval that they said—they asked for certain Indians, and they were approved for their request. So I think it referred to the Indians named, both by the Interior Department and by the Secretary of Agriculture, when he said, "I approve the request."

Mr. WRIGHT. It seemed to me from what you read there that it said "free grazing privileges for the Indians."

Mr. FAVRE. "For the requests," wasn't it?

Mr. WRIGHT. Were free individual permits ever issued?

Mr. FAVRE. I understand we have never issued a permit, but allowed by letter or agreement with your office that the Indians could put up so many cattle.

Mr. WRIGHT. Undoubtedly those individuals started out as indicated in this letter. Wouldn't that to some extent, at least, indicate it was not contemplated to issue individual permits, but simply to issue a sort of privilege for that number for whatever Indians could use it? Might it not be interpreted that way?

Mr. FAVRE. I think we have grown into that; that while the original was set up for these named individuals here in Captain Hall's letter, because that is what the Secretary asked for—he asked for these named individuals, and then they probably issued them this way for awhile, I suppose, or allowed these individuals to go up with stock and gradually got into letting anybody go up because at first there were not many settlers in there. In fact, in those early days, I guess, there were not any settlers to start with. I guess the settlement was after 1906.

Mr. WRIGHT. The settlement started about that year. Anyhow, one of the main things, I think, that Captain Hall had in mind, in requesting this, was free grazing, then, for these individuals that had been using it, because, understanding, this was an Indian reservation before it was put in a forest reserve. Then the Congress finally, I think, in 1931,

paid them \$1.25, or whatever it was, for the land, which discharged all responsibility to the use of that land.

Mr. FAVRE. As we go on, this exchange or this free use was granted more or less because of the free crossing of whatever white people's stock there was going up there. The whites were running stock and they would drift, as I understand it, early in the year. You gentlemen know how stock drifts from the ranches; they were turned out and would drift across the Indian lands onto forest lands, and that drift, as I understand these early letters here, in 1917—it is pointed out that an agreement of the supervisors here and the agent, Mr. Kneal, superintendent, agreed back there that there was considerable drift of the stock over the range for perhaps as much as 3 to 6 weeks in going to and from the forest. That is, they were not urged across the Indian lands. There was no fence along that line between the green and the yellow, so there was a drifting back and forth of the cattle of both the whites and the Indians on those land. In one letter I find that the supervisor agrees that inasmuch as these 800 head are off and on the forest, probably they were only on there, he said, about a third of the time, so he thought that grazing only a third of the time for 800 would about equal the amount of forage that the white stock consumed in going across the Indian lands, gradually this way, going up in the spring, grazing some, because that is better spring range than the higher range is. Then as they come out in the fall, they again grazed on the area, so he thought that was about equal and about right.

**STATEMENT OF W. B. RICE, ASSOCIATE REGION FORESTER,
OGDEN, UTAH**

Mr. RICE. I was afraid Mr. Favre was not going to bring out that, in the original letters of 1906 between the two secretaries, the Secretary of Interior agreed to this free drift across the Indian reservation. I think that is in the original correspondence.

Mr. FAVRE. That is.

Now, since 1917 I don't know whether that boundary line has been fenced across there or not.

Mr. WRIGHT. Yes, around 1934.

Mr. FAVRE. Since that has taken place there has been a definite division of stock, as I understand it now. The cattle of the white folks are trailed across the Indian lands, not grazed any more, as they used to. Isn't that right?

Mr. WRIGHT. That is right.

Mr. FAVRE. Drive them across the Indian lands and put them on the forest. That means white cattle are on the forest throughout the season and fully consumed the forage on there. Further than that, in about 1922 the Indian use fell off. I guess it began falling off before that, but from about 1922 to 1934 according to all the records that we have there, the use has been for about 100 to 200 head of cattle. Now the Secretary's regulation, as you know, governing all people, whether Indian or white folks, was that in order to maintain a preference it must be through use. Along in the early days, along about 1920, along about 1922, about 1 to 2 years of nonuse was all that was granted until it was considered that your permit had elapsed.

Since then, the last few years, that has been rather liberalized. But in those days 1 or 2 years was about all that any individual could hope to maintain a grazing preference, without using it. So the fact that the Indians, whether we consider it as use for certain-named Indians, or whether we consider it passing back and forth of the stock, or any of those other matters upon which the use of this range is based, it went out of use, those permits went out of use, or that privilege of using the range ceased to be used.

At the same time, or within 2 or 3 years, as I say, the supervisor personally justified under the regulation of the Secretary the fact that since he was not getting any more of these Indian stock on here, either by permit or otherwise and they had not asked for nonuse, which, according to the regulations he probably could not have approved of for more than a couple of years anyway, he was fully authorized and fully justified in giving permits to other individuals. Now, the settlers were coming in and taking up these lands and needed cattle to make a go of their living on these raw lands, so he gave them permits. Now, the permits that were given out were small. I guess the average permit for using these ranges now to white folks would be in the neighborhood of 26 head. So they were put on with perfectly good preferences under the Secretary's regulation. Now then, after these people have used it under permit and under the Secretary's regulations for this period of years, they have established preferences and must take care of those stock. In fact, under 10-year term permits, now, which the Government considers are contracts they cannot be broken. So the white folks have perfectly good preferences on there.

The Indians' permits have lapsed and the replacement of those Indian cattle on there is impossible unless we would greatly overgraze the range. This would disturb the watershed, which we could not do under the secretarial regulations. Therefore it amounts to just one of two things, either take off the small permit that got in their privileges under the secretarial orders, or not allow the Indian cattle to be admitted.

The CHAIRMAN. Are you confronted with the problem now by which the Indians are offering the cattle for grazing permits on the forest?

Mr. FAVRE. Yes; and we have been, for the last 2 or 3 years. But we have consistently held during the last 2 or 3 years that we cannot put the Indians on unless the Indians take some of the white cattle which formerly would have been on the forest and graze them for a period in the spring down on their better spring range. This would shorten our season on the forest. Then, in turn, we would take the cattle of both the white people and some of the Indians' on the summer range. We have been making that kind of a deal for several years and, as I understand the people here, the permittees, that is perfectly agreeable. But the permittees contend that they have to make this deal with the Indian Service annually, which does not give them a chance to know how they are going to run their stock each summer. They are up against an arrangement of making adjustments every summer on their Indian cattle, and they never know how many they are going to run nor how. That, I think, is bringing the thing to a head.

We are perfectly willing to set a certain grazing season up there. We are perfectly willing if the Indian Service can take those cattle for a part of that grazing season down on their spring range and then

let us take a part of their Indian cattle up on the summer range which will be a 50-50 proposition, all right. But we cannot take less than a 50-50 proposition.

Senator MURDOCK. In other words, you are doing everything that you can, under the rules and regulations of the Forest Service, to operate with the Indian Agency, to take care of the 800 cattle. Is that right?

Mr. FAVRE. That is right.

The CHAIRMAN. Very well, thank you very much.

Mr. DILLMAN. On the 400 head that have been transferred over onto the Uintah Forest, were those recognized as individual transfers, or was it the private transfers that you recognized?

Mr. FAVRE. At the time we took that over there, I think we took over so many Indian cattle. I think we were under this arrangement. We have, since the original letters were out, considered they were more or less private. That idea has grown with us.

Mr. DILLMAN. As far as that transfer goes, acquiesced in the theory they were tribal and not individual.

Mr. FAVRE. So far they have; they may be able to work it up over there. If they can, we are tickled to death to help take care of the Indians. Now, the situation over there, they seem to be getting at it pretty well.

Mr. WRIGHT. All right on the Wasatch.

Mr. FAVRE. None of these small owners have gotten into their preference further than that, got some reductions over there through a forfeiture or two, I believe, put the Indian cattle in on that forfeiture, I believe.

Mr. RICE. Mr. Chairman, may I make a short supplemental statement there? This may involve a little repetition, but it needs to be emphasized.

The exchange of letters that both the Forest Service and the Indian Service, I think, recognized originally, at least, as an agreement, provided two things. The Secretary of Agriculture agreed to permit the grazing on the national forest free of charge of 1,200 Indian cattle which he specified. Now, I don't think that it matters a great deal whether we consider it as permits to individuals or permit to the tribe. In either case it comes out the same way. Now, in return for that the Secretary of the Interior agreed to the crossing of the white cattle across the Indian reservation; and the Indian agents, from 1906 to 1937, at least, interpreted "crossing" in accordance with the customs of the day, permitting them to drift across at will, sometimes taking, according to the records, as much as 6 weeks. At the present time the Indian Service is interpreting that according to the customs of the present day; they are driven across and get comparatively little feed. We have no complaints to make about that except to state it as part of the record.

Now, in permitting the grazing of 1,200 head of cattle, free of charge, on the forest, the Secretary of Agriculture specifically waived the regulations in that case. That is, the grazing without charge is a waiver of the Secretary's regulations. He specifically mentioned that waiver, but he also mentioned this other. So I think the Forest Service was justified in assuming with that concept that the Indian cattle should be grazed under the existing regulations of the Department. The one point that Mr. Favre did not bring out is that this nonuse

lasted for a period of 13 years and, in accordance with regulations in effect at that time, and in effect now, 13 years of nonuse would lapse the privilege.

The CHAIRMAN. Yes.

Mr. DILLMAN. May we ask how many head are recognized by the forest of this 800 head now?

Mr. FAVRE. Between one or two hundred.

Mr. WRIGHT. Our records show about 600.

Mr. FAVRE. Two hundred head is continuous use; you are trading on the 600.

Mr. WRIGHT. We are getting 600 cattle on the forest, and we understood it is a result of this agreement. Any other use on the Indian land is being paid for by the users.

Mr. FAVRE. Being paid for, but you are taking part of our grazing service now.

Mr. WRIGHT. Yes; as a cooperative measure.

Mr. FAVRE. Two hundred head is what we are recognizing as an established preference; that has been kept there throughout this period every year since 1906. There has been a use of probably as much as 200 head, and that is what we would be willing to continue, this preference for 200 head as a regular permit. The rest of it would be a trade between grazing seasons. That is, if you take a certain part of our grazing period we could take some to the Indians.

Mr. DILLMAN. Let me ask further, if you are now recognizing the rights of the Indians on the forest for 200 head, are you recognizing that as to individuals, and, if so, what individuals?

Mr. FAVRE. What is the name of that fellow?

Mr. EARL C. SANFORD (forest supervisor, Ashley National Forest, Vernal, Utah). His name is Elmer Wash.

Mr. WRIGHT. May I make the observation there, in that connection, Elmer Wash runs a little over 300 head of cattle on the national forest, and Sapaniese Cuch runs 171, not that either of these men have a permit from the national forest; they never have had that. We have a record, Mr. Rice, of 13 years of nonuse. I don't believe it is entirely nonuse; some small numbers continued or whether or not—

Mr. RICE. Yes; there is this 200 head continued without a break. If I inferred otherwise, I was in error.

Mr. WRIGHT. During the last 7 years they have recognized the lease permitted the full number on the Wasatch Forest—that is, 1,200 sheep, which is equal to 400 head of cattle—without issuing any permits, and up to 600 head, according to our interpretation, on the Ashley. Now, I realize this is another one of those problems; we are trying not to make an issue of it. It can be settled around a table. We have been hoping, every year, it would be.

The CHAIRMAN. I think it should be. I don't know whether it falls into this committee's jurisdiction or not. We have listened to it.

Mr. WRIGHT. The essence of it could be thrashed out and settled. It has been a conflicting problem, which interferes with the permanent plans the Indians might make. We have been willing to try to get some settlement or compromise or whatever is necessary, but we don't seem to be able to.

The **CHAIRMAN**. We have now been running about 5 hours, and I would like to terminate this. I think it will be best to recess until a later hour. The committee will adjourn now, to meet at 7:30 o'clock this evening.

(Recess until 7:30 p. m.)

(At the request of the chairman, the four letters referred to by Mr. Favre in his testimony were inserted in the record. They are as follows:)

DEPARTMENT OF THE INTERIOR,
UNITED STATES INDIAN SERVICE,
UINTAH AND OURAY AGENCY,
Whiterocks, Utah, May 10, 1906.

COMMISSIONER OF INDIAN AFFAIRS,
Washington, D. C.

SIR: Referring to your communication of the 3d instant, "Land 31494, 1906," relative to the securing of a free privilege to graze Indian cattle on the forest reserve recently created from the Uintah Reservation, I have the honor to report as follows:

During the summer grazing months Indian cattle have been in the habit of grazing high up on the mountains on the headwaters of the following streams: North fork of the Duchesne River, Rock Creek, east and west forks of Lake Creek, Whiterocks, and Uintah Rivers.

The areas, therefore, that the Indians desire to utilize in summer grazing for their cattle would lie in T. 2 N., Rs. 1, 2, 3, 4, 5, 6, and 9 W. of the Uintah Special Base and Meridian.

The Indian cattle would not graze over the entire portion of these townships, but principally along the banks of the streams heretofore mentioned and covering areas of a mile or two from such streams.

The following is a statement of the Indians with the number of head of cattle which would probably be affected if the free permit could be arranged:

Headwaters, Uintah, and White- rocks River:		Headwaters of Lake Fork Creek— Continued.	
	Head		Head
Henry E. Harris	125	Joe Arhi	15
Rose Daniels	30	Rough	50
Nephi Lehl	75	Green Stick	100
Bob Ridley	40	Billy Woods	25
John Duncan	50	Headwaters of Rock Creek:	
Big Tom	25	Tapoots	150
Uncle Sam	25	Mountain Sheep	75
Jim Atwine	25	Towanta	75
Headwaters of Lake Fork Creek:		Wanrodes	150
Charley Mack	100	Sokmikent	100
William Wash	500	Bill	30
Toorooroose	100	John Henry Kodge	30
Square John	25	Joe Bush	50
John Starr	100	Headwaters of the Upper Duchesne River:	
Pearank	50	Tonegats	50
Terras	10	Jasper Pike	50
James Randlett	60	Jesse Copperfield	50
Frank Bannocky	60		
Grace Wash	40		

While this number of cattle have been heretofore grazed on the upper reaches of the streams mentioned, I have been endeavoring to have the Indians understand that it is not absolutely necessary to graze all their cattle high up on the mountains and in all probability if they were allowed free permit for 50 percent of the number of head shown in the above list it would be reasonably satisfactory to them.

Very respectfully,

C. V. HALL,
Captain, Fifth Cavalry,
Acting United States Indian Agent.

DEPARTMENT OF THE INTERIOR,
OFFICE OF INDIAN AFFAIRS,
Washington, May 25, 1906.

The honorable the SECRETARY OF THE INTERIOR.

SIR: On April 10 the Department referred to this Office for proper action a letter from the honorable Secretary of Agriculture, dated April 5, relative to the request of Acting Agent Hall that the Indians of the Uintah Reservation, Utah, be granted free grazing privileges on the forest reserve lands formerly included in the Uintah Reservation. The Secretary said that if the agent would describe as nearly as possible the areas outside of the 250,000 acres reserved as grazing lands on which they desired to graze their stock, and would state the maximum number of horses and cattle they desired to graze on the locations referred to, the Forest Service would look into the matter and would take such action as the circumstances warranted.

On May 3 Acting Agent Hall was requested to furnish the information desired. The Office is now in receipt of a reply from the acting agent, dated May 10, giving the information asked for. A copy of the letter is transmitted herewith for the use of the Secretary of Agriculture. The Office renews its recommendation that the Indians named be granted free grazing privileges on the forest-reserve lands for 50 percent of the number of head shown in the report of the acting agent.

Very respectfully,

C. F. LARRABEE,
Acting Commissioner.

The SECRETARY OF AGRICULTURE.

SIR: Referring to your letter of June 11, 1906, relative to free pasturage privileges on the Uintah Forest Reserve to certain Indians of the Uintah Reservation, I have the honor to transmit herewith a copy of a letter from the Acting Commissioner of Indian Affairs, dated the 25th ultimo, in relation thereto.

The Indian Office reports that the matter was submitted to the acting agent in charge of the Uintah and Ouray Agency and that he reports in substance that there is no objection to the arrangement suggested in your letter, and that a driveway has been agreed upon and established.

I, therefore, have the honor to request that you will issue instructions to the forest inspector in charge of the Uintah Forest Reserve to allow the 1,200 head of cattle owned by the Indians to graze on the reserve free of charge in exchange for the right to cross the Indian lands.

A copy of Acting Agent Hall's letter is herewith enclosed.

Very respectfully,

THOS. RYAN, Acting Secretary.

JUNE 1, 1906.

The honorable the SECRETARY OF THE INTERIOR.

SIR: I have the honor to acknowledge receipt of your letter of May 29 with its enclosures from the Honorable Commissioner of Indian Affairs. The forest officer in charge of the Uintah Forest Reserve has been informed that it is the opinion of the Forester that the request of the Indians to be allowed to graze about 1,200 head of cattle and horses in the Uintah Forest Reserve free of charge should be granted unless there is some objection unknown to him, and the officer was directed to report by wire whether or not any material objection exists.

I have the honor to be, sir,

Very respectfully,

JAMES WILSON, Secretary.

The CHAIRMAN. The Committee will be in order. Who is among those present who wishes to be heard? We will try to hear everybody tonight, if we can. Mr. Willard Day, any statement you care to make we will be glad to hear.

**STATEMENT OF WILLARD DAY, COUNTY COMMISSIONER, DUCHESNE
COUNTY, CHAIRMAN OF COUNTY PLANNING BOARD**

Mr. Chairman, I think perhaps I had better go to the map.

I might say in the first place, that my family homesteaded in this district in 1910. I was a member of a family of five boys. My folks

got hold of some of the high powered sales articles sent out by the Government. Of course, today, we call it propaganda. It was all about the good land and good water situation in this country; and they moved here on purpose so that their boys could have a chance.

Now, I will take this up from the county official's standpoint. I will give the county line, as near as I can. I think I am right that this is Duchesne County, coming down this way, in here [indicating].

We have no enmities, as far as the Indian people are concerned. It seems to me there is a chance there, or a possibility—the way things worked out, it has been whites here against the Indians, rather than coming to a solution that would satisfy everybody. We used to herd cows up in here. I don't know that we were even encroaching on the Indians' right at that time. Most of them moved in here, under those terms, and there was plenty of land and plenty of water; moved the stock in here, with them, and, later on, we found out this used to run across there. They used to graze up there; figured they had rights up here. There was one that came in here, and ran the stock on that. That situation has somewhat changed, until now the yellow is as we find it; the blue is where the Indians' farms are. It is claimed they are in the best part of the farming district, and to some extent that is true. It leaves the small pieces here. There are a few families still living there. This part belongs to the Forest, and this belongs to the Indians, the yellow belonging to the Indian Grazing; and, as for this purple, we have not decided who owns this.

But, from a county official's angle, there are a few people in here that are standing the tax burden of that territory; very few. I think we have already heard statements of how near collapsing the County Government was, a short time ago; and, we feel that when the solution of this problem is arrived at, most certainly the county government should be considered. You can see the vast amount here, and here, and this amount in here, that is available to farming; not paying the tax burden.

I checked for 2 years; asked the county clerk for a check on 2 years that I thought might be comparable, as far as prosperity is concerned; so I asked for the year 1927, the assessed valuation of the county then. It was around \$6,700,000. Then I asked for 1940, which I felt would be comparable, and the assessed valuation then was \$3,140,000. Now, something has happened, in here, to make that change; and I contend that part of what has happened has happened in connection with the decisions here; this public domain.

Now, the fellow who used to have small herds, that run on what is titled Taylor grazing ground, is out. The larger fellows come in from other parts, and that leaves us with the problem of taxation, among this small group here. Now, it seems to me, it would be plain for the committee to see, taking the line the county does, there is an injustice to the few people who live there, on that tax problem. I don't know how you are going to settle this other. I would not say that it does not make a lot of difference; but whether or not it does, I would like to bring to the attention of the committee that there should be some way that these departments, here, and here, should be considered in a tax settlement. We hope that, some time, legislation will be presented, where some of the burden is borne by some of the other departments that receive the benefit from the county government.

The CHAIRMAN. Let me say that the matter that you have just touched upon has been a matter of consideration and study by the Members of the Senate for some years. Some bills have been introduced on that subject. No agreeable plan has yet been worked out; but that something has to be done to compensate the respective States for the land that is taken off the tax rolls by the Federal Government is very apparent. Something has to be done, sometime or another in the not far distant future. Your State, Arizona, New Mexico, Nevada, and Idaho—those States are very materially affected.

Mr. DAY. That is all I wish to present.

Mr. PATTERSON. To what do you attribute your loss?

Mr. DAY. In the study, the blackboard study, one of the larger contributing factors was the loss of the small herds.

Mr. PATTERSON. The small herds?

Mr. DAY. Yes; cattle and sheep.

Mr. PATTERSON. Do you sustain any loss from the Forest Service?

Mr. DAY. From the Service? That is right, from the livestock upon the Service; well, you would find here, if the small farmer owned the stock that was grazing here, instead of coming in from this other direction—

Mr. PATTERSON. Do you think the herds have diminished?

Mr. DAY. Yes; the local herds.

Mr. PATTERSON. Has there been any loss by reason of land conditions, land withdrawals?

Mr. DAY. Yes.

Mr. PATTERSON. Depreciation in the value of land?

Mr. DAY. There is no question about it. That is what I am speaking of.

Mr. PATTERSON. Is it depreciation, or loss from the tax roll?

Mr. DAY. I don't get your question.

Mr. PATTERSON. Well, has the land failed to come upon the tax roll, for taxation; or has it been a depreciation in the value of lands?

Mr. DAY. Well, there has been both; been a depreciation in the value of the land. I might say this, there were hundreds of people came in here, on the assumption of what the Government stated, that this was very good land, and had a good water right. There were many, many people came in here on the poorer lands, and you will find many of them have pulled out and left. That has contributed.

Mr. PATTERSON. Has that happened in the last 2 years?

Mr. DAY. No.

Mr. PATTERSON. Over a series of years?

Mr. DAY. Over a series of years.

Mr. PATTERSON. You gave the figures here of a loss of about a million dollars in a certain length of time, in 2 years or more.

Senator MURDOCK. It was a loss of \$3,000,000.

Mr. DAY. Six million to three million dollars between the years of 1927 and 1940. That is why I based the conclusion that something had happened from our range set-up on this land. Our planning board findings prove it; and our planning board finding proves that these people are not going to be able to maintain themselves, and the tax burden they have on them now, unless something can be done to adjust this.

The CHAIRMAN. What is your rate per hundred on State and county taxes?

Mr. DAY. State and county runs around 0.0035.

The CHAIRMAN. Isn't it worse than that?

Mr. PATTERSON. 0.0035. What is your remedy? What do you suggest?

Mr. DAY. Well, the Planning Board—their suggestion was to acquire some of these lands from someone or another by Government purchase, or somehow, so this range could be restored to the people that lived in here.

Mr. PATTERSON. That is, getting it back into private ownership to pay taxes.

Mr. EMORY SMITH. Since the Taylor Grazing Act was enacted there has been two small operators admitted to that district H, and some of the large operators have been reduced; but there are more sheep there in unit H today, in Duchesne County, than there was before the Taylor Grazing Act was enacted.

Mr. DAY. Do you mean more local sheep that belonged to the people of the community?

Mr. SMITH. Yes.

Mr. DAY. I am not too well acquainted with that.

Mr. PATTERSON. How has it been the last 2 or 3 years? Has it picked up some in the last 2 or 3 years or gradually receded?

Mr. DAY. I am of the opinion that it has picked up some in the last 2 or 3 years.

Mr. FAVRE. Mr. Day, you said that land in green up there inside of the yellow line, is that where your permittees run their cattle, do you know, up above the Indian reservation? Do your people, permittees, run up there?

Mr. DAY. I am not sure.

Mr. FAVRE. You made the statement that they came from this Wyoming country. I question whether there is Wyoming sheep or cattle running on this side of the mountain. There might be, however; and I was asking for information. I don't think there is.

Mr. DAY. Well, what I know, I heard the statement from our county assessor, that this group here is grazing over here; getting out without being taxed. It was getting no revenue out; so I imagine there must be some grazing over there.

Mr. FAVRE. I wonder how much that amounts to; or if it is some of the Vernal sheepmen that run up there?

Mr. DAY. Definitely stated from Wyoming; and probably expensive to go get the herds, as it would be for what you would get out of them. That was the statement.

Senator MURDOCK. Haven't you an arrangement with Wyoming on the tax situation—the division of taxes? They range so long on your county, in this State, part of the year and part of the year in Wyoming?

Mr. DAY. I just know the statement that was made by the assessor, that these people were using that right; and we have not been able to get the taxes for it.

Mr. FAVRE. And the cattle we were talking about a while ago that crossed this Indian land, and come from this Duchesne County, in Roosevelt, through there; some few of your cattle that run upon the forest there, as I understand it. Is that right?

Mr. DAY. That is my understanding, too.

The CHAIRMAN. Anyone else who cares to be heard?

STATEMENT OF LEON CHRISTIANSEN, COUNTY SURVEYOR, REPRESENTING THE COUNTY COMMISSIONERS OF UINTAH COUNTY

Mr. CHRISTIANSEN. Uintah County has the same problem, on the tax situation, that was stated for Duchesne. Eighty-five percent of the area of the county is tax exempt; that is, it is in Government owned, Government controlled, or withdrawals. Here we have the Forest Service, Uintah Indian Reservation, the Grazing Service, the National Dinosaur Monument, the naval oil reserves, and other withdrawals of that nature. It leaves approximately 15 percent of the land to carry a tax burden for the entire county.

Up until the passage of the Taylor Grazing Act, we were getting along, on the rolls, each year, several thousand acres, from new homesteads. Of course, after the passage of the Act, that gradually has dwindled until, at the present time, there are very few lands being added on to the tax roll. In addition to that, the Indian Service, in their purchase program, have taken all of these lands, of course, from the tax rolls.

The CHAIRMAN. What was the taxable value, the assessed value, of the lands taken from the tax roll by the purchase within unit G?

Mr. CHRISTIANSEN. I could not give it; maybe Mr. Wright would know it, offhand.

Mr. WOHLKE. I think we will be able to produce that.

Mr. CHRISTIANSEN. I could find it, from the records downstairs. But not only that, all of the stock that were originally taxed, in there, of those owners, also passed off of the tax roll, leaving the rest of the county to carry that burden, also.

The CHAIRMAN. You are the assessor of the county?

Mr. CHRISTIANSEN. No, sir; county surveyor. I have handled the records.

The CHAIRMAN. How do you, in Utah, fix the value of your livestock? Do you fix it by a State board, or by county board?

Mr. CHRISTIANSEN. Usually the State board recommends the valuation, of various classes of livestock, which is then approved, or changed, as the case might be, by the county board.

Mr. PATTERSON. They fix the value; the State board fixes the value?

Mr. CHRISTIANSEN. Yes.

The CHAIRMAN. At what do you fix the value of cattle?

Mr. CHRISTIANSEN. Cattle vary over quite a range. This year, they run from about fifteen to fifty dollars.

The CHAIRMAN. And sheep?

Mr. CHRISTIANSEN. If I am not mistaken, ewes are \$5. Somebody can correct me on that.

Mr. EMORY SMITH. Four dollars.

Mr. PATTERSON. Do you make a distinction, in dairy herds, in your cattle?

Mr. CHRISTIANSEN. Yes; range cattle take one amount, and dairy another. Of course, this dairy cow, the cows and your pure-blooded cattle, have one evaluation, and range cattle another.

Since the passage of the act the question was brought up there that livestock had increased in Duchesne County. That is not the case in Uintah County. After the passage of the Taylor Grazing Act, especially after the act was operating, there was a large reduction in the numbers of livestock on the assessment rolls. Now, at one time I had

that information, but I cannot give it offhand. But there was a gradual decrease from the time the act went into effect until about 1940. As I see it, after awhile they have started to come back up again. Of course, that reduced our revenues from the taxes all the way through, and with the continued withdrawal of the lands, as Mr. Day states, we must have some relief on the tax set-up.

Senator MURDOCK. Let me ask you this: There seems to be a lot of sheep that are grazing both in Utah and Colorado. Now, is there any agreement between your county and the adjoining counties in Colorado on the distribution of taxes?

Mr. CHRISTIANSEN. They are taxed on the basis of the number of months in each location, as are our other cattle. We have a large number of cattle that also go in that area in the summer range at Blue Mountain, handled the same way. The same way with your sheep from Wyoming sections; they come into the summer range, on the north end of the county, and most of us are down here on the south summer range.

Mr. PATTERSON. Where do you feel the chief shortage in the administrative funds for the county or all of it?

Mr. CHRISTIANSEN. Reduction through the entire structure.

Mr. PATTERSON. Well, but your school funds are taken care of by State distribution. Where are you short? Why do you need any funds?

Mr. CHRISTIANSEN. For instance, we will take our roads. Uintah County has 1,500 miles of county roads to maintain. Under the present set-up, of course, we have a county levy, and the license-plate money. If it was not for that license-plate money from the State of Utah, we could not operate.

Mr. PATTERSON. But you would get other State funds for roads; wouldn't you?

Mr. CHRISTIANSEN. State roads are independent; we don't have anything to say about the State roads.

Mr. PATTERSON. Where do you feel the chief shortage; in funds to administer the affairs of the county?

Mr. CHRISTIANSEN. Mr. McKee can answer that.

STATEMENT OF J. R. McKEE, PRESIDENT, MOSBY CATTLE ASSOCIATION, TRIDELL, UTAH

Mr. McKEE. Mr. Christiansen, I understood, made a statement that the school fund was not affected this way. But it is affected, because the county supplies 16 mills, on our school funds, direct, besides what they get from the State. That comes out of the funds that are collected in the county, and out of the 35 mills that is levied against the county, and the general fund, the county fund, is broken up into several different funds. We have a general fund that is very depleted, and are not able to operate on it. Every year for the last 2 or 3 years, for the last several years, another fund has had to be created, which is called an efficiency fund, or general-indebtedness fund, that has to be turned into the general fund, to take care of it; so the county has not been able to operate on the funds it has received.

Senator MURDOCK. You haven't any railroad at all in the county?

Mr. McKEE. No railroad. We had a little gas company here, but the gas well went dry, and we don't even have that now.

Mr. PATTERSON. Do you have a utility fund?

Mr. McKEE. There might be some, from the Utah Power & Light Co., but most of the farms are served here by the R. E. A. I don't think that pays any utility tax.

Mr. CHRISTIANSEN. No, sir; none of those funds are taxed at the legal limit.

Mr. McKEE. I might say here, too, we get a little fund from the Forest Service. I believe it is 25 percent of your permit fees that are collected there. That is turned over to the county, and the school gets half, and the county administration gets half.

Senator MURDOCK. You get some from the Taylor Grazing Act?

Mr. McKEE. Not a thing from the Taylor grazing, contending a man who owns Taylor grazing rights does not pay any. He pays the same taxes as the man who owns cattle and keeps them on his own private property; he pays taxes on the private land and he also pays the same taxes on his cattle and sheep as the man who has Taylor grazing rights.

Mr. LEECH. Mr. Chairman, the 50 percent of the fees collected, under the Taylor Grazing Act are paid to the State and are distributed to the counties from which that money comes.

Mr. McKEE. What I have understood, this maintenance that goes to keep up the range, nothing comes into our county records unless it comes direct to the schools. I would not have any record of that, but it might come direct to the schools, but it goes to keeping up the improvements on the range, but direct to the county government. To my knowledge there is nothing coming in.

Mr. PATTERSON. Nothing comes into the general fund?

Mr. LEECH. It is paid to the county, and, under the State legislation, it is expended, on the advice of the advisory board.

Senator MURDOCK. Here is the provision on that in the Taylor Grazing Act—

fifty percentum of the money received under this Act during any fiscal year shall be paid at the end thereof by the Secretary of the Treasury to the State in which the grazing districts or the lands producing such moneys are situated, to be expended as the State legislature of such State may prescribe for the benefit of the county or counties in which the grazing districts or the lands producing such moneys are situated: *Provided*, That if any grazing district, or any leased tract is in more than one State or county, the distributive share to each, from the proceeds of said district or leased tract, shall be proportional to its area in said district or leased tract.

Mr. PATTERSON. Just as he said, it is devoted to some special purpose, where the county does not really get it.

Mr. McKEE. It goes to the advisory board, I have understod, here for the Taylor Grazing Act. They have been putting it on the range improvement, improvement of the range.

Mr. CHRISTIANSEN. One other thing, as these lands pass into the various ownerships the county is not relieved of the responsibility of roads or policing or the other duties that are carried on by the county.

Mr. DAX. Mr. Chairman, I understand that the man from the Forest Department can correct me on this if I am wrong, but I understand that you asked for a certain percentage of that back to be spent on the forest. Do they do that?

Mr. FAVRE. Additional to our 25 percent, the county gets 25 percent of the gross receipts of timber sales and everything, and we get another 10 percent. That goes on roads and trails on the forest, and then we collect out of the grazing fees 20 percent. That goes on range improvements, but your 25 percent is not touched.

Mr. DAY. Well, I remember receiving a letter——

Mr. FAVRE. It comes back to the school, or it comes to the State and the counties in which it originated, to be spent pretty largely as they designate. Your county commissioners can say whether it goes to schools and roads, I think.

Mr. DAY. I remember receiving a letter from the board asking if they could not use 10 percent of what they paid on their land——

Mr. ALLRED. I would like to ask the county commissioners from those two counties if they have ever interested themselves in trying to get that law repealed that took this 50 percent of money away from us that was so badly needed and gave it back to these advisory boards?

The CHAIRMAN. I'm not going to take up the time of the committee on that, I am sorry to say. It would not do any good. It would not do any good if you told us all about it.

Are there any others who care to be heard on this matter?

Let me make a remark here that I have customarily made at the opening of these meetings. I want it impressed seriously on those who have attended these meetings, and the committee means exactly this when we say it: We are asking for frank, candid, honest statements. We ask for those statements from individuals, from private citizens, and from public officials as well, from people who are connected with the government service, and from those who are in private life. We expect to get those candid statements frankly given to us. No one need have any fear of any statements they make before this committee. If there is any attempt or ever would be any attempt at reprisal on the part of any departmental individual or departmental head either in the way of punishment to be meted out to the individual or to the public official, our attention will be drawn to it, and I can give you my word of honor that the reprisal will not take effect, and the individual who does it will find himself cut off from a meal ticket in short order. We mean that because we want people to be frank with us and candid with us. We are trying to bring the Government of the United States out into the field so that the people may get the benefit of their governmental activity, so that anyone here who has anything to say need have no fear of reprisal, no fear of punishment, no fear of any hardship being worked upon you. Do I make myself clear on that?

Now, is there anyone here who cares to be heard on any subject pertaining to this matter that we have been considering for 2 days?

Mr. DILLMAN. The letters that were written by Mr. Hall, the Indian agent, were not introduced in evidence. I wonder if they should not be a part of the record disclosing, as they do, the names of those permittees, the Indian permittees, who were listed.

Mr. FAVRE. I will be glad to make copies of them.

The CHAIRMAN. Have them sent to the official reporter at Reno, and they will be placed in the record at the point where Mr. Favre gave his testimony.

(The data referred to are inserted with the letter introduced earlier by the Forest Service.)

Mr. WRIGHT. Senator, if you are ready now, I would offer this material that you called for yesterday concerning the income of the Indians and also the material which described the purchases of the properties on unit G. I can give you a short summary if you care to have them recited.

The CHAIRMAN. There is a gentleman here who wanted to be heard. Did you care to be heard further, Mr. McKee?

Mr. J. R. McKEE. I would like to be heard on this range proposition, as I represent a cattle association.

The CHAIRMAN. Very well.

Mr. McKEE. I would like to point out where we are located. We are located in this area right here. [Indicating.] You can see we are pretty well surrounded by Indian lands. We homesteaded that land, the settlers there. We see the necessity of having some range land to go with it and some livestock, and so we started to ask for permits on the Forest Department, from the forest range and we received those permits. We did not know at the time there was anything that the Indians had, any rights that they had there at all. There wasn't any Indian cattle there that we knew anything about. But in the last few years, I think it was about 1935, then this came up that has been spoken of here today, that there was to be 1,200 head of Indian cattle allotted on these forest rights.

Well, we have been cut down in our numbers. We have been cut down in the time we had to run and our feed has been cut off until we haven't got much left. Now, we have been in conferences with Mr. Wright and several other people, trying to settle this, and I think it was decided in conferences at Roosevelt that the way to settle it was to let the heads of departments and legislative bodies or somebody settle it. Now, I think it is the only way it will ever be settled, to say whether the Indians have a right there or whether the whites. We want to know. If the Indians have their rights, well and good, we have nothing against the Indians. I live as a neighbor to Indians that have been running cattle there the last 7 years, I guess, since 1935. They did not run any there before, and we want to know whether they have the right or whether they have not, and the association wants to know now as soon as we can whose rights they are. If we haven't got any we will have to quit.

The CHAIRMAN. Do those Indian cattle run on the yellow land?

Mr. McKEE. Not very much; they do, yes, sir; along the river here.

The CHAIRMAN. Where did you say they are running?

Mr. McKEE. Here. [Indicating.]

The CHAIRMAN. That is the Forest Service?

Mr. McKEE. That is where they are running; that we are talking about.

The CHAIRMAN. Running cattle in there?

Mr. McKEE. Yes, sir.

The CHAIRMAN. Have they permits to run in there?

Mr. McKEE. You have heard what the Forest Department had to say about those permits; they have run in there for 7 years.

The CHAIRMAN. What do you know about that, Mr. Favre?

Mr. FAVRE. That is the 800 head we were talking about there before the recess. We contend since 1922 up to 1934, over that 13-year period there was only from 100 to 200 head in actual use of that, that actually used the range, so that those old original permits granted free of charge in 1906—some certain specific individuals—dies out on account of nonuse from 1922 to 1934. In that time these individuals, small owners, applied for permits under the secretarial regulations and were allowed permits because there were none of those 800 head in there except this 100 to 200 head. So now these individuals have permits for

the amounts of the full carrying capacity of the range. Now, we cannot put the Indians back in, we claim; for more than 100 to 200 head unless there is a reciprocity trade there of some kind. That would make a 50-50 proposition in a trade so that the permittees can run their stock down on the Indian lands for a while and in turn later we could take on Indian stock and the whites.

The CHAIRMAN. Let me ask you something; are there stock running in there for which there is no permit?

Mr. FAVRE. No; that is—

Mr. PATTERSON. They have nonuse permits?

Mr. FAVRE. Who?

Mr. PATTERSON. Indians?

Mr. FAVRE. No; they never have had nonuse permits.

The CHAIRMAN. Then the stock running in there are running under permit?

Mr. FAVRE. Yes.

The CHAIRMAN. The stock he complains of in the Forest Service are running under permit?

Mr. FAVRE. Yes; under this reciprocity arrangement for whatever is more than 100 or 200 head. We make a trade so the white people can use the Indian lands for awhile in the spring, and then we take them on in the summer. That is a trade, annually our responsibility to take care of 100 to 200 Indian stock at the present time, and the rest of it, the white people.

Senator MURDOCK. You say you have annual agreements on that trade, the white men using part of the yellow lands. Has that been done in the past?

Mr. FAVRE. For the last 4 or 5 years, I guess; maybe longer.

Senator MURDOCK. Is that what you are complaining about?

Mr. McKEE. As far as us entering into the trade, when we talked there about this trade, Mr. Wright said the Indians had nothing to do with giving this yellow lands, that the Indians acquired that right through the letters that have been read here in the conversation that was carried on. The letters was carried on when the reservation was first thrown open, and the forest was made a forest. He said the right that we get is one day's right to run our cattle from our farms on to the forest for that 800 head, or whatever the amount is, 1 day. And we have had to negotiate each year, with the Indian Department for the right to run cattle on this area here, which has been no good to us and we never did consent to the exchange at all. It was not our trade. Somebody else did it for us when the trade was made.

The CHAIRMAN. You have a permit on the forest, haven't you?

Mr. PATTERSON. On the green?

Mr. McKEE. On the green, not any place else.

The CHAIRMAN. You complain of the Indians running cattle on the green?

Mr. McKEE. Which has reduced our permits and also made it so that our land that we have got there is practically worthless.

The CHAIRMAN. My understanding now from the Forest Service is that the Indians are not running in there excepting the 200 head. Is that right?

Mr. FAVRE. That is for the seasonable use until we make this trade. I understand it is largely up to the people whether they want to make this trade or not.

The CHAIRMAN. Have they in times past?

Mr. FAVRE. Yes; I understand the people agreed to it.

Mr. McKEE. Some of them have and some of them haven't.

Senator MURDOCK. Have you actually lost the number of stock that has to be decreased because of an interagency agreement?

Mr. McKEE. That is what we have been allowed; any time a man would lose out of the picture for 1 year, and put in for a hold-over, he loses his rights, and the association, the amount of cattle they run now is less than it was several years ago, and I think before we used to go on the forest lands about the 1st of May. Then it was changed until the 15th of May and then when the Indians come in they said, "We will make the trade with the Indians and get their land down there for the earlier season." So they put it up to the 6th of June, so that gave us about the 6th of May before we could even go onto the Indian grazing lands. So we only gain about 9 days' time in the trade we would make, from the 6th of May until the 15th of May.

Mr. LYNN ORSER (Roosevelt, Utah). Isn't it a fact, Mr. McKee, in the summer of 1936 there was a meeting between the forest officials, the permittees, and the Indian Department asking that some exchange be made whereby this reciprocity trade arrangement could be made, and that after several meetings there was no agreement come to and the reason was that later the officials agreed for the summer of 1936 that they would make a temporary arrangement and after that time they would make permanent settlements so that these permits could be issued both by the Indian Department and the Forest Department covering a number of years? Wasn't that at the meeting that was held at Roosevelt between the three departments?

Wasn't that the understanding you had?

Mr. McKEE. There have been several. I don't know what years they were. Seems like they were about the year 1940 or 1939 when we met. Then these Departments, the Indian Department and the Department of Interior and the Department of Agriculture were to try and make a settlement between the Indians and the whites; and so it would be settled.

Mr. PATTERSON. What business does the Indian Department have interfering with your rights up in the green?

Mr. McKEE. That is what we wanted to know. But you have heard it stated here by Mr. Wright that they should have had 1,200 head of cattle on the forest through an arrangement made between the Secretary of Interior and Secretary of Agriculture.

The CHAIRMAN. The Forest Service says they are not enjoying those rights now.

Mr. McKEE. We have them on our forest.

Mr. FAVRE. We have them on there, due to this trade that we made. Anything in addition to the 100 or 200 head is on account of the trade that we made to provide that exchange range on Indian lands, and then take the Indians out.

Mr. McKEE. I understand the trade only was for the right to drive our cattle across in one day. I think we have the papers in our association to substantiate that.

Mr. FAVRE. It is our position here that any Indian permits in addition, at least, to the 200, will have to be a basis of 50-50 trade for graz-

ing lands. This is, they will furnish 2 weeks' feed for 500 head of white cattle, if we are expected to furnish summer feed for 500 head of Indian cattle. That would have to be during the grazing season which you have up on the forest lands.

Mr. McKEE. There has been a misunderstanding between the association I am representing and the Indian Department on that matter.

Mr. FAYRE. The Indian Service might have a different slant on it; that is true.

Mr. WRIGHT. Perhaps I should say, Senator, we do have a misunderstanding there as it affects these fellows.

Mr. McKEE. It also affects the Indians. Our understanding was that this grazing that was allowed the Indian free on the national forest was in return for free crossing permits to the forest permittees and for waiving the regulations with reference to advertising to the highest bidder. Those two things are granted, free privileges to the Indians' stock on the forest and our demands increased from this period. I don't remember how many head there were; but we built up the number of Indian cattle that ranged on the forest to about 600 head in the Ashley Park; and that was of necessity the reason the other men had to be cut down in time. But we provided, in lieu of that, spring and fall range on the yellow range lands. These particular men may have gotten left out of it, some way or other; we left that to the Forest Service.

The CHAIRMAN. I think it had better be looked into locally.

Thank you very much, Mr. McKee. Now, Mr. Wright, what did you wish to bring up at this time?

Mr. WRIGHT. The agricultural income of the Indians for last year, 1942, was \$150,000. These are round figures, Mr. Chairman.

The CHAIRMAN. Is that from the total entire area, entire population?

Mr. WRIGHT. Yes, sir.

The CHAIRMAN. Nothing to do particularly with unit G?

Mr. WRIGHT. It includes their operations in unit G.

The CHAIRMAN. It also includes the other areas?

Mr. WRIGHT. Yes, sir.

The total income from leased agricultural irrigated lands as \$19,909. The total income from grazing permits was from the ceded lands south of the river—I believe you asked for it to be divided between the south and the north—from the ceded lands south of the river \$878; from the ceded lands north of the river, \$526; from the Ute extension area, or unit G, whichever it is called, \$1,060; and from the Indian grazing reserve, \$2,498; a total of \$4,900 from grazing permits; and a total of approximately \$20,000 from agricultural leases; a total of \$150,000 from agricultural income from the different livestock operations and farming.

The CHAIRMAN. From leases, \$4,900 from what?

Mr. WRIGHT. Grazing permits.

The CHAIRMAN. And from leases?

Mr. WRIGHT. \$20,000.

The CHAIRMAN. From agricultural pursuits?

Mr. WRIGHT. \$150,000.

The CHAIRMAN. Of that \$150,000, how much came from livestock; do you know?

Mr. WRIGHT. That came to around \$70,000.

The CHAIRMAN. And the balance was \$60,000. What did that come from; the sale of what?

Mr. WRIGHT. Grains and hay and crops produced on the lands, some from garden produce.

The CHAIRMAN. Does that money pass through your office?

Mr. WRIGHT. No, sir.

The CHAIRMAN. How do you handle it?

Mr. WRIGHT. Pardon me, the livestock income, mostly, does pass through our office; but the other does not. It is estimated, by our field men, as best they can.

The CHAIRMAN. I see, thank you, Mr. Wright.

Mr. WRIGHT. Very briefly, on this purchase of property, this summary shows that the figures are a little less than have been discussed here, because three of the properties are not included in the summary and tabulation, and the tabulation was made before the purchases were closed. The total price paid, \$293,000; total acreage purchased, 31,000 acres. The base A. U. M.'s, that is, the A. U. M.'s on this base property was 16,000.

The CHAIRMAN. That is estimated by whom?

Mr. WRIGHT. Our appraiser, Mr. Carl Pearson.

The CHAIRMAN. Before the purchase?

Mr. WRIGHT. Sixteen thousand five hundred.

The total operations, as reflected by licenses from the Grazing Service, on all the properties that had licenses, was 3,001 cattle units or animal units. This did not, as I mentioned this morning, include the two large properties which consisted of approximately half of the acreage. According to our boys there, who made this compilation, by applying the same ratios and the same proportions to those unlicensed properties, the total animal units would be 6,021 yearly.

The CHAIRMAN. That is animal units carrying capacity?

Mr. WRIGHT. Yes, sir. That is what the Grazing Service licensed the properties for, before they were purchased.

The CHAIRMAN. Have you any check on that, Mr. Leech?

Mr. LEECH. On this 6,021 animal units I believe that would compare with the list Mr. Larson put in this morning.

Mr. WRIGHT. I will offer this for the record. They would take it from that list, all except those unlicensed properties.

(The documents are as follows:)

Totals of compilation as of Jan. 23, 1942, of Indian purchased lands, with license information

Total purchase price	\$293,917. 01
Total acres purchased	31,527. 83
Base animal units per month	16,520. 00
Range 9-3 ratio, total animal units per month	54,096. 00
Total operation animal units yearly	6,021. 00
Total unit license, year of purchase:	
Cattle and horses	2,201. 00
Sheep	4,000. 00
Total animal units	3,001. 00
Units established priority period:	
Cattle and horses	3,928. 00
Sheep	25,830. 00
Total animal units	9,074. 00

NOTE.—2 or 3 tracts have been purchased in addition to the above.

Licenses issued on lands purchased

	Sheep	Cattle	Horses	Animal units per month
1936 summer range.....	3,000	2,545	140	18,370
1936 and 1937 winter range.....	900	2,308	115	13,820
1937 summer range.....	2,900	2,355	97	14,207
1937 and 1938 winter range.....	900	2,268	105	12,208
1938 summer range.....	2,100	2,490	116	7,436
1938 and 1939 winter range.....	1,100	1,690	116	6,326
1939 summer range.....	3,100	1,765	121	13,983
1939 and 1940 winter range.....	1,100	1,905	111	10,408
1940 summer range.....	3,000	1,605	96	9,848
1940 and 1941 winter range.....	None	1,520	61	4,209
1942 summer range.....	None	600	20	1,860

NOTE.—The above licenses were issued to the owners of the property purchased by the Indian Service. In the above figures are not shown the properties already purchased or under options prior to the summer of 1936 and does not include any Indian licenses or property. These unlisted properties comprise about half the total estimated carrying capacity.

Ute extension area grazing permits income—Uintah and Ouray Agency, Fort Duchesne, Utah, Feb. 17, 1943

Year	Amount received from non- Indians	Amount received from Indians	Total
1938.....	¹ \$1,053.50	\$375	\$1,428.50
1939.....	¹ 1,735.00	375	2,110.00
1940.....	¹ 2,980.50	400	3,380.50
1941.....	¹ 980.00	740	1,720.00
1942.....	¹ 1,060.00	575	1,635.00
Total.....	7,809.00	2,465	10,274.00

¹ This includes Dominique Eyhrimandy, one of the lessors from Myrup. He had just obtained a loan from the bank and signed a 5-year lease with Myrup when the Indian Service purchased the Myrup holdings. Since then he has been paying the Indians \$900 per year for the privilege of using the base property for 1,500 head of sheep. Over the 5-year period he has paid \$3,550.50 of the total \$7,809 received from non-Indians.

The above figures in no way indicate the stocking or animal units per month use of the above area.

Uintah and Ouray Reservation grazing permits income

Year	Amount re- ceived from non-Indians	Amount re- ceived from Indians	Total
1938.....	\$2,602.55	\$29.00	\$2,631.55
1939.....	2,125.49	118.81	2,244.30

FORT DUCHESNE, UTAH, July 9, 1938.

LAND VALUATIONS AND RELATIVE RANGE CONTROL UTE EXTENSION AREA, UTAH**INTRODUCTION**

In attempting to ascertain actual and true valuations in a large grazing area, such as that within the proposed Ute Extension Indian Reservation boundaries, one is confronted with several factors which heretofore have not been so apparent. The primary problem at hand is to ascertain land values as affected and governed by the range control which deeded base property may hold. Prevailing opinions in this area and generally among stockmen is that a tract of base property with good range control is increased in value to the extent of the full carrying capacity of the ranching unit, including the range control. Local bankers acclaim this fact on the presumption that a ranch with no range control was practically no value as compared with one which does.

The matter has been of increasing importance during the past few years since range control classifications have become more pronounced with present determinations and future indications of regular legalized range control as established by the Taylor Act and its resultant bureau, the Division of Grazing. In order to reach the most reasonable basis for land valuations, a policy is being proposed in this office wherein actual and reasonable carrying capacities are established for the base units, then applying the increase as extended by the range control and capitalizing per animal unit at a fair figure on land holdings for the total carrying capacity. This policy can best be explained by making reference to the attached tabulation of the tracts proposed for purchase of the Ute extension area and presenting the studies, investigations, and reasons for the several items therein.

TRACTS PROPOSED FOR PURCHASE

The several tracts or base properties within the boundaries of the Ute extension area are presented. Carrying capacities, capitalization figures, etc., are respectively listed, except for two large tracts on which additional inspection for carrying capacities are yet necessary.

LAND CLASSIFICATIONS AND CARRYING CAPACITIES

The land classification and respective production on carrying capacity figures on which total capitalization for land and improvements is used are from records as established by the surveys and inspections of the Land Division, United States Indian Service. Records are at hand as obtained by the Division of Grazing, but these records were taken hurriedly, usually at the rancher's own word, and are not as dependable as those now made by the Indian Service land field agent.

In estimating the production of hay land or the carrying capacity of grazing land, much has been dependent upon an appraiser's own estimate, as well as the facts presented by the rancher. However, the several assertions received and the inspection made have afforded reasonable bases for average estimates on the several land classifications.

Hay production in some cases has been increased on the record of hay land for deeded property by the disclosures that part of the cultivated land extends outside of the deeded property. Again, some productivity is credited to lands which are typed as cultivated but now are bare or being resown. Tract 18 (Sarah Pumphrey Watkins) for instance, shows no hay crop at present time, but the bare cultivated land with its water right should be given a reasonable, though reduced credit for production.

Pasture and grazing land are generally of two separate types. First, the winter feeding grounds of the lower home ranches on Hill Creek and Willow Creek contains pastures with limited irrigation and/or dry native grazing, the pasture lands with high carrying capacities are mostly rich stands of good palatable rye grass. Dry native grazing, with less carrying capacity, lies in the valley bottoms or along and above the canyon slopes. The other distinct types of grazing land is that of the summer grazing area, mostly at the head-quarters and along the upper courses of the Hill Creek and Willow Creek watersheds. The carrying capacities listed for such tracts are considered as fair and not too liberal, although exceedingly dry years would affect a market decrease. The Division of Grazing had tentatively applied a carrying capacity, generally, of 30 head per section for the grazing season, but this has been subject to considerable dispute. Inspections, especially for the present year, disclose a better carrying capacity for most of these grazing tracts. In some cases, such as the Wilcox holdings, a less conservative and more liberal estimate is applied because of the credit attached to the excellent care and preservation of the owned and adjoining range which has existed over a period of years.

BASE PROPERTY COMMENSURATE RATINGS

Commensurate ratings on base properties are listed from the records of the surveys and inspections of the Indian Service, and where possible from the Division of Grazing reports. As mentioned before, the carrying capacities of the summer grazing tracts as tentatively and generally applied by the Division of Grazing are in such dispute that these respective ratings have been deleted from the tabulation for the present time.

The commensurate ratings are presented by animal-months and the representative year-long animal units as carried by the base properties. The general estimated rate for hay per cow-month is one-fourth ton and this figure is applied in all cases for hay commensurability. The application is simplified on the basis that the total hay production in tons is thus increased four times to the total number of cow-months. Carrying capacities of grazing lands are applied to the acreage classifications whereby the total number of units fed during the stated period are determined. This number multiplied by the total number of months grazed establishes the commensurate rating in cow-months. The designated yearly proportion of the number fed for that proportionate part of the year, or the total number of cow-months divided by 12 months produces the number of animal units year-long in commensurate ratings. For instance, a grazing tract of 640 acres with an established carrying capacity of 15 acres per head for 6 months would produce the following rating: 640 acres divided by

15 equals 42.66 head for 6 months; 42.66 times 6 months equals 255.96 cow-months: $\frac{1}{2}$ times 42.66 or 255.96 divided by 12 equals 21.33 units year-long.

These commensurate ratings are the figures which are applied to the total capitalization of the ranching unit after the resultant total carrying capacity of the base property and range is determined. This is further explained in the next proceeding items.

RESULTANT USES RECORD OF TOTAL CARRYING CAPACITY ON BASE PROPERTY AND FEDERAL RANGE AT 3-TO-1 RATIO

Federal range permits for grazing units in district 8 of the Division of Grazing, where lie the lands of the Ute extension area, allow a 3 to 1 ratio on the public domain for base property commensurate ratings. Prior use and availability to the surrounding range determine the permit classifications. Most of the stockmen now operating fall within the class 1 permits. Some of the grazing homesteads are not classified because the owners have not been operating stock during the past few years, but have leased their holdings to other stockmen. However, the regular 3-to-1 ratio is applied so as to follow a consistent policy for land valuations. Further, the lease operations by other stockmen usually affect a class 1 permit as attached to such leased grazing tracts.

The total carrying capacity of a ranching unit, inclusive of the range control, is increased by 3, which means the commensurate rating added to itself 3 more times, or the base figure multiplied by 4. A base property with a commensurate rating of 100 animal units would earn a permit for 300 on the public domain, thus extending the total carrying capacity to 400 for the entire ranching unit. This is the figure used for capitalization purposes.

PRESENT LICENSE

The present licenses as issued by the Division of Grazing are based upon their commensurate records at the 3-to-1 ratio. This ratio is also understood as 3 to 9; that is, for 3 months commensurability on the base property the rancher is entitled to 9 months on the public domain. In nearly all cases the commensurate ratings are in excess of the ratings as established by the surveys and inspections of the Indian Service land field agents. It should be stated, however, that hayland acreages and productions, as recorded by the Division of Grazing, are excessive as compared with those of the Indian Service, which would, accordingly leave a much smaller balance for their records of grazing lands on the home ranches. The larger carrying capacities and ratings for pasture and grazing lands as established by the land field agents thus make up for some of the differences. It is safe to assume that any dependent property surveys which might be made by the Division of Grazing within a reasonable time in the future will establish no ratings less than those from the Indian Service records, and minimum ratings for capitalization purposes are thus safely assured at this time.

CAPITALIZATION

A sound capitalization figure in this area has been difficult to determine. It is apparent at the start that the total capitalization of livestock and land should be decreased by \$30 per animal unit, since this figure well represents an average price per animal unit over a period of years. The studies and theories of several sources have been used. M. H. Saunderson, of the Montana Experiment Agriculture Station, has reached a total figure of \$85 per animal unit, or \$55 per animal unit for the land alone. The Federal Land Bank of Berkeley has stated that the land capitalization in an area such as this should not exceed the average price of livestock, which would mean \$30 per animal unit.

Figures taken on the earning power balance of the average ranching unit in this area are well determined as comparable with those established by the Nevada State Agricultural Experiment Station. Receipts as applied against costs on ranches with good range control nets an average earning-power balance of \$4.50 per animal unit. Capitalizing this figure at 6 percent produces a total capitalization of \$75 per animal unit, including the animal itself. Deducting the average price of mixed stock at \$30 per head leaves a figure of \$45 per animal unit for land and allied equipment. This amount represents an applicable average between two other extremes which have been proposed. Further, it well sup-

ports the disclosures of prevailing and asserted market values for land in this area and is likewise in line with certain classified assessed valuations on county tax records. It is believed that the \$45 capitalization figure on land and improvements is fair for the purpose of supporting regular appraised valuations, especially when these appraised valuations and the indicated purchase prices will usually remain at a figure considerably below the total amount of capitalization.

GENERAL SUPPORT

As will be noted on the attached tabulation sheets, several ranching units can be capitalized on the land and improvements at a figure considerably in excess of the present-requested prices. By applying fair basic valuations to the land classifications, with a consideration for lands and settings which afford natural shelters, feeding grounds and drifts, a recognition of the labor and difficulties in making improvements and otherwise applying values which can be ascertained under all conditions, appraisals can be established which will be well supported by the capitalization process. This means the opinions of disinterested stockmen, banking officials, and general local and relative viewpoints.

Extremely important is the basic land value for summer grazing tracts. This has been generally designated in the area at \$5 per acre, especially because of the range control attached. It is now ascertained that certain grazing lands of the Bown Livestock Co. and A. M. Myrup in this area, now purchased by the Indian Service at the \$5 per acre valuation were very much desired during the pending purchase by a large Colorado livestock company at \$6 per acre. The assessed valuations of Grand County, Utah, wherein these lands are mostly located, indicate an actual value of \$5 per acre; furthermore, the tax rate is high.

Most of the summer grazing tracts are held by the original patentees. The value to them is well represented in the fact that it was necessary, by law, to maintain residence for 25 man-months and make improvements to the extent of \$1.25 per acre before patent could be obtained.

In nearly every case the prices as now requested for the ranching or grazing tracts are very much reduced from the figures as originally requested. In those cases now justified by the capitalization process the requested prices have finally been reduced to the asserted minimums as listed.

CARL L. PEARSON,
Assistant Land Field Agent.

SALT LAKE CITY, UTAH, January 22, 1942.

MR. C. C. WRIGHT.

Uintah and Ouray Agency, Fort Duchesne, Utah.

DEAR MR. WRIGHT: In view of the importance of the compilation requested in office letter of January 5, 1942, signed by Mr. William Zimmerman, Jr., Assistant Commissioner, and which can most simply be referred to as a report on range rights of base properties, Ute extension area, we believe it advisable that supplemental information and review be given you so that relative details and supporting evidence of our contentions will be readily at hand. Preferable to a lengthy narration on the detailed history of the project would be brief discourses under the major and important headings of the compilation, whereby historical details will be recalled and support of the applicable contentions will be more immediately available. In additional support of understandings, directions, etc., reference is made to attached exhibits as they may apply.

The important factors can well be introduced by a brief review of the general understandings which were affecting the land acquisition and proposed reservation project.

Endorsements of the project by stockmen active in the Ute extension area, by livestock association officials, by county officials, and by reputable inhabitants of the area can be easily recalled. A written endorsement referred to as the "Vernal agreement" and letters of endorsement from influential parties just mentioned are on record. (See exhibits 1, 1-A, 1-B, 1-C.)

Although the Bown and Myrup purchase prices, generally known by other landowners of the area, should have served as a basis for attempts at fair and reasonable prices, it was nevertheless necessary that we seek and initiate negotiations in nearly every instance. The attitude of these potential vendors

was that their holdings largely controlled the grazing privileges in the proposed Ute extension area, and that a "fair price" should be paid for their holdings. Several expressed the concern that legislation for a definite reservation boundary, evident at the time, would permit the Indian Service to exercise pressure on the sale of their holdings by the threat of withdrawing grazing privileges on an established Indian domain. In anticipation of a definite reservation boundary as provided for by the original agreement, and in a liberal consideration of the grazing privileges which would be difficult to duplicate, every effort for fair treatment toward these landowners was continually exerted.

As the project continued and as base holdings were optional, a more definite demarcation line for a practical reservation boundary became necessary. Under date of November 1, 1938, we proposed a line which followed natural barriers and which largely incorporated range rights attached to the base properties under completed and proposed purchases. (See exhibit No. 2.) The predominating theme of this proposal was that we avoid any overlapping or interference with range control areas of neighboring stockmen, even though this meant the deletion of approximately 70,000 acres from the area proposed in the original agreement. This proposal also gave careful consideration to the estimated carrying capacity of the incorporated range, with the intention that such carrying capacity would not exceed the limits of the 9-3 ration permitted by base property commensurate ratings. In view of potential additional ratings on Indian allotments within the area, it was believed that the estimated animal units per month incorporated in the public range was conservative.

While actively engaged in the project, contacts were continually made with Division of Grazing officials in an attempt to keep our policies consistent with their rules and regulations. This was especially important in the study of valuations on lands as they were affected by grazing privileges. Throughout these contacts there was never any dispute as to the 9-3 ration applicable in this area, nor was there any argument as to the definite attachment of grazing privileges to the base property. Among others, two instances can be cited as of special importance.

Early in 1938, Mr. Dean Seeley and Mr. Carl L. Pearson conferred with Mr. Archie Ryan and Mr. C. M. Kerr, of the Division of Grazing, at their offices in Salt Lake City, with the intent to determine the assurance of grazing privileges as may be attached to base properties. Mr. Ryan repeatedly assured them that such grazing rights were definitely attached to the base property and not transferable with livestock. On July 7 certain Indian officials met in the office of Mr. Richard B. Millin at Salt Lake City, in an effort to determine, with the contemplated assistance of Division of Grazing officials, valuations on base properties as may be affected by grazing rights. The Grazing Service was represented by Mr. C. P. Seeley, now regional grazer. The 9-3 ration and the assurance of grazing privileges being attached to base properties was constantly referred to and was in no instance disputed.

Moreover, all vendors realized the existence and advantages of the established ration and that their properties would be commensurately rated for such grazing privileges.

It is indicated in Mr. Zimmerman's letter of January 5 that the rules, regulations, and standards of the Division of Grazing as applicable at the time of our purchase project shall govern the policy now proposed. This is especially important in view of the changes which had subsequently existed in the Division of Grazing codes and even in some of their interpretations.

The prevailing understanding of the Taylor Grazing Act was that it intended a more fair and equitable distribution and balance of public-domain range rights. The so-called priorities of several range ranchers greatly outranked the number of livestock commensurate on their base properties. If the numbers established during the priority period were to be maintained, it would often mean the acquisition of additional base property to increase the commensurate rating. This tended to create an attractive market for desirable grazing and irrigated hay lands. At the same time, the owners of such marketable lands could have reasonable assurance of extended grazing rights on the basis of their commensurate ratings and the distribution and balance of available range. Yet, besides commensurability, nearly all of the Ute extension holdings also held priorities.

In a progressive series recognized as foundation material leading toward conclusions, the major and important factors of the compilation report are now set forth:

CARRYING CAPACITY AND PRODUCTION—LAND CLASSIFICATION

Appraisal records present carrying capacities and production estimates as of the date of appraisal. These estimates were believed conservative and in all cases were below the claims of landowners. Hay-land ranches were largely appraised in the spring of 1938, and thus at a season when only estimates were possible. Land classification figures were surveyed and platted for accurate acreages.

On September 14, 1939, we presented a complete commensurate record in accordance with certain requests in office letter of September 14, 1939. (See exhibit No. 3.) Measurements of hay cuttings, including the second, had recently been taken on the Blank ranch and served as a basis for average productions on other ranches of the area, the respective comparisons also being given consideration. These ratings were also affected by the comparative lack of moisture in 1939, whereby some depreciation in irrigation supply and also in grazing and pasture forage was noticeable; also by the fact that potential hay lands under irrigation right were given a small production rating in the appraisal reports but were classed as "cultivated—bare" in the later report so as to remain consistent with the Division of Grazing assertions that such land types could not be credited commensurately. While this 1939 report is more conservative than some of the figures on appraisal reports, the differences are so slight as to be ineffective in supporting other than our present contentions. Furthermore, the later record has been used in our former contentions to the Division of Grazing; it serves as a better range and average over the periods involving the purchase cases, and it is the record being used by Mr. Wershing in other reports.

It is important that you note certain conditions which influenced our production and carrying capacity records. It is realized that during the "transition period," where purchased lands were being liquidated by former owners, cultivation and irrigation activities were decreased. Yet, it is indicated that our assertions as to production and capacity be based on the periods of negotiation. Even though we concede a deletion of credit for potential hay lands under irrigation rights as contended by the Division of Grazing, we believe we can take issue with any failure to realize the increase in hay production as affected by irrigated hay lands extending, in some cases, off of the patented property. In accordance with the important letter of March 23, 1938, signed by Mr. Zimmerman and approved by the Secretary of the Interior, values and production are not credited definitely to the so-called public domain plots under hay production, but are reflected in the value and production of patented land. It should be realized that under the homestead laws, patents were issued by regular legal descriptions. It was not possible for the applicant to obtain a patent on a metes and bounds description which would have enabled him to outline a definite irrigable and farming tract in deep canyon bottoms such as are common to this area. It is apparent that the limits of aggregate 40-acre descriptions could not incorporate the entire acreage of the canyon bottoms and it is further apparent that irrigation officials took cognizance of this condition in surveying irrigation applications. If the policy of the Division of Grazing is to give no credit for the reflection of such production, then it appears as rather questionable that grazing permits be issued to squatters who have no commensurate hay production except that which is tilled on the public domain, viz., Nelson and Brewer, both located south of Ouray, Utah.

The Division of Grazing has recently presented figures on production and carrying capacities of the Ute extension base properties. It appears that a State average on alfalfa hay production of 2 tons per acre has been applied to our accurate deeded hay acreages. This would be very conservative for application to the excellent stands witnessed in 1938, on such properties as Blank, Hazelbush, Taylor, and Wild, even with a deletion of that production reflected by unpatented plots.

COMMENSURATE RATING ON BASE PROPERTY AND APPLICATION OF 9:3 RATIO ON PUBLIC DOMAIN

The commensurate rating on base property is, of course, the conversion of the production and acreage figures to animal unit months. The dependability of the 9:3 ratio has already been discussed above. The conversion of the animal unit month into animal units presents the total operation consistently for the 3-month period, the 9-month period and the total year. (See detailed explanation in exhibit No. 18.)

GRAZING LICENSES ISSUED AT TIME OF PURCHASE AND PRIORITY RATINGS

Our letter transmitting the compilation points out the general ineffectiveness of disclosing the licenses issued during the year of purchase payment. However, the information is no doubt effective in showing that certain vendors continually held grazing privileges as supported by their priority ratings, and also as should be supported by a much higher commensurate rating than the Division of Grazing now implies for the properties. Interpreting the factor in office letter of January 5, "the total number of animal units year long for which the base property was licensed by the Grazing Service during the year of purchase," as the year of option or the year in which purchase payment was made and title actually transferred, it must be realized that in either instance most of these properties were involved in a "transition" period in which the vendors were liquidating or ready to liquidate. It is accordingly recommended that the priority rating be given the important consideration. Totally, and in several cases individually, the priority ratings outrank the commensurate ratings.

VALUATIONS AND PURCHASE PRICES

Prior to the active work of the undersigned on the Ute Extension Project, the extensive and far-flung Bown and Myrup properties had been appraised and optioned and were under purchase proceedings. The values placed thereon had been determined on the support of the existing range-control conditions; the stockman and the banker realized that the locations controlling range and water reflected in themselves the values of the patented lands. As the project continued for the acquisition of the remaining lands in the project area, studies were made to support the basis of valuations and extend the vendors fair and reasonable treatment. Reference to a series of exhibits, attached herewith, and brief comments as to their nature, should present the general history and facts of the procedure and policy finally established.

Exhibit No. 4.—Letter of March 17, 1938. J. M. Stewart, Director of Lands, to T. W. Wheat, Assistant Director of Lands. This letter pointed out the difficulties involved in the contracting of range rights, water holdings, etc., as part of an operator's deeded property.

Exhibit No. 5.—Letter of March 22, 1938, Carl L. Pearson, assistant land field agent, to J. M. Stewart, Director of Lands. The subject of this letter was largely that "a broader interpretation of definite purchase designations is more important than at first appeared." It disclosed that a reflection of all values in patented lands would endanger the appraisal record as appearing fantastic, if all values were not somehow accounted for. It also suggested a partial remedy by reference to the appropriation act of August 9, 1937, which provided for the purchase of "* * * improvements on former public domain lands for said Indians."

Exhibit No. 6.—The important letter of March 23, 1939, William Zimmerman, Jr., Assistant Commissioner, to Carl L. Pearson, assistant land field agent, and approved by the Secretary of the Interior. The policy and procedure of our land acquisition work was largely a result of this letter. In carrying out these instructions for a reflection of all values in patented lands, the reasons for values, etc., were set forth under "Remarks" in the appraisal records.

Exhibit No. 7.—Letter of May 23, 1938, Carl L. Pearson, assistant land field agent, to J. M. Stewart, Director of Lands, which gives further evidence to the values of grazing rights, considered by the vendors, and their understandings that such grazing rights were attached to their properties.

Exhibit No. 8.—Letter of August 2, 1938, Carl L. Pearson, assistant land field agent, to J. M. Stewart, Director of Lands. As evidenced also in exhibit No. 7, this letter strongly supports the attitudes and understandings that range rights were attached to base properties and that the values of patented lands and payments for same reflected the attachment of those range rights. Incidentally, this is an important document in further supporting the fact that the Division of Grazing could not transfer Wilcox grazing rights to other properties.

Exhibit No. 9.—Letter of May 26, 1938, Carl L. Pearson, assistant land field agent, to C. C. Wright, superintendent. The assessed valuations as applied to Ute extension properties are disclosed as being high. These high valuations were consistent with our studies of values in that commensurate ratings and range control were considered as an enhancement of value. Again, there is a general recognition of the range control being attached to the property.

Exhibit No. 10.—Telegram of June 12, 1938, J. M. Stewart, Director of Lands, to William Zimmerman, Jr., Assistant Commissioner. Although the policy established by the letter of March 23, 1938, remedies the general situation whereby appraisal records would reflect a total true value in patented lands, there had remained some concern in cases such as the proposed N. R. Taylor negotiation, where large range control was held by stockwater filings. This was discussed with Mr. Stewart while he was in the field, with the recommendation again presented to Washington, per the telegram for use of the provision in the appropriation act to purchase improvements on former public domain lands.

Exhibit No. 11.—Letter of June 16, 1938, William Zimmerman, Jr., Assistant Commissioner, to J. M. Stewart, Director of Lands. This letter was in answer Jr., Assistant Commissioner, to J. M. Stewart, Director of Lands. This letter to Mr. Stewart's telegram and explained that after consultations with the Solicitor, no legislation was existent for the purchase of improvements, etc., on public domain lands of the Ute extension area. Our suggested remedy was disqualified by the use of the term "former public domain lands." This situation was remedied the following year by amended legislation for the appropriation which deleted the word "former" and which was resultingly helpful in presenting a more disclosive appraisal on the Taylor holdings.

Exhibit No. 12.—Letter of July 12, 1938, Carl L. Pearson, assistant land field agent, to J. M. Stewart, Director of Lands.

Exhibit No. 13.—Report and plan on Land Valuations and Relative Range Control, Ute Extension Area, Utah, as prepared by Carl L. Pearson, assistant land field agent. The letter of July 12 (exhibit No. 12), transmitted the report and plan on land valuation and relative range control. This was largely the result of certain conclusions gained at the aforementioned meeting of July 7 in Mr. Millin's office and the foundation of studies which had been taking place. The transmittal letter gives more evidence of the general understanding of range control attached to properties by the disclosure of certain private land negotiations which had recently occurred at purchase price figures similar to our valuations in the Ute extension area, and which were supported by assurances of definite range control. In this very connection you will recall that a large Colorado sheep outfit was attempting to purchase the Myrup properties, subsequent to his option, at a figure per acre higher than our values. The range control of the Myrup lands were undoubtedly recognized in this attempted negotiations, and even though Myrup had begun his liquidation proceedings, there appeared to be every confidence that the range rights, in view of priority and commensurate rating, would remain intact for the sheep outfit who desired the holdings. The plan and report on land valuations was largely one to support purchase price figures on a capitalization basis, wherein the reflection of all values in patented lands and improvements thereon were given fair and reasonable consideration.

Exhibit No. 14.—Appraisal report on tract No. 7 (Austin Wardle), which is representative of the method employed in disclosing valuations and which follows the policy as established in office letter of March 23, 1938.

As indicated in several of the discourses on the foregoing exhibit references, the intention is not only to support our methods and reasons for valuations but also to give evidence to general and specific understandings on the range control which was being acquired. The persistent understanding of all vendors was that they were selling their entire operations, inclusive of all range rights and control. Moreover, our options specify the deeded land and "rights appurtenant thereto."

The control of stock waters in the Ute extension area by these acquired holdings and also by certain Indian allotments is well realized. Easy or practical access to water on the entire summer range, and often on a large part of the winter range, is not possible without trespassing on these lands.

It is believed that this supplementary report and the supporting exhibits will be important in upholding our contentions and in serving as ready reference for the featured factors of the compilation on base properties. It should also recall the prevailing attitude and opinion which was so often expressed by ranchers and other inhabitants of the basin. "Congress might as well pass the Ute extension boundary bill. The Indians now own all the commensurate property in that area anyway."

Sincerely yours,

CARL L. PEARSON,
Assistant Land Field Agent in Charge.

UINTAH AND OURAY AGENCY,
Fort Duchesne, Utah, January 23, 1937.

Mr. J. M. STEWART,
Director of Lands, Bureau of Indian Affairs,
Washington, D. C.

DEAR MR. STEWART: I am enclosing herewith endorsements on the Indian Reorganization Act land acquisition Ute project, recently prepared by Mr. Mark W. Radcliff, land field agent.

You will find three separate endorsements representing the Board of County Commissioners of Uintah County, the Ashley Forest Grazers Cattle Association, and the Ashley Wool Growers Association.

This letter will constitute the endorsement also of the superintendent and the extension agent of this jurisdiction, whose signatures appear below. I have been advised that a separate endorsement by Mr. J. E. White, credit agent of this district, has been mailed to you and that another separate endorsement, signed by the chairman of the tribal business committee, will be mailed not later than January 26.

It has required some little time to obtain all these endorsements. Mr. Hugh Colton, county attorney of Uintah County, has assisted materially in this.

But may we add that an early acceptance of the options now held and a settlement of this entire land-acquisition program is highly desirable.

Respectfully yours,

C. C. WRIGHT, *Superintendent.*
K. G. SLAUGH, *Extension Agent.*

SALT LAKE CITY, UTAH, January 22, 1937.

Mr. J. M. STEWART,
Director of Lands,
Office of Indian Affairs, Washington, D. C.

DEAR MR. STEWART: The acquisition of additional lands for the Uintah and Ouray Indians as delineated in the proposed Ute project prepared by Land, will materially increase the range capacity and contribute much to the establishment of a balance between Indian-owned irrigated land and grazing areas.

This accomplishment will permit an increase and extension of the livestock industry for the Uintah and Ouray Indians, which at present is fast approaching the saturation point due to a lack of land which is suitable for grazing purposes.

This opportunity for extending the livestock industry for these Indians will evidently be reflected in an increase income per family and should assure a definite upward economic trend for the group.

For these reasons this office wishes to approve the Ute project as submitted by Land, and urges that this area be acquired at the earliest possible date.

Sincerely yours,

J. E. WHITE, *Credit Agent.*

FORT DUCHESNE, UTAH, September 14, 1939.

Mr. C. C. WRIGHT,
Superintendent, Uintah and Ouray Agency, Fort Duchesne, Utah.

MY DEAR MR. WRIGHT: This is in connection with office letter of August 25 and your relative requests for any possible disposition on commensurability as supported by dependent property surveys of tracts in the Ute extension areas.

I am of the opinion that we should determine the figures for animal unit months on the base properties of the area, all of which will disclose the amount of range land earned at the existing 3 months to 9 months (or 1 to 3) ratio now standardized in this grazing unit under the Division of Grazing.

Accordingly, there is enclosed herewith a tabulation of all tracts within the Ute extension area, including those under negotiation which lie outside the boundary. The tabulation presents all lands lying inside and outside the boundary and the total of same. It is further distributed into items showing tracts now acquired, those under acquisition and option, and those yet pending negotiation. All items are resultingly cross totaled and brought forward.

Under existing rules and regulations of the Division of Grazing we would expect that the total amount of animal-unit months on the base properties could be increased three times to determine the amount of commensurability earned on the public domain. Under such regulations, the base properties now negotiated, including the Taylor holdings, would control the entire area. However, prior use of the range controls by the vendors may yet strongly affect the actual number of animal-unit months on the public domain. Prior use figures in support of the ratios asserted by base properties alone cannot be completely determined at this time. Future unit months on the range may also be affected by the use made of such range by the Indians.

It is yet necessary that figures more accurate than the total licenses issued in the area be determined for its total public domain carrying capacity. The Division of Grazing has not made dependent property surveys on base properties, except for asserted productions of the landowners. The attached tabulation presents accurate acreages on land classifications and very conservative estimates on productions and carrying capacities. It assures us of sufficient base property for application of all Federal range licenses now existing in the area, provided prior use figures will also contribute to the proper extent.

No figures are applied to commensurability for range springs on the report. This is due largely to the fact that no rules and regulations for same have been definitely applied in this area; also that all springs, except the Taylor holdings, are on or adjoining patented lands and thus are not very effective in controlling an area. Nevertheless, the Taylor springs definitely control an area comprising at least 8,000 animal-unit months, this being in addition to that earned by his base property. Accordingly, the total carrying capacity of the Ute extension area should be reduced by this figure when determining the total of animal-unit months available on the public domain.

Sincerely yours,

CARL L. PEARSON, *Assistant Land Field Agent.*

UINTAH AND OURAY AGENCY,
Fort Duchesne, Utah, March 17, 1938.

MR. T. W. WHEAT,
*Assistant Director of Lands, Indian Office,
Washington, D. C.*

DEAR MR. WHEAT: This will refer to your telegram of March 15 concerning land purchases within the Uintah extension area.

Unless some ways and means can be devised to allow the vendors valuation for their improvements on public domain and the valuation for springs and other living stock water controlled by them then a good deal of our acquisition work may abruptly cease, because these types of purchases should first be cleared before we attempt to consummate the small untroublesome purchases within the project area. If we go forward now and purchase the so-called untroublesome holdings, we would have uneconomic purchased tracts on our hands and thus become subject to higher price pressure by the remaining vendors as represented by those controlling public lands and who have improvements thereon, etc.

The situation is really critical, and it seems to me that it might well be handled by placing the total valuation on the lands and improvements actually owned, and execute an option for the total price which would cover, of course, the improvements on public land and the control of springs, etc., thereon.

Supplemental to the option but not made a part thereof the vendor could be required to execute an agreement to the effect that he would quitclaim to the United States all right, title, and interest to his improvements and the water control on the public lands. This quitclaim deed to be executed simultaneously with the option.

Will you please bring this matter immediately to the attention of Mr. Zimmerman and of Mr. Stinson and try and work out something acceptable to the Department? Mr. Pearson should be advised very promptly by air mail and in detail in the matter in care of the Fort Duchesne Agency.

Very truly yours,

J. M. STEWART, *Director of Lands.*

MARCH 23, 1938.

Mr. CARL L. PEARSON,
*Assistant Land Field Agent,
Care of Superintendent, Uintah and Ouray Agency.*

DEAR MR. PEARSON: This is in further reference to the matter of land purchases within the Uintah extension area, and especially with respect to the interest of grantors in improvements, water holes, springs, etc., on the public domain.

In the appraisal of ranch properties, all of the elements of value, including their location with respect to availability of water holes, springs, grazing privileges, buildings, and other improvements located on the public domain, should be considered. This is especially true where the public-domain lands hold a strategic position with respect to the remainder of the ranch property. The fact that a private-ranch owner has the benefit of land and water on the public domain, a large part of which benefit is due to improvements made with his own time and money, would undoubtedly be ample justification for or be reflected in a higher valuation being placed on the privately owned land than would ordinarily be placed on such land if these benefits were not available. Therefore, although it is not possible for us to utilize any of our Indian Reorganization Act or tribal funds to purchase improvements, springs, and grazing privileges on the public domain, and they should not be appraised as such, it is entirely fair and proper, in arriving at the value of the privately owned lands, to consider the added value of these lands arising from the use which they control of improvements, springs, and grazing privileges on the public domain. Whether that added value may bear a relation to the actual value of the improvements, springs, or grazing privileges on the public domain must be dependent on the circumstances existing in each instance and is a matter on which the appraiser must exercise his best judgment.

The above method of appraisal appears to be further justified when it is realized that ultimately the public-domain lands in question will be made available for Indian purposes as a part of the proposed Indian reserve through enactment of the pending Ute reserve bill or as preference rights under the Taylor Grazing Act, if the privately owned properties are purchased by us and the Taylor Grazing Act is made applicable to this area.

It is understood that the vendor will agree, at the time the option is accepted, to tender a quitclaim deed of any and all right, title, and interest he might have in springs, grazing privileges, and improvements located on the public domain, the consideration in the quitclaim deed to be nominal only.

In cases where options have already been accepted, such as the Bown and Myrup tracts, it will not be possible to apply the above-mentioned arrangement to those purchases.

WILLIAM ZIMMERMAN, JR.,
Acting Commissioner.

Senator MURDOCK. Mr. Wright, can an Indian sell his livestock without permission from you, or someone at the Indian Office?

Mr. WRIGHT. Yes; if they are what we call unrestricted property, Senator, not designated by the brand, "I. D." If not branded "I. D." he has that privilege; yes, sir. That is within the law.

The CHAIRMAN. What is the brand "I. D."?

Mr. WRIGHT. Interior Department.

The CHAIRMAN. Why is that?

Mr. WRIGHT. That denotes restricted property, so-called, showing that the herd or the basic breeding herd from which the cattle originated was derived from restricted funds, either Government funds restricted and the Ute funds, or something of that sort.

Mr. PATTERSON. If the Indian financed himself in these trades, and gets them in, he can deal on them?

Mr. WRIGHT. Yes, sir.

Mr. PATTERSON. But if the Government finances the transaction for him, if it comes from the Indian funds, then the Government retains a limit on them?

Mr. WRIGHT. That is right. I might explain that a little bit further. The unrestricted cattle can legally be sold without a permit, but many times many of the Indians prefer to have a permit and to be protected by that permit so they request it and it is granted.

Thee CHAIRMAN. Are there any further questions?

I want to ask the two Services here, the Indian Service and the Grazing Service, is there anything to prevent you from getting together and settling this matter promptly? This is a matter of administrative settlement, and why couldn't it be done?

Mr. WOHLKE. I believe we are fairly close on an agreement with the Grazing Service.

Mr. LEECH. I believe so, Mr. Wohlke.

The CHAIRMAN. Have the stock growers, the private individuals, been brought into consideration; either they or their advisory boards or their associations, or anything of that kind?

Mr. LEECH. I believe they can all be gotten together, Mr. Chairman.

The CHAIRMAN. Now, listen gentlemen; this is a vital matter to this community. The Members of the Senate of the United States are carrying heavy burdens. The Nation is at war, and we must return immediately to Washington to delve into other problems far, far afield from these. You gentlemen are in the field, and you have these matters at your finger tips. We have sat here for 2 days and listened to it. It is my individual view as to what can be done, I believe it could be settled in no time. The committee is going to ask you to take upon your shoulders now the responsibility, and we hope you may see fit to bring this matter to a speedy conclusion, so that you will bring contentment to this community and settle this thing. I think it can be done. I don't think it is such a serious matter that it cannot be settled, and settled with a high degree of efficiency and justice and satisfaction. Are you willing to undertake it?

Mr. LEECH. Yes, sir.

The CHAIRMAN. How about you?

Mr. PATTERSON. I will say for the users, they will do everything possible to cooperate with the Department.

The CHAIRMAN. Fine. With that in mind, I don't believe there is anything else to come before the committee.

Senator MURDOCK. Mr. Chairman, I think I would be delinquent personally and also, as a Senator from the State of Utah if I did not take just a few minutes, at this time, to thank Senator McCarran in behalf of the people of the Uintah Basin and everyone interested in these controversies for the time and the patience and the industry and the trouble that he has gone to; to leave everything else in Washington and come clear out here to this session at this time of the year to help us in the settlement of these local controversies. Now, it is nothing at all for me, it is my duty, without any question, to come to this part of the State and every other part of the State, as your Senator, to do everything that I can to help you in the solution of your problems and to listen to your complaints. But I am very doubtful whether, in the entire history of the Senate you can find a precedent for what Sena-

tor McCarran has done on this occasion, and I think, Senator, that I can safely say in behalf of the people of this section of Utah that they are indeed grateful to you and appreciative from the bottom of their hearts for the fact that you have been willing to come out here and give this matter your attention.

The CHAIRMAN. I just want to say to everyone here, that I have enjoyed the 2 days that I have been here. I like to rub shoulders with my fellow men wherever and whenever I can; and when this matter is amicably and justly settled I will feel the happiest man in the outfit, because I think we will have done something worth while. I thank you very much, Senator Murdock, and I thank the people of this community for their courtesy to me since we have been here.

Just before closing, I wish to extend the thanks of the committee to Mr. Haskell, the chief investigator, for his diligent work in this matter, and for the fine arrangements he has made in bringing the material before us.

The committee will stand adjourned.

(The committee adjourned at 9:15 p. m.)

ADMINISTRATION AND USE OF PUBLIC LANDS

TUESDAY, JUNE 15, 1943

UNITED STATES SENATE,
SUBCOMMITTEE OF THE
COMMITTEE ON PUBLIC LANDS AND SURVEYS,
Washington, D. C.

The subcommittee met, pursuant to call, at 10:30 a. m., in room 224 of the Senate Office Building, Senator Pat McCarran (chairman of the subcommittee) presiding.

Present: Senators McCarran (chairman) and Abe Murdock.

Also present: E. S. Haskell, investigator.

For the Department of the Interior: Oscar L. Chapman, Assistant Secretary; Leland O. Graham, Assistant Solicitor; J. H. Leech, Chief of Lands of the Grazing Service; R. H. Rutledge, Director of Grazing, Salt Lake City, Utah; C. C. Wright, Superintendent, Uintah and Ouray Indian Agency, Fort Duchesne, Utah.

Others: Frank K. Nebeker, of the Tower Building, Washington, D. C.; B. H. Stringham, of Vernal, Utah; and Moroni A. Smith, of Fort Duchesne, Utah; Ernest L. Wilkinson, of Ogden, Utah, and Washington, D. C., attorney for the Ute Indians.

Senator McCARRAN. This meeting will come to order.

This is a regularly called meeting of the subcommittee of the Committee on Public Lands, and especially are we going to address ourselves in inquiring into matters pertaining to the problems that have presented themselves to the committee at Vernal, Utah.

The committee went to Vernal, Utah, pursuant to many requests to hold hearings there, and we held quite extensive hearings, quite complete hearings, at the conclusion of which it appeared that, at least to the chairman of the committee there present, that an amicable settlement of all of the differences was almost immediately in the offing.

We have been inquiring since as to what had become of the old settlement, and what the status of the thing was, and with that in mind we called this meeting here, thinking that we would have the bureaus here, and the heads of the departments. We did not think at the time that it was necessary for those individuals who were interested in the problem to come on here. We so advised Mr. Smith and some others, but we are very glad to see them here, and we are glad that they may listen in and give us such advice or suggestions as they see fit as we go along.

We have with us today the honor of having Assistant Secretary of the Interior Oscar Chapman, and I would like very much to have Mr. Chapman make a preliminary statement, if he sees fit.

Mr. CHAPMAN. Thank you, Senator.

We, in our Department for the last 3 days beginning Friday, have had the bureaus that are interested in the administration of this area together and have tried to work out what we thought was an equitable agreement regarding the management of this area; that is, equitable to all of the parties interested in the area. We have had the Indian Office, the General Land Office, and the Grazing Service, and they have come to some agreement among themselves as to how they feel that it should be administered. Mr. Lee Graham, who represented the Secretary and the Department at your hearing in Vernal, Utah, is here this morning, and he is prepared to make a full and complete statement of the details of that agreement and the general position.

I would appreciate it if you would have Mr. Graham to make a statement at this time.

Senator McCARRAN. Mr. Graham, we will be glad to hear from you.

Mr. GRAHAM. Mr. Chairman, I have no extended statement to make; as Mr. Chapman pointed out, there have been a series of negotiations between the Grazing Service and the Indian Office, which began shortly after the Vernal hearings concluded.

We met with those representatives at Fort Duchesne, and later at Salt Lake City, and finally in Washington. Out of those negotiations has come this agreement, which has now been accepted by representatives of both agencies, and has been approved by Secretary Ickes.

Senator McCARRAN. In that regard, may I ask whether the private individuals, the users of the public domain, were consulted at the formation of this agreement?

Mr. GRAHAM. They were not directly represented at the time of the last negotiations in Washington. However, it is my understanding that they were approached, and that meetings were held with them at some stage in Utah.

Senator McCARRAN. Now, I understand that there are individual users here.

Mr. Smith, Mr. Moroni Smith; and are there any individual users here?

Mr. Stringham is here also, I think. Mr. Stringham represents a group of users. Is that correct?

Mr. STRINGHAM. I represent the taxpayers of Uintah and Duchesne Counties, as well as the stockmen.

Senator McCARRAN. You are also, as I understand it, chairman of the advisory board, but not representing that advisory board in your capacity here.

Mr. STRINGHAM. That is correct.

Senator McCARRAN. Are there any others here who are individual users?

Mr. Wright, you are the superintendent of that Indian agency?

Mr. WRIGHT. Yes.

Senator McCARRAN. And we are glad to have you here, and one or two of the Indians are here.

Mr. WRIGHT. Three of them are here.

Senator McCARRAN. Very well, Mr. Graham.

Mr. GRAHAM. I have here a copy of the agreement and the attached map that I will offer for the record, rather than to burden the listeners by reading the entire thing aloud. I think it would be helpful if I would merely sketch what its effect is.

Senator McCARRAN. I think that that would be sufficient.

Mr. GRAHAM. In the first place, the area which has been in controversy is to remain a part of Utah Grazing District No. 8. The order which was signed by the Secretary of the Interior in August or September of 1941, I believe it was, is rescinded, is not to be promulgated—that is, the order affecting the Uncompahgres—I am not referring to the Uintah order, which is a separate matter.

Senator McCARRAN. I must apologize, but I think that I am getting so that I do not carry things in detail in my mind as I used to, and I would like very much, in view of the fact that I have traveled a lot of ground since I was out there, if you would just go over the thing again to designate on the map what these colors represent.

Mr. GRAHAM. It is my recollection, Senator McCarran, that the area delineated in green, that is on the east side in green and on the west by a black line, which I believe is the Green River—that area is the area described in the order signed by the Secretary of the Interior which, would set up a temporary grazing reserve for the Indians.

That order was not promulgated, and, in view of this agreement, it is not to be promulgated.

The area indicated in black, on the east, and, again, by the Green River on the west, I understand, represents a tentative agreement which was reached early in 1935 or the early part of July of 1935, with the users of this area.

Senator McCARRAN. That is the area bounded in black?

Mr. GRAHAM. That is correct. Now, the area that is involved here, and which is the subject of this agreement, I understand, follows in a general way the entire black area, here, with the elimination of the smaller area.

Senator McCARRAN. Will you repeat that?

Mr. GRAHAM. In general, the area which is the subject matter of the proposed agreement, to which we are addressing ourselves, is the same as the area indicated in black on this map, with certain minor differences.

I am sorry, I am told it is the green line. I was under the impression it was the black.

Senator McCARRAN. Let us go back a little way; the black line on the west is the Green River. Is not that right? And on the east it is an established line, established by some sort of arrangement. Is not that true; or is that true?

Mr. GRAHAM. I do not believe that black line on the east has any significance today; I understand that at one time it marked the boundary of a proposed agreement, of 1935.

Senator McCARRAN. My understanding of your first statement was that the green boundary line was to go out, now, because that was the line in controversy, as I recall. I may be wrong in that, and you can correct me.

Mr. GRAHAM. The line is not necessarily out, Senator. The particular order which was signed by Secretary Ickes in 1941 is no longer to be effective, and it is not to be promulgated.

Senator McCARRAN. That had to do with the green line.

Mr. GRAHAM. Yes, sir.

Senator MURDOCK. Was it ever effective? You say it is not to be effective. It never was effective, was it? It was never promulgated.

Mr. GRAHAM. It is not the intention to promulgate it.

Senator MURDOCK. Let me ask one or two questions here. In arriving at the agreement that you say that you have arrived at, were the parties who entered into the agreement informed as to these tentative orders of the Secretary, and were they frequently mentioned in your discussions?

Mr. GRAHAM. I do not recall they were mentioned, Senator MURDOCK. Of course they are a part of the record made in the hearings.

Senator MURDOCK. We have seen this morning, in your discussion of the thing, they seem to be the outstanding thing in your mind, is this order that was signed by the Secretary, as I understand it, or the two orders, but were never made effective.

Now, the purport of my question is this: In arriving at the agreement, which you say has been arrived at, were these orders constantly held in the background as a threat in forcing the agreement or bringing this agreement about?

Mr. GRAHAM. No; I think not.

Senator MURDOCK. Well, do you not know whether they were or not, when you say you think not?

Mr. GRAHAM. I do not know what was in the people's mind.

Senator MURDOCK. Did you participate in the agreement?

Mr. GRAHAM. I participated in the negotiation of the agreement, and I was responsible for a large part of the clerical draftsmanship of the agreement.

Senator MURDOCK. Do you know that the Indian Service have, for months and months, been demanding that these orders become effective?

Mr. GRAHAM. I cannot say that I know that; no.

Senator MURDOCK. You know that somebody has been very urgent down there in doing a lot of spade work in order to get them issued, do you not?

Mr. GRAHAM. I cannot say that I know that personally, Senator; I do not. I know that the orders were actually signed, and it was one step in my presentation merely to indicate what their current status was.

Senator MURDOCK. Do you know of any organization or any department down at the Interior Department, other than the Indian Agency or the Indian Office, that has been requesting the issuance of these orders?

Mr. GRAHAM. No.

Senator MURDOCK. The Grazing Service has not been anxious to have them issued, has it?

Mr. GRAHAM. I assume not.

Senator MURDOCK. You know of no other agency down there but the Indian Department that is at all interested in promulgating those orders?

Mr. GRAHAM. No; I do not know any agency.

Senator MURDOCK. Now, in the discussions on this agreement did not the officials of the Indian agency, or the Indian Office, constantly refer to these orders?

Mr. GRAHAM. Not within my hearing.

Senator MURDOCK. Not within your hearing?

Mr. GRAHAM. No, sir.

Senator MURDOCK. I think that that is all, Senator.

Senator McCARRAN. You may proceed.

Mr. GRAHAM. As I said, the area will now remain a part of Utah Grazing District No. 8. That is, under the order that we have been just talking about, it would have been eliminated from Utah Grazing District 8. The Grazing Service will issue a blanket permit to the Ute Indian Tribe for the area to which I have referred, the area which is the subject of this agreement. The Indian Office will have the active administration of this area for the period of the permit, which is 10 years.

Senator McCARRAN. Who will have that?

Mr. GRAHAM. The Indian Office.

Senator MURDOCK. Was that perfectly agreeable to the Grazing Division, to turn over the administration of this large grazing area to the Indian Office?

Mr. GRAHAM. I should make this statement right at this point, Senator Murdock. I do not think that we can say that the entire agreement is exactly what either agency would like to have. I would like to make it perfectly clear that there have been extended negotiations; there have been concessions, I think, on both sides by both agencies, and this represents a fair and honest attempt to arrange a compromise between the interests represented and the two agencies, so that I could not say that everything is agreeable to the Grazing Service, or that it is agreeable to the Indian Office, in the sense that it is exactly what they would like to have.

Senator MURDOCK. It would be fair to state at this time that the Grazing Service would have preferred to administer this large tract of grazing land themselves. Is not that right?

Mr. GRAHAM. I cannot speak for the Grazing Service.

Senator MURDOCK. I know that you are not speaking for them, but you are speaking as a participant in this agreement.

Mr. GRAHAM. I think that that would be a fair statement; yes.

Senator McCARRAN. Commencing with the statement that it is to be administered by the Indian Service, will you continue from there? How is it to be administered, and what rights, if any, will the users now in that territory have?

Mr. GRAHAM. There are six white users in this area who, I believe at this point, it is sufficient to say are in the northern part of the area. Those persons, I might name at this point:

Steve Chuturas; H. A. Tyzack; David Smith estate; Albert Smith Investment Co.; Blanche, Moroni, and Emory Smith; and D. R. Seeley.

It will be recalled that the eligibility of these six users to graze in this area has been something of a controversial matter for some time. Under this proposed agreement, the Indian Office is obligated to issue to these six users, first, a 5-year permit to graze in this area in winter range. The particular lands are not indicated in the agreement, but the agreement does say that it shall be in winter range. It shall be for the same numbers of livestock that were grazed by these six operators during the winter season of 1942-43, and licensed to them by the Grazing Service during that season.

The period of use—

Senator McCARRAN (interposing). May I interrupt right there? Is that seasonal use comparable to the present use made by these six white users?

Mr. GRAHAM. The period of the year?

Senator McCARRAN. Yes, sir.

Mr. GRAHAM. I am just coming to that. They are to be given use during each winter season for a period of not to exceed 5 months, which I believe is substantially the maximum use being made now, with the exception of one, or perhaps two, of the six operators who may have a 5½-month use in there. Some of the others, the lowest is 3½, and several of them are 4 or 4½, so in general it is the intention that they will be given substantially the same use as they have had in the past.

Senator McCARRAN. And the same season?

Mr. GRAHAM. Yes; and the same numbers.

Senator McCARRAN. The period is 5 years.

Mr. GRAHAM. The permit is 5 years.

Senator McCARRAN. Yes, sir.

Mr. GRAHAM. Not a license; a permit for 5 years.

Senator McCARRAN. Right there, do you mind this interruption?

Mr. GRAHAM. Not at all. Go ahead.

Senator McCARRAN. One reason is that along about 10 minutes of 12 I must leave to go on the floor, and I would like to get as much of the view of it as I can before I leave.

Why did you depart from the 10-year permit that is customary when the permits are issued by the Grazing Service?

Mr. GRAHAM. If you will permit me, I think that I can answer that by going right on from where I was.

The first permit is to be for a period of 5 years. It is in the form and that is attached to the agreement as an exhibit, which is the same form as is now issued by the Grazing Service, with such formal adaptation as is necessary merely because a different officer will sign it. I think it will be the superintendent of the reservation, rather than the regional grazier of the Grazing Service.

That 5-year permit is to be renewable for an additional period of 5 years, on the same terms.

In substance, it amounts to a 10-year permit; and I believe that there are two reasons why there are two 5-year periods instead of one 10-year period.

I think the first reason is more or less historical and accidental. I believe that at some stage of the negotiations between the operators, the white operators, the Indians, and the representatives of the two agencies, a proposal for two 5-year periods was made.

The second reason may be that different maximum reductions are provided during those two 5-year periods.

Senator McCARRAN. Reduction of herds?

Mr. GRAHAM. Reduction of herds.

Senator McCARRAN. By the white users?

Mr. GRAHAM. Yes, sir. The maximum reduction that can be made in the permit, during the first 5-year period, is 10 percent. The maximum that can be made during the second period is 15 percent, but in either case that reduction is to be made only if there is an actual need for the use of land by Indian-owned livestock.

Senator McCARRAN. What are the fees charged, if any?

Mr. GRAHAM. The fees to be charged there are to be the same as those now charged elsewhere in Utah District 8. In other words, these are to run right along with the Federal range fees, whatever those might be; the Indian Office is to furnish the Grazing Service

copies of the permits that are issued to the six white operators, and the Grazing Service will attend to the collection of the fees, the processing of their distribution, and so on, in the usual manner, just as is done in the case of any other fees collected under the Taylor Act, which means that a possible 75 percent of those fees will be available, when appropriated, for expenditure back on the land from which they were collected.

Senator McCARRAN. Now, the improvement of the range is to be conducted by the Indian Service, or the Grazing Service? Those fees are supposed to be plowed back into the range.

Mr. GRAHAM. That is the part that I was just referring to, the possible 75 percent. The 50 percent of the fees collected will go back to the States, or will go back to the State of Utah for the benefit of the county in which it was taken. Apparently that is all in Uintah County.

In the matter of the improvement of the range which is not being used, and which will not be used by the white operators, I assume that is to be a matter for handling by the Office of Indian Affairs.

Senator McCARRAN. Now, is all inside of the black line affected by this tentative agreement—all that is bounded there?

Mr. GRAHAM. I would like to ask Mr. Leech to answer that question. I am afraid that I am a little confused on these lines myself.

Mr. LEECH. Senator, the agreement that Mr. Graham has spoken of will be an adjustment of both the black and green lines. But, just to point it out very easily on this map, we can take this green line, and that will be the agreement, except we mark this line out and lift it up, the way I am indicating now [indicating on map], which would be the south line of sections 1, 2, 3, 4, 5, 6, and the south line of sections 1, 2, 3, and 4, in township 10 south; the range is range 21 and 20 east; if you will just rub that green line out and lift it up to the upper part there.

Senator McCARRAN. That would throw everything south of that east-west line, that you put on with a pencil, out into the public domain again.

Mr. LEECH. Yes, sir; and we would bring the line south, you see, right along to this green line.

Senator McCARRAN. From there it would follow the green line south.

Mr. LEECH. That is right, sir.

Senator McCARRAN. When you got down to where your pencil is now, you still follow the green line.

Mr. LEECH. We are still following the green line, Senator, coming right on around.

Senator McCARRAN. That between the green line and the black line, up there where you indicated, would be thrown out into the public domain?

Mr. LEECH. Yes, sir; it would be a part of the grazing district, the Federal range eastward; yes, sir.

Senator McCARRAN. Then I take it that there has been some slight reduction of the area. My guess would be that at least.

Mr. LEECH. I believe it runs around 40,000 acres, or 40 sections.

Senator McCARRAN. Thrown out into the public domain?

Mr. LEECH. It stays back in the Federal range; yes, sir.

Senator McCARRAN. Well, now, as to all within the boundaries, using the green line as the east boundary and the Green River as the west

boundary, all within those boundaries is the territory affected by this proposed agreement?

Mr. LEECH. That is the area that is covered by this agreement, the Green River on the west, and this green line on the east, with that adjustment of 40 sections that I indicated; and that would be the unit in which the Indian Office would administer, and the 10-year permits to the 6 men that Mr. Graham named, for the grazing of livestock.

Senator McCARRAN. What is there to insure the six white users of their ordinarily used territory, to which they testified at the other hearing? What is there in the agreement that the Indian Service must carry out to insure their continued use of certain lands within the bounded areas, to which they have been accustomed to use?

Mr. LEECH. You are referring to the particular areas rather than as to numbers and seasons. I take it.

Senator McCARRAN. We have the seasons. You said the season was a certain season, the winter seasons, of about 5 months; the individuals you have named.

Now, at the Vernal hearings, if I recall correctly, they testified as to the particular area in which they had been accustomed to range their livestock. Now, what is there now to insure those white users of a continuation for the period of the permit of the lands which they have been accustomed to using?

Mr. LEECH. The agreement, Senator, is specific only to this extent: It assures them of use of Federal range, as distinguished from Indian-owned land or allotments, and by Federal range we mean the public domain, at the same fee, of course, and in the winter range. Now, the extent to which they may regard that as a complete protection to use the identical land that they have been using, I am sorry that I cannot say that but they are assured of winter range, and not somewhere else in the area.

Senator McCARRAN. Well, of course what I am interested in—and I am interested to the extent of having it clear—supposing, using a particular fictitious name, supposing Bill Jones had been running sheep in that area for the last 15 or 20 years, and he had been accustomed to ranging over a certain part of that area; that is where he has his camp outfits set up, and his natural facilities, and he naturally would like to go back there at stated seasons to range his sheep.

Now, is there anything in this agreement that would insure that the Indian Service would carry out the same policy, and allow Bill Jones to go back into the same territory?

Mr. CHAPMAN. Perhaps Mr. Wright could answer that for you.

Mr. WRIGHT. As I understand it, the users within that particular area have, up to the last year, used the area in common; and the agreement provides for these two 5-year permits by the Indian Service for that same area. But there may be adjustments made with the Indian users in common also in that winter area; and, in addition to that, if the Indians absorb all of that area, in the 10-year period, and the tribe's permit is renewed for it, then the Grazing Service agrees to find grazing privileges in district 8 for these gentlemen.

That is, in comparison with other permittees.

Senator McCARRAN. Very well, Mr. Graham.

Mr. GRAHAM. I think that with Mr. Wright's last reference to this provision about finding a place for the white operators, that just about concludes the scope of the agreement.

Senator McCARRAN. I am not quite clear on that expression, "finding a place for the white operators," if they have a place. In other words, when the Grazing Service was set up it was one of the great problems that the Grazing Service had to solve, trying to establish what were the rights on the open public domain, which rights were based on usage, running over a period of years, for certain classes of sheep, and then the seasonal usage, that became a question.

Now, those things have to a large extent, by and large, been worked out. In some instances they have worked an injustice; and in some instances they have been fairly well worked out. But now we are dealing with a new area in here—that is, a comparatively new area; it is going under a new jurisdiction, and the testimony shows that six white users have for many years used that particular area for livestock.

Now, my recollection is that each one testified to about the area in which they ranged.

Now, I am wondering if any consideration is being given to those users to say, "Well, you will be assured of having the use for 5 years, under permit, of the range that you have been accustomed to use; and the season is such and such."

Do you understand what I am driving at, Mr. Graham?

Mr. GRAHAM. Yes.

Senator McCARRAN. Is there anything to carry out that policy?

Mr. GRAHAM. There is nothing that will constitute an absolute guaranty that a permittee can run in any precise designated area; that is correct. However, I think, in fairness, it should be pointed out that neither under Grazing Service administration, or at least that has been the Interior Department's position, that no permittee has a right to graze in any particular area of land; at least until he receives his permit, of course.

Senator McCARRAN. Now, you are going into the category of a permit, you see. Now, that might have been true, and I am not altogether certain that you are entirely correct on that. It seems to me, and I will stand corrected if I am in error on this, but it seems to me that the Grazing Service sought first to establish what was the territory, and the boundaries of it, that an individual user was accustomed to use, and the number of livestock that he was accustomed to range in that particular area.

There was a clash then between Smith and Jones as to whether or not Smith used more of it, and what line Jones recognized, and so on. But, by and large, they straightened that out, so that Jones would have the right to use the land he had been accustomed to use.

That is my understanding of what was worked out. I may be mistaken. Somebody can correct me if it is not true.

If Mr. Moroni Smith used a certain number of sections or townships up there, during a period of time, is there anything in the agreement that would say to Moroni Smith, "You would have the

privilege of using this, under permit, for 5 years; the territory that you have been accustomed to use."

Mr. GRAHAM. Not that specifically; no.

Senator McCARRAN. I just wanted to get that clear.

The only assurance would be that the territory would be in district 8, and would be under the jurisdiction of district 8.

Mr. GRAHAM. It is a little more specific than that. It refers to winter range.

Now, it is my understanding that the area that we are talking about, that in the north part of the area that we are talking about, that is winter range, whereas the summer range lies below that.

Under the agreement, these six people could not consistently be given privileges a long distance away from where they have been accustomed to operate. They would still be in that winter range, because the agreement says so. It does not say that they shall run on this or that particular described land.

Senator MURDOCK. May I ask this? Is the boundary well established between what is known as winter range and summer range?

Mr. GRAHAM. I do not know that it is marked anywhere except by physical characteristics.

Senator MURDOCK. That is what I mean. Is it well enough apart by physical characteristics? I would like to have anyone answer that.

Mr. LEECH. I would say, Mr. Chairman, that the winter range has been designated by the range examiners of the Grazing Service, and also the spring and fall and the summer.

Now, of course, there is some use made of the spring and fall, to far into the summer, but that is something that they just have to handle on the ground.

But the winter range is pretty well defined by the use that is made, and the range examiners have marked that out.

Senator McCARRAN. Have these six white settlers, whose names have been given by Mr. Graham, have they used any part of that territory for summer range in the past?

Mr. LEECH. Not these six people; not to my knowledge, Senator.

Mr. Wright may correct me.

Mr. WRIGHT. Not to my knowledge, either.

Senator McCARRAN. It has been used as a winter range?

Mr. WRIGHT. Yes.

Senator McCARRAN. All right; you may proceed.

Mr. GRAHAM. To amplify what Mr. Wright said a few minutes ago about the situation at the end of this 10-year period; that is, the period represented by the two 5-year permits to the six white operators; the agreement provides that they will be issued a 10-year permit at the expiration of the second 5-year period.

Senator McCARRAN. Is that optional or directive?

Mr. GRAHAM. It is directive, under the agreement, subject only to the possibility that actual Indian needs, for Indian-owned livestock, may reduce that possibility. In that event the Grazing Service is obligated under the agreement to satisfy the qualified demands of

these six operators on other Federal range; that is, outside the area which is the subject matter of the agreement.

Senator MURDOCK. Is that the way your agreement reads, the Grazing Service is bound to satisfy them?

Mr. GRAHAM. Yes, sir. May I read just a small portion of this?

Upon the expiration of the second—

this is paragraph 2 of the agreement—

Upon the expiration of the second 5-year period, said permittees or their successors in interest will, upon compliance with the rules and—

those are the six that I named some time ago—

will, upon compliance with the rules and regulations of the Secretary of the Interior, be issued 10-year permits to graze in the area outlined on exhibit B—

that is this map—

and described in exhibit C—

which is a list of the lands—

insofar as the actual needs for Indian use may, in the judgment of the Secretary of the Interior, then permit. To the extent that satisfaction of the qualified demands of said permittees or their successors in interest may not at that time be possible in said area, by reason of actual needs for Indian use, as determined by the Secretary of the Interior, the Grazing Service will undertake the satisfaction of such demands on other Federal range.

Senator McCARRAN. That is going to give somebody a headache, and I think it is going to be Dick Rutledge, to find some other range when it is already allotted and permittees on it.

Senator MURDOCK. I take it, Mr. Graham, that the whole agreement was entered into with the distinct understanding that Indian use of the entire area is only a remote possibility, even after the 10-year period?

Mr. GRAHAM. Senator Murdock, I do not believe that you could get the two agencies to agree on how remote that possibility is.

Senator MURDOCK. It is referred to there as only a possibility.

Mr. GRAHAM. That is right.

Senator MURDOCK. Maybe I should not have used the word "remote," but it has been considered and referred to as only a possibility.

Mr. GRAHAM. It is regarded as a possibility, at the end of the 10-year period, or during that period. How remote it is I am sorry that I cannot say.

Senator McCARRAN. Anything further, Mr. Graham?

Mr. GRAHAM. No. I think that that gives a sufficient sketch at this point, of the scope of the agreement. I will suggest that a copy of it with the map be placed in the committee's record.

Senator McCARRAN. That will be done.

(The agreement is as follows:)

COOPERATIVE AGREEMENT FOR THE ADMINISTRATION OF UTAH GRAZING DISTRICT
No. 3 (DUCESNE)

This agreement, by and between the Grazing Service and the Office of Indian Affairs, both of the Department of the Interior, Witnesseth:

WHEREAS Utah Grazing District No. 8 (Duchesne) was established by an order of the Secretary of the Interior dated June 22, 1935, and modified by orders dated July 20, 1935, and April 13, 1938, under the authority of the Taylor Grazing Act of June 28, 1934 (48 Stat. 1269), as amended; and

WHEREAS there are now included within the exterior boundaries of said district not only Federal range but private lands, State lands, and Indian lands, both tribal and allotted, by virtue of the ownership of the latter of which the Ute Indian Tribe of the Uintah and Ouray Reservation and individual Indians of said Tribe are entitled to certain grazing privileges under the Taylor Grazing Act and the rules and regulations promulgated thereunder by the Secretary of the Interior, which privileges have not been formally adjudicated; and

WHEREAS by an agreement between the Division of Grazing Control and the Office of Indian Affairs, approved by the Secretary of the Interior July 20, 1935, administration of the area of the former Uncompahgre reservation withdrawn from entry by an order of the Secretary of the Interior dated September 26, 1933, lying within the boundaries of Utah Grazing District No. 8, was temporarily placed under the Division of Grazing Control; and

WHEREAS the complex land pattern in said district has been productive of problems in the adjudication and management of the Federal range lying therein; and

WHEREAS it appears that such problems can best be solved through the medium of administration of a portion of said district by the agency in charge of the affairs of said Tribe of Ute Indians;

NOW, THEREFORE, the Grazing Service and the Office of Indian Affairs hereby agree as follows:

1. The Grazing Service will issue to the Ute Indian Tribe of the Uintah and Ouray Reservation a 10-year permit, without charge, in the form hereto attached and marked "Exhibit A," for the use of the Federal range lying within the boundaries of that part of Utah Grazing District No. 8 outlined on the attached map, marked "Exhibit B," and described in the attached list, marked "Exhibit C," and the Office of Indian Affairs will assume administrative jurisdiction and management thereof. This permit shall be renewable upon expiration.

2. The Office of Indian Affairs will issue permits, in the form of the sample hereto attached and marked "Exhibit B," to Steve Chuturas, H. A. Tyzack, David Smith Estate, Albert Smith Investment Company, Blanche, Moroni, and Emory Smith, and D. R. Seeley, or to their successors in interest, to graze upon Federal range in the area outlined on Exhibit B and described in Exhibit C, such permits in each instance to be (a) for use of the winter range in said area, (b) for the number of livestock for which the applicant therefor received a license from the Grazing Service for use during the winter season of 1942-1943, and (c) for the maximum period during each winter season, not exceeding five months, for which the range may be used consistently with good range conservation practice. Said permits each will be for a period of five years, with a right of renewal, upon compliance with the rules and regulations of the Secretary of the Interior, for one additional period of five years. Said permit each will be subject to a reduction of not to exceed 10 percent during the first 5-year period and a reduction of not to exceed 15 percent during the second 5-year period, provided that such reductions shall be made only if, in the judgment of the Commissioner of Indian Affairs, they are necessary for the purpose of distribution of use by Indian-owned livestock of Federal range in the area outlined on Exhibit B and described in Exhibit C. Upon the expiration of the second 5-year period, said permittees or their successors in interest will, upon compliance with the rules and regulations of the Secretary of the Interior, be issued 10 year permits to graze in the area outlined on Exhibit B and described in Exhibit C, insofar as the actual needs for Indian use may, in the judgment of the Secretary of the Interior, then permit. To the extent that satisfaction of the qualified demands of said permittees or their successors in interest may not at the time be possible in said area, by reason of actual needs for Indian use, as determined by the Secretary of the Interior, the Grazing Service will undertake the satisfaction of such demands on other Federal range.

3. The fees charged for the permits issued under paragraph 2 hereof will be in accordance with the prevailing fees charged in Utah Grazing District No. 8, as now provided for in section 8 (b) of the Federal Range Code, approved September 23, 1942 (7 F. R. 7685), or as changed with the approval of the Secretary of the Interior. The Office of Indian Affairs will furnish copies of the

permits issued under paragraph 2 hereof to the Grazing Service, which will collect the fees and process the distribution thereof under section 10 of the Taylor Grazing Act.

4. Nothing in this agreement shall be construed as creating any vested right, title, interest, or estate in or to any of the Federal range in the area outlined on Exhibit B and described in Exhibit C, the intention of this agreement being merely to provide for a medium of administration of grazing privileges in said area.

5. The remainder of Utah Grazing District No. 8 (Duchesne) will continue to be under the administrative jurisdiction and management of the Grazing Service.

6. This agreement supersedes the agreement between the Division of Grazing Control and the Office of Indian Affairs, approved by the Secretary of the Interior July 20, 1935, to which reference is made in the preamble of this agreement, insofar as the former agreement and any renewals thereof provided for the grazing administration of the area outlined on Exhibit B and described in Exhibit C, attached to this agreement.

(Sgd.) R. H. RUTLEDGE,
Director, Grazing Service.

(Sgd.) WILLIAM ZIMMERMAN, J.,
Assistant Commissioner, Office of Indian Affairs.

Approved June 14, 1943.

(Sgd.) H. L. ICKES,
Secretary of the Interior.

EXHIBIT A

UNITED STATES DEPARTMENT OF THE INTERIOR

GRAZING SERVICE

State: Utah
Utah (Duchesne) Grazing District No. 8

10-YEAR GRAZING PERMIT

(Under the act of June 28, 1934 (48 Stat. 1269), and amendments)

The term of this permit is from July 1, 1943, to June 30, 1953.
Ute Indian Tribe of the Uintah and Ouray Reservation.
(Permittee)

Date: July 1, 1943.

Fort Duchesne, Utah.
(Address)

In accordance with paragraph 1 of the agreement between the Grazing Service and the Office of Indian Affairs, approved by the Secretary of the Interior June 14, 1943, you are hereby authorized to graze livestock upon the Federal range within the boundaries of the area outlined on the attached map and described in the attached list, such use to be in accordance with good range management and conservation practices as directed by the Commissioner of Indian Affairs, to whom administrative jurisdiction and management of the area have been delegated.

This permit is subject to the issuance of permits by the Office of Indian Affairs to Steve Chuturas, H. A. Tyzack, David Smith Estate, Albert Smith Investment Company, Blanche, Moroni, and Emory Smith, and D. R. Seeley, or to their successors in interest, to graze upon Federal range in the said area, in the amounts and upon the conditions set forth in paragraph 2 of the said agreement, such permits to be subject to termination upon the enactment of H. R. 837 (78th Congress), or similar legislation, providing for the restoration of undisposed-of surplus, opened lands of the Uintah and Ouray Reservation and for the establishment of an Indian grazing reserve within the present boundaries of Utah Grazing District No. 8.

This permit shall be renewable upon expiration, provided that it or any renewal thereof shall be subject to termination upon the enactment of legislation of the nature described above.

Director of Grazing.

EXHIBIT D

UNITED STATES DEPARTMENT OF THE INTERIOR

OFFICE OF INDIAN AFFAIRS

Contract No. _____

State: Utah
Utah (Duchesne) Grazing District No. 8

5-YEAR GRAZING PERMIT

(Under the act of June 28, 1934 (48 Stat. 1269), and amendments)

The term of this permit is from July 1, 1943, to June 30, 1948.

Steve Chuturas.
(Permittee)

Date: July 1, 1943.

Meeker, Colorado.
(Address)

Pursuant to the agreement between the Grazing Service and the Office of Indian Affairs, approved by the Secretary of the Interior June 14, 1943, you are hereby authorized to graze on the Federal range in the special Indian unit in Utah (Duchesne) Grazing District No. 8, the number and class of livestock (Allotment or Unit)

indicated herein for the periods and within the area described below, which is the equivalent of 1,350 animal-unit months of feed each year. All livestock six months of age or over will be counted as a part of the total number of livestock allowed under this permit, and fees will be charged accordingly.

1,350 sheep, 100% on Federal Range, from November 16 to April 15 of each year, on lands shown on attached map.

This permit will cease to be effective as to any of the lands described herein immediately upon the elimination of said lands from the grazing district or upon the enactment of H. R. 837 (78th Congress), or similar legislation, providing for the restoration of undisposed-of, surplus, opened lands of the Uintah and Ouray Reservation and for the establishment of an Indian grazing service within the present boundaries of Utah Grazing District No. 8. Furthermore, this permit is subject to termination in whole or in part by the superintendent at any time because of:

- (a) Noncompliance of the permittee with rules and regulations now or hereafter approved by the Secretary of the Interior;
- (b) Loss of control by the permittee of all or a part of the property upon which it is based;
- (c) Failure of the permittee to demonstrate that the actual commensurate rating of the base property upon which it is based is equal to the estimated rating of such property at the time of the issuance of this permit.

This permit is subject to temporary adjustment if the necessity raises to protect or conserve the public lands affected.

THIS PERMIT IS SUBJECT TO THE CONDITIONS PRINTED ON THE BACK HEREOF

Accepted _____,
Permittee._____
Superintendent, Uintah and Ouray Reservation.

CONDITIONS

1. If the permittee desires any use of the Federal range different, either as to time or numbers, from that provided for in this permit, he must notify the superintendent in writing of the change desired at least 30 days before the beginning of each grazing period described in the permit. Failure on the part of the permittee so to notify the superintendent will result in the permittee's being liable for the full grazing fee even though he makes no use or only partial use of the range, provided the range is available and usable.

2. Each year during the term of this permit and before the beginning of each grazing period provided for in the permit, the permittee will be furnished a notice of the fees, fixed or determined by the Secretary of the Interior, chargeable

for that period. Fee payments must be made to the regional grazier in the manner and within the time specified in the notice.

3. This permit shall be void during any period of delinquency in the payment of fees.

4. This permit is subject to the Taylor Grazing Act and the rules and regulations promulgated thereunder by the Secretary of the Interior.

Senator McCARRAN. Have you anything to say, Mr. Leech?

Mr. LEECH. No, sir, Senator; I have not.

Senator MURDOCK. Before Mr. Graham finishes, may I ask this question:

Were the needs of the Indians for grazing land, Mr. Graham, at all considered from the formula established by the Grazing Service, and which is applicable to white grazers?

Mr. GRAHAM. Only to this extent, Senator Murdock; it will be recalled that in the Vernal hearings rather comprehensive tabulations were put in the record by different range examiners, on what the demands of these Indian-acquired properties would be, if they were adjudicated under a number of different assumptions.

Senator MURDOCK. That is the very thing that prompted my question.

Mr. GRAHAM. The best that I can say in response to your question is that there never has been an agreement between the two agencies on what the real demand of those properties should be. In other words, the controversy which was apparent at Vernal I do not think ever has been settled. For that reason the agreement does not take into consideration or, rather, the agreement does not expressly refer to any particular demand or adjudication. In fact, the agreement expressly recites at the outset that these rights have not been formally adjudicated, and that is one of the factors entering into the entire compromise arrangement.

Senator McCARRAN. Does anyone else care to be heard, Mr. Secretary?

Mr. CHAPMAN. I would like for Mr. Rutledge to make a statement regarding this general picture, if he would, at this time.

Mr. RUTLEDGE. Very well, sir.

Senator McCARRAN. Would you explain to the committee exactly what you understand by this proposed agreement, and how it meets with your judgment in the premises?

Mr. RUTLEDGE. Mr. Chairman, I have approved this agreement.

Senator McCARRAN. Vehemently?

Mr. RUTLEDGE. Well, I have approved it, and I should like to say that nobody ever held any club over my head about any order or anything else.

Senator MURDOCK. May I ask you this: Did you have knowledge, when you approved the agreement, that such tentative orders were in existence?

Mr. RUTLEDGE. I knew that they were somewhere around.

Senator MURDOCK. And you knew that they had been for a number of months, did you not?

Mr. RUTLEDGE. Yes, sir.

Senator MURDOCK. And you knew, did you not, that the Indian Office had been urging the Secretary of the Interior to make effective those orders?

Mr. RUTLEDGE. Well, I am not sure that I know how active they were, in urging the Secretary. I knew that the orders were in existence.

Senator MURDOCK. I do not want you to make it a matter of degree, as to how vehemently or vigorously they were urging it. You did know, did you not, when you approved this agreement, that they were very anxious to have these orders made?

Mr. RUTLEDGE. Well, I do not know that I can say that I was. So far as I am concerned, there was nobody holding any club over me; that is what I would like to make clear.

Senator MURDOCK. I am sure that nobody could hold a club over you and that you pay little attention to it; and I know that the orders have been held as a club over my head, and every time that the matter comes up it is called to my attention very vigorously that "if you do not do something right away that these orders are going to be made effective."

Now, of course, they may be more particular as to the use of such clubs over people in the Department than they are Members of Congress, but they have not let me forget for 1 minute that those orders were down there, all ready to be issued, on a moment's notice, unless something was done up here in Congress; and I was just wondering, and the reason that I asked this question was to find out whether they were called to your attention at the time that you approved this agreement.

Mr. RUTLEDGE. No; they were not mentioned to me.

I might say this, that those orders were floating around somewhere, and I think that it was in January that I was in here and I had a little talk with Mr. Chapman as to the status of those orders, and from that time on it just dropped out of my mind, and I was not worried by any orders.

Now, if I might continue on this whole thing—

Senator McCARRAN. Now, Mr. Rutledge, do you recall our hearings at Glenwood Springs; you will recall how this committee first came into the picture was that a group of white users came down there to Glenwood Springs, Colo., to give us their version of the subject. At that time I held a rather hurried hearing, so that they might get their expressions on the record, and then promised them that hearings would be held at Vernal. You were there.

Mr. RUTLEDGE. Mr. Chairman, I was not notified of that evening meeting in Glenwood Springs, and I did not attend it.

Senator McCARRAN. That is correct; because it was rather a hurried-up meeting; just simply because I did not think that the white settlers should come all of that distance, although they were late in getting there I thought it best to hear them so that we would see what the problem was. But you have had this matter before you for a long time. It has been a matter of some very serious contention, and I always had the idea that you had in your own mind a plan that would work out and would be satisfactory; but I never heard you express it.

I am wondering if this plan does meet with your entire approbation?

You have no club over your head now.

Mr. RUTLEDGE. It is very difficult to bring that right out that way. I think if I had a free hand I might be able to devise a plan; but with

the Indians and whites in there, I do not know that I could devise a plan that would satisfy both sides.

Probably if I had it all in my own hands I would say that we just set up a district there, and we would treat the whites and the Indians just the same; although I know that there are difficulties in that.

We have one of those down in New Mexico, a district where we are trying to handle whites and Indians under the Grazing Service; and I am beginning to think that I do not know just exactly how to handle Indian users. And when this question of the Indian Service taking jurisdiction of that area comes up, personally, I would just as soon they would handle it. It is easier for me, because I will admit that there are questions that come in on Indian users and the management of Indians that I am not skilled in at all.

Now that is for that part.

Now, we have been discussing this thing for years, and we have reached deadlocks, here and there, in all directions; and I felt in this approach that we should agree, so that we can get this thing settled and get the livestock men to know where they stood, and the Indians to know where they stood, and get busy on something else.

Now, this is not probably an ideal thing, I am satisfied that both the Indians and the Indian Service, and the whites, can find objections to this agreement. But to me this agreement is an attempt to compromise or arbitrate an almost impossible situation, and for that reason I was willing to let the Indian Service take the jurisdiction of it and administration of it, and I thought that we had pretty good provisions here for the white stockmen.

Senator McCARRAN. That is going to put them under probably three jurisdictions; that is, if they use the forest, that will be one; and if they use the open public domain, that will be your service; and then, if they go into this, they will be under a third jurisdiction.

Mr. RUTLEDGE. That is right.

Senator McCARRAN. Which, of course, is not a happy situation, if we could get away from it.

Proceed, Mr. Rutledge.

Mr. RUTLEDGE. I want to give my impression of the position that this leaves these white stockmen in, or places them in. They have the 5-year permit and then a guaranty of another 5-year permit and then a guaranty of a second 10-year permit.

In other words, there is a lay-out here which covers them for 20 years.

In the first 5 years they are guaranteed against any reduction exceeding 10 percent.

Now, that is not a statement that they will be cut 10 percent, but it guarantees them against a cut of more than 10 percent. The two things are quite different.

Senator McCARRAN. They would only be cut 10 percent in the event that the increase of livestock by the Indian was such as to require that. I take it that that is the intent.

Mr. RUTLEDGE. That is right. It is specified in here, and I do not know too much about Indians and the way they increase their livestock, but if I was a white man I would bet that there would be no demand from the Indians with actual livestock there in 5 years.

Then the next 5 years they are guaranteed again against the cut of more than 15 percent, and the thing is still an even bet. These

stockmen gamble all the time on everything else, and I have to gamble with them.

Now, on the last part, the succeeding 10 years, there is nothing said there about a limit of reduction, but it is a commitment. I think, to give them fair consideration; and if the Indians at that time do not have the livestock in a bona fide way, we are not trying to say that they have got to have them on a certain date, and this, that, and the other thing. We cannot get into that refinement. I think that they will go right on the second 10-year period with a pretty good set-up.

Now, I do not know what we can see in the future, Mr. Chairman, on this. I do not know what Congress might do about it, or what might happen in 10 years, or 20 years; and I believe that we have a proposal here that will work, and with a fair degree of equity between the two sides.

Now, maybe I had better say that this is a kind of a horse-trading proposition with me. It is a way out, to do the best we could on it.

Senator McCARRAN. I would not like a situation to arise such as was presented to us in Wyoming, in the Padlock ranch incident. That is where the whites had been invited, and urged, to come into the territory and settle; and after having done so, and after having set up their homes, and established themselves—and it is only a stock-raiser's territory, and nothing more—they were told that they could have no more rights on the open public domain, which simply meant that their deeded holdings had to go on the market, as it was at that time: which, to my mind, is one of the most damnable outrages that any bureau every worked on the white group, or any other group.

I think that it is a crime that will go down with the Indian Service until the Indian Service has been forgotten. I think it is something that never can be forgiven, by any man who has any sense of justice in his make-up.

Now, I would hate to be a member of a committee that would look with favor upon a repetition of that condition. That is the only thing that I have in mind, and I want to say very frankly here that if it is a question of saying to these white settlers, at the end of 5 years, "We have not the stock now, but the tribal funds, or the Federal Government funds, justifies us in saying that we are going to have the stock in a year, and therefore you are going to be reduced 10 percent or 15 percent," that just does not ring up with the spirit of the making of this agreement. If we are going to enter into this agreement, let it be an open agreement, openly arrived at. That is my individual view, and not the view of my committee. They are not bound by it.

Mr. RUTLEDGE. I agree with this, Mr. Chairman, that in the making of an agreement of this kind, and its application, I assume that it is going to be handled honestly and fairly.

I have got to assume that.

Senator McCARRAN. I have not said this before, and it is probably my fault for the omission, that anyone here at the table who is interested in this subject has a right to inquire and query those who discussed the subject.

Going back now to Mr. Graham, if we may.

If you, Mr. Smith, or your representatives here, or anyone here, desires to query Mr. Graham, be at liberty to do so now.

Mr. GRAHAM. May I make just one more brief statement?

A consequence of this agreement which has not yet been mentioned, and the Grazing Service can correct me if I am wrong, it is my understanding that whereas under the existing arrangement—that is, up until today—between the Indian Office and the Grazing Service, for the administration of Utah district No. 8, only temporary licenses can be issued in the area.

Under the agreement, which has been approved by the Secretary, the remainder of Utah 8, outside of this area that we have been discussing this morning, will, of course, be administered by the Grazing Service, and I assume that the consequence of that will be that that land will now be the subject of 10-year permits. Is that correct, Mr. Leech?

Mr. LEECH. That is correct.

Mr. RUTLEDGE. That is possibly a pretty strong consideration in my approach to this agreement, that we get this irritation focused on this area and the rest of it we go ahead and do business on.

We can settle the question on another million and a half acres.

Mr. NEBEKER. Mr. Graham, were any of the white users consulted about this agreement at all?

Mr. GRAHAM. It is my understanding, Mr. Nebeker, that they were consulted from time to time by representatives of both the Grazing Service and the Indian Office in Utah. They were not physically present in Washington during the last week; no.

Mr. NEBEKER. Well, any information that you have on that subject is something that you obtained from someone else. You do not know as a fact that they ever have been consulted about it?

Mr. GRAHAM. I know it on awfully strong hearsay.

Mr. NEBEKER. I am inquiring for my own information.

Did any of them assent to this arrangement?

Senator MCCARRAN. Is there anyone present at the table who has the facts? He may answer that question.

Mr. WRIGHT. May I reply, Mr. Nebeker, that in our office in Fort Duchesne, after the Vernal hearings were concluded—about 3 weeks afterward—Mr. Smith—in fact, all of the six non-Indian users—met with us there and discussed this entire situation again and were offered a proposal somewhat similar to this, but not as favorable to them, in my judgment; and they did not accept it.

They wrote a statement of their own and submitted it to Mr. Rutledge and to me, stating why they did not accept it, and that was transmitted to the Bureau here in Washington before these later negotiations.

Mr. NEBEKER. I would like to ask Mr. Graham a legal question:

This agreement is entered into between the Grazing Service, on the one side, and the Indian Service, on the other. You are the two parties to the agreement, are you not?

Mr. GRAHAM. Those are the two parties: yes, sir.

Mr. NEBEKER. Well, now, supposing that in 2 years from now, the two of you feel, or these two divisions feel, that that agreement should be modified; is there anything to prevent that being modified at that time?

Mr. GRAHAM. I think, Mr. Nebeker, that only Congress could prevent that, to answer your legal question.

In other words, if any two parties enter into a contractual arrangement, I suppose it is within the scope of their powers to modify it themselves.

But we are assuming, I hope, that the agreement which has now been entered into, and which is the result of extended negotiations, will be carried out by both parties.

Mr. NEBEKER. As a matter of fact, this arrangement, that has been agreed to now, is simply a Damocles sword to hold over the head of these white men. It simply says this:

That is what we are giving you out of this agreement and be satisfied with it, because if you do not we will cancel the whole thing. Now, is that not about where they are in this arrangement?

Senator MURDOCK. May I suggest Mr. Nebeker, that that sword is not only over the heads of the white men interested, but Mr. Graham stated the only agency and the only instrument that could stop a modification of the instrument is Congress.

Now, it might be very appropriate, just at this point to say this: That unless Congress did the bidding of the Department, that that same sword is up here constantly, with the threat that, if you do not do this, the whole thing will be set aside, according to the orders that we are now holding down here in abeyance.

Mr. NEBEKER. That is precisely what I had in mind, Senator.

Mr. GRAHAM. May I make one correction, Senator Murdock? My understanding is that the one order is not to be held in abeyance. It is regarded as if it never existed.

Senator MURDOCK. But the Secretary of the Interior could very readily sign his name to another one, and I know of no power in this Government today that can stop him. If you know of one, I wish that you would point it out.

Mr. GRAHAM. No, sir; that is correct, but I wanted the record also to be correct that the one order may be regarded as abrogated.

Senator MURDOCK. And I might say this, that, in the signing of those orders, I do not believe that the rights of the white men were given that much consideration. And also want to say this, that I have taken the position, right from the beginning of this controversy, that I wanted every Indian on that reservation, that needed grazing land to have it; and that he was entitled to it under exactly the same formula, as I saw the picture, as any white grazer. But evidently that is not a satisfactory solution.

Mr. NEBEKER. If I may make a statement now, I would like to say that we want it distinctly understood, so far as my clients are concerned, and that is Mr. Moroni Smith and his family and his brother, that we are not acquiescing in any part of this arrangement, and we are protesting against it at this time, and we want to have that made a matter of record.

In the first place, we have vested rights, that is, we have rights there now, and we do not propose to waive them. That matter is something that Mr. Graham and I would not agree upon. We had a somewhat similar dispute over it, in a case that went to the court of appeals of this district, and if it was not established in that case that a qualified permittee has a property right, which cannot be taken away from him without due process of law, then the case did not decide anything.

Senator McCARRAN. That was in the circuit court of appeals?

Mr. NEBEKER. The Court of Appeals for the District of Columbia, the Red Canyon Sheep Co. We had that precise issue. If I am not taking too much time, I would like to explain it.

Senator McCARRAN. Take all of the time you want.

Mr. NEBEKER. This involved grazing district No. 4, in New Mexico.

Senator McCARRAN. The committee can get the case; you do not need to dwell on that.

Mr. NEBEKER. I was going to state briefly the facts that were involved.

My clients, the plaintiffs in the case, were qualified permittees, and they had lands adjacent to these grazing lands. The district had been created without any strings at all, just as district No. 8 has been, and these people made application for permits, the plaintiffs did, and they were issued licenses, and there was no question at all but what they had all of the qualifications of a permittee under the laws of that district. But the Secretary of the Interior decided, or had in fact entered into a tentative agreement to exchange lands in that district with one Harvey, of El Paso, for land in the Lincoln National Forest, adjacent to the district, and that exchange involved the very land upon which my clients had pastured their sheep for many, many years, long before the district was created; and furthermore that exchange of land was authorized by an act of Congress, specifically authorized by an act of Congress.

I brought suit against the Secretary, to enjoin the carrying out of that agreement, and interfering with our rights in that district.

The district court held against me, and I took it to the court of appeals, and the court of appeals upheld the rights of those grazers.

Now, we are not mere interlopers on these lands, by a long shot. We have got legal rights there, and God knows we have moral rights. Any people that will go upon those God-forsaken lands, in that section of the country and build up an industry, as these men have done, are entitled to consideration.

Not only that, but at this critical time, I would rather have some men that are growing sheep and food there than to gratify the sentimental notions of somebody here in Washington about how those lands ought to be administered.

Mr. CHAPMAN. May I make one statement for Senator Murdock; one point that he raised? I want to say that I am recommending to the Secretary to appoint a committee of three, one of the Grazing Service, and one of the Indian Service, and a third outside person, to make a study and determine the rights of, both of the Indians and the white users in that area, based on the property rights.

Senator MURDOCK. But Mr. Assistant Secretary, should not such an examination, if it has not already been made, and if it has not been conclusively established by the evidence already before this committee, that if there is to be an examination of that kind made and conclusions reached, that certainly that should take place before we enter into an agreement?

Mr. CHAPMAN. That has not been done yet, Senator.

Senator MURDOCK. But we are confronted, as Mr. Nebeker said, with an agreement, that you must take this, or I am just afraid that those orders will loom up in the sky again.

I would like to ask Mr. Rutledge this question, which is prompted by the statement made by Mr. Nebeker:

Are we not confronted out there, Mr. Rutledge, with this situation: The Indians today are not using even the lands that they have available for grazing today to their full capacity?

Mr. RUTLEDGE. Well, are you referring to this particular area?

Senator MURDOCK. I am referring to the grazing lands that are now Indian lands, set aside exclusively for the Indians. They are not being grazed to their full capacity today, by the Indians; are they?

Mr. RUTLEDGE. I think that that is true as to this area, and if you spread it over—

Senator MURDOCK. It is true of this area up here, this Indian grazing land.

Mr. RUTLEDGE. Well, I have a little different impression, Senator, on that, but possibly Mr. Wright can tell you more clearly than I can.

Senator MURDOCK. Is that true, Mr. Wright, that the Indians are using all of this grazing land in yellow here on this map?

Mr. WRIGHT. I do not think that could be answered yes or no, but I would like to explain it if you wish.

Senator MURDOCK. They also have rights on the forests, as I recall the evidence at Vernal, for 1,200 head of cattle up there.

Mr. WRIGHT. They claim rights on there; yes.

Senator MURDOCK. That is not being fully used by the Indians.

Mr. WRIGHT. It is this year; yes, sir.

Senator MURDOCK. And then we come to this situation down here, involving this large part here, where it is admitted in the agreement that it is only a possibility, that within 20 years the Indians will not need it.

Now, if the Indians will not need it within the 20 years, it is certainly evident to me that they will not fully utilize the lands that are now needed to take care of the six white permittees in there. If they cannot use the lands that are set apart for them in this agreement to their full capacity, then livestock that could be grazed on those lands would either not be denied a right to graze there or the Indian Service will have to go out and lease that land to other people in the area to come in and fully utilize it. Is that not true?

Mr. WRIGHT. Is this not also true, though, Senator Murdock, that there has been uncertainty for many years, ever since the reservation was opened there, as to the grazing privileges and opportunities for the Indians in that area, and the Indians could never bank on certain grazing privileges or certain areas to which they were able to graze their stock?

Senator MURDOCK. I could not answer that. But the information that I have had ever since I have been a Member of Congress is that they are not fully utilizing the lands that are now set apart for them and which they own.

Then we come to the picture of the ceded lands, jurisdiction of which was taken since I became a Member of Congress, by the Indian Service, as opposed to the General Land Office. We find that instead of the Indian utilizing those lands for grazing, that they leased them to certain white settlers in the area.

That is true, is it not?

Mr. WRIGHT. With permits, yes.

Senator MURDOCK. Now, we are confronted with the fact that they want all of the ceded lands, and they want this vast territory here

set aside as another grazing area, with the probability that it will not be needed in the next 20 years.

Now, in this time when we should be fully utilizing every foot of grazing land that we have got in this country for the raising and fattening of livestock of some kind, either the Indians will have to import white settlers in there to graze that or the land will remain idle. Is that not true?

Mr. WRIGHT. I do not think that that is quite a true statement.

Senator MURDOCK. Well, what will happen?

Mr. WRIGHT. I think that the situation is about this; in this new area that you speak of, the summer range is not fully utilized at the present time by the Indians, because it has only been within the last 2 or 3 years that they felt like they had a right to use it. But a tremendous increase has taken place in the last year or two, from 600 head to 1,390 head of cattle; that is quite an increase, in about the last 3 years.

Now, there is room for perhaps 600 or 700 head more, on the summer range, in that new area; and one or two good calf crops will fill that capacity. I think that there is no question but that the Indians would fill that capacity within the next year or two, if they have assurance that it belongs to them for their use.

Senator MURDOCK. That is the summer range.

Mr. WRIGHT. Yes.

Now, with respect to the winter range, there is that uncertainty of use still existing there, and uncertainty of tenure, as far as the Indians are concerned. They will be very reluctant, in my judgment, to increase their stock to use that winter range, so long as there is provision for non-Indians. It is chiefly sheep range anyway, and the Indians are not inclined to the sheep business as much as they are to the cattle business. So I think that during a 20-year period they may not fill it to capacity, but they certainly would not have to import people in there to use it.

This agreement would provide for the users which have been accustomed to using it, under the same arrangements that they had used it under public domain.

Now, with respect to the Indian grazing reserve, which is shown in yellow on the map, it is true that for many years the Indians have not used it to full capacity, but it was almost impossible for them to do so because it is spring and fall range, and not spring, fall, and summer range—the complete unit—and so therefore they had to make exchanges and agreements with the national forests in order to get complete operating units.

Now, in making those exchanges, the Indians became confused many times; and they will run a herd of cattle on the national forest, and the forester will make a complaint against them for some violation, perhaps, and they will say, "Well, we will go out of business. They do not want us in the forest, any way."

Those conditions are responsible for their lack of full use on that area. In this particular year, it is used almost 100 percent by the Indians.

Senator McCARRAN. Mr. Wright, pardon me for the interruption, and all of those who are interested here.

A very hurried hearing here this morning indicates that there is quite an absence of a meeting of the minds on this perplexing prob-

lem. It did seem to us when we concluded at Vernal that we were approaching what looked to be a fairly happy solution. It is necessary for the chairman of this committee to go on the floor of the Senate almost immediately. I want to make the suggestion to all concerned here, especially to Mr. Chapman for his being here, that, in view of the fact that he has suggested, by a statement here to Senator Murdock, in answer to Senator Murdock, that a further study be made of this subject.

The chairman of this committee is now going to suggest that in view of the fact that we are trying to arrive at a solution here, that is apparent, that the whole matter remain now in abeyance for further study, during which time no executive orders of any kind will be made by the Secretary, and the matter will stand in status quo, with the study going on, and this committee will lend itself to aid in the study. If the Interior Department wishes to set up its own study group, that is its business. But it seems to me that we are not in any position to say that this is an agreement that would meet with anywhere near approbation. I will be glad to have an expression from the Assistant Secretary if that meets with his ideas, and with those of the Senator from Utah.

Mr. CHAPMAN. Senator, I will report this to the Secretary.

I would like to see this agreement put into effect, and operate under it rather than the present status that they are now operating in, and I think that it would be more equitable for them as a matter of fact. We will proceed and make such recommendations to the Secretary for a committee to make that study.

Senator McCARRAN. In the meantime no departmental or executive orders of any kind will be made.

Mr. CHAPMAN. Other than proceeding under this agreement?

Senator McCARRAN. I would prefer that we not proceed under this agreement until you had brought the matter back to this committee again, if we might have that consideration.

Mr. CHAPMAN. I will discuss that with the Secretary for you.

Mr. RUTLEDGE. Mr. Chairman, we pretty near have to proceed under the first part of this agreement and issue permits.

Mr. CHAPMAN. There are certain necessities there.

Mr. NEBEKER. Why not proceed under the Grazing Act?

Senator MURDOCK. That would be my opinion, Mr. Nebeker. If we could proceed to administer these lands under the Grazing Act, giving the Indians exactly the same rights that the white man has got, it is the solution and, in my opinion, the one solution for the problem.

Senator McCARRAN. Gentlemen, and those present, I think it best to recess at this time, and I think that we will meet again tomorrow morning. In the meantime everybody will give his best thought to see whether or not my suggestion has any merit.

The Chairman has received word from Senator Johnson of Colorado expressing regret for his inability to be present. The Senator desires the record to show that he is opposed to H. R. 837.

I think it would be well to meet at 10 o'clock tomorrow morning.

(Whereupon, at 12 o'clock m., the committee adjourned until 10 a. m., tomorrow, Wednesday, June 16, 1943.)

ADMINISTRATION AND USE OF PUBLIC LANDS

WEDNESDAY, JUNE 16, 1943

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON
PUBLIC LANDS AND SURVEYS.

Washington, D. C.

The subcommittee met, pursuant to recess at 10 a. m., Senator Pat McCarran presiding.

Present: Senators McCarran (chairman), Abe Murdock.

Also present: E. S. Haskell, investigator.

The CHAIRMAN. The committee will come to order.

Mr. Chapman, we are going to ask you to make any statement that you see fit at this time, growing out of our recess of yesterday.

Mr. CHAPMAN. Mr. Chairman, with reference to the closing of the session yesterday, the suggestion was made about abandoning this agreement, and the administration of it in the Department at this time, and proceeding with a committee to make an investigation of the base property rights of all the people involved in that area. I discussed this matter with the Secretary this morning, Mr. Muck and myself. The Secretary is sympathetic to this point: He said he would like to put the agreement into effect now as an administrative matter but that he would listen with a sympathetic ear to appointing a committee to make a study of the base property rights.

The CHAIRMAN. That agreement, if it is put into effect, reflects this condition: that one vital party to the agreement has been entirely eliminated. That is the white users. They have not been consulted in the premises at all which, speaking personally, does not ring up with the ring of propriety that I think it should have. It does seem to me that there are three parties to this situation—the Indians, the Interior Department acting through its Grazing Service, and the white users. The whole object of the Grazing Service when it was set up was twofold—one, to preserve our public domain in the best possible condition, and, secondly, to serve the people fundamentally who use the domain.

Now, the two users of the domain, for the purposes for which the domain is used, are the Indians, on the one hand, and the whites on the other, and one of those parties has been entirely eliminated, which does not seem to me to be the right thing. I am sorry the Secretary is taking this attitude, because it seems to me the study would very probably have worked out a happy, a very happy solution.

Senator MURDOCK. I might say this, Mr. Secretary, that I am also informed that the Indians themselves have not been given an opportunity to present their rights, except through the Indian officials.

The CHAIRMAN. What do you mean, the Indians, the Bureau, Bureau officials?

Senator MURDOCK. No; the Indians themselves. I understand they have an attorney representing them in the Court of Claims, and certainly he should be representing them in this matter. My information is that they had no part whatever in the agreement, so it makes it, as I see it, nothing more than an agreement between different agencies of the Department of the Interior.

Mr. NEBEKER. May I submit a suggestion along this same line?

The CHAIRMAN. Yes, sir.

Mr. NEBEKER. In addition to what Senator Murdock says, there is this fundamental situation back of all this movement on the part of the Indian Office to get control of these lands within the irrigation district so far as that part of it is concerned.

The CHAIRMAN. The irrigation district?

Mr. NEBEKER. The grazing district, I beg your pardon. This grazing district could not be created at all except upon Government lands, must be public lands, must be public domain without any strings to it. That is the only kind of lands that the act authorizes to be set up in a grazing district.

Now, if it is to be set up for a single purpose, and the act makes that entirely clear, it is for the purpose of using the lands to the very best advantage in connection with the stock industry, horses, sheep, and cattle, and to bring about increased production.

It is not an experiment in sociology at all; it is a place whereby the best use of this land can be made and the best use of these lands can be put to the purposes I have mentioned. Now, that is the full extent of the Secretary's power. I do not know what he attempts to do, but the full extent of his power is to administer it entirely for that purpose and if I understand this agreement, or this order, he now threatens to promulgate, to put into effect, an order which is not along that line; it does not accomplish that purpose, and it is purely ultra vires so far as any authority in the act is concerned.

Mr. RUTLEDGE. I am just a little bit puzzled with this whole thing. As I read the minutes of the meeting at Vernal, which I did not attend, I got the distinct impression that this matter was referred to the Indian Service and to the Grazing Service to be worked out as an administrative matter. I do not know that that is entirely accurate, but I think that is correct.

The CHAIRMAN. That perhaps goes a little further than was my recollection. The Indian Service and the Grazing Service, at the close of the hearings, stated that they were, I think they put it, very close together.

Mr. RUTLEDGE. Yes.

The CHAIRMAN. And they being very close together, it looked to the committee as though they were so close that they would be able to work out a solution.

Mr. RUTLEDGE. Well, now, may I follow that a little further. I am not raising any question here, except a question in my own mind.

After that hearing the members of the Indian Service met in my office in Salt Lake, and we considered this thing from all angles, and we put up a proposition almost like this one, even though it was not signed as is this one, but it was something which could be taken to the stockmen and to the Indians, and it was submitted very informally,

and again I was not present, but there was a certain amount of discussion of this proposal, and the records show and the letters that we got back show that the white users at least, and maybe the Indians themselves, said "nothing to it." And that, "And we are going to stand pat on this and that and the other."

I thought that was one attempt to settle this administratively.

Now, so far as I am concerned, and as I looked at it when I went in there, the question was to meet with the Indian Service and see what we could get together again and present to these men a real attempt to meet some of their objections.

Now, if we are going to administer that we have got to make some progress, and if one attorney says, "nothing doing," you aren't going to get any progress here, and another one on the other side says "nothing doing," why we are just wasting our time, and I think we have got something here that is another attempt to use the best information we have to get the entire matter settled and go on. If we have a lawsuit here why it will be interminable.

Senator MURDOCK. Was anything said to you whatever about the two-hundred-and-some-odd-thousand acres of ceded land which, according to Mr. Nebeker, are to be immediately, by the order of the Secretary of the Interior, returned to tribal ownership?

Mr. RUTLEDGE. Well, I am not in a position to discuss that ceded-land issue. I admit that when I get into the question of ceded land I get lost and some lawyer has got to bring me out of it.

Senator MURDOCK. I think it is a rather considerable thing. I did not know if you had anything to do with it.

Mr. RUTLEDGE. No: not very much.

Senator MURDOCK. So that about two-hundred-and-sixty-some-odd thousand acres of ceded land which, without any question under the law, was made a part of the public domain, and under some theory or other the Indian Bureau for the last few years, as I am informed, has assumed jurisdiction over those lands and has leased them out to different white stockmen; under what authority I am at a loss to know, and now, if Mr. Graham is correct in his statement, the minute that this agreement is signed, then the Secretary intends immediately to promulgate that order returning all of that land to tribal ownership. In my opinion, that is not equitable treatment.

Mr. RUTLEDGE. Is that expressed in the agreement?

Senator MURDOCK. I do not think that it is in the agreement, but Mr. Nebeker made that statement this morning and, as I understand, this agreement will be made effective at once.

The CHAIRMAN. My understanding of yesterday was that if this agreement was accepted, and went into effect, that no departmental or Executive orders would be issued with reference to any of the lands. That is the way I got it. Am I right in that understanding?

Mr. CHAPMAN. In yesterday's discussion my remarks referred only to the order relating to this grazing reserve being established, and no discussion has been had concerning the order concerning ceded lands.

The CHAIRMAN. Can someone tell us directly as to whether or not there is in contemplation the promulgation of an order affecting the ceded lands?

Mr. CHAPMAN. As for myself, I could not speak for the Secretary or what he is going to do about it. I have not discussed it with him for quite sometime, about the time of the hearing in Utah.

The CHAIRMAN. All right. Now, we will have to start some place to get anywhere. There has been brought before the committee here, and before those who are in attendance on the committee, a proposed agreement between two agencies of the Government, the Indian Bureau and the Grazing Service. Now, have copies of it been furnished to the interested parties, to the representatives of Duchesne County?

Mr. CHAPMAN. I am sure it has not been to anyone.

Mr. NEBEKER. We have received no copy. You speak of the tentative one that was submitted here.

Mr. CHAPMAN. Yes.

The CHAIRMAN. Now, do we not, in order to see if we can agree, do we not have to have for the consideration of the interested parties copies in their hands, and must we not then take up the matter, item by item, and see wherein there is a difference of opinion, and wherein there might be some change worked in that would affect the interest of all the parties? Would it not be advisable, Mr. Graham, even at the expense of a day's time, to have these people furnished with copies and then have them come in and testify wherein they see that they are going to be injured by the execution of this agreement?

Mr. CHAPMAN. May I say this, Senator, that this agreement was completed only a very few minutes before we arrived at this hearing yesterday morning. It was the intent of the parties involved in the discussion that each respective bureau would take this agreement and discuss it with their constituents that they were dealing with, the Indian Service with the Indians, and the Grazing Service would discuss it with their respective people. In the meantime, we deemed this to be purely an administrative matter that we have to proceed upon, but it was the intent that those people should have a chance to discuss it with our people, but we feel we have to proceed on some administrative formula.

As Mr. Rutledge has said, these permits have got to be issued and we want to get going on them.

Senator MURDOCK. May I ask you this question, Mr. Secretary: Do you think that an agreement should be made on this tract of land that is designated on the map there in black and green lines without at the same time disposing of the question with reference to the ceded lands?

Mr. CHAPMAN. I think if you handle this agreement matter, Senator, as worked out on this tentative agreement, I think you can handle the other matter as a separate matter entirely and equitably to all people interested. I do not see where anybody is losing any of his equities by settling this controversy by this agreement now.

Senator MURDOCK. Suppose that immediately on agreeing to it, if such an agreement is possible, that the Secretary would then go ahead and promulgate the order that affects these ceded lands?

Mr. CHAPMAN. That would be another administrative action dealing with a different matter.

Senator MURDOCK. It is all one matter. You have got one segment out there in that particular area that for years and years and years now, without interruption, have used the ceded lands.

Mr. CHAPMAN. I agree with you that that is a grazing problem too, but I think this agreement settles this one part of it now.

Senator MURDOCK. Well, yes; that is just it; but in settling that then if the Secretary of the Interior is right in his position, why

these lands which are subject to the terms of the Wheeler-Howard Act, then he can ignore the rights of the white people who have been using them, which certainly would be done if this order goes into effect, and immediately transfer all of them to the tribal ownership.

Mr. CHAPMAN. Well, of course, I am not going to question the Secretary's authority to do that.

Senator MURDOCK. No; I would not expect you to do that.

The CHAIRMAN. Well, now, coming back to the subject, does my suggestion meet with any approbation here? How can we discuss a matter that has not been submitted to the interested parties?

Mr. RUTLEDGE. This, I don't know, Senator, that we need to get this on the record, but we have handed a copy to you, didn't we, Mr. Stringham?

Mr. STRINGHAM. I read a copy.

Mr. RUTLEDGE. Just as soon as it was off the typewriter, and then yesterday afternoon after our meeting here, we tried, many of us, all afternoon to get Mr. Nebeker and Mr. Stringham and the others together and we were not able, and time gets away from us in this town.

The CHAIRMAN. The committee is doubly interested in this matter, to be of assistance. It wishes to be of assistance to all parties. We have no favorites to play; we are just simply trying to work out a problem that seems to have many rather difficult angles. We will have to start some place if we are going to finish anywhere. Now it seems to me that it would be well if the Indians had a copy of this agreement, if the white users had a copy of this agreement, and then sit down off by themselves somewhere and study it and say, "This is what we object to; this is what we are going to advocate before the committee," and come up here and present your objections, wherein are you going to be injured by the execution of this agreement, and let's talk it over around the table then and see if we cannot work it out, and let's do it as promptly as we can.

Now, the statement has been made here that the Indians have not been consulted at all, and that the white users have not been consulted. I understand that the attorney for the Indians is here and has not been consulted.

STATEMENT OF E. L. WILKINSON, ATTORNEY FOR THE INTERESTED INDIAN TRIBES

Mr. WILKINSON. Mr. Chairman, I had no part in the negotiations with respect to the interdepartmental agreement that was presented here yesterday. I have, however, had an opportunity at all times to present my views to the Indian Bureau with respect to the termination of this controversy. And, in order that the committee may be entirely acquainted with those views, I should say that the Indians would very much prefer that this entire controversy, including that of the ceded lands which Senator Murdock has just talked about, be handled by legislation, rather than by interdepartmental agreement of this kind; and if I may take the time this morning, I would just like to make a tentative statement as to our position.

The CHAIRMAN. You are representing, now, the Indian council.

Mr. WILKINSON. I represent, Mr. Chairman, the three bands of Ute Indians on this reservation.

The CHAIRMAN. Do you represent all three bands?

Mr. WILKINSON. All three bands.

The CHAIRMAN. You are doing fine.

Mr. WILKINS. N. I should say also that that—

The CHAIRMAN. I knew there would be a qualification.

Mr. WILKINSON. I am representing them, Senator, under a contract, approved by the Secretary of the Interior, with respect to their litigation against the United States. I have not represented them on other general matters; up until October last they were represented by a Capt. Raymond Bonnin; he represented them on their general matters. Unfortunately at that time he died and I have now been informed by a delegation that is here that they want me to represent them on their general matters too. Consequently all of the time I have had since they arrived I have been trying to acquaint myself with the details of this controversy. While I have known of it over the last 5 years, my knowledge thereof has been largely in connection with the claims that they have against the United States.

In making this statement to the committee this morning, I want to say that I do not profess to be acquainted with all the minutiae of evidence or details in the matter. I have not read the report of the hearing held at Vernal; that is, I have not read it personally, but someone in my office has read it and has given me a summary of the proceedings.

From the standpoint of the Indians themselves, we take the position that it would be preferable from their interest, preferable from the white interest, preferable from everyone's interest, that this be handled by legislation rather than by any interdepartmental agreement.

Now, yesterday, on behalf of these white owners, objection was made to this interdepartmental agreement on the theory that it is just an interdepartmental agreement which can be changed by the parties at will. They can say they don't like the agreement with respect to the grazing. Some future Secretary can terminate the agreement, or some future Grazing Service can terminate this agreement, at will, subject, of course, to any vested rights which may have accrued to the owner of those vested rights and you know that they are somewhat uncertain. In other words, it is the uncertainty of this very situation that has prevented us, as Indian tribes, over the last period of years from building up our grazing herds. If we had known definitely and absolutely what our rights were, we would have gone ahead and had larger herds than we have at the present time.

Second, under the plan as proposed here, or, as announced here yesterday, the Indian Service is to have jurisdiction over this grazing area. I noted, however, that the fees for grazing are to be paid to the Grazing Service; and it was objected here yesterday that, with respect to the white owners, that that meant that they had three departments of the Government to deal with. It would seem to me that if this could be handled by legislation, so that the rights of the Indians are actually determined, and their rights put in a definite area the jurisdiction of which is vested in Indian Affairs with no white owners in that area at all, that administration would be very much simpler, and that many of the problems that we have at the present time, and which I fear will continue to exist, might be eliminated.

Now, in the third place, one of the difficulties that the Indians have in this situation as Senator Murdock knows, because I have dealt

with him on the matter for several years, is that we have certain claims against the United States that we want determined once and for all along with this controversy. Now I have talked to Senator Murdock on the matter, and he has always taken the position that enabling legislation of that kind should be given at the same time as the administration of this controversy is settled so that the whole thing could be ironed out.

Now, fourthly—

The CHAIRMAN. Right there, let me interrupt you there. It would be the view of the chairman of this subcommittee, until the committee tells me otherwise, that that is an issue that does not come under our jurisdiction—the claims of the Indians. I do not think that we have anything whatever to do with it, and I do not think we would want to take up the time of the committee, at least until the committee tells me otherwise, to determine the claims of the Indians as to any matters over which we do not have jurisdiction. That is a different proposition entirely, as I view it.

MR. WILKINSON. Well now, on that, Senator, if I may, let me say this: That one of the things that moved the Department in the first place to consider the creation of the grazing district, or grazing reservation in the Uncompahgre area, is that some 2,000,000 acres there at one time were a part of the Uncompahgre Reservation of these Indians.

By Presidential or Executive order, in the nineties, or right after the turn of the century, I am not sure as to the exact year, this reservation was taken from these Indians. These Indians in the first place were put into Utah, out of Colorado, because the Government wanted the Colorado land. Judge Nebeker yesterday remarked that this after all was a God-forsaken country and that anyone who did build it up was entitled to a good deal of credit, to which I agree. On the other hand, the whites went there of their own choice. The Indians did not go there of their own choice. They would have much preferred to have remained in Colorado, near Gunnison, but they were removed from Colorado into Utah, and later on this Uncompahgre Reservation was taken from them by Executive order. The Indians themselves have always felt that there was no right to take the land from them; they wanted the entire 2,100,000 acres of the reservation. The Secretary of the Interior and the Indian Bureau after looking into it for a long time felt that the best thing that could be done was to set up a grazing reservation for them. Now, the proposal to set up a grazing reserve was an effort to try to settle this controversy, and we have been holding off bringing litigation with the hope that this solution legislatively would settle that matter so that there would not have to be any litigation over these lands.

As a matter of fact therefore the matter of this Uncompahgre grazing district here is really inseparable from the litigious claims that the Indians have against the United States.

But let me go on and say, a further objection that we have to interdepartmental agreements of this kind, assuming that legislation could be had as an alternative, is that we would like to see the ceded land situation, the Uncompahgre area situation and the whole thing, settled at one time and give us the right at that time to wash up any remaining dispute in the Court of Claims.

Now, from the summary that I have been supplied with of the hearing at Vernal, I understand that it was the position of the chairman, and Senator Murdock, that the Indians were entitled, in the determination of their grazing rights in the Uncompahgre area, to the same grazing rights on the public range as if that land had been owned by whites. Now I am talking particularly with reference to the land that has been purchased during the last 7 to 10 years by the Indians; and I understand, and I want to be corrected if I am wrong in this statement, that it was the position of the chairman, and Senator Murdock, that the rights that the Indians were to be given in that public domain included those rights that were attributable to the lands they purchased from the whites at the time of purchase.

The CHAIRMAN. It has always been my position in this matter that the policy of the Grazing Service has been a commensurable right, based on the property and its productiveness, and its power to support certain stock; and that was a standardized, well-recognized principle. The base property, either in water or land, or both, was essential to a commensurate right on the open public domain.

Now, if we would forget the racial distinction here and take the base property that has been purchased by the Indians and give it its commensurability on the open public domain the same as whites have commensurable rights on the open public domain, it always struck me that it would solve the whole thing. At least it would solve the whole thing with the same degree of effectiveness that the Grazing Service has solved some very intricate problems in times past. There have been injustices rendered by the Grazing Service, but they were minimized down about as far as human ingenuity could minimize them. I simply make that remark to cover the whole area of the West.

Mr. WILKINSON. Senator, I find myself, as representing the Indians, in entire accord with you on that basic principle.

Now, let me go ahead, if I may, and say how I think it ought to be applied in this situation. These Indians, as I have said, from 1935 to 1939, did purchase, largely with their own money, large tracts of land in this area.

They were told, I have been advised, that the purchase of these base properties would include all of the grazing rights in this particular area. You can appreciate therefore that the Indians, having permitted their money to be spent for that purpose, are very much concerned now with anything that varies in any way from those representations that were made at that time.

I am told, for instance, that they were told that their rights on the public domain, for grazing purposes, would be in the ratio of 9 to 3. That is, nine cattle on public domain for every three that they could raise on the land which they purchased.

The CHAIRMAN. Well, that is not the rule of the Grazing Service, as I understand it. If I am in error on that, I wish to be corrected.

Mr. WILKINSON. May I just inquire as to what the rule is? I realize that there are modifications.

Mr. RUTLEDGE. We do not associate in that way at all. If I get the 9-to-3 picture in my mind, the Grazing Service works first on the basis of the land devoted to the base property, the home ranch, or whatever it may be, which is the nucleus of that outfit.

Now, if I may, to illustrate and get it plain, if we take one of those ranches up there that produces 100 tons of hay—and in that climate or at that elevation, it took a ton of hay normally to winter a cow—then we would say that that base property is commensurate for 100 head of cattle. And then, from there, we would try to work out if that 100 head of cattle stay on there. This may be where you get your 3 to 9, if that hundred head of cattle stays on that land for 3 months then, from that, we try to work out a range set-up which will take care of that 100 head of cattle for 9 months.

The CHAIRMAN. For 9 months.

Mr. RUTLEDGE. Yes; if we use that for an illustration.

The CHAIRMAN. Yes; that sustenance will be furnished for those cattle.

Mr. WILKINSON. Of course, I am just giving just approximate figures. I know that there is bound to be a variation because of the varying character of the land and the varying stock raised on the land. I am just trying to get a rough idea.

Now the Indians find themselves in this situation, that they purchased this land and, immediately after they purchased the land, they find all these questions were raised as to their rights on the public domain; and at the time they purchased the land they felt that they ought to have the same right in this public domain as the vendors of the land that they purchased.

Now if, in the administration of these Indians' rights on the public domain, they are to be given the same right as the vendors of the land that they purchased, and if they are to be given rights based on their allotted lands, both within this area and immediately adjacent to this area, the same as white owners are given, including the other tribal lands that this tribe owns—if we can have a determination of their rights based on this formula and it can be worked out in a fair way, I say that the Indians will be satisfied. They do not want any more than they are entitled to. But they do not want to take less than they are entitled to.

Now it seems to me, and I think it is true, that the adjustment of this difficulty has been in the application of the formula. Apparently there have been varying yardsticks by the various bureaus of the Department of the Interior. I am not criticizing them for that. I recognize it is a very difficult problem, and I have already stated that I am not sufficiently acquainted with the details to be anywhere near an expert on it. But it does seem to me that the solution of this problem ought to be this: There ought to be a sound determination of the grazing rights to which these Indians are entitled, by virtue of the land that they always have owned, and by virtue of the land that they acquired from 1935 on, based on the rights that the white vendors had at the time they sold those lands to the Indians.

Senator MURDOCK. If the chairman would let me interrupt you there, suppose it isn't, Mr. Wilkinson; suppose that the white vendors had been given certain rights by the Grazing Service at some time in the past, but that good range surveys, which we call upon the Grazing Service to conduct all the time, indicated that the rights first created, or earlier created, to those lands, were out of proportion to the base property; would not you think that, in such an event, the Indians should be subject to the same limitations as the white vendees of the land?

Mr. WILKINSON. Yes, sir; I think, Senator, the Indians ought to be accorded the same terms.

Senator MURDOCK. That is exactly my position.

Mr. WILKINSON. I will agree, in that treatment by the Department.

Senator MURDOCK. That has always been my position, that the Indians are entitled to exactly the same rights which the white man had. Now, at the hearings at Vernal we had 10 different propositions, submitted by the Grazing Service, concerning this property of the Indians.

Now it seems to me that at least one of those propositions would be acceptable to the Indian Service, but evidently they are not.

Mr. WILKINSON. Well, as to that, Senator, not having been in on these interdepartmental negotiations, I do not know, but I say this: The particular fact that the Grazing Service presented 10 different alternatives would indicate to me that they were pretty much uncertain as to their application.

Senator MURDOCK. I think not. I think that the reason they did it was that they knew they were dealing with another agency that was going to be hard to suit, and they had to make the conditions as comprehensive as possible.

Mr. WILKINSON. Now, with respect to the hypothetical question you put, Senator MURDOCK, because of varying rights, because of more efficient administration, I say this: that I do not think that that hypothetical situation is a situation that applies in this case, and for this reason. As I understand the facts, I do not understand that there is anyone who has raised the question that these white vendors to the Indians received a larger amount of rights than they were entitled to. That has not been in the picture, as I understand it. No one has made the contention yet.

The situation, as I understand it, though, is this: that at the time some of this land was purchased for the Indians, with Indian money, the purchase was made on the assurance to them that it would give them all the grazing rights in this area.

The CHAIRMAN. Who gave them that assurance?

Mr. WILKINSON. My understanding is the Bureau of Indian Affairs.

Now, in saying that, I want to be fair to all. I do not know the names of the individuals who gave them the assurance. Therefore I would not want to pin it on any one person, but there is no doubt that that was the Indians' understanding all of the time.

In that connection, this becomes important—that at the time this land was purchased, with Indian money, not all of these white owners had made their respective application for their grazing rights.

Now, we do not feel, as to which I understand the chairman of this committee is in agreement, that the Indians should be penalized because, with respect to certain of the land that they purchased, no formal application had been made at that particular time. I have not heard that anyone is saying that they should be penalized, but the point I want to make is that, if the Indian tribe is given this same right on the range, for the land they purchased, as well as the land they had, we might be able to come to some agreement.

The CHAIRMAN. What do you mean by "the land they had"?

Mr. WILKINSON. The land they had.

The CHAIRMAN. Yes.

Mr. WILKINSON. All the certain allotted lands of individual members of the tribe, which they had, and I think no one would question that. Such land may be classified into two divisions—first, allotted lands, within the particular area which it is proposed shall be made into a grazing reserve, and second, their allotted lands outside and adjacent to this area.

Now, in that connection, let me point this out, Mr. Chairman—

The CHAIRMAN. Well, with reference to a white man's right in the open public domain, he might have allotted land in the midst of the open public domain that did not sustain animals heretofore. I do not believe he would get commensurability on it.

Mr. WILKINSON. Well, I understand that this man—

The CHAIRMAN. Am I right on that, Mr. Rutledge?

Mr. RUTLEDGE. It has got to have some productive capacity, to rate anything; that is right.

Mr. WILKINSON. Now, let me just say this: take the case of Mr. Moroni Smith—I understand that Mr. Smith has some land that he owns in the fee simple, grazing land south of the Indian grazing lands, the land that is marked in yellow on the map. Is that right?

Mr. SMITH. Well, it is located down through the center of the white area, on the Duchesne River, on both side.

Mr. WILKINSON. It is largely grazing land.

Mr. SMITH. Yes.

Mr. WILKINSON. Well that land of yours is taken into consideration in determining commensurability of your rights in the public domain, isn't it?

Mr. SMITH. It is, if I have a prior use of livestock to it. That prior use of the livestock, previous to the Taylor Grazing Act, based on the number of livestock that the individual is entitled to graze at any time.

The CHAIRMAN. I do not think we are getting anywhere there. I think we had better stay with your statement. In other words, I think we had better get those facts from a different source.

Mr. WILKINSON. The fact, as I understand it, is that Mr. Smith would be entitled because of the ownership of this grazing land, together with his ownership of the cattle on the land, to certain rights on the public domain, even without other base property.

Now, on the other hand the tribe owns the grazing lands represented in yellow on the map. While such lands do not have the same quantity of rights for grazing purposes as the ordinary type of land, nevertheless they are owned by the tribe and they should be taken into consideration just the same as if they were owned by white persons.

Now, I am sticking to the thesis with which I understand the chairman agrees, that we want the same consideration for those lands as if they were owned by the whites.

Now, I therefore, Mr. Chairman, propose this alternative, and I am doing it merely on the theory of trying to be helpful in solving this controversy: I think that the Robinson bill, which is before this committee, section 3 should be amended in the following particulars:

First, that there be set up a grazing unit for these Indians, the size of which would be determined in exact accordance with the commensurable rights of the Indians. I say the size of this grazing unit for the Indians should be determined in accordance with the rights

which they have, by virtue of the land which they have, and that they owned and that they purchased.

The CHAIRMAN. Let me interrupt you.

Mr. WILKINSON. Surely.

The CHAIRMAN. These red lines on this map are lands that were purchased by the Indians from white settlers.

Mr. WILKINSON. That is as I understand it.

The CHAIRMAN. Now, if the white settlers had remained on those lands, and had not sold to the Indians, they would have had commensurate rights in the open public domain. Is that correct?

Mr. WRIGHT. That is right.

The CHAIRMAN. Now, then, when you change the race or color, why should that change the rights on the open public domain?

Mr. WILKINSON. I do not think it should.

The CHAIRMAN. That is the position I have taken on this matter.

Senator MURDOCK. That is the position that I have taken, right from the beginning, that that would be a permanent solution, and be equitable and do equity to everyone.

Mr. WILKINSON. May I suggest this, Mr. Chairman, with respect to the Robinson bill, that section 3 be amended, in the first place, so as to accord to these Indians such rights—set up a grazing unit in which these Indians will have the rights that they had, by virtue of the ownership of the property that they had, and the rights that the whites had to the property which the Indians purchased.

Secondly, I would provide in the Robinson bill that that unit be administered by the Bureau of Indian Affairs. My reasons for that are these:

First, under that plan there would be no whites in that particular area to object to its administration by Indian Affairs.

Second, I think, and I have had considerable experience in this, that the Department of Indian Affairs is in a position to administer between the Indians themselves, better than any other bureau. One reason for that is that the Bureau of Indian Affairs knows the rights of the various Indians. Many of the Indians in this area do not even speak English, and the Bureau of Indian Affairs has to protect the rights of John Doe, for instance, as against Richard Roe. I think the Bureau of Indian Affairs is in a position to do that, and I cannot see any objection to that, if all of this area is for the benefit of the Indians.

Senator MURDOCK. The Grazing Service, Mr. Wilkinson, itself appreciates that. As I understood them yesterday, they agreed that the Indian Bureau can do a better job than they can, even if there are some white settlers in there. I was surprised at that testimony; but it was given here yesterday.

Mr. WILKINSON. I understand that, and I think that statement of opinion is right, and I think it is even more right where all Indians are included in it.

Now, what I am trying to do is to work out a solution of the whole problem, so that the whites thereafter will not be in this area at all—they will be subject only to the administration of the Taylor Grazing Act in accordance with the rights they have by the Grazing Service.

There is another reason, and that is that the control of liquor ought to be in accordance with the applicable rules of the Indian Service.

Now, the second suggestion I would have in the Robinson bill is that some machinery be set up for the actual determination of these Indian rights. I have indicated to you that we feel the same about this, that we would vastly prefer to have this done by legislation than through administrative orders. Now, as to that machinery, I haven't any particular formula to apply. Perhaps the suggestion made here yesterday, by Mr. Chapman, that a committee should be set up, one for each agency (the Indian Bureau and the Grazing Service) and some independent person; but I think it ought to be done as a matter of legislation, so that we will not have these shifting policies and shifting opinions.

Now, finally, and I say this with great regard for the Department of the Interior, since this grazing district was in the first place evolved as part of payment for one of the claims of the Utes against the United States, if they are willing and inclined to go along here and not insist on anything extra because of the claim that we have against the United States, we think that the committee ought to be willing to grant us some additional provisions in the bill which will permit us to settle all of our disputes against the United States in the Court of Claims.

The CHAIRMAN. You have a long-range view on that, one that I cannot go along with.

Mr. WILKINSON. I appreciate the long-range viewpoint on it, but Senator, let me—

The CHAIRMAN. You are commencing a 2- or 3-year job there.

Mr. WILKINSON. Let me put it to you this way, that what I propose here this morning is predicated upon the theory that with respect to grazing rights we would be no better off than the white citizens. Now, if we go along on that theory, then I think Congress ought to go along with the theory that we be accorded certain rights with respect to proposed suits that we contemplate bringing against the United States.

The plan that I have proposed is just in rough outline. I am offering it, Senator, out of a sincere attempt to see if we cannot get something done. I think this plan has the element of simplicity and, to a certain extent, finality, and I submit it for the consideration of the committee.

The CHAIRMAN. Thank you, Mr. Wilkinson.

Now, gentlemen, I have to retire here and the hearing should go on as far as it can go, and Senator Murdock will preside; and I again revert to the proposition that perhaps we can get farther if these various factions are given an opportunity to see this agreement and to study it for a day or two, and then return here, and let's go over it and then buckle right down and see where the white users object to this, and wherein it might be modified or changed, and let them present their objections or the objections the Indians might have, and so on and so forth. I am in hopes we can work something out, but I do think it is a tripartite proposition. I think there are three parties here that must be considered, if you are going to get anywhere on this plan.

Personally, I have expressed my own views and my views only. I would not go along with this plan at all; I would turn all the grazing over to the Grazing Service of the United States of America, and let them administer it under the regulations and laws of the

Grazing Service, and I would forget all about class distinctions in the whole thing.

That would be my way of working it.

Senator MURDOCK. Mr. Chairman, as chairman of the committee, would you agree with me that if the hearings are recessed at this time, with the understanding that all those interested could give consideration to this agreement, that it would be well for them to consider the agreement, and that there would be no Executive order issued?

The CHAIRMAN. Oh, I think any agreement should include that.

Senator MURDOCK. During the time that this committee will be attempting to determine the issues?

The CHAIRMAN. I made such a statement to Mr. Secretary Chapman with reference to the interdepartmental set-up, which has nothing to do with this at all. Anything that is set up, with all of the hardship that is being worked on the stock-raising industry of America today from every angle, it is an inopportune time to hinder it in any way by the issuance of Executive orders or departmental orders of any kind whatever. They are burdened with hardships enough; their men have been taken from them and have gone into the armed services; they are working men of an age who should not be working at all; men are working on the range past the years when they should be out there, and they are trying to do the very best they can; they are curtailed by vehicles, they can't go from place to place, they haven't the gasoline to do it; they haven't the help; and it seems to me that the Secretary should not promulgate any order. But that is not for me to say, that is only my view on it.

Mr. RUTLEDGE. Mr. Chairman, have you got a few minutes?

The CHAIRMAN. Yes; I will take a few minutes.

Mr. RUTLEDGE. I listened to Mr. Wilkinson with a great deal of care, and I can see that he has an objection there. But I can see that it is going to take time to work it out. We cannot get a bill passed in a day or two; it will be thought over and over and over, and it may be 1 year, 2 years, or even 5 years.

Now, we are faced with a situation that needs handling. As to this so-called agreement, and these matters have been raised about the commensurability of property, I have been able to keep myself somewhat aloof from the details and arguments and so forth concerning this thing. And in working out that agreement we did it with this thought in mind, that here is a block of land that has white users on it. It would be fine if we could make it all Indian area, but there they are right in the middle of the thing, almost; you can't segregate them.

Now, I am going to stick my neck right out on this thing, with all the discussion that has been made about the carrying capacity of that territory, and the commensurability of the land, I believe that there is enough feed in there to meet the commensurable demands of the lands that the Indians purchased, and that there is still pretty close to enough to take care of these whites. I think we get ourselves into a very unfortunate position when we get to thinking that it has got to be all one or all the other and, with that thought in mind, that is just exactly how we tried to approach it, or I did, that we are doing maybe by a short cut; but in the back of our

minds we have all that mass of figures that Mr. Leech has presented to you.

And as to the purchases, we come around on that every time when we say that the Indians are entitled to a certain percentage of summer range, and they are entitled to a certain percentage of winter range. Whether you use the Grazing Service figures, or the Indian Service figures, or what you use, we come out pretty close to the same figure, and that agreement is based upon that kind of thinking. I don't know whether we want to talk too much about the agreement, but we started right off by saying that these whites are to get the same treatment that they had, the same terms; that they are to get the same permits that they had last winter, and we want to issue those permits; that is the first step.

The CHAIRMAN. That is that they have had.

Senator MURDOCK. Same permit that they had last winter, to start off with.

Mr. RUTLEDGE. Same permit they had last winter, to start off with. That is a 5-year period; and then, just in order to safeguard the thing, and I say it is a safeguard to the whites, we say that there shall be no more than a 10 percent decrease in the first 5 years, and then as a further safeguard we say that there shall be no more than 15 percent during the second 5 years; and it is only contingent upon the Indians having the funds to put in to increase the size of their herds.

So I think we get ourselves in a situation here, in discussing theories, that leads us to an unsettled situation, an unsettled state of mind. That agreement is a meeting of the minds of the Indian Service and of the Grazing Service. Here is something practical; we can do this, based on the facts; and you can stay here for another 10 years and you are going to come out almost with the same situation.

The CHAIRMAN. Well, that might be true, Mr. Rutledge, but at the same time I think that all parties should have a chance to study it and give us their views on it.

Now, what I would like to do is this: I would like to have the white users, represented here by counsel and in person, who are interested in this matter, have an opportunity for a day or two, at least such time as they like, to study this thing; and I would like to have them call in the Grazing Service, or any other service they want, and discuss the matter by themselves.

I would like to have the Indians have the same opportunity. I would like to have these three agencies have the opportunity, for a day or two, to make a study individually. But I would like this, Mr. Secretary, if I can get it. I do not know if you have a right to bind your principal or not, if we can arrive at an agreement here, that it will be the policy of the Department to promulgate no orders whatever, assuming the emergency that we are now in. Now, you do not have that right, perhaps, and I do not want to bind you.

Mr. CHAPMAN. Nothing except this particular grazing order.

The CHAIRMAN. Is there a representative here from Duchesne County? The whole tax structure of Duchesne County is very much affected by these lands in purple up there; and that is another problem that is involved here. In a way, it is and yet not involved, but it is involved in this whole question.

Senator MURDOCK. I do not see, Mr. Chairman, how you can settle the thing; you refer to the sentiment of the population out there; I do not see how you can settle the grazing rights. I think the whole thing must be settled, and I agree with Mr. Wilkinson; while the agreement here may serve very well as a temporary solution of the thing, that ultimately it should be settled by legislation so that in the future neither the white man nor the Indians can have their rights interfered with by reason of the adoption of a different policy by a different Secretary of the Interior.

The CHAIRMAN. I am going to say something now; I am going to say it on the record; something that has been said by someone who is closer to one of the Departments than I am; I think we are making a mistake, for the Indians, at least, a mistake that will be far-reaching for them, not in this case alone, but in every case, to consider their rights separate and apart in determining the quantity, from the white race. I think that they must eventually become amalgamated into this country as citizens, they are citizens, they vote, they should not be discriminated for nor against because of their race, nor their color, nor their condition.

That brings me to this subject, that, I think, in reclamation and in grazing that those two services should be for the United States Department of Reclamation to deal with, all reclamation problems in the Indian country, and the Grazing Service should deal with all grazing problems in the Indian country. I am not alone in that, because Mr. Collier, in a speech he made, emphasized that very policy. Whether he has changed his mind on that, I do not know.

Senator MURDOCK. That same argument was made—of course, we did not have the Reclamation Service, but the Forest Service, and I think Education—that very argument was made by the first Commissioner of Indian Affairs.

The CHAIRMAN. As long as we continue with this policy of having a Grazing Service and a Reclamation Service belonging to the Indian Bureau, and we are considering the Indians as a group apart from our population, and whether they get the best of it or the worst of it, they should not get either one, they should be treated on an equality.

Now I regret again that I must go, but I think we have served some purpose here, and if you can form into groups and make a study of this proposed agreement, with respect to the white settlers, I respectfully recommend that you make an appointment with Mr. Rutledge and the other gentlemen here, and the Indians, and also the representative of Duchesne County, and have a conference with those gentlemen, and see if you cannot iron out your differences; get them to understand you and you understand them.

That same is true of the Indians. I do not know whether you can get somewhere or not, but you can try this. I think it is worthy of a trial, to be frank with you.

When would you wish to reconvene; how about Friday morning?

Mr. RUTLEDGE. Well, we would not need that much time.

The CHAIRMAN. Well, let us reconvene at 10 o'clock Friday morning, then.

(Whereupon, at 11:15 a. m., a recess was taken until Friday at 10 a. m., June 18, 1943.)

ADMINISTRATION AND USE OF PUBLIC LANDS

MONDAY, JUNE 21, 1943

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE
ON PUBLIC LANDS AND SURVEYS,
Washington, D. C.

The subcommittee met, pursuant to call, at 3 p. m., Senator A. Murdock presiding.

Also present: E. S. Haskell, investigator.

Senator MURDOCK. Senator McCarran requests me to say that he regrets very much that he cannot be with us, at least for a while, this afternoon. He is now engaged on some appropriation bill over at the Appropriations Committee room, and in the telephone call just now he tells me that it will be impossible for him to come over for at least half an hour, and that we had better go ahead.

The committee is now ready to receive any reports, or suggestions, or recommendations that any of the officials or others interested in this matter wish to let us have.

Secretary Chapman, we will be glad to hear from you.

Secretary CHAPMAN. Our people have been working since last Wednesday's meeting with both groups interested in the territory, trying to come to some agreement. This prepared statement, I think, comes very close to expressing what I believe they have pretty generally agreed on.

Since the meeting of this committee on Wednesday of last week, representatives of the Department have had a number of conferences with the white stockmen and their attorney, and also with the delegates of the Indian tribe and their attorney.

At these conferences the informal agreement, approved by the Secretary last week and also the proposed legislation, were considered in great detail. As a result of these conferences, it seems to be the consensus that a legislative solution of the problem is preferable and that to that end the Robinson bill, H. R. 837, which has been favorably reported upon by the Department of the Interior, and which has passed the House, and is now before the Senate Committee on Public Lands and Surveys, approaches the solution desired by the parties. Two amendments, however, seem to be desired by the interests involved. These two amendments are as follows:

(1) Section 1 of H. R. 837 provides that about 60,000 to 70,000 acres of Indian ceded land shall be restored to Indian ownership, and that the Indian title to an additional 160,000 acres of land, which the Secretary also has authority to restore to Indian ownership, shall be taken by the United States.

Because of this solution, the Indians insist that such amendment should also provide that they be entitled to recover for the value of this land in the Court of Claims, and that there be other refinements of existing legislation relating to their right to sue. I have been informed that the white livestock operators have no objection to these provisions.

(2) The parties have been considering an amendment to section 3 relating to the creation of the grazing reserve. I understand that Mr. Wilkinson, representing the Indians, and Mr. Nebeker, representing the white sheepmen, have pretty much agreed upon a proposed amendment to section 3, which they will submit.

While I am not in a position to commit the Department to the language of either amendment as formulated, you may be assured that they will have our sympathetic consideration.

I understand that if the Committee on Public Lands and Surveys is agreeable to the proposed legislation, the parties have no substantial objection to the intradepartmental agreement operating in this interim.

In this connection it has been agreed that the permits which are to be issued under the intradepartmental agreement will provide that they are subject to termination upon enactment of the proposed legislation.

I think they have put considerable time in on this, and it looks like they have come to some conclusion, or an agreement on it.

I wish you would inquire of some of the parties on both sides and see if they are still in agreement on this, and if they still believe in it. They have put in considerable time in studying it.

Senator MURDOCK. Do any of you care to ask any questions concerning the statement just made by the Secretary?

Mr. NEBEKER. I would like to make a statement, Mr. Chairman, in connection with the Secretary's statement.

Senator MURDOCK. But do you not desire to interrogate the Secretary?

Mr. NEBEKER. No; I do not, because his memo is quite explicit.

Senator MURDOCK. Is there anyone else here at the table who desires to interrogate Secretary Chapman? If not, we will hear from you at this time, Mr. Nebeker.

Mr. NEBEKER. I wanted to say that, so far as the first part of that memo is concerned, mention is made of the fact that conferences have been held with the attorney representing the white sheepmen. I have had no notice. There has not been anything done in my presence about anything other than what is mentioned in the last part of the memorandum. That is the only thing I have been brought into consultation about, that and the agreement.

Secretary CHAPMAN. Yes.

Mr. NEBEKER. That is all new to me; the first part of what you are proposing there. I am not saying what our position would be on it; but I would like to read it over.

Senator MURDOCK. Do you have reference to the statement made by Secretary Chapman about what is known as ceded lands?

Mr. NEBEKER. Well, it is the first part of his memorandum; it was almost Greek to me, some of it.

Secretary CHAPMAN. Do you refer to the Robinson bill, that I spoke of?

Mr. NEBEKER. No; where you say it has been considered. Do you want to hear from me as to what it is?

Senator MURDOCK. We will be glad to hear from you.

Mr. NEBEKER. Section 1 of H. R. 837 provides that about 60,000 to—

Secretary CHAPMAN. Well, I inserted the figures 70,000, to make it read "about 60,000 to 70,000 acres." There was a question about the exact acreage.

Mr. NEBEKER. Sixty to seventy thousand.

Now, does that mean the tract that we have referred to as the proposed area?

Secretary CHAPMAN. No; there is no connection.

Senator MURDOCK. I think, Mr. Nebeker, it would be well to have Mr. Leech, or some other official of the Department, point out to you, here, the lands that are referred to in that connection.

Mr. NEBEKER. I think that—

Secretary CHAPMAN. Let Mr. Leech point that out on the map.

Mr. LEECH. These are the ceded lands, Mr. Nebeker, in the Indian reservation, outlined here in yellow, north of the Strawberry and Duchesne Rivers. They have nothing to do with unit G that we have been talking about.

Senator MURDOCK. I think Mr. Leech was right in saying it was outlined in yellow, but the ceded lands are the ones that are shown on the map in purple. Is that right?

Mr. LEECH. That is correct.

Senator MURDOCK. And that the total acreage of ceded land is approximately what?

Mr. LEECH. About 220,000 acres.

Senator MURDOCK. And the sixty to seventy thousand acres referred to a public, rather than a tribal, ownership. It would be the ceded land, shown in purple, there, north of the Duchesne and Strawberry Rivers?

Mr. LEECH. Yes, sir.

Mr. NEBEKER. North and East.

Secretary CHAPMAN. That is right.

Senator MURDOCK. North and East.

Mr. LEECH. And the other ceded lands mentioned, south of the Duchesne, also indicated in purple.

Mr. NEBEKER. That is in the next section.

Mr. LEECH. Section 2.

Mr. NEBEKER. Well, now, that clears up what I did not know about because I was not present when that was discussed.

Mr. M. A. SMITH. I wish to say that I was present, and Mr. Nebeker was not, and I approved of that first section; at least, I had no objection to it from our standpoint, in the other bill; the ceded land there and the old reservation.

Mr. NEBEKER. Well, I will blame my client, rather than someone else, for not informing me.

Senator MURDOCK. Does that conclude your statement at this time?

Mr. NEBEKER. Let me now read the second paragraph, please. [After an interval:] That is all I have to say.

Senator MURDOCK. Mr. Stringham, do you wish to be heard at this time?

Mr. STRINGHAM. Just a moment, before the Secretary leaves.

I understand this record is being taken and will be available to our people back home.

Senator MURDOCK. That is correct.

Mr. STRINGHAM. Well, not that it makes so much difference to me personally that I am not mentioned in the splendid report of the Secretary, but when this goes back home and our people back there read it they are going to say, "Where is Stringham? Was he drunk when all these conferences were had?" And, in all fairness to my people, I think it should show that I was present.

Secretary CHAPMAN. I am sure that it will be noted that you were present in the conferences.

Senator MURDOCK. I will be glad to assure anyone who has any doubt about your presence that you were here.

Mr. STRINGHAM. I understand that, Mr. Chairman, but I understood the Secretary as he read it he left out any mention to my name as being present at any time.

However, I just have a short statement here, very short; and I thought I might read it for the purposes of the record.

Senator MURDOCK. Certainly.

STATEMENT OF B. H. STRINGHAM, REPRESENTING THE TAX-PAYERS OF UINTAH AND DUCHESNE COUNTIES, UTAH

Mr. STRINGHAM. My name is B. H. Stringham.

I am representing the taxpayers of Uintah and Duchesne Counties, Utah, with a population of 20,000. My expenses are being paid by these two counties, which can ill afford this expenditure.

This problem, which is dual in nature, has been a source of serious irritation for the past 8 years, entailing the expenditure of much time and money by those concerned.

It is not understandable by our people why this problem has not been solved before now, inasmuch as the parties involved, both the Indians and the whites, have been in substantial agreement for several years past.

As to the present proposed agreement between the Grazing Service and the Indian Service, we think this is a step forward, but in no way a proper, final solution; and we acquiesce in it with the definite understanding that all parties concerned support the final enactment of H. R. 837 with amendments as worked out between representatives of the whites and the Indians.

It is our opinion that H. R. 837 would be much more satisfactory, both to the Indians and to the whites, if it included also the restoration of the 61,000 acres of ceded lands north of the Strawberry and Duchesne Rivers, back to the public domain, for the reasons that this land lies in small pieces; it is unfenced, and, in most cases, adjacent to white owners. It is not susceptible to blocking, and will always be a source of trouble to both parties.

We think that the Indians should be compensated by the Government for all ceded lands restored to the public domain in this area.

We want to hold a sympathetic, cooperative attitude toward the Indian population of our two counties. We express deep appreciation to the Public Lands Committee for its patient handling of these problems, and we particularly commend the Chairman, Senator Mc-

Carran, and Senator Murdock, for their untiring efforts. You have done our people a great service.

Senator MURDOCK. Does that conclude your statement, Mr. Stringham?

Mr. STRINGHAM. That is all.

Senator MURDOCK. Is there any one around the table that wishes to ask any questions of Mr. Stringham?

Mr. WILKINSON. Mr. Chairman, may I ask Mr. Stringham a question?

Senator MURDOCK. Mr. Wilkinson.

Mr. WILKINSON. Mr. Stringham, in your prepared statement you stated that the citizens of these two counties, as I understand it, would of course prefer that this sixty to seventy thousand acres also be restored to public domain?

Mr. STRINGHAM. That is correct.

Mr. WILKINSON. And that the Indians be compensated for it?

Mr. STRINGHAM. That is correct.

Mr. WILKINSON. I think that you are aware of the fact that my clients in the past have expressed a desire that the whole 220,000 acres be restored to them. I think you are aware of that, are you not?

Mr. STRINGHAM. That is right.

Mr. WILKINSON. Well, now, although I appreciate the desire, and appreciate that what you have said is based on instructions that you have received from home, if we can agree on everything else in this matter, I take it that you are not going to seriously object to the restoration of this sixty or seventy thousand acres to Indian ownership?

Mr. STRINGHAM. That is right.

Senator MURDOCK. Any other questions?

All right; we are ready now to listen to anyone else that wishes to enlighten us on this matter.

Mr. NEBEKER. There is just one further qualification I want to make to this statement of the Secretary as to that agreement, the agreement between the Indian Office and the Grazing Division.

That statement hardly states my position, because I have definitely, in all of the prior conferences, taken the position that we are utterly opposed to the administration of this grazing matter by the Indian Office.

We are perfectly willing to take the administration of the grazing district, of course, but if anything should happen to this bill, for example, if it could not be enacted, I do not want to be put in the position of having consented to any part of the agreement, because we do not like it. It gives to the Indian Office power to make curtailment of our licenses or permits at their discretion; it is left entirely to them. There is no guide but their conscience.

While undoubtedly the head of the Indian Office is a very competent gentleman, and he understands their problems, I do not know that there is anybody in that office that knows very much about the sheep farmers, and it is the sheep problem that they are concerned with now. They are conducting something different, and we do not want it.

Now, I am agreeing to the provisions of this bill with the understanding that it is more likely, in doing that, to get it through at once, and then, that the agreement is overboard.

Senator MURDOCK. May I interrupt you to ask this question, Mr. Nebeker? Does not the legislation that is before us now, and the proposed amendment, compensate between the jurisdiction of the Uncompahgre area by the Indian Bureau?

Mr. NEBEKER. No; not outside of this area that will be set off to the Indians.

Senator MURDOCK. No; that is true.

Mr. NEBEKER. That part that is set off to the Indians by that act; they have complete jurisdiction over that. But the area there, as you know, that is to be left to the Secretary, with only such guides as have been inserted in the bill.

Senator MURDOCK. Yes; but in all probability the area will remain, will it not, and will conform to the area designated here, on the map, in the black and green lines?

Mr. NEBEKER. Well, I do not know. That is projecting the question as to what is in the mind of the Indian Office; what they will do; what they will recommend to the Secretary, and, I understand, that in order to satisfy the grazing rights of the Indians, based on their property and prior use, that it will not take all of that area; that there will be a substantial part, on the north of that area, that would not be needed in the interest of the Indians.

Senator MURDOCK. Well, I am glad to hear that; but I thought that I should ask the question.

I take exactly the position that you do, and have for many years, that the jurisdiction over all grazing on the public domain, and even on the Indian land, should be under the Grazing Service. Even at this hearing I find that I am in disagreement with the Grazing Service officials themselves.

Mr. NEBEKER. The only reason that I do not make a more detailed objection to that agreement, is that I understand it will be superseded, if this legislation is enacted, and it will be out the window.

Mr. WILKINSON. Mr. Chairman, may I just make this statement?

Senator MURDOCK. Mr. Wilkinson.

Mr. WILKINSON. Our acquiescence in the instant agreement is conditioned on it being an interim arrangement; is also contingent, of course, upon the understanding of everyone here that they will work for this legislation, and upon the acceptance of this legislation by the Committee on Public Lands and Surveys, we of course recognize that the committee must be converted to it.

Senator MURDOCK. Yes; you must recognize that we still reserve the right to consider the proposals.

Mr. WILKINSON. Yes; but the point I want to make is that all the parties interested are agreed that the legislation is the remedy we seek, and that our acquiescence in the intradepartmental arrangement is contingent upon getting the legislation.

Mr. NEBEKER. I think that is a very good statement.

The only statement that Mr. Wilkinson made that we might object to is the inference that there is a matter of enforced labor in it; they have got to go ahead and do some more work.

Mr. WILKINSON. I have been considering this problem for a good many years and all I have found in it so far has been work.

Senator MURDOCK. That is all I have found in it, too.

Mr. WILKINSON. I think that—

Senator MURDOCK. Mr. Muck?

STATEMENT OF LEE MUCK, ASSISTANT TO THE SECRETARY, IN CHARGE OF LAND UTILIZATION, DEPARTMENT OF THE INTERIOR

Mr. MUCK. I think that possibly the solution which we have offered, and in which I took a large part, is the only one that will really work until we do have legislation. We have within this area an overlapping of jurisdiction, which has always been there, and which has resulted, I think, in these continued controversies. I believe sincerely that an end will be put to that.

And I beg to differ with you, Mr. Nebeker, for saying the Indian Service has no experience in conducting grazing administration.

It has conducted grazing administration on Indian lands, through its Division of Forestry for many, many years—at least 30, that I recall; so I am satisfied that the administration of the Indian Service in this area will be just as effective and cooperative as that of the Grazing Service. The agreement will eliminate definitely this overlapping of jurisdiction, which has caused all of this controversy. I do not think there is any question about it. There has been a difference of opinion as to technical procedures which the agreement will bring to an end.

Senator MURDOCK. What are the recommendations with reference to section 3 of H. R. 837?

Secretary CHAPMAN. Why, Mr. Wilkinson has that, I believe, or Mr. Graham.

Mr. GRAHAM. This is a copy. The language which I am about to read was worked out in conference between Mr. Nebeker and Mr. Wilkinson, and it would be as a substitute for the last sentence in the present draft of H. R. 837, the last sentence of section 3 thereof:

The area of the public lands to be set aside shall be determined by the Secretary with due regard to the conservation and orderly use of the public lands, and the improvement and development of the livestock industry depending upon the public range, in Utah Grazing District No. 8: *Provided*, That in making such determination the Secretary shall consider the needs of any lands purchased for said Indians during the last 10 years on the basis of their prior use and productive capacity at the time of their purchase: *Provided further*, That the creation of such reserve shall not deprive the Ute Tribe or individual members of the Ute Tribe from being granted grazing licenses or permits based on lands not considered in determining the size of such reserve.

Senator MURDOCK. Are there any further statements or questions now by anyone?

Mr. Rutledge, do you care to say anything?

Mr. RUTLEDGE. No; I do not think so.

Senator MURDOCK. Mr. Wright?

Mr. WRIGHT. I do not think so, Senator.

Senator MURDOCK. Mr. Ryan?

Mr. RYAN. No, thank you, Senator.

Senator MURDOCK. Mr. Graham, do you have anything to add?

Mr. GRAHAM. No; I have nothing further, Senator.

Senator MURDOCK. Mr. Leech?

Mr. LEECH. No, sir.

Secretary CHAPMAN. What do you think of this agreement?

Mr. LEECH. I believe the agreement will work; yes, sir, Mr. Secretary.

Senator MURDOCK. Mr. Woehlke?

Mr. WOEHILKE. Senator, the agreement and the legislation are both compromises, and as such they are not satisfactory to any of the parties involved, including the Indian Office; and I doubt whether any measure could solve the problem of the demands made upon the range in the Uintah Basin, because there is always a far greater demand than any possibility of supplying it.

As you know, there are 2,000 small irrigation farmers who must have a certain amount of livestock in order to make a substantial living; and they have not got access to public range, because there isn't any.

As I said to Senator McCarran, out there at Vernal, the only solution that I see, the permanent solution of that problem of the Uintah Basin, is a vast W. P. A. project, after the war, and the building up of a second range.

Senator MURDOCK. Well, if there is no further statement to be made, are there any further questions to be asked?

Mr. WILKINSON. Mr. Chairman, I take it that these questions you are asking for now are comments on section 3.

Senator MURDOCK. I thought that anyone else that wished might comment on it.

Mr. WILKINSON. We have this further amendment, of course, to offer with respect to such section 2. Would you like to take that up now or later?

Senator MURDOCK. Well, anything that you wish to bring up.

Mr. WILKINSON. Before reading this, Mr. Chairman, may I—

Senator MURDOCK (interposing). Is this an amendment which you intend to propose to—

Mr. WILKINSON (interposing). Section 2.

Senator MURDOCK. To section 2?

Mr. WILKINSON. Let me tell you just shortly what this amendment does.

Senator MURDOCK. All right.

Mr. WILKINSON. Section 2, of course, restores approximately sixty to seventy thousand acres of land to the Indians for their own use.

Section 2 also provides that, except as provided in section 1 hereof, the Secretary of the Interior shall not have the power to restore any other lands in Utah to Indian ownership, and that with respect to the balance of said lands within the former Uintah Indian Reservation they, approximately 160,000 acres, shall become the absolute property of the United States.

Now, because Indian title to these 160,000 acres of land will be taken from the Indians, an amendment is necessary permitting us to go into court and get compensation, and, as a part of this entire plan, it requires certain other legislation, so that section 2, as amended by this, will read as follows, if you will kindly follow it:

SEC. 2. Except as provided in section 1 hereof, no undisposed of opened lands in Utah shall be added to any reservation under the provisions of section 3 of the act of June 18, 1934 (48 Stat. 984), and any such—

and from there on we strike the balance of section 2 and insert new language after "such" and the new language is this—

Senator MURDOCK. After the word "such"?

Mr. WILKINSON. After the word "such."

Senator MURDOCK. You strike the rest of the section?

Mr. WILKINSON. Strike the rest of the section, and it reads then:

• • • and any such undisposed-of open lands located within the boundaries of the former Uintah Indian Reservation in said State are hereby declared to be the absolute property of the United States free from any trust restrictions: *Provided*, That suit may be instituted in the Court of Claims under the provisions of the Act of June 28, 1938 (52 Stat. 1209), as amended, to recover for the Indian tribal ownership in the lands hereby taken: *Provided further*, That if in any suit instituted under said Act of June 28, 1938 (52 Stat. 1209), the court shall find that any band or bands of Ute Indians entered into a treaty with the United States, negotiated by an agent thereof, whereby such band or bands agreed to surrender, give up, or relinquish to the United States their possessory right of occupancy in and to certain described lands, and in substantial compliance with the provisions thereof, did give up, surrender, or relinquish to the United States such right of occupancy and that the United States, notwithstanding its failure to ratify said treaty or treaties assented to or accepted the benefits of such giving up, surrender, or relinquishment, it is hereby declared that such action shall be sufficient grounds for equitable relief and the court shall enter judgment in favor of said Indians for the value of said lands as of the time the right of occupancy thereto was given up, surrendered, or relinquished to the United States; but such judgment shall not as respects such cause of action include any increment, interest, or equivalent thereof, from the date of taking to the date of judgment, as an element of just compensation or otherwise, and this limitation is not severable from the other provisions of this proviso: *Provided further*, That in any suit instituted under said Act of June 28, 1938, the court shall set off against the plaintiff the value of the beneficial use of land purchased by the United States under any emergency appropriation or allotment, the title to which has been vested in the United States in trust for the benefit of such plaintiff, but there shall not be set off any expenditures made by the United States (1) prior to the time the cause of action sued upon arose, or (2) under the Act of June 18, 1934 (48 Stat. 984), as extended (49 Stat. 1260, 1967) or (3) for educational purposes, it being the intent of Congress that any and all bands of the Ute Indians may assert any and all claims which have accrued to them since they acknowledged themselves to be under the exclusive jurisdiction of the United States (9 Stat. 984), except those actually litigated and determined in the cause entitled, "*The Ute Indians v. The United States*" (45 C. Cls. 440), decided May 23, 1910, and that the United States may set off against any amount found due on any claim asserted any and all payments made thereon and the gratuitous expenditures provided for in section 5 of the said Act of June 28, 1938, as modified by this proviso: *Provided further*, That in any suit instituted under said Act of June 28, 1938 (52 Stat. 1209), the Supreme Court of the United States shall have authority to review, as in other cases, any final judgment, or any judgment relating to the right of the plaintiff to recover but which reserves for further proceedings the determination of the amount of the recovery and the amount of the offsets: *Provided further*, That in awarding compensation to the attorney or attorneys prosecuting any suit under said Act of June 28, 1938, the Court of Claims, or the Secretary of the Interior, as the case may be, shall consider all services rendered by said attorney or attorneys under said Act, including services rendered before the members and committees of Congress, the departments of the Government, and the courts, with respect to all suits instituted thereunder and that actual expenses of said attorney or attorneys heretofore or hereafter incurred or expended in the prosecution of any suit instituted under said Act shall be paid as provided in the contracts approved by the Secretary of the Interior under which such suit is instituted.

Now, I am instructed to inform the committee that, provided an amendment of that kind is suitable to the committee, that then the Ute Indians would consent to the taking by the United States of this approximately 160,000 acres of land, to which they hold Indian title at the present time.

Now, let me just point out one thing in that connection. The members of the committee may say, perhaps, "Well, of course, that is simple; the Indians ought to consent to it; they can go into the Court of Claims and get compensation for it."

But it is not quite that simple, because when we go into the Court of Claims to get compensations for the lands taken, then under existing legislation, the United States can set off against any recovery all gratuities that the United States has ever expended for these Indians. So actually the Indians are, from one point of view, much better off with the land, because they have the land; it is theirs, complete ownership, complete Indian ownership; whereas if they go into the Court of Claims and get compensation for it, they are subject to a set-off for gratuities; and that is one reason why the Indians, and why the Indian Office has certainly not been in favor of the United States taking this land; at least I can say that from one point of view the Indians would be better off to keep the land.

But if they can get jurisdictional provision of the kind I have just read I am authorized to say that the Indians would consent to the whole proposal, giving us approximately sixty to seventy thousand acres of land.

Senator MURDOCK. The question is suggested here by the investigator to this subcommittee, Mr. Wilkinson, with reference to the basis of ownership of ceded land.

Mr. WILKINSON. I shall be very happy, if I may, Mr. Chairman, to make a short statement on that question.

I regret that I have not had time, as yet, to read the testimony taken at Vernal. I understand, however, that at that hearing the question of the legal status of the unsold lands in the old Uintah Reservation was discussed. There seemingly was some misunderstanding as to the legal status of those ceded lands, and I would like, if I may, to explain what I feel to be the exact legal status of those lands.

Senator MURDOCK. I know, but my position all of the time has been that, under the laws by which the land was taken from the Indians and made public domain, that, as I construe the statute, there is no string or restriction or qualification whatever, except that, if and when the lands were sold, the Indians were entitled to some part of the proceeds.

Mr. WILKINSON. May I come to that, then?

Senator MURDOCK. All right.

Mr. WILKINSON. The chairman has stated essentially the language of the act of 1902. Let me read the pertinent part of it.

By act of Congress of May 27, 1902 (32 Stat. 245, 263) Congress provided for the allotment of land within the Uintah Reservation to members of the White River band of Ute Indians, said allotment to take place on October 1, 1903, after which date "all the unallocated land in said reservation shall be restored to the public domain."

The act further provided that—

* * * the proceeds of the sale of the lands so restored to the public domain shall be applied, first, to the reimbursement of the United States for any money advanced to said Indians to carry into effect the foregoing provision; and the remainder, under the direction of the Secretary of the Interior, shall be used for the benefit of said Indians.

Now, since that time all of the land except this 220,000 acres has been sold, and I presume that the proceeds of it have been paid over to the Indians, after the deduction of the expenses of the United States.

Now, this bill would restore some sixty to seventy thousand acres of that to the Indians, and the balance would be taken absolutely by the United States, and the question, as I get it from the chairman,

is. Why is not that already absolutely the property of the United States? I take it that that is your question.

Senator MURDOCK. That is the question.

Mr. WILKINSON. Now, in my opinion, and, again, this is based on a considerable study of the judicial decisions of the Supreme Court, the only significance of the statute of 1902 is that thereby the United States obtained a cessation of these lands in trust for the limited purpose of sale. Remember that the statute of 1902 was later assented to by the Indians themselves, in the form of an agreement; they later agreed to it.

I recognize there has been some controversy, in the record, as to whether there was an agreement on their part, but I am assuming, for the present, there was. Based on that assumption I then stated that the only effect of that agreement is that they cede the title to the United States, merely for the purpose of sale, because the proceeds were still to be paid to them they still held Indian title to this land, subject, however, to the United States in the interim managing it as the United States desired.

Now, as evidence that that construction is correct all proceeds, all moneys that have been received from these lands (proceeds of sales as well as proceeds of use) have during that time, been paid over to the Indians.

It has been administered by Indian Affairs.

Senator MURDOCK. Well, I am a little misinformed on that, if your statement is correct. My understanding is that the lands were never administered by the Office of Indian Affairs until 6 or 7 years ago, when they, as it was developed at Vernal, stepped in and took jurisdiction, without any authority whatsoever, so far as I was able to see.

Mr. WILKINSON. Well, now, if I am wrong, Senator, I want to be corrected; the gentlemen here certainly know, and I would like them to state just what the facts are.

Senator MURDOCK. Mr. Wright, could you put us straight on that?

Mr. WRIGHT. I believe that the ceded land was not administered by the Indian Office, so far as I know, prior to June 1937. The reason they were not was because—or the reason they were administered after that, put it the other way, was that they were withdrawn from further disposal by public sale or homestead entries, by secretarial order. I think the one that created the Grazing Act did that.

I am a little confused on the date. At least the Indian Service did not exercise administrative authority over it prior to 1937, and it has done so since that time.

Senator MURDOCK. So that, for a period, then, subject to the enactment of the Statute of more than 30 years ago, the Indian Office had not asserted, or attempted to assert, any jurisdiction whatever over those lands?

Mr. WRIGHT. That is right.

Senator MURDOCK. One further question. Did you state, Mr. Wright, that the jurisdiction by the Indian Office was asserted as a result of an order, Executive order?

Mr. WRIGHT. Well, that is my understanding. I find I am a little confused on that; to state just which order it was; but it is my understanding it is the result of a later order.

Senator MURDOCK. Can you throw any light on that, Mr. Woehlke, with reference to the order?

Mr. WOEHILKE. I do not know of any such order, except a direction by the Commissioner of Indian Affairs to the superintendents to begin the active administration of that area.

As I understand it, at the opening of the Uintah Reservation to entry, there was quite a large acreage left; and in the beginning I understand that acreage was leased out to private parties, and the Indians received what they called grass money.

Senator MURDOCK. That was prior to the —

Mr. WOEHILKE (interposing). Prior to 1937. And after the bulk of the land—the Indian lands—was sold nobody knew exactly what was left; and the value of this land for grazing purposes was so relatively small that the Indian Office got out of the habit of doing anything about it. That is the situation, as I understand it, at least.

Then, in 1934, when a survey of these unsold lands was made, then the Secretary issued an order withdrawing them from further sale, and reserving them for the purpose of restoring them to the tribe, under the Wheeler-Howard Act.

The survey indicated that the lands were being overgrazed; and that the users were very much worried about the inclusion of other grazers, who were being affected by the operation of the Grazing Act, outside of the reservation area; and who flocked on to this reserved areas—on to these open lands—to the detriment of the people who had been using them for all these years. So in 1937, in order to end this intolerable situation, in order to give some protection to the actual users of the land, the superintendent was instructed to assume jurisdiction of them, and to issue permits to the prior users. That is about the situation, as I remember it.

Senator MURDOCK. Then that assertion of jurisdiction was by the direction of the Bureau of Indian Affairs, or the Commissioner of Indian Affairs?

Mr. WOEHILKE. No, the jurisdiction over those lands rested in the Secretary of the Interior, all these years; and he, in 1937, issued an order prohibiting the further sale, for the purpose of restoring that land to the Indians.

Then it became necessary to administer the lands, some form of administration, and the Commissioner of Indian Affairs then directed the superintendent to issue permits to the users of the lands.

Now, the withdrawal order of 1933, of September 26, 1933, of the Uncompahgre area, stated that that whole Uncompahgre area of 1,800,000 acres was withdrawn for the purpose of creating a grazing reserve for the benefit of the Utes, and directed the Commissioner of Indian Affairs to issue permits. This land, of course, was not in the same status as the land which had been sold. The title to the Uncompahgre area was in the United States. The Indians might have a moral claim for compensation, but they had no legal title to the land. On this area the Secretary of the Interior directed the Commissioner of Indian Affairs to issue permits. On this land which was within the reservation, and which had been opened to sale, and which had been withdrawn from such sale, there the Commissioner of Indian Affairs reassumed jurisdiction, after a lapse of some 20 years, during which time it was not being administered at all. But

the jurisdiction and the authority, though, we believe, had always been there; ever since the land was first opened to entry.

Senator MURDOCK. Well, Mr. Woehlke, could we ask you to do this for the committee—to supply us with copies of the several orders which you have referred to; that is, of the Secretary of the Interior, withdrawing it in 1934; then any orders or communications passing between the Secretary of the Interior and the Commissioner of Indian Affairs relating in any way to the assumption or the assertion of jurisdiction over these lands by the Commissioner of Indian Affairs?

Mr. WOEHKE. Yes; I would be glad to furnish it.

Mr. WILKINSON. Mr. Chairman, I will try then to make this brief.

Senator MURDOCK. Yes; we would like to have it in time to include in the record, Mr. Woehlke, if you can get them to us tomorrow or the next day.

(The documents and communications are as follows: The withdrawal order of September 26, 1933, and accompanying letter appear on pp. 2175-2176 of the printed transcript of hearings at Vernal, Utah.)

DEPARTMENT OF THE INTERIOR,
Washington, June 22, 1933.

Memorandum for Mr. Zimmerman, Office of Indian Affairs.

During hearings before a subcommittee of the Committee on Public Lands and Surveys of the United States Senate, which were held recently in the city of Washington, the authority of the Indian Office to administer ceded Indian lands was repeatedly challenged.

At the hearing on Monday, June 21, Senator Murdock requested Mr. Woehlke to submit any documents relating to the dates upon which administration was assumed by the Indian Office and any authority therefor. I enclose in this connection regulations of the Department governing the administration of Indian ceded lands approved by the First Assistant Secretary of the Department of the Interior on July 25, 1912. These regulations have not been rescinded and are still in effect with respect to the administration of ceded Indian lands.

This one document in itself provides, in my opinion, sufficient evidence to dispel the misunderstanding which has surrounded this entire question. It is suggested that you hand it to Mr. Woehlke with the request that he submit it with such other documents as he may have in mind when making his response to the request of Senator Murdock.

LEE MUCK,
Assistant to the Secretary in Charge of Land Utilization.

JUNE 23, 1937.

Mr. C. C. WRIGHT,
Superintendent, Uintah and Ouray Agency.

DEAR MR. WRIGHT: I have your letter of February 10 with further reference to granting grazing privileges on the ceded lands within the boundaries of the old Uintah and Ouray Reservation.

In view of your recommendations in this matter, in which Mr. Richard B. Millin, regional forester, concurs, a grazing permit may be issued to the Uintah Basin Cattle Growers' Association by the tribal business committee, in accordance with the plan set forth in the above-mentioned letter, pursuant to the tribal constitution and bylaws. It is our opinion that the issuance of a lease would not be justified. We also feel that it is not advisable to grant grazing privileges for periods in excess of 1 year on these ceded lands until final action is taken on the proposed legislation to reestablish the old Uncompahgre Reservation.

Sincerely yours,

WILLIAM ZIMMERMAN, JR.,
Assistant Commissioner.

Approved June 28, 1937.

OSCAR L. CHAPMAN,
Assistant Secretary of the Interior.

INDIAN LANDS

REGULATIONS GOVERNING USE OF VACANT CEDED INDIAN LANDS

DEPARTMENT OF THE INTERIOR.
Washington, D. C., July 25, 1912.

To Officers in Charge of Indian Reservations and Registers and Reservoirs of United States Land Offices.

GENTLEMEN: Regarding the question of jurisdiction over Indian lands after they have been opened for settlement and entry, under date of November 27, 1911, the First Assistant Secretary of the Interior addressed the Commissioner of Indian Affairs as follows:

"JURISDICTION OVER RELINQUISHED INDIAN LANDS

"NOVEMBER 27, 1911.

"THE COMMISSIONER OF INDIAN AFFAIRS.

"SIR: You have submitted the question of jurisdiction over lands within Indian reservations after they have been opened to settlement and entry.

"The question is perhaps not one so much of jurisdiction as one involving the rights of the Indians to the use and benefit of the lands after provision has been made extinguishing the Indian claim and making disposition of the lands. You note that such lands may be divided generally into two classes: (1) Those which the United States has purchased from the Indians and paid for, the Indian claim thereto being thus completely extinguished; and (2) those which the United States agrees to dispose of for the benefit of the Indians, without, however, becoming bound to purchase the lands, whereby the claim of the Indians remains unextinguished until the lands are finally sold.

"The Department agrees with you that as to the first class the Indians have no further concern and that after the cession such lands are properly under the jurisdiction of the General Land Office.

"The Department also agrees with you that the Indians are rightfully entitled to the use and benefit of the lands coming within the second class until they shall have been finally disposed of, with the condition, however, that the use thereof shall in no wise interfere with the speedy sale or other disposition provided by law. There should be no difficulty in properly handling such cases through joint cooperation between your office and the General Land Office. There can be no objection to permitting the use of such lands by the Indians or for grazing purposes for the benefit of the Indians, provided always that such use is so controlled as to not interfere with the settlement or sale of the lands. You will in all such cases confer with the General Land Office, with a view of adopting such rules and regulations as may be necessary to secure to the Indians any income that may be properly derived from the lands and at the same time to secure their early sale or settlement, as the law may direct.

"In respect to the Round Valley Indian Reservation in California, specifically referred to by you, the act of October 1, 1890 (26 Stat. 658), provides for the survey and allotment of the agricultural lands to the Indians in severalty, for the reservation of a reasonable amount of grazing and timber lands, and for the survey of the remainder of grazing and timber lands into tracts of 640 acres, and the sale of the same, the proceeds thereof, after paying the expenses, to be placed in the Treasury of the United States to the credit of the Indians.

"The act of February 8, 1905 (33 Stat. 706), directed that all the lands relinquished from the Round Valley Indian Reservation under the act of October 1, 1890, supra, should be surveyed, reappraised, and thereafter be subject to settlement and entry under the provisions of the homestead laws of the United States, and that all the lands thus opened to settlement remaining undisposed of at the expiration of 5 years from the taking effect of the act might be sold and disposed of for cash, the proceeds to be disposed of as provided in the act of 1890.

"Under these provisions of law this reservation clearly falls within the second class, and the Indians are entitled to possession of the lands until the same shall have been settled upon, entered, or sold. You will immediately confer with the General Land Office, with a view to entering into an arrangement along the lines suggested herein.

"A copy of this letter will be sent to the Commissioner of the General Land Office for his information and guidance.

"Very respectfully,

"SAMUEL ADAMS,
"First Assistant Secretary."

To put into effect the foregoing rulings of the Department and to provide for concurrent supervision over the lands involved, wherever situated, for the protection and benefit of the Indian owners and protection of prospective settlers, the following instructions are issued:

1. Up to date of entry, sale, or settlement, the lands in class 2 shall be under the jurisdiction of the Bureau of Indian Affairs and under the immediate supervision of the officer in charge of the Indian reservation where the lands are situate.

2. The officer in charge of the Indian reservation will prepare permits for grazing purposes in favor of responsible persons on the form approved by the department September 1, 1911 (5-175a), to which shall be added the following:

It is understood and agreed by the permittee that he will place no improvements upon the lands covered by this permit without first securing the written consent of the officer in charge of the reservation, and all fences and other improvements which he shall place upon the lands shall remain thereon at the expiration of the permit and become the absolute property of the equitable owner of the soil.

It is also understood and agreed by the permittee that from and after the date of any bona fide settlement, sale, or entry of the lands covered by this permit, or any part thereof, this permit becomes void as to the lands so affected, and the permittee agrees and hereby stipulates that he will not interfere with or in any manner attempt to prevent any person from making settlement, filing, or entry upon any of the lands included in this permit.

The penalty for violating the foregoing conditions and stipulations will be the summary revocation of the permit.

3. No permit shall be issued for a longer period than 1 year, and all permits shall be subject to the approval of the Secretary of the Interior.

4. Before executing a permit in favor of any person the officer in charge of the reservation will first ascertain from the land office of the district in which the lands are situated if said lands are applied for or are included in any entry of record. And thereafter, upon the execution of a permit, he will furnish the said land office with a description of the lands, the name of the permittee, and length of term, the same to be posted in the land office for the information of the public.

Any and all permits executed under these instructions shall be subject and subordinate to any valid settlement made or maintained under the public-land laws.

5. The officer in charge of the reservation is charged with the duty of preventing all trespassing on lands in class 2, the collection of trespass fees, and the prosecution of trespassers as provided by law.

6. After date of entry, sale, or settlement the lands in class 2 shall be under the jurisdiction of the General Land Office; and any permit in effect at such date shall cease and determine, and if occupied by any Indian such Indian's right of occupancy shall cease.

7. It shall be the duty of the local land officers to furnish the officer in charge of all Indian reservations within their jurisdiction monthly lists of all applications for entry or purchase, as well as all relinquishments filed, embracing lands in class 2, and to furnish also information when requested as to particularly described tracts.

F. H. ABBOTT,
Assistant Commissioner of Indian Affairs.

Approved July 25, 1912.

S. V. PROFFIT,
Assistant Commissioner of the General Land Office.
SAMUEL ADAMS,
Assistant Secretary.

(Taken from Circular and Regulations of the General Land Office, January 1830, pp. 669-671.)

DEPARTMENT OF THE INTERIOR,

August 10, 1934.

The honorable the Secretary of the Interior.

(Through the Commissioner of the General Land Office.)

MY DEAR MR. SECRETARY: Section 3 of the act of June 18, 1934 (Public No. 383, 73d Cong), enacted to conserve and develop Indian lands and resources and for other purposes, contains the following provision:

"The Secretary of the Interior, if he shall find it to be in the public interest, is hereby authorized to restore to tribal ownership the remaining surplus lands of any Indian reservation heretofore opened, or authorized to be opened to sale, or any other form of disposal by Presidential proclamation, or by any of the public land laws of the United States: *Provided, however*, That valid rights or claims of any persons to any lands so withdrawn existing on the date of the withdrawal shall not be affected by this Act: *Provided further*, That this section shall not apply to lands within any reclamation project heretofore authorized in any Indian reservation."

During the early years of our dealings with the Indians, the custom was to have individual or combined nations, tribes, or bands relinquish or cede to the United States large areas claimed by them, for which there was usually a cash or other consideration, and also the setting apart or reserving of certain lands within such ceded areas or from lands belonging to the United States and located elsewhere. These reserved lands thereafter became the recognized reservation of a tribe or band. In this way the Indians lost all identity with the ceded areas and their rights and interest therein were recognized as having been completely extinguished. In many instances such cessions, taken as a whole, embraced practically all of the lands now comprising many of the States of the West.

In years following, for reasons varying on the different reservations, portions of these diminished or newly established reservations were also ceded to the United States, the Indians receiving from the Government in lieu thereof a cash consideration, and other benefits. Such transactions were also recognized as carving or separating a certain area from a particular reservation, operating as an extinguishment of the Indian title. In this way the exterior boundaries of a reservation were further reduced. The lands thereby separated from a reservation were no longer looked upon as being a part of that reservation.

This brings us up to the period of about 1890, at which time there was adopted the plan of opening to entry, sale, etc., the lands of reservations that were not needed for allotment, the Government taking over the lands only as trustee for the Indians. Under this plan the Indians were to be credited with the proceeds only as the lands were sold, the United States not to be bound to purchase any portion of the lands so opened. Undisposed-of lands of this class remain the property of the Indians until disposed of as provided by law (*Ash Sheep Company v. United States*, 252 U. S. 159). Such lands are usually referred to as surplus lands of Indian reservations opened to public entry, and undoubtedly comprise the class of lands from which restorations to tribal ownership are to be made under the said section 3, if in the public interest. It can safely be said that it would not be to the interest of the public to restore to the Indians all undisposed-of public lands that at one time were in Indian ownership but afterward became the property of the United States by outright cession from the Indian owners, because, as stated above, such action would mean the withdrawal in many States of all lands now available for entry as public domain. Such action undoubtedly would raise strong opposition in the various localities affected and have an undesirable bearing on the new Indian legislation.

In connection with this matter, attention is invited to section 16 of the same act, which authorizes the formation of tribal organizations and provides that tribes and tribal councils shall have authority "to prevent the sale, disposition, lease, or encumbrance of tribal lands, * * *"; also to section 18 which authorizes the Indians of any reservation, by a vote of a majority of the adult Indians on the reservation, to exclude themselves from the operation of the entire act, referendum election for such purpose to be held within 1 year after approval of the act. It, therefore, will be some time before it is known definitely whether the Indians of any of the reservations will exclude themselves from operation under the act, and until tribal organizations can be formed and thereafter definitely determine which of the "opened" Indian reservation lands still undisposed of should be permanently restored to tribal ownership. Tribal organizations should have a voice in deciding which lands should be withheld from disposition. It is understood from informal inquiry in the General Land Office that, although there are "opened" lands on various reservations, there are only a very

limited number of reservations where sales can actually be made. Nevertheless, there is a possibility that in the meantime some desirable undisposed-of "opened" lands might be entered or filed upon by non-Indians and thereby prevent the restoration of such lands to tribal ownership. For this reason, action should be promptly taken to prevent, for the present, the further disposition of any of such lands by public entry, sale, or otherwise. A withdrawal of this kind would be merely of a temporary nature.

The following is a list of reservations where lands have been opened, the Indians to receive the proceeds of sale only as the tracts are disposed of. As a matter of convenience, citations to treaties, agreements, or acts, under which such "openings" occurred, are also furnished:

Arizona: San Carlos, agreement of February 25, 1896, ratified by act of June 10, 1896 (29 Stat. 388).

California:

Klamath River, act of June 17, 1892 (27 Stat. 52).

Round Valley, act of October 1, 1890 (26 Stat. 658).

Colorado: Utes, act of June 15, 1880 (21 Stat. 199).

Idaho: Coeur d'Alene, act of June 21, 1906 (34 Stat. 355).

Minnesota:

Bois Fort, act of January 14, 1889 (25 Stat. 642).

Deer Creek, act of January 14, 1889 (25 Stat. 642).

Fond du lac, act of January 14, 1889 (25 Stat. 642).

Grand Portage or Pigeon River, act of January 14, 1889 (25 Stat. 642).

Red Lake, act of January 14, 1889 (25 Stat. 642).

White Oak Point, act of January 14, 1889 (25 Stat. 642).

Leech Lake, act of January 14, 1889 (25 Stat. 642).

Montana:

Flathead, act of April 23, 1904 (33 Stat. 302).

Fort Peck, act of May 30, 1908 (35 Stat. 550).

Crow, act of April 27, 1904 (33 Stat. 352).

North Dakota: Fort Berthold, act of June 1, 1910 (36 Stat. 455).

Oklahoma:

Cheyenne and Arapaho, act of June 17, 1910 (36 Stat. 533).

Kiowa, Comanche and Apache, act of June 5, 1908 (34 Stat. 213).

South Dakota:

Cheyenne River, act of May 29, 1908 (35 Stat. 460).

Lower Brule, act of August 21, 1906 (34 Stat. 124).

Pine Ridge, act of May 27, 1910 (36 Stat. 440).

Rosebud:

Agreement of September 14, 1901, ratified by act of April 23, 1904 (33 Stat. 254).

Act of March 2, 1907 (34 Stat. 1230).

Act of May 30, 1910 (36 Stat. 448).

Standing Rock, N. and S. Dak.:

Act of May 29, 1908 (35 Stat. 460).

Act of February 14, 1913 (37 Stat. 675).

Utah: Uintah and Ouray, act of May 27, 1902 (32 Stat. 263, as amended).

Washington:

Colville, act of March 22, 1906 (34 Stat. 80).

Spokane, act of May 29, 1908 (35 Stat. 458).

Wyoming: Wind River, agreement of April 21, 1904, ratified by act of March 3, 1906 (33 Stat. 1016).

As a matter of explanation, it may be said that the Klamath River Reservation, mentioned in the list of reservations herewith, was established by Executive order of November 16, 1855. The surplus lands were opened to settlement, entry, and purchase under the laws of the United States by the act of June 17, 1892 (27 Stat. 52). As a consideration for the lands so opened, the Indians were to receive allotments, village sites, and \$1.25 per acre for lands disposed

of to certain settlers. Apparently the lands within this "opened" reservation remaining undisposed of at this time are of the class intended for withdrawal and should be retained from disposition until their need for Indian purposes has been investigated.

The Ute lands of Colorado, the areas covered by the act of June 15, 1880 (21 Stat. 199), as amended by the act of July 28, 1882 (22 Stat. 178), were deemed to be public lands of the United States and subject to disposal as such. However, the lands were to be sold, the proceeds to be first applied to reimbursing the United States for expenses incurred in connection with administration of the act and the remainder to be deposited in the Treasury of the United States for the benefit of the Indians. In view of this provision, such of these lands as remain undisposed of are also looked upon as being of the class to be temporarily withdrawn from further disposition, as proposed, and, therefore, have been included in the above list.

The act of May 17, 1900 (31 Stat. 179), provided for free homesteads for the benefit of actual and bona fide settlers, and that all sums of money so released from payment or collection, which if not released would have belonged to an Indian tribe, were to be paid to such Indians by the United States. It is, therefore, not intended that this withdrawal shall apply to and lands of this class where the Indians were reimbursed by the United States for the value of such lands in accordance with the said act of May 17, 1900 (31 Stat. 179).

If there are lands on any of the reservations named, other than the areas covered by the said citations, that were "opened," and for which the Indians receive the proceeds when disposed of, it is intended that they be included in the withdrawal. Areas within regularly authorized reclamation projects are to be excepted.

It is, therefore, recommended that all undisposed-of lands of the Indian reservations named above that have been "opened," or authorized to be "opened," to sale, entry, or any other form of disposal under the public land laws, or which are subject to mineral entry and disposal under the mining laws of the United States, with the exception of areas included in reclamation projects, be temporarily withdrawn from disposal of any kind, subject to any and all existing valid rights, until the matter of their permanent restoration to tribal ownership, as authorized by section 3 of the act of June 18, 1934, *supra*, can be given appropriate consideration. The intention is to withdraw only lands, the proceeds of which, if sold, would be deposited in the Treasury of the United States for the benefit of the Indians. In the event it is found that there are lands of other reservations that should have been included in this proposed withdrawal, appropriate recommendation will be made to have the withdrawal extended to embrace such lands.

Sincerely yours,

JOHN COLLIER, *Commissioner*.

GENERAL LAND OFFICE,
Washington, D. C., September 15, 1934.

There are no reasons known to this Office why the foregoing recommendation should not be approved.

FRED W. JOHNSON, *Commissioner*.

DEPARTMENT OF THE INTERIOR
OFFICE OF THE SECRETARY

Approved, as recommended, September 19, 1934.

HAROLD L. ICKES,
Secretary of the Interior

Mr. WILKINSON. My understanding is that during this period, irrespective of whether or not the Indian Office was actually doing the administration thereof, that this so-called grass money that they got from the land was paid over to the Indians.

Senator MURDOCK. I think, too, Mr. Woehlke, that we should have an account or a statement of whatever moneys were received and

turned over to the Indians during this period of time between the 1902 statute—is it?

Mr. WILKINSON. Between the opening of the reservation in 1905 and the present.

Senator MURDOCK. Yes; on down to 1937. I would like to know just how much that amounted to.

Mr. WOEHLEKE. Mr. Wright can probably supply that from the agency records.

Mr. WRIGHT. I think so. It will take some little time, Senator, to make that accounting.

Senator MURDOCK. Yes. Would you get it to us as soon as you can?

Mr. WILKINSON. Now, I rely, Mr. Chairman, on four cases of the Supreme Court of the United States to support my views on this subject.

The first case is that of the *United States v. Brindle*, which is to be found in 110 U. S. 688, and which was decided in 1884, by an opinion, unanimous opinion, of the Supreme Court, written by Mr. Chief Justice Waite.

Now, this opinion, you will notice, precedes the 1902 agreement by some 18 years, so I think that the Indian Office knew what the law was with respect to this kind of an agreement.

In that case, the Delaware Tribe of Indians had, in 1854, entered into a treaty, the pertinent provisions of which are analogous to those in the case at bar.

The Delaware Treaty provided:

ART. 1. The Delaware Tribe of Indians hereby cede, relinquish, and quit-claim to the United States all their rights, title, and interest in and to their country—

and then describing it.

ART. 2. The United States hereby agree to have the ceded country * * * surveyed as soon as it can be conveniently done, in the same manner that the public lands are surveyed; * * *. And the said President will as soon as the whole or any portion of said lands are surveyed, proceed to offer such surveyed lands for sale at public auction, in such quantities as he may deem proper being governed in all respects, in conducting such sales, by the laws of the United States respecting the sales of public lands; * * *.

ART. 3. The United States agree to pay to the Delaware Tribe of Indians the sum of ten thousand dollars; * * *. And as a further and full compensation for the cession made by the first Article, the United States agree to pay to said Tribe all the moneys received from the sale of the lands provided to be surveyed in the preceding article, after deducting therefrom the cost of surveying, managing, and selling the same.

Now, in the Ute statute, the only agreement on the part of the United States was that they would pay to the Indians the proceeds after deducting their expenses. In the Delaware Treaty the United States agreed to pay the \$10,000 plus the money that they got from the sale of the land.

Now, the plaintiff in that case, the *Delaware case*, was the receiver of public money, and he had charge of the sale of the lands ceded by these Delaware Indians, the sale to the public.

If, under the statute, these lands were public lands, he was entitled merely to his official salary. If, on the other hand, they were still Indian lands, notwithstanding the conveyance, he was entitled to addi-

tional compensation over and above his salary, and he sued for this additional compensation on the theory that they were still Indian lands, notwithstanding the conveyance to the United States; and the Supreme Court so held and said:

* * * the cessions to the United States were in trust, to survey, manage, and sell the lands and pay the net proceeds to, or invest them for the Indians. There was never a time that the United States occupied any other position under the cessions than that of trustees, with power to sell for the benefit of the Indians. In equity, under the operation of the treaties, the Indians continued, until sales were made, the beneficial owners of all their country ceded in trust. Of this we have no doubt. * * *

Now, I think, as a matter of fact, the facts in that case were even more in favor of the United States than they are in the present case because there was an absolute consideration paid immediately by the United States, yet the Supreme Court held they were Indian lands in trust.

Now, in 1902, which is the year our statute was passed, the Supreme Court decided the case of *Minnesota against Hitchcock*, 185 U. S. 373.

In that case the Chippewa Indians had ceded to the United States, under an act of June 14, 1889, certain lands in the former Red Lake Reservation in Minnesota. These lands were also to be allotted to individual Indians, and the balance sold for the account of the tribe.

By another statute the United States had ceded to the State of Minnesota all public-school sections on the public lands within that State. The State of Minnesota claimed that under the latter statute it was entitled to the school sections within the land ceded by the Chippewa Indians, and sued to enjoin the Secretary of the Interior from selling these school sections for the account of the Chippewa Indians.

The Supreme Court refused the relief, saying:

* * * the cession was not to the United States absolutely but in trust. It was a cession of all the unallotted lands. The trust was to be executed by the sale of the ceded lands and a deposit of the proceeds in the Treasury of the United States to the credit of the Indians, such sum to draw interest at 5 percent, and one-fourth of the interest to be devoted exclusively to the maintenance of free schools among the Indians and for their benefit.

The lands were held to be Indian lands, even though they had been ceded to the United States.

That case was followed and applied in *United States against Mille Lac Band of Chippewa Indians*, 229 U. S. 498. I shall not take the time to give the facts there; they are similar to the other case.

A more recent case of the Supreme Court is that of *Ash Sheep Co.* against the United States, reported in 252 United States 159. In that case a statute provided that—

Every person who drives or otherwise conveys any stock of horses, mules, or cattle, to range and feed on any land belonging to any Indian or Indian tribe, without the consent of that tribe, is liable to a penalty of \$1 for each animal of such stock.

The Crow Indians had "ceded, granted, and relinquished to the United States" all of their "right, title, and interest" to a part of their reservation within the State of Montana. As in the case of the Ute Indians, the United States was to sell that land for the account of the Crow Indians. The question involved in the case was whether or not they, having been ceded to the United States, were still Indian

lands, so that any cattlemen who drove cattle over these lands offended the statute.

The Supreme Court held that they were still Indian lands, and upheld the imposition of the penalty against the grazing of sheep on these lands.

Now, the Court said, at page 243:

Taking all of the provisions of the agreement together, we cannot doubt that, while the Indians by the agreement released their possessory right to the Government, the owner of the fee, so that as their trustee, it could make perfect title to purchasers, nevertheless until sales should be made, any benefits which might be derived from the use of the lands would belong to the beneficiaries and not to the trustees, and that they did not become "public lands" in the sense of being subject to sale, or other disposition under the general land laws. *Union Pacific R. R. Co. v. Harris*, 215 U. S. 380, 388, 30 sub. C. T. 138, 54 L. ed. 246. They were subject to sale by the Government, to be sure, but in the same manner and for the purposes provided for in the special agreement with the Indians, which was embodied in act April 27, 1904 (33 Stat. 352), and as to this point the case is ruled by the *Hitchcock and Chipewea cases*, supra. Then we conclude that the lands described in the bill were "Indian lands" when the company pastured its sheep upon them, in violation of section 2117 of Revised Statute, and the decree in No. 212 must be affirmed.

Now, let me say this final word. It is my considered opinion, after having read all the decisions, that this is still Indian land. If I turn out to be wrong, then we will not recover for them in the Court of Claims. So I cannot see that anyone is damaged, in any event. If they are not Indian lands, then we won't get anything for them.

Mr. M. A. SMITH. In relation to these lands, and the jurisdiction since the opening of the reservation in 1905, all of the unentered lands, the homesteaders, and all the unsold lands before they were sold, was used by the livestock men, just as any other public-domain lands were used, without objections from the Indians or the United States Land Office, until some time in 1937 or 1938, as Mr. Wright said.

I heard of the making and issuing of permits, but I have not, up to date, received any notice from them myself, personally. However, I heard a Mr. Clay made a deal with Mr. Wright for some permit, something like about 6,000 acres, of these lands. In other words, up until these last 3 or 4 years, I think it was about 1938 or 1940, that they were attempting to take jurisdiction of these Indian lands; but at all times, from the time that reservation was opened, there was no attempt to administer them by the Indian Office, these unsold lands, at all, or the United States Land Office. They just remained just like any other public lands.

Senator MURDOCK. May I ask this question: Who has agreed to the proposed amendment to section 3?

Mr. STRINGHAM. May I ask what that is?

Mr. WILKINSON. That is the Uncompahgre part.

Mr. STRINGHAM. I have, Senator.

Mr. NEBEKER. I am not, Mr. Chairman, agreeing to it. I was landed this draft by Mr. Wilkinson, when we met late this afternoon, and I said that I would receive it and look at it.

Mr. WILKINSON. Mr. Nebeker, the chairman is referring to section 3, not 1.

Mr. NEBEKER. Oh!

Senator MURDOCK. To section 3.

Mr. NEBEKER. Oh, I have agreed to that. That is the amendment, now, as drafted by Mr. Graham.

Mr. GRAHAM. With your help, Mr. Nebeker. I think the first half of it was yours.

Senator MURDOCK. Mr. Woehlke, does the Indian Office agree to it?

Mr. WOHLKE. Yes.

Senator MURDOCK. And Mr. Wilkinson?

Mr. WILKINSON. Mr. Chairman, my position is just this, that we have here a complicated situation, one, the question of the ceded land, and the other the proposed jurisdiction amendments. I am agreeing to it, if we can agree on the whole thing. We want the whole thing settled.

I cannot, under the instructions from my client, agree to it unless we agree to the whole thing, and then I can. That is, if we can agree to all amendments here presented, then I will agree to the amendment to section 2.

Senator MURDOCK. What is the attitude of the Grazing Service? Are they agreed to it?

Mr. RUTLEDGE. No, sir; we have not been asked to agree to it; and I do not think that I could express agreement to it, because, as has been pointed out, the Department always takes the final action on a bill. And after that is written in the bill, then it would come to the Department for a report; so I think it would be improper for me to say, except personally, that we agree to it. I will say this, I think they are working along the right track, and I have not any real objection to that approach to it.

Senator MURDOCK. I think the present acting chairman of the committee realizes thoroughly the position of the Director in this matter, and that it would be improper, probably, for him to take a position; and I assume that it is understood by all of us that if and when an amendment is offered that it will be referred to the Secretary of the Interior for his views.

Now, is there any further comment?

Mr. MUCK. The Department has committed itself to certain language in the bill, as it now stands; and no representative of the Department is in a position to say that he will agree to a change in that language.

Senator MURDOCK. Yes; I understand that. Well, now, if there are no further statements by anyone, I do not see any necessity for remaining in session longer.

Mr. NEBEKER. I would like to say just a word with regard to this amendment that has been submitted at length by Mr. Wilkinson. I do not wish to take the position that he is wrong in regard to the law of the case. It is a matter, in other words, that we are not very much concerned with, as I understand it; but I do think that probably such a rider as that to the whole bill is very likely to delay and interfere with the enactment of the bill we are primarily interested in getting through; I do not know whether my judgment about that is correct or not, but it seems to me that that is raising a controversial matter that is very hard to determine, whereas the bill without it is rather simple, rather easily understood, and in a short time, it seems to me that it ought to be in a position to be enacted.

It brings in complicated matters, and I am interested now in getting this bill through as soon as possible. If we could get it through tomorrow, all the better.

At the request of Moroni A. Smith, I desire to offer for the record a brief prepared by the attorney who represented him and his associates at previous hearings before this committee, relative to the matters under consideration at the present hearing.

(The brief is as follows:)

**BRIEF AND MEMORANDA IN BEHALF OF MORONI A. SMITH AND ASSOCIATES, NOW
USERS OF GRAZING DISTRICT NO. 8, UTAH, UINTAH, DUCHESE COUNTIES**

(By Knox Patterson, attorney)

The proponents of the proposition that all of this land in question is essentially public lands of the United States, and subject to the direct control of the Grazing Division, desire to call the committee's attention to the following facts bearing directly upon the equities of this contention, and showing the direct and inequitable results to the citizens occupying these lands, should this area revert to the control of the Indian department.

These proponents, at least the older generations thereof, made by long and continued use of these lands. That while they were public domain previous to 1933 from about 1907 to present date, year after year they have continuously used these lands for winter grazing without protest or objection from any source whatsoever, subsequent to the enactment of the Taylor Grazing Act, such use has been under the administrative authority of the Grazing Division.

As the result of such continuous use of this area and reliance upon it, a use that has been recognized by the Government of the United States in years past, and a use that has become common to all prior users of the public range, of district No. 8, Utah, these proponents have made large and extensive investments in ranch property and ranch improvement, to secure to them stabilization, and in the growing of livestock, and created special legal preference and under valid rights of the Taylor Grazing Act, and vested rights over all nonusers previous to 1933 or 1934, including the Indians.

The proponents have reduced their patented areas to the highest state of cultivation conformable to good livestock practice, and have at all times maintained themselves to preserve their herds when the public range would fail as the result of drought, or otherwise; that at all times their fee ownership of land and investment in improvements and in agricultural pursuits has been on a par and consistent with the use of the public range; that subsequent to the administration of these public areas under the Taylor Grazing Act, such investments and improvements have continued, and are on a plane consistent with the administration policy, and have cooperated in every way possible to conform to, and much above the requirements of the administration regulations; and all such have been done with a feeling of security and from a legal position, that the Government policy would at all times be consistent with the proponents' use of said lands, their base properties, and the final stabilization of their inherent grazing rights, customs of the United States, and the common laws prevailing in the United States.

That such expenditures and investments in land and improvements have contributed very materially by heavy taxes to the upkeep of schools, county government, State government, and welfare interests in general, and without such investments and ownership of property by proponents and other livestock interests of these areas, the municipal governments of the area would be short of practically all revenue for the maintenance of civic and municipal government.

That by reason of such investments and the encouragement of the Federal Government in the use of the public range, even long before the enactment of the Taylor Grazing Act, and in particular under the spirit of the Taylor grazing law, these proponents declare their vested rights in and to the use of the lands allocated to them under the Taylor Grazing Act, and confidently assert that such rights cannot be legally dissipated by the claims of the Indian department or of the Indians themselves, especially under claims of the Indian department and said Indians of recent origin and without any foundation in fact, against proponents in the prior use of these 1,800,000 acres (withdrawal of 1933) in Uintah and Duchesne Counties, Utah.

That a destruction or denial of the rights of these proponents to the lands in question would result in extreme and excessive deterioration of all of their base

property, even to the extent of eventual loss of the said property of these proponents by depriving them of their year-round established operations, and to the several municipal governments supported thereby. That such base property can only be used in connection with these public lands of which they are wholly dependent for 6-month winter use.

That a loss of these base properties would result in materially increasing domestic animal food, such as hay, grain, and other products so greatly in need in a national sense to maintain production on the highest possible level.

To deny to these proponents the continuing use of such lands would be a desecration of rights already held sacred, and make the claim of ownership of property a Government mockery. It would virtually destroy whole sections of our western country and lay waste the greatest industry of the West.

Let it be further understood that this section of country is quite remote to transportation facilities, especially railroads, and that all of the agricultural areas capable of producing foodstuffs for livestock should be maintained to the maximum degree, and that only through a recognition of base property where primary agriculture is carried on in support of livestock can this progress be maintained. Agriculture is essential to the livestock interest and the livestock interest is essential to agriculture.

Proponents are not denying the rights of Indians who have succeeded to ranch property in the areas which had grazing commensurability, and they are heartily in accord with the policy suggested by Senators McCarran and Murdock at the Vernal meeting that Indians owning noncommensurate property should be treated exactly as white men and given no special favors because of the fact that they are Indians. Even then such Indians enjoy a preference in treatment in the fact their properties and livestock are not taxable. Of course, an extended practice of buying commensurate property for the Indians would result in material losses to taxing units in the community and State, as Indian real and personal property are not now taxable in Utah, and apparently exempt from paying grazing fees.

Proponents respectfully petition the committee to maintain the status quo; that is to say, control of such area by the Grazing Division of the United States of all the areas here involved in the interest of the common rights of people and in the interest of a stabilized livestock industry.

Any recognition of tribal Indian rights in this area would result in utmost confusion and place in jeopardy the rights of all of those long-established and recognized uses; it would create an unsettled condition requiring years to solve.

Let it be understood that the problems of my proponents are typical; here, in order to maintain from 12,000 to 15,000 sheep, actual cash subsisting investments have been made to the extent of from \$300,000 to \$350,000. This means actual investment. This will give the committee the situation as to the bona fide users of the land areas in question and perhaps include contiguous areas.

If it is the Government's and Congress' desire to confiscate these rights and grant this area to the Indians, who were given their citizenship by law in 1906, then proponents insist they should be paid for their vested rights under the condemnation laws of the United States or by agreement such as has been practiced in the purchase of other ranch property in that area; otherwise, to grant the property to the Indian without relief would be confiscation of property under the Constitution.

Respectfully submitted,

MORONI A. SMITH AND ASSOCIATES.
By MORONI A. SMITH.

Mr. WILKINSON. May I say this, Mr. Chairman?

Senator MURDOCK. Yes, Mr. Wilkinson.

Mr. WILKINSON. I appreciate, Judge Nebeker, what you have said. As a matter of fact, to be candid with you, what we wanted was considerably more than is in this amendment, and I cut it down to this size in order to make it a little easier to get enacted into legislation. On instructions from my clients, however, I cannot consent to section 3, as redrafted here, nor can I consent to giving up 160,000 acres of this land to the north, which my clients want, unless we get an amendment of this kind. We are making a concession on the two amendments in order that we can get these jurisdictional amendments through.

Senator MURDOCK. Anything further?

Mr. STRINGHAM. There is just one further understanding we had, verbally, and that is that in the issuance of these permits, under this intradepartmental agreement, it shall be stipulated in the permit that these permits become void at the time of enactment of this legislation. That does not mean a great deal, but it will to the boys who receive the permits.

Mr. GRAHAM. Along the line of what Mr. Stringham has just mentioned, it will be recalled that I offered for the record, on the first day that this subcommittee met, a copy of the agreement, which had been approved by the Secretary, to which were attached certain exhibits, including the form of permit from the Grazing Service and the Ute Indian Tribe, and the form of permit to be used for issuance by the Office of Indian Affairs to these 6 white users.

Since that time the provision to which Mr. Stringham has just referred has been incorporated in the forms, and it may be well if I would substitute those in the record, one copy of each of the revised forms.

Senator MURDOCK. I think that would be appropriate at this time so that there will be a complete record.

Mr. WILKINSON. One final item, I have been informed, as late as this afternoon, that the description of this land, the sixty or seventy thousand acres which is to be restored to Indian ownership, as contained in the Robinson bill was not entirely accurate. I was informed by the Indian Office just about 2 o'clock this afternoon, to that effect.

I have already talked to Mr. Stringham about it and I want Mr. Smith, now, and Judge Nebeker, to get exactly what I mean, because this has just come to my attention.

As I understand it, this sixty or seventy thousand acres of land embraces the land north and to the east of the Duchesne River; you see the Duchesne River runs east and south.

Now, I am informed that the description contained in the Robinson bill omits some of the land east of the Duchesne [indicating] and it is agreed, as I understand it, that the land north and east of the Duchesne River should be restored to the Indians. We will want to have this amendment checked to make sure that it properly describes that understanding.

Senator MURDOCK. Do you know how much land is involved, Mr. Wilkinson? In this area?

Mr. WILKINSON. We are told by Mr. Wright, sixty or seventy thousand acres. That is the aggregate amount we have been talking about; that is all right, but the description here does not include all of it.

Mr. SMITH. It is this land here [indicating].

Senator MURDOCK. Can you submit for the record that description of what you allege is left out?

Mr. WILKINSON. I have here, Mr. Chairman, a copy of a memorandum that was given me today; it is a memorandum for Assistant Secretary Chapman, and I think it comes from Mr. Zimmerman, does it not, Mr. Woehlke?

Mr. WOELKE. I signed it.

Mr. WILKINSON. And I can submit that for the record.

Now, I should say that I, of course, want to check that for myself.

(The memorandum is as follows:)

JUNE 21, 1943.

MEMORANDUM FOR ASSISTANT SECRETARY CHAPMAN

H. R. 837, the Robinson bill, restores some 60,000 acres of unsold open lands to the tribe and throws some 165,000 acres back into the public domain. It is doubtful whether the Utes will ever recover a cent for these lands, as, in my opinion, the offsets will more than absorb the value of these lands.

In most of the predecessors of H. R. 837, certain lands in the southeast corner of the Uintah Reservation were restored to tribal ownership. Adjacent to these lands the tribe has developed excellent winter flood irrigated pastures and intends to enlarge these pastures which have a high carrying capacity. In connection with these pastures, the following-described lands should be restored to tribal ownership, as they do not appear in the list of lands to be restored by H. R. 837: 15. T. 3 S. R. 2 E., all north and east of Duchesne River; 23a. T. 4 S. R. 2 E., all north and east of Duchesne River; 23b. T. 4 S. R. 3 E., all north and east of Duchesne River; 23c. T. 5 S. R. 3 E., secs. 5, 6, 7, and 8.

Since the unsold open lands of the Uintah Reservation were placed under the administration by the Indian Service, the Ute Indians have been able to make increasing use of these lands by their own livestock. Because Indian sheep are using them almost exclusively for winter range, the following-described lands should be added to the lands mentioned in H. R. 837, for restoration to tribal ownership: T. 5 S. R. 4 W., secs. 12, 13, 14, 24, 25, 26, 35, and 36; T. 5 S., R. 3 W., all; T. 4 S., R. 1 E., all; T. 4 S., R. 1, W., all.

Utah base line and meridian are used in all the above descriptions.

Senator MURDOCK. We will take it now; no harm in putting it in the record.

Mr. WILKINSON. Mr. Chairman, I appreciate your permitting me to say so much. In conclusion I merely repeat that under the decisions of the Supreme Court there is no question that the lands in the Uintah Reservation which are still unsold, are Indian lands. This has been recognized within the last week by the United States attorney for the district of Utah.

On June 9, 1943, he brought suit, in the name of the United States, for and on behalf of the Uintah and White River Indian Tribes, against Paul S. Hanson, alleging that Hanson had driven some 1,200 head of sheep over the open und unsold lands in the Uintah Reservation.

The petition asked for a penalty of \$1,200 against Hanson. The allegation of the petition is as follows:

That at all times herein alleged the lands hereinafter described were a part of the Uintah and Ouray Indian Reservation in the central division of the district of Utah and were unsold open Indian tribal lands held in trust by the United States of America for the use and benefit of the Uintah and White River Tribes of Ute Indians, said lands being described in particular as follows—

and then follows a description of the lands.

(3) That on or about the 3d day of March 1943, said defendant did drive and cause to be driven upon said lands certain cattle, to wit: 1,200 head of sheep, then and there for the purpose of ranging and feeding on said lands belonging to said Uintah and White River Tribes as aforesaid.

(4) That the acts of said defendant, as alleged in paragraph 3 hereof, were without the consent of said Uintah and White River Indian Tribes and were in violation of the property rights of said Uintah and White River Indian Tribes.

Therefore, the Secretary of the Interior has authority, under section 3 of the Wheeler-Howard Act, to restore these lands to tribal ownership. That section reads as follows:

The Secretary of the Interior, if he shall find it to be in the public interest, is hereby authorized to restore to tribal ownership the remaining surplus lands of any Indian reservation heretofore opened, or authorized to be opened to sale, or any other form of disposal by Presidential proclamation, or by any of the pub-

lie land laws of the United States: *Provided, however*, That valid rights or claims of any persons to any lands so withdrawn existing on the date of the withdrawal shall not be affected by this act: *Provided further*, That this section shall not apply to lands within any reclamation project heretofore authorized in any Indian reservation.

I think this committee is already advised of the opinion of the Solicitor of the Department of the Interior of June 15, 1938, holding that the Secretary did have authority to restore certain lands in Colorado to the Ute Indians. Such lands were held by the United States under a statute similar to the statute of 1902.

What I have said, of course, goes merely to the legal status of the lands. Whether the Secretary should restore them to Indian ownership is, of course, a different matter.

The Indians whom I represent have, for a long time, asked that they be restored to their possession; but, on the other hand, they have during the last few years agreed in general to the legislation proposed in the Robinson bill, which would restore only 60,000 acres to them and permit the Government to take the other 160,000 acres as its own absolute property.

At a meeting of the business committee of that tribe, held on May 27 of this year, they again reiterated the position they have taken, and passed the following resolution:

After a full discussion of the relative merits of (1) the Secretary of the Interior promulgating the two orders previously signed, one relating to the restoration of the so-called ceded lands in the former Uintah Reservation and the other to the creation of a grazing unit in the old Uncompahgre Reserve, and (2) H. R. 837, it was unanimously agreed—

(1) That the business committee of the Uintah and Ouray Tribe goes on record in favor of H. R. 837 with an amendment pertaining to the rights of the said tribe to sue the United States, said amendment to be presented by our attorney, Ernest L. Wilkinson, to the Senate Public Lands Committee; and

(2) That in the event that H. R. 837 with the aforesaid amendment is not enacted into law within a reasonable time that the Secretary of the Interior be requested to promulgate the two orders herein referred to.

MR. STRINGHAM. May I make one final statement? This is for my poor people who live in the approval area there.

In regard to the jurisdictional rider on this bill, it certainly is not satisfactory to them; but they have sent me out here to make the best deal possible, and I have consented to that rider with the understanding that it is an offer and a compromise, and that we all must compromise, man to man, in order to settle these long-drawn-out problems.

MR. WILKINSON. Mr. Stringham, when you say the jurisdictional amendment, what you referred to was the provision restoring the 60,000 acres to Indian ownership?

MR. STRINGHAM. That is what I mean.

MR. WILKINSON. You do not have any objection to these jurisdictional provisions permitting us to go into the Court of Claims and sue?

MR. STRINGHAM. None, whatever.

Senator MURDOCK. Well, now, if that concludes all of the statements and questions that any of the people around the table here wish to make, I think it would be proper for me to state this: I think that at our last meeting Senator McCarran expressed some opposition to the inclusion of these jurisdictional amendments to the present bill, and, of course, he has a perfect right to his opinion on that; and,

if the amendments are offered by me or anyone else on the committee, we will have to do it with the understanding that Senator McCarran has expressed his opposition to their inclusion.

As I see the picture now, as a member of the Public Lands Committee of the Senate, we, of course, have no jurisdiction whatever to approve or disapprove of any of the agreements that you people have entered into, or attempted to enter into.

All we have done is to hold these hearings, and fully inform ourselves, and in turn, to convey on to the whole Public Lands Committee whatever information we have obtained by these hearings.

As to what amendment will be offered, or what effort will be made to pass H. R. 837, of course, that remains wholly in the discretion of Members of Congress.

My attitude, however, is that if these agreements that have been worked out, and the amendments to the bill that have been worked out, are the best that you people can do, then it is my opinion that the whole matter should be solved by legislation as promptly as matters between human beings can be solved that way.

However, before agreeing to all of the amendments that have been submitted, I want a day or two to look them over. It may be that I will want to change a word here and there, or rewrite it in some way. Of course I must reserve that right in myself.

I want to take this opportunity, also, to express my gratitude to Senator McCarran, as chairman of this subcommittee, for his patience and sincere perseverance in aiding the people of my State, including the Indian population, as well as the white, to come to some agreement; and I am hopeful that in the very near future the whole thing can be consummated by enactment of either the Robinson bill or some other bill along that line.

I do not believe that I have anything further to say, and if no one else has, we stand adjourned.

Thank you all for having come here and participated in the hearing.

(At the request of Senator Murdock, the following memorandum is made a part of the record:)

MEMORANDUM CHALLENGING THE VALIDITY OF THE WITHDRAWAL ORDER OF SEPTEMBER 26, 1933, AS WELL AS ALL SUBSEQUENT ACTS BASED THEREON

To the Honorable Members of the Senate Committee on Public Lands:

This memorandum is addressed to the proposition (1) that the withdrawal order of September 26, 1933 (report of hearings, pp. 2175-2176), is null and void in its entirety and (2) that subsequent official acts based thereon are equally devoid of authority. Special reference, in this connection, is made to the proposed agreement between the Commissioner of Indian Affairs and the Director of Grazing, purporting to authorize the Commissioner to issue certain grazing permits and perform other functions not within the scope of his official authority.

As the above-mentioned order of September 26, 1933, is the basis of all of the subsequent official acts mentioned in the preceding paragraph, the legality or illegality of this order presents the first question to be considered. In this connection reference is made to the letter of June 22, 1933, from the Commissioner of Indian Affairs to the Secretary of the Interior (report of hearings, p. 2175) as this letter purports to be a statement of the grounds upon which the order was to be issued. On the question as to the authority of the Secretary to issue the order it will be noted that the letter refers to paragraph 4 of the

act of March 3, 1927 (U. S. C., title 25, sec. 308d). This statute reads as follows:

"308d. Same; changes in boundaries of Executive order reservations. Changes in the boundaries of reservations created by Executive order, proclamation, or otherwise for the use and occupation of Indians shall not be made except by act of Congress; *Provided*, That this shall not apply to temporary withdrawals by the Secretary of the Interior (Mar. 3, 1927, c. 299 4, 44 Stat. 1347)."

In order to make the point that this statute does not confer on the Secretary the authority to make temporary withdrawals it is necessary to call attention to the fact that nothing is said about temporary withdrawals in that part of the section which precedes the proviso; and that the proviso itself merely says in effect that nothing contained in the other part of the section shall be construed to apply to temporary withdrawals by the Secretary. In issuing the order, the Secretary of the Interior takes the position that the later statement amounts to an affirmative grant of power to make temporary withdrawals. That is to say, that the words "this shall not apply to temporary withdrawals by the Secretary of the Interior" have the same force and effect as if there were a provision in the statute which says in so many words that "the Secretary of the Interior is hereby authorized to make temporary withdrawals."

It is an elementary rule of statutory construction that the office of a proviso is to take from or modify some statement that precedes it in the same statute (*U. S. v. Morone*, 266 U. S. 535-536); his proviso, however, does not refer to anything that was said in the other part of the statute, and at the same time it does not purport to be an affirmative grant of authority. In fact it has all the earmarks of a hastily prepared clause which was intended to accomplish some purposes which the draftsman did not wish, and indeed utterly failed, to disclose. In the light of the foregoing comments it is difficult to understand how the Commissioner of Indian Affairs could possibly make the statement contained in his letter, that "Section 4 of the act of March 3, 1927 (44 Stat. 1347), permits the temporary withdrawals of land for Indian purposes but prohibits permanent withdrawals except by act of Congress."

At the risk of seeming to labor a point that is already sufficiently obvious there is one other matter along the same line which may be of some interest. This suggestion has reference to the point that the statute under consideration relates only to existing Indian reservations, while the withdrawal of September 26, 1933, involved lands which became a part of the public domain in accordance with the act of June 7, 1897. The area described in the order formerly constituted the Uncompahgre Reservation which was established by Executive order of January 5, 1882. As a result of the distorted construction placed on the language contained in the section (4 of the act) by department officials, this large area (with certain minor exceptions), was, in form, at least, withdrawn from private entry. While this order is called a temporary order, it has already been in existence for nearly 10 years, although in the meantime the public lands in the withdrawn area have been placed in a grazing district organized and established under the Taylor Grazing Act. As a culminating absurdity, the grazing authorities and the Office of Indian Affairs have prepared and signed an agreement for joint management and administration of the affairs of the grazing district. (See report of hearings, p. 2415.) Thus has the Commissioner of Indian Affairs more or less successfully pursued the tactics of the camel that secured possession of the tent by first inserting his nose under the edge and then proceeding a few inches at a time until he was in full possession.

Needless to say, the effect of this unwarranted intrusion is to upset existing range allocations and to interfere with the orderly and economic use of the range for grazing purposes. It is also contrary to the provisions of the Taylor Grazing Act and to the rules and regulations of the grazing district, and this suggests the next question to be discussed.

The original order establishing Utah grazing district No. 8 was promulgated June 22, 1935. This order was supplemented by the order of July 20, 1935, and neither of these orders refers to, or recognizes the existence of the order of September 26, 1933.

The statute providing for the creation of grazing districts is something of an innovation in public-land policy, and the Taylor Grazing Act as amended has provided in great detail for the management, control, and use of the public range. The act expressly provides that only "vacant, unappropriated and unreserved lands," constituting a part of the public domain, were to be included in grazing

districts. In fact the whole tenor and effect of the act are inconsistent with the theory now being advanced by department officials. It follows, therefore, that even if the order had any vitality to begin with it certainly had none after the lands were withdrawn and incorporated in a grazing district pursuant to the express terms of the Taylor Grazing Act.

Furthermore, this act does not recognize such a hybrid management within a district as that provided for in the ill-advised agreement to which reference has been made. It does not give authority to the Secretary to create more than one management and does not authorize that management to delegate any part of its powers to the Office of Indian Affairs or any other outside agency. It certainly would be entirely subversive of the basic purposes of the Taylor Grazing Act if grazing districts could be saddled or hampered in any way by means of such orders as that of September 26, 1933; and if this order is valid, then what is there to prevent the Secretary from making temporary withdrawals anywhere he can find a pretext for making them, on what is left of the public domain.

The legislative history of the act of March 3, 1927, discloses nothing to indicate that section 4 was intended by Congress to confer upon the Secretary of the Interior the power to make future withdrawals. On the contrary it conclusively appears that this section was intended to have the opposite effect. The purpose of the proposed legislation was clearly stated in connection with two bills—S. 4893 and H. R. 15021—which received extended and critical consideration. The two bills were identical and later on S. 4893 was substituted for the House bill and was passed.

In the report of the Senate Committee on Indian Affairs, to accompany S. 4893 (Rept. No. 1240, 69th Cong., 2d sess.), the purposes of the measure are summarized as follows:

The enactment of this legislation will accomplish the following purposes:

1. Permit the exploration for oil and gas on Executive order Indian reservations.
2. Give the Indian tribes all the oil and gas royalties.
3. Authorize the States to tax production for oil and gas on such reservations.
4. Place with Congress the *future* determination of any changes of boundaries of Executive order reservations or *withdrawals*. [Italics supplied.]
5. Extend relief to permittees and applicants which in good faith expended money in development looking to the discovery of oil and gas under the general leasing act of February 25, 1920, upon Executive order Indian reservations, at a time when such lands were held to come within the terms of the said act.

The report of the Committee of the Whole House was agreed to a few days later and it contained the same summarized statement of the purposes of the bill (Rept. No. 1791, 69th Cong., 2d sess.). It will be noted that the numbered statements in the summary have reference to the same numbered sections in the bill; also that paragraph 4 of the summary states in clear and explicit terms that section 4 places with Congress the power to make future withdrawals. The use of the word "future" is accounted for by the fact that the Secretary had theretofore withdrawn all lands within Executive order Indian reservations from future appropriations under the leasing act of February 25, 1920. (See quotation from Assistant Secretary Finney's decision at p. 17 of hearings of the Senate Committee on Indian Affairs, 69th Cong., 2d sess., January 11, 1927.) Mr. Finney says in the closing paragraph of the decision that "it was the purpose and effect of said order of April 1, 1925, to withdraw from future appropriations, under the act of February 25, 1920, pending the final decision of the courts, lands within the so-called Executive order Indian reservations."

The net result seems to be that the proviso in section 4 was intended to take from the Secretary the power to make future withdrawals but to allow the temporary withdrawals mentioned by Mr. Finney to remain intact. As these withdrawals were only intended to operate "pending a final decision by the courts," they were necessarily temporary withdrawals. It appears, therefore, that the proviso would have been entirely explicit if an appropriate word or appropriate words had been supplied to fill the elipsis between "withdrawal" and "by" in the proviso. In that case the proviso would read: "Provided, That this shall not apply to temporary withdrawals heretofore made by the Secretary of the Interior."

It is believed, therefore, that the following propositions have been sufficiently established:

1. That section 4 of the act of March 3, 1927, does not on its face, nor when considered in the light of its legislative history, confer upon the Secretary of the Interior the power to make withdrawals.

2. That as a necessary consequence of this lack of authority the Secretary's order of September 26, 1933, as well as all subsequent orders and official acts based thereon, are null and void ab initio for the following reasons: (a) The proviso in section 4 of the act of March 3, 1927, does not, when considered in connection with its context, purport to be a grant of power or authority; (b) that when considered in the light of the legislative history of the act, it is apparent that the proviso was intended by Congress to place with that body the power to make withdrawals; (c) even if the order of September 26, 1933, were valid when issued, it became functus officio by necessary implication when the lands covered by the order were placed in a grazing district pursuant to the provisions in the Taylor Grazing Act.

Respectfully submitted.

FRANK K. NEBEKER,

Attorney for Moroni A. Smith et al.

ADMINISTRATION AND USE OF PUBLIC LANDS

SATURDAY, AUGUST 28, 1943

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON
PUBLIC LANDS AND SURVEYS,
Ely, Nev.

The subcommittee met, pursuant to call, at 10 a. m., at Ely, Nev., Senator Pat McCarran presiding.

Present: Senator Pat McCarran, Nevada, chairman.

Also present: E. S. Haskell, special investigator.

MORNING SESSION

The CHAIRMAN. The meeting of the subcommittee of the Senate of the United States, called for this date, will come to order, the subcommittee being a subcommittee of the Committee on Public Lands and Surveys of the Senate. Notices of this meeting have been distributed throughout the country. We have tried to make the notice as broad as possible so that all and any who sought to come before the committee would have an opportunity to be heard.

I regret exceedingly, due to many conditions, the members of the committee who had planned to be with us here have been unable to attend. Senator Murdock of Utah was quite certain that he could be here until day before yesterday, when it was disclosed his son was about to leave this continent in the military service of the United States, and in order to see him off the Senator and Mrs. Murdock were compelled to go to a seacoast point far remote from here.

During the day, ladies and gentlemen, we will devote the time of the committee to a discussion of the matters pending before the Committee on Public Lands and Surveys of the Senate. We want a free and open and untrammelled discussion of anything that touches upon the phase of life in which you are interested. We have attempted to bring before this committee meeting representatives of various departments of the Federal Government that in anywise touch upon or have to do with the administration of the open public domain in any way whatever. The reason for requesting them was that we might bring to the people who utilize the open public domain the representatives of their Government, so that the people might have an opportunity to discuss with them, face to face, terms and conditions and problems that present themselves to the people. In other words, this committee has attempted, during all of the years of its existence, to bring the Government out to the people, as nearly as we could. There are many vexing problems, especially in the public-lands States, and we are anxious to have those problems presented first hand to those who have had the administration of the open public domain.

The first thing that we will do this morning is to pass through the audience cards on which you will kindly register your name, your post-office address, and what, if any, group or public service or public agency you represent, so that the committee may have a full register of those who are present, and what they represent. That will also apply to the representatives of the Federal agencies who are present. (The list of persons referred to is as follows:)

LIST OF PERSONS REGISTERED AT ELY HEARINGS

Phil Abjeto, box 15, Kimberly, Nev.
 Lester Bagley, State Game Warden, Wyoming Game Commission, Cheyenne, Wyo.
 Andy Barr, Nevada Fish and Game Commission, Ely, Nev.
 Glen A. Bellander, Baker, Nev.
 John W. Bonner, district attorney, White Pine County, Ely, Nev.
 Kenneth E. Bradshaw, district range examiner, Soil Conservation Service, Ely, Nev.
 A. E. Briggs, forest supervisor, Nevada National Forest, Ely, Nev.
 James O. Beck, director, Idaho State Fish and Game Commission, Boise, Idaho.
 Frank Callaway, Callaway, Nev.
 Arthur N. Carter, Lund, Nev.
 S. A. Christensen, Wyoming Game and Fish Commission, Evanston, Wyo.
 J. L. Collins (hotel operator), Collins Hotel, Ely, Nev.
 Steven Dantre, Ely, Nev.
 George Doyle, City Hall, Ely, Nev.
 Thomas Deardon, Garrison, Utah.
 C. F. Dierking, regional grazier, Grazing Service, Reno, Nev.
 Dale E. Doty, Office of the Secretary, Department of the Interior, Washington, D. C.
 P. W. Duffin, Caliente, Nev.
 Howard Engle, grazier's aide, Grazing Service, box 1289, Ely, Nev.
 Cedric G. d'Easum, information supervisor, Idaho Fish and Game Department, Boise, Idaho.
 George Eldridge, McGill, Nev.
 Frank W. Groves, Fish and Wildlife Service, Las Vegas, Nev.
 Nick Goicoa, Elko, Nev.
 John O. Gustafson (range examiner, Grazing Service), box 521, Ely, Nev.
 C. W. Hodgson, Extension Service, Ely, Nev.
 Oscar W. Jenkins, Ely, Nev.
 J. P. Johansen, Garrison, Utah.
 Fred W. Johnson, United States Forest Service, Albuquerque, N. Mex.
 W. Howard Gray, attorney at law, box 1260, Ely, Nev.
 M. L. Hamifan, farm agent, United States Indian Service, Fallon, Nev.
 Charles W. Hanscum, deputy game warden, Lander, Wyo.
 Q. David Hansen, forest ranger, United States Forest Service, Ely, Nev.
 G. H. Hansen, district agent, Fish and Wildlife Service, Division of Predator and Rodent Control, Reno, Nev.
 E. W. Hardies, assistant agronomist, United States Indian Service, Stewart, Nev.
 George Hardman, State conservationist, Soil Conservation Service, Reno, Nev.
 Thomas C. Havell, General Land Office, Washington, D. C.
 D. W. Heckathorn, McGill, Nev.
 Douglas E. Henriques, field examiner, General Land Office, Branch of Field Examination, 355 Federal Building, Salt Lake City 10, Utah.
 Charles T. Hohenthal, field examiner, General Land Office, Branch of Field Examination, 355 Federal Building, Salt Lake City 10, Utah.
 C. E. Horton, attorney at law, box 1260, Ely, Nev.
 D. A. Hughes, secretary, Eastern Nevada Sheep Growers Association, box 217, Ely, Nev.
 Steve James, extension agent, Lincoln County, Pioche, Nev.
 Cale C. Johnson, box 398, Ely, Nev.
 D. R. Kerr, Ely, Nev.
 L. F. Kneipp, assistant chief, United States Forest Service, Washington, D. C.
 Joe Laxagoe, box 784, Ely, Nev.
 E. N. Larsen, Utah Fish and Game Commission, Hyrum, Utah.
 Joe H. Leech, Chief of Lands, Grazing Service, United States Department of the Interior, Salt Lake City, Utah.

Ross Leonard, director, Utah Fish and Game Department, Salt Lake City, Utah.
 David Luce, commissioner, White Pine Co., Ely, Nev.
 John A. Lundell, Cedar City, Utah.
 John Manzonie, box 1236, Ely, Nev.
 A. G. McBride, Elko, Nev.
 W. S. McGill, Grazier, district 4, United States Grazing Service, Ely, Nev.
 John Melland, East Ely, Nev.
 Jack Moore, 205 North Eleventh Street, Las Vegas, Nev.
 Charles F. Moore, regional grazier, United States Grazing Service, 238 Post Office Building, Salt Lake City, Utah.
 C. R. Moorman, Moorman Ranch, Ely, Nev.
 Judge E. L. Nores, Pioche, Nev.
 H. E. O'Harra, agricultural extension agent, United States Indian Service, Stewart, Nev.
 Foyer Olsen, forest ranger, United States Forest Service, Ely, Nev.
 C. J. Olsen, assistant regional forester, United States Forest Service, Ogden, Utah.
 Peder V. Pederson, secretary, White Pine Sportsman's Association, Ely, Nev.
 Vail Pittman, Lieutenant Governor of Nevada, Ely, Nev.
 W. C. Phillips, Ely, Nev.
 B. H. Robison, McGill, Nev.
 D. C. Robison, Baker, Nev.
 Allan C. Randle, Utah Fish and Game Department, Capitol Building, Salt Lake City, Utah.
 Leonard D. Selfers, Ely, Nev.
 Alfred W. Smith, Arthur, Nev.
 J. W. Smith, 135 South Third Street, W., Cedar City, Utah.
 Loyd Sorensen, Ely, Nev.
 Glen W. Southwick, administrative assistant, Nevada National Forest, Ely, Nev.
 George N. Swallow, president, Eastern Nevada Cattle Association, Shoshone, Nev.
 Richard M. Swallow, Shoshone, Nev.
 A. R. Torgerson, forest supervisor, Humboldt National Forest, Elko, Nev.
 Alfred Uhalde, Ely, Nev.
 Leo C. Walker (representing Sportsmen's Clubs Southwest Wyoming), Green River, Wyo.
 John J. Weber, Ely, Nev.
 Theodore H. Wegener (president, Idaho Wild Life Federation), Boise, Idaho.
 C. N. Woods, regional forester, United States Forest Service, Ogden, Utah.
 James A. Wadsworth, State senator, Panaca, Nev.
 Frank Wait, Clark County game warden, 201 North Ninth Street, Las Vegas, Nev.
 G. E. Wardwell, Fish and Wildlife Service, Las Vegas, Nev.
 William W. Willis, justice of the peace, Ely, Nev.
 J. L. Whyyle, Ely, Nev.
 John Yelland, East Ely, Nev.

The CHAIRMAN. There is an outstanding measure here that has, I am happy to say, caused a wide and unusual recognition. That is known as S. 1152, authored by the chairman of the subcommittee of the Senate Committee on Public Lands.

(S. 1152 is as follows:)

[S. 1152, 78th Cong., 1st sess.]

A BILL To provide for the conservation of wildlife on public lands and reservations of the United States

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That whenever the head of a department or agency of the Government having supervision and control over any public lands or reservation of the United States shall determine that a reduction in the wildlife population of such lands or reservation is necessary to prevent injury to the soil, plant life, or to any wild or domestic animals dependent upon such lands or reservation for sustenance, he is authorized to request the appropriate officers of the State in which such lands are situated to take such action as he deems necessary and proper to bring about such reduction. In any case in which such officers of the State are unwilling, or unable because of provisions of State laws and regulations, to comply with such request, the head of such department or agency is authorized to provide, in accordance with such regulations, as he may prescribe, (1) for the issuance of licenses authorizing the holders thereof, during

specified periods, to hunt, trap, kill, and possess stated numbers of such animals of either sex, upon such lands or reservation, and (2) for the issuance of licenses authorizing the holders thereof to remove, transport, or cause the removal and transportation of such animals or their carcasses, or parts thereof, in either intrastate or interstate commerce, and to sell or otherwise dispose of such animals, their carcasses, or parts thereof, if tagged and labeled in accordance with rules and regulations promulgated pursuant to this Act, or, in the absence of such rules and regulations, in accordance with State laws and regulations. Licenses may be issued pursuant to this section to citizens of the United States without regard to residence, upon the payment of a reasonable fee. No action permitted to be taken under a license issued pursuant to this section shall be deemed to be a violation of any State law or regulation.

SEC. 2. Any person who willfully violates any rule or regulation promulgated, or any condition or requirement of any permit issued, under authority of this Act shall, upon conviction thereof, be fined not more than \$500 or imprisoned for not more than six months, or both.

SEC. 3. There are hereby authorized to be appropriated annually such sums as may be necessary to carry out the provisions of this Act.

The CHAIRMAN. In order that the atmosphere may be entirely clarified, S. 1152 came into existence after a series of hearings conducted throughout the West. Excerpts from those hearings will be inserted in the record here today, at a later point. In those excerpts the committee found, from various angles and from various statements, that the question of propagation and preservation of wildlife on the open public domain, and the proper protection and preservation of the open public domain, was a question that must be dealt with constructively. It is no longer a theory; it is a condition that presents itself. However fine the theories may be, nevertheless they do not answer conditions where those conditions are presented. Theories will not answer questions. We are, I am sorry to say, and in this respect, and in what I am now going to say, is from the chairman of this committee personally, and not for the committee—I am sorry to say that we appear to be on the verge in America of a regime that is startling and not to be encouraged, so far as people who think as I do are concerned. That regime seems to be to turn over the Government of the United States to bureaus and agencies who, in turn, make rules and regulations, which rules and regulations, in turn, impress themselves upon the people of the United States.

Congress makes basic laws, and those who administer the laws make rules and regulations, and it is the rules and regulations that come to impinge upon, if I may use that term advisedly, the individual effort.

We have had some outstanding examples of that in the last year or more. Those of you who have had the opportunity to read the August number of Reader's Digest, if you will read the article by Senator O'Mahoney in that volume, you will know what I am saying and how serious it is. Just a few months ago we were startled by some Executive orders that were, indeed, revolutionary and will be revolutionary until the people of this country take hold of the matter seriously and make known that this is a democracy and not an autocracy.

The Jackson Hole incident, that is uppermost in the minds of the people of Wyoming, has brought this thing to the forefront; but just the other day in our own State there came by promulgation an Executive order that might, if we took it seriously, startle the people of Nevada. What is true in these two instances is true in many instances. The Executive order to which I refer—and that applies to Nevada—is an Executive order that was unknown to the delegation, the con-

gressional delegation of the State of Nevada. It may be unknown even yet to the members of the delegation. What is more than that, it was unknown to the agency, and the representative of the agency, that had the particular territory in charge. That was an Executive order that took out of the open public domain 180,000 or 190,000 acres of land, without a word of warning of any kind, and put it into a special reserve.

The chairman of this committee is exceedingly interested in these, because in all of my public life I have opposed and will continue to oppose, as long as I serve in public life, the overriding of Federal control in and within the confines of the sovereign State. It is my judgment—and I am speaking individually—that the nearer you bring the Government to the people the more contentment you will have in the people, and contentment is the thing that must prevail in a democracy.

But in order to bring this matter of the control of wildlife to the people and to arouse them, so they would see what was lurking in the background, it was necessary to put out a bill that would put the matter solely and exclusively and emphatically to their attention, because if an Executive order was made from the White House, it could be made tomorrow morning, and it might be drastic, even 10,000 times more drastic than the bill, S. 1152, and you would have no chance whatever to amend it. You could protest and protest until you were black in the face, but you could not call Congress to account for it, and you would have no chance to work out a progressive piece of legislation.

This bill has done exactly what the committee wanted it to do. I think one author has stated—and I might add that I believe that author has rendered a splendid service to the committee in that he says he has sent out 14,000 letters protesting against this bill. That is exactly what the committee wanted. He rendered a special service to it because in doing that he brought the matter to the attention of the public of America, and out of that we hope that those who criticize will give their best thought to constructive criticism, because it is a question that must be dealt with, and you don't want it dealt with by an Executive order.

There are men and women in America, in public life and in private life, who have given their life's study to this great subject. Why can't we arouse the interest of those people to the promulgation of a bill that will retain in it the State's sovereign rights to deal with the things that belong to the States, and cooperate with the Federal Government in the things that belong to the Federal Government? We have the question before us.

So this meeting was called here in the State of Nevada, at a point where we thought and hoped there would be the greatest number of sportsmen, the greatest number of stockmen, and the greatest number of those interested in the open public domain. We are going to ask them to come forward and give to the committee their best advice, their best criticism, their best comments, so that the committee may have the thoughts of those who are interested in the subject. So we are going to bring up the subject of S. 1152 first, this morning.

We want you to shoot at it just as hard as you like; but while you are shooting at it, try to give the committee a constructive thought as to how the whole subject may be handled. Don't say, "Kick the bill

out"; that is easy. We can do that tomorrow morning, and we could have done it before; but if, after you kick it out, an Executive order comes down from the White House, and is more drastic than this, blame only yourselves, because you have not attempted to deal with a vital subject and attempted to deal with it constructively. It is a subject that must be dealt with, because it is not a theory any longer. There are, I hope, in the group today, some who represent the various agencies here locally, and I am going to ask them to come forward first, and give the committee their views on this particular bill.

I think Mr. Howard Gray, who represents the sportsmen of this district, and who has represented the stockmen, and who knows Nevada and knows the open public domain, perhaps as well as any man in the country, is here.

Mr. Gray, we will be very glad now to have you come forward and give us a frank statement as to your views on how the subject can be dealt with, and your views as to this particular bill.

STATEMENT OF W. HOWARD GRAY, ATTORNEY FOR WHITE PINE COUNTY FISH AND GAME ASSOCIATION, ELY, NEV.

Mr. GRAY. Mr. Chairman, I did not intend to become a witness myself, but to appear merely as an agent, to present the views of the men who are interested in the protection of the game, through various witnesses who are officers of that organization.

I might say, in a general way, that the people in Nevada, at least the people in White Pine County, feel that they have taken care of any situation or any problem that might be presented locally, by virtue of the State act relative to the control of game, particularly the amendment to section 66, as amended in the last session of the legislature, in 1943.

The CHAIRMAN. That is section 66 of the statute?

Mr. GRAY. Section 66 of the statute, section 3100 of the Nevada Revised Statutes.

Under the provisions of that act, Mr. Chairman, a committee can be appointed, at the request of any of the representatives of the Federal agencies having jurisdiction over the public domain, this committee to be composed of representatives of the Forest Service, the Taylor Grazing, representatives of the fish and game associations; and the committee can make a study and recommendations to the State fish and game association, and they, in turn, can authorize the removal of deer, antelope, elk, and bighorn sheep from the range, in given quantities. That act became effective in the spring of 1943. Under that act, steps have already been taken to remove some 500 head of deer from the Schell Creek-Lehman Game Refuge, and from Duck Creek. Those deer will be removed, or are supposed to be removed, during the hunting season of this year. However, under the State act, the removal of those deer are not limited to the regular hunting season, but a hunting season can be set up by the State fish and game commission, during which the deer may be removed, and which does not necessarily have to coincide with the regular game season.

The State of Nevada, so far as I know, has led the way, for the purpose of controlling and regulating the problem which does exist, through the local agencies; that is, through its State association and through its county associations. In other words, we believe we have

brought the problem down to the local people, who know the proposition and the situation and the problems better, and how better to handle them, than someone who is not intimately acquainted with the territory.

Mr. Chairman, I would like to have Mr. Vail Pittman, who is here, and who is the chairman of a committee appointed by the White Pine County Fish and Game Association, make a statement.

The CHAIRMAN. Is Mr. Pittman present? Apparently he has not arrived. I had intended to call on Mr. Pittman.

Mr. GRAY. That's fine. He has some of the facts at his fingertips, that will amplify some of the statements that I make.

The CHAIRMAN. Now, Mr. Gray, have you read S. 1152?

Mr. GRAY. Yes; I have read S. 1152, and I am going to say that, in all of the bills that I have read, I know of none that more thoroughly and completely annihilates, wipes out, State control over the subject of the bill than that bill does.

The bill, as I see it, nullifies any State legislation that we may have. It would wipe out, entirely, the step that has been taken by the people of the State of Nevada to control this very problem. It would nullify the legislative act authorizing the control, and, on top of that, it would nullify any and all other controls that we have over the taking of the wild game.

I was very much interested in the statement made by the chairman of this committee to the effect that it was desired you have constructive criticism toward the enactment of some legislation. To be frank with this committee, I don't see what need there is of any legislation, if the State is taking care of its problem; unless, by Federal legislation, an act could be drafted which would be constitutional, which would prohibit the execution, or issuance, of Executive orders without consulting the Senate and the House of Representatives. That is the only constructive suggestion that I have.

The CHAIRMAN. You do see, of course, Mr. Gray, that the possibility of an Executive order—

Mr. GRAY. I certainly do; I see that

The CHAIRMAN. Do you realize that an Executive order dealing with a subject of this kind would be a very serious proposition?

Mr. GRAY. Yes; as all Executive orders are very serious, Mr. Senator; but the question in my mind is this: Would any Federal legislation adopted in lieu of Senate bill 1152 preclude the issuance of an Executive order? That is the point I am worried about. And any legislative enactment which would tend to limit, or tend to take away the State's right of controlling the game would be merely an extension of the trend which now exists, and which this chairman has referred to, toward the bureaucratic type of government, which brought about the downfall of one of the outstanding democracies of Europe. The whole thing is controlled by men, not by law. How you are going to prohibit the Executive orders is something that I don't know. So far as meeting the problem is concerned between the livestock men, on the one hand, and the sportsmen on the other, for the area of the State of Nevada, I believe that the machinery has been perfected, the groundwork laid, for the meeting of those problems, and we have taken the first constructive steps by providing that during the fall of this year, over the ranges I mentioned a while ago, there would be a num-

her of deer taken. That, to my mind, is a strong demonstration of the theory of control by States.

As far as the livestock men are concerned, as far as both cattle and sheep, I believe that they, so far as this area is concerned, will cooperate with the sportsmen, as well as the sportsmen will cooperate with the livestock industry. They have demonstrated that too, by constructive action.

I have been informed that at no time in the history of the grazing districts in and around Ely, at least this portion of the State, has there ever been a reduction in any permit to any sheepman or cattleman brought about by virtue of the increase of wild game on the range. I understand that is not true in some parts of the country, but, so far as the local situation is concerned, I understand that is true.

That is all I have to say, Senator.

The CHAIRMAN. Are there any questions? Does anyone wish to ask Mr. Gray any questions? Do any of the Federal agencies desire to the standpoint of the law. Mr. Sutherland said:

That was very well taken, Mr. Gray. I hope you may find it convenient to remain with us for today.

Mr. Pittman, your name was mentioned a moment ago. Do you desire to make a statement? The committee has you down on the program to make a statement, and we would be very glad to have you now, if you care to make your statement.

**STATEMENT OF VAIL PITTMAN, CHAIRMAN, SPECIAL COMMITTEE
OF WHITE PINE FISH AND GAME ASSOCIATION, ELY, NEV.**

Mr. PITTMAN. Senator McCarran, as a member of the White Pine Fish and Game Association and chairman of a special committee to protest the passage of S. 1152, I will make the following statement: That, in my opinion and in the opinion of the sportsmen of White Pine County, this bill is a flagrant usurpation of State's rights in that it deprives the State fish and game commission of any authority in the matter of regulating wildlife in the event their opinions conflict with those of the heads of the highway department, the Grazing Service, the Indian Service, or any other head, or any other public-land head. In other words, the will of the State fish and game association, or any other State authority in that connection, would be nullified, would be brushed aside, with total disregard for the wishes of the sportsmen, for the welfare of the people as a whole in the State.

Furthermore it is my opinion, as a representative of this State government and as a representative of the White Pine Fish and Game Association, that this legislation is not needed so far as Nevada is concerned. In making this statement I recognize the rights of the livestock men, the livestock business, which is one of the most important industries of Nevada, the same as mining, and under no consideration would I take any steps or advocate any measure that would destroy in any degree the rights of the livestock industry. However, it is my sincere belief that, with the good State laws we have in Nevada and the fine spirit of cooperation that exists among the department heads, the State authorities, and the sportsmen, that there is no danger existing in that respect.

You are doubtless aware, Senator, that we have a law on our statute books that provides that, if it appears to any one association or

group—I don't know just exactly how it is worded—that grazing lands are being damaged or property is being damaged, by reason of an overabundance of deer, elk, or other wild animals, that that individual can make a complaint, or that association, or those I have named, can make a complaint to the county commissioners, and the county commissioners, in turn, can set up a committee composed of one of each of the livestock associations, Wildlife Service, Forest Service, the Grazing Service, and the sportsmen.

The CHAIRMAN. Mr. District Attorney, could the committee call upon you to get us a copy of that statute? I think it might be well to have it inserted in the record at this point.

(The statute appears later in the transcript.)

Mr. PITTMAN. I will go back there a little bit and say that reference is particularly made to section 66 in the Nevada laws.

The CHAIRMAN. Mr. Gray has already identified it, so we have the identification.

Mr. PITTMAN. Recently, this law was invoked in this county, and a committee appointed in accordance with its provisions, namely, a representative from each of the groups just mentioned, by myself. As a result of that survey of wildlife conditions, the committee recommended that 500 doe deer be removed from certain areas in this county. That report was submitted to the sportsmen of this county, and approved. That report was likewise submitted to the State fish and game commission, and approved, and pursuant to that approval, an order was issued by the State fish and game association, or commission, I believe it is, of Nevada to reduce the number of deer by 500 does, in this county, in addition to the regular buck allowance of one male deer for each license issued.

In view of the splendid cooperation that was shown, it appears to me that matters in this State are being well handled, and can, in future years, be well handled, that if the livestock men, through their representatives, and the other associations through their representatives, cooperate, that any damage or danger will be removed. It is my opinion that the livestock men, including the sheep association and the livestock associations, want protection whenever it is necessary, but I do not believe they will subscribe to the enactment of any legislation, such as provided in S. 1152, which usurps the rights of the State far beyond anything that has ever been known in the history of this State, with regard to regulation of wildlife, livestock, or anything else.

That is my statement. If you have any questions, Senator, I will try to answer them.

The CHAIRMAN. I think at this point, at the conclusion of Mr. Pittman's statement, the statute to which reference has been made by both Mr. Gray and Mr. Pittman, which has just been handed to the chairman of the committee in leaflet form, and which we take to be a correct and true copy—if not, it will be corrected—

Mr. Briggs, forest supervisor, Nevada National Forest, Ely, Nev. I would suggest that that be checked against the bound volume.

The CHAIRMAN. Well, I suppose we can have that done.

Mr. PITTMAN. Senator, if you would like to know the area from which those does ought to be taken, I can give them to you, but I think that is immaterial.

The CHAIRMAN. With your permission, I am going to follow that up by inserting in the record a copy of the report on the deer problem

areas, furnished me by Mr. Briggs, of the Forest Service. I am going to have that inserted in the record in its entirety. I think that it is unfortunate that we cannot get the photographs into the record. They are very interesting. I want to say, in this respect, that I had the privilege of going over this area with Mr. Briggs some weeks ago, when I was hurriedly here. We drove out and spent several hours over the entire area and saw it, and later on I saw a copy of this report, so that the first thing that will be done will be to insert the statute of Nevada, as furnished to me, in the record at this point, which follows the testimony of Mr. Gray and Mr. Pittman, and then, I think, the record on the deer problem areas, as furnished to the chairman of the committee, will go into the record. Again, I say, it is unfortunate that we cannot put the photographs in the record, but the entire report, with the permission of Mr. Briggs, will become a part of the files of this committee, and in the file are photographs taken which are part of the report.

(The statute and the report are as follows:)

[Assembly Bill No. 59]

AN ACT To amend an act entitled "An act relating to and providing for the protection, propagation, restoration, domestication, introduction, purchase, and disposition of wild animals, wild birds, and fish; creating certain offices, providing the method of selecting the officers therefor, defining the powers and duties of certain officers, and other persons; defining certain terms; providing for the licensing of and regulating of hunting, trapping, game farming, and game fishing, authorizing the establishment, control, and regulation of private fish hatcheries, state recreation grounds, sanctuaries, and refuges, and the closing, opening, and shortening of hunting and fishing seasons; regulating the transportation and possession of wild animals, wild birds, and game fish; providing for the condemnation of property for certain purposes; providing for instruction in the game laws of this state in the public schools of this state; establishing certain funds and regulating expenditures therefrom, providing penalties for violation thereof, and repealing certain acts and parts of acts in conflict therewith, approved March 29, 1929, together with the acts amendatory thereof or supplemental thereto," approved March 28, 1941

The People of the State of Nevada, represented in Senate and Assembly, do enact as follows:

SECTION 1. Section 66 of the above-entitled act, being section 3100 N. C. L. 1929, is hereby amended to read as follows:

Section 66. It shall be unlawful to hunt deer at any time during the year other than during such forty-five (45) day period, to be known as the open season, between October 1 and December 1, of each year, as may hereafter be designated for the respective counties by the board of fish and game commissioners, under the provisions of this act; *provided*, that during such open season of each year it shall be unlawful to kill, catch, trap, wound, or pursue with the intent to catch, trap, injure, or destroy more than one deer, except under rules and regulations prescribed by the fish and game commissioners as hereinafter provided; *provided further*, that the open season for deer in district No. 1 shall extend between October 1 and December 31 of each year; *provided*, that the county commissioners of any county in the state, upon the application of any person, persons, organization, or governmental department may appoint a committee of one each, sportsmen, livestock, U. S. forest service, fish and wildlife service and grazing service to consider the advisability of reducing the number of deer, antelope, elk, and bighorn sheep in any district or specified portion of such county; and whenever in the judgment of said committee, big game have increased in numbers in any locality to such an extent that a surplus exists, or to such an extent that such animals are damaging public or private property, or are overgrazing their range, said committee shall make appropriate recommendations to the state fish and game commission as to the area or areas being damaged, the extent of damage, and the number and kind of deer, antelope, elk, or bighorn sheep, to be removed; upon the recommendation of the committee, the commission may determine the area or areas within such county from which said deer, antelope, elk, or bighorn sheep shall be removed, the number of hunting licenses to be issued, the number of sex of deer, antelope, elk, or bighorn sheep that may be killed by each license holder, the special license fee to be paid to

the county clerk, the hunting season, which may be separate from or concurrent with the regular open season, and prescribe such other rules and regulations necessary to properly conduct the hunt.

SEC. 2. All acts and parts of acts insofar as they conflict with the provisions of this act are hereby repealed.

SEC. 3. This act shall become effective from and after its passage and approval.

A REPORT ON DEER PROBLEM AREAS

To the Nevada State Fish and Game Commissioners:

This report has been prepared by a committee consisting of one representative each, sportsmen, United States Forest Service, Fish and Wildlife Service, Grazing Service, and stockmen. This committee was appointed by the White Pine County commissioners on April 5, 1943, in accordance with the provisions in section 66 of the Fish and Game Laws of Nevada.

The report is based on:

(a) Personal observations and investigations on three winter range areas as hereinafter described, where surplus deer now exist because their numbers have increased beyond the winter food supply.

(b) Factual information available from recorded data covering studies and investigations on the three winter range areas by a representative of the Fish and Wildlife Service, Forest officers, Grazing Service officers, sportsmen, and other interested persons.

(c) Forest Service records covering deer population, conditions of ranges, and other pertinent information since 1918.

(d) Statements of old-time residents of the district, miners, stockmen, other businessmen, and interested persons.

SOME BACKGROUND HISTORY OF DEER IN WHITE PINE COUNTRY

An official Government report shows that Lt. George M. Wheeler headed an exploration expedition into this territory in 1871 for the War Department, for the purpose of obtaining correct topographical knowledge of the country traversed, to prepare accurate maps, and to determine as far as practical everything relating to the physical features of the country. The number, habits, and disposition of the Indians; to select such sites as might be needed for future military operations, or occupation; to determine facilities offered for making rail or common roads to meet the needs of those who at some future time might occupy or traverse this part of the territory; to make detailed examination of mineral deposits discovered and to determine influence of climate, the geological formations, character and kinds of vegetations, its value for agriculture and grazing purposes, relative proportions of woodland, water, and other qualities which might effect its value for the settler. Among other significant statements in this report is one that very little game or any specie of wildlife was seen on the areas covered between the Sierra Nevada and Wasatch Mountain Ranges.

Alex Kolchek, a long-time resident of Cleve Creek, has stated that deer were very scarce 40 years ago in the Schell Creek Range. Statements of other old-timers indicate that deer were very scarce on ranges in White Pine County. This is borne out by Forest Service records which show a total estimated deer population of 400 on all forest lands in this district. These records show the trend of deer development.

In 1919 complaints were received that too many deer were being killed by the Indians. The Forest Service recommended a buck law, and game refuges were recommended in order to build up the deer and other game herds.

In 1920, complaints were received in regard to killing of deer and selling the meat. Deer population estimated at 800.

In 1921, game refuges were again recommended. The buck law was enacted in 1921.

In 1923 the Schell Creek State Game Refuge and the Lehman State Game Refuge were created; more favorable public sentiment toward the conservation and development of game. Deer population estimated at 800.

In 1929 deer were noticeably increasing on most ranges in White Pine County. Estimated population was 2,500.

In 1932 the estimated deer population was 3,500; 28 elk were transplanted on Duck Creek.

In 1940 the estimated deer population, based on counts on the Duck Creek winter-concentration area and other studies and observation had reached 6,000. Three winter-range concentration areas used by deer began to show definite earmarks which indicated that the number of deer had about reached the carrying capacity of their winter range on the three areas, namely, Duck Creek drainage, east side of the Schell Creek Game Refuge, and the south end of the Lehman State Game Refuge.

In 1941 a very substantial increase in number of deer was determined by actual counts and other observations on many ranges, including the Duck Creek winter-concentration area. Upon request, an associate biologist was detailed to assist forest officers, Grazing Service officers, sportsmen, and other interested persons to make an intensive study of the winter food supply for deer and other conditions to determine proper management of the deer herds. Recorded data definitely indicates the winter forage supply to be on the downward trend on these winter-concentration areas, while the deer were increasing as evidenced by a 84 percent fawn crop and low mortality from predators and other causes. Sportsmen and other interested persons were encouraged to assist in the studies and observations.

In 1942 the studies were resumed on the Duck Creek area and expanded to include more intensive studies on the east side of the Schell Creek Game Refuge and the south end of the Lehman Game Refuge, also cursory examinations of the winter range on the White Pine Mountain range where overpopulated winter range is threatened. Recorded information resulting from these studies shows that the number of deer on Duck Creek drainage, east side of Schell Creek Game Refuge and south end of the Lehman Game Refuge have increased beyond the carrying capacity of the winter range and damage to the range is now resulting as evidenced by the overgrazed condition of the browse species on which deer depend for survival. The poor condition of the range is further evidenced by the poor condition of some of the younger and smaller deer and some of the older bucks and does. Removal of excess numbers of deer is necessary to prevent destruction of the winter forage within the concentration areas and prevent heavy losses in deer from malnutrition.

CONCLUSIONS

There are several reasons apparent to the committee for the large increase in numbers of deer in this district.

1. Effective elimination of predatory animals.
2. Favorable winter conditions and large fawn crops.
3. Reduction in extent of poaching resulting from more favorable public sentiment toward game protection.
4. The buck law which has prohibited the killing of doe deer.
5. Keeping refuges closed to hunting after the deer population has reached the carrying capacity of their winter range.

Winter snows force the deer out of the higher country into the lower and more confined areas. The areas into which the deer are forced during the winter months are usually not more than one fifth the size of their summer range. Often the winter range is much smaller than this proportion.

When deer are allowed to increase in numbers beyond the forage supply on areas of winter concentration, there is great danger of destruction of the forage species on which they must depend for subsistence and survival.

It is the habit of deer to concentrate on their favorite areas, and no practical way has been found to remove them to areas where food is more plentiful.

The best practical and economical method yet found is orderly removal of excess numbers of deer from those congested areas by hunters.

RECOMMENDATIONS

Schell Creek State Game Refuge.—We recommend that this area in its entirety be opened to hunting deer during the regular hunting seasons, and during any special seasons which may be necessary to remove deer in numbers in excess of the carrying capacity of the winter range.

Lehman State Recreation Ground and Game Refuge.—We recommend that this area be opened in its entirety to hunting deer during the regular hunting seasons and during any special seasons which may be necessary to remove numbers of deer in excess of the carrying capacity of their winter range.

Duck Creek drainage as described on the attached map and shown as deer problem area No. 1.—Includes all Duck Creek drainage to the narrows at the J. B. Pescio ranch. We recommend that each licensed hunter be allowed to take one deer of either sex from this area during the regular hunting season, and as determined from checking station counts, if 200 doe deer have not been removed from the area during the regular hunting season, that special doe permits be issued for the difference between the number of does removed during the regular hunting season and 200, and special season of 10 days' duration be set up after the expiration of the regular season, and between October 1 and December 1, 1943. For extent of damage to the forage species on this area through overuse by deer, see attached report on "A Winter Range Relationship, Schell Creek State Game Refuge" dated April 24, 1943, and attached photographs.

East side of Schell Creek Range.—An area with boundaries extending to Kalamazoo Creek on the north, the national forest boundary on the east, Taft Creek on the south, and the main divide between Spring Valley and Steptoe Valley on the west. Shown on the attached map and designated as deer problem area No. 2.

We recommend that each licensed hunter be permitted to remove one deer of either sex from this area during the regular hunting season and that if 100 doe deer as determined by checking station counts have not been removed from the area during the regular hunting season, special doe permits be issued to licensed hunters for the difference between the number of does taken during the regular hunting season and 100, to be removed during a 10-day special season to follow the regular season and between October 1 and December 1, 1943. For extent of damage to the forage species on this area, see attached report on "A Winter Range Relationship, Schell Creek State Game Refuge," dated April 24, 1943, and attached photographs.

Lehman State Game Refuge—Snake Range.—An area known as the Snake Division of the Nevada National Forest within Townships 10 to 14 north, in ranges 68 to 70 east, inclusive, containing approximately 175,512 acres, as shown on attached map and designated as deer problem area No. 3.

For extent of damage from overuse by deer, see attached report on "Range Conditions of the South End of the Snake Division of the Nevada National Forest," dated April 22, 1943, and attached photographs.

We recommend that each licensed hunter be permitted to take one deer of either sex from this area during the regular hunting season. If 200 doe deer are not removed from this area by licensed hunters during the regular hunting season as determined by checking station counts, that special doe permits be issued for the difference between the number of does removed during the regular hunting season and 200, to be taken during a 10-day special season to follow the regular season between October 1 and December 1, 1943.

ATTACHMENTS

1. Photographs showing damaged forage species on the problem areas on which deer must depend for survival.

2. A report on "Winter Range Relationship, Schell Creek State Game Refuge," dated April 24, 1943.

3. A report on "Range Conditions of the South End of the Snake Division of the Nevada National Forest," dated April 22, 1943.

4. Map showing boundaries of deer winter range concentration areas, where damage to the range has resulted because of overpopulation by deer.

5. Copy of letter requesting White Pine County Commissioners to appoint a committee as provided for in section 66 of the Fish and Game Laws of Nevada, and formal appointment of the committee.

Respectfully submitted this 14th day of June 1943.

C. M. ALDOUS,
Representative, Fish and Wildlife Service.

W. R. OVERFELT,
Representative, White Pine Fish and Game Association.

L. L. ROHMER,
Representative, Grazing Service.

D. C. ROBISON,
Representative of Stockmen.

A. E. BRIGGS,
Representative of Forest Service.

A WINTER DEER RANGE RELATIONSHIP

SCHELL CREEK STATE GAME REFUGE

Two years of study have now about been completed on the Schell Creek Division of the Nevada National Forest in an effort to determine the status of the deer as well as the condition of the winter range. These studies have been made on the Buck Creek drainage and along the east boundary of the Schell Creek State Game Refuge as shown on attached map, and which area is covered by the following statements.

This has been a joint study undertaken by the Forest Service and the Fish and Wildlife Service.

Before any program of procedure could be made and justified it was necessary to determine actual facts as to conditions now existing over these areas.

First it was necessary to know how many deer were using this range and in what manner they were dispersed over the winter range, which obviously is the limiting factor in the set-up. Next it was necessary to determine the condition of the range and by this is meant, the distribution extent and present utilization of each of the important plant species that furnish winter food for the deer over the limited winter range.

After the two seasons' observations by representatives of the two Government agencies, it was concluded that there now existed, over portions of this area, winter concentrations of deer in such proportions that a great deal of the natural browse species is in imminent danger of becoming ruined by overbrowsing by the deer.

The summer range is represented by some 110 square miles or 70,000 acres. There are approximately 2,500 deer that spend the summer and fall months over this area. This means that there are available about 28 acres per deer to furnish both food and protection.

As the winter months approach with their complement of cold weather, high winds and snows, the deer find it increasingly difficult to maneuver around in search of food as well as to find it in the high country. This naturally compels the deer to move down the mountain where food is easier to obtain and where there is less snow to impede their movements. By the time winter has really set in, the deer are all found congregated into groups of varying sizes, along the foot of the lowest slopes from which places they work out onto the flats or valley floor for their food. Cold spells particularly cold winds drive the deer from the open flats back into the lower foothills country where there is found protection among the pinon, juniper, and mahogany cover.

Instead of there being 28 acres per deer as was the case of the summer range, there now exists but 6 acres for each deer on which to eke out an existence on the winter range. Dr. D. I. Rasmussen, leader of the wildlife research unit in Utah, after years of intensive study of deer winter ranges has this to say, "Mule deer require approximately an acre of average winter range a deer-month use if undue losses and range depletion are to be avoided." The winter-range area on the Schell Creek Division is only about one-fifth of that of the summer range. Now this 6 acres per deer for the 6 months they spend on the winter range would be the saturation point for range usage providing the deer were equally dispersed over the entire winter range but our observations have shown that this is not the case. There are too many areas where the deer tend to congregate in large numbers on areas that do not supply 1 acre per month per deer over the 6 months they spend there. On these areas of overpopulation the important browse species are now becoming drastically overused and there is an immediate danger of their being completely destroyed. True there are areas where few if any deer are found during the winter months where there is yet a fair amount of available food left, but how to get the deer to utilize these areas is not yet known. Driving them or unduly molesting them will temporarily disperse them but they soon return to the areas from which they originally came.

Early in the winter before any of the bucks had shed their antlers a sex ratio was determined. Counts on 304 deer showed the presence of 73 bucks, 114 does, and 117 fawns. Put in terms of percentage this shows bucks 24.01, does 37.5, and fawns 38.48. During March of this year a census of the deer within the refuge which did take in a few additional ones on the south end, showed in Duck Creek a total of 1,300 and on the Spring Valley side a total of 700. This makes a grand total count of 2,000 deer actually counted. A conservative estimate for the area under study would bring this figure up to 2,500 deer. Applying above percentage figures to this total, it shows approximately 604 bucks, 937 does, and 963 fawns on the area at the present time. This represents a much larger popula-

tion than was counted last year. This can be accounted for largely by the fact that there has been a satisfactory increase in numbers and the fact that the counting technique this year was a marked improvement over last year's method.

As to the condition of the range, this year's observations showed a further downward trend toward overutilization than was recorded last year. Actual plot measurements will be completed in May.

There are at least four important plants that supply deer with food during the winter months in this area. In the order of their abundance they are: purshia (bitter brush), mahogany, juniper, and cowania (buck brush). In the order of their apparent preference as food for the deer they are: Mahogany, cowania, purshia, and juniper. Sage, while it is more abundant than the other species, above mentioned, is not very palatable nor is it of high food value, although deer will feed on it when forced to do so.

Observations made in the field during the past two seasons, reveals the fact that mahogany in the immediate vicinity of deer concentrations is every bit high lined by these animals. In other words it is utilized fully 100 percent within reach of deer. There is no evidence of any reproduction on the areas where the deer tend to congregate. Mahogany is the first of the important food species to be taken by the deer after they come off the high summer range. The cowania would evidently be taken as early as the mahogany if it were present on the east foothills in the Duck Creek area but because it is largely found on the rocky slopes of the west side of the valley it is not utilized until early in the spring when some of the deer move into that range. By May 1, this species is fully utilized or is eaten back approximately 100 percent within the reach of deer. Bitterbrush, because of its widely scattered abundance, still offers a good source of food for the deer. Its use varies from 0 to 100 percent depending upon the abundance of the deer on the area. Some of the areas supporting this browse species is far overbrowsed while in other areas it hasn't been touched. The juniper is utilized rather spottily. In some areas it is fully used and in others it is used only sparingly. Why there is a preference of one tree over another of the same age and size is not known. Neither the big nor black sage is now overutilized on the Duck Creek area although on the Snake Division it has been hard hit.

Just to what extent any one of these important browse species can be eaten back and still continue to be thrifty has not been definitely determined although studies are now in progress to determine this. It has been conservatively estimated however, that when use is greater than 75 to 80 percent of the available current growth none of these plants can continue to thrive and produce an adequate supply of nutritious, edible stems and leaves. So much for the range condition.

The present study of the area has shown that the range is now carrying more deer than it can adequately support as evidenced by the condition of the browse plants. The saturation point has been reached and if the range is to be saved and the deer maintained in good flesh, a reduction in the herd must be made in the very near future in order to prevent ultimate destruction of both the deer and the range. This removal should be accomplished by the hunter take if that is possible. The killing of bucks alone will never accomplish this need. Removal of some does will be necessary. Does are necessary only so long as they are needed to build up a herd. After the herd has increased until it has overpopulated an area then the removal of does becomes necessary. The killing of does should offer as much sport and be as valuable in supplying wholesome meat as one gets from killing the stately buck.

The increase in the herd through the fawn crop this spring will be approximately 1,000. If the herd is to be reduced it must at least take care of a number equal to the increase. Naturally some of the fawns born this spring will die before they reach maturity, either by accident, disease, or predation. Assuming that 200 of these fawns die that still leaves at least 800 that can be classed as excess. If does are removed this fall, hunting them only outside of the refuge will not fully accomplish the desired results, because this would not take them from the areas where the heaviest concentrations occur, which are found mostly inside of the refuge boundaries.

This refuge was created some 20 years ago and in that time it has contributed some, but not all, in building up the herd. Such other things as the buck law, predatory animal control, reduction of livestock grazing have played an important part in building up the herd to its present numbers. Also less poaching and more favorable public sentiment have contributed. Inasmuch

as the refuge has now served its purpose, no logical reasons can be given for its retention. The very nature of the terrain within the boundaries of the present refuge will always keep it a natural refuge for the deer there. Hunting in the high country and rough canyons will always make the sport of killing deer a hard one. It is not likely that the amount of hunting that will take place inside the present boundaries will hurt the present herd. There will always be a good surplus of deer left over to propagate and keep the herd at numbers commensurate with the carrying capacity of the range. The present rate of take on adjacent ranges is approximately 1 to each 17. In Utah, on ranges where the take has been 1 to every 4 on the range, their populations have continued to remain stationary. If this can occur in neighboring States where the winter range is in poorer condition than what is found in the Duck Creek area, then it is reasonable to assume that the removal of more deer here than has ever been taken before will not in any way hurt the present herd.

A continuation of the present study will make it possible to determine each year the correlation between the numbers of deer and the condition of the range. It will be the aim of such investigations to keep the deer numbers down to what the range will carry properly. The management program will always be elastic enough to keep the winter range fully occupied.

During the present national emergency we owe it to ourselves as well as to the Government to make the fullest use of all of our natural resources, of which the deer or game is but one.

There is now facing the American people a pending meat shortage and there is a patriotic responsibility bestowed upon each of us to help the Government through its present crisis. By removing the excess number of deer on this overcrowded area and fully utilizing the meat and salvaging the hide and the fat for the War Department, we are accomplishing the two very important obligations, namely assisting to conserve and fill the demands for meat and in restoring the range that is now so badly overused.

Q. DAVID HANSEN,

District Forest Ranger, Forest Service.

RANGE CONDITION OF THE SOUTH END OF THE SNAKE DIVISION OF THE NEVADA NATIONAL FOREST

At the request of Supervisor Briggs, Rangers Thomson and Hansen and myself made a 2-day cursory examination of the range condition of the south end of the Snake Division in the vicinity of Murphys Wash and Johns Hollow.

Sunday, March 28, we drove up Murphys Wash in a Forest Service car approximately 6 miles above the forest boundary. We traversed about a mile of this distance on foot.

The snow was all gone except on steep north slopes; in traveling this mile on foot we picked up something like 17 deer antlers. Finding this many antlers in such a short distance is indicative of a heavy deer concentration. A further substantiation of heavy concentration was noted in the vast amount of deer droppings found. In places it looked similar to sheep-bed grounds. It was plainly evident that we were at least a month and a half too late to attempt to make a count of the deer, as they were well dispersed in small groups. During our walk and the distance covered in the car we counted 58 deer.

This range, especially on the lower slopes, is now in a sad predicament from overuse.

The *Purshia*, while scattered and not continuous, represents a food source of no little importance. Except in a few instances where snow had covered some of the lower branches, compressing them to the soil level and thus protecting them against browsing, these plants were clipped of all of the 1942 growth and in a great many instances the clipping extended well into the 1941 growth. It was conservatively estimated that the present usage was from 75 to 125 percent. The average height of this species is now little more than a foot and in a most unhealthy condition.

Cowanla, although somewhat scattered over the area, is quite abundant. A considerable amount of this species is now dead and more is on the verge of passing out. Every single *Cowanla* we observed was highlined even to a height of 6 feet in many instances.

A report made in 1940 of the condition of this same range spoke of skylining, and in the case of Cowania this term of skylining is probably more descriptive than highlining. The only leafy material now present is what appears above the 5½ to 6-foot skylining level. In a great many instances these plants are at least 13 feet high. There is a dearth of reproduction of this browse species. Utilization on available Cowania here was 100 percent.

Mahogany (*Cercocarpus intricatus*) is found on the rocky ridges and this species, like the others mentioned above, is entirely highlined and utilized 100 percent.

Black sage and big sage have been topped by the deer to hedge proportions. They occur very abundantly over the area and have been severely utilized. Even the rank tall rabbit brush in the hollows has been partially topped by the deer.

The juniper, while not too heavily used, is showing the effect of rather heavy browsing.

Ranger Q. Hansen, who saw the Kaibab Forest at its worst, made the statement that there was a close parallel between conditions on the Murphys Wash and the Kaibab Forest.

We were informed by the elder Mr. Swallow that sheep had been taken off this allotment 3 years ago and that only cattle now used this area in the summer time. There was no evidence to show that any of this highlining had been done by cattle.

Predation.—Several bobcat tracks were seen and at least 3 dead deer were found. Although we saw neither coyotes nor their tracks, the ranchmen told us that coyotes were very abundant there.

On March 29 we rode the area known as John Wash on horseback. This area lies to the east and south of the Murphy Wash. This day we counted 124 deer which were well scattered. Here again it was determined we were too late to make any accurate count of deer numbers.

Very little Purshia was found present on this area. Cowania was scattered but present in considerable quantity. Like in the Murphy Wash, this species was noticeably skylined. More mahogany was present here than on the Murphy Wash area and it was found to be 100 percent utilized. The big sage was all clipped of the 1942 top growth. The Brigham Tea was even taken on this area.

Condition of the deer.—We saw many does in very thin condition. Most of the fawn crop, likewise were small and showed the effect of malnutrition.

Ranger Thomson had recently ridden the area east of Johns Hollow known as Big Springs Wash and he reported to us that conditions there were similar to what we had seen on Murphys Wash and Johns Hollow.

Recommendations for considerations:

1. An annual inventory of the number of deer should be made before all of the snow has left the lower slopes, which would be sometime early in February. The resident ranger should keep a close watch of this range and should determine, each year, when conditions were right for counting.

2. The resident ranger should make observations on the west as well as the east foothill portions of this mountain to determine range conditions and tendencies for any deer concentrations during the winter and early spring months.

3. An immediate further study of the south end of the mountain should be made by representatives of the Forest Service, Grazing Service, Fish and Wildlife Service, livestock industry, sportsmen, and State or county game department, for the purpose of recommending early action on deer removal, and further management practices to correct the critical condition of the range.

Ranger, United States Forest Service.

APRIL 22, 1943.

UNITED STATES DEPARTMENT OF AGRICULTURE,

FOREST SERVICE,

Ely, Nev., April 3, 1943.

The Honorable BOARD OF COUNTY COMMISSIONERS,

White Pine County, Ely, Nev.

GENTLEMEN: For the past 3 years the Forest Service cooperating with representatives of the Fish and Wildlife Service, sportsmen, and other interested per-

sons, has been conducting studies and investigations in regard to some deer range problems which have developed on the Schell Creek Game Refuge, and on the south end of the Snake division in the vicinity of Murphy Wash and Johns Wash.

Our investigation definitely show there has been a very large increase in the number of deer generally on these areas and generally throughout eastern Nevada. There are several reasons for this increase.

1. Effective elimination of predatory animals.
2. Favorable winter conditions and large fawn crops.
3. Reduction in the extent of poaching, probably brought about by more favorable public sentiment toward game protection.
4. The existing buck law which prohibits the kill of doe deer.
5. Keeping refuges closed to hunting after the deer population has reached the carrying capacity of their winter range.

Winter snows force the deer out of the higher country into lower and more confined areas. When the number of deer increases to a point where there is insufficient food supply on these areas of winter concentration, then there is very great danger of destruction of the forage species on which the deer must depend for subsistence and survival. It is the habit of deer to congregate on their favorite areas, and no practical way has been found to remove them to other areas where food is more plentiful. If this condition is allowed to continue, deer in poor flesh condition and subsequent losses of both food supply and deer can definitely be expected. The only practical and economical method yet found is orderly removal of excess numbers of deer from these congested areas by hunters during the hunting season.

The deer problem on the Schell Creek Game Refuge and on the Snake Division has developed more rapidly than we had expected and has now reached a point where the forage supply is seriously threatened with destruction because of too many deer, and a high percentage of the deer, and particularly the younger and smaller deer are now in poor flesh condition. The younger and smaller deer being in poor flesh condition is one of the best indications of overused ranges because the older and larger deer are able to reach higher on the browse species for food, such as mountain mahogany and Cowania, on which they largely depend for food during the winter months when smaller browse plants are covered with snow. It is probable that some winter loss can be expected this year among young deer and older bucks and does because of malnutrition. These conditions are clearly obvious for anyone who desires to visit and observe the situation on the deer concentration areas in Duck Creek Valley and in Murphy Wash. The deer will be congregated on these areas for the next 2 or 3 weeks, depending on the weather, before they start working into the higher areas.

Section 66 of the Nevada State fish and game laws, among other things, provide that: "The county commissioners of any county in the State, upon the application of any person, persons, organization, or governmental department, may appoint a committee of one each, sportsmen, livestock, United States Forest Service, Fish and Wildlife Service, and Grazing Service to consider the advisability of reducing the number of deer, antelope, elk, and bighorn sheep in any district or specified portion of such county; and whenever in the judgment of said committee, big game have increased in numbers to such an extent that a surplus exists, or to an extent that such animals are damaging public or private property, or are overgrazing their range, said committee shall make appropriate recommendations to the State fish and game commission as to the area, or areas being damaged, the extent of damage, and the number and kind of deer, antelope, elk, or bighorn sheep to be removed: Upon the recommendation of the committee, the commission may determine the area or areas within such county from which said deer, antelope, elk, or bighorn sheep shall be removed, and the number of hunting licenses to be issued, the number of, sex of deer, antelope, elk, or bighorn sheep that may be killed by each license holder, the special license fee to be paid to the county clerk, the hunting season, which may be separate from or concurrent with the regular open season, and prescribe such other rules and regulations necessary to properly conduct the hunt."

I hereby respectfully request the board of county commissioners of White Pine County to appoint the committee as provided for in section 66 of the Nevada State fish and game laws.

Very sincerely yours,

A. E. BRIGGS, *Forest Supervisor.*

Mr. A. E. BRIGGS,

Forest Supervisor, Forest Service, Ely, Nev.

DEAR SIR: The Board of County Commissioners of White Pine County, pursuant to your request, do hereby appoint the following persons to serve on the committee as outlined in your letter of April 3, 1943.

Dr. C. M. Aldous, representative, Fish and Wildlife Service.

A. L. Rohwer, representative, Grazing Service.

A. E. Briggs, representative, Forest Service.

William R. Overfelt, representative, White Pine Fish and Game Association.

D. C. Robison, representative of stockmen.

BOARD OF COUNTY COMMISSIONERS, WHITE PINE COUNTY NEV.,
LEONARD D. SEIFERS, *Chairman of Board.*

The CHAIRMAN. Are there any questions from anyone, to be propounded to Mr. Pittman?

That is all. I hope you may stay with us, Mr. Pittman, during the day, because the matter will be uppermost here until I have exhausted the subject, as nearly as I can with the limited time that we have. This hearing must be concluded today, as our program requires that we be in Fredonia on Monday morning.

Mr. L. F. KNEIPP, United States Forest Service, Washington, D. C. Might I ask Mr. Pittman a question?

The CHAIRMAN. Yes, Mr. Kneipp.

Mr. KNEIPP. Assuming that proper action has been taken, and full agreement among all parties, between Federal and State agencies, with respect to any given area, is reached, isn't that a complete estoppel of any further application of the bill S. 1152?

Mr. PITTMAN. Well, I think where there is complete agreement, yes; but suppose there was not complete agreement; suppose the State Fish and Game Commission and the heads of the departments of the public land agencies did not agree; then would it not be a fact that the rights of the State could be completely overridden?

Mr. KNEIPP. Well, I'm not sure about that; but what struck me was that where there was such complete adjustment as indicated here, my reading of S. 1152 would indicate that all the rest of it was entirely inoperative.

Mr. PITTMAN. I don't quite understand you.

Mr. KNEIPP. Well, the bill provides that the requirements of any particular piece of land shall be communicated to the State. If the State proceeds accordingly, that finishes it, and nothing more need be done, and the rest of the bill is wholly inoperable.

Mr. PITTMAN. Obviously so.

Mr. KNEIPP. So, what you say about Nevada here, apparently so far as this particular State is concerned, the bill would practically be inoperative.

Mr. PITTMAN. Inoperative; wouldn't be needed so long as there is agreement; but do we know there is always going to be complete agreement? And is it just and fair to give a Federal public land agency absolute domination over our State, on the execution, on the right of the State Fish and Game Commission, or any other recognized, constituted authority of the State? Is that just?

Mr. KNEIPP. Well, I wouldn't try to debate that at this moment. I was just interested in that one little point.

Mr. PITTMAN. So long as there is agreement, of course; everything will work as long as everybody is in accord; but those laws and things

are made with the anticipation that there will not always be absolute agreement on every point.

The CHAIRMAN. Right at that point I think it might be well to bring to the attention of those who are interested some matters that have come to the attention of this committee, in the hearings held throughout the public lands States. The one hearing that we had here is only an illustration of what came to our attention in several places. At Glenwood Springs, in Colorado, the matter was brought more vividly to the attention of the committee than in any one place; but in Utah and in Colorado and in other places, and in Wyoming, the subject was brought up by those who attended the hearings. They were not brought up by the committee itself. The Kaibab incident was brought up first, in Salt Lake City, at our hearings; and I think the Kaibab incident may now be considered in keeping with Governor Pittman's statement.

The Kaibab incident, according to the record before this committee, grew out of the overgrazing of the Kaibab National Forest by wildlife. The question was dealt with by the Federal agencies, and the State agencies, and an attempt was made for cooperation. I regret exceedingly that Mr. Rutledge is not here, but Mr. Leech represents Mr. Rutledge of the Grazing Service. Mr. Rutledge was the party, the Federal agent, who dealt with the subject, and who brought about the whole incident. The Federal agency, the Forest Service, went into the Kaibab and killed off great numbers of deer, because they were destructive of the range. The bodies of the deer were given to charitable institutions, such as orphans' homes and the like, in northern Arizona. The Governor of the State of Arizona, Governor Hunt, brought out an injunction against Mr. Rutledge as the Federal agent. The case was taken through to the Supreme Court of the United States and it was the decision of the Supreme Court of the United States that has attracted the attention of this committee. The Supreme Court of the United States did not hesitate to say what could be done and what could not be done: and if an Executive order were made, it would be supported by the decision of the Supreme Court of the United States in the case of *Hunt v. The United States*. In order that those who are interested in the subject may have the matter brought specifically to their attention, I think it proper that we might read the very short decision following an extractive brief, which decision was rendered by Mr. Justice Sutherland.

I read this because it is of interest to everyone who is here. Especially would it be of interest to those who deal with the subject from the standpoint of the law. Mr. Sutherland said:

The Kaibab National Forest and the Grand Canyon National Game Preserve, covering practically the same area, are situated north of the Colorado River in Arizona. They were created by proclamations of the President under authority of Congress. During the last few years deer on these reserves have increased in such large numbers that the forage is insufficient for their subsistence. The result has been that these deer have greatly injured the lands in the reserves by overbrowsing upon and killing valuable young trees, shrubs, bushes, and forage plants. Thousands of deer have died because of insufficient forage. Attempts were made under the direction of the Secretary of Agriculture to remove some of the deer from the reserves to other lands, but these entirely failed, as did other means. The district forester, acting under the direction of the Secretary of Agriculture, proceeded to kill large numbers of the deer and ship the carcasses outside the limits of the reserves. That this was necessary to protect the lands of the United States within the reserves from serious injury is made clear by the

evidence. The direction given by the Secretary of Agriculture was within the authority conferred on him by act of Congress. And the power of the United States to thus protect its lands and property does not admit of doubt,

I want to dwell on that last expression which has arrested my attention very seriously:

And the power of the United States to thus protect its lands and property does not admit of doubt, the game laws or any other statute of the State to the contrary notwithstanding.

Now, that is a weighty expression, coming from the court of last resort.

Appellants interfered with these acts of the United States officials and threatened to arrest and prosecute any person or persons attempting to kill or possess or transport such deer, under the claim that such officials were proceeding in violation of the game laws of the State of Arizona, the observance of which would so have restricted the number of deer to be killed as to render futile the attempt to protect the reserves. Three persons who had killed deer under authority of United States officials were actually arrested. Thereupon suit was brought to enjoin appellants from continuing or threatening such interference, arrest or prosecution. The court below, after a trial, found for the United States and entered a decree in accordance with the prayer of the bill, with the limitation, however, that the decree could not be construed to permit the licensing of hunting to kill deer within said reserves in violation of the State game laws.

While the Solicitor General does not concede the authority of the Court to make this limitation, he is content to let the decree stand. We, therefore, passed the matter without consideration and accept the opinion and decree below, with the modification that all carcasses of deer and parts thereof shipped outside the boundaries of the reserves shall be plainly marked by tags or otherwise in such manner as the Secretary of Agriculture may by regulations prescribe, to show that the deer were killed under his authority within the limits of the reserves.

Now, that is one decision by the Supreme Court of the United States.

Another decision which has arrested the attention of this committee and which comes in direct contact with the statement of Mr. Gray and Mr. Pittman—there are many decisions on the subject that I am going to want to touch because of the pertinency—this one comes out of the State of North Carolina. This is the case of *Chalk v. The United States* (114 Federal, 2d ed. 207). The Circuit Court of Appeals of the Fourth Circuit, following the Kaibab decision, which I have just read, held that the Secretary of Agriculture could cause deer in the Pisgah National Forest game reserves of North Carolina to be killed for the protection of the lands of the United States. The lands involved were purchased by the Government under the Weeks Act. It goes on to cite the circumstances; the State, by legislative act, gave its consent to the Federal Government to make rules and regulations necessary to game animals; authorized the President to establish preserves for the protection of game animals, birds, and fish; prohibited, under penalty, hunting, catching, trapping, or killing or wilfully disturbing any kind of game animal or bird or fish, except under rules and regulations that the Secretary of Agriculture may from time to time prescribe. The Court ruled that that constituted an acceptance by the State of Federal jurisdiction. It also said, without regard to this acceptance of jurisdiction, the Secretary had authority to take the action which he did.

Now, let's analyze that, Mr. Pittman. I am sorry you were not here to hear my opening statement. Let's analyze that; and I speak to you two gentlemen here together, because we can seek to see what that all means; what those two decisions mean; and see whether we are

not, under the decision of the Supreme Court of the United States, under voluminous laws, confronted with a serious situation.

The Supreme Court of the United States has said that the United States Government had a right to go into the Kaibab Forest and kill off the deer, notwithstanding the laws of the State of Arizona, based squarely on the proposition that those were the lands of the Government of the United States, and the Government had a right to protect its lands against overgrazing, or against anything that interfered with the value of that land. The same is true of the North Carolina case; the same is true in many other cases. That being true, we then come to what was disclosed to the committee in various hearings, which may not apply here at all, but it did apply in the State of Utah, as brought to our attention, and emphatically applied in the State of Colorado, and brought to our attention at the Glenwood Springs hearings, where thousands of deer, eighteen or twenty thousand deer in one particular section, were not only destroying the open public domain for grazing purposes, but were destroying themselves, because they were starving themselves out.

Now, if that problem is presented to the Executive in the form in which it was presented to this committee, if the facts were presented to the Executive in the form in which they were presented to this committee, my fear is, the fear of this committee is, that the Executive would not hesitate to make an Executive order, under the authority of the Supreme Court of the United States; and then we would have no chance to say a word, because Congress' hands would be tied.

Whereas, no Executive order has been made, this committee seeks to take time by the forelock, and try to bring to its aid those who, like yourselves, Mr. Pittman and Mr. Gray, and others who are here, bring to its aid the best thought of those who have contact with the subject, to the end that we may formulate something. It does look to me, from the statute read into the record here from the State of Nevada, that the State of Nevada has taken an advanced step, a highly advanced step, in the solution of that problem. When you take the statute of the State, as inserted in the record, and compare it with the language of S. 1152, you will find that they work harmoniously. In other words, the language of 1152, and I choose at this time to read it, because I want to discuss it and have it torn to pieces—I want it torn down, so that we will build something that will be advanced—that language says:

That whenever the head of a department or agency—

Now, if you will take your State statute and follow it you will see that the spirit is in the same way,

of the Government having supervision—

Mind you, there, again, the statute of the State of Nevada recognizes the Federal Government having supervision over the public domain—

having supervision and control over any public lands or reservation of the United States shall determine that a reduction in the wildlife population of such lands or reservations is necessary to prevent injury to the soil, plant life, or to any wild or domestic animals dependent upon such lands or reservations for sustenance, he is authorized to request the appropriate officers of the State in which such lands are situated to take such action as he deems necessary and proper to bring about such reduction.

That brings the Federal Government into an advisory capacity, whereby it advises and recommends that the State take such steps as it recommends to reduce the population.

In any case in which such officers of the State are unwilling or unable to comply with such request, the head of such department or agency is authorized to provide, in accordance with such regulations as he may prescribe, (1) for the issuance of licenses authorizing the holders thereof, during specified periods, to hunt, trap, kill, and possess stated numbers of such animals of either sex upon such lands or reservation, and (2) for the issuance of licenses authorizing the holders thereof, to remove, transport, or cause the removal or transportation of such animals or their carcasses or parts thereof, either intrastate or interstate, and sell or otherwise dispose of such animals.

The State of Nevada has come squarely up to that, by this recent statute, and I think that if the other States of the Union, especially the Intermountain States, had taken the advanced step which Nevada has taken, we wouldn't have been confronted with the testimony that was presented to us in the State of Colorado and the State of Utah and other States.

I think it would not be out of place now to read into the record the testimony that gave rise to a study of this subject, out of which we hoped to bring a solution. I want to say to you gentlemen that there is no question but what we have got to work out a solution, and it seems to us to be the duty of the public lands committee of the legislative body of the country to work out that solution, because if an Executive order is handed down, we won't have a chance to work it out, won't be called in on consultation, any more than we were on the Jackson Hole incident, or the Nevada incident, or any one of the hundreds, or thousands of cases.

Now, what gave rise to this? Let's read a little of the testimony at Glenwood Springs. Mr. Rutledge was testifying about the Kaibab situation. Senator Holman asked him the following question, referring to the action of Mr. Rutledge:

Senator HOLMAN. Do you mean by shooting them?

Mr. RUTLEDGE. Yes, sir; we killed a lot of them. What we could we turned over to the State for their institutions, and a good many truck loads of deer went to the orphans' homes and other institutions of the State. The State of Arizona applied for an injunction against me personally, and it was a pretty hot time. When you go up against a State set-up like that, you have to have guts. That case became the celebrated Kaibab deer case.

I wish the committee could get that case and read it and study it and get the decisions. It went finally to the Supreme Court of the United States, and in the brief time that was put up by the Forest Service, the question of ownership of deer was raised specifically. The Solicitor General of the United States for some reason did not want to put that point in the decision, or in the trial, but the result of that trial and the decision of the Supreme Court is to this effect without trying to quote it: That the owner of land, in that case, the Government, has the right to protect its property, but that the owner of the land, in that case, the Government, does not have the right to license hunters to come in and take the game, so as a result, all we could do there was to kill the deer and let them lie, except what could be taken to these institutions.

Now, we don't want that to recur. The testimony there was that there were thousands of deer starving themselves out. The testimony at Glenwood Springs is to the same effect. First of all, take the two propositions: We can't get away from the fact that the land that belongs to the Government of the United States is the property of the Government. There can't be any contradiction to that. The Gov-

ernment of the United States has the right to protect its property, just as an individual.

There is a case here, that I will refer to later on, where an individual shot an elk and reported to the game warden that he had shot the elk and had shot it in self protection, protection of his property, because the elk were coming in and jumping his fences and destroying his range. That was taken to the court of last resort of that State, and he was upheld. So it is not a theory that confronts us, Mr. Pittman, it is a condition.

Now, with your State statute, which I think is most commendable, we can bring about some progressive Federal statutes, to meet and co-join. Then we can set aside any possibility of an Executive order, and I am very much against Executive orders. This entire committee stands on record against Executive orders. It is to forestall an Executive order that this bill is before the American public today.

MR. PITTMAN. Senator, may I ask a question, just for my information? Why is it that the condition, such as you have just cited, could exist in Colorado and the Kaibab Forest or any other place? What brings that about?

THE CHAIRMAN. Many things bring it about. In various sections different things, as disclosed by the committee's analysis, largely from the record, more than from my personal knowledge. The record as made before the committee, shows, first of all, that the Federal Government has been called in for many years to invest vast sums of money in the destruction of predatory animals. As you destroy predatory animals you increase the deer population. Use deer as an illustration: Your report here made by Mr. Briggs, or rather, I suppose, by the committee of which Mr. Briggs is a member, pertaining to this Duck Creek Reserve out here, shows that the early observers of that district found no deer, no wildlife whatever. Then later on some wildlife came in. Today it is admittedly overburdened with wildlife. One may stand on the sidehill there and look for miles and miles and see the action of the overgrazing.

So, as Government set in and as civilization set in, and as the predatory animals went out, the wildlife increased. That is one thing.

Another thing is that, as there was supervision of the open public range, there was an increase of grazing, and the wildlife increased. Those are some of the things that gave rise to the increase of wildlife.

Then State laws and Federal laws, as well as the Federal laws prohibiting the shipping of carcasses or bodies across State lines, and so forth. The State laws protecting the wildlife was another agency that made it possible for an increase of the population of deer and the like.

Now, those are some of the things that gave rise to the condition. If you were to read the testimony given to us at Glenwood Springs, the chairman of the committee and some other members of the committee suggested that the hunting season be increased that they could take more sportsmen, and that they could take a greater number of game. We also suggested that the sex provisions be eliminated, so they may take either bucks or does. That was answered by this significant statement, which made a definite impression on me as I listened to it; I can't recall who it was who stated it, but he said, "That will not answer the question. We have done that and it didn't answer the question." Then he gave the number of licenses that had been

issued for the taking of deer for that particular season, and the number of deer that had been killed did not compare at all. He said, "The average sportsman"—this will hit some of you fellows a little bit hard—"the average sportsman who hunts deer hunts just as far as his rifle can reach from the automobile, and no farther." I thought that was a significant statement, from one in his position. In other words, they drive out on the road as far as they can and shoot a deer from the car. That did not hit the mark at all.

Those were the answers we received to suggestions we made which we thought might be pertinent. Whether he was right or not, I don't know. I am only giving his answer.

Mr. PITTMAN. All I want to say is, I well understand how deer can increase, you know, but what I meant was, why was it that the State authorities refused or failed to enforce the State laws, assuming they have State laws, to prevent a condition like that, where they are overgrazing the land, and the deer are dying in great numbers? That is the thing I can't understand, why a competent authority would refuse to meet a situation of that kind.

The CHAIRMAN. Well, I'll tell you; I'll give you a little answer to that, and this comes to us from the record also. I don't think I have the exact portion of the record here, but I can give you the answer in substance. Whenever there was a movement on foot to go into these congested areas and take out greater numbers, there was a counter-movement set up by sportsmen organizations and wildlife organizations, throughout the whole country. That testimony has come to our committee. Whether that be an answer to your question or not, I'm not ready to say, but it is true that sportsmen's organizations are interested, and some wildlife promoters are interested in this subject; and whenever there is an apparent letting down of the bars for the protection of wildlife they jump right into the breach and want it stopped.

Mr. ROSS LEONARD (director, Utah Fish and Game Department, Salt Lake City, Utah). I would like to know just where the record shows those thousands of deer dying.

The CHAIRMAN. I don't have the Utah hearings here. I don't know whether I addressed that statement to the State of Utah, but it is apparent in the record on the State of Colorado and especially the Glenwood Springs situation. Now, I won't quote anybody, because the party is here, and those who know this subject will testify. Largely in answer to your question, on the expression I made a moment ago, management suggestions are found in the partial report of the committee, made just before Congress adjourned. These are management suggestions which we, as a committee, suggested and which came to us by those who testified before our committee. The Forest Service and other agencies first suggested longer hunting seasons. I want to say that that was opposed quite bitterly. Secondly, they suggested extended seasons on problem areas. For instance, I have in mind the problem area right out here. Glenwood Springs is another. Third, an increase in the bag limit. Now, that was opposed by some wildlife organizations. Fourth, departmental control of surplus, where the hunters' harvest is insufficient, and that impinges on this proposed legislation.

Now, of course, the State can do that when it wants to. The fifth suggestion, a State-wide policy of the numbers of animals which can

be maintained in adjustment with the environment and the harvest which should be realized in order to utilize the surplus.

Now, some witnesses testified as to the increase, and we made note of it here in our report, in which the Forest Service brought out that the deer in 1920 numbered 20,000 and in 1940, 140,000, an increase of 120,000. Elk, in 1920, 5,600; in 1940, 22,000. Cattle in 1920, 321,500; in 1940, 209,800. So you see as your wildlife goes up your domestic grazing life goes down. Your cattle showed a decrease of 170,000. Now, I am not ready to say that was due entirely to the increase of wildlife; it may have been due in part to other agencies. But the facts are there. Sheep, in 1920, 1,019,600; and in 1940, 808,500; a decrease of 211,100. That was the condition that was testified to before the committee, that we made mention of in our report. By the way, I hope there may be sufficient copies of the committee's report to go around to all those who are interested in a solution as to how to handle this problem.

Governor Pittman, we are glad to have you here. Is there anything further that you wish to say? I hope you may stay with us during the day, because it is the desire of this committee to bring out the best thoughts that we can get here.

Let me say frankly, this bill was introduced for the purpose of bringing out the best thought on the subject and to arouse public interest in the subject, so that we might get the better thought. The author of the bill, the chairman of the subcommittee, the senior Senator of Nevada, referred the bill to his own committee. There is where it is now, and it will rest there until we can bring out the best thought on the subject that there is.

Mr. GRAY. Mr. Chairman, may I make a brief statement? The query was directed to Mr. Pittman as to whether or not the proposed Senate bill 1152 would not work hand in glove, side partner of the Nevada statute. Was that roughly the query that you had, sir?

Mr. KNEIPP. No; my query was whether, under the conditions in Nevada, the only part of S. 1152 that would be operative would be the first part, requiring the report of the State, if there was a need for correction. That need having been met with, wouldn't the rest of the bill be inoperative?

Mr. GRAY. Theoretically, I might agree. But there is nothing in the bill to say who shall determine whether or not the recommendations which have been deemed necessary by the heads of the departments have been met by the State, or the action on the part of the committee appointed to act with the Nevada State Game Commission admit those recommendations were not. In other words, if we are to be faced with any legislation at all upon this problem, it would appear to me that the legislation must contain a provision of some kind which safeguards the action of the State from any arbitrary opinion expressed by the head of any department as to whether or not the State action has met the requirement of the department, because if something is not in the bill protecting that right, then there is no assurance that the head of one of the departments, the Forest Service or the Taylor Grazing Service, would not say that the action taken under your State act does not meet our requirements, and therefore we'll go ahead with the second part of 1152, and set at naught the State's act. I offer that as a thought, Senator.

The CHAIRMAN. Now, let's dwell on that. I am very glad that you have done that. Let's dwell on the thought, in connection with the

Supreme Court decision in the *Hunt case* and other cases, wherein it says emphatically that the Federal Government need not give any consideration to the State whatever but may go in and kill off, on its own domain. How do you reconcile the situation? First of all, do we not have to admit that we are confronted with a mandatory and final decision on a subject of law that we are dealing with, under that final decision, which said that the Forest Service, the Grazing Service, the Park Service, or any other service can now go in and kill off, and not confer with the State at all. We are confronted with that. So it is a condition, again, that confronts us, not another theory.

Now, in order to modify that situation and tone it down so that we would not be confronted with a Kaibab situation again in any State, is it not best that we try to formulate far-sighted legislation? I think that the State statute of Nevada has taken a step in that direction, notwithstanding the fact that I see in your State statute a peculiar condition in that you call upon the Forest Service and the Grazing Service and the other services to become members of a group which, as a matter of fact, you haven't any authority to do at all. But if they will join, accordingly, with that group, and give their best efforts in the matter, it is commendable.

Mr. GRAY. We can't compel them, any more than we can compel any individual to become a member of that department.

Mr. PITTMAN. If they didn't cooperate, it would put the departments in a bad light, and militate against them in any recommendation for a reduction of deer.

The CHAIRMAN. What I am saying, you take action with reference to the public officials whom you don't control at all. I think that is a side issue, and it doesn't need any particular consideration, but you certainly have got a step in the direction of cooperation by the Federal Government for the protection of the open public domain, haven't you?

Mr. GRAY. That is quite true. As a matter of fact, Senator, viewing it from the point as I see it, and I think I mentioned this to you in the conference we had the other day, under the present Federal statutes and the decisions of the Supreme Court of the United States, there is no question at all but what the heads of the Grazing Division, or the heads of the Forest Service, could go in and kill off every head of deer, elk, bighorn, or every other kind of game that is on the public domain or within the boundaries of those forests or grazing areas. Of course, even the decision of the Supreme Court of the United States on the *Kaibab case*, as I construe it, prohibits the removal of those carcasses from the area. We then have a situation, with the Federal Government having a right to exercise certain prerogatives without an estop. The situation there is a good deal like the well-known pound of flesh, you can have it, but you shall not spill a drop of blood. I agree that some legislation should regulate the thing if we are to protect it at all. However, whatever legislation it is, it will amount, if you please, Mr. Chairman, to the withdrawal, from one of the departments that have jurisdiction over the Federal domain, of some of the power which they now possess, as I see it.

The CHAIRMAN. Well, go back a little way. We know the ancient thought was the open public domain, as it was called, was the property of the State. Well, that was, from time to time, dissipated. The thought was that the wildlife was the property of the State; but that,

too, has been dissipated. Wildlife is under the protection of the State. The State may, under its police powers, enact laws for the preservation and protection of wildlife; but it does not mean that the wildlife is the property of the State. I am quoting the law. You know, and you have read yourself, decision after decision, those rules which go way back beyond the time our shores were ever discovered.

These are the kinds of discussions that we want. I want to say to you frankly that the chairman of this committee, and the entire committee—I will speak for them in this regard—stand as a unit against further encroachment of Federal control. But we are confronted with the decisions of courts of last resort, which constitute the laws of the land, and we are confronted with other conditions that prevail, and impress upon us the necessity for some progressive legislation, and we hope to work it out.

Mr. KNEIPP. Mr. Chairman, might I comment on Mr. Gray's statement?

The CHAIRMAN. Yes.

STATEMENT OF L. F. KNEIPP, ASSISTANT CHIEF, U. S. FOREST SERVICE, WASHINGTON, D. C.

Mr. KNEIPP. I first might emphasize this fact, that I think it is clearly to be established that no officer of the Government has any power of capricious and whimsical action; that under S. 1152, there could be no ordering of all the game animals from any Federal area, or any complete slaughter. I think you might stress the fact, from its very beginning the Forest Service has cooperated heartily in trying to build up game resources, and has taken part in that movement at a time when the game resources were at their very lowest ebb, and where their protection and augmentation was a definite necessity. The Forest Service cooperated in every practical way in fostering an adequate development of game resources.

Now, as to the action under S. 1152, it seems to me the only action an agent of the United States could do, would be to report to the State, "Here is a given area of land of so many acres, which has a vital relationship to the economy of the region, and is needed in part for the pasturing of domestic livestock, for the protection of watershed against erosion and floods, and the capacity of that land for the production of the sport of game animals, with due regard to the domestic livestock that ought to be provided for, is, we will say, for example, 5,000 head of deer. Within that area, due to several causes, one being that the predators have been pretty well controlled, and secondly, that the State game laws prevented the removal of an adequate number of game animals by establishing a short season or a hunting limit of only one buck, or by a high fee for hunting, either residential or nonresidential, there has never been under the State game laws a take of more than, we will say, 15 percent of the normal increase of that herd, whereas deer normally increase, when protected from disease and predators, 30 percent. Consequently, on that area, instead of the 5,000 it could support, there are 15,000 head. Therefore, we request the State to initiate action to reduce that herd from 15,000 to 5,000." That is a factual determination. As soon as it can be shown that the herd is down to 5,000, S. 1152 has been complied with, and there is no question of determination as to the adequacy of the State action.

Mr. GRAY. I don't like to argue with the gentleman, but still—
The CHAIRMAN. Well, don't hesitate.

Mr. GRAY. There is a question to be determined yet. At all times, even under the hypothetical case that you have stated, the question will have to be determined as to whether or not the State has fully complied with the request or the demands of the department.

Mr. KNEIPP. As soon as the number of deer is reduced to 5,000, wouldn't that constitute complete compliance?

Mr. GRAY. Well, take our own situation out here in Nevada. As it has been worked out under the Nevada statute, is the order issued by the Nevada State Fish and Game Commission authorizing the taking of some 500 head of does from designated areas, does that constitute compliance with the request?

Mr. KNEIPP. If the 500 does are taken; yes.

Mr. GRAY. Suppose the Nevada Commission had said, when your department had requested 500 to be taken, suppose the Nevada Commission had said, "We think we should only take 300," and 300 are taken. Is that a compliance?

Mr. KNEIPP. No.

Mr. GRAY. You still reserve unto your Department the ultimate decision to determine how many shall be taken.

Mr. KNEIPP. Whether or not it is the ultimate decision, the decision of how many deer, in combination with other users, a certain tract of land can support without damage and depreciation—

Mr. GRAY. That is the effect of your decision, sir, but the point still remains, or the fact still remains, that the decision rests entirely with your Department.

Mr. KNEIPP. Yes, in the light of the physical circumstances, the condition of the ground, the condition of the growth, and the condition of the deer.

Mr. GRAY. That is the thing you base your conclusions on, but your Department still has the final say.

Mr. KNEIPP. That is right, as it has now under the Supreme Court decision that the Senator has cited.

Mr. GRAY. That is the point that I see needs correction, that no department of the Government should be in a position to dictate to the State of Nevada, or any other sovereign State, its wishes and desires upon this question. I do believe that legislation is necessary and required that the parties be compelled to get together; but if you are going to leave the decision in the hands of the Department, we are no better off after the legislation than we are at the present time.

The CHAIRMAN. That is our condition at the present time, isn't it?

Mr. GRAY. Our condition at the present time—

The CHAIRMAN. In other words, apply the Supreme Court decision to existing conditions; you are in this condition, that the Government, through its agency, may say whether or not, and then have the exclusive say, apparently, whether or not a take or a kill-off should take place. So that is a condition that is on us, which we are trying to modify and get away from.

Mr. GRAY. That is why I make the suggestion, if you please, Mr. Senator, that there should be something inserted into the bill whereby, after the State officials have been requested, the determination of whether or not they have complied with the request of the departments should not be left entirely within the hands, or the control,

of the organization or department that initiated the petition, so that our petitioner and our judge are not one and the same party.

Mr. PITTMAN. That is correct. That is exactly the point I was going to make. Here you could have one Government agency, for instance, the Forest Service, or the Grazing Service, or the Indian Service, or any one of these Services, or the heads of any one of those Services, make an arbitrary demand, and if the State authorities didn't abide by it, or acquiesce in it, they could override the wishes of the State.

The CHAIRMAN. That is the condition now.

Mr. PITTMAN. What?

The CHAIRMAN. That is the condition now.

Mr. PITTMAN. If this bill passes, that is the condition. My remarks apply to the pending bill.

The CHAIRMAN. But it is the condition now, without the bill, don't you see?

Mr. PITTMAN. I realize the condition would have to be very, very bad before an Executive order could invoke—

The CHAIRMAN. No Executive order is necessary now, Mr. Pittman, no Executive order is necessary now. The Supreme Court of the United States has handed down the rule, that all the Department has to do is to go in and take. That is the condition that I am trying to modify.

Mr. PITTMAN. This is my suggestion on that: While I am not approving the bill or anything, but—in other words, if it is going to pass, it should not be based as it is now, but changed so that it would not be one Government public land head who would have a right to do this, but it would have to be done by an agreement among the heads of the various public land departments. That would straighten it out to some extent. I would go further than that, but as far as those departments go, that is one feature that should be taken care of, in my opinion.

The CHAIRMAN. We are very glad to have that suggestion.

Mr. ANDY BARR, Nevada Fish and Game Commission, Ely, Nev. Mr. Chairman, Mr. Pittman's remarks there, on putting this thing in so all of the heads should decide on the decision, that is on the side of the Federal Government. That would be a cinch.

The CHAIRMAN. It would be what?

STATEMENT OF ANDY BARR, NEVADA FISH AND GAME COMMISSION, ELY, NEV.

Mr. BARR. They would all agree on whatever one department wanted.

The CHAIRMAN. Let me tell you something. Years of observation indicate to me that these departments don't speak to each other, half of the time.

Mr. PITTMAN. That is what I had in mind.

Mr. BARR. That might be, Senator, that's the way the lawyers are when they go into court, but they shake hands when they come out. That would apply to these heads, too. But as far as agreeing on anything that either the Forest Service, or the Grazing Service, or the Fish and Wildlife, we have the fish and game commission in this State that has always agreed and tried to do the right thing with them.

But we don't believe that, if they got this thing, and they wanted us to go over our hunting periods, if they didn't get 500 does in 40 or 60 days, and wanted us to go over it, well, our laws won't let us go over that period for the hunting season, and I don't think they should. But as far as agreeing with them, we have got three or four sections in the State, right now, that we have agreed with them that we would try and put the thing over. They wanted 500 does in this section, and so many on other sections. Well, that ain't our problem, if they don't get them; but we agreed to do what they wanted. but not to go over and have a season all year round. That is what it looks like with this bill, if they get it, it will be commercializing the wild-life.

The CHAIRMAN. All right. Does anyone else care to be heard on this phase of the subject? I think I interrupted the gentleman from Utah.

Mr. LEONARD. I was just going to make an observation, if the Federal agencies had had that power, based on the Pisgah decision and the Kaibab decision, as handed down, they are merely passing the buck to State agencies, when they say they are refusing to face the problem, take care of the problem. It appears they have had the power over a number of years, without the bill 1152, without any action of the Federal Government.

The CHAIRMAN. They have it now.

Mr. LEONARD. Why hasn't the problem been taken care of?

The CHAIRMAN. I suppose it is answered by the question that your States have resisted Federal interference. I think that would be one answer. Whether it would be the final answer or not, I don't know. I think perhaps another answer is that it has been a desire of the Federal agencies—I don't speak for them—to try to comply with the wishes of the State game authorities, as far as possible, as Mr. Barr has just brought to our attention.

Mr. ALLAN C. RANDLE (Utah State Fish and Game Department). Does S. 1152 control the game in the national parks?

The CHAIRMAN. It controls the game in any section belonging to the Federal Government.

Mr. RANDLE. In other words, they could open the season in the national parks?

The CHAIRMAN. No.

Mr. RANDLE. It wouldn't?

The CHAIRMAN. No; not the Federal Government. The national park agency might open the season in a national park for the take.

Mr. RANDLE. It would still be left up to them?

The CHAIRMAN. Yes; it is now.

We are dealing with a condition. I am trying to impress that upon you; we are dealing with a condition, and not a theory, all the way through this thing.

I am delighted that we have here representatives of Wyoming, Utah, and, I think, Idaho. Little by little, I hope that the true significance of the bill will sink into those listening to this discussion. It is not something new, set up here, it is to deal with a condition that actually exists by the law of the land, and to try to modify it so that the States may have the proper place in the picture, in keeping with the desires of their own citizens. That is what we are dealing with, and that is

why the Committee welcomes suggestions, so that we may emphasize this.

Is there anyone else who would care to be heard on this subject?

Mr. FRANK WAIT (Clark County game warden, Las Vegas, Nev.) I would like to introduce Mr. Jack Moore, the president of the Southern Nevada Fish and Game Protective Association, and I would like to have him heard.

The CHAIRMAN. We will be very glad to hear him.

Will you kindly state your name and official position, for the record?

STATEMENT OF JACK MOORE, PRESIDENT OF THE SOUTHERN NEVADA FISH AND GAME PROTECTIVE ASSOCIATION, LAS VEGAS, NEV.

Mr. MOORE. My name is Jack Moore, and I am president of the Fish and Game Protective Association for Southern Nevada.

We had quite a discussion on this bill, in our last regular meeting, and we put out several copies of the bill so that the boys could think it over. We are in favor of this bill, with a few restrictions.

We think that, down there, there should be a unified body to determine whether there is actually a necessity for the taking of this game. We don't think it should be under one head, but the various heads. Say, for instance, one member from the cattle association, one from the Park Service, one from the Fish and Game Protective Association, and the various other bodies that are interested in this area as a whole and as a community. When these men go out over the area and determine the damage, then it is balanced, and it is fair for all, and we don't believe in commercializing on wild game in any way.

The CHAIRMAN. On that last expression, "We don't believe in commercializing," I think we will all agree on that; but if there was an agreement, as for instance, the one discussed here, with reference to this Duck Creek Reserve, an agreement to kill off 500, now you wouldn't favor just the wholesale destruction of the bodies, would you?

Mr. MOORE. No, sir.

The CHAIRMAN. If they could be given to charitable institutions, or some other places where they would serve the purpose, that would be all right?

Mr. MOORE. Yes; that's right.

The CHAIRMAN. In other words, you wouldn't believe in killing off for sale, or commercializing it in any way. Your idea would be to take, in keeping with the necessity of the particular area, which necessity must be determined by some observing or governing body?

Mr. MOORE. That's right. If the animals are to be taken, and they can't be taken by hunting, I believe that if you would allow a little longer season, you know, not the whole year round, but a few days longer, or allow a doe license, that that could be eliminated without having to go in and just kill these deer. I don't believe in letting any kind of meat lay, when it has been killed.

The CHAIRMAN. The testimony given to us in Colorado was to the effect—I haven't it right at hand now, but it was to the effect that, notwithstanding the fact they had increased the number that could be taken, and had let down the bars as to the sex, and had extended the season, still the increase—and I quote rather at liberty—the increase

was approximately 31 percent. That seemed to be the problem that confronted everybody with reference to that particular district.

Mr. MOORE. Then the ordinary sale of licenses doesn't take the amount of deer from the ground, from the lands, that should be taken.

The CHAIRMAN. That is your observation?

Mr. MOORE. That is what I gather from your statement.

The CHAIRMAN. Yes, that was the testimony before us. What is your observation on that subject?

Mr. MOORE. Well, in a case like that——

The CHAIRMAN. Referring to your own knowledge of your own district.

Mr. MOORE. In our own district we don't have any overpopulated areas at all, in Clark County and southern Nevada, down there. There was some that suggested an open season on Mount Charleston, but we have a very small number of deer there, and lots of grazing; and I think that what few deer we have in that community are worth much more for the recreational area than they would be for meat, or anything like that. That is the opinion of our body down there, that the bill is a good bill, with those restrictions, that we form a committee to determine whether or not the ground is actually overgrazed, and the number of animals that should be taken.

The CHAIRMAN. Is there anything further?

Mr. MOORE. I believe that is all.

Mr. PITTMAN. May I clarify one remark that Mr. Barr answered, that I wish answered? That is, when I said instead of one public land agency having absolute authority, under this bill 1152, that it ought to be changed so that all of the public lands departments would have to agree on it. Now, in saying that, I don't mean if they all should agree, that should end it. I think any investigating committee, under this bill in its final passage, should include as this gentleman from Clark County said, representatives of the livestock, wildlife, and of the sportsmen, and any others that are directly connected with that phase of wildlife. That is what I mean. I am just looking now, if this bill is going to be amended, the first thing that ought to be done is to have all the Federal agencies agree on something, not just one; and in addition to that, have this committee set up to be composed of those that I have mentioned. That will clarify my remarks on that.

Mr. LEONARD. Mr. Chairman, I would like to give you Utah's position in this controversy, if I might.

The CHAIRMAN. Kindly state what position you occupy.

STATEMENT OF ROSS LEONARD, DIRECTOR, UTAH STATE FISH AND GAME COMMISSION, SALT LAKE CITY, UTAH.

Mr. LEONARD. I am director of the Utah State Fish and Game Commission.

The commission in Utah have adopted the attitude that they have deer problems, and we have had them in the past, and they wanted to take care of them.

The CHAIRMAN. Right there, clarify as you go along. What were your deer problems?

Mr. LEONARD. We had a concentration of deer on some winter areas.

The CHAIRMAN. Were they, in some instances, destroying themselves by starvation?

Mr. LEONARD. We had some loss, but it did not run into the thousands, as was brought out in this hearing. We lost a few hundred deer on some occasions. Severe winters is one of the contributing causes, if not the major factor. We have set up in Utah what is known as a board of big game control. This has been on the statutes of Utah since 1935. I have a copy of that law, section 30-0-54. Would it be all right if I were to read that?

The CHAIRMAN. Yes, indeed.

Mr. LEONARD (reading):

In order to more scientifically define the boundaries of State game preserves, and to regulate hunting, trapping, and travel thereon by stockmen and other citizens, the State fish and game commission, by and with the consent of the Governor, shall appoint a supervisory committee to be known as the State game refuge committee, the members of which may be reimbursed for actual and necessary hotel and travel expenses incurred to attend official meetings of said committee. This committee shall be composed of five members, one of the members of the State fish and game commission, one representative each to be chosen from and nominated by the Utah State Cattle and Horse Growers Association, and Utah State Woolgrowers Association, the Utah State Sportsmen Association, the regional officer in Utah of the United States Forest Service; the member of the State fish and game commission to act as chairman. The committee shall have authority to fix boundaries of all State game preserves; *Provided*, That private lands may be included in State game preserves established for big game only by and with the consent of the owner, and then under such conditions as the owner may prescribe; *Provided further*, That for the purpose of securing a better distribution of the big game now found on the game preserves, the committee shall have authority during the process of reestablishing and defining the boundaries of the State game preserves to declare an open season thereon for the killing of big game, which season shall conform with the general open season for big game as prescribed by law.

I'll skip a couple of paragraphs and go over here to the powers of the State game refuge committee:

The State game refuge committee shall also constitute a State board of big game control and shall also have full power and authority to designate game refuges for big game. Whenever, after due investigation, the committee shall find that big game have increased in numbers in any locality to such an extent that a surplus exists, or to such an extent that such animals are damaging public or private property, or are overgrazing their range, the said committee is hereby authorized and directed to provide for a special hunting season for such animals additional to any open season specified by law. The committee shall designate the number of licenses to be issued, the area in which hunting will be permitted, the number and sex of animals that may be killed by each license holder, and the conditions and regulations to govern the hunting. The license fee for such special big game hunting season shall be fixed by the committee, and the money received from the sale of such licenses shall be covered into the State fish and game fund. The committee may also authorize, under such rules and regulations as it may determine, the commission and its members, the State fish and game warden and deputies, to capture and remove or kill big game animals at any time without advertisement, on any area where said animals are damaging private or public property, covering into the State fish and game fund all money received from the sale of the carcasses of all big game animals. For the purpose of this act, the following animals are hereby classed as big game animals: Elk, deer, antelope, mountain sheep, and mountain goats.

So, you see, we have had the power in Utah to take care of these problem areas. Now, a Federal agency has had the same vote on determining this kill in Utah for the past 8 years, as the State fish and game department, who have been holding one vote. We have had a rapid increase of deer, and have tried to meet that problem. In 1940 there were approximately 15,000 doe permits authorized by the board

of big game control. We killed 10,104 antlerless deer and 15,159 bucks, a total kill in 1940 of 25,382 deer.

The CHAIRMAN. Right there, what was your increase?

Mr. LEONARD. In the total number of deer? I haven't those figures available, on the increase. We figured on the basis of 25 percent. We and the Federal agencies have agreed on that figure.

The CHAIRMAN. In other words, I want to clear this for the record, if I may, notwithstanding the 25,000 take, there was an increase in the population?

Mr. LEONARD. I think there was that year, yes; in fact I am satisfied that there was an increase.

The CHAIRMAN. But you haven't that figure?

Mr. LEONARD. In 1941 we killed 18,580 doe deer, 25,418 bucks, a total of 43,998 deer killed in 1941. Authorization for 23,500 doe permits was made this year by the board of big game control. Still our problem areas remained as bad as ever. In order to face this situation, and get it over once and for all, many of the sportsmen of the State thought that the board of big game control was completely off the beam in their authorization for 1942, when they authorized a total of thirty-four-thousand-some odd does to be removed.

The CHAIRMAN. Right at that point, how did the sportsmen's organizations make this attitude manifest?

Mr. LEONARD. By telling the fish and game department they were going to entirely destroy the game herds in the State, and through a program of cooperation, with the sportsmen's organization, we sold them on the problem of taking care of many of our concentrated areas, so in 1942 we killed 26,822 doe deer. More antlerless or does were killed in 1942 than the whole total killed in 1940. We killed 36,787 bucks, or a total kill last year of 63,609 deer.

The CHAIRMAN. How did it affect your congested areas?

Mr. LEONARD. It took care of practically every congested area in the State of Utah.

The CHAIRMAN. What was your increase in population in 1942?

Mr. LEONARD. We had a reduction on most areas; for instance, on our unit the number of deer on the Fishlake Forest rated at 66,000 in 1942 as of January 1, and 54,000 as of January 1, 1943.

The CHAIRMAN. Is that the increase?

Mr. LEONARD. No; a reduction of 10,000 head.

The CHAIRMAN. I didn't catch your figures right, then.

Mr. LEONARD. From 66,000 in 1942 to 54,000 in 1943.

The CHAIRMAN. Do you have congested areas that reflect the same proportion of reduction?

Mr. LEONARD. We still have a problem area in the southern part of the State, where it is practically impossible, in these times of gas rationing, to get hunters in there to remove them.

The CHAIRMAN. Gas rationing has something to do with taking deer?

Mr. LEONARD. It will have a big effect, we are afraid, unless some action can be taken.

The CHAIRMAN. You know that fellow Ickes has brought an awful lot of sins on himself. I don't know why, but he has.

Mr. LEONARD. We have taken care of the problems that faced us in practically every area. Now, the board of big game control this year has authorized a kill of 28,000, 27,000 does and 1,000 bucks; 28,000 special permits to be issued this year by the State game and fish department. We have set up a program, and made recommendations to the board of big game control that they extend the season in various areas. On the Fishlake Forest, the season instead of running the 10-day period set by law, from October 16 to 26, will this year run to November 7. On the La Sal area, where we have this congestion, we recommended to the board that a 30-day season be allowed, which will go into effect this year. Whether that will solve the problem or not, I am very doubtful. On the Wasatch National Forest—

The CHAIRMAN. Let us pause at that last expression, "whether this will solve the problem or not, I am very doubtful." Explain that a little more.

Mr. LEONARD. Because of the lack of ability to get hunters into isolated areas in Utah, and the shortage of gasoline.

The other method we are using to take care of our concentrations is post season hunting. Instead of killing off deer back in the hinterlands, that are not damaging property in the areas where there is no congestion, we are setting up a policy whereby we will set a season when the deer are down on concentration, and then allow the hunters to go in there, under a special permit system, and remove the deer at that particular time. Our post season this year—

The CHAIRMAN. That is to kill off?

Mr. LEONARD. Yes; a post season this year in the various areas will run from November 27 to December 5, when the deer are starting to come down and damage agricultural crops.

The CHAIRMAN. That is about 1 week?

Mr. LEONARD. Ten days, in conformity with the usual provisions of law.

We have one congested area in the southern section of the State where we had too many deer last year. The board of big game control authorized 1,150 doe permits on that Parowan-Paragonah area. It was for a post season hunt. Hunters went in there and solved that problem completely. The board of big game control met again this year and overruled its recommendations to the fish and game department, in that particular area, in which we recommended no doe killed, and set up again 400 doe permits for post-season hunting in that area. In a telephone conversation with one member of the big game control in that area, he states that the ranchers, stockmen, are joining in on a petition to prevent that kill from taking place, because the deer are just not there.

In regard to S. 1152, many of the objections to that bill have been brought out. It has been stated, it will allow commercialization, which strikes at the foundation of the purpose for which game is controlled, reared. It will allow interstate hunting; it will completely eliminate control. It would be impossible to enforce, because of the various ownerships of lands involved, on the forest, grazing, State fish and game department lands, and lands belonging to the State of Utah. It would, as has been pointed out, set up a diversified administration. I don't know whether the Grazing Service administrators will agree with the administrators of the Forest Service on the number of deer

to be removed, and past experience indicates that various interests are not too favorable toward game, in any form, on any of the ranges.

It also sets up a form of double taxation. Money will have to be appropriated, from the national funds, to take care of the enforcement the same way it is for the Grazing and Forest Services, as well as the special fees that are charged. From past experiences, the special fees have never covered the administration of Federal agencies. The State fish and game department in Utah operates solely upon fees collected from the sale of fish and game licenses.

Now, as far as game management is concerned, Federal agencies haven't made an outstanding success of the management of game. The gentlemen from Cedar City, the National Park Service, are in a quandary as to what to do with the surplus game. The superintendent of Zion National Park was in our office to work out a solution on his problem, to remove 300 deer from his area. We can remove 300 deer from that area, and they have broken down their rules to such an extent that they will allow members of the Park Service, or State game department, to go in there and hunt those animals and kill them. We could regulate that hunt, sell 300 permits, and allow the hunters to go in and remove the deer, thus taking care of the situation all in one move. That certainly does not disrupt the established practices of game management.

This Senate bill 1152 is, to me, purely another example of the desire of part of the Federal agencies to expand activities, to take over by law what they have failed to do by other methods of procedure.

The CHAIRMAN. Just a moment. You have set up some very vital and interesting objections to the bill. But did you stop to think that under the laws, as they now exist, under the settled law of this country, notwithstanding all the objections you raised, the Federal Government can now go into the State of Utah and kill?

Mr. LEONARD. Well, why haven't they carried that out already, if they have had that power? Under our laws of the State of Utah we have as much authority. Under our State laws—

The CHAIRMAN. They didn't have to go to the State law of Utah. That's the trouble with it; you see, the law is already fixed. It is a law fixed by the court of last resort. They might go into the State of Utah, into any congested area, and kill out and not ask a question of the State of Utah. That is what we are driving at, to try to get something that will bring this thing into the grasp of the State of Utah, which is today not within your grasp. Don't you realize that the Forest Service can go into the forest areas today and kill off as it sees fit, to remove the bodies by putting a tag on the body, and you couldn't do a thing about it. You say the bill would be the usurpation of States' rights. It is to get away from that, that we are trying to formulate proper legislation. Your usurpation of States' rights is already here, because the law fixes the province and powers of the Federal Government, and if they were to exercise that, there would be no way of stopping them from exercising that thing of which you are complaining. You say it is a demand on the part of the Federal Government for more power. They have the power now.

Mr. LEONARD. But they've been afraid to use it in the past, and they wanted to pass the buck to Congress.

The CHAIRMAN. Well, I don't know about that. You can put it that way if you wish. What I am trying to do is modify that power.

Mr. LEONARD. We in Utah have tried our best to cooperate with the Federal agencies, and we're willing to work with them, but we have experts in our game department, and we must rely upon their judgment as much as we must rely upon the judgment of any other agency.

The CHAIRMAN. Everything you say is correct, but you are still confronted with a condition.

Mr. LEONARD. We're trying to face that condition. We killed 63,000 deer in the State of Utah, by actual count, last year. By estimate, we killed 75,000. We are throwing post seasons open, to take care of these problem areas, and they will be taken care of under our State administration.

The CHAIRMAN. Let's take the first expression of this bill—and remember, I am not wedded to this bill by any means. I want you to know that. The bill says that whenever the head of a department or agency of the Government having supervision or control over any public land or reservations of the United States, shall determine that a reduction in wildlife population of said lands or reservations is necessary to prevent injury to the soil, plant life, or any wild or domestic animals dependent upon such lands or reservations for sustenance, is authorized to do what?

Mr. LEONARD. Ask the State departments.

The CHAIRMAN. To go in and kill off? No; he has that right now, but this bill would curtail that right. The bill says he is authorized to request the appropriate officers of the State in which such lands are situated, to take such action as they deem proper. Now, under the law he has not that demand upon him now. All he has to do is to go in and do it. If the Forest Service said there were too many deer down here, they could issue the order now, and have them killed off. This bill would require that they first go to the State and ask them to take hold of the situation.

Mr. LEONARD. I imagine that the representative of the Park Service here wouldn't like that very much, because if there is a surplus of deer on the national parks, then that would take away their powers to regulate game on national parks, and give them—and then give it to the State to step in and remove the surplus deer.

The CHAIRMAN. Well, wouldn't that be all right?

Mr. LEONARD. It would take care of the problem and prevent the abuses today.

The CHAIRMAN. The more you dwell on this, sir, the more you will discover that we are trying to get States' rights up to where they don't exist now at all.

Mr. LEONARD. It gives any Federal agency sitting in a regional or district office the power to go to the State department and say, "You do this or else."

The CHAIRMAN. Well, they can do that now.

STATEMENT OF LESTER BAGLEY, STATE GAME WARDEN, WYOMING GAME COMMISSION, CHEYENNE, WYO.

Mr. LESTER BAGLEY. State game warden, Wyoming Game Commission, Cheyenne, Wyo.: May I ask you a question here, Mr. Chairman?

I believe there is a distinction between the *Kaibab case* and the *Pisgah case*, between those cases, and the cases which you are citing.

The CHAIRMAN. I have cited them.

Mr. BAGLEY. You have cited them both. I don't think there is any question on the part of a State that would question the authority that was granted there, but there is quite a difference between that situation and the situation presented in this bill. Now, in the *Kaibab case* you have deer destroying a forest, and you have them dying of starvation, through excess numbers. There is no question but what that was justified. Now, let's turn to the *Pisgah case*. The State ceded a right, in that case, which we in the western States have never ceded. They bought that land and ceded it to the Forest Service, by State action, in that case. Now, there is a broad difference between a Federal agency stepping in and reducing a game population because they were destroying themselves, or wherein a right had been ceded by a State, than that which we are confronted with where a Federal authority can say you must reduce game populations because they want to put more livestock on.

The CHAIRMAN. Let me take your analysis. Let's apply the Taylor Grazing Act to what you have said. Let's say the States have not ceded the open public domain in the State of Nevada. Then, if that is the case, the Grazing Service would have no authority to regulate domestic animals on the open public domain, because the State of Nevada had not ceded that right. But the contrary is true, my good friend. The contrary is the fact, that the Federal Government owns the land, and no cession of that is necessary, nor would any cession be at all in place. Take for illustration, my own State, the State I represent, 84 percent of all the lands within the boundaries of the State of Nevada, is the property of the Federal Government. Eighty-four percent, that is the highest percentage of any State in the Union. Let's take our next thought. Did we cede that land to the Government? We did not. The Government owned the land. It is Government land, and we have recognized it. We recognized it by our recognition of the Taylor Grazing Act. It is Government land in the Forest Service. We recognized it by the setting up of the forest administration. It all belongs to the Federal Government. That is 84 percent, and that is our misfortune, because we have an arid and semiarid region and private individuals have not taken up the land. Otherwise the percentage would be much lower.

You were much more fortunate in Utah and Wyoming. Your lands are better watered, and you have a different climatic condition. There is no cession in question, because we didn't cede these lands to the Government. The Government owned the land, and owns them now, and has set up the administration. The Government could today, the Forest Service or the Grazing Service could today, under the *Kaibab* decision, under the *Pisgah* decision, under the law generally speaking, could, by an Executive order, close all the hunting on the open public domain of the State of Nevada, 84 percent of the land of the entire State, or they could go in and kill off, if in their own judgment it was necessary, on 84 percent of the lands in the State of Nevada.

Just a moment, I have been corrected; it is 86 percent.

These are conditions; and your analysis, I am unable to apply it. I wish it were true.

Mr. BAGLEY. I wish I had that *Pisgah case* here, too. If you will refer to the decision in the *Pisgah case*, the reason, or one of the reasons, they said that right was given is because they said that when these deer—the Forest Service officials were arrested, moving those deer across the State line, and the reason was because the State had given that; the State by legislative act had given it, and that was a part of the decision.

The CHAIRMAN. That is correct; but remember this, North Carolina was one of the Thirteen Original States, and the lands in the State of North Carolina passed to the State of North Carolina when the Federal Government was set up, which is not true with reference to the Inter-mountain States.

Mr. BAGLEY. Well, let me ask this question: I, of course, am not an attorney—when Wyoming was admitted into the Union under the enabling act, it stated this, that it should be admitted to the Union on a par with other States, which admitted that same condition to be true—

The CHAIRMAN. That is all right; but North Carolina didn't do that. The lands of North Carolina belong to the State of North Carolina. When the Federal Government acquired lands in North Carolina, they acquired them by purchase.

Mr. LEONARD. Senator, may I make a statement? If Federal agencies would assume an attitude of cooperation with the State game department, instead of "you do this or else," we could solve game problems. In this State, there is no question about it, it would go a long way. In Utah we have a few areas, but practically every game problem in the State is being solved.

The CHAIRMAN. I think you are right.

Mr. LEONARD. There is no need for action like this; no need for controversies between the States and the Federal agencies.

The CHAIRMAN. Would it not be for the protection of the State? That is what I am interested in, that we should define the rights of a Federal agency, and define them by a Federal statute, so that we in the State would know whether they were transgressing the rights or not, so that we can limit the force of, as we term it, the "big stick." Did you ever think of that?

Mr. LEONARD. Yes; but with every increase of Federal regulations we tend to lose on the side of the State administration.

The CHAIRMAN. You are entirely right; and I am glad you bring it up, because it was the very thing I referred to before Governor Pittman came in here. We are getting laws that do not come from the representatives of the people, and we are getting them in multiplicity. We are getting them by leaps and bounds, and the Congress is as powerless as a baby to interfere with the creating of them by Executive orders. Now you have a decision of the Supreme Court of the United States fixing a condition under which wildlife may be dominated by the Federal agencies, and all that is necessary now would be for an Executive order to issue from the White House, and they could go into any State in the Union, as their judgment dictated. I am not saying by that that they can rightfully abuse the judgment.

Mr. LEONARD. Thank you.

Mr. J. P. JOHANSEN. I want to get that statement clear, where you stated that where you collect enough money from your licenses to operate your whole organization under the fish and game commission in

the State of Utah—I don't quite understand it, and if you would make that a little clearer—may I ask you this question: Do you really think, by taking and using the public domain, and having all the protection that you can possibly get for these wild animals, wildlife, with no taxes are collected on, only the revenue you collect from them, are they more essential than it would be if we had those domestic animals, with all the rich lands that we have to depend on from these farms, or investments and everything like that? Which is your policy? You have built up an organization from the game which you have got, an organization set-up which pays its way. So which, in your opinion, do you think is the best, to have this organization of the wildlife, the wild game, or to stock these ranges and rich lands up to their capacity?

Mr. LEONARD. I think every Federal agency will agree with me when I say there is room for domestic livestock and wildlife upon the ranges in our Western States, and I personally feel there is very little use in you and I going into an argument over which is beneficial. I personally feel that we have room for both of them on our ranges, and that we should not remove game entirely, which may benefit in Utah a hundred thousand license buyers, to benefit entirely 6,000 permittees. After all, the Grazing Service is working for the people and for the public. That should be their general policy, the greatest good to the greatest majority. That should be the philosophy of the Forest Service, and the philosophy of the State game department in the State of Utah.

STATEMENT OF GEORGE N. SWALLOW, PRESIDENT, EASTERN NEVADA CATTLE ASSOCIATION, SHOSHONE, NEV.

Mr. GEORGE N. SWALLOW (Shoshone, Nev.). I am a livestock operator. I would like to ask a question.

What method is used in determining the number of deer that you take off from a given area each year? What is the basis for arriving at the figure that you used, the figure you finally decide to determine on?

Mr. LEONARD. In Utah we have been trying to determine how many deer we could maintain upon any given area. It will take some time to determine what that figure is. It may be a process of trial and error. In the spring of the year, when our deer are concentrated, we have invited the Grazing Service and the Forest Service and the State game department, and different interested livestock interests, and sportsmen, to all participate in counts on various areas, and they have, in many instances, come to a conclusion, the Forest Service, the Grazing Service, the sportsmen, and the livestock interests, upon the number of deer that should be removed from any particular area. We gave them all a chance to voice their opinion.

However, I might state that the Grazing Service have not been too active in our counties. Part of that responsibility for their not being so active, probably, has rested with the State game department, and some of it has rested with the organization itself.

Mr. SWALLOW. That still doesn't answer the question. I had in mind, for instance, you determine on a certain area that you must take off 5,000, say, on the Fishlake Forest. How do you determine that 5,000 deer should be taken off that area? What is the basis for that determination, other than just numbers?

Mr. LEONARD. The condition of the range and the condition of the forage has a great deal to do with it. We might state that the carrying capacity has been set by one agency at 30,000 deer on the Fishlake National Forest. Last year we killed 30,000 deer on the Fishlake Forest, or 28,000—maybe I had better be exact—but there was some discrepancy in the figures used there. We, there in the game department, do not entirely agree that is the carrying capacity, that it has not been determined entirely to our satisfaction but we do know that the deer herd has been reduced on the Fishlake National Forest.

Mr. SWALLOW. Referring to that particular area, how much has the game increased in the past 20 years, and how much have the livestock decreased?

Mr. LEONARD. Mr. Randle, who is the game manager, can give those figures.

Mr. RANDLE. I don't believe I can go into the livestock figures. You can get the Forest Service figures.

The CHAIRMAN. Mr. Olsen, do you care to give those figures?

Mr. OLSEN. I have them with me and I'll give them.

Mr. SWALLOW. I'd like to have them for the record.

The CHAIRMAN. I am a little bit concerned about every minute here. Perhaps while you are looking that up for Mr. Swallow, we could listen to Mr.—oh, do you have it?

Mr. OLSEN. Yes; I have it.

STATEMENT OF C. J. OLSEN, ASSISTANT REGIONAL FORESTER, FOREST SERVICE, OGDEN, UTAH

Mr. OLSEN. I could give this to the reporter, Senator. It is a tabulation.

The CHAIRMAN. There was one statement in particular that Mr. Swallow wanted answered.

Mr. SWALLOW. I want this particular area that the gentleman from Utah mentioned; I believe it was Fishlake.

Mr. OLSEN. I have that, too.

Mr. LEONARD. Give him the general figures from Utah.

The CHAIRMAN. While you are going into that, Mr. Olsen—

Mr. LEONARD. I have those figures handy here, if you want them—these are counts from the Forest Service. In 1909 there were 144,834 cattle and horses on Utah national forests, 1,019,432 sheep; game, very few. In 1920 there were 172,551 cattle, 757,000 sheep, 13,000 game animals. In 1940 there were 113,670 cows and horses, 688,522 sheep, and 143,000 game animals.

Mr. SWALLOW. Isn't it true, then, as the game population has increased, the domestic livestock have decreased?

Mr. OLSEN. Mr. Senator, I have that.

Mr. LEONARD. Whether the two factors, whether one is a result of another or not, I am very doubtful. The ranges in Utah have been overgrazed by cattle and sheep for a number of years. The Forest Service has inaugurated the policy of reduction. Quoting Mr. Griswold, the Grazing Service states that between deer and cattle there is only 4 percent competition for forage, and between deer and sheep 14 percent. When we get competition between deer and livestock—as it is, the range has reached such a state that there is competition for everything available. Now, in Utah we are reducing our deer herds.

We have taken great strides in that direction, and we will take care of more problem areas. This fall there will be 28,000 permits allocated in Utah. We are ready and willing to face that problem, and we don't think any special interests should place their personal desires above the general welfare. There is room for all forms of activity upon the national ranges in the Western States.

The **CHAIRMAN**. Let me draw your attention to this, in connection with your statement—within the past 10 years or so the Federal Government has inaugurated and carried forward a policy of charging for the open public range; that is, charging for the use of the grazing units of the open public range, 5 cents a head per month for cattle and 1 cent per head per month for sheep. Now, that has raised another question, that it is the duty of the Federal Government as the permittor, issuing these permits—it is the duty of the Federal Government to see to it that certain areas from whence revenue is derived, and from which taxable property is appropriated, that that taxable property must have a range commensurate with its needs, and to see to it that it is not overpopulated by wildlife to such an extent as to destroy the ranges. Some new observations have come in, to which those of us in the western country interested in increasing taxable property have given our aid and consent, in the adoption of the Taylor Grazing Act and the Forest Service and the like, so that it throws the State agencies and the Federal agencies into a very close contact on all of these problems.

Now, Mr. Swallow, I promised Mr. Bonner that I would entertain him next.

Mr. **SWALLOW**. I shall appreciate being able to continue with a few more questions to the gentleman from Utah at a later time.

STATEMENT OF JOHN W. BONNER, DISTRICT ATTORNEY, WHITE PINE COUNTY, NEV.

Mr. **BONNER**. Senator McCarran, as has been stated, the purpose of the bill is to curtail the bureaus, the powers of the various Federal bureaus, and notwithstanding the Supreme Court's decision giving the bureaus the authority to remove deer, would it not be possible to amend this bill, providing that the boards of county commissioners in the counties involved would first have to give their approval before the animals could be removed? In other words, the department heads, before they would have the right to remove these animals, could not—this bill provides that the approval of the board of county commissioners of the county involved would first be advised—could that not be inserted into the bill?

The **CHAIRMAN**. Certainly, it could be inserted in the bill, or you could select even another agency if there was a doubt. If there was a doubt about the efficacy of the two agencies, Federal and State, getting together, you could select another agency, you could throw in your whole court if you wanted to, if the court would take on that obligation. You could have a final and definite arbiter, and perhaps in view of the criticism that has come here, I think it is constructive criticism. Perhaps something of that kind might be well to put into the bill.

Mr. **BARR**. If that were put into the bill, the people who would have some say in the matter would have a voice through the board of county

commissioners. I think I speak for the county, and if this bill is necessary, the county commissioners should have some say; it should be subject to their approval.

The CHAIRMAN. Thank you, Mr. Bonner, for your suggestion. Is there anyone else who cares to be heard on this subject?

STATEMENT OF PEDER V. PEDERSON, SECRETARY, WHITE PINE SPORTSMEN'S ASSOCIATION, ELY, NEV.

Mr. PEDER V. PEDERSON (Ely, Nev.). I'd like to direct a question to Mr. Swallow. I am a pants presser, the Modern Cleaners, Ely, Nev. I think Mr. Swallow was omitting something in the argument. I can see the point in his question. I believe it would go on indefinitely—

The CHAIRMAN. Well, we can't stay with you that long.

Mr. PEDERSON. He doesn't take something into consideration that is very important, and that is the habits, and the habitat of the deer the year round. I would like to know what kind of a contrivance or contraption Mr. Swallow would use to take a 2-year-old steer up to where I shot my buck last fall, where the deer are feeding and living right now, and where that one would be if I hadn't eliminated it. Deer now are on the rimrock. Does that eliminate any grazing land? Surely I would be the last one to do anything against the cattle industry in this country. I'm making my living in here, and this State depends on it. But the point is, you can't feed cattle where the deer feed 7 months out of the year. Later on we will have concentration, but when you have that there is snow on the ground. The deer is a browsing animal, and in all my experience I never saw him out on the meadow clipping short grass. I would like to hear of anyone else who ever heard of it. How is Mr. Swallow going to get those steers up on that rimrock?

Mr. SWALLOW. I should like the privilege of making a statement. To begin with, I started questioning the gentleman from Utah. We have been doing a little presupposing over there, because I was interested in having a few questions answered. Inasmuch as the gentleman has brought up the situation, and inasmuch as the statement was made by the gentleman from Utah that deer are only 4 percent competitive with domestic livestock, I think we livestock operators must take issue with you on such a statement. Beyond question, it is quite erroneous, and there is no question but what deer will take the most succulent feed. When it gets to the point that they have to go on to the higher areas, they will take the browse on those areas.

Now, we livestock people certainly do concede that game has a place in the picture. But we certainly don't believe they have a place in direct competition with the livestock industry. Livestock men have to pay a grazing fee in order to operate, either under the Taylor Grazing Act or under the Forest Service. In addition to that, each and every livestock operator has to make a "purchase"—what they are purchasing I don't know, but yet the Grazing Service permits these purchases to be made on the Taylor Grazing Act and the Forest Service, and it certainly is commercial as far as the livestock people are concerned. For instance, the livestock operator may make a purchase of a permit for 300 head of cattle, and in any case that purchase price may vary from \$20 to \$30 a head, in all possibility amounting to the operator an in-

vestment of \$9,000. The game can increase 10 or 20 percent, and decrease the livestock proportionately. The livestock operators are at the mercy of the game. There is 10 to 20 percent of the livestock operators' investment lost. If it were true that the deer were not in competition with the livestock operators, there certainly would be no statements made by the livestock operators objecting to the increase of deer; and the fact that statistics show that when deer increase livestock numbers decrease proportionately clearly indicates there is competition between the two. The livestock people naturally want to protect their own interests, and will continue to do so. At the same time they recognize that game has an important place in the picture. But we don't concede that it is being handled properly at the present time. We feel that the people in these game associations should be far more educated, as to the ways and nature of wildlife, because there is no question but what they are directly competitive. You can ask any livestock operator who has had any experience at all, and has, for a long number of years, watched the wildlife alongside of domestic livestock, from early spring through the fall and winter, and any livestock operator will clearly state that they are in direct competition, and during practically any season of the year, as long as the feed is available. The deer will take it, and the livestock, both the sheep and the cattle, eat browse just the same as deer, and they eat it in practically the same quantity. The deer also eat grass, and plenty of it.

STATEMENT OF FRANK CALLAWAY, CALLAWAY, NEV.

MR. FRANK CALLAWAY (Callaway, Nev.). According to all this discussion, it looks like the deer has eaten the livestock all out, but I want to quote a few figures here that I read a short time ago. I think this meeting was held in San Antonio about 8 weeks ago, and the president of the National Cattlemen's Association—here is the statement he made at that meeting, about the 1st day of January: "We would have 82,000,000 head of cattle in our country," he said, "enough surplus to feed 200,000,000 people and our entire Army for 1 year." Now, if he showed that we had that surplus of cattle—last spring at our stock meeting, here in Ely, I asked what the increase in cattle had been in the State of Nevada in the last 10 years, and these figures were furnished by a representative of the National Forest Service. He said on January 1, 1933, we had 278,000 head of cattle, and on January 1 of 1944, we had 406,000 head of cattle.

Now, as for deer population overstocking; in the deer population in our State, outside of two preserves in our State, and that is the Duck Water and the Tioga, which there is no question but what they have got too many, but they only represent a small spot in the State of Nevada, where, I think, there is plenty of room for the State of Nevada. Everyone knows they have got a surplus there and they have overstocked in Duckwater. All you have to do is to give the boys out in McGill ammunition and 30 extra days, and I promise you there won't be any surplus deer on the Duckwater. Furthermore, those lambs come over to Duckwater preserve and Tioga preserve, and my opinion is that those lambs there are way up with any lambs in the State of Nevada. I don't know, but that is my opinion of it.

The CHAIRMAN. Thank you.

Mr. SWALLOW. I would like to ask Mr. Callaway a question. Isn't it a fact, Mr. Callaway, that the cattle population in the State has increased and that the sheep population has decreased?

Mr. CALLAWAY. Yes, sir.

Mr. SWALLOW. Isn't it a fact that, over the State as a whole, the numbers of livestock licensed on grazing permits, both as to the Forest and the Taylor Grazing, have decreased rather than increased?

Mr. CALLAWAY. I don't think so. I figure your sheep, 4 to 1, and you'll find out there have been an increase, 4 sheep to 1 cow. My opinion there has been no decrease.

The CHAIRMAN. Mr. Olsen, do you have those figures?

Mr. OLSEN. Yes; I have them for Nevada, Senator. I can give you the figure for 1925.

For cattle permitted on the national forests in Nevada, 66,195.

Mr. SWALLOW. On the national forests?

Mr. OLSEN. For 1942, 54,676. The reduction there is about 12,000 head.

For sheep, in 1925, 306,520. In 1942, 250,947, about 56,000 reduction in sheep.

Now, on the area you asked about a while ago, George, for 1925 on the Fishlake Forest, 27,247 cattle. For 1942, 21,743, a 20-percent decrease. I am speaking of permitted number on the Fishlake National Forest. Sheep in 1925 were 85,819; in 1942, 70,167, an 18-percent decrease.

Deer on Fishlake in 1925—we apparently don't have very good records on those, but the estimated number was 6,000 head. In 1942, 60,000 head. By the way, it was 66,000 in 1941. The reduction in that year cut it down to 60,000 deer.

Mr. SWALLOW. Thank you for presenting those points and figures. The making of a mere statement at these hearings certainly isn't going to accomplish anything for the sportsmen, or anything for the livestock men. We'll have to stick pretty well to the actual facts in every case, and in response to one of Mr. Callaway's statements, I want to make this statement: Mr. Callaway said there were very few areas in the State of Nevada where we have game problems. Last night we held a meeting of the Eastern Nevada Cattle Association, which I represent as president, and it was the consensus of the majority of those present that the game had increased greatly in the past 10 or 15 years, especially the last 10 years, and at the present time is becoming very competitive with the livestock interests. It is causing concern and fear among many of the livestock operators.

Over here in Duck Creek we have a problem area; over here on the Snake Division we have a problem area. We had actual cases there, where 1,650 or 1,660-some-odd head of sheep were licensed on one particular area, on the south end of the Snake Division, and approximately somewhere between two and three hundred head of cattle. The sheep have been entirely eliminated. The cattle population has been reduced to approximately 250 head. In fact, this year approximately 200 head of cattle were put up when 400 were actually permitted, and the reason was that no more were put up. The reason for that was the feed was not available. The game has increased to the extent that the feed is not available for domestic livestock, showing clearly again that the deer are in direct competition with the livestock interests.

Now, we take a point there and recognize that the livestock interests

do have some place in this particular picture. The livestock operator who made the original purchase, or any subsequent purchase, of those grazing rights in there purchased on the basis of sixteen-hundred-some-odd head of sheep and on the basis of approximately 300 head of cattle, at the rate of perhaps \$8 per head per sheep and \$20 per head per cattle. Anyone here present can clearly see the position the livestock operator is placed in. Now, something should be done to correct a situation like that. Livestock operators should not be encouraged, induced, permitted to make such purchases if they are going to suffer such ruination at the expense of the game. As far as many of we livestock operators are concerned, it would be far more to our advantage to have some of these areas put entirely into game and take us entirely out of the picture, because it is impossible to operate in competition with the game when they increase in such numbers.

Referring again to this area, down here on the south end of the Snake Division, Dr. Aldous made a survey there last spring. He made a statement that that was the nearest thing to the Kaibab he had seen in many, many years. He put many, many years into the study of the question. He brought in brush that livestock, domestic or game, seldom eat, and showed where it had been eaten down 6 and 8 inches. He also made a statement that if some severe weather should occur within the next few weeks that the deer population would decrease just from starvation entirely. The season was fairly good, and still there are dead deer over that area at the present time, and they can actually be located and actually be found by anyone riding into that district. The riders in there this season have estimated approximately 110 to 125 deer have died just since the early spring.

The CHAIRMAN. Is that a forest area?

Mr. SWALLOW. Yes.

The CHAIRMAN. Who is the forester?

Mr. SWALLOW. Mr. Briggs is the Forest Supervisor for that area.

The CHAIRMAN. Thank you, Mr. Swallow.

Mr. Briggs, have you anything to say on that subject? I mean on the subject just touched upon by Mr. Swallow.

STATEMENT OF A. E. BRIGGS, FOREST SUPERVISOR, NEVADA NATIONAL FOREST, ELY, NEV.

Mr. BRIGGS. Yes; I can agree with Mr. Swallow. We have a heavily congested area on the south end of the Snake River known as the Lehman State Game Refuge, containing some 175,000 acres. The deer concentrate on the south end of this division during the winter. Most of them have to come out of the country on account of snow. We did have a very, very congested area there, some range which was in very, very bad condition. That refuge has been opened to hunting for this year. That is one of the areas we are taking out 200 does from.

In regard to some of the other points Mr. Swallow brought up, in regard to the direct competition between livestock and game, in order to check our own judgment here, the judgment of the sportsmen and the forest officers and the Grazing Service men and other interested persons, we requested the services of an associate biologist of the Fish and Wildlife Service to set up some studies. While we don't have any concrete information as yet, we have that the conflict, the com-

petition for the use of our ranges, between livestock and game, is much less than we have thought it before. Now, I'm speaking from a local standpoint, from what we have thought locally. We rather feel that the problem of overpopulation of game is being worked out, and will be worked out.

The sportsmen, I think, pretty well realize the conditions, and entirely approve of the opening of that refuge and the removal of the 200 does this year. I think that's about all I have to say.

The CHAIRMAN. If your sportsmen had not concurred and cooperated, what would have been the condition?

Mr. BRIGGS. This committee, which was set up by the county commissioners, made an investigation of the area and wrote up the report and made the recommendations. Those were sent to the Nevada State Fish and Game Commission. Had the Nevada State Fish and Game Commissioners disapproved the recommendations, the committee as set up by the county commissioners probably would have asked the Nevada State Game and Fish Commissioners for further consideration of action on this particular area.

The CHAIRMAN. Something emphatically would have been necessary.

Mr. BRIGGS. Yes.

The CHAIRMAN. What is it, sir?

STATEMENT OF ALLAN C. RANDLE, UTAH FISH AND GAME DEPARTMENT, SALT LAKE CITY, UTAH

Mr. RANDLE. Through all this discussion of the reduction of livestock numbers on the public ranges, it has been inferred that has been the result of that reduction. I think we all recognize there have been large reductions, in both sheep and cattle, on the western ranges, but I think those in charge of Federal ranges will admit that for a large part that reduction has been necessary because of overgrazing on the part of these domestic animals themselves. If any of those officers care to take issue on that question, I wish that you would do it now so that the record may be clear on that point.

STATEMENT OF J. P. JOHANSEN, ELY, NEV.

Mr. JOHANSEN. I have a statement to make to Mr. Briggs and Mr. Swallow on the Duck Creek region. I am an operator in this district, with sheep, and I went in there. Somewhere 13 years after I came here they put a bunch of elk in my allotment. That allotment is very small, and I own a lot of private grounds, too, and just about a week ago I had two of my men there with my livestock give me a report on elk. They told me there were 180 elk in this one allotment that I have for 800 head of sheep, and the feed that those elk take is an enormous amount, the full year round, on any allotment, 12 months practically, in the year. The Forest Service makes statement to me that I am overgrazing my allotment. It isn't me or my livestock that's overgrazing it, it is these elk, and as far as the deer are concerned, you can go out after sundown, and make a drive around the district, and count from 1 to 50 head of deer. Those deer can all be shot right from a car, if they are close to the road, and they should be all over the district the same.

Then when we get in our high areas, the feed is all gone, because the deer has taken it; so we are suffering from the overproduction of deer. If we have got to take and reduce our livestock from all of our property in order to give it to the deer, I don't think it is a logical thing. It is just like the statement made by the Fish and Game, they have read some laws, and we have all got some good laws, and I agree we should have this game for the sportsmen to go and hunt; but with all their law, I think they have neglected to use them, and let the deer overpower us. I don't think they have taken care and lived up to their rules. I think myself, my own opinion, from my experience is that the Federal Government ought to take this under control, as they own the land that the deer is grazed upon. I thank you.

Mr. BRIGGS. Mr. Chairman, in regard to Mr. Johansen's statement, a very careful count was made of these elk last spring, I think along about March. I think that was the time during which the count was made. We counted a total of 237 elk, and it is very definitely those elk that are in several different bunches, not only in the winter but also in the summer, and they are pretty well scattered over an area up there. Further, in regard to another point which Mr. Johansen mentioned, I don't believe that the Forest Service had maintained that Mr. Johansen's allotment has been overgrazed. For a few years we found that it was getting pretty heavy use, and we found that instead of grazing the 800 sheep which were preference numbers, he was grazing 1,200 sheep for a shorter period of time. When the 800 sheep were grazed on the allotment, the allotment held up in pretty good shape. I wanted to bring that out.

Mr. JOHANSEN. I would like to make you this statement: We stayed off from that forest until nearly the first of August this year, and we pretty near have to leave there now on account of no feed, on account of the deer and elk has taken it.

The CHAIRMAN. I think we are fraying out on this one little subject.

Mr. JOHANSEN. Yes; I think so, too.

The CHAIRMAN. Is Mr. Weber here? You are connected with the White Pine Sportsmen's Association, are you not?

Mr. JOHN J. WEBER. Yes; I am present officially.

The CHAIRMAN. The committee will be very anxious to have the sportsmen of the various sections of the country heard on this subject. I am very anxious to receive from them all constructive suggestions.

STATEMENT OF JOHN J. WEBER, ELY, NEV.

Mr. WEBER. We have had a meeting here, some time back. We had quite a meeting on this bill, and at that time we drew a committee up and we drew up a resolution in protest of the bill. I believe Pete has that, and I could read that. This was the protest that was drawn up by the committee for this bill:

Whereas it has been uniformly held in the United States that the title to fish and game within the boundaries of the several States is vested in the several States in trust for the use and benefit of the people thereof, and

Whereas Senate bill 1152 contemplates an unjust and dictatorial appropriation and seizure of the property of the people of the several States tending, with related enactments or proposals, to the complete destruction and abolition of States' rights, and

Whereas the people of the several States are better equipped, better informed, and more capable of handling problems in connection with their fish and game than are the sundry Federal bureaus, and

Whereas Senate bill 1152 will in effect severely restrict or abolish the traditional right of free Americans to engage in and enjoy fishing and hunting privileges, and

Whereas Senate bill 1152 is in principle, irrespective of form, unwarranted, unjustifiable, uncalled for, and indefensible, and

Whereas the State of Nevada through its legislative bodies has enacted the necessary laws by which cooperative action can be had by the State and the various Federal agencies having jurisdiction over public lands, which cooperative action is to be taken for the purpose of preserving ranges and range feed, as well as wild game, and

Whereas problems presented to the various Federal agencies having jurisdiction over public lands because of the number of deer ranging upon the public lands have been met and solved by action taken under the State act, and

Whereas by virtue of the State legislation and the cooperative action taken pursuant thereto, it is demonstrated that Federal legislation for the State of Nevada is not necessary and is unwarranted: Now, therefore, be it

Resolved, That the undersigned does hereby most strenuously and vigorously object to, protest, and condemn Senate bill 1152 along with any and all other proposals, measures, or enactments having in anywise a similar purpose or effect, as being unwarranted, unjustified, uncalled for, and indefensible in fact and in principle, and an invasion of the rights of the several States and dictatorial seizure of the property of the people thereof.

Approved:

WHITE PINE FISH AND GAME,

JOHN J. WEBER, *President*,

PETER V. PEDERSEN, *Secretary*,

VAIL PITTMAN,

Chairman, Special Committee.

The whole thing is, we can do that, and the sportsmen felt that there wasn't any need for this bill, and that is why they went about to draw up this resolution.

Now, we have tried to cooperate, all the way through, with the sheepmen and the cattlemen, and have tried to work out a solution all the way through, and when this committee was set up on this overgrazed condition, and two or three of these places, we had one of our men appointed and he went out with them and they made the survey and found that there were some congested areas and made recommendations. We called a special meeting together, in on the report on this committee, and at this special meeting the sportsmen thrashed it out, and they approved it and they decided it would be a very good thing to send to the State fish and game commission and ask their consideration, which they did, and at present we are to kill 500 does in this district.

The CHAIRMAN. All right.

Now, let me put a hypothetical question to you. Supposing that this congested area continued to be congested, but your State authorities did not cooperate to the extent of permitting 500 to be killed off. Would the area be jeopardized?

Mr. WEBER. Yes, I believe it would.

The CHAIRMAN. Then you would say that the agency that owned the land in the area would be justified in going in and eliminating the population to some extent?

Mr. WEBER. To some extent.

The CHAIRMAN. Well, then, in keeping with your answers there, today there is a law by which the Federal agencies can go in on open public domain and eliminate wildlife where it is jeopardizing the open public domain. That is nothing new.

Now, this proposed legislation is——

Mr. WEBER. The way we interpreted it, we felt there was——

The CHAIRMAN. Did you know at the time you interpreted that, that there was a law now permitting the very thing that this bill would permit under legislative act?

Mr. WEBER. We didn't know it; at least I didn't know it, that there was a national law. We knew in the event, the only one we thought of was the Forest Service. We knew in the event they felt it had to be, we felt they could go in and do that; but they have never went across and tried to do that. They have always come, and usually through a meeting, or through cooperation, before that was ever thought of——

The CHAIRMAN. That is exactly what this committee has had presented to it in these various hearings, that there was the law which would permit these agencies to go in and kill off in contravention, and without regard to State laws or States rights. Now, whatever it has been, the idea that it would be better to have cooperation between the States and the Federal agencies was our idea. So, with that in mind, we have tried to bring to the attention of yourself, and thousands of others with your same interests, the existence of the law. In the first place, it has been known to but very few, and, secondly, we want them to suggest to us a solution, so that by legislative act, rather than by Executive order, the States rights and the rights of the sportsmen might be protected, recognized and protected.

Now, do you agree with that policy, generally speaking?

Mr. WEBER. I believe in the State having full say as much as the State fish and game in their bounds, that they should have the right to adjust conditions in their States.

The CHAIRMAN. But they haven't the right now, don't you see? Let me give again to you the illustration of our own State, where 86 per cent of the lands within our borders belong to the Federal Government, out and out ownership, and with the Kaibab decision, and other decisions, the Federal Government has the right to go in and kill off. The State has not the right, now, to do anything for itself excepting to cooperate as best it can with the Federal Government.

What I am interested in is to see to it that no more Kaibab incidents take place, especially in the State of Nevada. I think we can work out legislation.

Mr. BARR. May I make a statement, clarifying your statement that the Federal powers have the power to go in and shoot, kill deer? I'll clarify that for some of the gentlemen here. I remember, a few years ago, on the forest, especially in the Duck Creek range, they had some wild horses up there, and there were no questions asked whether they could do this or not. There was an order came out from the Forest Service to shoot them horses, regardless, I guess, of who they belonged to. They might have been notified, those who owned some of them, but them horses were shot without asking anybody. I suppose they could shoot the deer the same way if they dared to do it. But I don't think they would dare to do it. However, they did dare to shoot the horses.

Mr. WEBER. That is all.

The CHAIRMAN. Thank you. I am glad to have your interest.

Again I must apologize, that our time is absolutely limited. We must leave here tomorrow morning, early, to go to Fredonia, and then

to Phoenix and Albuquerque. Therefore we will have to reconvene at 1:30. The committee will pause here now.
(Recess until 1:30 p. m.)

AFTERNOON SESSION

The CHAIRMAN. The committee will be in order.

Now, are there any other local sportsmen, or any who are interested in wildlife from a sportsman's standpoint? Are there any others here who would care to be heard? We invited all of the sportsmen's organizations that we could reach, to send representation here. Is there anyone else who would like to be heard?

Will you please come forward and state your name, and what organization you belong to?

STATEMENT OF JAMES O. BECK, DIRECTOR, IDAHO STATE FISH AND GAME DEPARTMENT

Mr. BECK. Mr. Chairman, S. 1152 is very unpopular in the State of Idaho. It has never received the endorsement of the Idaho State Wool Growers Association, of the Idaho State Cattle and Horse Growers Association, and it is opposed by all sportsmen's organizations, as well as the citizens of the State, in general.

I was very much interested in Senator McCarran's remarks this morning because, after reading the transcript of the hearing at Glenwood Springs, Colo., I was of the opinion that Senator McCarran was as interested in this bill from a Federal standpoint as the Federal agencies themselves. I am glad to have him state that he is taking this bill into consideration from the viewpoint of States' rights.

At the meeting of the directors of the 11 Western States, at Reno, this bill was given due consideration. At that time no one seemed to want to take any responsibility for this bill, with the exception of the regional grazier, Mr. Dierking, of the Grazing Service, who stated that Director Rutledge was in favor of the bill. The Forest Service appeared to be in a haze in regard to the introduction of this bill, without any responsibility attached to their service.

After reading the transcript of the testimony at Glenwood Springs, Colo., it appeared to me that this bill was rather a steam-roller proposition. In fact, I thought Senator McCarran was in favor of it, and it was endorsed by both the Forest Service and the Grazing Service. This bill is the most far reaching of any legislation yet proposed for overriding of States' rights by Federal bureaus. Federal agencies administering public lands already have authority to correct overgrazing to the point, if need be, of exterminating animals responsible for it.

The State departments are as mindful as Federal agencies of the importance of holding game and livestock populations within their natural food supply. However, in as many instances as with game, there will be found too many livestock on the public ranges, and it is contended by the States that such revolutionary legislation as S. 1152 is not required to meet the situation. What is needed is more cooperation between the livestock users, the Federal Government, and the State game department, in making the proper studies of the range

areas, and determining a ratio between game and livestock to maintain a safe margin of forage to eliminate range depletion.

Senator McCarran has stated the acreage now controlled by Federal agencies within the State of Utah. In the State of Idaho approximately 66 percent of our area is controlled by Federal agencies.

The CHAIRMAN. I did not state the percentage in the State of Utah.

Mr. BECK. That was the State of Nevada. I stand corrected, Senator.

In the 11 Western States Federal agencies administer and control over 47 percent of all lands. This is comparable to approximately 20 percent of the lands within the continental borders of the United States, and shows the tremendous hold that Federal agencies have in our western country. That is why we are so vitally concerned with this vicious bill. Land acquisitions are still being pushed by various departments and agencies of the Federal Government. They have spent millions of dollars of public money, and millions of acres of land have been taken from private ownership, which has encroached upon the land use base of our Western States.

In Idaho we have set up a game commission, divided into 5 districts, with a commissioner over each district. These men are straightforward businessmen and look at all angles in making recommendations as to seasons, take, and the study of big game populations. We have recently inaugurated a system of study, with the cooperation of the Forest Service and the Grazing Service, of all our big game ranges. I know of no instance, at present, where recommendations have been agreed upon by our men in the field, the Grazing Service men in the field, and the Forest Service men in the field, where the Idaho State Fish and Game Commission has not given them due consideration.

Within the State we have approximately 138,000 deer, 30,000 elk, 14,000 antelope, 2,000 mountain sheep, and 5,000 mountain goats. In the entire State I know of but one instance in which we have a problem area that cannot be controlled. This area can be controlled after the war has ceased. It is a primitive area and necessitates transportation and landing fields in order to properly hunt it. We have, probably, in the State 30,000 deer and 1,000 elk that come in direct competition with livestock grazing. In all my travels over the State I know of but two instances where a sheepman or a cattleman is opposing our program.

In my opinion the solution for this problem is for the States to inaugurate a proper big-game-management program, and I feel they are as capable in handling this situation as our Federal agencies. It is true that many of the programs up to date have been far from perfect. This is also true of many of the programs of the Forest Service, the Grazing Service, and the Fish and Wildlife Service. As stated before, I think it is a matter of cooperation to handle this problem. That is all.

The CHAIRMAN. Was your attention drawn to the laws that now exist?

Mr. BECK. It was, Senator.

The CHAIRMAN. The laws that now exist are more drastic than the proposed legislation.

Mr. BECK. That is correct. But as it stands at present, no Federal agency will give due consideration to the problem without taking into consideration public sentiment.

The CHAIRMAN. Well, that would be a matter of, you might say, courtesy on their part.

Mr. BECK. That is correct.

The CHAIRMAN. They wouldn't have to take into consideration the public sentiment; and they didn't do it in the *Kaibab case*. In other cases, as disclosed by the suits that followed, they didn't take it into consideration in those.

Mr. BECK. That is correct.

The CHAIRMAN. Now, if we have a law now, definitely settled, which we have in America, settling the rights of Federal agencies to destroy that which they deem to be inimical to the welfare of the public range, and if that law is as drastic and as arbitrary a law as can be drafted, anything that modifies that law looks to a beneficial result. Is that right?

Mr. BECK. That is correct if you get the right type of law.

The CHAIRMAN. All right. You have a law now that permits Federal agencies to go in and kill off anything on the open public domain. I have now an attitude on the part of a committee of the Senate that would seem to modify that drastic and arbitrary rule, so that the people of the respective States and districts might have a voice, rather than to be ignored entirely. That committee is presenting to you, as a representative of the State of Idaho, as a representative of the State of Utah, and a representative of the State of Nevada, and of Colorado, and of Wyoming, and other States, this condition, and asking you to give your assistance to the committee of Congress to formulate a law, finally, that will give the greatest possible opportunity for the people of the States to have a definite voice in things that affect them, although it might be on the open public domain.

So, with that in mind, Mr. Beck, in place of condemning an initial step, looking to the modification of a drastic law already existing, we respectfully suggest to you that you make a study of the subject, after these hearings have been held, and after the laws that now exist have been brought to your attention, and from your study, give to this bill your suggestions as to wherein it should be modified, and how it should be brought about to effect the things that you have in mind.

Mr. BECK. I think the commission of the State of Idaho would be very glad to give these conditions and proposals, as they see them, after this study has been made.

The CHAIRMAN. Sitting alone here, I am going to make this hearing today about as complete as I can make it. I am going to insert into the record, before the day is closed, a memorandum of authorities, on my own initiative, authorities of the decisions of the courts of this country, including the decision of the court of last resort, everything and anything that pertains to this; so that a reader of this report hereafter may have brought to his attention, and your game organizations may have brought to their attention, not a half baked view of the subject, but a full and comprehensive view of the law as it exists now; so that you may take that law and see if you can mold something out of it that will aid us in constructing a law that will be worthy and worthwhile, according to your views. I said at the opening this morning there was a condition, and not a theory, that confronts us. We

can't have, in my judgment, we could not have, a more drastic law than that which is today the law of the land. That law permits the Federal Government, without equivocation and without notice to any community, to walk into any place and kill off wildlife.

Mr. BECK. The Federal Government, Senator, must have some basic facts before they can kill that wildlife off. They must show that deer are damaging the land, and must also show that they are damaging the forage upon the land.

The CHAIRMAN. That is all right.

Mr. BECK. That is where they are forced to prove that before they can go forth and kill this game off.

The CHAIRMAN. If you would have followed our hearings, and indeed, right here this morning, there is the proof that any court would accept and permit them to go in and kill off right here in Nevada.

Mr. BECK. I believe, with further studies of this, and of some of these ranges, provided they go into them in detail enough, that the State fish and game department can also give proofs in this, whether or not these ranges are being deteriorated.

The CHAIRMAN. But don't forget, in your studies, that first of all the cardinal principles involved here are very interesting.

Mr. BECK. That is correct.

The CHAIRMAN. People sometimes forget that the open public domain belongs to someone. The question was raised here by the gentleman from Wyoming, this morning, that in a certain case the State had ceded its rights. That does not apply to the lands acquired by the Federal Government under the Treaty of Guadalupe-Hidalgo, or other acquisitions when made in the history of our country. The land was turned over to the Federal Government, and we carved the States out of the Federally-owned lands that were never ceded to the State. Keep this in mind. These things are all interesting. Keep it in mind that your own people of the State of Idaho, and the people of the State of Nevada, not only invite but urge appropriations from the Federal Treasury to do the very thing that they did in this Kaibab National Forest in another way.

Now, I happen to be a member of the Appropriations Committee on the Interior Department and on the Appropriations Committee for the Forest Service. If we were to omit the appropriation for the extermination of predatory animals we would have a condemnation brought down on our heads that would resound all over the United States. If we were to omit an appropriation for the killing off of rodents and the like, and other things that are destructive we would have condemnation visited on us. In other words, the people of the sovereign States would request the Federal Government to appropriate money to be expended on the open public domain, to destroy those things that are destructive of tame life, domestic life; but when it addresses itself to the destruction of that which they say destroys the range, then they say "Halt." So I bring these things all to your attention, because, while we say our sovereign States, and we are, and we must be, and we must remain so, we are also calling on the Federal Treasury to aid the sovereignty of the State. It is surprising how many places we call on, too—

Mr. BECK. Well, we are the people who pay it, too.

The CHAIRMAN. Well, with those thoughts in mind, I hope your people will make a further study of the subject.

**STATEMENT OF J. H. LEECH, UNITED STATES GRAZING SERVICE,
SALT LAKE CITY, UTAH**

Mr. LEECH. Mr. Chairman, I would like to make one little statement in connection with Mr. Beck's impression that the Grazing Service has in any way publicly sponsored, or privately sponsored, Senate bill 1152. I would like to read the type of letter that the Grazing Service sent out, in answer to queries of that nature. This letter is addressed to Mr. Kenneth A. Reid, of the Izaak Walton League, and is dated July 23, 1943:

MY DEAR MR. REID: I have received your letter of July 19, in which you enclose a statement of the league in connection with McCarran bill S. 1152 now pending.

When the Senate bill 1152 is referred to the Interior Department for report in the usual form and manner, the Department will state its official position on the bill. In the meantime the Grazing Service is in no position to issue an official statement of its position, and any discussion of the bill should be upon its merits, not with reference to what I or any other member in the Grazing Service may personally think of it.

The letter is signed by Mr. Rutledge, Director of the Grazing Service.

Mr. Doty, of Secretary Chapman's office, can speak on the departmental opinion of the status of the bill. I am merely giving the views of the Grazing Service at this time, Senator.

The CHAIRMAN. Thank you very much.

**STATEMENT OF DALE E. DOTY, OFFICE OF THE SECRETARY,
DEPARTMENT OF THE INTERIOR, WASHINGTON, D. C.**

Mr. DOTY. Mr. Chairman, I regret that when I left Washington I was not able to bring with me a copy of the departmental report on this bill. It takes quite a while to get a departmental report. After it is once written, it has to be submitted to the Bureau of the Budget, to coordinate with other reports of other agencies who might be interested in this problem. The status of our report, now, is that it is written and submitted to the Bureau of the Budget.

The report is, in some respects, adverse to the bill, although it recognizes some of the things that you have mentioned today, as problems which must be met. I, personally, have gained a great deal from the discussion this morning, and the problems which you have cited. When the Interior Department, the National Park Service, the Fish and Wildlife Service, have a serious problem in how we are going to dispose of this excess game, I think that the best way we are going to work it out is through cooperation with the States. It may be that we are going to have to work out a better system of cooperation; and it may be that that can be accomplished through some type of legislation.

I was particularly interested in this Kaibab decision, which says that the Federal Government shall not issue permits to hunters to go on reservations to kill the deer; instead of doing that, the State shall issue permits and have the State people go on the land. I think that system has a lot of merit to it, and I would like—I would be very much interested in getting reactions from the various State game

and fish people. Our interest is in keeping the cost of conservation enforcement as low as possible.

The studies of this committee have certainly shown that the cost is prohibitive for Federal agencies to try and keep down the excess game. It has to be done by cooperation with the States, with the hunters in the States. Thank you, Mr. Chairman.

Mr. BECK. Mr. Chairman, may I make one other statement, please?

The CHAIRMAN. Yes, indeed.

Mr. BECK. I very much appreciate the statements made by Mr. Leech and Director Rutledge, clarifying their position, and Mr. Doty, also, in clarifying their position on S. 1152. I am glad they are going to give it further study before making any official endorsement of it. Thank you.

The CHAIRMAN. Are there any further statements?

STATEMENT OF THEODORE H. WEGENER, PRESIDENT, IDAHO WILDLIFE FEDERATION, BOISE, IDAHO

Mr. WEGENER. Mr. Chairman, I can only give my reaction for the clubs, under the bill, as they understand it. I managed the second war loan, and I am organizing the State on this next one. I have covered the entire State, since I am working on that job for a dollar a year. I think I have a right to do some checking on other things, and among them was this bill.

Our clubs consist of about 60 various clubs, and a membership of about 15,000. Without exception, they are opposed to this legislation.

The CHAIRMAN. What are they opposed to?

Mr. WEGENER. They are opposed to another bureau. That is the interpretation that they place upon the bill.

The CHAIRMAN. Is that the only opposition?

Mr. WEGENER. I have discussed it with livestock men I know, and sheepmen all over the State, and I haven't found any of them that are in favor of the bill. They feel that our State commission, which was created 5 years ago by the Initiative Act, with a vote of 125,000 out of 200,000, is perfectly capable of administering and handling the administration of our big game, in cooperation with the Federal agencies.

The CHAIRMAN. Do you work in cooperation with the Federal agencies?

Mr. WEGENER. We certainly do. Every year we have a convention of our sportsmen all over the State. Each district is represented, and to that convention are invited the Federal agencies, and also the game department commissioners and employees, to attend that meeting, at which we discuss our problems, and determine how to meet them. I don't think that there has been any problem that has come up that we have not met, somehow. If there are problems—there probably is one place where we do have a little difficulty, and I am certain that the commission is doing the very best that can be done in connection with it. I don't believe that anybody could do any better.

As I said, I am giving you the impression of the bill, as we understand it, without this decision. If a bill were to be enacted, I am sure they would be opposed to any bill that would create another bureau

and take that control away from our State. I think our entire State organization, our clubs, and our people, would be opposed to it. However, a bill that might clarify it, might add to it, might be accepted. We have gotten along with the Federal agencies, I think, 100 percent. I think Mr. Olson will verify that. We have gone over areas that we thought needed attention, before the time came, and I think that any problems that exist there are anticipated in advance. We try to meet them, and we have the cooperation of the sportsmen, the livestockmen, the sheepmen, and the voters, as well.

The CHAIRMAN. Have you given study to the law that is antecedent to the bill?

Mr. WEGENER. Not until I came down here. I have since studied it, and, as I said, that was somewhat new; but I am sure that our people would still feel they are opposed to the bill, because they don't want another bureau. That bill has many things in it that are objectionable, and it would have to be entirely differently set up to satisfy our people.

The CHAIRMAN. Is the law as it exists, now, satisfactory to your people?

Mr. WEGENER. So far they have been. We get along and cooperate with the agencies, and we haven't had any difficulty, so they must be acceptable. We certainly have had no objection to them so far.

The CHAIRMAN. If the law as it exists now is as drastic as it can be written, would a modification of that law be objected to by your people?

Mr. WEGENER. If control of game remained in our State, and in every way would continue to be handled about as it is now, I presume some law could be enacted that would clarify that which might help, but we are definitely opposed to any law that might lead to the things that bill contains, complete control and issuing of permits by the Government. Those are the things we object to, and don't want to have the control taken away from our State. We feel that our State commission is a representative of the people, created by the people, and it functions well, and if we had any difficulty we would have to do something about it.

The CHAIRMAN. Well, the very first expression in this bill resubmits the entire thing to the people.

Mr. WEGENER. Yes.

The CHAIRMAN. You wouldn't object to that?

Mr. WEGENER. We want to leave it there with the States.

The CHAIRMAN. That is the first thing this bill does. It is not in the States now; control of wildlife is not in the States now, excepting by tolerance.

Mr. WEGENER. Mr. Chairman, don't you think that would only arise if there were a really serious problem that needed attention, and if that were the case, maybe that would be justified, the law as it is now?

The CHAIRMAN. That is true, undoubtedly that is true. In other words, that emphasizes what I have been trying to say, that as this law now exists, as it has been for many years, placing control in hands of Federal authorities, yet it has been exercised only in extreme cases; but those extreme cases have given rise to the thought of what might follow from an Executive order. An Executive order, I might state to you, is not a foreign thing, it is not a remote thing; and I

may state that it is a thing that is in contemplation, I am sorry to say. So, with those things in mind this committee sought to set up something that would, first of all, arouse the interest of the people to a problem, and, secondly, arouse their constructive thought, so that legislation might be worked out whereby there would be no discord between—

Mr. WEGENER. I am certain that is worthy of consideration.

The CHAIRMAN. Of the people and the Federal Government. That is the study that we are trying to make.

Mr. WEGENER. That's fine; I am sure we will all cooperate with it. Thank you very much.

The CHAIRMAN. Now, would the gentleman from Wyoming care to be heard?

STATEMENT OF LESTER BAGLEY, STATE GAME WARDEN, WYOMING GAME AND FISH COMMISSION

Mr. BAGLEY. Mr. Chairman, may I offer for the record a resolution passed by the Wyoming Game and Fish Commission in opposition to this bill in question; and also a tabulation of the livestock in the State of Wyoming? These figures were prepared by the United States Department of Agriculture, Bureau of Agricultural Economics, Division of Statistics, which forms the basis of the information I have in my statements. Also, I would like to present a map showing antelope concentrations in the State of Wyoming. It may not be necessary, but if it is I would like to use it.

The CHAIRMAN. We would be very glad to see it.

(The resolution and tabulation are as follows:)

RESOLUTION

The Wyoming Game and Fish Commission in special session at Casper, Wyo., on July 9, 1943, carefully considered Senate bill No. 1152, commonly known as the McCarran bill.

The Commission feels that passage and enforcement of Senate bill No. 1152 would constitute unlawful appropriation of the property of the people of the sovereign State of Wyoming, which it, as an official executive agency, is sworn to defend. It feels that this bid for power on the part of the Federal bureaus or agencies, even though supported by such a bill, is a transgression upon rights of the State and its citizens, and is a direct violation of the State Constitution and the Enabling Act accepted when Wyoming became a State. This fact has been substantiated in the courts.

The Commission believes that the principle embodied in this bill is entirely unsound, unjust, and uncalled for. It believes that its attempted passage is a usurpation, an encroachment upon States' rights over which the people of the West must guard with unwavering vigilance.

Enactment of such a law would nullify practically all of the laws for the protection of game animals in the State of Wyoming and would substantially interfere with the administration of wildlife in all the States.

Now, THEREFORE, it is ordered by the Wyoming Game and Fish Commission that copies of this resolution be sent to our State representatives in Congress. It is further ordered that copies of this resolution be sent to the different Federal agencies having headquarters in the State. It is further ordered that copies of this resolution be sent to every livestock organization, requesting that they join the Commission in opposition to Senate bill No. 1152 which would be an unjust encroachment upon States' rights.

Adopted by the Wyoming Game and Fish Commission in special session at Casper, Wyo., July 9, 1943.

Livestock in the State of Wyoming¹

Year	Cattle	Horses	Mules	Sheep	Hogs
1930.....	790,000	176,000	4,000	3,420,000	130,000
1931.....	837,000	171,000	4,000	3,722,000	137,000
1932.....	885,000	167,000	4,000	3,792,000	123,000
1933.....	956,000	164,000	3,000	3,703,000	98,000
1934.....	1,050,000	158,000	3,000	3,703,000	87,000
1935.....	858,000	146,000	2,000	3,444,000	49,000
1936.....	849,000	138,000	2,000	3,350,000	47,000
1937.....	781,000	133,000	2,000	3,250,000	50,000
1938.....	820,000	133,000	2,000	3,305,000	60,000
1939.....	828,000	130,000	2,000	3,478,000	70,000
1940.....	811,000	128,000	2,000	3,478,000	87,000
1941.....	827,000	125,000	2,000	3,548,000	76,000
1942.....	885,000	122,000	2,000	3,619,000	84,000
1943.....	947,000	128,000	2,000	3,781,000	125,000

¹ Figures secured from United States Department of Agriculture, Bureau of Agricultural Economics, Division of Agricultural Statistics.

Mr. BAGLEY. I would like you all to know that Wyoming has had a commission form of game management since 1927. This commission consists of six men, generally chosen because they are businessmen, and, in the majority of cases, more than half of that board has always been prominent stockmen. The present chairman of the Wyoming Game and Fish Commission is one of the largest cattlemen in the State of Wyoming. The previous chairman was one of the largest sheep owners in the State. They have endeavored to manage this business as they would their own businesses. Each year, when the game regulations are contemplated, or at the time they are made, a written request is sent to all agencies interested, including the stock people, the Federal agencies, and all the sportsmen's groups, and they are not only asked, but they are especially requested, to be present or to bring their recommendations, as they would like to see them put into effect in the State.

Now, I have prepared a paper here which I shall read. It will only take me a few minutes to read it. Probably the Senator will take me to task for some parts of this. That is perfectly all right; I am not a lawyer. This paper has the consent and approval of the Wyoming Fish and Game Commission.

The CHAIRMAN. Well, then I should take the Fish and Game Commission to task, rather than yourself.

Mr. BAGLEY. That will be all right, either way, Senator.

Any discussion of State and Federal relationship in the management and control of wildlife must be prefaced by the statement that the State owns and controls the wildlife within its boundaries. This right has been handed down to us since the Magna Carta through the system of English common law and by the Enabling Act which admitted Wyoming to the Union on a par with other States. This declaration of ownership has been upheld uniformly by decision of the courts of last resort in every State and by the Supreme Court of the United States.

When the information reached the Wyoming Game and Fish Commission that Senate bill 1152, known as the McCarran bill, had been introduced in the United States Senate, the Commission was very much surprised. It had received no forewarning that such legislation had been contemplated, and from the Commission's point of view the bill was unjustified.

The Wyoming Game and Fish Commission has endeavored to carry on a cooperative program with the Federal land agencies relative to the number and the distribution of game animals in the State of Wyoming. For the past 5 years, the Federal bureaus have been invited to confer with the Commission, and their recommendations have always been considered in the drafting of regulations to govern the killing of game animals in the respective land areas over which the Forest Service and the Taylor Grazing departments have jurisdiction. It has been the object of the commission to manage wildlife affairs as it would manage a livestock business. Special emphasis has been placed on determining as nearly as possible the total number of game animals in the State. The checks made on these counts and estimates from time to time have proved quite consistent and have been adjusted periodically in conformance with new and better information as the latter became available. To illustrate—the elk herd in the Jackson Hole area has been counted 5 times since 1932. I am submitting a table of this count which shows that in 1932, 19,855 animals were counted; in 1935, 22,000; in 1936, 18,920; in 1938, 17,370; and in 1940, 17,902. It must be borne in mind that this number of animals was actually counted, exhaustively, by enumerators in an airplane and by men on foot, and therefore represents as nearly accurate a count as was possible in this herd.

Jackson Hole elk counts—years 1932 to 1941

	Year				
	1941	1938	1936	1935	1932
Feed grounds.....	10,903	6,958	5,470	10,630	8,600
Winter range, south of Jackson.....	3,226	4,453	4,177	4,099	3,332
Winter range, north of Jackson (except Gros Ventre).....	1,168	2,233	1,925	1,227	2,938
Winter range, Gros Ventre.....	2,605	3,726	7,348	6,079	4,985
Total.....	17,902	17,370	18,920	22,035	19,855

Similar counts have been made of the elk and deer in the Big Horn Mountains and in Fremont, Lincoln, and Sublette Counties. At the present time the elk population is placed at about 35,000 head. The deer population presents a more difficult problem, and the Commission has never devised any satisfactory method for counting the deer in the State. However, several deer counts have been taken during the winter months when these animals have been pushed on to the plains by snow. Such a count was conducted around the Big Horn Mountains in the spring of 1942. The deer population, as a result of the best counts and estimates available, is now placed at about 80,000 head.

Antelope during the past several years have shown a very decided increase. In order to have rather definite information relative to their numbers, the Commission in 1939 conducted an airplane count of a large part of the State. This census placed the antelope population at about 35,000 head. At this time, however, certain areas were omitted. Due to some dissatisfaction on the part of the citizens of northern Wyoming, a more exhaustive count was made during the winter of 1942-43. During this period an airplane was used for about

2 months, but due to bad weather it was impossible to make the complete count by air before the herds broke up in the spring, and as a result counts and estimates by car and horseback were necessary in a portion of the State. About 35,000 antelope were actually counted from the air and the total population of antelope following the count was placed at approximately 55,000 head.

Add to these numbers 3,500 moose and 2,500 bighorn mountain sheep and you have a very close estimate of the total big-game population of the State, which places the number at 176,000 head. This would mean that with Wyoming's 97,548 total number of square miles this State has approximately 1.7 game animals per square mile. This figure does not appear excessive, but it should be recognized that there are rather heavy game populations in certain sections. For example, we have in southern Campbell County one area in which more than 6 antelope are present per square mile, while on the line between Carbon and Natrona Counties, in the vicinity of the Pathfinder Dam, there are 3.52 antelope per square mile. In another section in Fremont County we have 6.7 antelope per square mile. It is in these areas that the Commission is making special effort to reduce the population.

Concentrations of game animals are controlled by many factors. For example, during the winter of 1941 and 1942 a severe storm drifted the antelope from a large portion of the Red Desert onto the lower Sweetwater and a heavy concentration resulted. These animals were held in the section by snowdrifts which prevented them from returning to the desert.

Now, let us look at the stockman's side of the picture during the same approximate period. The average number of cattle raised in Wyoming over the 10-year period from 1931 to 1943 has been set by the Bureau of Agricultural Statistics at 866,000, the number having increased steadily since 1937, when the number was 781,000. At the present time the cattle population is placed at 947,000, an increase of 81,000 over the 10-year average.

The present population of sheep is 3,781,000. The 10-year average is 3,726,000, or an increase of 55,000 over the 10-year average. This represents a decrease over the number of the previous year. The number of sheep in 1937 was placed at 3,250,000 and shows a consistent increase since that period.

At this point we might insert an interesting inconsistency with which we are constantly confronted. The Forest Service and the Grazing Service maintain and their reports show that since 1937 they have made constant and repeated reductions in livestock permitted on the forest and grazing districts—in some cases up to 50 percent—while the Bureau of Agricultural Statistics shows that the livestock population of the State during this time has constantly increased. The present population of horses and mules is 130,000. This is a slight increase over last year and below the 10-year average, which was placed at 142,000. The total number of domestic animals, including cattle, sheep, horses, and mules, according to the Bureau of Agricultural Statistics, is now placed at 4,858,000 head. The census for 1937 places this number at 4,166,000 reflecting an increase of 692,000 head in 6 years. In other words, the increase alone of domestic animals in the last 6 years represents a figure which is 4 times the total population of game animals in the State.

Let us state the same thing in another way. At the present time there are approximately 28 domestic animals, including cattle, sheep, horses, and mules, to one game animal, representing elk, deer, antelope, mountain sheep, and moose. Providing this ratio could be maintained over the total area of the State, I feel that there would be little objection on the part of the owner of domestic livestock. Unfortunately, this is not the case. We have had and still do have areas of limited concentration, and it is upon these areas that the Wyoming Game and Fish Commission is attempting to concentrate hunting pressure. Being aware of the fact that the game populations were increasing and were forming concentrations in certain areas, the Game and Fish Commission has put forth a special effort during the past 5 years to make the needed reductions from populous regions. To illustrate, in 1939, 8,258 game animals were killed; in 1940, 14,359; in 1941, 18,614; while in 1942, 27,217 animals were taken. These figures are not based upon estimates or guesses. All of the elk and a very large percentage of the deer taken by Wyoming hunters are actually checked and counted as they leave the game field. Following is a tabulation of the 1942 big-game kill:

1942 big game kill

Game species	Total	Average weight, pounds, hog dressed	Pounds, big game meat	Total value ¹
Elk	9,046	308	2,786,168	\$557,233.60
Deer	11,929	127	1,514,983	302,996.60
Antelope	6,050	80	484,000	96,800.00
Moose	121	450	54,450	10,890.00
Sheep	22	120	2,640	528.00
Bear	49	(?)		
Total game	27,217		4,842,241	968,448.20

¹ Total valuation computed on basis of \$0.20 per pound.

² No meat valuation.

³ Total meat pounds.

Comparative kill, 1939-42:

1939	8,258
1940	14,359
1941	18,614
1942	27,217

Check stations are maintained 24 hours a day during the hunting season. The aid to game law enforcement through checking the dressed game and to see that no domestic livestock has been killed is of minor importance compared to the other benefits gained. A stockman would not remain in business long if he did not know the sex, age, number, and physical condition of the animals sent to market. This information is all learned through our check stations and forms the basis for department planning and policy.

The antelope kill presents a more difficult problem, but due to the great abundance of antelope, we know the hunting effort to be practically 100 percent successful. This is borne out by a post-card check, whereby a card of inquiry was sent last winter to every tenth hunter who purchased a license. Response to this check revealed that practically 100 percent of all antelope hunters secured their meat. In order to be conservative, we have taken the figure of 6,050 antelope killed, which figure represents 90 percent of the antelope permits pur-

chased. In spite of the large number of antelope killed last season, there is still some overconcentration, particularly in those counties where the land is all privately owned. The last legislature made it possible for the Commission to place two antelope coupons on resident hunting permits to be used in these areas of overconcentration. Fearing that this would not accomplish the purpose, the Commission at a recent meeting authorized the sale of two antelope permits to each resident desiring to purchase the same. This will entitle one holding the two-antelope permit to kill four antelope in the areas designated by the Commission as two-antelope territory, and two antelope in the territory designated as one-antelope territory, providing the two permits are purchased.

I wish to add here another little statement. The legislature and the committee has been aware of this situation for some time. In 1937 a law was passed which provided that half of the licensees for antelope permits be returned to the landowner on whose property the antelope were killed. This has amounted to a sizable sum. In other words, there are \$2 of the money that is paid for an antelope permit which goes back to the landowner on whose property the antelope is killed, providing that if it is a nonresident license the landowner gets \$5 on his property. The commission has paid back to the landowners of the State, in accordance with this law, over \$6,000 a year.

In view of these facts, I feel that you must agree with me that the Wyoming Game and Fish Commission is controlling the game populations in the State, and although it recognizes certain areas of overpopulation, it is convinced that it is in a much better position to make necessary reductions in these areas than any Federal agency could be. As a result Federal encroachment as embodied in Senate bill 1152 cannot be looked upon with favor. This bill is dictatorial in nature, making the bureau head the sole judge in cases where reduction of game species is ordered. The passage of such a bill is an unlawful appropriation of the property of a State held in trust by the game commissions of the respective States; is a transgression of States' rights; and is a direct violation of all principles of the organic acts and the constitution of the State of Wyoming.

The CHAIRMAN. Thank you, sir.

I think it might be well to clarify one other point, the right of the Federal Government over the public domain of the United States, conferred on Congress by the Constitution of the United States. That is one principle that we overlook. Many of those who have attempted to make a study of this proposed act have evidently overlooked it. Based on that, the courts' decisions have been handed down, by and large. Again there is another fundamental principle of the law which, I am sorry to say, is misstated by the gentleman who just addressed the committee. The wildlife of the open public domain is not the property of the State. That has been so held repeatedly by the Supreme Court of the United States and other courts. The wildlife of the open public domain is the property of the people. That has been held so from time immemorial, and the only place where the State comes into the picture, at all, is under the police powers of the State. The laws give to the State the right to regulate for the promulgation and the taking of wildlife. That is another fundamental principle. It is unfortunate that people, in reading this law, have been misguided and misadvised as to the law. I think perhaps

this meeting today—at least, I hope this meeting will have brought out the principle under which, and in the light of which, legislation of this kind may be properly, fairly, and impartially just.

Now, then, take those court opinions that the chairman has just announced; they are undeniable, because they have been established by the judicial law of the land, as well as by the Constitution itself. Take that, and add to it that the open public domain is the property of the Federal Government, and there we find our position fully stated. That is the position that is uppermost in the study of this question. There we find the cardinal principles that guide us in the formation of legislation beneficial to the people at large.

If the gentleman's position was correct, if the wildlife belonged to the State, that would be one thing; but even then his position would not be well taken. It is not well taken at all. I am going to, at the conclusion of this hearing—because I want this hearing to be full so that all who attend here, and all who wish may read the hearing in complete transcript—I am going to insert a memorandum of authorities dwelling on the whole subject of the law as applicable in this case. This I shall insert into the record, on my own initiative so as to give a full light on the subject to those who discussed the subject and whom I advised on it.

We will be glad now to hear from anyone else. Mr. Bagley, do you have anyone else with you?

Mr. BAGLEY. Yes; there are two gentlemen here that would like to make statements.

STATEMENT OF LEO. C. WALKER, SPORTSMEN'S CLUBS, SOUTHWEST WYOMING, GREEN RIVER, WYO.

Mr. LEO C. WALKER (Associated Sportsmen's Organization, Wyoming). I represent the association of sportsmen's clubs of Southwestern Wyoming. I have a protest to enter against this bill, and I would like to read it to you so that you may get it in as we wish it. It says:

We, the sportsmen of southwestern Wyoming, can assure you gentlemen that we can see no reason for Federal control of wildlife in our end of the State of Wyoming. We, as sportsmen and citizens of the State of Wyoming, have taken a keen interest, and that is not all, we have assisted materially in the management of our wildlife in our State, for we realize the assets we, as people, have in this wildlife.

May I add to that, that as to the right of wildlife to the use of public domain, we think it only fair to the fifty-thousand-some-odd sportsmen and citizens that like that kind of sport, that they be given a voice in the management of that land, for, as we look at it, the public domain is as much our land as any individual or any group of individuals.

We stand behind our game commission 100 percent. We feel that we have the necessary Federal agencies and State agencies to take care of that situation, and any deviation from this, we would more or less lay at the door of the head of that department, that he is not a big enough man to handle his job.

That is all. I thank you.

The CHAIRMAN. Are there any questions? Thank you very much.

Is there anyone else who cares to be heard now? If there is anyone who wishes to be heard before leaving the hearing, we would be glad to hear you.

Mr. BARR. I would like to be heard.

The CHAIRMAN. You are not going away, are you?

Mr. BARR. Well, I think I am getting tired.

I want to make myself clear. I am representing the State Fish and Game Commission of Nevada. I did not do that this morning. I am just having a few words to say pertaining to this bill.

I heard the Senator raked over the coals pretty severely 2 months ago at the meeting of the Western Association of Fish and Game Commissioners. At that time Nevada was not a member of the association, which they are now. They went on record as being against this bill. I want to make this clear on the part of the State of Nevada's Fish and Game Commission; they are in accord with what the Western Association did as being against the bill as it is.

For myself, I believe that probably when you get back to Washington you will probably have to make a new bill, Senator, to say that we of the West—

The CHAIRMAN. Supposing, Andy—supposing we make no bill; supposing we just drop this bill and make no bill, and then the law was enforced as it is now. In other words, let the Federal agency have the right to go in on the open public domain and kill off; would you then say we have been derelict in our duty in not trying to mold the situation nearer to your heart's desire?

Mr. BARR. No; I don't believe we would, Senator. We have gone along here—if this law is as you say, as I stated, they can kill if they wish to kill, which you brought out very plainly, but sometimes maybe we would be better off to leave well enough alone, and go along for 50 years more, as we have been doing. It don't look like we're going to benefit ourselves with this bill very much, because most of the people feel that we have given up pretty near all of our State rights, and this is another bill that is going to take some more of our State rights away. Let the Federal bureaus come in, even if we don't agree with what they want, come in and take it in their own hands and shoot that wild game and commercialize it; in other words, which they never did, and I don't think they will do, unless we keep airing something like we are doing now; and maybe they'll get nerve enough to come in and kill them off, if they feel like it.

Mr. BAGLEY. Mr. Chairman, we have a long way to drive, and I believe we must be going. I would appreciate very much those citations on authorities, when they are available.

The CHAIRMAN. They will all be in the record.

STATEMENT OF S. A. CHRISTENSEN, WYOMING GAME AND FISH COMMISSION, EVANSTON, WYO.

Mr. S. A. CHRISTENSEN (Wyoming State Game Commission). Mr. Chairman, it seems to have been brought out that the committee is groping for a solution, perhaps, to amend or rephrase the present bill. It seems to me that if you would really want to be helpful in the situation that has been brought out here today, perhaps if the bill was amended to only read that before any Federal agency took action on these wildlife problems and errors, that they do consult the respective State game commissions. I believe that you would then have fulfilled the purpose that is expressed.

The **CHAIRMAN**. Let me say to you, in that respect, and I say so advisedly, that no court would construe, no present court but would construe the very expression that you now make; in other words, that the Federal authorities would be duty-bound, under the law, bound to first confer with the State authorities before they would have the right, as they now have, to kill. All of that has been thought out before, although your suggestion is an absolutely cogent and correct one.

Mr. CHRISTENSEN. Thank you.

STATEMENT OF JOHN A. LUNDELL, CEDAR CITY, UTAH

Mr. JOHN A. LUNDELL (Cedar City, Utah). Mr. Chairman, after listening to all this discussion today, it seems to me most of these sportsmen are afraid that the Federal Government is going to eliminate the game. But, I, as an individual stockman, I'm afraid that they are not going to eliminate it. I don't want to see the game eliminated, but I do want to see it controlled; and I'm afraid those Federal agencies, as they are now set up, will not take on their responsibilities as they should. In other words, when the range is overgrazed, they will blame it on to the livestock instead of on to the game population. Maybe the livestock is responsible for part of it, and maybe the game population is responsible for part of it. The brunt of all this game population will be borne by the livestock industry, as it has been in the past, from the figures that have been given here today.

I feel that—I don't advocate at all that any State should give up any of its rights, but it looks to me like the rights are already gone. If we can do anything to regulate the control of the Federal Government, in administering jointly with the States, then we should pass such a law, and not permit it to be directed by Executive order.

The **CHAIRMAN**. That is a very constructive statement, and I am very glad to hear it made. It is the thought of this committee.

Is there anyone else that would care to be heard?

STATEMENT OF DAVID LUCE, COMMISSIONER, WHITE PINE COUNTY, ELY, NEV.

Mr. DAVID LUCE (member, board of county commissioners, White Pine County). I just want to ask a question that won't take but a few minutes to answer. I haven't heard the Pittman-Robertson bill mentioned today. I would like to ask, in the event Senate bill 1152 is enacted, would it repeal the Pittman-Robertson Act; and if it did not repeal that act, would it not conflict with it?

The **CHAIRMAN**. I will answer it very offhand. Without having the Pittman-Robertson Act at hand, I would say it would not conflict with it, or repeal it. I understand the Pittman-Robertson Act has not been adopted by this State.

Mr. LUCE. My understanding is that it has been adopted by about 45 or 46 States, and it has been before the people of Nevada, I think, for the last year. This district here has been particularly interested in it for many years, but it has not been enacted or adopted by the State of Nevada.

Mr. PITTMAN. All States in the Union except two, of which Nevada is one, have adopted it. I think the other State is Florida, or something, I don't know.

The CHAIRMAN. Is there anyone else here, any sportsman here? Mr. Gray, you look as though you wanted to be heard again.

Mr. GRAY. No, sir; thank you for the compliment. I am just enjoying myself back here.

STATEMENT OF JOHN YELLAND, EAST ELY, NEV.

Mr. YELLAND. Yelland is my name.

I believe every one of us here today is interested in conservation, and I believe in eliminating the deer where they are troublesome. But I also believe that we have got a splendid bunch of men here in our county. I will not call their names, but take them altogether, they don't want to destroy the deer, and they are cooperating in a fine way to preserve, and, at the same time, not to overgraze. I have been at two or three of our meetings where, just like here today, there have been conflicting opinions, and different ideas about the deer. I have thought about this terrible war that we are in. It is quite a serious thing, and we have got to do the right thing, gentlemen. What are you going to tell those boys, when they come back? What are you going to tell them when they come back with their empty sleeves and wooden legs? It is a very serious affair, this killing off all the deer; at the same time, we must protect the ranges that they are infesting.

There is a problem in White Pine County. I don't know nothing about Wyoming, but the gentleman has given a very—and the Utah people have given very fine statements. I consider them very fine; and I wanted to say that the cooperation—and we have got a good one, Senator—the finest cooperation in this county that I have seen anywhere, and they will carry on.

We don't want no more bureaus; we have got a plenty of that. Just stop a minute and see what is posted in the papers, "Buy bonds," that is a fine idea, a splendid idea. We want the bonds to go where they will do the most good, and right at home we are the second line of defense, right here today. We may not think so, but we are, and so are these men all around you here; we are the second line of defense. We have got to do our duty. Those boys will be back, and we've got to meet them half way, and not pass the buck either. But we have to be white and carry on our own thoughts and our own ideas and help all we can in every way. That is the way I feel about it, Mr. Senator.

I have been here a great many years. I don't like to say too much about that—you know I might want to get married again, yet. I have seen changes here, lots of changes. There were only two or three herds of sheep in the country when I came here. Now, it has been the policy of the Forest Service to conserve, and lessen the numbers of sheep and cattle on the forest; and that is where those figures are misleading. It is their policy, for reasons not only of themselves, but to help others, that they have limited numbers of cattle and sheep, for the benefit of all around; and so these figures are not so great, after all. There are less horses than there used to be; there used to be thousands of horses on the range everywhere. The horses, they are gone. So there are lots of different things to be considered; but above all, let us not forget the spirit of conservation, so that we can face these boys when they come back.

The CHAIRMAN. Thank you, Mr. Yelland.

Now, a representative from Utah, Mr. Leonard, is here. Mr. Leonard, I understand there is a regulation, known as W-2, in effect on the national forests. This regulation was developed cooperatively. Is that correct?

Mr. LEONARD. Not entirely satisfactory to the State. It has been accepted as working basis.

The CHAIRMAN. Do you think that the game management problem within the national forests of your State can be handled cooperatively, through the application of regulation W-2?

Mr. LEONARD. I think it could be, with the proper attitude on both sides.

The CHAIRMAN. Well, that is always necessary. You do think it can be made to work?

Mr. LEONARD. It could be; yes, sir.

The CHAIRMAN. Is it working now?

Mr. LEONARD. Not as well as it should do.

The CHAIRMAN. Then you think it is possible to make it work more perfectly?

Mr. LEONARD. Yes.

The CHAIRMAN. That is a matter that addresses itself to your sphere. I just wanted to get it.

Mr. Kneipp, we should be glad to have you discuss the matter, from the standpoint of your department, and your individual views, based on your training and your experience and knowledge of the subject.

STATEMENT OF L. F. KNEIPP, ASSISTANT CHIEF, UNITED STATES FOREST SERVICE, WASHINGTON, D. C.

Mr. KNEIPP. Well, Senator, this is the way the situation impresses me, in relation to this bill, and the discussion which it has provoked.

As your subcommittee, during the past several years, has held hearings at different points throughout the western United States, there has been brought to the attention of the subcommittee, insofar as I know, without any gratuitous efforts on the part of the committee itself to raise the subject, an increasing number of statements with regard to the situation which is existing, by reason of large oversurplus as of game. Those statements have been made in many places. Your investigator has obtained from a wide variety of different sources, a lot of figures and data as to the situation. As a result, the subcommittee felt it was desirable to crystalize thought and action by the introduction of a bill, and the bill S. 1152 was introduced. Since that time there has been a tremendous number of expressions, in the form of magazine articles, newspaper articles, resolutions, and personal letters and statements, from different interested individuals, with reference to the bill, most of which were opposed to it. So far as I have reviewed these various expressions of opinion, they seem to reduce themselves down to four issues.

The first issue is that the bill would be a usurpation, or deprivation, of the sovereign powers of the States, and their rights of ownership in the game. The second common assertion is that the numbers of game, the increases of game, and the losses of game, due to such increases, in excess of their available feed supply, are not so great as alleged. The third is that the damage to lands, the public

lands of various categories, and the plant cover on those lands, the vegetation and the browse and trees, is not so great as alleged; in fact, that there exists no condition which makes it necessary to control the game, as a means of preventing the destruction of public property. Then, the fourth allegation, or issue, is that if such damage does exist, it is due in part, if not wholly, to domestic livestock; that the livestock has not been reduced; and that the proposals to reduce the numbers of game animals, on the areas in question, are designed largely to protect the livestock interests from reductions in permitted numbers and curtailments of operations.

All the statements that I have seen, I think, can be reduced to these four issues. The first has been quite widely discussed today, very exactly discussed; and I don't know that I need dwell on it too much. As I suggested, in talking to Mr. Pittman this morning, my interpretation of the bill is that, if a State is willing and capable of taking the appropriate action, the bill means nothing to that particular State. I might remark that the bill, of course, was drafted to cover the conditions in all 48 of the States. There has been at no time any assertion that in all of those States, or even in all parts of any State, conditions were such as to require the action contemplated by the bill. It so happens that this morning the expressions of opinion have been from States that have been rather progressive in attacking the problem; where the need for the action may not be so acute. There are, however, other States that have not as yet, for one reason or another, adopted an adequate program, or effectively attacked this problem; nor do they offer any promise of immediately attacking it in any effective way. There still seems to be a need for a definition of public policy.

Now, I think your comments on the wide array of court decisions, of which you have a list, there, of the citations, make it very clear that the Federal Government has complete power to protect its land from any form of destruction. It has all the powers of a private owner; and, incidentally, no owner of livestock of any kind could trespass on private lands, to the detriment of those lands, and be paramount over the owner of the lands.

The only question, really, is the question of ways and means. The only issue, actually, so far as this bill is concerned, is that of the power of the Federal Government to delegate authority to the individual to take game. That is now a power that is exercised by the State. In some of these court decisions you will find that the State's relation is that of assignment to the individual of a right to take what is otherwise public property. Actually, this bill raises only that one question. It is generally conceded, judicially, that the Federal Government, through its own paid agents, can take any step necessary to protect its property. The question raised by the bill is whether it can endow an individual with any share of those powers. Now, in the *Pisgah* case, as I understand it, the decision of the court could readily be construed as confirming the right of the Federal Government to delegate that power. In all respects, if action is going to be necessary to reduce the game herds, if that action is not to be taken by the State, it would be far better for the Federal Government to delegate its power to the individual, under some form of adequate control and compensation, than to put its own paid hunters in to destroy the game. Under the delegation theory, the citizens, broadly speaking, all over the country,

would have the right to take for their own use the game resources, or some part of it, and, thereby derive all of the benefits and privileges that come from hunting. They would have the right to dispose of the results of the hunt, as they do under present State laws. The Federal Government would not be subjected to the cost that would exist if killing by the agents of the Government were the alternative. So, I believe that of the four points I outlined, point No. 1 has been pretty well discussed.

The other three points are questions of fact, and I take it that this gathering here is particularly concerned with those facts which relate to the intermountain region. Mr. C. N. Woods, the regional forester for the intermountain region is here. He has lived in the intermountain region for considerably more than 40 years. He has never been so much of a forester that he was not equally a hunting enthusiast, and nature and game lover. He has not only an official interest in the subject, but a personal interest. I think any suggestion to Mr. Woods that any agency of the Government be empowered to so eliminate game animals, that he couldn't go out and get his elk or deer, would be just as distasteful to him as to anybody else in the intermountain region.

With your permission, I would like to suggest that Mr. Woods be requested to discuss those other three points. First, whether the numbers of game are as great as alleged, and the losses as great. Second, whether the damage to Federal lands is so great as to dictate corrective action; and third, where damage is conceded to exist, whether it is in fact attributable to the game or to the livestock; and whether, to the degree that it is attributable to the livestock, the Forest Service has or has not taken action to reduce the numbers of livestock to the capacity of the range, as is proposed on the problem areas, in relation to game animals.

The CHAIRMAN. Mr. Woods, we would be very glad to hear you.

STATEMENT OF C. N. WOODS, REGIONAL FORESTER, INTERMOUNTAIN REGION, UNITED STATES FOREST SERVICE, OGDEN, UTAH

Mr. Woods. I am C. N. Woods, regional forester for the Forest Service in the intermountain region. I have occupied this position 5 years, and have served 39 years in this region. I have been stationed in each of the four States of this region, Wyoming, Nevada, Idaho, and Utah. I have had headquarters at Ogden for the past 29 years, from which I have inspected every one of the 24 forests of the region, with their 29,500,000 net acreage of Federal land. I have ridden horseback over every one of their 125 ranger districts.

Most Forest Service personnel who do the principal part of the work on the big game and livestock problems in the intermountain region, are sportsmen and range men, experienced in investigating forage conditions. We have men both technically and practically trained for this work. The man who has for 3 years headed game work on the forests of this region, was raised in the region, and has been a sportsman for 30 years. Our second man on big game work has had similar experience. The regional forester has hunted big game and worked on range problems for 40 years.

No one can say exactly how many big game animals there are on any big area of our broken, timbered, and brushy country. A very

rough approximation is the best that we can hope for. Our men have had much experience, over the past two decades, in estimating numbers of big game, and have worked out methods and techniques of value. After all, the principal thing on which to base plans is the effect grazing animals have on the forage. If forage, year after year, is becoming depleted by grazing, then too much use is being made of the range. That conclusion is inescapable, and can be reached without knowing the number of grazing animals. In such a case, reduction in numbers is necessary to save the forage. We do believe we can get a workable estimate of the number of big game on a range, and can, with considerable assurance, say when the range is much overstacked. Condition of animals and mortality among them indicates whether they have enough forage.

As to damage to forage, it can be readily seen wherever much has occurred. There are dead and dying and hedged and damaged plants. The palatable species are not reproducing. Pairs of enclosures have been built. One of each pair excluding both game and livestock, and the other admitting game but excluding livestock. There can be seen the effect of the grazing of deer alone on the forage and the effect of the grazing of both deer and livestock.

What has caused so widespread damage to the forage on the open range? In some places it has been due primarily to big game and in some places to livestock. There has been a congestion of big game on more than, say, 10 percent of the national forest area of this region. Therefore, on 90 percent of these Federal lands, where there is depletion of forage, it is due to livestock rather than game. Deer are primarily responsible for any depletion of the browse on their winter ranges, and, on much of this, removal of all the livestock will not remedy the condition. Generally, livestock browse but little on these deer winter ranges on the forests. By noting the amount of the current year's growth left on the browse on deer winter range just after livestock have left the forest in the fall and then noting how much of it remains just before livestock enter the forest the next spring, it can be determined how much the deer ate during the winter. We have large areas of winter range, some of it badly depleted, where nothing but deer graze any time in the year.

Some summer ranges have a congestion of big-game animals. There is too much competition between them and livestock. On some very heavily used summer ranges depletion of forage is due to both big game and livestock.

During the winter deer live normally nearly altogether on browse. In the early spring from 10 to 15 percent of their diet may be grass. In the summer, 5 to 10 percent may be weeds. In the past 25 years or so, livestock permitted on the forests of the intermountain region have been reduced 30 to 40 percent for range protection, while deer have increased on one forest, around a thousand percent. Twenty years ago there were not enough deer generally through the region; there are now in many places too many. Our principal objective now is to get the deer herds reduced to the carrying capacity of the browse on their winter ranges.

Deer herds increase fast in this region if they have enough forage in the winter. It is not possible to control numbers by killing bucks alone when conditions are favorable for propagation. The only large herd of elk in this region is on the Teton Forest. But limited

areas there on drift routes between summer and winter feed grounds; and areas on wind-swept ridges and where snow does not lie long that are grazed in the winter, seem much overused. Summer elk range on the Teton and Bridger National Forests is very abundant.

We appreciate the fine effort the State of Wyoming is making to control the elk herds, and all the cooperation we have received in other States. Elsewhere in the region elk herds are small. There are some local problems, but progress is being made in their solution. The region recognizes its responsibility and that it has authority to protect the forage on Federal lands on the national forests, but it believes the States and the sportsmen prefer to have deer removed by licensed hunters and that no other way would be so satisfactory to the people generally and none so inexpensive to the State or to the Federal Government. Forest officers themselves were too slow in recognizing the big-game problem and in getting busy on its solution.

Prior to 1934 the Forest Service manual provided for cooperation of forest officers with the fish and game authorities of the States, almost exclusively for the purpose of helping enforce fish and game laws and to propagate fish and game. Nothing was said as to control of numbers or as to the possibility of numbers getting out of bounds. On March 29, 1934, wildlife regulation G-20A was approved by the Secretary of Agriculture. This regulation was intended to give the Forest Service much more control of the fish and game than it had ever exercised. It provided that the Secretary of Agriculture might establish on the national forests hunting and fishing seasons, fix bag and creel limits, specify the sex of animals to be killed and fix the fees to be paid for permits, among other things. The Forest Service was becoming alarmed at the evidence that big game was outstripping the forage supply.

This regulation caused much protest by State game officials and sportsmen. The Forest Service in the intermountain region has never applied regulation G-20A. It is our responsibility to protect the forage and watersheds on the national forests from damage by big game and livestock, and to fix the maximum number of each that shall graze.

In September 1941 regulation W-2 was issued to replace regulation G-20A. Regulation W-2 has been accepted by the fish and game commissioners. It reads:

Regulation W-2.—The Chief of the Forest Service, through the regional foresters and forest supervisors, shall determine the extent to which national forests or portions thereof may be devoted to wildlife production in combination with other uses and services of the national forests, and, in cooperation with the fish and game department or other constituted authority of the State concerned, he will formulate plans for securing and maintaining desirable populations of wild-life species, and he may enter into such general or specific cooperative agreements with appropriate State officials as are necessary and desirable for such purposes. Officials of the Forest Service will cooperate with the State game officials in the planned and orderly removal in accordance with the requirements of State laws of the crop of game, fish, fur bearers, and other wildlife on national forest lands.

If the Forest Service and the States and all interests will cooperate under regulation W-2, I believe all big-game problems on the forests of the intermountain region can be solved without any additional Federal legislation or regulations. I do not presume to speak for any other agency nor for any other region of the Forest Service. We have,

the past 2 years, actually made some reduction in the number of deer on some areas of heaviest concentration. While the reduction has generally been small, nevertheless sportsmen and others who have investigated conditions on the congested deer ranges have recognized the need of further action, and we feel there will be mutual cooperation between the Forest Service, the States, the sportsmen, and the livestock interests under State laws and regulation W-2, until the forage problems are all solved and until there is a proper balance between livestock and big game. We should accomplish these ends within the next 2 or 3 years.

I recommended the revocation of the 1934 regulation G-20A, and the adoption of W-2 in substantially its present form. I would, therefore, be inconsistent and could be accused of bad faith, if I suggested legislation giving us more authority than we have under W-2, unless and until we give W-2 a thorough trial and find we cannot get needed protection of the national forest regions under it.

This region has long appreciated that big game is a great asset. We have cooperated with the States in building the game herds. It is our policy to have perpetuated enough big game to furnish good hunting widespread over the intermountain region. We will be very happy if the States themselves will control numbers so as to protect fully our forage resources and to make it unnecessary that we exercise any more authority over big game than regulation W-2 contemplates.

Mr. Chairman, if I may, I would like to answer Mr. Leonard on a few points.

I believe that, in view of the walking habits of the ordinary hunter, it would be very desirable if the States and the Government would build more low-class roads to reach congested game areas which are at the present time pretty inaccessible to hunters.

Mr. Leonard and the regional forester have some differences of opinion. I'm referring to what Mr. Leonard said this morning. Now, I believe that the big trouble is that we argue and propose to act from different premises. What I conceive to be the facts, Mr. Leonard, in different cases does not. Do any big numbers of deer starve to death on the national forests of Utah? Yes. Does not the number run into the thousands? Yes. I have evidence of that. How did I get it? By sending forest officers into the forest in early spring to make checks, by running survey lines considerable distances, and counting, on a strip of a certain width, the number of dead deer which apparently starved to death, found on those strips.

I mentioned the Annabella area. In the winter of 1928 the check showed 2,050 deer that our men believed had starved to death; 2,050 dead deer on the range. On the Cache National Forest, in one winter, I haven't the year, but just a few years ago, 1,300 head were checked that were considered to have starved to death.

Why hasn't the Government managed the deer herds in Utah? That is a proper question. I said, in my statement, there has been too much delay on the part of the Forest Service in handling the deer problem in Utah. It should never have been allowed to become a problem. It was not a problem 20 years ago; and the Forest Service has had charge of these Utah ranges for pretty nearly 40 years.

Mr. Chairman, you, yourself, stated the principal reasons. There has been too much opposition; and sometimes the State game officials themselves are the principal opponents of a program which would

reduce the number of deer on the forests to the number the forage would support, and in fairness to the livestock industry. Mr. Chairman, I want the record to show that I am not referring in that remark, or in any criticism I may make, to any other states than Utah. I also want the record to show that I am sorry I have to make these statements but, since Utah raised these issues, I wish to express my opinion.

Mr. Leonard says, outside the southeast corner of Utah, every deer congested area was taken care of in the 1940 hunt, or in that and previous hunts. Our information does not justify that statement. In 1942, in the latter part of the winter and the early spring of that year, the State, under Mark Anderson, the State game warden, and the Forest Service, put in 232 man days in getting an estimate of the deer. We had a man engaged throughout the season in endeavoring to get a check, by the sex ratio count. I should say that the number that the State and the Forest Service finally arrived at, by the 232-day check, agreed very closely with the other method of sex ratio count. The number was set at 66,000 deer on the Fish Lake Forest alone. That is, in the herds that summer on the Fish Lake National Forest, that average a total of nine months on that forest each year. We have made another check of deer. We, in the Forest Service, in the past winter and spring, made that check, and we arrived at a certain number. They were difficult to count, because the snowfall on the Fish Lake was light and deer were widely scattered. The State, Mr. Leonard, didn't agree with that count, and I told him, "All right, take the count that the State and the Forest have agreed on in the spring of 1942, add to that the fawn crop of 1942, say, 25 percent of the herd, subtract from that total the deer that the State says was killed on the Fish Lake last fall in the hunt, subtract the normal loss through predators, diseases, and starvation, and we will take that count for it."

Our estimate of the carrying capacity of the winter ranges on the Fish Lake is 30,000 deer. As I said, we have good evidence that deer are primarily responsible for the bad forage conditions of the browse, on which they largely subsist, during the winter on the Fish Lake. We believe that 30,000 deer is the maximum the winter range on the Fish Lake, now used by deer, will carry and gradually recuperate. Certainly we cannot be content merely with stopping the damage on the deer winter range on the Fish Lake. Those ranges are producing greatly less forage than they originally produced; and we must get down to a number of deer that will allow the range to gradually recuperate, because if the valuable forage species for deer on those winter ranges are not reproducing, as things are going now, it is only a question of time until the carrying capacity will be still lower.

That, I think, we are too likely to overlook, Mr. Chairman. If any range is overstocked, it will continue to deteriorate until it is relieved and until stock are reduced—livestock, or big game, or whatever the grazing animals are—to the carrying capacity of that range; and the longer we put off getting down to carrying capacity—and we have put it off entirely too long—the lower the carrying capacity will be, and inevitably the fewer deer the range will carry.

Now, should we kill the 25,000 or so does that the big game board of the state, by a majority vote, said should be removed from Utah ranges in the fall of 1943? Mr. Leonard says, in substance, no, be-

cause we have already gotten down to carrying capacity. I agree with the majority of the big game board that we are not nearly down to carrying capacity. Certainly there must be more than 50,000 deer yet on the Fish Lake, and the best estimate of our best qualified men is that 30,000 is a maximum those winter ranges will carry and make any progress toward recuperation.

Mr. Chairman, I want to assure you and the gentlemen present that we do not employ arbitrary methods. I have been in the Forest Service just over 41 years. I have plenty of trouble, even when I watch my step, and I am not looking for any more trouble. I am careful not to go farther than is necessary in the protection of the forage and watershed. Too many times we haven't gone far enough, and that is the trouble with our Utah deer range on these congested areas at the present time.

Mr. Leonard says that the deer in the hinterland are not destroying property. He doesn't specify; but they are destroying property on congested areas. They are destroying the property of the United States. Maybe they are not bothering ranchers.

I am glad to hear Mr. Leonard approve a fundamental policy that Secretary Wilson stated in a letter to Chief Forester Pinchot on February 1, 1905, that is, that the national forest should be handled for the greatest good of the greatest number in the long run.

Thank you, Mr. Chairman.

The CHAIRMAN. Thank you, Mr. Woods.

Mr. Kneipp, would you care to continue?

Mr. KNEIPP. Only to this extent, Senator. The departmental report on S. 1152 has not been issued; therefore I cannot say what the Department attitude toward the report will be, after the various bureaus of the Department have submitted their views to the Secretary. But the current viewpoint of the Forest Service is about as Mr. Woods expressed it, we hope to proceed in conformity with the spirit of co-operative action that the Forest Service proposed in regulation W-2.

The CHAIRMAN. May I interrupt you here?

I wish specifically now to draw the attention of the sportsmen who are here, and everyone who is interested in this hearing, that it has been brought out so plainly that W-2 is a departmental regulation almost as drastic as the proposed legislation, if not more so, and yet the people of this country, acting through their Representatives in the Congress of the United States, have no voice in the formation of either of those regulations. I am referring now to regulation G-20-A and to regulation W-2. I only draw the attention of those who are listening here today to something that is very close to my thought, and that is that it doesn't go along with the departments. We must get back to fundamental principles in this country, that the people shall govern themselves by their chosen Representatives in the Congress and in the respective States. I draw your attention to these regulations. They are so illustrative of the thought that we had in mind in the formulation of this legislation, or something of its kind. It does strike me as being a splendid illustration brought out here this afternoon. Shall we be governed by regulations in the future, or shall we be governed by acts of Congress? We can always modify an act of Congress, but you can't always modify a regulation. They have seen to it that regulations are rather hard to get at. I dwell on that, not by way of criticism of the Department, because the Department has a perfect right

to do it, as has been established here, but I do want to draw to the attention of those interested in the subject that the Congress of the United States has nothing to do with those regulations, yet they impinge upon every man, woman, and child within the forest regions.

Mr. KNEIPP. Might I make this comment? Your observation is wholly correct as regards G-20-A, but the new regulation W-2 does not go so far as S. 1152; it is predicated on the principle of joint action between the States and the Forest Service.

The CHAIRMAN. That is also the spirit of S. 1152 at the present time.

Mr. LEONARD. Mr. Chairman, that is for the publicity, but I don't want you to——

The CHAIRMAN. If you don't mind, Mr. Leonard, I don't want to break in on Mr. Kneipp's statement. I am going to hear you after he concludes.

Mr. LEONARD. All right. I was going to make a short statement that will make the record more readable and comprehensive.

Mr. KNEIPP. I was just going to say this much more, Senator, that the prevailing view of the Forest Service is that conditions requiring corrective action undoubtedly exist. To meet the condition in a way which would not arouse widespread opposition, the Forest Service adopted the principle expressed in regulation W-2. That regulation has now been in effect about a year and a half. In some States the progress under it is very gratifying, while in some other States it is not. Nevertheless, in view of the reaction toward this whole question, the present feeling of the Forest Service is that perhaps a proper course would be to continue under regulation W-2 for an additional period, and see whether the States do want to work the problem out by a proper correlation of the respective functions. If they do, there is nothing further to argue about; the whole situation will have adjusted itself, and there will be no disputes, no question about the Federal Government taking over the functions of the State Game Commissions; and we will all be very happy, the Forest Service most of all. If, however, that hope is not realized; if, even after another couple of years, it is found that regulation W-2 is inadequate, and that bad conditions continue uncorrected, then legislation should certainly be enacted which would clearly express the views of Congress itself, as the custodian of all the Federal lands, and the body with power to regulate their use, as to how this situation may be met. Although the report of the Forest Service had not been formulated when I left Washington, I think that may be what the Forest Service will recommend to the Secretary, as its viewpoint with regard to the bill.

That is all I have to say, Senator.

The CHAIRMAN. Thank you very much. Are there any questions to be addressed to Mr. Kneipp?

Mr. PITTMAN. I think I have no questions, but there is one thing I do want to say. I am unable to see Mr. Kneipp is reasonable when he says this law, 1152, if enacted into law would not affect the States, if the Fish and Game Commission agrees to whatever regulation the Federal agency wants. Naturally, what he predicates the whole idea upon is the fact there is to be an agreement. I think that is the wrong way to look at it.

Mr. KNEIPP. S. 1152 says that the officer in charge shall request the appropriate officers of the State in which such lands are situated to

take such action as he deems necessary and proper to bring about such reduction. Then the crux of the bill follows: "If in any case in which such officers of the State are unwilling or unable because of provisions of State laws and regulations to comply with such request," then the part that is objected to becomes operative, but only in that event. Now, where the necessary adjustments are made, the rest of the bill would be entirely inoperative.

Mr. PITTMAN. The whole thing, boiled down, means this, that the department head making the complaint would have to confer with the State authorities, the Fish and Game Association, and if the Fish and Game Association agreed to the ideas of the Federal head, well and good; but if they failed to agree, then the will of the Federal agency would prevail, and the State authority would have no further power. Now, that is the sense of that bill; that is the only interpretation you can put on it. Isn't that right, Senator?

The CHAIRMAN. Not exactly. Here is the idea, I think, where you and Mr. Kneipp are not understanding each other. It lies in this very first provision of the bill, that the Federal agency shall submit the matter of eradication or elimination or reduction to the proper State officials.

Mr. PITTMAN. Yes.

The CHAIRMAN. Now, if the officials to whom he submits the matter comply, and carry out his request, then the rest of the bill does not apply at all.

Mr. PITTMAN. Naturally it wouldn't apply, there wouldn't be any argument. In other words, it would be there to use if it were necessary; but so long as there is an agreement there would be no use to invoke a law. That is exactly what I say.

The CHAIRMAN. Well, that is what Mr. Kneipp said.

Mr. KNEIPP. You might say this, Mr. Pittman: The first condition of the bill is that there shall exist a wildlife population on certain Federal lands that is creating injury to the soil or plant life, and thus to the wild or domestic animals dependent upon such lands or reservations for sustenance. If that condition does not exist, the bill is wholly inoperative. Therefore, before any action can be taken by any officer of the Government, he must be able to demonstrate conclusively that the prescribed condition does exist.

Mr. PITTMAN. That department head can demonstrate to his own satisfaction, and if the State authorities don't see it that way it doesn't make a bit of difference, the department head goes ahead and enforces the law. In other words, boiled down, it can only be one thing; that the department head will show the State authorities enough consideration to submit the problem of what his idea is. To that extent, and if they agree, the thing is ended. If they don't agree, then the State authority is ended and the will of the Government agency prevails. That's all you can get out of that bill.

Mr. KNEIPP. If this condition actually does exist, and if it is demonstrated and reported to the State, and if the State chooses to disregard that fact, what is the alternative? Shall the land be allowed to continue to deteriorate, and the game animals allowed to eat themselves out of existence, or should something be done about it?

Mr. PITTMAN. I think something should be done about it, and I believe the State authorities will do something about it. I know they would do something about it in Nevada, and I think, as has been

pointed out here time and time again, they know the conditions and are cooperating with the Forest Service and the Grazing Service and the other public agencies, and there is no reason to believe they will not continue to cooperate.

Mr. KNEIPP. I agree. I suspect S. 1152 means nothing to the State of Nevada.

Mr. PITTMAN. It means a great deal to the State of Nevada because if there is a failure to agree or to cooperate then the Federal agency has all the satisfaction; it certainly means a great deal to it. I can't get your reasoning where you say it doesn't mean anything to the State of Nevada.

Mr. KNEIPP. My reasoning is predicated on two points: First, there must be established unquestionably the existence of the excessive damage on the Federal property. Unless that exists, the bill does not apply.

Mr. PITTMAN. Who is going to determine whether that exists?

Mr. KNEIPP. Initially the officers in charge of the reservation. In the case of the Forest Service, probably it would originate here with Mr. Briggs, be confirmed by Mr. Woods, go to the Chief of the Forest Service, and from him to the Secretary, as a record of facts, which the Secretary will verify, and then decide whether a condition exists that must be met.

Mr. PITTMAN. In other words, they decide for themselves that that condition exists, regardless of what the State authorities decide. Here we have a law in this State that has been operative, where you had a member of the Forest Service, the Grazing Service, a member of the livestock board, and of the sportsmen, and of the wildlife, and all diversified interests there, making a survey and making recommendations. Isn't that more representative and far stronger than to have one department head—than to have a bill that permits one department head to make an arbitrary ruling or decision, and, if the State authority does not acquiesce in it, override the authority? Me, I can't see that.

Mr. KNEIPP. First, that reservation is set aside for some particular public purpose, which has been decided by or under authority of Congress. Public interest dictates that within a certain type of reservation, certain lands be dedicated to certain purposes. Then authority and obligation to carry out that mandate is delegated to the head of a certain executive department.

Mr. PITTMAN. Centralizing all of the authority in one Federal agency.

Mr. KNEIPP. It is his responsibility. He is the man to whom Congress delegates the power, and it is his obligation to achieve what is best in the public interest. Whenever he finds conditions preventing him from achieving that public obligation, he must take action, or fail to meet the obligations which Congress has imposed upon him.

Mr. PITTMAN. I can't see it. Senator McCarran says we want Congress to act. We do want Congress to act; but in this particular bill I think Congress is augmenting the authority of the agencies, of bureaus, as you might term it. I think that extends that authority, in place of curtailing it. In putting it in the hands of the people—it is true that our Congress represents the people, and it is also true that the people in our State represent the people in the State and Congress; so all of those things should be taken into consideration.

The CHAIRMAN. You have got to go back to the same proposition we went over here two or three or four times today; that is, that the Federal Government is the owner of the open public domain. The Federal Government, according to the laws that now exist, has the unqualified right, without addressing itself to the people at all, to take the wildlife. They don't even have to consult the people. That being true, any modification of that limitation, that puts the matter into the hands of the people, unquestionably is better than that.

Mr. PITTMAN. Senator, do you believe a little different angle could be considered, in the event the bill is going to pass, regardless of what a great many people think about it? Is it possible to amend the bill so as to exclude Nevada by saying this bill would not apply to any State with a population of less than 150,000? Would that be constitutional, in your opinion?

The CHAIRMAN. Well, I don't want to pass on the constitutionality of that, offhand; nor would I pass on the efficacy of the public policy of it. I think the public policy would be wrong; but I think, Mr. Pittman, you are too apprehensive. You give the chairman of this committee too much credit on the question of passing this bill. Bills are introduced in Congress, and they go to the departments for approval or disapprobation. They accomplish results in various ways. This bill is accomplishing a valuable result, if it never goes another inch farther than where it is. It has already accomplished a valuable result; valuable to the people of this country. It has aroused the people of this country to a condition of law that they have not had brought to their attention before; and it has aroused the people of this country to a power that was in the Federal Government that they have never thought of before. I am in hopes, as the proponent of the bill, and at the behest of my committee, to arouse further interest in this bill, so that the people of this country, advising their Congress, will eventually formulate legislation whereby the States will retain their rights, regardless of 50,000 or 150,000 or 1,500,000 population, or any millions of population; that the States will retain all of the possible rights they can retain, and at the same time preserve the law as it is, and preserve the open public domain. I think we can work this thing out, and I think we can work it out successfully. I think that when we do work it out many of the objections that have been raised, if not every one of them, will drift into thin air. That is my view on it.

Mr. PITTMAN. I hope you are right.

STATEMENT OF THOMAS DEARDON, GARRISON, UTAH

Mr. THOMAS DEARDON, Garrison, Utah. Is there any better time to dispose of those deer than now?

The CHAIRMAN. I don't know. I know the committee has a few members that would like to dispose of them, if you've got one or two.

Mr. DEARDON. The question is, with me, that range is going down all the time, and there is a surplus of deer, and there is more cattle than we have ever had in our country. Which is the best time to get rid of them, now, or wait until after the war is over?

The CHAIRMAN. I can't answer that.

Mr. DEARDON. Don't you think those soldiers would like one of these deer?

The CHAIRMAN. I imagine so.

Mr. DEARDON. Why shouldn't it be a good idea to send one of these soldiers a deer and uphold the tame industry? Those men have got to live as well as the men——

The CHAIRMAN. Off the record.

(Off the record discussion.)

The CHAIRMAN. Do you recognize the fact that we have a problem here that we are trying to deal with?

Mr. DEARDON. Yes, sir, I do.

The CHAIRMAN. These hearings are for the purpose of bringing out the thoughts that may come, from every angle; and, if you have attended here, that has been very liberally expressed. We are very happy, at the present time, to say there is no intimation, that we have heard, to destroy wholesale the wildlife in any particular section. We do know that in the past it was necessary to do that, and the courts upheld the doing of it.

Mr. DEARDON. Which is most necessary, to protect the wildlife animal, or the tame, for the benefit of everybody in our country?

The CHAIRMAN. Well, now, we don't want comparisons. We want to protect both.

Mr. DEARDON. Which is the most essential?

The CHAIRMAN. Well, personally, I think the taxpaying animal is the most essential.

Mr. DEARDON. That's what I think; and now, it seems to me, is the time to dispose of those deer.

The CHAIRMAN. You wouldn't dispose of them all, would you?

Mr. DEARDON. No, sir, but I look at it like as if I owed a debt. If I owned a ranch and a bunch of cattle, which would be better to dispose of, the cattle or the ranch. I couldn't build up a bunch of cattle again if I disposed of the ranch and the range was gone to pieces.

The CHAIRMAN. I talked to a rancher, and he said he would like to dispose of everything he has.

Mr. DEARDON. I'm getting old; but if I had my time to live out on a ranch I'd rather dispose of my cattle than I would my ranch, because I would have a chance to build up again. The way I feel about the deer, I feel like we have a chance to build up in the deer, but if we dispose of our tame stock, it is going to ruin our country, it seems to me.

The CHAIRMAN. All right, thank you, sir; thank you very much.

Mr. LEONARD. Mr. Chairman, in regard to the deer that died on the ranges of Utah, that was in 1928. The first doe killed in Utah was in 1934. Since that time, we have taken drastic steps in taking care of our concentrated areas. We are going to do so; we are going to continue that program. One of our difficulties is in determining actually what the carrying capacity of any given range is. We have a range in Utah known as the Stansbury area. An estimate made by one member of the regional office in Utah stated that the carrying capacity of that range was 4,000 head. Later the carrying capacity of that area was changed to 2,500 head, after we had reduced the herd on that particular area to 3,500 head. Now, I would like to work these problems out in a cooperative manner with the agencies affected, but in order to do that we have got to have mutual confidence and trust in each other.

Now, in our deer counting, our game wardens, counting with representatives of the Forest Service, have their disagreements. Many of our men maintain that the estimates given have been too high by the Forest Service. Now, we are seeking after information. We have proven in Utah that we are willing to face our problem. We killed 63,609 deer in the State last year, as I have stated. I think the facts speak for themselves in that particular instance. The number of deer being killed each year has increased. We spent \$1,000 last year sending a man to California, asking hunters to come into Utah to hunt. I don't know where any Federal agency administering the game problems in the State would get more hunters. We sold two and three doe permits to individuals last fall, in order to take care of these problem areas.

In spite of any statements made here, I am thoroughly convinced that the Fish and Game Commission of the State of Utah has taken the greatest possible steps toward meeting their problems and taking care of them; in fact, greater steps than any State in the Union.

The CHAIRMAN. Thank you, sir.

Does anyone else wish to question Mr. Kneipp or Mr. Woods? Don't hesitate; they don't come to visit you very often, and they are apparently full of information.

Mr. J. M. SMITH. I don't know as I have any questions.

The CHAIRMAN. Please state your name.

STATEMENT OF J. M. SMITH, CEDAR CITY, UTAH

Mr. SMITH. J. M. Smith, from Cedar City, Utah.

I operate on the forest, on the public domain, and on privately owned ground, and I can't see why the Government should not handle the deer. They handle the livestock. We pay them a fee to take care of them, and I don't see how the Government can take care of the livestock and the State the game; so I think they ought to take it all. In my particular area we are close to a park. The deer is protected on the park, and also the mountain lions. I asked the park officials why they protected the lion, and they said to regulate the deer. We keep a hunter right along the border. Myself and two or three others are paying \$40 a head to shoot those lion. Them "Government cats," we call them, and we shoot them when they come over the line. If they don't do something with the deer coming over there and starving to death, we are going to do it. In fact, they are so God damned poor that they come over on our ground, and they ain't fit to eat; but we have got a problem there. We have got privately owned ground. I sent a man up on my range, 2 years ago, and he came back and said, "My God, there are thousands of deer on your range, coming from Zion Park, and starving to death and going down there and wintering." There ain't one-tenth of the winter forage for the deer on there. They crowd the snow back, follow the snow.

While I admit our game officials have done a wonderful job of killing a lot of them off, I think they ought to kill a few more; but I do disagree with them on the competitiveness on the deer with the livestock. I don't think that a deer will eat anything that a sheep won't, and not much that the cattle won't. I think more than 10 per cent they are competitive, because we don't get on our range until the middle of May, and if the snow comes off in February, and they

are in in March until we can send them up to the forest, or they go out; so I think the Government ought to take hold of them.

The CHAIRMAN. Mr. Leech, do you care to be heard? I would like to have your statement. Have you any statement as to the Grazing Service?

Mr. LEECH. No, sir; I have read the information as to 1152. I read the statement from Mr. Rutledge's letter. That is the extent of my comments on 1152.

The CHAIRMAN. Very well, if that is all you care to say on 1152, it is not necessary to go any farther into the subject here today. We have some other matters that we are going on, at the proper time. Miss Reporter, I will hand over to you a memorandum of authorities which will enlighten the record as to the law bearing on this subject. Everyone who is here and has left his address with the committee, and everyone else, will eventually have a copy of these hearings. In the hearing will be these court decisions and this memorandum of the law, as we have tried to work it out.

We are going to pause here now for 10 minutes.

(Recess until 3:35 p. m.)

(The memorandum is as follows:)

Two questions present themselves: First, what is the extent of the power now vested in the Federal Government with relation to the killing and transporting of game on Federal reservations? Second, what changes in this authority, if any, would result from enactment of S. 1152?

Directing attention to the first question, a review of the history of the law on this point shows that the right of the Federal Government to deal with *ferae naturae* was gradually restricted over a period of many years, but that recent judicial decisions have reversed this trend and seem to favor enlargement of this right.

Originally, the ownership of wild game in England was regarded as vested in the King as a personal prerogative. In the course of time, however, it became established that the title of the Crown was only in trust for the English people (*State v. Mallory*, 65 L. R. A. 773, 3 Ann. Cas. 852; *State ex rel. Clarkson*, 70 Fla. 340, 70 So. 367, Ann. Cas. 1918a, 138).

When the American States attained independence, each State in its sovereign capacity acquired the titles of the Government to the game within its borders, in trust for the benefit of its citizens.

While there is some difference of opinion as to whether the titles so acquired by each State are actual property rights, the weight of opinion seems to be as stated in *LaCoste v. The Department of Conservation* (263 U. S. 545).

"The wild animals within its borders are, so far as capable of ownership, owned by the State in its sovereign capacity for the common benefit of all of its people. Because of such ownership, and in the exercise of its police power the State may regulate and control the taking, subsequent use, and property rights that may be acquired therein."

In line with this view in the decision of the Nevada Supreme Court in *Ex parte Crosby* (38 Nev. 396 (1915), where McCarran, J., said, citing *U. S. v. Shauver* (214 Fed. 154):

"In this decision, we find a reiteration of the principle that wild game and fish in public waters alike are the property of the States in their sovereign capacity, as the representatives and for the benefit of all of their people in common; from which principle, so often asserted by the several courts, it follows, as a matter of course, that the right of protection and preservation of game and fish is a matter for State legislation, and a subject over which the State courts have jurisdiction when a violation of such laws is brought before them by proper process, and where a party accused is one over whose person the State courts have jurisdiction."

With regard to game within the boundaries of a Federal reservation, the Federal Government cannot be said to have less power than would be exercised by an individual property owner over wild game on land owned by him. It has been almost uniformly held that the private owner of property has the unqualified right to control and protect the game on his lands. Thus, in a recent

Montana decision of the supreme court of that State, in reversing the decision of the lower court which held the defendant guilty of killing an elk out of season upon his own private property, said:

"The people of the State may protect their public property in the manner best suited to accomplish the purposes for which the law was enacted, but in doing so they may not disregard the natural and inalienable rights of the individuals. Legal justification may always be interposed as a defense by a person charged with killing a wild animal contrary to law" (*State v. Rathbone*, 110 Mont. 225, 1940).

And in *State v. Burk* (114 Wash. 370; 195 Pac. 16, 17, 21; A. L. R. 193), the court said:

"The argument of the State is to the effect that one may not justify himself in the killing of an elk, in violation of express provisions of the statute, simply because the elk, at the time of the killing, may be damaging or even threatening to destroy, the property of the person charged with the killing. It is argued that when the legislature enacted this statute for the protection of the elk it must have realized that they might trespass upon the lands of private individuals and do material damage to crops or domestic animals, but determined that the preservation of the elk was of such importance to the people of the State as that the private individual should bear his loss for the good of the public. * * * If in this case the appellant had undertaken to defend on the ground that he killed the elk for the protection of his life, or that of some member of his family, then, unquestionably, such defense would have been available. But the constitutional right is to defend, not only one's life, but one's property. The difference in the justification in killing a protected elk in defense of one's life and killing one in defense of one's property is only in degree."

A private owner has the exclusive right to hunt on his land and may prohibit others. *Ohio Oil Co. v. Indiana* (177 U. S. 190); *Kellogg v. King* (114 Calif. 378, 46 Pac. 166); *Sterling v. Jackson* (69 Mich. 488, 37 NW, 845); *L. Realty Co. v. Johnson* (92 Minn. 363, 100 NW. 94). In the case last cited the Supreme Court of Minnesota said:

"While true that the title to all wild game is in the State and the owner of premises whereon it is located has only a qualified property interest therein, yet he has the right to exercise exclusive and absolute dominion over his property, and incidentally the unqualified right to control and protect the wild game thereon."

So, a State license does not authorize hunting on the lands of a private owner (*Lamoureux*, 114 Wis. 44, 89 NW. 880, 886). That the rights of the United States over game on Federal reservations exceed the right of a private individual in similar circumstances is apparently well settled. Article IV, section 3, clause 2, of the Constitution of the United States, provides:

"The Congress shall have power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States."

Legislation providing for the creation and administration of the national forests is based upon this provision of the Constitution. In *United States v. Gurley* (279 Fed. 874), Judge Sibley said:

"* * *; but the Congress still has the power, under the supreme law of the land, to make such regulations as are needful, Congress being the judge of what is needful. It is probable that it is the exclusive judge of what is needful. Certainly any regulation looking to the use or disposal or the safety of the property is needful, if Congress so conceives it. It is well settled that Congress, in making regulations, may not only deal with them itself, but may, after providing a general scheme, delegate the details to some officer or commission."

In *Shannon v. United States* (160 Fed. 870), the Circuit Court of Appeals for the Ninth Circuit said:

"The Federal Constitution delegates to Congress the general power absolutely and without limitation to dispose of and make all needful rules and regulations concerning the public domain and this independent of the locality of the public land, whether it be situated in a State or in a Territory * * * the exercise of which power cannot be restricted or embarrassed in any degree by said legislation. * * * The rights given by the State statutes to the subjects of the State extend only to the lands of the State. They end at the borders of the Government lands. At that border the laws of the United States intervene, and it is within their province to forbid trespass. Such laws being within the

power of Congress, it is not necessary to discuss the question whether it is sovereign power or police power, or what may be its nature, for there is no power vested in the State which can embarrass or interfere with its exercise."

The Supreme Court of the United States, in referring to this constitutional provision in *Kansas v. Colorado* (206 U. S. 46, 89), said:

"The full scope of this paragraph has never been definitely settled. Primarily, at least, it is a grant of power to the United States of control over its property. That is implied by the words territory or other property."

In *Light v. U. S.* (220 U. S. 523), the Court said:

"The United States can prohibit absolutely or fix the terms on which its property may be used. As it can withhold or reserve the land, it can do so indefinitely."

In the *Utah Power & Light Company case* (243 U. S. 389), the Supreme Court said:

"And so we are of opinion that the inclusion within a State of lands of the United States does not take from Congress the power to control their occupancy and use, to protect them from trespass and injury and to prescribe the conditions upon which others may obtain rights in them, even though this may involve the exercise in some measure of what commonly is known as the police power. 'A different rule,' as was said in *Camfield v. United States*, *supra*, 'would place the public domain of the United States completely at the mercy of the State legislation.'"

The United States Supreme Court, in the *Kaibab Forest case* (*Hunt v. U. S.* (278 U. S. 36)), held that:

"1. When the numbers of wild deer on a national forest and game preserve have increased to such excess that by overbrowsing upon and killing young trees, bushes, and forage plants they cause great injury to the land, it is within the power of the United States to cause their numbers to be reduced by killing and their carcasses to be shipped outside the limits of such reserves.

"2. This power springs from the Federal ownership of the lands affected, and is independent of the game laws of the State in which they are situated.

"3. A direction for such killing and shipment, given by the Secretary of Agriculture, was within the authority conferred upon him by act of Congress."

This is as far as the present trend toward enlargement of Federal rights in this regard has gone, though an earlier case (*Light v. U. S.*, *supra*) appears to leave the way open for the assertion of further rights by the Congress, through appropriate legislation. In this case, the court said:

"It is true that the United States do not and cannot hold property as a monarch may for private or personal purposes. *Van Brocklin v. Tennessee* (117 U. S. 158). But that does not lead to the conclusion that it is without the rights incident to ownership, for the Constitution declares, section 3, article IV, that Congress shall have power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States. The full scope of this paragraph has never been definitely settled. Primarily, at least, it is a grant of power to the United States of control over its property. *Kansas v. Colorado* (206 U. S. 89)."

This doctrine seems to settle any doubts as to the constitutionality of S. 1152 or the proposed substitute for that bill.

However, even in the absence of specific legislation on the subject, it appears clear that the Federal Government has the power to kill, or cause to be killed, any wild game on a Federal reservation, where necessary for the protection of its property rights, and to remove, or cause to be removed, the carcasses of such game.

Under the doctrine of the *Kaibab case*, *supra*, this right is subject to the limitation that the decree shall not be construed to permit the licensing of hunters to kill deer within Government reserves in violation of State game laws. But, as seen above, the power of Congress to assert this right through appropriate legislation cannot be successfully challenged.

Let us consider now the results which would flow from enactment of the suggested substitute. S. 1152, briefly, the bill provides for deferment to State authority in handling the problem of overpopulation of wildlife on any Federal lands or reservation. The bill requires that a determination, by the head of a Federal department or agency, that such an over-population exists shall be certified to the Governor of the State in which the Federal lands or reservation are situated, together with the fact or facts upon which the determination is based.

The State is then given 90 days in which to take action, at its discretion, of such nature as it deems necessary, to reduce the wildlife population.

The bill contains a provision that the head of the Federal department or agency concerned may authorize—that is, agree to honor—licenses to be issued by the State for the hunting, trapping, killing, and possession of game and for the removal, transportation, and disposal of the carcasses of animals killed. Issuance of such licenses by the State is not made mandatory, and such licenses, if issued, will be in such form, and will retain such restrictions, as the State approves. Under section 2 of the bill, the State is specifically authorized to take such action, other than the issuance of licenses, and either in addition to or in lieu of the issuance of licenses, as shall be reasonably calculated to bring about the desired reduction in the wildlife population on the Federal lands or reservation in question.

Only in a case where the State declines to take any such action does the bill grant authority for the issuance of Federal licenses.

The **CHAIRMAN**. The meeting will come to order.

Now, ladies and gentlemen, assuming that we have exhausted the thoughts that seem to be uppermost with reference to S. 1152, and we have been able to get some very fine thoughts on the subject, pro and con, I think it well for us to pass on to another subject.

For several years there has been pending before the Congress of the United States what is commonly called the Johnson bill. It was called the Johnson bill because it was introduced by Senator Johnson of Colorado. It is not before the Congress now, because, when a bill is once introduced, unless it is passed, it dies with the Congress in which it is introduced, but many stockmen throughout the country have asked for a reintroduction of the bill. At nearly every hearing that this committee has held, the Johnson bill has been discussed, either extensively or slightly.

We have prepared the bill in a modified form. It pertains exclusively to the administration of the forest. The Johnson bill originally would have provided for the election of members of the advisory boards in the Forest Service, in about the same way they are chosen in the Grazing Service. That was quite seriously objected to by the Department of Agriculture; so much so that it got nowhere. But the stock raisers throughout the country are still interested in it, so we have prepared again a modified form of the Johnson bill, which deals with the question of the election of members of the advisory boards. It also deals with the question of limitations on distribution cuts and transfer cuts, as they exist and are carried out on the forest.

Those who graze on the forest know what a distribution cut is, and a transfer cut. You know that when there is a transfer of land or livestock from one owner to another, there is a cut in numbers permitted resulting. This bill, as it has been prepared, but not introduced, and which was formerly the Johnson bill, would provide that there could be no transfer cuts in the administration of the Forest Service. A form of the bill approved by the American National Livestock Association, not having been introduced, is not printed, but is mimeographed. We are going to send copies throughout the country, and will give each of you a copy.

The Forest Service, after making a study of it, made some suggestions with respect to certain phases of the bill. The Forest Service, as I understand it, would have no objection to the adoption of that phase of the Johnson bill which provides for the advisory boards. Therefore, we have prepared in mimeographed form a draft which is approved by the Forest Service. I would like very much, at this time, to have a brief discussion of the Johnson bill, as it is in the mimeographed form, by Mr. Kneipp, setting out his objections, if he cares

to. Also, if in the discussion he would discuss the other form, which deals only with the advisory boards, we would be very glad to hear him.

Mr. Kneipp, I will pick on you because I think we can save time and bring the matter to a head. Those interested in stock raising here will be interested in listening to you on the subject.

STATEMENT OF L. F. KNEIPP, ASSISTANT CHIEF, FOREST SERVICE, WASHINGTON, D. C.

Mr. KNEIPP. Well, Mr. Chairman, the Secretary of Agriculture, or the Under Secretary of Agriculture, by a letter dated July 3, 1941, reporting to the chairman of the Senate Committee on Public Lands and Surveys, expressed the viewpoint of the Department to the then pending bill, S. 1030. As you may remember, I read that report in detail at the Glenwood Springs meeting, and Mr. Wright and I debated it at considerable length, so much so that you finally had to terminate the debate, in order to permit somebody else to say anything about it. That was all printed in that hearing, and I don't know whether it is necessary to read this long report.

The CHAIRMAN. I would not think so.

Mr. KNEIPP. But merely to summarize the viewpoint of the Department, which is equally applicable to the bill now proposed by the American National Livestock Association, the bill contemplated three features: (1) This was the definition of the standards of commensurability; that is, the lands which an applicant for a grazing preference on the National Forest would have to own in order to qualify for the preference. (2) The second was a section which statutorily would authorize the establishment, by election, of advisory boards. (3) The third was a section which prescribed the only conditions under which an existing permit could be reduced.

The crux of the Department's report of July 23, 1941, with regard to the commensurability publication feature was that the Department did not regard it as absolutely necessary. It particularly questioned the provision of the bill which required that the commensurability standards, applicable to individual grazing districts, must all be published; the Department's belief being that the standards were known, were matters of common knowledge, and that their publication each year, as contemplated by the bill, or the publication of each minor change would have a very limited value, and would not be absolutely necessary. But the Department said if the Congress deems such action desirable, the Department has no great objection to it.

The Department's viewpoint, with regard to advisory boards, was that from the very beginning of the Forest Service the principle of organizing advisory boards and of discussing with them the requirements and procedures of grazing use of the national forests, had been a major practice of the Department. In fact, the Department was the first to establish advisory boards, being then the only agency administering grazing on the public lands. Those boards have always existed; they exist now, about 800 of them, and their number has been fairly consistent throughout the years. The Department has made a practice of consulting the advisory boards, and has received from them a great deal of valuable guidance and assistance. In fact, I might say that the regulations governing the administration of grazing on the national forests at the present time are very largely the

products of advisory boards, and the acceptance of their constructive recommendations as to how the affairs should be conducted. Therefore, the Department felt that there was no need for a statute to establish a condition that was already existing, and had prevailed throughout the entire history of the Forest Service. If, however, it were deemed desirable to give statutory recognition to the advisory boards, the Department had no serious objection to and would not oppose such action.

So, on two out of three features of the Johnson bill, S. 1030, the Department, though not enthusiastic, was at least acquiescent.

Now, we come to the third feature. On that the Department was wholly negative. It felt that the fixation as absolute limits of numbers representing current grazing use, regardless of conditions that prevail thereafter, despite whatever changes might subsequently occur in economic or social conditions adjoining or within the national forests, was an undesirable rule in many ways. It would prevent the agency having administration of the forest from working out the best distribution of preferences. One other bad feature is that while numerically the permittees grazing the smaller number of stock constitute the large majority of all the permittees, the acreages of national-forest lands occupied by the small minority of large permittees comprise almost half of the national-forest land that is grazed.

In the discussions at Glenwood Springs, some of the proponents of the bill were quite frank in admitting their object was to establish an indefeasible property right. Several of them mentioned that as being the reason why they advocated the passage of the bill. The Department does not feel that the establishment of individual property rights, on the part of a relatively small number of people, over a very large acreage of publicly owned land, is a desirable arrangement, and will continue to oppose it.

That is the crux of the situation. The new bill which has been proposed goes even further than the original Johnson bill, because it not only would preclude reductions on any existing permits for purposes of distribution to other applicants but it also would preclude reductions on transfers. Now, strangely, that rule with reference to cuts on transfers originated with the stockmen themselves, way back in 1909 or 1910. It was based on what seemed to be the quite plausible theory that if the range had been overstocked, stocked beyond the capacity, and if it were necessary that the numbers be reduced, or if it were true that bona fide homesteaders needed limited grazing preferences in order to market products of the ranches, and if, by reason of those facts, it was necessary to cut the permits of existing permittees, the man who was going out of business was far better able to stand that cut than the man who wanted to stay in the business for the rest of his life. That, at that time, seemed to be quite a logical argument, and it was adopted, and made the basis of that part of the regulations which prescribed cuts in cases where outfits were transferred from existing permittees to new owners.

Now, before this committee gets through—and it has already heard this at earlier hearings on the same subject—this committee will know that there exist in the national forests quite a number of areas where not all of the bona fide and dependent ranchers have grazing preferences. Hundreds of such ranchers feel they are acutely in need of small supplemental grazing preferences which they can utilize in con-

nection with their ranch and use as a means of marketing ranch products they couldn't otherwise market because of their bulk. Many such resident ranchers need additional cash income in order reasonably and adequately to make their living. Those people are coming to this committee and objecting to legislation that will prevent them from getting the preferences or privileges that they need. Under the rule that has prevailed for the last few years, no cuts for distribution have been made, no permits have been increased, no new permittees admitted, except to the small degree made practicable by cuts on transfers.

If you listen to these other gentlemen, that is quite an iniquitous condition. The Forest Service has to balance between these two extremes. It desires to stabilize the use of the national forest so that it will afford maximum security and stability; so that a man confidently can plan his future operations with reasonable assurance that he can carry them out. On the other hand, there are hundreds, potentially thousands, of honest, qualified people, who believe that their need should be recognized and that they should be permitted to share in national forest range use to a limited degree, even though some of the larger permittees may have to be content with a smaller share. Therefore, the Department believes that this part of the bill is definitely contrary to sound public policy.

The stockmen have argued that what they want is a statement of policy by the Congress. What they are asking for, however, is not a statement of policy, but a rule of law, a definite statutory fixation of property rights. The bill that the Forest Service has suggested as an alternative is a statement of policy. It's first section starts out with a declaration by the Congress as to what the objectives of range use should be; the basic policies by which the Secretary of Agriculture should be governed in apportioning the grazing privileges on the national forests. It is not a fixed and inflexible rule of law, but it does declare the intent of Congress.

The Johnson bill declares the intent of Congress to be specifically one thing, and one thing only. That, briefly, is the comparison between those two drafts of bills.

The draft by the Forest Service omits the commensurability clause because commensurability standards vary widely. Down in the Southwest, perhaps the ownership of a headquarters ranch and some sources of water supply meets the requirements of local range practice, and is all that the individual needs. If he had more than that he would have more than he required. In other parts of the country, where the competition for range is very keen, the competitors for that range are seeking to make practicable the continued operation of intensively operated and developed farm properties; are trying to find means of transmuting their bulky crops into commodities of sufficient compactness and value to be shipped to distant markets. There the men who are applying for privileges, or who hold the privileges, are men who own well improved land, land producing hay and grain, and so forth; men who own considerable investment in range improvements, such as fences, corrals, water supplies, and things of that kind. Consequently commensurability would vary a great deal between the extremes of those widely different types, and a definition of commensurability would either have to be inadequate to meet all situations, or would have to be so general that it wouldn't mean much more than

the present practice. Therefore, that has been left out of the bill, out of the Forest Service draft, I should say. Nevertheless, I assume that the attitude of the Department, on that point, would be as it was 2 years ago; that if the Congress felt that it was necessary, the Department could offer no very strong reasons why it should not be made a part of the statute.

However, the crux of the whole situation is this: Shall these grazing preferences on the National Forest which are quite valuable, which bear a very intimate relationship to the economic welfare of many persons and large surrounding areas, shall they be frozen in their present status, which has been more or less fortuitous, as a matter of fact, or shall there continue to be a certain amount of leeway so that very equitable and obviously proper adjustments can be made?

The Forest Service believes very strongly that the latter is the policy that will redound most to the public interests. It does not intend that the distribution policy shall be widely applied, widely experienced, but feels there should be a certain balance between the status quo and the recognition of new applicants. Past experience has shown many new applicants, recognized in earlier years, did not make any permanent use of the preference, but very frequently transferred it to one of the larger permittees, who then qualified for renewal of permit.

Nevertheless, even though that condition did occur occasionally, it is felt that there will be cases arising in the future where the interests of the community, the individual and the industry may very properly dictate some change in the distribution of preferences from that which now prevails, and if that should prove to be the case, if the need for such changes would unquestionably be established, then there should be power to make it without having first to go to Congress and ask it to reconsider the whole situation and modify the law.

I think that distinctly states the position of the Forest Service in regard to this measure.

The CHAIRMAN. Is there anyone present who cares to discuss this bill? Mr. Swallow, would you care to discuss it?

STATEMENT OF GEORGE N. SWALLOW, SHOSHONE, NEV.

Mr. GEORGE SWALLOW. I don't have very much, Mr. Chairman, to say about this except that, at the present time, for the few remarks that I will make, I represent the Eastern Nevada Cattle Association, as president of that organization.

Last night, at a meeting of the Eastern Nevada Cattle Association, that group went on record as favoring the enactment and passage of the revision of S. 1030, the Johnson bill. Expressions were given to this effect, that as long as the policy continues of cutting grazing permits on the National Forest for 10 years, 10 percent, and, also, whenever a transfer is made, that a similar or greater cut is made, that it does not offer any stability to a large stock operator. It was illustrated in this way: Supposing any operator, livestock operator, who has a well-balanced year-round operation, at the end of 10 years has a 10 percent cut. That operator has actually lost 10 percent of his investment, because, after all, about the only way, in the past few years, that an operator has been able to go into business, that is, when the operator is new, has been by the actual purchase of a grazing

preference. These preferences cost in this locality, for sheep, approximately \$8, and for cattle on the basis of from \$20 to \$30. You can readily see that a permit valued at \$10,000, and actually costing an operator \$10,000, can, within a 10-year period, be reduced 10 percent; and, in the event that 2 or 3 transfers are made, not only is additional money lost to someone, but the unit is cut down to the point where it may not be a going concern. After all, if the livestock people are to continue in business, they are entitled to something that will give them definite assurance that there will be stability.

We realize, at the present time, and during the past few years, that the policy of the Forest Service has been not to reduce any of the present allotments. That has been the policy; but, nevertheless, they still have the power to do it if they wish. It is just a matter of a change of policy by an individual. During the past few years the livestock operators have been fortunate in that they have had individuals that took that attitude, but we do not know who might be placed in the different positions in the future. Anything could happen. These 10-year cuts could be resorted to again, and transfer cuts could be made.

The CHAIRMAN. Aren't they making transfer cuts now?

Mr. SWALLOW. I think that is true.

The CHAIRMAN. Transfer cuts are being made now; isn't that true?

Mr. WOODS. Yes, sir, Senator McCarran.

The CHAIRMAN. Well, the transfer cut is how much as a rule?

Mr. WOODS. As a rule, it is 10 percent if ranch property and stock are bought together, or 20 percent if but one.

The CHAIRMAN. Well, a stockman having rights or permits on the forest, that right or permit, if he sold, would be reduced 10 percent if he sold his entire outfit. Is that right?

Mr. WOODS. Not necessarily. The cuts are not mandatory. They are made if we need range for some well-qualified new applicant, or if the allotment is overstocked; and we need protective cuts, then we take advantage of the transfer to get it straight.

The CHAIRMAN. You still have, in addition to that, your protective cuts?

Mr. WOODS. In addition to that we have protective cuts.

The CHAIRMAN. Those take place without any transfer at all?

Mr. WOODS. Yes, sir.

The CHAIRMAN. Well, a number of transfers of a piece of property would soon, if the 10-percent cut was invoked, reduce the unit to a point where it might not be an economic unit.

Mr. WOODS. But, Senator McCarran, if we are down to carrying capacity, then very often we would not make the 10- or 20-percent cut, because we wouldn't need it, and we couldn't use it to advantage.

The CHAIRMAN. Well, now, Mr. Woods, I don't know that this would be a fair question, in view of the fact that you may not have the data here, but do you recall any transfers made, say, in the forests of Nevada in the last 5 years, in which there has not been a transfer cut?

Mr. WOODS. I haven't the information. There are two supervisors here who probably can answer that for their two forests.

The CHAIRMAN. If it can be answered with the information that you have at hand, we would like to have it.

Mr. BRIGGS. I think we have one case, Senator, where we have not made a transfer cut for this forest. We have taken advantage of the privilege of not making transfer cuts, except where it is absolutely necessary, on preferences, under what we call the lower limit, which would put that operation down below an economic unit of operation. The lower limit on this forest is 1,200 sheep, and—

The CHAIRMAN. Is that the minimum?

Mr. BRIGGS. Well, that is the limit below which no cuts, no reductions will be made except for range protective purposes.

The CHAIRMAN. How many cattle?

Mr. BRIGGS. How many cattle?

The CHAIRMAN. Yes; below which you would not cut?

Mr. BRIGGS. One hundred and fifty is the lower limit.

The CHAIRMAN. Well, now, perhaps this question has been asked before, but it is a little hazy in the mind of the chairman: Supposing that you have a ranching unit, and the unit has no grazing privileges, aside from the Forest Service, and the rancher produces, say, 500 tons of hay at the base ranch; supposing he was cut down to 150 cattle by the Forest Service. He wouldn't have an economic unit, would he? Unless, of course, he had a market for the surplus hay.

Mr. BRIGGS. No, that is right.

The CHAIRMAN. I'm just wondering how it works out in some cases. If there was a case of that kind, how would it work out? Would ranching under that condition pay? That is what I wonder; what I am driving at, at least.

Mr. BRIGGS. Well, you may have several cases, Senator, where a man may have much more commensurate range property than he has a grazing privilege for. Certainly we do have those cases. We have a number of those cases.

The CHAIRMAN. Yes; I am sure of that.

Mr. BRIGGS. This commensurability property is considerably above their actual grazing privileges.

The CHAIRMAN. Is there any other forester here who can answer? Do you know of any case where there has been a transfer and no cut, in the past 5 or 6 years?

STATEMENT OF A. R. TORGERSON, FOREST SUPERVISOR, HUMBOLDT NATIONAL FOREST, ELY, NEV.

Mr. A. R. TORGERSON. Forest Supervisor, Humboldt National Forest, Ely, Nev. No transfer cuts below the lower limit during the past 5 years, that I know of.

The CHAIRMAN. Do you know of any transfer where there has been no cut?

Mr. TORGERSON. All transfers below the protective limit have not been cut.

The CHAIRMAN. If a unit was down to the lower limit, there would be no cut on the transfer?

Mr. TORGERSON. That's right.

The CHAIRMAN. Do you know of any cases of that kind?

Mr. TORGERSON. Yes; there have been a number of cases of sales, during the past 2 or 3 years, on which there has been no reduction because they are below the protective limit.

The CHAIRMAN. Do you know of any case, where they were above the lower limit, where a transfer cut has not been effected?

Mr. TORGERSON. No, I don't; not on the Humboldt.

The CHAIRMAN. In other words, you have been carrying on the transfer cuts, down to the lower limit?

Mr. TORGERSON. When for the reason that we needed surplus range for range protection; not for distribution.

The CHAIRMAN. How many new permits have you issued on that particular range, growing out of the transfer cuts?

Mr. TORGERSON. None.

The CHAIRMAN. Have any new permits been issued at all?

Mr. TORGERSON. In the last 3 years, I am sure not; not the last 5 years; but I am sure, the last 3 years.

The CHAIRMAN. It does impress the Chairman of this committee that there is a lack of stability in a farming unit where transfer cuts are permitted, and that lack of stability takes from the value of the unit. It must, of necessity, take from the value of the unit. There may be good reasons, growing out of the practice of that procedure, but it does not appeal to me, as one who is not very well versed in it, but who is trying to get the inside of it.

Mr. TORGERSON. Take the case, Senator, if a transfer were made above the protective limit, and no reduction was needed for protection, the cut would not be made ordinarily.

Mr. KNEIPP. Might I make this comment, Senator: Let's assume, just as a hypothetical case, you have a range shared by five permittees, all above the lower limit. That range is going down, so it becomes evident that a reduction in the collective numbers of stock on that range is necessary. One of the permittees wants to sell out, and the other four do not. Which would be better, to waive the transfer cut and impose the necessary reduction on all five of the permittees, or take advantage of the transfer clause, and thus minimize, or perhaps obviate, the reduction on the four who are going to stay? It would be instability in both cases.

The CHAIRMAN. That is true, that is true; but I am wondering if the time will not come when that instability will disappear.

Mr. KNEIPP. We hope so; and when that disappears cuts probably will not be necessary. The distribution cut would provide range only to a limited number of people who clearly showed the need for it, would probably be small, and at irregular intervals.

The CHAIRMAN. The Grazing Service is now set up, I think, pretty well, with the 10-year permits.

Mr. LEECH. That's correct, Senator.

The CHAIRMAN. You have that pretty nearly completed, haven't you?

Mr. LEECH. I would say we are around 80 percent.

The CHAIRMAN. Of course that spells stability. That spells a permit on the grazing lands for 10 years; and that spells stability for the whole unit marketability. It also spells assurance for credit purposes. The Forest Service, notwithstanding the fact that it has been in existence many years before the Grazing Service came into existence, doesn't seem to have arrived at that degree of stability.

Mr. KNEIPP. Senator, may I remark that the Forest Service has been issuing 10-year permits for a long period of time, where ranges are

stabilized, and where numbers are suited to the capacity. We are in the second era of 10-year permits at the present time.

The CHAIRMAN. You are in your second era. Do those 10-year permits, issued that way, assure against administration cuts?

Mr. KNEIPP. Not to prevent damage on the range they assure against everything else. As Mr. Torgerson said, at the end of the 10-year period reductions might occur.

The CHAIRMAN. But not during the 10-year period?

Mr. KNEIPP. No, except to avert damage.

The CHAIRMAN. But the transfer cuts could take place at any time?

Mr. KNEIPP. Yes, sir.

The CHAIRMAN. Does anyone else here wish to discuss this subject?

Mr. SWALLOW. Going further, Mr. Chairman, I would like to state that the Eastern Nevada Cattle Association passed a resolution in favor of the provision in this Johnson bill, S. 1030, of establishing forest advisory boards. I would appreciate having Mr. Clarence Moorman, who is a member of the Eastern Nevada Cattle Association, discuss the subject of 10-year cuts and transfer cuts.

The CHAIRMAN. On the forest?

Mr. SWALLOW. On the forest.

I thank you.

STATEMENT OF CLARENCE MOORMAN, MOORMAN RANCH, ELY, NEV.

Mr. MOORMAN. I think one correction should be made. It was stated that the grazing preferences had been purchased. I think he meant that animals were purchased, and grazing preferences transferred with them. Is that right, George?

Mr. SWALLOW. Technically; yes.

Mr. MOORMAN. In other words, what I wanted to get at, you stated that in the record, and it didn't sound very good.

Mr. SWALLOW. Yes, in effect; these permits are exceptions, because we have been allowed to go that way. Both the Taylor Grazing and the Forest Service differ from parks, game refuges, and areas such as that. I can't see that it is exactly public by nature, inasmuch as the entire public can't participate, such as the participation can be taken in game areas, parks, and that sort of thing. Because of the very nature of the ranching and grazing units, there are only a limited number that can participate and maintain economic units.

The CHAIRMAN. Would anyone care to discuss that?

Mr. Moorman, you have been elected to discuss the subject.

Mr. MOORMAN. I have to stand up because I don't talk much. Now, whenever you run out of something, and there isn't anything that anybody wants to say, they call on me.

I don't know why, but this is a delicate thing to me, Mr. Chairman, this forest, and that Taylor bill, because I am in both of them. I said to you once before, I wanted to hold the both of them, one as a leverage against the other, so we could remedy the mistakes one makes against the other. Of course, you can say, "Give the devil his dues," but if you say, "Which devil?" I says, "Both of them."

Now, I figure that the forest has in their time accomplished something for us. But the only thing about it, they were a little too hard boiled for us, gave us something we don't want, and left too much

feed, and give it to the other fellow. You know how that makes you feel; don't do that now, see? Now, I tell you, I say that the Taylor bill has helped the forest be a little more liberal. Now, the forest can take it either way you want to, or the Taylor bill, see? Now, one thing, Mr. Briggs—I can talk to him, he doesn't take exceptions to everything, because he is working under rules and regulations. The Senator says to me, "Who is your boss?" I says, "If you work for anybody, he is your boss." However, this is the point that I want to get at: Now, I figure that if a man is a director, that, absolutely, he should be a director. That is, somebody says it is just a director. We talk it over, you see, but we have no assurance that is going to be what we talked over, because you can change it.

Now, as far as forest supervisors, Mr. Briggs, he and I would fight every darn year over a little thing like salt. Finally he told me, if I didn't do as he said, he would cut me 10 percent. I said, "Go ahead and cut me." It doesn't make you feel too good toward the Forest Service, or anything else, when they are always going to cut you and cut you. It may sound funny. It would be all right if he'd cut for cause; but I figure this cut business is out of trimmings; and if they try to do the same thing in the Division of Grazing, as long as I am in it, I am going to try to stop it. I think the cattle or the sheep should be the best judge as to whether you're going to do a hell of a lot of cutting, in 10 years or any other time. I think the condition of the cattle should be judged. If they come off a good range they are good; if the winter is bad they come off worse. But don't hang it over a man's head that you're going to cut him because he don't salt right, or something or other.

If the Division of Grazing starts the same thing—here is the point, we get out here, I do, and you ask me my opinion in regard to what has happened. I have had experiences, during a lifetime, and I don't want to do anything else. This man, his obligation is to go with these others, and still we are looking ahead, too. The point I'm trying to get at is that the advisory boards should be where they have a little voice, not to just sanction what you say, or they say, or anything. It should be binding, and we should get paid for it.

I don't see why you bring us in here and pay expenses, and it costs us \$10 a day to sanction something that you already got backed and everything, to make it legal for you, and we get \$5 a day. We can pay you \$50 a day to look over our business, and you spend \$10, and then you are paying us \$5 a day. We come in here; I am here; got to pay my own expenses, and go home shaking hands with myself if I'm not out much money. \$5 or \$10 ain't bad; it helps a little. But I would like an advisory board to be an advisory board. I was a director in this hotel, up here, and it cost me \$26,000. I thought a director was a big man. I didn't know they could wash him. Now, I want something, Mr. Briggs. You can wash me for \$26,000, and yet I'm a director. Here's the point, get down to business; if we can make these things work out without cutting every time you figure. I paid once on 900 head, 400 horses, and 500 calves, and now I'm paying on 338 head. Pretty soon I'll pay on 250 here, if I transfer. I'm afraid to transfer. The Government takes part of it, and the other will take it all. I can't sell it; that is the only thing. As I told you once, Senator, if I get in bad, stop me.

Here is the point, we have an object in view, what we want to do with this here is to try to make it just as near as we can to being workable, both of them, I don't mean one. If you people will set an example, I will try to get the other fellows to set one, too, as long as I'm in there. I believe in cutting with a cause, and never mind range protection. How do we know you're protecting the range? You say you have to have range protection, and then you cut everybody. I have got a whole range, and you cut the whole cheese of it. I don't think that is right. It ought to be a whole cut or something.

You can't regulate the Taylor bill like you do here. I think every locality should be handled in a way to suit that locality, and I think we'll get along that way, if you do. If you keep pitching at us, you're always going to have the sheep association and the cattle association meeting one day, and they're going to cuss one another, and they're not going to get together. Now, we work together as stockmen, not as sheepmen or as cattlemen, and we have the feeling that what we are doing is for the benefit of the country. I've been here so long now that I don't want to leave, and I'm not going to leave if I can help it. I can sell out tomorrow, but I like to get in here, in town, once in a while, where they say, "Pop is here." Yet if we can stop the idea of the feeling of cuts for cause and effect, and so forth, and range regulations, I think we ought to do it. I'd like for those cattle or sheep to regulate that range a little in regard to cuts. I think they are a better judge of the range than we are. If they come out, and they look good, for 3 or 4 years, there ain't nothing very bad. If they look bad, I'm willing to cut a little. Now, the system, standing in here today, shooting them all in the eye, is unfair, giving them cuts after a while. You can't make a living on under 150 cattle to save your life, and you can't make a living on 400 head of sheep or 600 head of sheep. You have got to have a little.

In 1931 I fought for 7 weeks to gain the '31 law. It gave us 5 years' priority use. "Customary use," what is customary use? Customary use—I went down; ate us out; came back, and ate us out. That is customary use, and what we are trying to stop is customary use. I have had them tell me to put my cattle on the haystack. I don't know what's the matter with these people in the State of Nevada. I guess they are cowards. It's a good thing it wasn't in Montana; they would have run them over the cliffs. Cowards or civilized people, I don't know which.

Is there anything else, Mr. Swallow? I sometimes forget what you started.

MR. SWALLOW. I would suggest that would be enough for the present, Pop.

MR. MOORMAN. I tried to help you out there. The deer are chasing you out there. The deer have got nothing to eat out there. If they stay up there, let them stay, and give them that range. They went up there and found nothing to eat. Now that was what we are scared about, that the deer is going to take some of this cut off of us, and the deer is going to put me out of business. So, today, maybe because of some of your wildlife friends, if any of them wanted to go to work and put everything above 6,000 feet into a deer range, I might as well go into the deer business. My ranch is 6,500 feet, and I'd have to go into the deer business, wouldn't I? That looks pretty silly, when people get so one-sided they want to elevate you, by gosh, where you can't raise

a crop. Vegetables freeze down every month in the year. Here I am down here, I'm 6,000 feet, and everything above me is a deer range. I'm down in the flat. Now, you take wildlife, nobody on earth, I think, protects wildlife better than a farmer, or a rancher, or a stockman. They don't want to slaughter them or destroy them, but by gosh they don't want them to destroy them either. For a man to tell you we have got no right to come in our fields and hunt, why Jesus, we only go out once a day, and you fellows hunt the year round.

Well, Mr. Chairman, if this goes on too strong, or too long, just say, "Pop, stop."

The CHAIRMAN. Well, what do you say we stop now?

Mr. MOORMAN. I want to give the sheepmen a chance now.

Mr. WOODS. May I make one correction? The Forest Service is not making blanket reductions. They treat each allotment as a separate unit for purposes of any necessary reduction.

The CHAIRMAN. There was an intimation there in Mr. Moorman's statement, that if I heard it right, doesn't set very well. Maybe there is a reason for it, but if reductions are used, as punishment or reprisals for some noncompliance with regulations, I am at a loss to see how they could not be an abuse of discretion. Along that line, that might be very serious, if it is customary to cut as a punishment for failing to comply with the regulations. The stockman doesn't have much of a court of resort to go to, and the stockman is pretty well harassed anyway. I wouldn't believe that. Someone would have to establish it to me that a practice of that kind would be indulged in. There were references made to you, Mr. Briggs. You might be able to explain it.

Mr. BRIGGS. Well, I think Pop was talking about a period a long time ago, Mr. Chairman. I don't believe that we are following a policy of that kind. I don't know that we are, not that I know of.

The CHAIRMAN. I should greatly regret to hear of a policy of that kind.

Mr. KNEIPP. Mr. Chairman, may I make a comment? I haven't heard of a policy of that kind, and I don't think one should be tolerated; but this may be a misinterpretation. There may be a range where the stock are crowding to capacity, but if all means are applied to carefully distribute the stock, including salting, to get them out and equalize the burden on the range, it will carry that stock. If that is not done, it will not carry that stock, it will only carry 80 or 90 percent of it. It is a matter of construction of what the supervisor said. He may have said, "Unless you salt that range to get the best use, it won't carry the full number, and you'll have to reduce." That was not as a penalty, but as a matter of protecting the range.

The CHAIRMAN. The expression was rather harsh on my ears, because, if it were true and that were the practice, the stockmen would have little redress.

Mr. KNEIPP. I think, Mr. Chairman, if that practice had been generally followed, there wouldn't be any livestock left on the national forest.

The CHAIRMAN. Does anyone else care to be heard?

Mr. JOHANSEN. We are in a discussion over the advisory board with the Forest Service. Now, in this district here we have an advisory board that works for the national forest, and how they were elected, or, that is, how they were to be elected, I don't know, unless maybe Mr. Briggs can answer the question. Was it that the Forest Service

has its own advice to elect an advisory board to get their advice and recommendations?

The CHAIRMAN. In other words, how are the present Forest Service advisory members selected? There are advisory boards, are there not?

Mr. BRIGGS. Yes.

Mr. KNEIPP. The customary practice is that they are selected by the permittees.

The CHAIRMAN. Is that the general custom on the ranges?

Mr. BRIGGS. That's right; elected by the permittees.

Mr. WOODS. That is the invariable practice. Senator McCarran.

Mr. JOHANSEN. That is correct; but the advice and their recommendation, as advisory board members, is just endorsed by the Forest Service, isn't it?

The CHAIRMAN. Just what?

Mr. JOHANSEN. Endorsed by the Forest Service. It is not recommended or acknowledged by the Secretary of Agriculture.

Mr. WOODS. Ordinarily it is approved, or disapproved by the forest supervisor.

Mr. JOHANSEN. That is the question, was to see what power an advisory board had to act under the present conditions, other than just furnishing a little information. Now, under these conditions. I wouldn't think their recommendations would be in power to tell other permittees that he could have this, or couldn't have that. So I just make that statement, that I think the provisions of the 1030 law, or the Johnson bill, should be adopted, so to give the advisory board their full authority to act, from the power of the Secretary of Agriculture.

The CHAIRMAN. When the Grazing Service was first set up the Secretary of the Interior promulgated the regulation as to how advisory boards would be selected. It was a regulation. Congress saw fit to put that into the form of a law. Under the Forest Service, as I understand it, it is a regulation.

Mr. WOODS. Yes, sir.

The CHAIRMAN. And has been in effect, as a regulation, for some time?

Mr. WOODS. Since 1906.

The CHAIRMAN. There seems to be an attitude on the part of those who foster this bill to do the same as regards the Forest Service with reference to the Grazing Service on the theory that is as it was put forward. I was the author of the bill with reference to the Grazing Service. It was put forward that it was discretionary on the part of the Secretary of the Interior to abolish the regulations any time and the advisory boards will pass out of existence. Now, this is promulgated on the same theory; in other words, to put it in the form of a concrete law. The stock industry seems to think there is more security in that; and I want to say, frankly, that the Department seems to favor it. There is no objection to the short form of the bill. Was that all you cared to say?

Mr. JOHANSEN. That is all.

The CHAIRMAN. Was there anyone here from the sheep industry who cared to be heard?

Mr. JOHANSEN. Well, I was just one sheepman. Maybe there is an organization; there should be a representative here from the Eastern Nevada Sheep Growers Association.

STATEMENT OF BILL ROBISON, MCGILL, NEV.

Mr. ROBISON. Speaking individually and collectively for the sheep industry, I rather favor the Johnson bill, 1930. I think it would give a little more stabilization to the livestock industry if we had something a little more permanent. As has been brought out here before we have gone through a good many years of different transfers, of cuts. I can't see, individually, why a permit should not be just as good in the hands of another transferee as it was in the transferer. All it is doing is jeopardizing the ranch property that it stands by. In other words, that permit, or the livestock that it supports, is the bread and butter of the average Nevada livestock man, and anything that can be added to stabilize that permit is more secure for that individual that is in the livestock business. I'd say that it would help the livestock industry in Nevada if the bill would pass, the Johnson's revised bill of 1930.

The CHAIRMAN. Thank you, Mr. Robison.

Are there any questions? Thank you very much.

Does anyone else care to be heard on this? If not, we'll pass on to another proposition.

In this instance we'll take up S. 1139. Senator Hatch, of New Mexico, has a bill relating to placer mining claims of deposits of phosphates, sodium, potassium, oil, oil shale, or gas on the open public domain. Has this been drawn to the attention of anyone? I state this bill, if enacted, would provide—I think it might be well for you to read it. I'll have the investigator of the committee read this bill into the record, or I will read it into the record.

(Thereupon Senator McCarran read S. 1139 into the record as follows:)

[S. 1139, 78th Cong., 1st sess.]

A BILL Relating to placer mining claims for deposits of phosphate, sodium, potassium, oil, oil shale, or gas on the public domain

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, except as provided in section 6 of this Act, the holder of any mining claim located for deposits of phosphate, sodium, potassium, oil, oil shale, or gas on the public domain shall, within one hundred and eighty days after the date of approval of this Act, file in the United States land office for the district in which the deposit claimed is located, or in the General Land Office if there is no land office for the district, a statement under oath of the existence of such claim, which shall contain the name and address of the claimant or claimants, the time and place of the original location or relocation, and such other relevant information as shall be prescribed by the Secretary of the Interior; and upon failure to file such affidavit, such claim shall become null and void and all rights and interests thereunder shall terminate.

Sec. 2. If the labor or improvements required by section 2324 of the Revised Statutes, as amended, shall not have been performed or made on any mining claim described in section 1 of this Act during the first full assessment year commencing after the date of approval of this Act or during any subsequent assessment year, all rights and interests of claimants in such claim shall terminate, unless compliance shall have been had with any applicable relief Act.

Sec. 3. The holder of any mining claim described in section 1 shall within ninety days after the expiration of the first full assessment year commencing after the date of approval of this Act, and within ninety days after the expiration of every subsequent assessment year, file in the United States land office for the district in which the deposit claimed is located, or in the General Land Office if there is no land office for the district, a statement under oath in such form as shall be prescribed by the Secretary of the Interior as to the assessment work done or improvements made during the preceding assessment year, or such other notice, in lieu thereof, as may be required by law; and upon failure

to file such statement or notice, such claim shall become null and void and all rights and interests thereunder shall terminate.

SEC. 4. Notwithstanding the filing of any statement required by this Act, the validity or existence of the claim to which such statement relates shall remain open to inquiry and determination upon such procedure as may be prescribed by the Secretary of the Interior, or in any other lawful proceeding.

SEC. 5. The failure to file any statement required by this Act or to perform or make the annual assessment labor or improvements upon any claim described in section 1 hereof shall be conclusive evidence that such claim has been abandoned and that all rights and interests thereunder have terminated.

SEC. 6. The provisions of this Act shall not apply to any claimant who is entitled to the benefits of, and who has complied with the provisions of, sections 501 and 505 of the Soldiers' and Sailors' Civil Relief Act of 1940 (54 Stat. 1178), as amended, during the periods for which he is protected by those sections. But the provisions of this Act shall become operative as to such claimant upon the termination of such periods, subject to the following limitations:

(a) The period of time within which a statement is required to be filed under section 1 of this Act shall commence to run upon the termination of the period during which the claimant was protected under section 501 of the Act cited.

(b) The first full assessment year referred to in sections 2 and 3 of this Act shall mean the first full assessment year commencing after the termination of the period during which the claimant was protected under section 505 of the Act cited.

SEC. 7. If any provision of this Act or the application thereof to any person or circumstances is held invalid, the remainder of the Act and the application of such provision to other persons or circumstances shall not be affected thereby.

The CHAIRMAN. That is the gist of the bill. In other words, it would require in all these placer claims that the annual assessment work be done, that affidavits be filed, and that the value of the claim be established. The significant part of the bill is that it still leaves in the hands of the Secretary of the Interior the right to determine whether or not the claim is a valid claim, based on actual probability of production. This is a matter that has been widely discussed, and addresses itself largely to the State of Colorado, although some other States have similar conditions. It addresses itself chiefly to the shale locations, where vast areas of oil shale lands have been taken up by placer locations, and are being held with no assessment work, annual work, being done, and revenue is being derived from these claims, in many instances, by leasing the ground to stock-raising industries.

If there is anyone here who cares to object to the bill, I'd like the committee to hear him. I think these conditions at this time exist in Nevada to some small extent. I have heard of them. Perhaps there are gold-mining claims in those instances, as there are not very many shale or placer claims.

If there is no comment on the subject, we'll pass over it, but these are matters that this committee has to deal with, and we are very glad to bring them out to the public, to where the public has a chance to confront the issue from a practical standpoint.

Mr. LEECH. Mr. Chairman, the Grazing Service is much in favor of 1139.

**STATEMENT OF T. C. HAVELL, GENERAL LAND OFFICE,
WASHINGTON, D. C.**

Mr. HAVELL. The Department is in favor of it as a whole.

The CHAIRMAN. I don't suppose it addresses itself to the Forest Service?

Mr. KNEIPP. Yes, also, Senator. Several hundred thousand acres of land of that kind are in national forests in the States of Utah and Colorado. We are also in favor of the bill.

The CHAIRMAN. Am I correct in the statement that lands are being held out, assessment is being held up, and those lands are being leased to the stock industry?

Mr. HAVELL. The matter, Senator, has been a subject of investigation by the Grazing Service, and is, at the present time, being investigated by the General Land Office, with a view of taking such remedial action as the facts may warrant. The difficulty, as you know, grows out of the fact that the Supreme Court, in the *Krushnic case* and the *Virginia-Colorado Development Co. case*, has held that the Interior Department has no authority to attack these placer claims that were established prior to the Leasing Act of 1920. We have no authority to attack them because of the lack of assessment work. The result is that the claims are interfering with the administration of the Grazing Act and with the national forest. Some are being leased for grazing. The question as to whether the mining claimant has a right to use the claim for other than mineral development purposes is the question which must be determined.

The CHAIRMAN. Of course, we understand that it was never the spirit of the law that placer locations should be used wholesale for the purpose of control of the surface of the public domain. I don't think there is anyone in the country that will ever claim that that was the spirit of the law when it was enacted; but it is like many other laws, it has been abused. It is one of those things that should have a stop put on the abuse. Stockmen have been assessed, and by those who have not seen the territory in, perhaps, years; but still they hold the record title to a placer claim for perhaps shale, or oil, or some other substances, under the placer law. Not only that, but, in my individual judgment, the development of mining, placer mining, has been to some extent retarded, in that claimants hold the claims from year to year against those who would operate the claims if they had them. So, it is one of those laws subject to abuse, and the committee has it under study as to whether or not this is the correct solution of the matter, a matter to be determined by the committee.

Now, gentlemen, it is approaching 6 o'clock. We have put in quite a steady day of it. I think that, unless there is something that someone wishes to bring to the attention of the committee, we will come to a conclusion. The committee must leave those who are here. The committee must leave here tomorrow morning and go to Fredonia, and then on to New Mexico, for further hearings, which will be along the lines that we have indulged in here.

Please be assured that the committee having public lands in hand are entirely men who are mindful of the use to which the public lands should be put, mindful of the fact that the public lands are an asset to the public-land States of the Nation; and, above all, don't think for a moment that anyone is going to take anything away from the sovereign rights of the States, any one member of this committee. We are a states rights committee. We do see dangers in the offing. We do know the law with reference to this wildlife. We do see that Executive orders are made out without consulting Congress; and we don't want an Executive order to be made governing the subject of wildlife, which might be even more drastic than the present law as it stands,

which could be averted by careful study and promulgation of a statute that would bring the State, as a sovereign State, into close cooperation and progressive contact with the Federal Government. The Federal Government puts out millions and millions of dollars for the improvement of the public range, for the administration of the public range, and the Federal Government, under the court decisions of this country, has its rights as the owner of the public domain. The people have their rights; the sportsmen must have their rights protected, so that recreation and the sportsman's life may be fostered and promoted here; those who use the public domain for industries that bear the burden of taxation have their rights on the open public domain. It must be protected. So, out of all this, the committee hopes to work out a progressive statute. We thank you for your attendance here. We are exceedingly grateful for the frank and open expressions that have been presented here for the record, and we assure you that it has been a pleasure to the chairman of this committee to come back home and listen to some of the talk and language that he is accustomed to when his life was spent on the open public domain of this State.

Is there anyone here who has not registered, or left a card with his name and address on it? If so, he will do that before leaving.

Thank you very much. The meeting stands adjourned.

(Adjournment, 6:45 p. m.)

ADMINISTRATION AND USE OF PUBLIC LANDS

MONDAY, AUGUST 30, 1943

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON PUBLIC
LANDS AND SURVEYS,
Fredonia, Ariz.

Present: Senator Pat McCarran, chairman.

Also present: E. S. Haskell, special investigator.

The CHAIRMAN. This meeting will come to order.

This meeting is being conducted by a Subcommittee of the Committee on Public Lands and Surveys of the United States Senate, pursuant to resolution duly passed by the Senate, and especially called for in this section by a number of communications that have been received by the chairman of the committee and by the special investigator of the committee.

We regret exceedingly to have to report that members of our committee called to attend these meetings have had other engagements and are unable to attend here. We expect to have them all with us at Phoenix; but the record of proceedings is being taken very carefully here. Senator Hayden, of Arizona, and Senator McFarland, of Arizona, are especially regretful that they cannot be present. These Senators have had previous engagements and are now conducting those engagements. The record will be carefully kept, and the Senators will have that record before them for final consideration on matters that may be brought up here.

We wish that you would sign the cards that are being passed among you, with your name and address and what official position you occupy, or what place you might occupy in civil life, if you are the chairman or secretary of any group. We would be glad to have that information. This record will be the record of the attendance here. Copies of the hearings will be sent to those who sign these cards and to others who request them.

The list of those registered is as follows:

LIST OF PERSONS REGISTERED AT FREDONIA HEARINGS

Myron H. Allen, district grazier, Arizona strip grazing district, Grazing Service, Department of the Interior, St. George, Utah.	Rubin Broadbent, Jacob Lake, Ariz.
William L. Allen, 1617 East Ninth South, Salt Lake City, Utah.	Mrs. Rubin Broadbent, Jacob Lake, Ariz.
Chas. C. Anderson, Glendale, Utah.	L. R. Brooks, regional grazier, Grazing Service, United States Department of the Interior, Phoenix, Ariz.
J. O. Atkins, St. George, Utah.	John Brooksby, Fredonia, Ariz.
Anthony W. Atkins, St. George, Utah.	Joseph Brooksby, Fredonia, Ariz.
Rudyer C. Atkins, St. George, Utah.	Myron S. Brown, Fredonia, Ariz.
James E. Babbitt, State senator, Flagstaff, Ariz.	W. J. Brown, deputy game warden, Box 1667, Flagstaff, Ariz.
Merle V. Adams, Box 16, Kanab, Utah.	Harold C. Bryant, superintendent, Grand Canyon National Park, Ariz.
Harold I. Bowman, Jacob Lake, Ariz.	Roy Bundy, Mount Trumbull, Ariz.

LIST OF PERSONS REGISTERED AT FREDONIA HEARINGS—Continued

- W. S. Connor, chairman, Arizona Game and Fish Commission, Phoenix, Ariz.
 J. W. Chatterley, Kanab, Utah.
 A. W. Craig, Tuweep, Ariz.
 Milton B. Cram, Fredonia, Ariz.
 Cecil Cram, Fredonia, Ariz.
 Ormand A. Cram, Fredonia, Ariz.
 E. A. Curtis, Jacob Lake, Ariz.
 J. Calvin Croft, junior range examiner, Grazing Service, United States Department of the Interior, Cedar City, Utah.
 Albert M. Day, assistant director, Fish and Wildlife Service, Department of the Interior, Chicago, Ill.
 C. F. Dierking, regional grazier, Grazing Service, United States Department of the Interior, Reno, Nev.
 Dale E. Doty, Secretary's Office, Interior Department, Washington, D. C.
 Charles H. Esplin, Cedar City, Utah.
 Lee J. Esplin, St. George, Utah.
 Ward H. Esplin, St. George, Utah.
 Frank L. Farnsworth, Kanab, Utah.
 Dewey Farr, St. Johns, Ariz.
 Alex Findlay, Kanab, Utah.
 A. M. Findlay, Kanab, Utah.
 John F. Findlay, St. George, Utah.
 Phillip Foremaster, St. George, Utah.
 Ephriam Joseph Foremaster, Jr., St. George, Utah.
 Newell R. Frei, St. George, Utah.
 Rex R. Frei, St. George, Utah.
 Wayne C. Gardner, St. George, Utah.
 John C. Gatlin, regional director, United States Fish and Wildlife Service, Albuquerque, N. Mex.
 Weldon George, Fillmore, Utah.
 G. J. Gray, district forest ranger, Jacob Lake, Ariz.
 Leland S. Haws, grazier's aid, Grazing Service, Richfield, Utah.
 Glenn S. Hunter, deputy game warden, Arizona Game and Fish Commission, Box 782, Clarkdale, Ariz.
 Thos. C. Havell, General Land Office, Washington, D. C.
 Fay Hamblin, Kanab, Utah.
 Clark B. Hardy, United States Grazing Service, Kanab, Utah.
 Fred E. Heaton, Moccasin, Ariz.
 Gilbert G. Heaton, Moccasin, Ariz.
 Fred C. Heaton, Moccasin, Ariz.
 Charles C. Heaton, Moccasin, Ariz.
 Douglas E. Henriques, field examiner, General Land Office, Salt Lake City, Utah.
 Charles T. Hohenthal, field examiner, Branch of Field Examination, General Land Office, Salt Lake City, Utah.
 Elmer Jackson, Kanab, Utah.
 Thomas Jensen, Fredonia, Ariz.
 Fred W. Johnson, range examiner, United States Forest Service, Albuquerque, N. Mex.
 John H. Johnson, Tropic, Utah.
 P. Elmer Judd, Kanab, Utah.
 Carlos W. Judd, Kanab, Utah.
 D. K. Judd, Fredonia, Ariz.
 Warren D. Judd, Fredonia, Ariz.
 J. Owen Judd, Kanab, Utah.
 T. Willard Jones, Cedar City, Utah.
 Henry A. Jolley, Tropic, Utah.
 K. C. Kartchner, State game warden, Phoenix, Ariz.
 Mrs. J. M. Keith, secretary, Arizona Cattle Growers Association, 140 South Central Street, Phoenix, Ariz.
 Hugh E. Kent, Tuweep, Ariz.
 Dale H. Kinnaman, district grazier, Grazing Service, Richfield, Utah.
 L. F. Kucipp, Assistant Chief, Forest Service, United States Department of Agriculture, Washington, D. C.
 Edward T. Lamb, Mount Carmel, Utah.
 E. N. Larsen, fish and game commissioner, Hyrum, Utah.
 Carl Lausen, regional field examiner, General Land Office, Albuquerque, N. Mex.
 Joe H. Leech, Chief of Lands, Grazing Service, Department of the Interior, Salt Lake City, Utah.
 Ross Leonard, director, Utah Fish and Game Commission, Capitol Building, Salt Lake City, Utah.
 Frank Little, Kanab, Utah.
 W. J. Mackelprang, Jacobs Lake, Ariz.
 W. B. Mathis, St. George, Utah.
 Andy Matson, Flagstaff, Ariz.
 Charley McCormick, Fredonia, Ariz.
 D. L. McKinny, assessor, Coconino County, Flagstaff, Ariz.
 Stanley McKnight, Minersville, Utah.
 D. S. Moffitt, district grazier, Grazing Service, Kanab, Utah.
 John H. Page, attorney at law, Post Office Box 3706, Phoenix, Ariz.
 Frank C. W. Pooler, regional forester, United States Forest Service, Albuquerque, N. Mex.
 Elwin Pratt, Fredonia, Ariz.
 E. B. Pratt, Fredonia, Ariz.
 Francis A. Riordan, grazier, United States Grazing Service, Phoenix, Ariz.
 Allan C. Randle, Utah Fish and Game Department, Salt Lake City, Utah.
 John H. Riffey, park ranger, Grand Canyon National Monument, Tuweep, Ariz.
 Wallace N. Roundy, Escalante, Utah.
 Norman W. Sargent, United States Grazing Service, Kanab, Utah.
 John V. Schoppmann, Cedar City, Utah.
 Marcell E. Schmutz, St. George, Utah.

LIST OF PERSONS REGISTERED AT FREDONIA HEARINGS—Continued

John H. Schmutz, St. George, Utah.	P. V. Woodhead, assistant regional forester, United States Forest Service, Albuquerque, N. Mex.
Charles J. Smith, superintendent, Zion National Park, Utah.	N. F. Waddell, regional field examiner, Branch of Field Examination, General Land Office, Salt Lake City, Utah.
S. A. Spear, managing director, the Arizona Tax Research Association, 425 Heard Building, Phoenix, Ariz.	O. C. Williams, Arizona State land commissioner, Phoenix, Ariz.
A. T. Spence, Jacob Lake, Ariz.	Charles F. Moore, Grazing Service, Salt Lake City, Utah.
Lester Spencer, Escalante, Utah.	C. W. Parry, Kanab, Utah.
William G. Stambaugh, district conservationist, Soil Conservation Service, Flagstaff, Ariz.	Gronway R. Parry, Cedar City, Utah.
Donald C. Swapp, Kanab, Utah.	Arthur Woolley, attorney at law, 617 Eccles Building, Ogden, Utah.
M. R. Tillotson, regional director, Region 111, National Park Service, Santa Fe, N. Mex.	Royal B. Woolley, 2152 Adams, Ogden, Utah.
C. H. Vaughn, Fredonia, Ariz.	J. Allred, district grazer, Fillmore, Utah.
J. D. Waring, Fredonia, Ariz.	

The CHAIRMAN. There is one thing that I especially wish to emphasize. This committee is composed of western Senators, and we fully appreciate that the man out on the range, or out on the ranch, or out in the open, is not very much inclined to do very much talking in public. As a rule, if you can get out on the back-yard fence with him, and get a stick or two and whittle, you can talk to him. But to come into a public gathering they are usually rather reticent. We wish to dispel that reticence. We wish you to know that we are bringing the government to you. In other words, we are trying to bring the government to the people, so that if you have complaints, if you have problems that you think your Congress could solve, we want you to tell them to us. It doesn't make any difference how you express yourself, we will get your meaning. So don't hesitate; be at ease; talk freely; ask questions; for that is what we are here for. Above all, be at ease and tell us what you think, what improvements could be made with reference to the open public domain of the United States; what might be necessary to bring about better conditions.

There is one other matter that I want to emphasize here. I am going to emphasize it quite emphatically. You need have no fear of anything that you may express here. This committee is going to see to it that no Government agency, nor Government official, will effect reprisals on anyone who expresses himself freely here. The investigator for this committee will be on the ground, and we are going to see to it that the people have an opportunity to express themselves without fear of reprisal in any way, or fear of punishment.

Now, with that in mind we hope to go forward just as rapidly as possible. If there are those groups here, or individuals here, who have attorneys or representatives and desire that their attorney or representative speak for them or ask questions during the course of the proceedings here, they are welcome. But more than that, if any individual of any group, or any individual in the audience, will stand and give his name and address to the reporter of the committee, he may ask any question pertinent to the subject that is uppermost here.

The subject that is uppermost here is the administration and regulation and orderly use of the open public domain. It covers all phases of the open public domain, the forest, the Grazing Service, the Park Service, National Monuments, and every other phase that the open

public domain may take; and all matters pertaining to the open public domain, whether it be the grazing by domestic animals or grazing by wildlife, or the refusal to permit grazing, or anything else that pertains to the welfare of the open public domain and its orderly use. We will be here, and we will conduct this hearing, using every minute that we can during the time allotted to it. We may have to work a little late this evening, in order to cover the ground; and we may have to work earlier tomorrow morning than 10 o'clock. If those who are here live remotely from here but desire to attend the meeting continuously we hope you all may be able to remain close by so we can go on early in the morning and conclude whatever comes before us.

We are advised by our investigator that Mr. Page would like to make a statement. We would be very glad to hear from him.

Is Mr. Page present?

Mr. JOHN H. PAGE. Yes, sir; but, Senator, there is no hurry about that. We can do that later when some of the other more pressing business is finished.

The CHAIRMAN. Very glad to have you make it at any time.

Mr. PAGE. I think it will be just as well to make it a little later, Senator.

The CHAIRMAN. With that in mind, we will try to proceed along what we have tried to determine is an orderly fashion. We have presented to us by our investigator a program that we will try to carry out, but if at any time it does not appear to be orderly to carry this out please let the committee know.

Under the subject Lake Mead and Zion National Monument areas, especially the Lake Mead area—is Mr. Joseph Atkins in the room? Is Mr. Charles G. Anderson, or Mr. Charles Esplin in the room? Those gentlemen, according to the report of our investigator, desire to be heard on the subject of the Lake Mead area.

Mr. ROYAL B. WOOLLEY. They have not arrived yet, sir.

The CHAIRMAN. Is Mr. Wayne C. Gardner, of St. George, Utah, here? Would you care to be heard?

Mr. GARDNER. I think, Senator McCarran, I would like to be heard at such time as the reports of the others are in. I would like to be heard in connection with them.

The CHAIRMAN. Are there others to be heard on that subject?

Mr. GARDNER. Not that particular subject, but it has to do with the same policies with livestock, grazing in park areas.

The CHAIRMAN. Well, I suggest you come forward and make your statement now, since the others are not here. We have to proceed with some order here, in order to utilize the time.

Mr. GARDNER. Then it is proper, Mr. McCarran, that I come forth?

The CHAIRMAN. Yes; I think so. This is not in the order you would like, but we have to utilize the time and cover our subjects as much as we can. Please be at ease and have a seat here.

Mr. GARDNER. Should I discuss this for the benefit of the audience?

The CHAIRMAN. Your statements are made to the record for the committee. Sit where the reporter can hear you, and make your statement partly to the audience and partly to the committee. You won't have to convince the audience, but you may have to convince the committee. Will you please state your name for the record?

STATEMENT OF WAYNE C. GARDNER, ST. GEORGE, UTAH, CHAIRMAN, LOWER VIRGIN AND SANTA SOIL CONSERVATION DISTRICT, PRESIDENT, SOUTHERN UTAH-NORTHERN ARIZONA LIVESTOCK ASSOCIATION

Mr. GARDNER. My name is Wayne C. Gardner, St. George, Utah. I am a license holder in Zion National Park or Monument, or I might be termed a permittee. I have no grievance or complaints as to our local officers administering the park problems. In each and every case the superintendents and rangers, and all connected with the grazing of livestock in the addition to the park have been very fair and reasonable.

The CHAIRMAN. Now, you get your permit, Mr. Gardner, from whom? From the park authorities?

Mr. GARDNER. From the park authorities.

The CHAIRMAN. What is the extent of your permit, in numbers?

Mr. GARDNER. 1,450 sheep, during an approximately 3-week period of time in the spring of the year.

The CHAIRMAN. Do you graze in the Zion National Park?

Mr. GARDNER. No; it is in the addition to the park, or the monument.

The CHAIRMAN. How much land, if you know, is embraced within this addition to the monument? Can anyone here give us this information? Will the Park Service kindly give it to us? First of all, how much land is in the park itself, and how much in the addition, if you please?

Mr. M. R. TILLOTSON. Senator, I can give you the information.

The CHAIRMAN. Will you please state your name.

Mr. TILLOTSON. Mr. R. Tillotson, regional director, National Park Service, Santa Fe, N. Mex. Zion National Monument is 490,150 acres, and Zion National Park is 86,343 acres.

The CHAIRMAN. Approximately 50,000 acres in the addition?

Mr. TILLOTSON. Yes; approximately.

The CHAIRMAN. And eighty-odd thousand in the park itself?

Mr. TILLOTSON. Eighty-six thousand.

The CHAIRMAN. How long have you been running sheep in the addition to the park, Mr. Gardner?

Mr. GARDNER. Since its creation, and before it was created a park, I was in that area.

The CHAIRMAN. Had you been running livestock in that area before it was created a monument?

Mr. GARDNER. Yes, sir.

The CHAIRMAN. When was this monument created, please? How long has it been in there?

Mr. GARDNER. About 10 years.

The CHAIRMAN. Since the creation, or since you have run in the area? How long have you been running in that area, Mr. Gardner?

Mr. GARDNER. Since it was created, for approximately 10 years.

The CHAIRMAN. And before?

Mr. GARDNER. Yes.

The CHAIRMAN. Practically the same number?

Mr. GARDNER. Practically the same number.

The CHAIRMAN. When the monument was created, your right of grazing in there was recognized?

Mr. GARDNER. Yes, sir.

The CHAIRMAN. And you are licensed to run that same number in there each year?

Mr. GARDNER. Through an exchange of areas, my numbers were reduced with my consent, which was agreeable.

The CHAIRMAN. Have you got that information, when it was created?

Mr. TILLOTSON. January 22, 1937, was the date of the creation of the monument.

The CHAIRMAN. Was that by Executive order?

Mr. TILLOTSON. Yes, sir.

The CHAIRMAN. 1937. Well, now, have you any understanding with the Park Service, or any notice from them, as to whether or not you would be permitted to continue with the grazing of livestock in that particular monument?

Mr. GARDNER. Yes; it is my understanding that during my lifetime I shall enjoy the grazing privilege there.

The CHAIRMAN. But you have not the right to transfer or dispose of that by will or bequest, or to make any disposition of it?

Mr. GARDNER. That's right.

The CHAIRMAN. While we are on the subject, I don't think it would do any harm to interrogate the representatives of the Park Service in connection with it.

Is that the general policy of the Park Service, that those who have been using the area may continue to use it during their individual lifetime, but they cannot dispose of it?

Mr. TILLOTSON. That is the general policy; yes, sir.

The CHAIRMAN. Is there any exception to that policy?

Mr. TILLOTSON. There have been exceptions to that policy; yes, sir.

The CHAIRMAN. In what respect?

Mr. TILLOTSON. Where the privileges have been extended to the heirs; but those exceptions are rare; but there have been exceptions.

The CHAIRMAN. But the general policy is that no right or disposition or inheritance flows?

Mr. TILLOTSON. That's right.

The CHAIRMAN. You may continue, Mr. Gardner.

Mr. GARDNER. On that particular point, that is my concern at the present time, the right of assigning. I am not particularly interested, necessarily, in assigning for financial gain, so far as selling the right. But I am concerned in my own immediate family, of handing that right on to my sons.

The CHAIRMAN. You mean during your own lifetime?

Mr. GARDNER. Yes; and that it might continue in the family. This policy no doubt has not worked a hardship in times past; but at the present time, with the Federal range all under control, one's operation is no stronger than its weakest part. This plays a very vital part in any livestock operation, for a 3 weeks season of time. I leave the Dixie country, near St. George, when the annual spring growth has dried, and it is not possible to remain in the lower country longer at that season of the year. My mountain grounds are covered with snow. It is that in-between time that is one of the most vital parts of my 12 months' operation.

The CHAIRMAN. Let's get that a little clearer. Mr. Gardner, you enjoy grazing rights under the Taylor Grazing Act?

Mr. GARDNER. Yes, sir.

The CHAIRMAN. Do you enjoy any rights under the forest?

Mr. GARDNER. I have no forest rights.

The CHAIRMAN. What is your high range?

Mr. GARDNER. Cedar Mountain Range.

The CHAIRMAN. Under what jurisdiction does that come?

Mr. GARDNER. Private ownership.

The CHAIRMAN. So that you use your Taylor Grazing land in the early spring and in the winter, I take it?

Mr. GARDNER. Yes, sir.

The CHAIRMAN. Then you use the Park or Monument Service in an intermediate period between your spring and your late summer?

Mr. GARDNER. That is right.

The CHAIRMAN. And your high range is covered with snow until the midsummer; is that right?

Mr. GARDNER. Normally until the 15th or 20th of June.

The CHAIRMAN. I see; so that this Park or Monument territory which you have used in the past, and which you were using at the time the monument was set up, is vital to an orderly arrangement of your unit?

Mr. GARDNER. Yes; it is very vital.

The CHAIRMAN. What would be the result if you were to sell your economic unit, and a denial was entered to the right to use the monument?

Mr. GARDNER. Well, it would hamper considerably the 12 months operation. You couldn't pick a more vital time. The lambs are born early, and the value of the mountain range is to fatten the lambs, of course; and during a 3 weeks' period of time, right when they are at an age when they should be thriving and coming, to know where to go with them would be a problem.

The CHAIRMAN. To hold them in the lower country sets them back because of the drying up?

Mr. GARDNER. The annual growth dries to a brown, and it isn't possible for them to remain in the low country.

The CHAIRMAN. And it isn't possible for them to get into the high country at that period of the year?

Mr. GARDNER. No. The ranch is approximately 9,000 feet high.

The CHAIRMAN. What does that do with reference to the value of your unit for sale?

Mr. GARDNER. Well, it is just a weak spot. It would weaken it from any angle you might figure it. If that was taken from it, taken from the set-up—forget the individual concerned—if it was taken from the livestock set-up it would definitely weaken it. You can forget about the individuals in it.

The CHAIRMAN. What have you to say about that, Mr. Tillotson?

Mr. TILLOTSON. Undoubtedly it would, as Mr. Gardner says, weaken his possibility of sale. But it has been the departmental policy to continue the grazing rights of those who had prior existing rights, upon the establishment of the monument, with the understanding that they would not extend beyond the lifetime of the permittee. The thought there being that this would give them ample opportunity to seek other range, and dispose of their stock, rather than to deny the privileges immediately upon the establishment of the monument.

The CHAIRMAN. I am addressing this question to the policy, and not to the individuals, if you please. If the park policy continues to be augmented—if we set up more parks and more monuments—the time will come when we will have an entire doing away with the grazing on the open range.

Mr. TILLOTSON. That is assuming the parks and monuments will cover the entire open range, yes.

The CHAIRMAN. In the Jackson Hole incident, recently brought to the attention of the West, they didn't cover all the open range. They still left a little in Wyoming.

I want to bring that to the attention of the proper people. I am glad there are members of the Park Service here, because, to be very frank with you—and I don't speak individually, I speak and address myself directly to the question of policy, entirely—the western country depends largely on livestock. I don't need to tell you this because you know it better even than I do. A ranching unit in this country is not very valuable without livestock; and if we increase the parks and monuments throughout the country, and this policy is pursued, we are impairing the livestock industry as we increase the parks and the monuments. The tax structure of these States and these communities is very much involved because, as we reduce the livestock, by whatever agency, we reduce the income for the maintenance of government, and increase the tax on those who do remain. It does seem to me that the Park Service should have this matter brought to their attention, to the end that something more progressive may be hit upon. As the chairman of this committee sees it, there should be a more progressive program, and one more conducive to the development of agricultural life in the West. Such a program should be established.

You may proceed, Mr. Gardner.

Mr. GARDNER. From a conservation standpoint I am willing, and have stated to the park officials that I would be glad, to have the livestock counted on at a given date, and I would be willing to follow any conservation program they may suggest in the use of the range in the area. I feel ultimately that I would be benefited, as a livestock producer, and I could not be pointed to as one who had marred the national monument with my livestock. I think the park officials will agree that since my use in the new area that I am using that it shows marked improvement. I think, too, where a highway goes through I would be glad to adjust and move back from any use to be made in there. I am willing and anxious to cooperate from a conservation standpoint, but I cannot see the consistency of ultimately being denied the right to graze in the area, so long as I am conserving the natural forage and covering of the range in the area, and not marring or destroying in any way the scenery or vegetation to the point where the area shows erosion or an overgrazed condition or a marring in any way.

My concern, as I have stated, is that this right will cease at the end of my lifetime, and that my boys will not enjoy the benefit of this use at such time as I may pass out of the picture and pass it on to them; because I have built, in acquiring range rights on the Federal range and acquiring private range, a 12-month operation, and I don't know where I could turn, or where money could buy the range to supplement the use that I have been making of the national monument.

The CHAIRMAN. This 1,200 sheep; is that the total amount of sheep that you run?

Mr. GARDNER. No; I run more than that. I have what might be termed "dries," which I eliminate when I start for the mountains with my lambs.

The CHAIRMAN. You keep your "dries" in another place?

Mr. GARDNER. Yes, I have them in another area.

The CHAIRMAN. Do you have anything else you wish to say on this subject?

Mr. GARDNER. As I am stating, I am not complaining about the local park officials, but it is a policy bearing not only in this area but in all park areas. The park officials have been very fair and reasonable, and very cooperative in every way. It has been a pleasure to be associated with them as they do business in a cooperative way. I haven't the slightest complaint on the administration other than the policy that has been established.

Mr. ARTHUR WOOLLEY, attorney at law. With respect to the use by the Park Service of the monument, for either departmental purposes or bureau purposes, or scenic use by the public, what, if any, interference have you observed by your sheep operation with that functioning of the area?

Mr. GARDNER. So far as I know, no disturbance. There wasn't a road in the area at the time—it is only a pack trail, and, of course, because of war conditions roads and trails haven't been developed. What will be developed back in normal times I don't know but I will be glad, as I stated, to cooperate in any way in getting back from anything that would interfere with the public.

Mr. ARTHUR WOOLLEY. So actually the park has made no change in the set-up, or lay-out, for the area, at all?

Mr. GARDNER. No, other than the exterior boundaries; marking the boundaries.

Mr. ARTHUR WOOLLEY. Is there anything there other than natural scenery?

Mr. GARDNER. No.

Mr. ARTHUR WOOLLEY. No historic monument of any kind in the area?

Mr. GARDNER. Not in the area.

There is one other point that has been suggested, that a part of the area might be turned back to Federal range. I am wondering though, as a policy, whether it is a common practice to turn any part of an area that has been assigned to them back for any other use? It seems like quite a duplication to those of us who see the area. Maybe we don't appreciate it to any extent; but it seems more or less a duplication of the same thing, the same type of scenery, and taking in so much area. From the grazer's standpoint, we aren't able to see the justification of it; but, of course, we will allow we were raised in it, and probably we don't appreciate it to the fullest extent.

The CHAIRMAN. Does the regional superintendent of the park care to discuss that phase at this time, why the park was set up, and the monument was set up, and what, if any, natural objects it has which brought it within the monument law?

Mr. TILLOTSON. You are speaking of Zion National Monument, is that right?

Mr. GARDNER. Yes.

Mr. TILLOTSON. It was set aside purely for its scenic features.

Now, to answer your specific question as to reduction in size, you asked if that could be done?

Mr. GARDNER. Yes.

Mr. TILLOTSON. That has been done in other cases, where it was found that the area was greater than required for national park purposes. For instance, Grand Canyon National Monument, right here on the Arizona Strip, was established by President Hoover with an area of 273,145 acres. That was recently reduced to 201,291 acres.

The CHAIRMAN. Reduced to what, please?

Mr. TILLOTSON. Reduced to 201,291 acres. That reduction took place in April of 1940, simply for the fact that it was determined that there was a greater area in the monument than was necessary for monument purposes. So, to answer Mr. Gardner's specific question, it can and has been done. I hope that answers his question.

The CHAIRMAN. Now, will you tell me, while you are on your feet, please, will you state to the committee why this policy, as far as you know, has been established, which terminates grazing after the lifetime of those who occupy the territory, and why it is then turned into a monument?

Mr. TILLOTSON. Yes, I'll be glad to.

The mandate of Congress to the National Park Service in caring for the national parks and monuments is that they shall be maintained in their natural condition. We feel that cannot be done so long as outside interests, such as grazing and water-power development, lumbering, and the like, or any of those operations, are carried on in a park. But it is also obviously unfair, with the establishment of a park area, immediately to discontinue the grazing privileges of those who have had prior existing rights. Consequently the policy has been established of allowing those to continue during their lifetime. Now, does that answer your question, sir?

The CHAIRMAN. Partially so; at least if that was a mandate of Congress. But I want to take a little issue with you, that Congress never contemplated that a whole countryside would be turned into a monument.

Mr. TILLOTSON. Of course, that has to do with the extent of the area, not with the primary purpose of the individual areas.

The CHAIRMAN. One other thought comes to me that I think might be well for you to discuss while you are on your feet, and that is, assuming that that is the mandate of Congress, and assuming that you would carry it to the extent that you have just stated—to which I cannot find myself in accord at all, but assuming that, for the sake of argument—does it not increase the fire hazard in any area when it is not grazed off to a proper extent?

Mr. TILLOTSON. Not necessarily. It does increase the growth of the grass and weeds, and so forth, which dry up, and in that way become a fire hazard. I presume that is what you refer to. But, on the other hand, whenever there is human use in an area, no matter how careful a man may be with his campfires, and so forth, the human usage increases the fire hazard. However, I would say that the net increase in the fire hazard is not appreciable.

The **CHAIRMAN**. These monuments are not set up for the purpose of having them become sacred. They are set up for the purpose of having the public enjoy the scenery, and see the natural objects in their natural state; so you have human use all the time. That is the real purpose.

Mr. TILLOTSON. That is right.

The **CHAIRMAN**. That is the real purpose of the setting up of the monument. Now, as you increase human use, and you decrease the usage which grazes off the grass and weeds and underbrush that afterward becomes dry, it seems to me that the two running together constitute a greater hazard than if the surface of the monument were properly and systematically grazed off. Now, that is the way it appears to just an ordinary layman.

Mr. TILLOTSON. Well, perhaps a representative of the Forest Service, where grazing is carried on to a much larger extent, naturally, by the nature of the area—perhaps he could give us some idea as to the relative fire hazard in grazed or ungrazed areas.

The **CHAIRMAN**. Well, I don't know; here we are running up against that same old thing; one department passes the buck over to another one.

Mr. TILLOTSON. I am just asking for their experience, their experience in grazing.

The **CHAIRMAN**. Well, I don't mean that critically. You see, I see it so often. But do you take issue with my thought, just expressed there, that first of all—let me tear it down again—first of all your monuments are made for the enjoyment of the public.

Mr. TILLOTSON. Certainly.

The **CHAIRMAN**. So whenever you invite the public to come into your monument section—now, then, you say you want to maintain it in its natural state, and, therefore, you do not want it grazed off. We know that where there is no grazing grass accumulates, weeds accumulate, and brush accumulates, and they dry up. Even in the early history of this country, before we knew of very much humanity being here, fires occurred from one source or another, and great destruction took place. Now, do you take issue with the proposition that if this was a systematic, economically grazed area, that it would reduce the fire hazard?

Mr. TILLOTSON. Do you mean by consuming the forage?

The **CHAIRMAN**. Yes.

Mr. TILLOTSON. Yes; naturally it would decrease the amount of the dry material on the grounds in the way of grass and weeds.

The **CHAIRMAN**. That is the thought that I wanted to get clear. I was only expressing the thought with the hope that we might be able to get a modified policy.

Mr. TILLOTSON. So long as you are talking about fire hazard only.

The **CHAIRMAN**. Yes; that's right.

Mr. STEVE A. SPEAR, Phoenix, Ariz. I would like to ask one question at this point. I think it might be of interest to have this question answered; we all recognize the frailty of human life. Supposing Mr. Gardner was to lose his life on the way home from this meeting. How long before he would be wiped off the park? What would be the procedure for liquidating his outfit?

The CHAIRMAN. Will the Park Service answer the question? We don't like the premise, but it is a good one.

Mr. TILLOTSON. If Mr. Spear is talking about ordinary times, I should say that at the expiration of this grazing season he would, as you say, be "wiped off the map." But during wartimes grazing permits have been issued on a 3-year basis, and, during the wartime, Mr. Gardner's permit would be for a period of 3 years.

The CHAIRMAN. Let's put another condition to it. Supposing the war should terminate next week, and anything should happen to Mr. Gardner, when would it ordinarily terminate?

Mr. TILLOTSON. I should have modified my statement a little bit. Permits are issued for a period of 3 years, or 6 months, I believe, after the end of the war.

The CHAIRMAN. Now?

Mr. TILLOTSON. Now.

The CHAIRMAN. Very well, you may proceed, Mr. Gardner.

Mr. GARDNER. I would like to make this statement, that the Park Service have called in the committee from the Grazing Service. I don't know just what constitutes that committee, whether it is the chairman of the advisory board, or the representative, or the district grazer, but they have called them in, in going over licenses or permits in the park. I would like to commend them for that fine cooperation, and for the cooperation between the two departments, both departments being under the Department of the Interior, and, as a matter of suggestion, I can't see why it wouldn't be possible that, both being under the Department of the Interior, for the Grazing Service to handle the grazing problems in parks and monuments. That is my hope and my ambition.

Mr. ARTHUR WOOLLEY. Mr. Gardner, are there others situated similarly to you in the use of the monument?

Mr. GARDNER. Yes; a number of others.

Mr. ARTHUR WOOLLEY. About how many?

Mr. GARDNER. Well, in the monument area I would say possibly three or four, and in the park a good many more.

Mr. ARTHUR WOOLLEY. Is it true that in Zion Park, the 86,000 area, as far as the top lands are concerned, those are in a similar situation to the monument, as you have discussed it here?

Mr. GARDNER. Yes; that's right.

Mr. ARTHUR WOOLLEY. About how many are there on the whole top park area that use it for grazing.

Mr. GARDNER. I am not prepared to say, as I am not acquainted with the use in there.

Mr. ARTHUR WOOLLEY. Did you want to discuss this matter of procedure in appeal?

The CHAIRMAN. Yes; I wanted to get to that later on, but I do want to conclude this subject first.

It has been suggested, and I am going to follow out the suggestion, I would like to have the Forest Service, Mr. Kneipp, discuss the matter of fire hazard with reference to grazing.

Mr. J. H. LEECH. Mr. Chairman.

The CHAIRMAN. Yes, Mr. Leech?

**STATEMENT OF J. H. LEECH, CHIEF OF LANDS, GRAZING SERVICE,
SALT LAKE CITY, UTAH**

Mr. LEECH. I want to comment in connection with Mr. Gardner's statement of the cooperation between the Grazing Service and the National Park Service. They operate under an agreement.

The CHAIRMAN. Who operates?

Mr. LEECH. The Park Service and the Grazing Service. They have a memorandum of understanding, approved by Secretary Ickes on February 20, 1940, to the effect that if licensees in a grazing district also use the monument that they have joint meetings between the users and representatives of the Park Service and the Grazing Service; and, under that agreement, also in some monuments we administer grazing for the Park Service.

The CHAIRMAN. In other words, in some monuments your Grazing Service administers and regulates the grazing for the Park Service?

Mr. LEECH. For the Park Service.

The CHAIRMAN. But is there any difference in policy under those conditions? Which policy is used? What I refer to as the permanent policy?

Mr. LEECH. No; the policy on that would be the Park Service policy.

The CHAIRMAN. So you exercise that same mandate?

Mr. LEECH. Yes, sir.

The CHAIRMAN. Have you ever known of a change of that policy?

Mr. LEECH. Not personally, Senator, I have not; no, sir.

The CHAIRMAN. In other words, I think we may assume that by and large, it is quite a definite policy of the Park Service of the Interior Department that, where grazing is conducted in a park or monument, it terminates with the life of the permittee?

Mr. TILLOTSON. That is right. There have been some exceptions.

The CHAIRMAN. And the permittees are limited to those who were using that particular area at the time the monument or park was set up?

Mr. TILLOTSON. That is right.

The CHAIRMAN. So that is the policy that addresses itself now to the committee of the Senate, and which we want to consider.

Now, I would like to have Mr. Kneipp discuss the matter from his own experience and training in the Forest Service, as to what he regards, or how he regards grazing with reference to fire hazard.

**STATEMENT OF L. F. KNEIPP, ASSISTANT CHIEF, FOREST SERVICE,
UNITED STATES DEPARTMENT OF AGRICULTURE, WASHINGTON, D. C.**

Mr. KNEIPP. Why, Senator, there are, of course, all kinds of variations, dependent on different conditions, but generally speaking it is the opinion and experience of the Forest Service that the removal of inflammable vegetation by grazing reduces the fire risk, and the difficulty of protecting a national forest, to a far greater extent than that risk is increased by the presence of the men handling the livestock. In general, on the 82,000,000 acres of national forest, where domestic

livestock graze, grazing is regarded as an important factor in fire control.

The CHAIRMAN. Thank you. Now, as to the Grazing Service, Mr. Leech, I understand that you speak for Mr. Rutledge, the Chief Grazier?

Mr. LEECH. That is right, Senator.

The CHAIRMAN. What have you to say to the same question?

Mr. LEECH. I would answer it in the same way that Mr. Kneipp has.

The CHAIRMAN. Very well. Is there anyone else here in this audience who would care to discuss this particular subject? If not, we will pass on to another subject.

You also utilize the open public domain under the Grazing Service, do you not, Mr. Gardner?

Mr. GARDNER. Yes, sir.

The CHAIRMAN. Did you have anything to do with the promulgation of the grazing code?

Mr. GARDNER. Yes, sir. I was a member of the national council.

The CHAIRMAN. And how does that grazing code operate down here in this particular section?

Mr. GARDNER. Generally speaking, very effectively.

The CHAIRMAN. Have you any comment or discussion that you wish to make or enter into with reference to the operation of the grazing code?

Mr. GARDNER. I think the power given the advisory board in the modification of the code and the McCarran amendment was one of the finest things that has taken place. I think our advisory boards in the various districts are prepared, because of their first-hand knowledge of individuals and range rights and conditions, to adjudicate the rights and to maintain the policy of the Grazing Service, but there are some phases of the code I think could be improved on.

I think our appeal system, and the handling of appeals, and the rights of the license holders, could be improved on. The code has been worked over a time or two, and we have been given every opportunity, as representatives of the advisory boards from the various districts in the national council; we were given the best legal advice the Government could afford, and the finest cooperation that was possible. We prided ourselves on the fact that we wrote our own code to govern the Federal range—something, I think, that is outstanding in the history of our country when it comes to administering public-lands affairs. That is something of a source of pride to all of us.

However, like any law or rule that may be made, there is disappointment at times in the way that the intent is carried out. Now, specifically, in the appeal system, I don't feel that normally the license holder is—or he is beginning to feel that he does not have a fair chance when he is denied a license and has to go through the course of the appeal system to be heard.

The CHAIRMAN. Right there, let's pause. What are the steps in the procedure? Let's start at the beginning. By the way, is there a copy of the grazing code here?

Mr. LEECH. Yes, sir, Senator.

The CHAIRMAN. May we have it?

Mr. LEECH. Mr. Gardner is addressing his remarks to section 9.

The CHAIRMAN. Well, I'm going to ask that we start right at the beginning. How is a grazing right acquired, in the first instance, under the Taylor Grazing Act and under the code as it now exists here?

Mr. GARDNER. One must have had a priority during the years of priority specified by the code.

The CHAIRMAN. Those were 5 years prior to the setting up of the statute?

Mr. GARDNER. Yes; there was a 5-year period, or the priority period; any 2 consecutive or any 3 years from June 28, 1929, to June 28, 1934.

The CHAIRMAN. That is the 5 years immediately preceding the adoption of the statute?

Mr. GARDNER. Yes, sir.

The CHAIRMAN. Now, if one had a right, and was exercising that right, or was grazing on the open public domain, any 3 years in the 5 prior to the setting up of the statute, he would have the right to apply for and secure a grazing permit. Is that correct?

Mr. GARDNER. That is correct. There are other factors to take into account, of course.

The CHAIRMAN. What are the other factors?

Mr. GARDNER. The ownership or control of base rights, either land or water, or a combination of land and water.

The CHAIRMAN. As regard those base rights in this particular section, what has your board adopted, the land or the water, or a combination of both?

Mr. GARDNER. Speaking for Arizona 1, water has been adopted.

The CHAIRMAN. Now, in order that the record might be clear, will you kindly state what that means in just every day ordinary understandable terms?

Mr. GARDNER. The Arizona Strip has been noted for a dry area, as being dry, drained as it is by the deep gorge, the Grand Canyon; and water has been at a premium since the pioneers settled this country. There has been a use by Utah users, where they overlapped, or came into Arizona in the winter, on snow or stored reservoir water, and there was an agitation and controversy for some time as to whether Utah land should have a preference over Arizona water. But, after taking all factors into account, the Grazing Service, through cooperation with the advisory board, has definitely settled that Arizona should be set up on water, as was New Mexico, and its base rights were to attach to all controlled water, live or stored. That was the way the district was set up and is now operating.

The CHAIRMAN. All right. Now, then, after that, what is the next step in securing a permit to graze?

Mr. GARDNER. The limiting factor might be termed the available Federal range. We may have both those factors in our favor, but Federal range would be limited, and it would have to be adjudicated in proportion to others who are in the same classification as yourself.

The CHAIRMAN. Now, then, supposing one applied for a permit to graze on the open public domain, and set up his right, and he was denied the right. By whom would that denial be made?

Mr. GARDNER. By the advisory board and the Grazing Service.

The CHAIRMAN. And supposing that party against whom a denial was entered sought to carry his case to a higher authority. Under the code, what would he do?

Mr. GARDNER. He would first come back to the advisory board, at a regular set meeting, known as an appeal meeting, which, in most cases, takes care of any grievances, because the board will reconsider their denial, on additional evidence or facts, and, if they feel they have erred in denying the license, the license is granted. If not, the license is denied. Then it is the right of the license holder to be heard before the examiner, or the representative of the Grazing Service in a special hearing.

The CHAIRMAN. Before whom?

Mr. GARDNER. Before an examiner of the Grazing Service.

The CHAIRMAN. Are there regularly appointed and acting examiners?

Mr. GARDNER. Yes, sir.

The CHAIRMAN. Is there an examiner for this particular section?

Mr. GARDNER. The examiner as I understand—Mr. J. H. Leech is chief examiner. He has his deputies, who are assigned to various parts of the Federal range in the 10 Western States.

The CHAIRMAN. Now, Mr. Leech, may I interrogate you at this point? As chief examiner, when an appeal is taken what do you do?

Mr. LEECH. On that, Senator, I want to go back just a little to Mr. Gardner's remark about an appeal meeting before the advisory board. That is a protest meeting. After any applicant receives a notice from the board and the district grazer, he may protest that action, and the advisory board may adjust it with the district grazer. Now, if he is dissatisfied with the results of that protest meeting, he files an appeal. He files that with a regional grazer's office, and the regional grazer receives that appeal, looks it over, goes thoroughly into it, usually goes out, or has one of his men go out and see this appellant and try to adjust the matter. If he cannot, he forwards the appeal to my office in Salt Lake City. After we receive the appeal—

The CHAIRMAN. Now, right there, when he forwards the appeal to your office in Salt Lake City, does he do so without comment, or does he do so with his comment or decision attached?

Mr. LEECH. The regional grazer, when he forwards the appeal, comments as to whether or not he has been able to come to a satisfactory adjustment with the applicant. The appeals there are docketed in my office, and we advise the regional grazer of a period of time that an examiner will be in his region. Now, like for Arizona, we might advise Mr. Brooks that between the dates of October 1 and October 20, that we would have an examiner to hear the appeals in the State of Arizona. Then he would set one of those dates at a convenient place, where the district grazer and members of the advisory board and the appellant's witnesses and intervenors can come in. They would be placed under oath, and testify before this examiner. The examiner, after the hearing, renders a decision, a written copy of which is furnished by registered mail to the appellant.

The CHAIRMAN. Is a transcript of the proceedings had?

Mr. LEECH. A transcript of the proceedings is had, and is available to anyone who wishes to buy a copy for 5 cents a folio. Now, after the receipt of the examiner's decision, if the licensee or permittee or

appellant feels that he is not satisfied, he may appeal to the Secretary of the Interior. The entire case record then goes to the office of the Secretary, and a decision is rendered by the Secretary.

The CHAIRMAN. How long, as a rule, does that procedure take, from the time the applications are first acted on by the local board, advisory board, and the local grazier?

Mr. LEECH. Well, that would vary, Senator, in different cases.

The CHAIRMAN. In different cases?

Mr. LEECH. Yes; it might take longer to determine the one case than it would another.

The CHAIRMAN. Why would that be?

Mr. LEECH. Depending on the complexity of the case, the preparation of maps, the studying of the testimony and the exhibits.

The CHAIRMAN. Let's take the first step first. How long would it be after the appeal was taken before the examiner from your office would be on the ground and go into the case?

Mr. LEECH. Well, in some cases that happens within 30 days, Senator. More ordinarily it may be 4 or 5 months, depending on whether an examiner is available to go into that region, and also whether or not the regional grazier and the appellant—many times they think they can work it out by going on the land and talking to the intervenors, because usually the appeal of one stockman involves the privileges or rights of maybe two or three others, and you have to get those all together before you can adjust that range-line agreement, or this appeal for use.

The CHAIRMAN. Now, from the time it gets to the point of decision by your examiner, after your examiner decides, does it go to your office directly, or to you directly?

Mr. LEECH. The examiner works directly out of the office of the director. At the present time the two examiners are functioning. I hold some of the cases, and Mr. Williams is holding the bulk of the hearings at this time.

The CHAIRMAN. Is Mr. Williams here?

Mr. LEECH. No, sir; he is holding some hearings in Utah at this time.

The CHAIRMAN. How long has Mr. Williams been engaged in that line of business?

Mr. LEECH. Mr. Williams has been in the Department of the Interior, the General Land Office, the Grazing Service, and the Division of Investigations for, I would say, since 1916 or 1915.

The CHAIRMAN. He is not here now?

Mr. LEECH. No, sir.

The CHAIRMAN. Is he far remote from here?

Mr. LEECH. This is the 30th. He has a hearing in Price, Utah, I believe, on the 2d, and one in Salt Lake City tomorrow.

The CHAIRMAN. How long since he has held a hearing in here?

Mr. LEECH. In the Arizona Strip? I believe the last hearings were sometime in May or June.

The CHAIRMAN. Have you a list of the cases that he passed upon at that hearing?

Mr. LEECH. I have available here, Senator, a list of all the cases that have been appealed in the State of Arizona from 1936 to 1941, and I believe I have a list of the cases—

The CHAIRMAN. Have you a list of the dates of the filing of those cases, and the dates of decision?

Mr. LEECH. No, sir; I do not.

The CHAIRMAN. Have you any record that would enlighten the committee as to the time involved in each particular case?

Mr. LEECH. It would be very difficult, Senator, to give an estimate of the average length of time. I would be glad to have those prepared for the committee, a complete list showing the date the appeal was filed, the date heard, the date of the examiners decision, and the date of the Secretary's decision, if an appeal was taken to the Secretary.

The CHAIRMAN. I think the committee would like to have that.

Mr. LEECH. I will have that prepared and submit it, Senator.

Now, I believe Mr. Gardner may be speaking of his own appeal, which is involved with a case with Mr. Lamereaux, and some others, which is now pending before the examiner who took the testimony. I intend to review that.

The CHAIRMAN. Who was that examiner?

Mr. LEECH. That was Williams. I intend to review that record.

The CHAIRMAN. When was that case heard before the examiner?

Mr. LEECH. I believe, Senator, speaking from memory, without the record before me, that it was in May. Is that right, Wayne?

Mr. GARDNER. I think February, Mr. Leech.

Mr. LEECH. February?

Mr. GARDNER. Yes.

The CHAIRMAN. That has not been decided?

Mr. LEECH. No, sir; it has not.

The CHAIRMAN. Any good reason for a delay of that kind?

Mr. LEECH. I'm sorry, I do not think so, Senator, except the pressure of business, and the delay of getting the transcript from that particular record. We no longer have any reporters to accompany the examiner.

The CHAIRMAN. I beg your pardon, what was that last expression?

Mr. LEECH. I say that at the present time the reporters that we had are all in the Army, and when the examiner goes out to hold a hearing now he has to either use a clerk from the district office of the Grazing Service, and they are not supposed to be reporters, or he has to circulate around and employ whoever he can. That is one of the reasons that they are delayed. I have made every effort, Senator, in the past, to have these decisions out within 30 days after the hearing.

The CHAIRMAN. This case has gone to the Secretary of the Interior. hasn't it, on one or two occasions in the past?

Mr. LEECH. I believe in the past it has been appealed to the Secretary on different issues than are involved in this particular case, Senator.

The CHAIRMAN. Has there been a decision by the Secretary's office?

Mr. LEECH. There was a decision in the case of Milo Brook. That was the title of the case, wasn't it, Wayne?

Mr. GARDNER. Yes, sir.

Mr. LEECH. Involving some of the intervenors. That case was heard in, I believe, 1940. I would not say that the same issues were involved in that case, though, as are involved in the present one pending before the examiner.

The CHAIRMAN. Was that decided?

Mr. LEECH. The decision of the Secretary in the *Milo Brook* case directed that certain permits under section 4 of the act, authorizing

the maintenance or construction of improvements, be issued in order to repair or maintain water developments, that it was contended had been prior waters used between 1929 and 1934.

The CHAIRMAN. I am rather concerned, or the committee will be rather concerned, with the general policy, addressing itself to the question of time rather than to the merits of the controversy. The merits of a controversy, if it be a controversy, that is, addresses itself to a broad field, and that is one thing. If it is an individual controversy, the committee would not care to inject itself into the procedure, to sit in judgment, but rather to a policy, if there be a policy of delay, and I say frankly to you that the committee has had its attention drawn to this. If there be a policy of delay, justice delayed in a grazing case is justice denied in a grazing case, as much as any other. That is the thing we are driving at, is this delay.

Mr. LEECH. I believe, Senator, when I furnish the committee a list of the cases that it will show that early action has been taken in the great majority of cases.

The CHAIRMAN. As regards an appeal to the Secretary, what is the period of time usually involved before a decision is handed down?

Mr. LEECH. I believe at the present time, Senator, appeals are received out of the Secretary's office in 60 to 90 days.

The CHAIRMAN. How soon after the appeal is taken to the Secretary does it leave your office?

Mr. LEECH. That depends upon whether the appellant has served the brief and copy of the appeal on the intervenor. If he has not, that is called to his attention, and he is directed to do so. Then the intervenor may file an answering brief. He is allowed 30 days in which to do that. Then, the entire record is forwarded to the Department.

The CHAIRMAN. Now, when one of these examiners comes out of your office he usually comes alone to conduct the hearings?

Mr. LEECH. Yes. At the present time he comes alone because he does not have any reporter to accompany him. The district grazier or regional grazier may accompany him to the place of hearing.

The CHAIRMAN. Will you try to see to it that these examiners occupy and maintain a fair and impartial attitude in every respect?

Mr. LEECH. Yes; in every respect, Senator.

The CHAIRMAN. If you were advised otherwise you would, of course, look into it immediately, would you?

Mr. LEECH. I would do so; yes, sir.

The CHAIRMAN. Very well. Is there anything else you wish to say on that?

Mr. LEECH. This list of cases and dates, you wish that to just cover the Arizona strip or the entire 10 States?

The CHAIRMAN. Well, I think we had better stay with the Arizona strip for awhile.

Mr. LEECH. All right, sir.

(The tabulation of appeals and hearings is as follows:)

Appeals and hearings, Arizona—Arizona strip district

Appellant	Intervener	Date			Examiner's decision	To Secretary	
		Appeal	Hearing	Decision		Appeal	Decision
1936:							
Bonal, J. F.		Apr. 14, 1936	May 15, 1936	May 29, 1936	Sustained.

In 1936, 15 cases were appealed to the Secretary of the Interior, of which 14 were withdrawn by the appellants before a decision was rendered. One case was dismissed by action of the office of the Secretary.

In 1937, three cases were appealed to the Secretary, one case was withdrawn before a decision was rendered, one case was dismissed, and in one case the decision of the examiner was modified; this was the case of L. J. Esplin, appellant, and Mason Meeks, intervener.

In 1938 there was only one appeal to the Secretary, which was withdrawn by the appellant, resulting in a dismissal by the office of the Secretary.

In 1939 there were no hearings in the Arizona strip district.

(The E. A. Curtis case is shown as a 1938 case because that is the date of Mr. Curtis' appeal from the decision of the regional grazier. The actual hearing of this appeal was in 1939, however.)

In 1940, three cases were appealed to the Secretary, one appeal being dismissed and the examiner being affirmed in the other two cases.

No appeals have been filed from decisions of the examiner for the years 1941, 1942, and 1943, to date (October 19, 1943).

The CHAIRMAN. Are there any questions that anyone cares to propound to Mr. Leech while he is discussing this matter? Do you care to interrogate anyone else, Mr. Gardner?

Very well, you may proceed.

STATEMENT OF WAYNE C. GARDNER—Resumed

Mr. GARDNER. My intent was not with my own case. I am speaking particularly of the appeal system. The intent of the national committee in framing it was that it would not be too complicated, or so complicated that license holders would not have a fair chance. I don't think there is a thing in the Federal range code that is finer than the appeal system. I will say this, I don't think there is anything to do with the Federal range that offers as fine an opportunity as the appeal system does. I don't care to be involved in my own particular case, but I do hear the complaints of license holders who say, "We are beat before we start. What chance have we? We feel like immediately, if the advisory board denies us a right, we have got the whole system of the Federal Government to fight." Now, then, that would be a lamentable thing, if that were the case. Now, whether those license holders are justified in their feelings, that is how they express it; and I hope that the appeal system won't be too complicated, or won't be so one-sided that it will lose its value, the value we thought we were putting into it, because it is the finest thing in the code. Where could a man go in the Forest, or any other department in the Government, and get the same set-up to actually be heard, and have his problem taken care of in the fine way that the Federal Range Code provides he can be taken care of? I feel like the examiner, in coming into an area where a hearing is to be heard, should be impartial. He shouldn't come in and say, "Well, now, what has the advisory board done on this; what has the district or regional grazier done on it? Why did he take this action?" He should be just as interested in why that license holder was denied something. I don't think he, the examiner, should, so to say, take sides with the Grazing Service. He should come in as a judge, impartially, and be just as much interested in seeing that license holder was meted out justice as he is to see that the action of the district grazier or regional grazier is upheld in his decision that he has made. There is a feeling that the Grazing Service have taken the attitude that they are infallible once they make a

statement. If they make an error that it cannot be counted against them. The license holders say, "We make errors and will admit it, and we want the Grazing Service to be just as broad as we are; occasionally they can make an error that they can correct when they are given additional information."

I'm speaking generally for license holders, and I'm not airing my own personal feelings in this matter. Having been on the national committee, I make that comment because they have commented on it to me. I did boastfully say that we had the finest thing in the code that could be found anywhere when one's rights were to be taken into account, and they called my hand on it. That is why I'm concerned with it.

Mr. LEECH. May I comment there, Senator?

The CHAIRMAN. Yes; indeed.

Mr. LEECH. The appeal procedure as given in the Federal Range Code was, as Wayne says, worked out by the National Council of Advisory Board members; and it is a very, we think, a fair procedure. The examiners of the Grazing Service are just there as fact finders, and they base their decisions purely upon the facts, as found and developed. They are not there to uphold what the district grazier or the advisory board have done.

Now, of course, the examiner has to find out, in the course of the hearing, why the district grazier is taking this action. He calls on the district grazier to testify as to why he did this, why he rejected this man's application. He goes into the reasons for that, and the Grazing Service, in all of its appeals, the examiner is just as interested in the appellant as he is in the Service. All he is trying to do is develop the facts and render a fair decision, and I believe the procedure fully provides for this. Do you agree with me?

Mr. GARDNER. The procedure is there; yes.

The CHAIRMAN. What you are addressing yourself to is the procedure. You seem to be quite proud of the procedure as you have stated it. I understand you to address yourself to the subject of the administration of the procedure.

Mr. GARDNER. That is my thought.

Mr. ARTHUR WOOLLEY. May I ask Mr. Leech a question?

The CHAIRMAN. Yes; indeed.

Mr. ARTHUR WOOLLEY. Does your examiner, when he comes out to make his investigation with your approbation, take affidavits ex parte from persons who might have some knowledge of the matter, without notice to the appellant or the applicant for the license?

Mr. LEECH. He does not. Now, in the course of preparing for a hearing the district grazier, or regional grazier, may take an affidavit from a prospective witness; but if the examiner determines to take the testimony of any witness who is not at this hearing, that must be done either on an oral deposition or a written interrogatory, which is prepared by the representatives of the Grazing Service and the appellant, and the written interrogatories are furnished, through a notary or United States commissioner, to propound to the witness—

Mr. ARTHUR WOOLLEY. If that practice has been carried out in some instances it has been contrary to your instruction?

Mr. LEECH. That is correct. But you will find, Mr. Woolley, many times that a ranchman will come in and he will say, "Now, I have

the statement here of Bill Jones. He cannot be here as a witness, and I want to put this affidavit in." Now, we permit the appellant to file that affidavit with the case for what weight it is given. It is not evidence.

Mr. ARTHUR WOOLLEY. If your examiners exert any pressure, by way of conversation, or otherwise, to the appellant like, "We are out here to see that this happens," or, "We are going to do this to you," of course, that you don't know about except as it may be related to you?

Mr. LEECH. That is correct.

Mr. ARTHUR WOOLLEY. That would not be your policy, but an individual could overstep himself in showing partiality?

Mr. LEECH. I can say for Director Rutledge, if we had an examiner at any time who did not render decisions according to true facts, we would remove him.

Mr. ARTHUR WOOLLEY. So Mr. Gardner reflects some complaints of individual cases of showing partiality. I think that is what he is trying to bring out. Those complaints could be taken up to you personally?

Mr. LEECH. I would be glad to take those up.

The CHAIRMAN. I am going to say to Mr. Leech that the chairman of this committee is going to take up a case with you. If you afterwards deem necessary that it be held in public hearing it will be, but I think first the chairman of the committee will take the matter up with you, as head of the Grazing Service.

Mr. O. C. WILLIAMS (State land commissioner, Arizona). Senator, I don't think we have gotten down to what Mr. Gardner has tried to tell you yet. I might put it in the words of the cattleman.

The CHAIRMAN. Well, I'm going to stay with it until I get down to it.

Mr. WILLIAMS. I think I can help you on that. I deal with those men every day of the year. I just went through a week of hearings with the congressional committee from Washington, and the complaint is what Mr. Gardner tried to say when he stated they were licked before they started. The fact he is trying to bring out is that all hearings and appeals are step by step up through the Department. They feel that if there was some short cut, somewhere along the line, where the case could be taken to the courts, or something outside of the Department, they feel they would have a chance. Now, in the State of Arizona we used to have the commissioner, then appeal to the boards, and then to the courts. We have cut out the board and they go directly from the commission to the courts. That is what the cattlemen would like; I know from their own words in talking with them. They feel if they go through the investigation, if they could go outside of the Department it would be better, because the last word eventually, if it is carried that far, is the Secretary of the Interior, which is still within the Department. I think that is definitely what they mean when they say they are licked before they start. They feel that something outside the Department itself is necessary to make the final decision. They want to appeal to someone else.

The CHAIRMAN. I am going to ask a direct question that will have a bearing on it. Have you any record that would disclose the number of cases where there was a reversal, either in your office, as chief examiner, or in the Secretary's office, from the decision that was rendered by the examiner in the field?

Mr. LEECH. Yes, Senator, the regional examiner's decisions has been reversed by the chief examiner many times, and the chief examiner has been reversed by the Department a number of times, and, after the Secretary has spoken, some of them have proceeded to the courts, after the administrative procedure was exhausted.

The CHAIRMAN. I'm addressing this remark to the land commissioner of the State of Arizona. He has made a very pertinent suggestion. As I view it, the procedure commences on the ground, and finally winds up in the office of the Secretary of the Interior. That exhausts the jurisdiction of the Department. From there on the court has ample opportunity, or the aggrieved party has ample opportunity to go to the court. At least, without following the procedure, I take that to be the case. I have never known one of these departments to be supreme yet. I hope they never will become supreme, to be very frank with you. I take it from your remark, Mr. Commissioner, that you gather, by and large, that if the appellant or the aggrieved party could go directly to the court, from the decision of the chief examiner, they would be better satisfied. Is that the way you understand it?

Mr. WILLIAMS. Yes; that is the sentiment I get from the cattlemen, somewhere in his own country, by his own judge in his own court, where he could get witnesses before it without going to an expense and going a long distance and having it dragged out for months and months even into years. They would feel more satisfied.

The CHAIRMAN. Is that the way you understand it, Mr. Gardner?

Mr. GARDNER. Yes, sir.

The CHAIRMAN. Where would you break off?

Mr. GARDNER. Well, as Mr. Williams says, after the examiner has rendered his decision. That seems to be the most logical place to break off.

Mr. LEECH. Of course, the only hearing is before the examiner. The appeals to the Secretary are in writing, and do not necessitate travel to distant points. The hearing is held right where the appellant is located.

The CHAIRMAN. And in some cases right on the ground. Does the appellant have the right of counsel?

Mr. LEECH. Oh, yes, sir. I was just looking at the file here, Senator. We have had, beginning in 1936 and running up to the present time, in the Arizona strip district, 169 appeals.

The CHAIRMAN. One hundred and sixty-nine appeals to the chief examiner?

Mr. LEECH. Have been filed with the regional grazier, from the action taken by the region or the district. Many of those were adjusted by the district grazier and the appellant, but this reflects the total number of appeals filed. At the present time there are six pending in this district.

The CHAIRMAN. Now of that number, how many reached the chief examiner's office?

Mr. LEECH. Oh, I will say, just speaking offhand, I would have to get that from my record, but I would say in the neighborhood of 60 or 70.

The CHAIRMAN. Out of how many?

Mr. LEECH. Out of 169. So I believe as Mr. Williams said there, most of these cases are settled right out here on the ground. Didn't you find that to be true, Wayne?

Mr. GARDNER. Yes; that is very true. It is a rare thing, exception to the rule, I would say, that they get beyond the advisory board. But there are, and there will be, cases that will go on.

The CHAIRMAN. Now, out of the number that arrived at the chief examiner's office, how many went to the Secretary?

Mr. LEECH. I do not have that. I would have to speak from memory, Senator, I do not believe that I have ever had over seven or eight cases from Arizona go to the Secretary. Could you correct me on that, Mr. Brooks?

Mr. L. R. BROOKS (regional grazier, Phoenix, Ariz.). I imagine that is probably right. No; I haven't any definite figures on it, but I can look it up and supply it, though.

Mr. LEECH. We will supply it, Mr. Chairman.

The CHAIRMAN. You haven't any record here that would say the number that was sustained or reversed in the Secretary's office.

Mr. LEECH. No, sir; I do not but that will be supplied in this statement to the committee.

The CHAIRMAN. Very well.

Are there any questions by anyone here?

Mr. CHARLES ESPLIN. Mr. Chairman, I'm Charles Esplin from Cedar City, Utah. I would like to ask Mr. Gardner if his principal objection is to the appeals after they get into Mr. Leech's office, or if they are to the conduct of the case before it reaches that stage of the appeal?

The other night you said you objected mostly to the district grazier or local officials building up a case against you before you ever got to the appeal office.

Mr. GARDNER. That is the objection of some license holders. In my own case I could not make any charge and substantiate it. That is the charge made by some license holders, that the advisory board immediately sets up a wall, or barrier, against them and the district graziers. In my own case I couldn't say that.

Mr. ESPLIN. I couldn't say it, but I think it is true that the cards are stacked against you from the time you go from the advisory board to Mr. Leech's office, but my experience is that there are no objections from there on after we got an appeal from above the regional grazier. From there on we get very fair treatment. Up until then, I think there are a lot of pressure groups influencing the Interior Department up to that point.

Mr. LEECH. I didn't quite understand Mr. Esplin's statement, Senator. Could I ask him a question?

The CHAIRMAN. Yes, indeed.

Mr. LEECH. Did you mean by that, Mr. Esplin, that you received fair treatment from the office of the chief examiner?

Mr. ESPLIN. Yes, sir; and I thought from Mr. Gardner's statement, a few days ago, that his principal objection was to the district grazier and his office accumulating evidence to work against a man when he got that appeal into Mr. Leech's department.

Mr. LEECH. I believe, on that, that the district grazier, in going around and getting the evidence—of course, he is going to determine whether his action was correct or whether he has taken an improper action. If in going around and getting his testimony, or affidavits, the district grazier saw he had made a mistake, he and the board and the regional grazier would immediately correct it. Haven't you found that to be the practice?

Mr. ESPLIN. I never got anywhere until I got up in the appeal. I never got anywhere with the advisory board or the district grazier. You have to have an office above them to appeal to.

Mr. ARTHUR WOOLLEY. That was my question a minute ago, Mr. Leech, about whether or not you permitted your examiners to go out and take affidavits without letting the appellant know that process is going on, so that your case is built up before he comes to court. In other words, you go out and get affidavits, as I am informed, from people who are supposed to know; you go out and get the facts before you come to court, and when he comes in there he is confronted with these things; so he is told they have got it all loaded for him, as one expressed it—"We are loaded for you," as one expressed it to me.

Mr. LEECH. Let me try to explain that, Senator. Mr. Woolley, I didn't mean that the examiner from the office of the director goes out and takes these affidavits. I explained he would have to do it through a method of depositions either oral or written. Now, prior to the hearing, and after the action of the district grazier has been taken, and this appeal has been filed, that district grazier, or that range examiner, may interview parties in the community, take their affidavit or statement, in preparing his side of the case, to present to the examiner; and, of course, the appellant may do the same thing.

Mr. ARTHUR WOOLLEY. But the Government then is on the one side: so the appellant feels that, while a paternalistic Government has afforded him an executive court, that executive court is out prosecuting him.

Mr. LEECH. I would say, Mr. Woolley, there, if that district grazier, in gathering this testimony and taking these affidavits, should determine his original action was wrong, he would correct it, then, and there would be no hearing.

Mr. ARTHUR WOOLLEY. He is the judge, then, of himself. Is that what you are trying to get away from?

Mr. LEECH. Or the regional grazier may determine it.

Mr. ARTHUR WOOLLEY. Yes; they get fairness above them. That is the fallacy of letting a man be an investigator who is the judge, too. It is all within your Department. That is the sentiment, I find, that is expressed to me by a number of these cattlemen. In other words, you are becoming a bureau too quick.

Mr. LEECH. The main object is for that district grazier, however, to know all of the facts; he and the advisory board.

The CHAIRMAN. Should your examiner, who sits as a judge, go out and try to ascertain the facts for himself or, should he, coming in as a quasi-judicial officer, notify of the sitting, and the parties would come before him and present their cases, without his activity at all?

Mr. LEECH. The examiner takes no activity in it, Mr. Chairman, other than, sometimes, he goes out in advance and looks over the country so he will know what these witnesses are talking about when they begin talking about this creek, that fence, this line. Sometimes he does that. I have done that many times myself.

The CHAIRMAN. Does the district grazier, at this hearing, set about to justify his action before the examiner?

Mr. LEECH. The procedure provides that the examiner calls on the regional grazier to state and show why he has taken this action on this appellant's application. The regional grazier then puts in what-

ever evidence or reasons that he had to reject, or only allow that partially.

The CHAIRMAN. Any further comment? Any further questions? Don't hesitate, any of you boys. If you have any questions to ask, let's have them, on how all this affects you or anybody else.

Mr. JOSEPH ATKINS (St. George, Utah). On the *Lamereaux and Gardner case*, what we are most concerned about is the way the thing has been drug along. Mr. Leech says he is short of help, in getting evidence and the transcript of that evidence. I know about that; but this hearing I'm speaking about went into the office a long time ago. Now the grazing season is on, and both the parties need the water there. They both need the grazing, here; and the time now, within 30 days, will be coming along to winter range; and neither one of the parties knows what their set-up is. I have spoken to both of them. They are both personal friends of mine and that is what is concerning them very much at the present time. Why are they dragging it along?

The CHAIRMAN. You say it has gone to the regional chief examiner's office?

Mr. ATKINS. It's gone to Leech's office, and it's been there since the 1st of February, but the evidence was later than that getting in, I know.

The CHAIRMAN. What have you got to say to that?

Mr. LEECH. That's one of those unfortunate delays. We'll get the decision out on that. I hope to get it out very shortly.

The CHAIRMAN. Is the record all in?

Mr. LEECH. Yes, sir. It is now in.

The CHAIRMAN. Is there anything further? You may proceed, Mr. Gardner.

Mr. GARDNER. There is one point I would like to ask Mr. Leech, for the benefit of all of us, on the same issue. How many times can a case go to the Secretary of the Interior for decision?

Mr. LEECH. I would say, if a case goes to the Secretary, and he decides it, and sends his decision in, the same set of facts, the same issues, would not again go up, because we would dismiss it, for the reason it has already been heard.

Mr. GARDNER. Then in that event—

Mr. LEECH. Now, I know, in 1936 and '37 and '38, prior to the adoption of the present code, in 1938, the earlier license system, some cases were dismissed by the Department itself, for the reason that the time had expired. Some of those cases were again heard, and did reach the Department, but the record already made was the record used, and very few new witnesses testified. We do not follow the process of appealing the same issue over and over again. I can assure you that if a case has been heard, and decided on its merits, and the same issues come up again, I would direct that it be dismissed for the reason it has already been heard *res adjudicata*.

Mr. GARDNER. In this particular case, in fairness of Mr. Lamereaux and myself, the thing I was unable to understand, after the decision was rendered, points weren't clear why it was not possible for one rendering that decision to clear those points. What was the object in going back and doing the job all over again?

Mr. LEECH. Well, I don't know the particulars in the particular case, Mr. Gardner, and I wouldn't care to discuss particular facts of the

case until I reviewed the testimony and the record with the appeal in the *Milo Brooks case*; and I haven't had that opportunity.

Mr. GARDNER. Then one other point; criticism by license holders is that if, in the courts of our land, you are charged with horse stealing, you are tried on horse stealing, not, after they get you in there, to be tried for horse stealing and all other charges possible to bring in against you. Wouldn't it be possible, in the hearing, if you are charged with priorities, that you be so notified?

Mr. LEECH. If that were the only issue that would be what the case would be about. However, if the question of commensurate rating of the property, or the numbers of priority, arises, you couldn't just determine priority, unless you determined the numbers of priority.

The CHAIRMAN. Off the record.

(Off the record discussion.)

Mr. GARDNER. I would like to make this statement, in closing, that in anything I have said here I feel I have tried to stay away from anything of a personal nature. I am interested, as one who has to do with the writing of the code, in representing the people of Arizona in the code, and I want my personal grievances to be left out. If I have injected them in here I apologize to the entire group.

The CHAIRMAN. You didn't bring it up yourself; Mr. Leech brought it up. You were speaking in generalities, and there's no harm in your having it brought up. You are not chargeable at all in that respect.

Mr. GARDNER. But I am interested in the code and in the fine piece of work that it represents; and I want the Grazing Service to know that they have 100 percent cooperation. I am proud of my association with them.

Mr. LEECH. We certainly appreciated your help in writing the code, Mr. Gardner.

The CHAIRMAN. Very well, thank you, Mr. Gardner.

Mr. STANLEY McKNIGHT (Minersville, Utah). I'd like to ask Mr. Gardner one question. It was the intent of the committee, in writing the code, to have land and water as base properties, both of them; or, was it land or water?

Mr. GARDNER. My understanding was that it could be land or water, or, land and water.

The CHAIRMAN. Any other questions?

Mr. McKNIGHT. I would now like to ask Mr. Leech if the Department has ruled that it can't be both land and water, as base?

The CHAIRMAN. Can you give us any information on that, Mr. Leech?

Mr. LEECH. Yes, sir; I'll refer the gentleman to the Federal Range Code.

The CHAIRMAN. You may read that.

Mr. LEECH. I am reading now from section 4 of the code, approved by the Secretary of the Interior on September 23, 1942, now, which says:

For the purpose of determining the proper use of base properties of all applicants and their relative dependency upon the Federal range land at water conditions and other factors affecting livestock operations in the area will be considered and determined according to customary use and best practices for good

range management. Base properties will be classified as land or water and further in the following manner:

- Class 1, land dependent by use for full-time prior water.
- Class 2, land dependent by location or full-time water.

I think that answers the question.

The CHAIRMAN. Does that answer your question?

Mr. McKNIGHT. I have been informed that the Department has ruled that it can be land, or it can be water, but it cannot be both. Is that right?

Mr. LEECH. I would say, on that, that when the advisory board determines what the base property is, in a particular unit, they say, in this unit it is water, and in this one it is land, because, when you have water competing with land, the mechanics of working out, say, an allotment or range use, is very complex.

The CHAIRMAN. Are there localities in which combinations of land and water are recognized as base property?

Mr. LEECH. Yes, in the Utah-Nevada district No. 4 they use both land and water. I would like for Mr. Dierking to correct me on that. Is that not true, Mr. Dierking?

Mr. C. F. DIERKING, Regional grazier, Reno, Nev. That is right.

The CHAIRMAN. That is in the Ely district, is it not?

Mr. DIERKING. Yes, Senator.

The CHAIRMAN. I think I have heard that before. I didn't know.

Is there any other question to be raised on this particular subject?

Mr. LEECH. I would suggest, Senator, that it is a matter that originates with the advisory board of a district.

The CHAIRMAN. Now, going back to the first subject that we had, which was Lake Mead, and the Lake Mead and Zion National Monuments, is Mr. Joseph Atkins, of St. George, present now? Mr. Atkins, do you care to be heard on that subject?

Mr. ATKINS. I would like to give my views on it, Senator.

The CHAIRMAN. Will you kindly come forward, Mr. Atkins, and I will say, for your benefit, that before you came in I tried to make it clear, to those who did us the credit to be here today, that they should be very much at ease and discuss any subject freely, in their own way, and not feel at all constrained by anything, either the audience, or the committee of the Senate, or anything else. We are just one of you here, trying to hear your stories, and trying to understand the situation. If you will please be seated, and state your name and address, for the record, and say what you have in mind.

STATEMENT OF JOSEPH ATKINS, ST. GEORGE, UTAH

Mr. ATKINS. About 35 years ago our family started to run cattle down in what is known as the Pocum district, exclusively.

The CHAIRMAN. What district?

Mr. ATKINS. Arizona No. 1, down next to Mead Lake.

The CHAIRMAN. What is the name of the district?

Mr. ATKINS. Pocum district; elevation averaging between 1,200 and 2,000 feet. We run in common with Gentrys, from over in Nevada, and other men from St. George; McArthur, Whitehead and others. We have always used this range, and here, a few years ago, when this withdrawal was made, there, they started to hem us off; put us down to the lake, in a lane. Now this withdrawal takes in about one third

of the country in the Pocum district, and, when we had to move back, our neighbors, people accustomed to go down in there, it congested the area in there. Some of them have moved over into Nevada, and other places.

The CHAIRMAN. Now the withdrawal to which you refer, I take it, is the recreational area around Mead Lake?

Mr. ATKINS. That is it, Senator.

The CHAIRMAN. Did they require that you move back as soon as they set up the withdrawal?

Mr. ATKINS. I don't know exactly when it was set up, but it has been 3 or 4 or 5 years ago that they first started to agitate it; never been told what we could do on it. Mr. Blankenagel made trips down to see them at Boulder City, but we have never been able to get anything definite.

The CHAIRMAN. Is the recreational director, or party in charge of the Boulder recreational area, here?

Mr. TILLOTSON. I understand that Director Drury will not be here until about noon.

The CHAIRMAN. Very well. I think it is best; I want it discussed as much as possible in the presence of Mr. Drury, and the committee will want his statement on the situation, unless you have a statement to make?

Mr. TILLOTSON. I'm sorry; I'm not familiar with this particular case.

The CHAIRMAN. I wonder then, Mr. Atkins, if it would be advisable to withhold your statement until the park representative is here.

Mr. ATKINS. That would be O. K., Senator.

The CHAIRMAN. I think that would be best, so that he can answer your questions and try and get it straightened out for you.

Mr. ATKINS. That would be O. K., thank you.

The CHAIRMAN. I want to know the pleasure of the group here today, and all who are here, as to a recess. I thought we would run on until 1 o'clock and then recess. I don't know what arrangements there are here for getting luncheon. Perhaps there are some here who would care to go back to the other little city, back here, for lunch. I thought we would run on to 1 o'clock and recess for an hour.

Here is Mr. Drury. Glad to see you, Mr. Drury.

Now, Mr. Atkins, if you will come forward, I believe it would be a good time to bring up this subject.

Now, I don't like to take up too much time, without going on with the hearing, because I want to cover everything pretty thoroughly. We'll run on until 1 o'clock, and then, if someone will give advice as to the length of the recess, we will arrange it accordingly. The committee will be at ease for 5 minutes.

(Recess for 5 minutes.)

The CHAIRMAN. Very well, gentlemen, we will proceed.

Mr. Drury is here now, Mr. Atkins. You will make your statement, if you please, as regard to the grazing privilege on the recreation area on the Lake Mead area. Start at the beginning, if you will.

Mr. ATKINS. As I stated in the beginning, for your benefit, about 35 years ago we started to run cattle down in the Pocum area. That is in this withdrawal area, down next to Lake Mead. We ran cattle there exclusively, and then started in with sheep and cattle, both, and

used that for a winter range and spring range. Since we have gone out of the cattle business, we have been running in a community allotment, with the rest of the grazers on the Arizona strip, in this district. In about 1940 we were notified that this was a game refuge, and we wouldn't be allowed on it. Mr. Blankenagel, district grazer in Arizona 1, made several trips down. They worked out some kind of a plan where they would have to trail their sheep down lanes, about a quarter to a half a mile long, to get down there; said they were afraid of polluting the water in the lake with the sheep.

By doing this, it has crowded us back and made a congested area on the northern part of Pocum district. Now, this district is absolutely worthless, only in the spring, as far as sheep are concerned. They never go into it in the winter, unless it is an exceptional winter. One winter they went in, in November, and stayed there. But, as a rule, we go into it about the last of January, or the 1st of February, and sometimes as late as the 1st of March, before we are able to get in there.

Now, this relieves the range up on the higher elevations, up around the Hurricane Valley district. February is a hard month. Sheep do pretty good up there early in February, when you are practicing early lambing. The sheep start to falling to pieces, go down, and flesh off fast; and it is necessary that we have this district in there.

As far as the wildlife, there are a few jackasses, and a few jack rabbits, and that is the size of the thing. It is plain asinine to cut the sheep out of there, when this feed is going to waste; and, as far as the sheep polluting the Lake Mead, the rodents along the lake pollute it as much as any sheep that get in that district.

What we would like to do is have this turned over to the Grazing Division to administer. We have confidence in them, confidence in the men handling the livestock and grazing. Livestock men have confidence in them, and they have done a swell job; and we would like to have this handled in some way. I don't think the park men are cowmen, down there. I think they would want somebody else to administer it, and maybe they would be glad to get rid of it. I should think they would like to have this land grazed on there, and we would like to get this extra country down there. While it hasn't been absolutely prohibitive to go on there, they have allowed us to trail down to the lake there, but we need water in that country. It is a low, hot country. Sometimes you think you can get along, and maybe you can go for a month without any water, and suddenly you have to have the water and get to it. We would like to have it administered by the Taylor Grazing Act grazers. They know grazing. You men in the Wildlife, your line would be wildlife, fish, and that. Don't think we are antagonistic to you, don't feel that way. But we feel it could be better administered, and be better all the way around; and so that is the grievance that we have. When it comes to getting more meat and things, and you are being encroached upon, with that area down around Mead Lake extending out—maybe new men don't feel like going into the grazing game, and others are being crowded out.

We have the same thing over in your State, Senator, part of the lake there in that withdrawal, and we have the same proposition over there. That part of it joins us. The line is over there by St. Thomas. We have the same thing to contend with. It got so crowded in the Pocum that I bought some interests over in Nevada, and some of the

other boys are doing the same thing. If this could be straightened out, it would help our business. I think that is all that we all want.

The **CHAIRMAN**. Are there any questions on this? Do you care to interrogate? I take it that the Boulder, or the Mead Lake area, which is not a park, as I understand it, is under the park supervision. Is that correct? Am I correct in that, Mr. Drury?

Mr. **NEWTON B. DRURY**. Yes.

The **CHAIRMAN**. I don't know whether it is officially a park or a monument.

Mr. **TILLOTSON**. It is a national recreational area. I don't know, we don't have Mr. Rose here, who is familiar with the whole set-up, but perhaps one of you gentlemen know more about it. If you do, we would be glad to have you make the statement.

Mr. **DRURY**. Mr. Tillotson, I suggest you say something about the character of the area.

Mr. **TILLOTSON**. Mr. Atkins, before you came in, I believe, it was Mr. Leech who indicated that there was an interbureau agreement between the Grazing Service and the National Park Service, in regard to generalities, for the administration of grazing. Now, as I understand it, you would like to have the grazing handled more along the lines of the Taylor Grazing Act?

Mr. **ATKINS**. That is it, exactly.

Mr. **TILLOTSON**. All right, if we get together with the Grazing Service officials, and work out your problems, that is what you would want?

Mr. **ATKINS**. That is what we want. Turn the grazing end of it over to them, and you men handle the fish and wildlife; and let the grazing division handle the grazing on it.

Mr. **TILLOTSON**. I'll assure you we will do that, in keeping with the interbureau agreement.

Mr. **ATKINS**. I never heard of it; but there was some talking done about it.

Mr. **TILLOTSON**. I could not say that we will turn the grazing completely over to the Grazing Service, but I'll say that we'll do what we can, in accordance with the terms of the agreement.

The **CHAIRMAN**. What is the agreement, in general terms?

Mr. **LEECH**. The agreement, in general terms, Senator, on areas within parks—I mean monuments, not parks—where grazing is permitted, the Park Service will permit us to say the numbers, and the persons to whom grazing privileges are granted. In some monuments we collect the fees, and in other monuments the Park Service collects the fees.

The **CHAIRMAN**. Is it working out fairly well?

Mr. **LEECH**. Yes, it is. This is a general memorandum of understanding, of February 20, 1940. Then that has to be supplemented by a field agreement between the superintendent of the park or monument and the regional grazier.

The **CHAIRMAN**. That localizes it?

Mr. **LEECH**. Yes. As I understand it, Mr. Brooks, aren't you and Mr. Rose, and some of the others, working on a proposed agreement in this area at this time?

Mr. **BROOKS**. That is right. This particular area, I think, is in about 4 different withdrawals. It is in the Park Service withdrawal, and the Fish and Wildlife withdrawal, and Reclamation withdrawal, and,

I think, a monument withdrawal. It is in four different withdrawals, and there are four agencies of us, all in the Interior Department, working on it at the present time, attempting to work out a cooperative agreement for the administration of grazing on the area, for the handling of grazing. We have been working very closely with Mr. Rose, of the Park Service, and Mr. Litner, of the Reclamation Service, and a representative of the Fish and Wildlife Service. I haven't had occasion to check recently. There has been a proposal worked out, and turned over to the various agencies to criticize, and the work sent back for a final drafting. I haven't had occasion, in the last few months, to check on that, but, in talking with Mr. Rose of the Park Service about 2 weeks ago he indicated that a lot of progress had been made. I was hopeful that I would be able to talk with him over here on this particular subject.

Mr. DRURY. I might explain, Mr. Chairman, as a part of our program of conserving tires and gasoline, Mr. Rose took me as far as Zion. Had I only known this matter was coming up here, I should have been glad to have him at this hearing. I might suggest to you that Mr. Rose could appear at any subsequent meeting of the committee, if it is your pleasure, and we will go into this matter more thoroughly. It looks to me like an interbureau administrative matter that we ought to be able to work out equitably. I am sorry I am not familiar with the particular case, or just how far the superintendent of Boulder Dam recreational area has gone with it.

The CHAIRMAN. I will say to you, Mr. Drury, that the matter of grazing in this section of the country is a vital matter to our whole economic set-up, in all of these States.

Mr. DRURY. I recognize that, Senator.

The CHAIRMAN. These people graze cattle and sheep under greater hardships than any people in the world. They endure and endure, in order to carry on. Sometimes one wonders why they do it. But they do it; and they maintain the tax structure of their specific States. Now, that area, down there, is a mighty hard area to graze. It must be done. It is very sparse in water, and the season of grazing cannot be so very long. It must be rather short. It is comparatively short; and I just hope, in keeping with the story that has been told here, that your departments can get speedy action on this, and see if it cannot be worked out. It seems to me it should be.

Mr. DRURY. We will do our best to work it out.

Mr. ARTHUR WOOLLEY. May I ask one question; whether or not, in this interdepartmental program you contemplate adopting the grazing code with respect to the length of the lease and the permanency of the permit? These people don't want to be on a day-to-day or year-to-year basis with this thing if they can avoid it.

The CHAIRMAN. Has anything been discussed on that?

Mr. LEECH. I would prefer to do it under the Federal range code.

Mr. ATKINS. That is the way we would like it.

The CHAIRMAN. You understand, Mr. Drury, at least the committee has been given to understand and I generally understand—that the policy of the Park Service is to terminate grazing at the expiration of the life of those who were grazing before the park or monument was set up.

Mr. DRURY. That is the general policy as to national parks and monuments.

The CHAIRMAN. That is a policy that, personally, I can't go along with; and I don't think our committee goes along with it at all; although it may have its meritorious side. We see that it can be worked to a great detriment. I hope that it may be the subject of a greater study in the future. This particular area we are addressing ourselves to is of such a peculiar nature, and the entire set-up of it is so peculiar, that I think it is a subject of immediate consideration. I take it that you will go into that.

Mr. DRURY. I agree with that. The Boulder Dam recreational area is a specific type of area, not a national park or a national monument. We recognize there are certain uses that existed there for a long time that should be respected in that area, and we will try to work it out administratively.

The CHAIRMAN. Thank you, very much.

Mr. ARTHUR WOOLLEY. Does that also go, if I may ask, to the question of elimination of that exclusion they have already practiced? In other words, he testified that they excluded them, made them go down a lane. Is there any purpose in that, other than excluding grazing?

Mr. DRURY. I would say that would be something that we would have to work out and study. The men who know the conditions on the ground could best answer that. I'm not familiar with the reason for that exclusion. All I can say now is that we will go into it very thoroughly.

The CHAIRMAN. You also add the word "promptly" to it?

Mr. DRURY. Promptly. That is a counsel of perfection that we try to follow, Senator.

The CHAIRMAN. Thank you.

Mr. Anderson, do you care to be heard? Will you please state your residence and business?

STATEMENT OF CHARLES C. ANDERSON, GLENDALE, UTAH

Mr. ANDERSON. Well, I believe I am acquainted, down in this particular area, as much as any of our stockmen.

The CHAIRMAN. You are referring again to—

Mr. ANDERSON. To the Lake Mead area; four withdrawals; that part of it that lay in the Arizona part of Lake Mead, both sides of the Colorado River. I think if these park gentlemen here know as I know—perhaps they don't, but there is not one sheep permitted on the park at the present time on the Arizona area. I think there is one cattleman recognized on this area, and that is all, since the spring of 1940.

We didn't really know there was a withdrawal in there. We might have heard of it, but we didn't realize it until, in the spring of 1940, a park ranger came in that area and ordered off all the sheep that were grazing there, in spring use, as they had always grazed, from the beginning of my time, in that area, which was about 1920, when I first took my sheep in this area. We had never been denied, until the spring of 1940, and the park ranger came out and moved us back to certain places, said: "Here is the line." Well, we had not even seen any boundary lines until this time. I think perhaps they may have been posted. They may have been, before, but if they had not been, we have not seen them since that time. We have been forbidden to graze on there entirely, and the Grazing Service, or its district grazer,

Mr. Blankenagel, got an agreement, or permit, with the Park Service to get two trails across these withdrawals—I don't know just what withdrawals the trails lay on—to go to the lake to water from public domain on the north boundary of these withdrawals. I think these trails are from half a mile to a mile wide, which I appreciate very much, in getting a trail that wide.

One trail lays next to the rim, over by Pierce's Ferry, and the other lays down on the bottom of the Grand Wash. I helped stake these trails, or post the boundary lines for these trails. There was about three members of the Grazing Service present at that time that participated in this, and an engineer of a C. C. camp, which I guess was under the direction of the Grazing Service, as I understood it, at that time. At that time the Park Service had no system for handling livestock and no help for this sort of work. Under the direction of Mr. Blankenagel, the district grazer of the Grazing Service employed their own help, dug down and furnished their own posts, and marked these boundaries, and did it without the presence of any park officials. As I recall, I don't remember seeing any. I was there while this work was being done but, to my knowledge, there is some sheep permitted on these areas in here. This was shortly after we had first been ordered

Two years ago, or a year ago last November, I was present at Kingman, to some of the committee's hearings there, and I remember you had Mr. Edwards up to question him at that time regarding grazing on these areas in here. This was shortly after we had first been ordered off. I think Mr. Edwards was head of the Park Service then; wasn't he, Tilly?

Mr. TILLOTSON. At that time; yes.

Mr. ANDERSON. Mr. Edwards made the statement, as I remember, there, if we would prove our priorities there—and those priorities had been consistent—and some other requirements, they would allow grazing there. So, on my return home after the hearing in Phoenix which you held there, I got to thinking of this, and I decided to make application to graze there. I did make application in January of 1941, to graze 2,700 sheep on this area during the spring months.

Now, I didn't care to—I believe I asked for a privilege of about 3 months. Afterward, I was wishing I hadn't. But I did it more to test out as to whether it would be allowed, grazing would be allowed there, than anything. I didn't care to go out and graze there and get ahead of some of my neighbors, or anything of that sort—try to get something they didn't have. But I wouldn't want to give up my rights on the public domain—go on this area and stay for that long, because some years there is no feed on this particular area, when there is some feed on the other parts of that Pocom area, or that lower country. But it was shortly after I had made this application, sometime within 30 days, I would say, that I received an answer saying that I had been denied a grazing privilege there, because I desired to graze in certain townships that was in the locality of a certain cowman's holdings, and therefore would be denied.

Now, I have looked for this answer from the Park Service, but I was unable to find it. I went to the Grazing Service the other day, I thought perhaps I would take it and leave it with them. They didn't find it. But they did find a letter from the Park Service to Mr. Blankenagel verifying what I have said here. They have this letter of record, if you care to have it for the records. So, as I said, they

denied me this right, and thought they would continue to deny me any right for grazing on the area.

The CHAIRMAN. Did you set up proof of priority?

Mr. ANDERSON. Well, I don't know whether I set up proof, I give them the time I had run; I told them that in the letter. I told them that I had run there so many years, in this particular area, watering on the lake, and this and that. But as far as giving anything signed up before a notary public or anything, I didn't do it.

The CHAIRMAN. Let me ask you a question, there. You said you have watered on the lake. Now you said you started grazing there in 1920?

Mr. ANDERSON. Yes.

The CHAIRMAN. The lake didn't come into existence until along about 1934 or '5.

Mr. ANDERSON. That's right.

The CHAIRMAN. Then you didn't water on the lake.

Mr. ANDERSON. I watered on the river, and the lake backs up in the river to where the river comes out of the Grand Canyon. It backs up the canyon a good ways now. I watered at the mouth of this canyon, at what is known as Pierce's Ferry; also on the Grand Wash, where the wash emptied into the Colorado River.

The CHAIRMAN. So you have been using this Colorado River as a watering source from about 1920 on?

Mr. ANDERSON. Yes, sir.

The CHAIRMAN. At that time were you running counter to any other stockman?

Mr. ANDERSON. There were a few cattle in the country at that time. I didn't know whose they were. I was new in the country; didn't take any sheep in there until about the year 1920. There were a few cattle there, but I never did see a great lot of cattle in this country. But the sheep—there were lots of sheep in there, a great many more at that time than there are at present.

The CHAIRMAN. What season of the year did you run in there?

Mr. ANDERSON. Well, it varies with our moisture. Some years we go in in January, and some years we don't go in until March, and some years we don't go at all. It's very seldom that we can't get some good grazing in the spring of the year.

The CHAIRMAN. It is a spring season?

Mr. ANDERSON. Spring season proposition. When the feed is good, it is good. If it isn't good, you don't want to be there at all.

The CHAIRMAN. What length of time is it liable to be good, at its best?

Mr. ANDERSON. Well, from February to April is ordinarily the best months for feed.

The CHAIRMAN. How many sheep did you graze in there from 1920?

Mr. ANDERSON. The herd varied from 2,500 to 3,500 during those years.

Mr. TILLOTSON. May I ask you a question as to this refusal of your application? Was that based on priority of some cattlemen, or was it based on just the question of excluding sheep from the area?

Mr. ANDERSON. I would like the Division of Grazing to produce a letter that explains that. It just refuses the right.

Mr. LEECH. I don't know whether we have that letter. I will ask Mr. Allen if he has that with him.

MYRON H. ALLEN (district grazier, St. George Utah.). I think we can get that letter, Mr. Leech.

Mr. LEECH. In how long?

Mr. ALLEN. Oh, about half an hour.

Mr. LEECH. We will furnish it to you later, Senator.

The CHAIRMAN. The letters will go into the record.

Mr. ANDERSON. I think this area takes between one-fourth and one-third of our spring grazing area, on the Arizona side of the line. Now, the Nevada line lies not far west of Grand Wash, where the Colorado River is close to where the Grand Wash empties into the Colorado River. That runs due north, but the withdrawals, in there, constitute perhaps a third more, and a fourth, and almost a third, of all of the spring feed area, and we had, always, up until 1940, the spring of 1940, the privilege to graze all of that range. When we were moved back off from a third or fourth, or whatever portion it is, it congested the sheep use on the area that was left. So we have missed this area. We feel that, in a time like this, when we are invited and asked and persuaded upon to produce all we can, it is a poor time, when our Nation is going into war, to prohibit the use of big areas of range that could be made to produce a lot of foodstuff for our Nation.

Mr. ARTHUR WOOLLEY. Is the area being used, Mr. Anderson, for any apparent purpose, by the Park Service?

Mr. ANDERSON. I don't think so, by the Park Service. I think, if I am not misinformed, if I know it right, there is one cattleman who has the right to run cattle on there, and this particular man has an allotment on Federal range adjoining this withdrawal, of 20 sections. The advisory board of this district has granted him—I have been on the board since the beginning of the Taylor Grazing Act, in this district, and I know the particulars about it. He has been allowed 20 sections, and his prior use, up until the time I got a license, I think our records show his prior use is only about 70 head, and we give him a license for a hundred head.

The CHAIRMAN. On how many sections?

Mr. ANDERSON. Twenty section. Well, you figure that area a year around. It has a very low carrying capacity. Figure it for spring use, and you can put it to high carrying capacity, for the length of time the feed is there. But they put it to 5 head per section, year-round use. He has an allotment of 20 sections. Then he has some rights on the park. Just what they are I don't know, but he has a right to graze his cattle anywhere on these withdrawals. All sheep are prohibited, other than the sheep trails allowed by the park. We appreciate that right very much, to trail across it.

The CHAIRMAN. That addresses itself to the same proposition that we had up with Mr. Atkins.

Mr. TILLOTSON. Mr. Chairman, for the record, I would like to make a comment on one statement Mr. Anderson made. He said that the Park Service were not grazing men. That is true. We are not in the grazing business and never pretended to be in the grazing business. We admit that we don't know the grazing business. But we have recently—that is, within the last year, or a little more—added to our force a man who does know grazing. We have done that recently. We have a grazing man now who can answer some of your problems for you.

The CHAIRMAN. Is he here?

MR. TILLOTSON. He is not here, but he will be at the Albuquerque meeting, Senator. I have sent for him to be at the Albuquerque meeting.

The CHAIRMAN. It may be possible that Mr. Edwards, who was then in charge of the recreational area at Boulder Dam, or Lake Mead, denied the application, on the general policy of the Park Service. But if he did, he should have denied the cattlemen as well, you see. So it seems there was something else that entered into the picture.

MR. DRURY. I would like to see the letter involved, and review the case.

MR. LEECH. We have the letters here, now, Senator.

The CHAIRMAN. Will you read it please?

MR. LEECH. There seems to be several letters, but I believe I should start with the one of February 4, 1942. It is addressed to Mr. Blankenagel, from Guy D. Edwards, superintendent. Mr. Blankenagel was at that time our district grazier at St. George, Utah. The letter reads as follows:

DEAR MR. BLANKENAGEL: We are in receipt of an application for a grazing permit from Charles C. Anderson, of Glendale, Utah, dated January 27, 1942.

In this application Mr. Anderson requests a permit to graze 2,700 sheep from February 15, 1942, to April 15, 1942, on the following-described land: W $\frac{1}{2}$ of T. 33 N., R. 15 W., and on the E $\frac{1}{2}$ of T. 32 N., R. 15 W.

Our map shows that the above-described area has been assigned to Ed Yates & Son. Our records also show that this assignment was decided upon after a survey of the area in question made by yourself and our chief ranger. However, we have nothing in our records which would shed any light on the following statement made by Mr. Anderson: "It has been my customary practice to graze on these lands for the past 15 years until March 1940, when the privilege was denied us."

If you can help us in clarifying this matter, we will greatly appreciate it.

Sincerely yours,

GUY D. EDWARDS, *Superintendent.*

MR. TILLOTSON. What is the date of that letter, Mr. Leech?

MR. LEECH. February 4, 1942.

There is also a letter to Mr. Edwards from Mr. Blankenagel, under date of February 9, 1942. It reads as follows:

DEAR MR. EDWARDS: Reference is made to your letter of February 4 regarding an application submitted by Charles C. Anderson of Glendale, Utah, under date of January 27, 1942, for a grazing permit to graze 2,700 head of sheep from February 15 to April 15, 1942, on the W $\frac{1}{2}$ of T. 33 N., R. 15 W., and on the E $\frac{1}{2}$ of T. 32 N., R. 15 W.

As stated in Mr. Anderson's application, it has been his custom to graze stock on these lands prior to March 1940, at which time this range was included within the allotment of Ed Yates & Son.

Evidently Mr. Anderson feels that Mr. Yates has received more than enough range to take care of his operations and is therefore applying for the lands that he formerly used in connection with his livestock operations.

Very truly yours—

On February 14 Mr. Edwards replied to that letter as follows:

DEAR MR. BLANKENAGEL: Reference is made to your letter of February 9, 1942, concerning an application submitted by Charles C. Anderson, of Glendale, Utah.

We appreciate very much your assistance in helping us clarify this problem, and believe that under the present conditions we will continue to deny Mr. Anderson his grazing rights in Tps. 32 and 33 N., R. 15 W.

Sincerely yours—

That seems to be the correspondence concerning the Anderson case.
The CHAIRMAN. That says nothing about any right granted to the cattlemen, does it?

Mr. TILLOTSON. Yes.

Mr. LEECH. Only that Mr. Yates was granted that area for cattle use.

Mr. ARTHUR WOOLLEY. By whom would that be, Mr. Leech?

Mr. LEECH. I would take it that was issued by Mr. Edwards, after an examination by the chief ranger and Mr. Blankenagel.

The CHAIRMAN. There is nothing there that shows that, though, is there?

Mr. ARTHUR WOOLLEY. That is without reference to the board system of the Grazing Service, that is, the advisory board. That was not under the Grazing System Code, was it?

Mr. LEECH. Well, I do not have the board action, if there was a board action on it. The trouble is Mr. Blankenagel is not here any more. He is in New Mexico, and Mr. Allen wouldn't know, would he?

Mr. BROOKS. I think he would, probably.

Mr. LEECH. I would like to ask Mr. Allen, of the Grazing Service, if he knows whether or not this matter was referred to the advisory board.

Mr. ALLEN. No; it was not.

You had your board member in that area present, Mr. Anderson, when they discussed that.

Mr. LEECH. That would be the reason it was not referred to the Advisory Board.

Mr. ALLEN. That was on land administered by the Park Service, and, therefore, there would be no reason for the advisory board.

Mr. TILLOTSON. Then, I take it, it was a question of priority, rather than simply denial of the application.

The CHAIRMAN. The trouble, as I gather it, there was no determination on the question of priority.

Mr. TILLOTSON. Whether the priority was right, whether we completely decided the priority, was another matter.

Mr. ANDERSON. Mr. Chairman—

The CHAIRMAN. Yes, Mr. Anderson.

Mr. ANDERSON. I think you will find practically all of these withdrawals have been put within Ed Yates' area, and he has no stock to stock it. We figure we have given him more range on the public domain, off of the park withdrawals, than he had prior use for in the country, to say nothing about the park lands now. They give him all of the park, in fact, those two half townships that I formerly run on. I think I asked for those particular townships, all the area down west of there, Grand Wash, all that area he tells us that is his. I don't know, I haven't got that for the Park Service, but the cattleman himself says that is his area, the whole thing.

Mr. TILLOTSON. Is it your understanding this would be a proper matter for reference to the advisory board?

Mr. LEECH. Not if Mr. Anderson is a member of the advisory board. It would be up to the district grazier.

Mr. TILLOTSON. How would you suggest they handle it?

Mr. LEECH. I would suggest, after they enter into an agreement on the administration of the entire unit, that we have our local man look into the Yates case, and this one, too, and come to the proper conclusion.

Mr. TILLOTSON. Will you do that? We would be very glad to have you.

Mr. LEECH. We will be very glad to do it.

Mr. ANDERSON. I have a good many neighbors who have as much prior use on this country as I have. I didn't stay on there 3 months at a time. I made application, to see what results I got from it, but we moved on and off, and didn't know where the lines were—went to water at the river and the lake, after the lake came in. We moved back to feed. Sometimes we stay out, as Mr. Atkins stated, as high as 30 days without water, if the feed was right. Oftentimes, we went more frequently after water. I have as many neighbors, sheepmen, that have as much priority on that as I have; sheepmen that go in the spring of the year.

What we would like, as the grazers or licensees on this Arizona strip unit, is that it be grazed as it used to be grazed, figuring, that is, so it isn't overgrazed. Then, if it could be handled by the Grazing Service, that is what we would like; and to have the park people receive their portion of the fees. If the Grazing Service could supervise this, to you people's satisfaction, so it would not be overgrazed, and you receive your share of the fees, and let the Grazing Service handle the grazing part of it, we think it could be handled much more systematically than it has been.

The CHAIRMAN. Well, I respectfully suggest to you gentlemen that maybe we can first get your working arrangement worked out, and then, I think, it ought to be taken up. This is only a suggestion, if you please, but it should be taken up as though no permits had been granted, and taken up de novo, so to speak. I think that is the only way to work these rights out. But that is my individual opinion, and you don't have to be governed by that.

Mr. LEECH. I think that is right, sir.

STATEMENT OF NEWTON B. DRURY, DIRECTOR, NATIONAL PARK SERVICE, CHICAGO, ILL.

Mr. DRURY. May I make a brief statement? I don't know whether this is the proper time, but I should like, if it is appropriate, to say something in general about the approach of the National Park Service to these very vital questions that the gentlemen here are concerned with; the questions relate, of course, to fundamental industries of this whole community.

The National Park Service is set up by law to accomplish certain ends for the people of the United States and to administer areas of various types for the enjoyment and recreation of our citizens.

We find that we come up against a good many problems, of which these rather detailed technical questions of grazing are only one, in which we have to have the benefit of the advice of the related bureaus in the Department of the Interior. As far as I am concerned, I don't look upon the management of grazing as one of our primary functions. Insofar as the regulations of the Department allow, we rely very definitely upon the technical knowledge of the Grazing Service, just as in wildlife matters we rely upon the knowledge of the Fish and Wildlife Service.

I feel myself that the closer the National Park Service can get the decisions of matters of this sort to the actual field where the problems lie the more apt we are to be fair and equitable in dealing with them. So in the Director's office in Chicago we are very remote from this

kind of problem. The regional office in Santa Fe is closer to it. But the superintendents in the areas, working with the local representatives of grazing and fish and wildlife and going very definitely into the facts of the case and the right or wrong of each consideration, are more apt to reach sound solutions—solutions more in harmony with the interests of the communities where these areas lie.

I want to say, as far as I am concerned, I shall rely definitely upon the men in the field, who are in touch with the actual conditions, and upon the technical advice of the related bureaus in the Department.

The CHAIRMAN. I think that is a very fair statement of policy.

There is one thought that I want to throw into this matter. The Grazing Service has had a very constructive history. I don't say this boastfully, but from the very initial stages of the Grazing Service the senior Senator from Nevada has been into it up to his ears, and I have known of each progressive step. I think the Grazing Service has taken advantage of the experience through which the Forest Service has passed, and has had the benefit of that experience. It has given the Grazing Service a splendid impetus and put it 'way ahead of what might be expected, because the Forest Service had to pioneer the whole thing, and did pioneer it, and went through it.

Now, another phase of the question is that your Park Service men are not presumed to be graziers. They haven't that grazing attitude; so that, if something could be worked out whereby grazing would be permitted within proper limits within your parks or on your monuments, and the Grazing Service have charge of it where it is a Grazing Service territory, it seems to me that you would work out a valuable asset to these communities.

Mr. DRURY. We rely on the Grazing Service for advice as to the management of such grazing as existed at the time of the establishment of the park or monument. It is understood that the Boulder Dam recreational area is to be open to grazing and is so specified in the agreement under which we administer the area. I take it that issue is the whole fundamental question, as to whether or not the grazing should gradually diminish on the national parks and monuments. That issue is not in question here as to the Boulder Dam recreational area. I would be glad later on, Senator, to answer any questions as to what we think are the justifiable reasons for the basic policy that has been applied to the national parks and monuments ever since they were established.

The CHAIRMAN. We would be very glad to have you do that.

Mr. DRURY. Wherever, in the beginning, grazing rights have existed prior to the establishment, those rights have been respected.

The CHAIRMAN. For the life of the permittee.

Mr. DRURY. For the life of the permittee; yes.

Now, the question as to how long those rights might exist is a basic question of policy. That is decided by the Department of the Interior.

There is no disposition—particularly at this time, when, as Mr. Anderson says, every service is being strained to produce an increased food and fiber supply for the Nation in time of war—there is no disposition on our part in any way to hamper legitimate grazing interests. In fact, quite to the contrary. While we have not opened up any new areas on the primary parks and monuments, we have, at the request of the Secretary, made a study of the grazing possibilities, in some areas of the historical site, type, and recreational areas, and we

were able to indicate about a 20-percent increase in the amount of grazing afforded.

The CHAIRMAN. To get back to my thought, in the various hearings that we have held, we have had your Park Service and your Monument Service people before us, and they have—I say this without any criticism—they have become inspired with the policy of no grazing within the parks. They have got it bred right into them.

Mr. DRURY. Well, we are instructed to abide by this policy. Congress itself enjoined us to protect certain things in those parks.

The CHAIRMAN. To follow that up, if you were to leave it to the Park Service man in the Boulder Canyon area as to whether or not there should be grazing, he is liable to say no. As a matter of fact, grazing could be conducted in the Mead Lake area without harm. The Grazing Service could manage it, and you might come to the solution.

Mr. DRURY. I wasn't aware that that was the attitude, insofar as the Boulder Dam recreational area is concerned.

Mr. TILLOTSON. The Senator's point is that that is the attitude of every Park Service man.

The CHAIRMAN. That is right.

Mr. DRURY. Of course it is a long story, entirely a matter of basic theory of national-park administration. I suppose you wouldn't want to go into that right now? I would be very glad to answer the question sometime during these hearings.

The CHAIRMAN. It is an interesting subject, and one on which I am sure the other members of the committee think as I do. I have definite thoughts on it. I can also see the other side of that. I am not blind to that. I think there is a reason in everything, as I said before. However, as I also said before you came in, Mr. Drury, if we continue increasing the parks and monuments and continue with the policy of no grazing, pretty soon we will shut out all the grazing in these States, because you can find a good excuse to make a park out of the entire State of Nevada, if you want to.

Mr. DRURY. I can agree with you, Senator, on both your points, both as to the parks and to the unreasonableness of trying to include every area that might take our fancy into a park. I can also say, as far as I am personally concerned, and I know it is the general approach of the National Park Service, that we are confining our attention to the areas which are outstanding in caliber of national beauty, wildlife values, historical and scenic interests, and we can, I agree with you, also readily imperil the high standards which we have tried to maintain for the national-park system, if we take in too much territory.

Now, the question as to how much territory is reasonable to include in parks and monuments, is, of course, debatable. The fact is that, in the total land area of the United States, only about three-quarters of 1 percent of the land, at the present time, is included in all the different types of areas administered by the National Park Service. In general our approach is not to add to this number of areas or acreage, except where there are outstanding examples, in scenery and other values such as we are supposed to preserve in parks and monuments, examples that are distinctly of interest to the Nation as a whole, the preservation of which is a matter of concern for the entire people.

That, too, I think we have to do without injustice either to individuals or the communities where those areas are located.

The CHAIRMAN. Well, dwelling locally, then, with this particular subject, it is neither a park nor monument nor grazing district, at the present time; and it does seem to be an injustice to these people, and to the economic structure of the respective States that pay taxes, and pretty heavy taxes, too. It seems to me this matter should be a subject for quite prompt attention, if you please.

Mr. DRURY. We will try to see to it that it is prompt, just, and reasonable.

Mr. ARTHUR WOOLLEY. In that connection, may I inject a question? As to whether or not it has come to the attention of the present administration of the parks, locally, that assurance was given the local people here by the former director of the Park Service, Mr. Albright, that the withdrawal of these lands would not interfere with the grazing or the general utilization of the public domain for grazing? In other words, that was a very definite ruling, or assurance, given as early as 1933, in connection with it, over Mr. Albright's signature, which these people find has not been kept as a matter of faith. Whether or not it has been overlooked, or some change of policy nationally effected, is reflected in this condition, or, whether it is up to the disposition of the park people to execute grazing and be more concerned with wildlife or something of that sort, that is a question.

Mr. DRURY. Is it so much a question of excluding grazing or a question of dealing with individual cases, where there may be perhaps a conflict of interests?

The CHAIRMAN. Well, there are two questions uppermost. The one is fundamental and addresses itself to the policy; and the other is local now and addresses itself to this particular case, which, to be very frank with you, appeals to the chairman of this committee very strongly. If these people did actually graze sheep in this locality and were excluded, and someone who had no rights, or who had limited rights, has been given rights by the Park Service, then we would say that neither was right, and that justice should be resorted to. We should go back to the beginning, and let the Grazing Service determine whether or not these rights did exist. If they did exist, then to what extent should they be carried on?

Mr. DRURY. As far as I know, that is the procedure we follow. If it isn't, I will see to it that they operate along those lines.

Mr. ARTHUR WOOLLEY. May I ask a question? I'd like to know whether or not it is the policy of the Park Service, in that connection, to adopt the formula of the Taylor Grazing Act, that the land suitable, or better adopted, or most particularly suited, for grazing, in the releasing or allocating them for grazing?

Mr. DRURY. Well, we rely on the advice of the Grazing Service as to that to a considerable extent. What do you think has been our attitude on that, Mr. Leech?

Mr. LEECH. Well, I would say that the formula was followed where we said who they were and the numbers, and we were guided by commensurate rating and prior use in the area.

Mr. WOOLLEY. But as to the area upon which they may graze, you have nothing to say, under this interdepartmental program?

Mr. LEECH. If it is within a monument we would say, "John Jones, you use these sections over here." Yes, we would determine that, with the Park Service, if we are administering grazing on that area, that is.

Mr. ARTHUR WOOLLEY. If they first say, "We are going to permit grazing," that is all right; but if they say they are excluding it, you wouldn't administer it. They have the first say as to what area is to be turned over to your administration?

Mr. LEECH. Yes.

Mr. ARTHUR WOOLLEY. So we have this question; these gentlemen have been excluded from an area that has no value except for grazing. Do they contemplate passing it at that, or do they intend meeting the issue on it?

Mr. DRURY. I didn't understand that that was the primary question. The primary question is prior rights, isn't that right?

Mr. TILLOTSON. That's right.

Mr. ARTHUR WOOLLEY. That is an individual case. I am trying to direct your attention—don't skip us on this. These men have been pushed back several times, have been told you can't graze here, and nothing is done there to use that ground, and they say it is a waste. They want their rights, and want to get back there. Are you going to let them? Or are you going to go into a huddle with a department, and come out with a recognition of administration some place else, or are you going to try to do something, without committing yourself? That is what our problem is.

Mr. DRURY. You want to know how we approach that?

Mr. ARTHUR WOOLLEY. Yes.

Mr. DRURY. I would say this, as far as the Boulder Dam national recreational area is concerned, the interests of several Bureaus are concerned. The Reclamation Service made the original withdrawal, which was followed by a withdrawal for possible national monument purposes and by still another withdrawal for wildlife purposes, all involving lands also used for grazing.

You have got to have a coordination of all these interests before you can answer the question.

Mr. ARTHUR WOOLLEY. The Wildlife started out by fencing off a canyon now and then. Mr. Day is here.

The CHAIRMAN. Mr. Day, would you care to be heard?

STATEMENT OF ALBERT M. DAY, ASSISTANT DIRECTOR OF WILDLIFE SERVICE, CHICAGO, ILL.

Mr. DAY. I am not familiar with this particular area. In general, our interest lies in protecting certain species, largely big game, in conjunction with the other use of the public domain. In this particular instance, it is a strain of mountain sheep we are attempting to protect from too close crowding by domestic sheep, from the possibility of disease, intermingling, and so on. As it comes to grazing, that is handled largely by the Grazing Service, in which we concur as to the grazing within that area. So, we have nothing to do with the allocation of the range, or numbers of grazing, other than to protect enough forage to maintain the minimum number of animals we think are advisable in the area.

The CHAIRMAN. Well, have you a certain part in there, a withdrawn area of Lake Mead, in which there are mountain sheep on the Arizona side?

Mr. DAY. That is right.

The CHAIRMAN. I knew there was a withdrawal on the Nevada side, for mountain sheep, but I didn't know there was one on the Arizona side.

Mr. DAY. There may be some doubt as to whether they run over the Arizona line or not, but it is in the general area.

The CHAIRMAN. I think they stay away from Arizona.

Mr. DAY. They are within the Boulder Canyon withdrawal.

Mr. WILLIAM J. SWAPP, Alton, Utah. I just want to say that I like your attitude; and there's only one thing that I dislike about the attitude of the park graziers, and that is simply because they put on every permit the termination of that permit depends on the life of the individual. Out here in our country—I run out this way—a lot of our fellows from this part of the country know that the range is practically valueless for anything but sheep. In the wintertime there is no water on it. I feel that if it is possible that this here termination, at the death of the individual, should be terminated if possible—I don't believe it is right, because most of us men that are running sheep, we don't expect to live forever. But we have sons, and they have been trained to the livestock business, in the same set-up that we have. I don't believe, if a man happens to die, that his rights ought to be taken away from his inheritance.

Mr. ANDERSON. In answer to this man here regarding his mountain sheep in this particular area——

The CHAIRMAN. Do you mean Mr. Day?

Mr. ANDERSON. I have been in there now since 1920, and the only time we ever saw a mountain sheep on those low areas was in the winter of 1936 and 1937, when that deep snow came down. They did come down to the foot of the mountains that year to get something to eat, when the snow fell deep on those mountains. Other than that I never did see any mountain sheep in the bottoms in the spring feed area.

Mr. DAY. I think they are farther south.

Mr. ANDERSON. Well, I want to say there are several hundred head of burros there. If they have any value to anybody, I don't know what it is. If the park wants to keep increasing them and go on prohibiting the use of sheep and other stock—well, they might be of some use, but I can't see what the good of several hundred head of burros is. I don't know how many hundred there are, but I don't think anyone else can see it, either.

The CHAIRMAN. Well, a very prominent Senator once said on the floor of the Senate that those of us from the West are sons of wild jackasses, so maybe we ought to keep breeding the jackasses.

Mr. Esplin, do you care to be heard?

Mr. ESPLIN. Yes, Senator.

The CHAIRMAN. Will you state your name for the record?

STATEMENT OF CHARLES ESPLIN, OF CEDAR CITY, UTAH

Mr. ESPLIN. My name is Charles Esplin; I am from Cedar City, Utah.

The CHAIRMAN. You are concerned with the Lake Mead area?

Mr. ESPLIN. Yes, sir; and the Zion Park area.

The CHAIRMAN. You may make your statement.

Mr. ESPLIN. With regard to the Lake Mead area, Mr. Anderson and Mr. Atkins have just about said everything that needs to be said with regard to that. It is an area which we have used with our livestock since Mr. Atkins—I guess back for 40 years. The sheep went in there since 1914 or 1915, and made it a part of their set-up every year there is moisture enough to let them come down there for that spring feeding.

The CHAIRMAN. Is there any water in the area, aside from the Colorado River?

Mr. ESPLIN. Yes, sir; several springs, all privately owned now, and this park coming in has taken a block, I think about a third of the area, out, and it has also excluded them from watering on the lake, except in two places, one at the extreme west side of the area, and one at the extreme east. To get to either of those, you have to go through a long lane, between the mountains, and down to the farther edges of the lake. There is a bend in the river—it used to be in the river, but it's in the lake now—that comes up in the middle of the area. We could reach that much quicker and have a shorter cut to the water, and it would allow a great deal freer grazing for the area, if they could come close to the water hole.

Now, just about the question of the first two herds that get in there, one gets to one lane and the other to the other, and they can hold the other 10 or 12 herds from going into the water—the lanes are so narrow. That is the same in both areas, east and west of that, is in the same condition. In any event, if they exclude grazing; if they decide to do it, it would exclude a great many livestock that run in there on a year round set-up. I think you will hear from those different livestock people later, but the thing, too, that I am greatly interested in is the question of time. The Park Service has always taken the attitude that as soon as a man using it, when they come in, passes out of the picture, then the thing is closed for grazing.

I have several sons that will be better livestock men than I am, given a chance; and they would like to carry on. At least I hope some of them will stay with it, if there is any inducement to stay in the livestock business in the future. I hope part of them will stay with the industry, and carry it on, as soon as they come from the armed forces, wherever they are, and are not just kicked out or told to retire. I hope they will have a chance to go on and carry on in this area.

In regard to the Zion National Park, that was made, I think, in about 1918 or 1919. I know I was in Europe at the time, and when I came home we had a park and a small grazing permit, which didn't affect us much. In a few years they decided they didn't want us there, and let us off. But they did practically eliminate, entirely, the live-

stock industry in the town of Springdale. The people there were farmers, small farmers with small bunches of cattle, each one of them. They gave some of them permits for awhile, and some of them were kicked off immediately. That community went on, a few years, and gradually died out. I think now, of all the original permittees which adjoined the park, when it was set up, there is one operator, who has a few head within the boundaries of the park. It killed the industry of both of these towns. I met an old resident, a farmer and pioneer, and I asked him one time when he lost his cattle industry what did he do with his crops. He said, "I haven't any; the cattle is gone, and I haven't any. I did get a little work out of the park. In the depression years the C. C. C. boys come and took that for a few years, and eliminated that source of income." This is all on account of the park taking larger and larger areas for the park.

Now I don't think humans ever get on, and up, off of the canyon bed. There are no roads to those parks, poor trails; and some of them are so extensive that they can't possibly use them. I think a great deal of that should be thrown open to grazing and reestablish it for these men in business, so they can come out and be given a chance to produce after the war is over. They should be given a chance to produce livestock again on the areas not needed for the Mead recreation.

The CHAIRMAN. Are there any questions? Do you care to interrogate any of the Park Service or care to interrogate anyone here.

Mr. ESPLIN. No.

The CHAIRMAN. Does anyone else care to ask any questions? Thank you very much, Mr. Esplin.

Now, the upper Lake Mead wildlife area. Is Mr. Waring, from Fredonia, here?

Mr. J. D. WARING. Yes, Senator.

The CHAIRMAN. Will you come forward, please, and state your name and place of residence for the record and then make any statement you care to make? We would be glad to hear you.

STATEMENT OF J. D. WARING, FREDONIA, ARIZ., STOCKMAN

Mr. WARING. My name is J. D. Warink, and I live at Fredonia. I am located down on the point, down there of the area.

The CHAIRMAN. What area is that?

Mr. WARING. Boulder Dam recreational area, a little bit higher country than we were just talking about, though. Here recently the Government has requested of the railroad, which I lease from, in odd sections, the offering of exchange of 11 sections, down on the end of that point where I graze my stuff in winter. If that is done, it looks to me that the purpose of that is for the elimination of grazing eventually. There's no other reason for it that I can see.

The CHAIRMAN. Elimination of grazing from that area?

Mr. WARING. From this area that I am in.

The CHAIRMAN. I take it that they must want to make those railroad sections a part of the area. Do you know anything about that, Mr. Tillotson?

Mr. TILLOTSON. No.

Mr. DAY. Not I.

The CHAIRMAN. Where did you get this information, Mr. Waring?

Mr. WARING. The railroad told me they were withholding the sec-

tions from my lease because the Government had requested them to offer them for exchange.

Mr. LEECH. It is not a Grazing Service exchange.

Mr. TILLOTSON. I'm sorry; I don't know anything about it, myself.

Mr. WARING. Well, I don't either. I thought I would bring it up right now. What is the object of getting that railroad land out of there?

Mr. LEECH. The railroad land was within the withdrawal. Perhaps the railroad company wants to select land elsewhere to get out of the withdrawal.

Mr. WARING. Well, they said it was at the request of the Government. They didn't mention what outfit.

The CHAIRMAN. Maybe the railroad wants to make some exchange.

Mr. THOMAS C. HAVELL. General Land Office, Washington, D. C. I don't know, Mr. Chairman, if any application for an exchange by the railroad could have been filed in the General Land Office, and that is the place it should be filed. Furthermore, I would like to say that the railroad company must be the moving party. The Government is not the moving party in an exchange.

The CHAIRMAN. And the Park Service knows nothing of that?

Mr. TILLOTSON. No.

Mr. ARTHUR WOOLLEY. Do you want to make a statement also, Mr. Waring, concerning your desire to be administered.

Mr. WARING. Very much so. The Park Service so far has treated me all right, but the policy of the Park Service, as applied to my lands, which are spring range lands for stock purposes, why eventually I'll be eliminated. The only thing that can save us is being set up by the Taylor Grazing Act.

How much land does the Park Service need, anyway? They're all along the Grand Canyon, and you have all the Grand Canyon. How far do you intend going back from the river?

The CHAIRMAN. That is not in the park.

Mr. WARING. It's a recreational area, administered by the Park.

The CHAIRMAN. Grand Canyon?

Mr. ARTHUR WOOLLEY. You lease some sections, and then you have a permit?

Mr. WARING. My permit is 55 percent on recreational area, 20 percent privately owned land, railroad, and the rest fed.

Mr. ARTHUR WOOLLEY. How many cattle do you have?

Mr. WARING. My permit is for 640 head, I think.

The CHAIRMAN. You were running in there before the area was set up?

Mr. WARING. I have been there since 1916, and in '34, when the tenure bill was passed, we felt that we had after that some consideration and rights. We spent considerable money making range improvements and paid our fees until 1941, and then woke up to find that it belonged to the Park Service; had been paying for the wrong part of it to the Grazing Service.

The CHAIRMAN. Do you still have that money, Mr. Leech?

Mr. LEECH. I think we do, Senator. I think we have applied it.

Mr. WARING. Since then we've paid the Park Service, and everything has been satisfactory. But that land down in that point is strictly grazing land. I have been in the dude business, and the proper use of that land is strictly grazing beyond any doubt. Of course, that area

of the Grand Canyon, if it was set back in Ohio, it would be all right for the National Monument; but taken in connection with all of the Grand Canyon it doesn't seem necessary.

The CHAIRMAN. This is the area away from the canyon, is it?

Mr. WARING. All of my lands, I think, are back at least 6 miles from the river.

Now, then, the point, as I see it, is, Does the Park Service intend to continue to reach out and take those lands? What is their limits; or is there any limit?

Mr. DRURY. I might say that I asked myself that same question. I am inclined toward a conservative position, in matters of that sort, and I am studying those problems all the time. As to this particular area, it, of course, is not in a national park or national monument. It is in a recreational area, which is in a special category, the possibilities and limitations of which are still subject to study and experiment. That's about as far as I can go now, in answering specifically your question as to what we consider and what Congress and the Government, generally, would consider a reasonable way of handling these lands, where it has been recognized that, in addition to reserving the scenic and recreational possibilities, there are also legitimate interests that which, if not in conflict with the Government interests, should be recognized.

Mr. WARING. The only thing I am asking for is proper use of this land. That's all; just proper use.

Mr. DRURY. What specific question is at issue now, Mr. Waring?

Mr. WARING. No particular question. I would like to see this range land, which is range land, administered by the Division of Grazing and taken out of the Park Service, to be plain about it, because we don't feel we have any rights, under the Park Service, for grazing over a period of time. You said, later on, there might be 3-year permits. On grazing permits, now, we get 10-year leases. The Park Service runs that out of line all the way through, and they're mixed up there. We're mixed up, too, and we don't know where we are at. If the policy of the Park Service is followed, as it has been in the past, gradually, we'll be eliminated. That is what we believe.

Mr. DRURY. There's no evidence, in this particular area, to bear out that apprehension, is there?

Mr. WARING. No; so far. I said so far with the Park Service everything has been satisfactory.

Mr. ARTHUR WOOLLEY. But have you been able to get your lease now from the railroad for those 11 sections?

Mr. WARING. I am paying on these, at the present time, to the railroad for 11 sections, but they are saying, at the request of the Government, they are withholding the rights, to exchange that right and withdraw it from lease at any time.

Mr. ARTHUR WOOLLEY. The rest of the sections are on fixed lease?

Mr. WARING. Yes; the rest of it.

The CHAIRMAN. Does the railroad issue a lease for more than 1 year at a time?

Mr. WARING. Five and ten years; yes; that is the time the leases are for grazing.

The CHAIRMAN. Have you got some land near the Arizona Strip?

Mr. WARING. This is all in the Arizona Strip.

The CHAIRMAN. Is there anyone from the railroad here? Since there is no representative of the railroad here, we cannot pursue that. Are there any further questions?

Thank you very much, Mr. Waring.

The committee will stand at recess until 2 o'clock.

(Recess until 2 p. m.)

AFTERNOON SESSION

The CHAIRMAN. We will come to order.

On the subject of the Grand Canyon National Monument, Mr. John Schmutz, of St. George, Utah, do you care to be heard now?

Mr. FINDLAY. Mr. Chairman, Mr. Schmutz could not be here until tomorrow, and he asked that he be held over until tomorrow.

The CHAIRMAN. Very well, Mr. Findlay. Would you care to come forward?

Your name is John F. Findlay?

Mr. FINDLAY. Yes, sir.

The CHAIRMAN. Mr. Findlay, you utilize the Grand Canyon National Monument for grazing?

Mr. FINDLAY. Yes, sir.

The CHAIRMAN. You may make any statement you see fit, with reference to the administration of that.

STATEMENT OF JOHN F. FINDLAY, ST. GEORGE, UTAH

Mr. FINDLAY. Mr. Chairman, my name is John F. Findlay, and I live in St. George, Utah.

The CHAIRMAN. How long have you been using that area? Start in there.

Mr. FINDLAY. Oh, about 30 years.

The CHAIRMAN. Do you run sheep or cattle?

Mr. FINDLAY. Cattle.

The CHAIRMAN. And about where?

Mr. FINDLAY. All over it.

The CHAIRMAN. Well, do you now operate under permit?

Mr. FINDLAY. Yes, sir.

The CHAIRMAN. A permit issued by whom?

Mr. FINDLAY. The Park Service.

The CHAIRMAN. How does this come to be called a national monument, Grand Canyon National Monument, as distinguished from the Grand Canyon area?

Mr. FINDLAY. Well, they have got two areas in, fenced in one, down there, and, I don't know, they say they are going to raise antelope on it. I don't know.

The CHAIRMAN. What was the Grand Canyon originally; a monument or a park, or what? Can anybody tell us?

Mr. FINDLAY. It was a park originally, on the Kaibab side of it. That didn't quite satisfy them so they had to have a little more on the monument. They couldn't increase the park, so they took in some of the monument.

The CHAIRMAN. Why couldn't they increase the park?

Mr. FINDLAY. Somebody might object, so they slipped up on the blind side of people and took it into a monument.

The CHAIRMAN. Are you on the monument, or on the park?

Mr. FINDLAY. Monument.

The CHAIRMAN. How much land did they take in for the monument?

Mr. FINDLAY. It was 270,000 acres—slightly over 200,000 acres now—the monument.

The CHAIRMAN. Does that border on the park?

Mr. FINDLAY. Yes; it adjoins the park.

The CHAIRMAN. Does it border on the canyon?

Mr. FINDLAY. Yes.

The CHAIRMAN. Does the monument come to the rim of the canyon?

Mr. FINDLAY. Yes; it goes back from the rim of the canyon.

The CHAIRMAN. Well, the park covers the rim of the canyon, doesn't it?

Mr. FINDLAY. It did on the Kaibab side, sort of a connecting ledge between the Grand Canyon National Park and the Kaibab Forest and the recreational area, although that was established prior to the recreational area, on Boulder Lake.

The CHAIRMAN. None of the Park Service people are here as yet. I don't want to get the history of this; I don't want to speak of it until they are here.

However, tell us what your troubles are, Mr. Findlay.

Mr. FINDLAY. Well, of course, in this place they have fixed to go to raise antelope. The Schmutz brothers and I have five sections in there.

The CHAIRMAN. What do you mean, you have five sections?

Mr. FINDLAY. We own the five sections of it.

The CHAIRMAN. Inside this area they have fenced off?

Mr. FINDLAY. Inside of their enclosure; and, of course, they let us have so many cattle down there for a certain length of time. Last year it was awful dry out there and the cowboys, the 15th of December, took double of the amount down there of what the permit would call for, and cut half the time down to let the cattle in there. I went across to Grand Canyon and got them to let me leave them there. Of course, somebody made some fires, up there, and burned their fences down. Anyway, we couldn't keep them out.

The CHAIRMAN. Who made the fence?

Mr. FINDLAY. I don't know; it burned some of their fences down. They went to fix it. Of course, we got them out by the 15th of March; that was the time, of course. Then they came over this spring and told me I couldn't have my cattle there this year.

The CHAIRMAN. Notwithstanding you own land in there?

Mr. FINDLAY. I control three sections of it, in there.

The CHAIRMAN. Does that give you any commensurate lands for grazing?

Mr. FINDLAY. That is the way we get them, in there, for the land we own.

The CHAIRMAN. When they shut you off from using your own land, do they give you any other land to use instead of that?

Mr. FINDLAY. No; they just said I couldn't put them in there.

The CHAIRMAN. Is that permanent, Mr. Findlay?

Mr. FINDLAY. No; just for this year, so they said.

The CHAIRMAN. There's not much use in talking about it until the Park Service people are here.

Mr. W. B. MATHIS, St. George, Utah. Mr. Chairman, on that investigation, on the Boulder Dam recreational area——

The CHAIRMAN. I overlooked you, Mr. Mathis; please come forward.

Mr. MATHIS. I expected to be called, or I might have asked some questions this morning.

The CHAIRMAN. I offer you my apologies.

STATEMENT OF W. B. MATHIS, OF ST. GEORGE, UTAH

Mr. MATHIS. Well, Mr. Chairman, maybe I looked too old for you. I don't know that I can add very much to what has been said, only that I might date back a little farther.

I have been in that country 40 years and, like a lot of others that have expressed themselves, I guess you have found out, since you have been in the West, here, that everyone has boys in this country, or girls, one or the other.

The CHAIRMAN. I found that out from my own birth. I was born here.

Mr. MATHIS. Well, we are looking ahead, I think, and not only should that right be perpetuated, or continued in the family, but we should also have the right to sell our interests. When this Taylor Grazing Act came into operation here, we tried to set ourselves up—before that most everyone run in common all over the country. Naturally, our interests were scattered all over the country.

Since the Taylor Grazing has operated, this question of give and take, and bought and sold, to get your holdings together, so we might have a private and individual set-up. That is what we did. In doing that, we have bought rights, and some of the rights has been on this recreational area; and, as I understand, the policy is that we have no right to transfer these rights. I would like to stress the inconsistency of that a little, if I could.

The CHAIRMAN. Glad to have you. Be just as emphatic as you want to express it.

Mr. MATHIS. Well, I would like to be as emphatic as I can be.

The CHAIRMAN. That's all right. Let your temper go. Don't worry about that at all.

Mr. MATHIS. Now, on these Taylor Grazing set-ups, close to this recreational area, that is a natural low country, and it is our winter drift, for cattle and sheep. If we were compelled to eliminate the grazing of livestock on this particular area, it upsets the whole set-up for there is no place for the cattle and sheep to drift in the wintertime. The rest is up on the mountain. They crowded us back up on the mountains. We couldn't winter our stuff on this higher elevation so naturally they drift down onto there. If we were compelled to withdraw our grazing privileges from there, why it would upset our entire set-up.

The CHAIRMAN. You heard the discussion here this morning, as to this interdepartmental arrangement, whereby they were going to permit grazing on some of the park and some of the monuments; and we have been trying to, here this morning, suggest to them what to do. That is about all we have the power to do, right here; that is, to suggest that the arrangement be entered into as promptly as possible. There seems to be quite an accord here, I thought, between the Park

Service and the Grazing Service, whereby we might be able to continue in here, but that addresses itself only to this particular area.

Personally, I'm interested in the change of policy, with reference to all of these parks. Now, how far we can get with that is another question. The policy now is pretty hard and fast and settled that when the users of the area in which a park is set up pass out that that ends the permit. Now, that is a pretty hard and fast policy that has been adopted, apparently, by the Park Service. Whether it is a justifiable policy or not, they say that it is, and some say that it isn't.

Mr. MATHIS. But if you make a record of the testimony of the people who are interested here, the more you have the stronger the appeal might be; is that true?

The CHAIRMAN. The more we get on it the better we like it, as far as that's concerned.

Mr. MATHIS. That is about the only reason I want to be heard. I think I will only repeat a good deal of what has been said this morning. If I go through the history of the thing—as I say, I have operated out there for 40 years, as I guess you can judge from the hair on my head. I don't intend to operate too much longer, but I have some boys that were brought up and trained in this business. Naturally, the vocation of the boys follows that vocation. I suppose, if you have a son, he'll be a Senator. Mine will be a cowboy.

The CHAIRMAN. Well, all I can say is that he'll make an awful mistake if he does become a Senator, I can tell you that.

Mr. MATHIS. Well, I'd like to say this: I have actually bought interests, or springs, of the Indians, to get it, and acquire it in a peaceful way, that are now on this recreational area. I have operated unmolested in there since then in setting up my operations. I've bought some other interests, because of the interest being so small it wouldn't be an economic unit. I didn't want to crowd anyone out, but we have bought some of the smaller interests, that could operate when everything was in common, and have a few along with everyone else.

Now, I'm interested in having these rights perpetuated, of course, and protected, and now, under the Taylor Act administration, I'm trying to get in the position to get a 10-year permit. As long as I get from one year to the other on part of it, I don't know that I can get a 10-year permit, and that depreciates my set-up.

The CHAIRMAN. Under the policy, as announced here this morning, and as we understand it to be, it is highly doubtful if you will get a 10-year permit from the Park Service. If you can't get a 10-year permit from the Park Service, I would still have a doubt as to whether or not you would get a 10-year permit from the Grazing Service. Would that be your attitude, Mr. Leech?

Mr. LEECH. He might get a 10-year permit on part of it, Mr. Chairman.

Mr. MATHIS. But my cattle drift back and forth from the public domain—it is all public domain—back and forth onto this recreational area. It would be impossible to fence it. If you fenced it, it would upset my set-up. I have nothing to sell; and I couldn't sell a set-up of that kind, and say, "Now, this isn't permanent." I thought from this investigation that you are conducting here, we might lend some influence to having this policy changed so we might get a 10-year permit.

The CHAIRMAN. That is exactly what I wanted you to do, because I think a change of policy, in regard to Park Service, is a very valuable thing. But I also think it is going to be a difficult policy to set aside or modify.

I have heard a number of expressions, in various hearings we have had, as to the steadfastness of that policy; and it's going to take some effort to get that policy changed.

Mr. MATHIS. The first step then that we might be able to take is to put it under the administration of the Taylor Grazing Act.

The CHAIRMAN. Well, you must remember this: there are congressional acts affected, and there are Executive orders. It takes a congressional act to set up a park; but an Executive order can set up a monument. We have that glowing example in Wyoming, right now. We have the Teton National Park set-up covering all of that. They thought, at that time, that was all that was essential for park and scenic use. Someone got the happy thought that it should be enlarged—and they knew that the congressional delegation from Wyoming would fight it to a finish if they undertook to enlarge it as a park—so the Executive order was made, enlarging it, and calling it a monument.

Now, there isn't any question in my mind, and I speak personally, now, as to what was the intent of Congress, when they passed the Monument Act. It was to preserve, in its natural state, any natural object of scenic or historical or other interest. It wasn't intended to take in a whole countryside. Nor was it intended to cut into the Park Service, or become a part of the Park Service. But it has been utilized, nevertheless, and the Executive order has been made, in the Jackson Hole incident, and in other incidents as well. Just the other day in my own State 180,000 acres were added to a game refuge without even conferring with the delegation from Nevada; without it even being known to the Wildlife Service itself, except, perhaps to one individual. But it is there, and it is an Executive order.

Mr. MATHIS. I don't think we object so much to this being set up as a recreational area or national monument or what not, within reason, if it weren't the policy of the Park Service to eliminate the grazing of livestock. That ought to enhance the value of it, in my opinion.

The CHAIRMAN. But the policy is to eliminate the grazing of livestock.

Mr. MATHIS. Anyway, to get at it, and change that policy, what can we do? Are we going to lose our democratic way of doing things, and weaken on that point?

The CHAIRMAN. You have put a pretty direct question to the chairman of this committee. I'll answer it directly. I'm very sorry to say that I see our democratic form of government becoming a bureaucratic form of government, and I deprecate it very much. As far as I'm concerned, my intent is to try to stop it, as soon as I can. I hope we'll have enough strength in Congress to do it. If we don't do it, we will have lost the better part of our democracy very shortly.

You asked me the question and I gave you the answer, as I see it. But let's get down to the facts. It is a condition, and not a theory, that confronts us. We have a condition that visits itself on us here; and that is growing out of a policy. Now there may be, and I am not saying there isn't, a good reason, basically, for a policy that would

say that national parks and monuments should be highly protected, so that the natural condition should be retained as far as possible. But to go with that, it seems to me that reason would step in. We haven't destroyed our forests by grazing on our forests. We haven't destroyed the beauty of our forests by grazing on our forests. In fact, we have enhanced our forests by grazing on the forests. We have made our forests by far. The Forest Service and the Grazing Service, both, testified here this morning that grazing is beneficial for the forests. We all recognize that.

It does seem to me a modified policy should be set up, with reference to the parks and monuments, so as to preserve the natural conditions; but at the same time, give opportunity for the natural condition to be preserved, as against threatened fire and threatened destruction of all kinds. Where there is an overabundance of underbrush, or of grass, or weeds, that dry up and become tinder, there is an overabundance of opportunity for fire destruction, destruction by fire, and grazing—I never knew grazing to hurt any territory particularly. So it is looking to a change of that policy that this committee will bend its effort, if we can do it reasonably. We will try to do it. If we can't, we will have to take some other steps.

That is the chairman of the committee speaking alone. My committee members are not here, I'm sorry to say.

Mr. MATHIS. We are with you. We speak with you. I would like this to go into the record.

The CHAIRMAN. It is in the record.

Mr. MATHIS. I have one other statement to go into the record. In all my experience out in this country whenever you have eliminated the grazing of livestock you increased the fire hazard. In that particular area, there is no wildlife. If you want it to go back to its natural state, you will have to take these Indians that we have partly civilized and moved out a reservations and put them back and let them go wild. That is the history of that country.

The CHAIRMAN. They wouldn't go back.

Mr. MATHIS. Well, they wouldn't have it. If the Government continues a little while longer, even the Indians wouldn't have it! Now, what else—I thought if I got excited I would lose a point.

The CHAIRMAN. You don't seem excited to me.

Mr. MATHIS. I have been mad about this issue, been sorely provoked about this, but I haven't said too much about it, because I have to be careful what I say. But I think this recreational area, Boulder Dam Recreational Area in particular, is so inaccessible for tourists, and for the person that wants to see a country in its natural state, you wouldn't get one in 6 months, and it's just awasting the country, depleting a resource the country needs. It is a taxable interest, and taxable industry, and, at this particular time, when they are stressing the production of food, to eliminate grazing of livestock, on a country that is good for nothing else, seems to me like some of them better come out here and see what we have got.

The CHAIRMAN. There is another phase of this subject that I would wish that somebody would touch on. This policy eliminates the use of the grazing on park lands, after the passing of the original permittee. In many cases the original permittee has sons, some of whom would want to follow in the father's footsteps. Now, those sons, when they know that the privilege and right die with the father, they become

discouraged, and leave the homestead, and leave the business, and go off into something else. That is extremely discouraging, for a line of industry in America that is basic. It is to the best interests of our Nation to hold our youth in the field, and to hold our youth in agricultural pursuits; and it does seem to me that, while it isn't an extensive problem, it is a problem that addresses itself to every community in the West.

Mr. MATHIS. It is.

The CHAIRMAN. Maybe I'm doing too much testifying here, but I would like to get that in the record, too.

Mr. MATHIS. I'd like to also get in the record, and I think I can speak for the whole assembly here, we appreciate, Senator McCarran, your coming out here, with your committee, to get on the ground, and get in testimony direct from the operators who know conditions here. I think you are to be complimented for it.

The CHAIRMAN. Thank you, sir.

Now, has the Park Service come in? The Park Service is the most interesting service here; and then there's the Grazing Service next. I think our friends of the Forest Service are pretty free from the controversy over here.

Mr. MATHIS. Mr. Chairman, I would just like to add this, on this 10-year permit the Taylor grazing administration might issue. Mr. Leech has stated that, on part of it, you can't issue a 10-year permit, as I understand the law, on a set-up that hasn't got an all-year-round operation. You take our winter range away, and we haven't got a year-round set-up. You take the winter range away, and you might as well come 10 miles farther up onto the mountain and take the rest of it, because you have destroyed the set-up. I have a permit for 800 cattle, and I have spent—I went in there in the first place with commensurate rights; I thought to take care of my outfit. Since then, to round this thing out, I have spent from ten to fifteen thousand dollars to round it out in fences and holdings.

The CHAIRMAN. Right there, let me interrupt you. How much in the way of fencing and holdings did you acquire, or construct, which is now within the recreational area?

Mr. MATHIS. It is fenced on the south by the Grand Canyon.

The CHAIRMAN. I know, but I am speaking of your own construction, on the recreational area. You acquired water rights?

Mr. MATHIS. Construction has been mostly in the way of holding pastures, to hold steers and green calves, holding pastures. The drift fence was built by the Taylor grazing administration, C. C. C.

The CHAIRMAN. You have depended on the recreational area for a certain period of each year?

Mr. MATHIS. Always depended upon that for my winter range; always used it for that. If you take that away, I don't know where I could go for wintering my cattle.

The CHAIRMAN. Has it been taken away?

Mr. MATHIS. No; but they say fear is the worst thing you can put into a man to upset him. Well, you can do that, you can drive his boys away and everything else, but they haven't hurt me yet.

The CHAIRMAN. You are grazing in there now?

Mr. MATHIS. I'm grazing in there now. I haven't been hurt. I'm paying the Boulder Dam recreational area part of my grazing. I notice somebody suggested that when the browse gets weak it's hard

to carry three or four burros. I'm carrying about two or three thousand.

The CHAIRMAN. We had an example here this morning, in another line of livestock, where the permit was entirely taken away.

Mr. MATHIS. Well, that's putting the fear into us. That is the thing; if you are fearful of it, you want to take this in time, and do all you can to guard against it.

The CHAIRMAN. Let's boil this down to the last analysis. You have been grazing, and have set up an economic grazing unit, in which you have certain territory that you graze in the summer, and certain territory that you graze in the winter?

Mr. MATHIS. That's right.

The CHAIRMAN. And you have a permit from the Grazing Service. Let me see if I am right on this. You have a permit from the Grazing Service, for all the territory you have grazed on, excepting on that which is the recreational area. That is correct. But, if this recreational area is taken away from you, or your right to graze on it is taken away from you, the permit issued to you by the Grazing Service will become a useless permit. Am I exaggerating?

Mr. MATHIS. Well, you might be exaggerating to say it is useless, but it destroys the economic unit; destroys my customary way of operating; and I don't think—Mr. Leech might answer me on this—I don't think I can get a 10-year permit as long as I can only get a 1-year permit on the recreational area.

Mr. LEECH. Do you have a 10-year permit now for any numbers at all?

Mr. MATHIS. No; I don't think there's any use applying for it.

Mr. LEECH. Speaking offhand, I would see no reason why they couldn't give you a 10-year permit for the part on the grazing district.

Mr. MATHIS. What are you going to do with the other part? You couldn't give me a 10-year permit on it.

Mr. LEVY COX, St. George, Utah. You wouldn't have a year-round operation; no place to put the stuff in the wintertime.

Mr. LEECH. I was under the impression that part of Mr. Mathis' operation was on the monument and part was on the grazing district.

Mr. MATHIS. That is right.

Mr. LEECH. And that you would still possess a year-long operation for that number on the grazing district.

Mr. MATHIS. Not if I can't get down there for winter. I don't know where I would go for winter. It's 85 miles to any public water.

Mr. LEECH. Is all of the winter set-up on the withdrawal?

Mr. MATHIS. Well, there is nothing to prevent all of them from going down there, if it snows. They most all go down there, yes; but there might be a few right along close to the line that would winter. It depends on the winter. If deep snow comes they will have to go down there. Furthermore, these springs—the only permanent water on this recreational area—you can't get to the river. That is water that I have acquired title to, from the State.

Mr. LEECH. I'll be glad to have the case gone over, and see to what extent we could issue a 10-year permit.

Mr. MATHIS. I'm not worrying about that. I'm not worrying about the administration of the Taylor grazing law. You are all right, as far as I know. I've been on the board since it was created. I know

what I'm up against. The thing I'm worrying about is the thing that I'm facing now. They might do with me, and others, what they have done in other places; upset this set-up. I've got boys that wouldn't be anything but cattlemen, to my own sorrow, I guess.

The CHAIRMAN. I take it—it presents a picture to me—I may be wrong, but it is as though the base property were eliminated from an economic unit on which a 10-year permit would be issued. If the base property was not there, you wouldn't issue the permit.

Mr. LEECH. No, sir, Senator.

The CHAIRMAN. So, whether it is the base property, or the commensurate property—

Mr. MATHIS. It's all listed as base property. It was prior use, all of it, on top and below.

The CHAIRMAN. So, I think he has something, by way of an argument, that he would scarcely be entitled to a 10-year permit if he lost this right to graze on the recreational area. However, we are glad to have it brought out, and it again addresses itself to the Park Service. It is one of those things.

Mr. DRURY. May I ask, have we, as far as you know, made any move to cancel?

Mr. MATHIS. No, sir. I think I stated, I want it understood that I have no complaint, up to date. It is this fear that I have, that I am worried about.

Mr. DRURY. Thank you.

The CHAIRMAN. It is the fear that you have, and others, that addresses itself to this basic policy with reference to this—that when this user passes out the right ceases. That has been a policy as to parks; and, of course, that naturally makes him apprehensive.

Mr. DRURY. That policy does not apply to Boulder Dam national recreational area.

Mr. MATHIS. My boys are running this now. I haven't done much riding for a few years. They are running it with the idea that it will be theirs; and their fear is getting into them, too, thinking about the whole thing. What can we do about it? This is the business that I am fundamentally in.

The CHAIRMAN. What would you say, without committing yourself too strongly, what would you say—for the purpose of the record, because the congressional committee will view this record, and the Senate of the United States may, some day, view this record—what would you say, off hand, is the value of your economic set-up?

Mr. MATHIS. The entire set-up?

The CHAIRMAN. Yes.

Mr. MATHIS. Fifty thousand dollars.

The CHAIRMAN. All right. If you lose one part of the set-up, which deals with the grazing of your livestock, during a certain period of the year, and which is now within this recreational area, what would be the value of your economic set-up?

Mr. MATHIS. Well, it would depreciate. I don't know how I would operate. I wouldn't go so far as to say that it would clean me out, because there is some good country on top, if it were fenced so I could handle less cattle. I might winter a few cattle; but I couldn't winter the cattle that I can summer, by any means. That would mean that your summer range would grow up to a fire hazard.

The CHAIRMAN. The market value of your set-up would be much reduced, wouldn't it?

Mr. MATHIS. It would; it surely would.

The CHAIRMAN. All right. Thank you very much, Mr. Mathis.

Now, going to the subject of the Grand Canyon National Monument, would Mr. Findlay care to come forward now?

Now, will the Park Service kindly state the history of Grand Canyon National Monument? First of all, when was the Grand Canyon National Park set up?

Mr. DRURY. I will have to ask Superintendent Bryant, of Grand Canyon National Park.

The CHAIRMAN. When was the first withdrawal made, for either a park or monument, with reference to the Grand Canyon of the Colorado?

STATEMENT OF HAROLD C. BRYANT, SUPERINTENDENT, GRAND CANYON NATIONAL PARK, ARIZ.

Dr. BRYANT. Back about 1908, or something like that, is when the Grand Canyon area was made a national monument, under the Forest Service. Then in 1919 it was created a national park. The present Grand Canyon National Monument was created, in 1932, and the boundary line was changed, eliminating some 71,000 acres, in 1940.

The CHAIRMAN. Was it set up by an act of Congress, in the first instance, or by an Executive order?

Dr. BRYANT. Grand Canyon National Park was set up by act of Congress. The monument was set up by proclamation of the President.

The CHAIRMAN. For the enlightenment of the committee, tell us the difference between the Grand Canyon National Park, and the Grand Canyon National Monument.

Dr. BRYANT. Grand Canyon National Park contains about 105 miles of the main Grand Canyon of the Colorado. The Grand Canyon, itself, extends from the mouth of the Little Colorado to below the Grand Wash cliff, near the head of Lake Mead, 217 miles of deep, finely colored canyon. Of that amount, 105 miles are within the Grand Canyon National Park.

Later on, it was discovered that, below the main park area, there was a very scenic part of Grand Canyon, with very deep, very perpendicular sides; and that the view from Tuweep Point was a wonderful and astounding view, because the canyon was so narrow at that particular place. At the eastern end of the canyon it is around 18 miles wide. Down at the national monument, the canyon is hardly 4 or 5 miles in width; and it seemed to display an entirely different type of scenery, and, therefore, it was suggested that that should be placed inside of the national monument, and given special care or protection.

The CHAIRMAN. How far back from the rim of the canyon does the park extend?

Dr. BRYANT. On the south rim, 4 to 5 miles, on the north rim 10 to 12.

The CHAIRMAN. Both rims are in Arizona, are they not?

Dr. BRYANT. Yes.

The CHAIRMAN. And the north rim is that territory that we have under consideration, partially known as the Arizona strip?

Dr. BRYANT. It is within the Arizona strip, because it is north of Grand Canyon. Grand Canyon cuts off a portion of Arizona, and makes it very hard to get around, by bridge, to the northern area of Arizona, across Grand Canyon.

The CHAIRMAN. You say it extends about 12 miles back from the rim on the north side?

Dr. BRYANT. Correct.

The CHAIRMAN. Is that for the full 105 miles?

Dr. BRYANT. Not by any means. Part of the way, along the western portion of Grand Canyon National Park, the boundary line follows the north bank of the Colorado River; then it jumps up to the rim, and follows along, beneath the Coconino, to Sandstone; and then it jumps farther north and takes in about 10 or 12 miles of the territory, including some of the fine views, and fir forest.

The CHAIRMAN. What is your rule, or custom, as to grazing within that area?

Dr. BRYANT. At first, when Grand Canyon National Park was set up, all of the grazing rights were recognized, and it took 20 years before grazing was cleaned up, from our point of view, within the park. Each time that someone died the permit was considered invalid, and, therefore, after 20 years the grazing has ceased to exist within Grand Canyon National Park.

Within the monument, all the grazing permittees that were found there when the monument was created, are still grazers. There with one exception, a man who sold his sheep outfit, and, therefore, the permit ceased to exist.

The CHAIRMAN. Now, I want to get the line of the monument and the line of the park fixed in the record, if I can. The monument was created quite recently, comparatively recently. Does that increase the width of the park north and south?

Dr. BRYANT. Not of the park. The two units are entirely separate. It increased the area to the westward, under the jurisdiction of the Park Service, when this monument was created; and the area—this will give you an idea. I'll show you a map of the monument. There is about a township on the south side of the river, and a considerable amount on the north side.

This area runs across the river; is on the south. This represents the present boundaries of the Grand Canyon National Monument, to the north of the river; also, down Kanab Point, down here, westward to the Trumbull Mountains.

The CHAIRMAN. Kanab is on the north; this red line that sets off a rectangle, here?

Dr. BRYANT. That is an area south of the canyon itself, and it is almost contiguous with Grand Canyon National Park, which runs in a V to the forest. This, supposedly, was added on to this area, because it was public land, and seemed a logical thing to add to this national monument.

The CHAIRMAN. Now, where do you graze, Mr. Findlay?

Mr. FINDLAY. I graze at Tuweep.

The CHAIRMAN. Do you graze within the Grand Canyon Monument?

Mr. FINDLAY. On the monument, now. That is a restricted area; that's what you have got under fence there, isn't it? Is that what you call the monument?

Dr. BRYANT. The monument is shown by this red line. It runs up; it originally went up like this; all cut down to this side. Privately owned land is within this.

Mr. FINDLAY. That is our land in there.

The CHAIRMAN. This land in red there, is that an allotment, a grazing allotment?

Mr. FINDLAY. To this group of men.

The CHAIRMAN. Made by whom?

Dr. BRYANT. By the Grazing Service and the Park Service, working closely together, on this whole grazing organization.

The CHAIRMAN. Now is that a grazing permit that has any time duration to it?

Dr. BRYANT. Yes, sir. Originally 1 year, and now changed to 3 years.

The CHAIRMAN. So that they may get permits for 3 years at a time?

Dr. BRYANT. Correct.

The CHAIRMAN. Does that terminate with the death of the original parties?

Dr. BRYANT. That has always been the understanding we have had. There has been no instance of any loss of permit, thus far, with this particular monument.

The CHAIRMAN. That is largely because of the brief duration of the monument. It was only set up comparatively recently?

Dr. BRYANT. That is right.

The CHAIRMAN. But, as the permittees pass out, their rights pass out?

Dr. BRYANT. The hope was that that might happen, because there was a plan for that particular area as an antelope refuge, eventually. It had been an area heavily used by antelope, many years ago; and it is hoped that particular area you are pointing at, there, might be utilized as an antelope refuge. There are no antelope in there today.

The CHAIRMAN. There are no antelope in there today, at all?

Dr. BRYANT. No.

The CHAIRMAN. Now, what is this north part, here, in yellow?

Dr. BRYANT. That is all grazing allotment, arranged on the basis of the men having rights there, having pastured there before those allotments were all figured out, when the monument was first set up. The first plan followed was to have a survey made, to determine the carrying capacity of the range, and that, having been determined, then the Grazing Service and the Park Service got together with the grazers themselves, and figured on the proper boundaries, and so on. So, we had this agreement, on this particular map. We have had two definite meetings with the grazers, one on June 15, 1940, and another September 25, 1941, when this was discussed over the map, and what the boundary lines should be, and so on.

The CHAIRMAN. Does that apply, also, to this pink?

Dr. BRYANT. That is another grazing allotment.

The CHAIRMAN. Community?

Dr. BRYANT. Yes.

The CHAIRMAN. Now, does that all come under the provision that these original users, the rights pass out with them?

Dr. BRYANT. As far as we know now. That has been the policy of the Park Service.

The CHAIRMAN. That applies to the yellow and the pink?

Dr. BRYANT. To everything within it. They were told that, I think, at some of the first meetings. They were told that was the general policy of the Park Service, and they would be as fair as possible to every man concerned.

The CHAIRMAN. Now this monument was set up by Executive order?

Dr. BRYANT. Yes, sir.

The CHAIRMAN. Set up when, did you say?

Dr. BRYANT. In 1932, first, with a change of boundary in 1940.

The CHAIRMAN. Did the boundary extend the area, or decrease it?

Dr. BRYANT. Decreased it, by 71,854 acres.

The CHAIRMAN. Now is that a territory that is accessible to the public?

Dr. BRYANT. Rather difficult of access at the present time. There are a great many plans for major roads, off in that direction; and, one time, there was talk of a road that might cross, by Pierce's Ferry, across the recreational area. At present the roads are rather difficult.

The CHAIRMAN. What was the aim, or object, when the monument was set up?

Dr. BRYANT. To protect the scenic values of a narrow portion of the Grand Canyon and a particularly valuable volcanic exhibit on the monument. There happened to be a large volcanic flow of lava to form the Trumbull Mountains and in one place the lava flowed over into the Grand Canyon and dammed up Grand Canyon in geological times, and made a lake behind the lava dam, which was eventually washed out by the river and leaves a large mass of lava still in the bottom of the canyon. But the great flow of lava, down one wall and over to the far side, is a fine geological exhibit that geologists consider well worth protecting and saving, for people to come and see.

The CHAIRMAN. Have the grazing permits in this area taken from the scenic value of the area, up to date?

Dr. BRYANT. Not that we know of, except that wherever you have grazing, you have less wild flowers and less high grass and other vegetation that would grow much higher and look different than it does after it is all grazed down.

The CHAIRMAN. Of course, the grazing wouldn't do any harm to that volcanic flow.

Dr. BRYANT. Your question, was it not, sir, was as to why it was set aside? I was trying to explain.

The CHAIRMAN. What I am trying to drive at is this, that I find your statement to be that it has done no harm to graze this area, up to date.

Dr. BRYANT. I'm afraid I am not willing to make such a statement, because it has been heavily overgrazed. In setting up those grazing allotments, there had to be a cut of 25 percent, year by year, to get it down to the carrying capacity of the range, so that if you visited the area you would still find it had not come back anywhere near to normal. It has been a heavily grazed area.

The CHAIRMAN. These people who graze there, on this area; about how many stock graze in there? Have you ever counted them, or had a count made of them?

Dr. BRYANT. I will have that answer for you in just a moment.

The CHAIRMAN. It doesn't have to be in detail. It can be a general count.

JOHN H. RIFFEY, Park ranger, Grand Canyon National Monument. There are 60 head of horses, 776 head of cattle, and 11,740 head of sheep.

The CHAIRMAN. Thank you very much.

Is there anything else you care to state, Mr. Findlay?

Mr. FINDLAY. Only like I said, in that pasture, where we have that land now, last year there was an awful drought. We put off a lot of cattle; sold a lot of the cattle as best we could. But, along about the 15th of December, the cowboys, they drove double the amount of the cattle down there that I was entitled to range there, 65 head on them 3 sections—they don't give any other permit in there; but, of course, then I left 'em there for the time, and they cut the time down. I went across the Grand Canyon and met with these gentlemen, and they were very nice about the emergency call; and so the fence burnt down—didn't it burn down? It was down on the west side there.

The CHAIRMAN. Well, that's all right.

Mr. FINDLAY. But, anyway, the cattle kept coming back in there; kept coming back. We drove them away, and they come back. Now they are not going to give me those permits, in there, on that land for that.

The CHAIRMAN. Why is that?

Mr. FINDLAY. Oh, you might ask them.

The CHAIRMAN. Can you explain that?

Dr. BRYANT. Well, I think the main point, of course, is that we have no control over any privately owned land. A man has to do what he wants to on his own privately owned land. But, as we understood it, the Grazing Service and the Park Service were anxious to have regulated grazing, and get the grazing down to the carrying capacity of the range. And there are such things, you know, as fees, that are paid for by the men who put in larger amounts of stock than they are entitled to. Mr. Findlay has not been told, at all, that he couldn't have a permit. He was simply penalized for having turned in this large amount of cattle, onto a range not ready to support it. It couldn't support it. He was informed, by mail, and even by telegram, about the cattle; far more cattle on that range than he had any permit to pasture, there. So, it was simply a penalty, and nothing is planned to actually take his permit away, unless it is a permit not standing within the regulations of the grazing program for the area. I understand all of these permittees graze part of the time on the monument, and part of the time off the monument, on grazing lands.

Mr. ARTHUR WOOLLEY. What is the water situation on there, with respect to the antelope?

Mr. FINDLAY. Haven't any water only on the pond. No living water there, within 4 or 5 miles of it.

The CHAIRMAN. On this territory?

Mr. ARTHUR WOOLLEY. Who owned the pond of water?

Mr. FINDLAY. Oh, now, they built the pond of water.

The CHAIRMAN. Do you have water on these tracts that you own?

Mr. FINDLAY. No, sir.

The CHAIRMAN. Well, is there anything further you want to state?

Mr. FINDLAY. Of course, now, about those excess cattle, I told them they could get their price on there; to come over to see me this summer.

The CHAIRMAN. You were willing to pay the penalty?

Mr. FINDLAY. Yes, anything. I told them to make it easy on themselves, because the cattle were in that condition; plenty of feed left there after the cattle left, too, plenty of feed there, now, for a thousand head of cattle.

The CHAIRMAN. What you want to put in there now is what you have usually been permitted to put in?

Mr. FINDLAY. Oh, that would be fair.

The CHAIRMAN. Well, when cattle need feeding they need feeding, I know that.

Mr. FINDLAY. That is what I put them there for.

The CHAIRMAN. Well, is that order, Mr. Superintendent, hard and fast, that he is not to have a permit in there?

Dr. BRYANT. I beg your pardon?

The CHAIRMAN. Do I understand it to be a hard and fast order that he cannot graze in there for a season?

Dr. BRYANT. Only for this short period, as a penalty for not standing by the regulations of his permit. If we let each man overdo what he promises to do on his permit how could it be possible to regulate it; and it isn't fair to the other men who stay within the regulations, if some men go beyond the regulations and then are not penalized for it. We are just trying to be fair to all the rest of the permittees.

The CHAIRMAN. Well, I haven't any right to tell you what your penalty should be.

Mr. T. W. JONES, New Castle, Utah. May I ask the gentleman what he proposes Mr. Findlay should do with those cattle during this period of the penalty?

Dr. BRYANT. He can make arrangements with the Grazing Service, or Park Service, to find an extra pasturage.

Mr. JONES. You don't agree that any man can simply step in and put two or three hundred head of cattle on some range, without permission to do it? He needs to find more range.

Mr. FINDLAY. We had permission to do that. Your own men left them in there. They were counted in; your agent, down there counted them in; and left them there for that length of time. I went across there and you were down to Phoenix, and your man, Mr. Davis, on emergency, told me to leave the cattle there. I wasn't trying to steal anything off of you fellows.

Dr. BRYANT. That is the interesting thing. We went all the way with him in trying to give him special privileges during wartime, and then when we tried to get back to the specified number, and so on, he still had too many there. We asked him to remove them, and instead of being removed, when we asked them to be removed, they stayed there another 2 or 3 weeks.

Mr. ARTHUR WOOLLEY. Was that when the fence was found down?

Dr. BRYANT. I don't think it has anything to do with the fence.

The CHAIRMAN. Very well.

Thomas Jensen, do you care to come forward and make a statement? You graze livestock on the canyon, the Grand Canyon National Monument, don't you?

Mr. JENSEN. Yes, sir.

The CHAIRMAN. What have you to say?

STATEMENT OF THOMAS JENSEN, FREDONIA, ARIZ.

Mr. JENSEN. Mr. Chairman, I have had some grievances there on some particular occasions, but, as far as the boys I have had to deal with, I would say they have been very nice people, and so on. But it so happens that I was hit on this withdrawal that was asked for.

The CHAIRMAN. What withdrawal was that?

Mr. JENSEN. A couple or 3 years ago they asked for a withdrawal on that monument, and in my particular case we asked for 5 miles of withdrawal, and they withdrew 3. That left my holdings within the park.

The CHAIRMAN. That is, they pulled their lines in 3 miles, in place of 5. Is that what you mean by the withdrawal?

Mr. JENSEN. Yes; and that left my holdings within the park; but the Park Service was good enough to tell me they would give me a special permit to go in there with my livestock, because I had water on my reservoir, between two different roads. But that wasn't the real trouble.

When the withdrawal took place, that threw the withdrawal under the Division of Grazing. They separated and allotted their lands there, and my property was within the park. So, they first made what I called a fairly even division, and then they took my part of it from me, because I was still in the park. But in that certain area I was given about three-fifths of it. The park listed me up with about three-fifths of the grazing that was thrown out there, which they had supervision over that area. Afterward, for awhile, I had nothing, because my property was still left within the park; see?

The CHAIRMAN. Didn't you have the right to graze within the park?

Mr. JENSEN. Yes; within the park. But after it became Taylor grazing, they said the Board first figured that it should be an even division, between me and my neighbor, and gave me that kind of a division; so I said nothing more about it. Later they came in and took that away from me.

The CHAIRMAN. Who did; the Grazing Service?

Mr. JENSEN. Because my property was still in the park. They said they had no right to give me anything because my water was in the park. Well, I put in a protest against it—well, it has never been settled, entirely, yet. But the neighbor and me made fairly agreeable lines, and we are still running that way.

The CHAIRMAN. Are you running in the park now?

Mr. JENSEN. Yes, sir. I had a permit. I have used that permit for over 20 years; that is, used that country for over 20 years; and

the park officials have given me grazing privileges on the balance of what is left in the park; but that is——

The CHAIRMAN. But you lost your rights on the 3 miles?

Mr. JENSEN. The 3 miles that was withdrawn, lost it for awhile, and it is still pending.

The CHAIRMAN. Still pending with the Grazing Service?

Mr. JENSEN. Yes; I got no satisfactory agreement between me and the Grazing Service on that.

The CHAIRMAN. Were you given the right, or denied the right, or is it still standing in abeyance?

Mr. JENSEN. It's still standing.

Mr. LEECH. I would like for Mr. Allen to tell us about it, Senator.

Mr. ALLEN. At present there is pending an appeal of Charley McCormack, and until that appeal is settled there is a temporary agreement between Mr. Jensen and Elmer Jackson concerning the division of that range in there. That will not be definite until the appeal of Mr. McCormack on the portion of that area is determined.

The CHAIRMAN. That addresses itself to this so-called 3-mile withdrawal?

Mr. ALLEN. That tank Mr. McCormack is appealing on is in the middle of the 3-mile area, but is returned to the grazing district.

The CHAIRMAN. How long before that is going to be settled?

Mr. ALLEN. That should go to a hearing this fall sometime.

The CHAIRMAN. Meanwhile what is he going to do with his cattle?

Mr. ALLEN. He has an allotment. He has never been denied for any number of stock he has applied on.

The CHAIRMAN. Are you running entirely on the monument now?

Mr. JENSEN. No, sir; I have a Taylor grazing——

Mr. ALLEN. All of his cattle are on the Grazing Service. The sheep run for 6 months on the monument, 3 months on the game refuge, and the other 3 months are on us.

The CHAIRMAN. Your real complaint is, then, with the Grazing Service?

Mr. JENSEN. No, no; my real complaint, in the first place, is with the Park Service for not moving back to where we asked for that 5-mile withdrawal. That would have left everything very easily settled. If it had been, the division had been made very quickly, but it left one holding out and the other holding in, which at that time made a confusion. Then I also have a water right on a game withdrawal.

The CHAIRMAN. A wildlife withdrawal?

Mr. JENSEN. A game preserve, I guess it is. There are a few acres, a few sections, that is in a game preserve clear up on top. I don't know how they happen to put that in there. It's clear away from the Grand Canyon, and separate from all the other wildlife or game refuges. But it happens to sit there—wasn't surveyed in early days. I put a reservoir in there on it. Well, it landed right in the corner of this game refuge that was unsurveyed property, and it landed in the corner of that game refuge there and it is still a game refuge; and that is the way the situation sets.

Mr. ARTHUR WOOLLEY. What is your experience as to your permit in the game refuge? Do you have to deal with another agency?

Mr. JENSEN. Well, it's just laying there, that's all. I've been using it, and that's all there is to it; but it lay in the corner. I had that same thing there. I laid it right square in the corner of the game refuge. That excluded me from the Taylor grazing on those rights, because that little old game refuge had to be there. All the rest of them around me there, they got their property right up against mine, and mine's laying right in the corner. They went right up to my line, against it, and the game refuge took what was around me, and left me sitting in the corner there. I was using it for years. That's the way that little old game refuge worked out on me.

The CHAIRMAN. How much land is involved?

Mr. JENSEN. I think 21 sections.

The CHAIRMAN. Well, between the game refuge and the Park Service and the Grazing Service, it looks to me like you are in a little tough spot.

Mr. JENSEN. Well, it made it a little tough for me.

The CHAIRMAN. It takes a lot of courage to carry on an industry under conditions like that. It takes a lot of patience as well. Have you anything else you want to present to the committee?

Mr. JENSEN. Well, I would like to say this; I'm like the rest of the men that has been up here. I can't see where we give our rights up, just because we have fought the thing through, maybe for a lifetime; and then, when we kick off, we have to give up our rights on public lands of this kind, which we have maintained and improved them, maybe, for a lifetime. That's one thing I can't see there is any sense in. And there's another thing I haven't heard brought up at all, and that is this: They speak of wildlife and such as that. We sheepmen and cattlemen, we range bordering these wildlife areas. Well on a lot of these wildlife areas they preserve and restrict the killing of coyotes. And right off on our areas the Government is hiring trappers to kill these coyotes off. That's one thing I absolutely can't see no sense in.

The CHAIRMAN. You say they restrict the killing of predatory animals?

Mr. JENSEN. Yes; on these wildlife refuges. We are neighbors there. You talk about a good-neighbor policy. All those sheepmen and cattlemen there are neighbors, but still they raise coyotes to kill our sheep and cattle, and then another branch of the Government, because we are making a big howl, comes in and put in trappers for us, which, I will say, a lot of them has done a very good job. They have come in and did a very good job killing coyotes. a lot of these trappers. But it's only a matter of time, when you think you're pretty well rid of the coyotes and cats—

The CHAIRMAN. And then there comes along another batch.

Mr. JENSEN. When they get hungry they come from some other source—came in droves to our range. Well, I call that a very poor neighbor policy.

The CHAIRMAN. Well, Mr. Wildlife, what have you to say to that?

ALBERT M. DAY, Assistant Director, Fish and Wildlife Service, Chicago, Ill. Well, Mr. Chairman, he seems to be laboring under a misapprehension. As far as the wildlife is concerned, the Fish and Wildlife Service organization assists in the control of coyotes and

wildcats, and does not restrict killing of predators on big game ranges.

Mr. JENSEN. I had one of the trappers tell me, ask me, where the park lines are.

Mr. DAY. That's the national park line; not the wildlife areas.

Mr. JENSEN. On my territory you can't say where is the park line, and then draw an imaginary line, and tell 'em they can't go beyond that within the park.

Mr. DRURY. Mr. Chairman, you kindly indicated to me that tomorrow morning I might discuss three or four of these topics that are so important before this meeting. I might say this though, and I would like to have Dr. Bryant and some of the others, and even the Fish and Wildlife Service, bear me out on the policy of the National Park Service, which has never been one of refusing to limit the numbers of predators if it can be shown, definitely, that those predators are destructive of property adjoining the park areas. Now, it's a question of evidence, pretty largely.

The CHAIRMAN. What is that now? Do you mean, if it can be proven that coyotes and wildcats and bobcats and mountain lions destroy property adjacent to the park, then the Park Service will permit the stockmen to go in and kill these predators in the park?

Mr. DRURY. No; I said subject to aid by men who know much more than I do about wildlife, we would undertake to control the destructive animals. I just wanted to try to indicate that our position is a fair one.

The CHAIRMAN. You know, a coyote is one animal that the benefit of a reasonable doubt doesn't apply to. He's guilty to begin with.

Mr. DRURY. I know. In some cases—

The CHAIRMAN. What is the policy with reference to the park, please?

Mr. BRYANT. As far as the national park is concerned, if you will remember the law given us by Congress, that we are expected to enforce, we are to conserve the natural and historic objects, and the wildlife therein in such a way that it may not be modified in any way. In other words, we are trying to preserve a little piece of unspoiled America, and we are quite sure we are enjoined to take care of all the living things within a park, so that we will have a few places where there are coyotes, and some people can see them. We find they enjoy seeing them, as they come into the park. There are other places where they certainly ought to be controlled. If I was a sheepman, I would want the coyotes killed around my sheep. If I could get that much help I probably would have to. But it all depends on what the park has to do; and the scientists of the future will need some places where the predators have not been killed off, to see how nature takes care of a patch of land; how the thing fits in together.

Mr. DRURY. I would like to go into that more fully. I know this is taking up your time, but I would like to say something on that subject when I testify tomorrow.

I might say, Mr. Chairman, that as far as I know, I am one of few in the United States who doesn't think he is a wildlife expert. I'll speak from that point of view, but try to give you the best testimony I can. I will do that later on, when I make my full statement.

The CHAIRMAN. Very well, thank you.

STATEMENT OF JOHN H. JOHNSON, TROPIC, UTAH

Mr. JOHNSON. My problem is up on the Bryce Canyon National Park. My summer range is about—possibly one fourth, or one fifth of it is within the Bryce Canyon National Park.

The CHAIRMAN. Is that under your supervision?

Mr. CHARLES SMITH (superintendent, Zion National Park). Yes, sir.

Mr. JOHNSON. And the grazing is supervised by the Service, and they have treated us very nicely. The Park Service is tip-top. I have no complaints to make about the local officers, in any way; only there is one policy that we cannot hardly get in sympathy with, the one you was just talking about, the predators. They won't allow trapping or hunting on the park, and those wild animals come down and take quite a total out of our stuff. Just less than 10 days ago, I went on to my herd, and one morning the herder said a cougar come in the night before and got 16 head. One of them he packed off with him. Of course they take the fatter ones, the best ones. And it takes a lot of joy out of life and profit out of a man's pocketbook, and the only thing I wanted to bring up here, is there any chance we could get that policy modified, some way, so that a Government trapper, somebody you would approve of, could get in there to take those animals that are working out all the time like that?

Mr. SMITH. Well, I would say that would have to be investigated and studied by our people and the United States Fish and Wildlife. I wasn't aware that that problem was going on.

Mr. JOHNSON. I have had that trouble, now, for a great many years.

Mr. SMITH. And I would be willing to look into it and make recommendations to having a study made of it.

Mr. JOHNSON. I would appreciate that.

Mr. SMITH. I'll take it up with the regional director, Mr. Tillotson. I hadn't heard anything about it. You must understand I've only been superintendent of Bryce for 2 months now, and that hasn't come to my attention.

Mr. JOHNSON. This is the first chance I've had to bring it up.

Mr. ESPLIN. On the subject of predatory animals in a national park. I've had a great deal of experience, particularly with the predators on Zion National Park. I've been so well disciplined that I don't even suggest going on the park for coyotes or any kind of predators. I remember one time our trapper asked the head ranger about a lion that used to come in on our property from across the line in the park. He asked if we could come across the line and get it, and the head ranger said, "Yes, but don't you bring your dogs." We have a veritable nest of predators that we can't control. The park is down in the center of that area, and the predators are coming out in all directions and killing both sheep and cattle.

Mr. SMITH. I have been looking into that around Zion. I was talking it over with the chief ranger, just day before yesterday, and he says that Zion Canyon, so far as he knows, hasn't had a cougar, or cougar's track, for something like 10 years. Probably that condition is different up on the rim.

Mr. ESPLIN. Well, I had a man check—I don't know whether it was in the park or out, but about 4 days ago we found the tracks of one coming off the sheep range. He had been going back and forth,

through there, for a month or 6 weeks, and had been on my ranch and all of the neighbors' ranches, and the trapper happened to catch him as he was heading into the park, and caught him just on or off the park.

Mr. SMITH. Was that in the high country on the west?

Mr. ESPLIN. In the country between the gulf and North Creek, on the east rim.

Mr. DAY. Mr. Chairman, might I say, in further reply to the gentlemen who criticized our predator policy, that we have found in some of the game ranges in Nevada and elsewhere, the best way to increase the mountain sheep population is to establish predator control.

Mr. ARTHUR WOOLLEY. I wonder if I might ask you a question. In this area you mentioned as being reserved for mountain sheep, have you made a count of mountain sheep?

Mr. DAY. Yes; we have rather a good record of it. I can't tell you how many there are.

Mr. ARTHUR WOOLLEY. Approximately how many?

Mr. DAY. I can put it in the record after I find out.

Mr. ARTHUR WOOLLEY. Would it be a hundred, do you think?

Mr. DAY. Probably two or three hundred; within that range.

Mr. ARTHUR WOOLLEY. Within the whole Grand Canyon area that has been reserved?

Mr. DAY. Yes.

The CHAIRMAN. Mr. Elmer Jackson, do you care to be heard?

STATEMENT OF ELMER JACKSON, KANAB, UTAH

Mr. JACKSON. Well, it has been pretty well discussed, what I have in mind. As my friends have said, I have no quarrel with the gentlemen supervising the park. I find that they are fine gentlemen, every one of them. But it is the policy that they are sworn to carry out that I object to, that of eliminating grazing as a person dies.

Most of these fellows here know that I probably have a reason to think of that more than any other one man. I thought for a while I might outlive the Park Service and eventually beat that. But last spring I was kicked by a horse and then I got a blood clot in my lungs. I told some of the boys the other day that that's the only reason I'm alive today. I owe it to the Park Service, because I knew if I died my children—that right would pass from them. And so I'm living today, and I'm going to keep on living until this policy is changed. I'd like to see that changed, the process of elimination of grazing at the death or sale of rights, and I believe that is no more than right.

Much of this Grand Canyon National Monument is of no value for tourists. Nobody but a sheep herder or grazing park ranger would go on it.

I might say I've been a sheep herder for 30 years, ever since I could look over a bush, and there isn't anything there of value to tourists, with the exception of the point that Mr. Bryant has pointed out as the reason for that becoming a monument. That is probably a good thing. But the area from the point he points out—that is, on top of the rim, the canyon—there has never been any argument. So far as the canyon is concerned, we admit that, and have no objection to its being a part of the national monument. But, as has been pointed out

just a short time ago, at one time we asked for this monument line to be moved back to the rim, and Senator Hayden was active in it. Mr. Tillotson, I believe, was agreeable, if I remember correctly.

Mr. TILLOTSON. That is correct.

Mr. JACKSON. And I worked for it, and got that line moved back to the rim, so it wouldn't interfere with any grazing on the top. There was a petition went in to Congress signed by practically everybody in southern Utah and northern Arizona, requesting that that be acted upon; and the Park Service officials were agreeable with it. For some reason, I don't know why, there was just 3 miles withdrawn and returned to the Grazing Service, instead of going all the way back. I don't believe anyone would object to the area that Mr. Bryant pointed out as a reason for its becoming a monument, or a reasonable area surrounding it. But on that area known as the Son-of-a-bitch—and that is the name of it, an Indian gave it that name—it is of no value whatever to anything except sheep and cattle.

I would like, and I believe everyone else here would like, to see that monument line moved back to the rim of the canyon. I doubt if the Park Service would object to it. I believe that possible. Now would be a good time to ask for that withdrawal to be made and that the line be moved back to the rim of the canyon. In fact, Senator Hayden said—he didn't ever tell me the reason—he says it looks like we are deadlocked on it, and suggested that we compromise, for the present, on this 3-mile withdrawal being taken from the monument and returned to the Grazing Service. At a later date efforts should be made to push that line back to the rim, or according to the original plan. I would like to see that done.

The CHAIRMAN. That addresses itself to the monument; doesn't it?

Mr. JACKSON. Yes; that's the monument.

The CHAIRMAN. Was that created by Executive order?

Mr. JACKSON. I was surprised to note this morning that President Hoover was responsible for that. I thought possibly he knew better than that. But I guess there are some Republicans that don't know all they should about all these things, but how they can do it; they must be blind and just take a pencil and make a line on the map. I suppose that's the way a lot of these monuments have been established, when they have been blindfolded, and they go out and draw a line and, wherever that happens to light, that is it, regardless of common sense. I think that an act of Congress should prohibit the promiscuous making of national monuments. Where mistakes have been made, I believe that the mistake should be recognized and the line changed.

The CHAIRMAN. Thank you. Are there any questions?

Mr. Swapp, do you care to be heard?

STATEMENT OF DONALD SWAPP, KANAB, UTAH

Mr. SWAPP. I believe I put my question in this morning, but I suppose I could say a little more.

I am located in the same locality Mr. Jackson is, and the trouble is about the same. The only thing I have in mind is to extend a person's permit beyond the time of their life. That is the problem I have, and I would like to see if it couldn't be done.

Mr. CHAIRMAN. That is in regard to parks and monuments.

Mr. SWAPP. Yes; where we all have to run. Of course, each permit; of course, they have stamped that permit that it terminates at the death of the individual. That is the part of it that I don't like. When it first started up here at Kanab I opposed it at the start and I have ever since. I don't think it's right for the community, or for the people, to have such a thing, because the range we occupy is, like Mr. Jackson says, it is practically valueless for anything but sheep and they have got to use it in the wintertime. That's about the only thing I can say.

The CHAIRMAN. Thank you very much.

Mr. Merle Findlay, do you care to be heard?

Mr. MERLE FINDLAY. I think Mr. Jackson has expressed my opinion of it all right.

The CHAIRMAN. The next subject is the Kaibab National Forest. Mr. Thomas Jensen.

Mr. JENSEN. Yes, Mr. Chairman.

The CHAIRMAN. Mr. Jensen, you are also on the Kaibab?

Mr. JENSEN. I used to be on the Kaibab, but I am not there at the present time.

Mr. ARTHUR WOOLLEY. Mr. Chairman, I'd like to have him make a statement on that.

The CHAIRMAN. Very well.

Mr. WOOLLEY. State your experience, and what you think ought to be done, now, about the Kaibab.

Mr. JENSEN. Well, I happened to be one of the pioneer boys of this country, and in my early days, as a boy, I got a permit for me and my father, together, from the supervisor, the first supervisor that the Kaibab had, and we run cattle there for years, and we got along fine. We had—in fact I worked at that time. They had the Use Books—

The CHAIRMAN. What?

Mr. JENSEN. What they termed the Use Book, a pamphlet about the size of the Readers Digest, that gave you the laws concerning the forest for us to go by. We got along fine for years on the forest out here.

Well then, changes came along; different supervisors and different rangers, and so on, and they began to issue them permits to everybody that made application for a permit until the grazing of the forest was absolutely overrun. Together, at the same time, they increased deer, and at that time wildlife was well taken care of. We had one of the best trappers, I think, that the United States has ever known, for lions. That was old Uncle Jim Owens. He caught lions by the hundred, and that gave the game, such as deer, and like that, a chance to increase.

Well, those deer increased, and the cattle increased, on there until they ruined the forest. We had to move off. We sold out. I told my father, I said, "We built up a nice little herd of cattle." I told my father, "Well," I says, "cattle has went to the peak, the deer has taken the country. They have allotted too many cattle on here," I says. "They can't feed them," I says. "They all started to move out; and we either had to do that or die off."

Well, then, it went on. Well, at that time, I think about the peak, there was around in the neighborhood of twenty to twenty-two thousand head of cattle permitted on the Kaibab Forest. Now, I think, there are around 800, or something like that. But we have lived all these years and been excluded from the Kaibab in different ways of

experimenting, and it all fell upon the local people here. That's what they have had to contend with, and that isn't all. Fredonia, along about the same time, a little earlier, was taken in by an Indian reserve. This little town was taken entirely in, and we were surrounded, and the forest was taken away from us. We have lived here, and scratched, and dug around, one way or another, trying to make a living. That is really what makes me a little skeptical. I have been treated very nice by the Park Service, as I said a little while ago, permits to graze on the park. But that is the way we was cheated out of our forest here. Right, again, at our door comes the Park Service. It makes me skeptical about the Park Service, how long it's going to last. There might be another man in there right away that will exclude us entirely. You can't tell what we are going to get. That is the way it was excluded from the forest years ago and I say that I think the forest should be opened together with the park. The park has got a lot more country on the Kaibab than it should have excluded from grazing, because there is room there—the Bar-Z Cattle Co., alone ran 15,000 head of sheep on that—

The CHAIRMAN. What is that, and when?

Mr. JENSEN. That was around about 1910, or somewhere along in there.

The CHAIRMAN. Before they went in and killed off the deer on the Kaibab?

Mr. JENSEN. Yes. Then they went in and killed the deer off by the thousands. The sheep herded every point down on the winter range. That was about the time I decided to leave and—well, now, they have had about 25 years to put the mountain back to where it ought to be furnishing something to eat. Now I don't think we should use the slopes of the mountain for winter range, we have plenty of winter range, but I think the mountains in general should be thrown open to grazing, and I think—

The CHAIRMAN. When you say "the mountain" do you refer to the Kaibab Forest?

Mr. JENSEN. Kaibab Forest.

The CHAIRMAN. Isn't it open?

Mr. JENSEN. I think in the neighborhood of 800 head of cattle and 1 little sheep herd.

Mr. ARTHUR WOOLLEY. That has been under a gradual elimination process similar to the Park Service.

The CHAIRMAN. When you had the 15,000 head of cattle running in there the forest was gradually fed out, wasn't it?

Mr. JENSEN. They had some wonderful—well, at that time it was, as I say, the forest officials went to the extreme in issuing permits. They did overstock the forest with the livestock and, together with the deer also increasing, that was done under the supervision of the Forest Service.

The CHAIRMAN. What has the Forest Service to say on the opening of the Kaibab? Is it open now?

Mr. KNEIPP. Speaking for the Kaibab Forest, as for the numbers of stock, I have a list here showing the numbers of permitted cattle and sheep and the estimated numbers of deer for every year from 1908 down to 1924. This doesn't show that the numbers of domestic stock were ever so high as Mr. Jensen indicated, twenty to twenty-two thou-

sand, or anywhere near that; nor so low as he now indicates. But it shows that in 1908 there were 13,750 cattle, 5,000 sheep. In 1909, 14,000 cattle, 7,500 sheep. In 1910, 14,383 cattle and 500 sheep. In 1911, 14,475 cattle. The high point was in 1913, with 15,210 cattle. From then on there was a progressive reduction until 1931. Since then there has been a gradual increase so that at the present time the numbers of permitted stock are 3,442 cattle and 1,280 sheep.

Mr. JENSEN. I would like to ask this question: Is that for summer, those figures? I know there is considerable cattle permitted on winter permits, but not very many permitted on for summer.

Mr. KNEIPP. I think these figures cover both seasons. I gave the total number of stock, some of which graze yearlong and some over the short season. In other words, yearlong stock, and the yearlings that are carried over.

The CHAIRMAN. What is the number now?

Mr. KNEIPP. In 1942 the total authorized is 3,242, approximately 1,050 yearlong.

The CHAIRMAN. What is the condition of the wildlife in there now?

Mr. KNEIPP. I will ask Mr. Woodhead, the assistant regional forester, who has charge of the grazing and wildlife work.

**STATEMENT OF P. V. WOODHEAD, ASSISTANT REGIONAL FORESTER,
ALBUQUERQUE, N. MEX.**

Mr. WOODHEAD. As for the condition of the wildlife, back in the days of the heavy population, I know about that only from a matter of record.

After that heavy build-up, or explosion, of numbers, various means were taken to reduce the Kaibab deer herd. Some of them died, I guess, naturally. There was some hunting by Federal people and later on hunting by sportsmen. As indicated by Mr. Kneipp, the number of livestock were adjusted downward through those years.

That range, according to people who saw it in those days, was in about as bad a condition as it could have been. People who have seen it say it looked like a fire had run through it, particularly the winter range areas where the browse is the principal feed. Well, today, we think we have gotten pretty well on top of the browse recovery job. However, we feel that we have not done as well with the herbage vegetation on the higher summer ranges.

I think I would sum the whole thing up this way, Senator; as far as livestock is concerned, I think, on the forest as a whole, we have permit or permit obligations for all that mountain can carry. I think, however, that our distribution of use up there could be improved. There are some allotments that perhaps are carrying too much livestock right now. There are others that could carry more by shifting certain fences and by development of additional water. If that is possible, the forage which grows on the Kaibab Forest could be made to carry the livestock load much better.

As far as the deer herd is concerned, I have been checking the station's record. Those deer are checked out every year and they indicate that that is a very healthy herd of deer. We have the hunting of bucks and all other animals. We take both does and bucks from that area. In other words, a permit allows the kill of one deer.

We are getting bigger and better animals off that area every year, which indicates, of course, a come-back of that deer feed.

Now, what the future of that herd might be is something that, as far as I am concerned, I wouldn't care to try to say too much about. Whether we could carry more deer, or whether we ought to carry more deer, is something that is pretty hard to determine.

The CHAIRMAN. Have you figured your increase; your annual increase?

Mr. WOODHEAD. We have fewer deer now, as far as we can determine; a lot fewer deer than we had, of course, during this big increase in numbers. Our estimates are eight to ten thousand head of deer at the present time. We are very free and frank to admit that we don't know whether that number is correct or not, because it seems that no one has found a satisfactory method for counting deer, or making an estimate of the population. We do know that the deer are healthier, the bucks are heavier. Some of the prize trophies are coming from the Kaibab Forest; that is the forage upon which the deer depends principally—we know that that is improving. The cliff rose and other species of browse are improving. Does that answer the question?

Mr. ARTHUR WOOLLEY. Does your deer population include the deer in the park part of the forest, or only on the Forest Reserve?

Mr. WOODHEAD. Only on the forest as far as we know.

Mr. ARTHUR WOOLLEY. Your statement doesn't take into account the park area?

Mr. WOODHEAD. No.

The CHAIRMAN. Anything further, Mr. Jensen?

Mr. JENSEN. I believe that's all.

The CHAIRMAN. Mr. Elmer Jackson, you have already made your statement.

Mr. JACKSON. I think so. I, like Mr. Jensen, have been there during a good many years, and I worked off. We went off with 160 head of cattle in 1927, because of the fact there was no feed for them; and I am there at the present with the only herd of sheep that is on the Kaibab. But I happen to be a member of the advisory board of the Kaibab Forest; and the idea of increasing grazing has been discussed and the condition of the range has been discussed. Of course, the advisory board has no authority as yet. Their recommendations are generally acted upon. But as far as their recommendations being final, they are not. As far as I know, the policy of the Forest Service is to increase the grazing and the individual numbers as much as the range will permit, and the advisory board went on record a few days ago as being in favor of increased grazing as rapidly as the range would permit. I believe the Forest Service, at least one officer of the Forest Service, indicated they would do that.

Now, we have had 2 pretty bad years, and there hasn't been a great surplus of feed up there. In fact, there has not been any surplus. If it had not rained this year, as far as my allotment is concerned, by now I would have had to leave the mountain. It rained 30 days ago, and the range is coming back. But there isn't a great deal of surplus. When there is a surplus, I think that the men who voluntarily moved off should be considered, and that, in fact, their rights should be among the first to be considered and be placed out there. I don't know what the Forest Service thinks about that; but,

so far as the park end of the Kaibab Forest, there is a surplus of feed. I have been over it practically every year, and, of course, Mr. Bryant has told you that grazing has been eliminated. If it were possible to work out some plan with the Park Service to permit grazing on the Grand Canyon National Park, the north rim, I think it would take care of a lot of the cattle belonging to local people for feed that is necessary, especially right now when we need more beef and more mutton; and, if the policy of the Park Service could be changed to permit that, this country would be improved a great deal.

I don't know the exact area of the park on the north rim, but that is it. It could be utilized as grazing. There are approximately 800,000 acres, I believe, on the north rim, and I would say perhaps 700,000 could be used for grazing. Of course, if it were properly grazed, and I would go on record as saying that and agreeing with other statements that have been made, that proper grazing would be beneficial to us. I have said, from personal observation, that I believe that if the grass is allowed to continue to grow without grazing on the Grand Canyon National Park that we would some day get a fire that would not only destroy all the park and the timber on the park but destroy the Kaibab National Forest as well.

Another thing I have noticed—of course, this is just a personal observation—the feed is so arranged on the park that the deer don't graze it. There is so much old growth in there that the deer don't, as a rule, stay there. They come out onto the forest where it has been eaten off and where the fresh tender growth of feed is. I believe that a proper amount of grazing on the Grand Canyon National Park and Kaibab, the forest side, would be beneficial to the park; and it would be of great help to the people of this section of the country.

MR. T. W. JONES. In your opinion, does the proper balance exist on the forest?

MR. JACKSON. Well, I think that it is as near balanced at the present time as it has been for years. Of course, it was overgrazed, and the deer did destroy it. They destroyed this country until it is having a hard time to come back. But it is coming back, so that, within a few years, there should be a surplus of feed. I believe, if the deer were held at their present numbers, there would be plenty for tourists, and plenty of hunting. I don't believe that the deer herds should be increased. I believe that the domestic livestock should be increased as rapidly as the feed will permit.

THE CHAIRMAN. Is Mr. C. W. Judd here?

MR. JUDD. Mr. Jackson covered most of my problems out there.

THE CHAIRMAN. You are on the Kaibab National Forest?

MR. JUDD. Yes, I am. I run cattle in there, and I am like him. I think that there is a lot of valuable grazing ground on the Grand Canyon National Forest, adjoining us, that should be fed off.

THE CHAIRMAN. On the park, do you mean?

MR. JUDD. On the park, and it is very hazardous, as far as the growing of undergrowth; and there are permits there that I think could be increased to an advantage to local grazers here where it would benefit them very much.

THE CHAIRMAN. Have there been any fires on any of the national parks in this vicinity in recent years?

Mr. TILLOTSON. Lightning fires, Senator, on the north rim, and—

Dr. BRYANT. On the south rim, too; but I have kept up with it, in a general way. We have had somewhere between 20 and 30 fires this summer, all started by lightning. As far as we know, it didn't burn very many acres, although we had one on the north rim that was quite difficult to control, out on one of the points in heavy timber.

The CHAIRMAN. Well, there is scarcely any use in dwelling on this matter of policy, with reference to the park, excepting as you gentlemen present your individual stories here, which become of record, and I think it is worth it. Do you have anything further to say, Mr. Judd.

Mr. JUDD. No, I think not. It has been pretty well covered.

The CHAIRMAN. Do you have any permit on any park at all?

Mr. JUDD. No, sir; just on the forest.

The CHAIRMAN. Have you applied for a permit on the park?

Mr. JUDD. No, sir; I didn't think it would do any good, or I would have done it.

The CHAIRMAN. All right; I guess you're right.

Mr. Daniel K. Judd, is there anything you have to offer? We would be glad to hear from you.

STATEMENT OF DANIEL K. JUDD, FREDONIA, UTAH

Mr. JUDD. I didn't expect to be called on today. I have been for a long while down through that area, from the time the Forest Service started on the Kaibab. I was under Mr. Kneipp here for a long time, and, about the number of cattle and sheep on the Kaibab, it's probably exaggerated—Mr. Jensen's statement about the numbers at one time. One company had 14,000 cattle, and the supervisor at that time was very considerate of local people. He encouraged the local people to make application for what is known as the west side of Grand Canyon. The Grand Canyon Cattle Co., at that time, was operating their cattle on the east side, and, at that increase, Mr. Clark, the supervisor, of course, made a number of cattle on the Kaibab, and caused the overgrazed condition with the deer, as has been stated.

Mr. Kneipp made a statement a few minutes ago, that they have been making a continual increase in permits on the Kaibab for the last number of years. I would like for Mr. Kneipp to give me a leaf out of that book.

The CHAIRMAN. What?

Mr. JUDD. I would like for him to give me a leaf out of that book. I have made continued applications, on the Kaibab for increase in cattle for a number of years, and I haven't any yet. I was a forest ranger for 16 years, and during that period I accumulated a few cattle—it was allowed. Finally, the Forest Service made a ruling, which was O. K., that I take my choice between being a forest ranger and a cattle man; so I took the cattle. It wasn't long until the supervisors changed; in fact, I worked under seven. The new supervisor saw fit to make a cut in my number at that time. I then had a permit for 150, year round. He made a cut of 75 head. That discouraged me; and I moved off the forest entirely. I went on the public domain, which was badly overgrazed. I still had a heavy loss. I finally got back on to the forest, on a different area, with 50 head of cattle.

That has been some 15 years ago, and, like I said before, since then I have been trying to get an increase. I finally succeeded in buying the remnants of one permittee, who sold out, and then I got an increase of 20. That made 70 head, year long. I have been maintaining that permit of 70 head for a number of years, and asking for an increase; and still no increase.

Last year one of my neighbors was granted a temporary permit, for, I wouldn't be positive, but I think it was 40 head, until he got water in his tanks on the lower range. That was granted. That encouraged me, so I, likewise, made an application for an increase of yearling heifers. I also operate a bunch of cattle here for a widow, who has a 75-head permit, and I also made application for her, for her yearling heifers. When those applications went to the forest supervisor, served by the ranger, the word came back immediately, "Dan Judd, or Mrs. Pratt, can't have an increase on this range, because the man who got the increase runs the same water." I took it up with Mr. Woodhead, who happened to be in the vicinity at that time. I told him the conditions, and he said, "I am sorry, I can't go against that decision. I'll make an investigation and see what we can do about it." I also told him about the water condition out there. We have a very great shortage of water and there is a certain pipe line there that I was given to understand I would have the privilege to use during the dry season. The Forest Service put a water tank there, and the highway people and I get a run-off of a certain amount of water during the dry period.

Well, it happens you turn on a little water and the tank fills up and the cattle water and leave for the night, and the tank fills up and runs over. The highway man comes down and finds the water running over, and he turns it off, and then the cattle have to do without water. My operation won't permit me to be there to take care of it. I told Mr. Woodhead, and he said, "I'll see something is done about that before I leave." It happened when he come to town to see me I was called back to my cattle, because the reservoir had gone dry. I received a letter, 10 days later, saying that my troubles were taken care of, and it had been arranged that I was taken care of and would have good range.

Well, the good range was taken care of, through nature, until this year, and again the same thing happened. All the water holes dried up, and no provision was made for the water tank. I went to Mr. Gray about it. He said, "If I had known the condition, I would see that it was fixed." He said "I'll see that it's fixed immediately." That's the way the picture is. I don't see any reason why an increase couldn't be given to a man who has so few to operate to make it.

To carry the story further, it has only been less than 5 years ago that the officials met in Albuquerque. I think at that time, so my understanding through the paper is, all permittees on the Arizona Forest would be 200, protective limit. That would be the protective limit. That would be considered as an operating basis. I immediately made application to the officials, and asked them if that couldn't be worked out on the Kaibab. At that time I was a member of the advisory board, and we were in session at Williams, when I made that request. I was given to understand this is a national game preserve, Kaibab, and the forest rules don't apply to national game preserves.

So there is no increase in numbers on this particular area, and I have been on the Kaibab since 1905, every year, and every month, and almost every day. I know that the forest is coming back, and coming back fast, through the method used; through their keeping the deer down, as they should do. There are still plenty of deer, with the numbers of cattle on the Kaibab; but the number of deer is just right, and there is plenty of room for a summer increase, if it is properly distributed. I think Mr. Woodhead agrees with me. A few minutes ago he said the same thing. Some areas are overgrazed and on some there is plenty of feed.

That is all I have to say.

The CHAIRMAN. Very well, thank you.

Is Mr. Elwin Pratt, from Fredonia, here? You graze livestock on the Kaibab, do you not?

Mr. PRATT. Yes, sir.

The CHAIRMAN. You may please make any statement you see fit.

STATEMENT OF ELWIN PRATT, FREDONIA, ARIZ.

Mr. PRATT. Well, there is a little strip of country up there which is called the national game preserve, which lays within the land as controlled by the Division of Grazing. The Forest Service has no jurisdiction over it whatever.

The CHAIRMAN. That is Wildlife?

Mr. PRATT. It is a national game preserve.

The CHAIRMAN. Well, that comes under Wildlife, doesn't it?

Mr. ARTHUR WOOLLEY. It must be a part of the Kaibab National Forest, Senator.

Mr. PRATT. I haven't been able to find anyone that knows anything about the control.

The CHAIRMAN. Do you happen to know what that is, Mr. Kneipp?

Mr. KNEIPP. I think so, Senator. When the Grand Canyon refuge was established in 1906 certain boundaries were adopted, believed to be coincident with the boundaries of the national forest. Shortly after that, by resurvey, the boundaries of the national forest were modified somewhat so there is a hiatus. Part of the game refuge extends outside of the national forest. On account of that difference in boundaries there has been considerable discussion as to incidental recommendations for legislation which would adjust it; but, so far as I am aware, no agreement has been reached between the two departments as to just what adjustments could be made. Therefore, none have been made.

The CHAIRMAN. The committee will be in recess for 10 minutes.

(Recess for 10 minutes.)

The CHAIRMAN. All right, we will proceed. Is Mr. E. B. Pratt here? You may make any statement you wish to.

STATEMENT OF E. B. PRATT, FREDONIA, ARIZ.

Mr. PRATT. I have a set-up that adjoins the National Forest Reserve, and also an allotment under the Division of Grazing. I'm located right on the line between the two.

The CHAIRMAN. Between what two?

Mr. PRATT. Between the Kaibab Forest and the Division of Grazing. I have an allotment, on one side, of 15 sections. I have a permit

for 45 head of cattle on the forest for the last 20 years. Every year, for the last 20 years, I have applied for an increase in that permit, which has been turned down. I would like an increase. What I would like to have is an increase in that forest permit, for summer range, where I won't have to use the Division of Grazing for summer and winter.

The CHAIRMAN. Now, during the time that you have been applying for additional numbers on the Kaibab Forest, have any others secured additional permits to your knowledge?

Mr. PRATT. Yes.

The CHAIRMAN. In your vicinity?

Mr. PRATT. Yes; but very small.

The CHAIRMAN. You have been making this application for a number of years, as I understand it?

Mr. PRATT. Several years; yes.

The CHAIRMAN. During that time others have secured increases?

Mr. PRATT. Yes, sir; some additions; very little. I feel now that the way that feed is on that forest that it could be opened up for probably five or six thousand head of cattle. It would relieve all that Division of Grazing land, in this district, and people could raise three or four times as many cattle as they do at the present time under the present set-up.

The CHAIRMAN. What has been the reply to your application?

Mr. PRATT. No new permits issued and no increases.

The CHAIRMAN. Does the Forest Service care to explain that?

Mr. KNEIPP. Yes, Senator; we would be glad to.

There are certain physical limitations in the use of range. Cattle must have so much feed to eat, to keep alive, and only so much feed is raised as a growth on an acre of land. The method used by the Forest Service is called the range survey, under which the lands are classified, as to the density of the vegetative cover and the proportion of that cover which is palatable and available for livestock. Out of that is evolved what is called the "forage acre," which is the equivalent of an acre fully stocked with palatable forage. In other words, the equivalent of very fine feed.

A survey of that kind, made on that part of the Kaibab Forest north of the canyon, in 1940, exclusive of that in the park, revealed that of the whole area, 725,000 acres, an area of 214,517 acres is wholly nonusable for grazing, either because of very rough topography, or, because of total absence of water or dense stands of timber. That left, then, a usable acreage of 511,500 acres; and that usable acreage, as has been known for a long time, has a very scanty forage covering. As a matter of fact, the range survey estimate indicates, or supports, only the equivalent of 31,950 forage acres. That's all there is in the way of usable forage, for all the cattle, and for such use as the deer make of it.

Now, to support a cow in that country for 1 month, it is estimated it will require 1.31 forage acres; and, on range for deer and livestock, it is 1.01 forage acres, taking into account the poorest feed. In other words, under normal conditions, in the average year, there is only a certain amount of vegetation capable of supporting cattle. If the number of cattle is increased beyond that normal limit, they begin overgrazing these plants to the point of destruction. There is not, up on this mountain, as large as it is, room for continual increase.

Historically, there have been two periods of depletion. The first was a period of depletion caused by large numbers of cattle and sheep, at a time when the deer herd was relatively small. That period of depletion, unquestionably, was due to the domestic livestock. As has been indicated here, some of the stockmen themselves, because of the poor range condition, left the range, or had their preferences reduced.

Then came the phenomenal increase in the deer herd, and the second period of depletion, the utilizing, in general, of the type of browse feed that the cattle used in a lesser degree. Then, steps were taken to reduce the deer herd, and, so far as the browse feed was concerned, that is showing a quite excellent recovery. But, as to the grass feed, and the weed feed, the vegetative feed upon which the cattle and sheep more nearly depend, that has not come back nearly so fast, nor so far, as the browse; which would indicate that there is no considerable excess of feed up there, and that the cattle and sheep are actually utilizing the available feed resource to about as full a degree as it can be used without depletion.

I think that fact ought to be taken into account, that the Forest Service actually is studying this condition carefully. Nothing would make us happier than to be able to announce a considerable increase in the grazing of domestic stock, if that were possible.

The CHAIRMAN. What have you to say to the statement, which this witness has been making, that he applied for an increase, and others have secured an increase?

Mr. KNEIPP. I will have to ask one of these gentlemen. Mr. Woodhead possibly could answer that. The gentleman himself said the increases they have received were quite small. This much is true, and I think it has been indicated here, while some parts of the area are overstocked, there are other parts that are not overstocked, and the ability to grant a small increase would depend, in part, on the range upon which the man wanted the increase.

The CHAIRMAN. Very well, Mr. Woodhead.

Mr. WOODHEAD. Well, Senator, the only thing I can say, to supplement what Mr. Kneipp has said, is that, as far as I know, these increases, to which Mr. Judd refers, were allowed on ranges, which, in the judgment of the supervisor, were in such condition as to permit increases.

The CHAIRMAN. Along this immediate range that he uses, and has used; have there been increases?

Mr. WOODHEAD. As far as I know, none. That is one of the ranges I had in mind, Senator, where conditions could be improved, I think, by a shift in fences. Perhaps it would result in at least providing Mr. Judd with more adequate feed for the numbers he now has. As to looking along into the future, and talking about increases, it is simply holding out an encouragement that is not justified, because, in our judgment, at least, as indicated by Mr. Kneipp, we can't see in the immediate future the opportunity to increase livestock numbers on the Kaibab Forest. We feel, if we did that, it would start this process of retrogression, which has happened twice before, and which it has taken so long to overcome. There have been so many hard feelings, about the things that had to be done, there, to improve those conditions, which resulted from heavy livestock and deer use, that we certainly would not want to start that range on the downward trend again.

The CHAIRMAN. Well, naturally it is discouraging, when a fellow makes an application, right along, and is rejected, when he sees someone else get an increase.

Mr. WOODHEAD. I appreciate that.

The CHAIRMAN. And, to men who are out in the open, and who have no direct contacts, except through the elements, they naturally think that they are being discriminated against. The explanation of those matters is sometimes very wholesome.

Have you anything to say, Mr. Pratt, other than what you have said?

Mr. PRATT. No.

The CHAIRMAN. Has there been any increase granted, in the range than you do occupy?

Mr. PRATT. Increases in winter permits, to Mr. Pace, Mr. Bunny and Mr. Brown, of Kanab, and also Mr. D. K. Judd and Mrs. Alder Pratt.

Mr. WOODHEAD. On the range where you wanted an increase yourself?

Mr. PRATT. That's right.

Mr. WOODHEAD. Down in the Willis Canyon?

Mr. PRATT. That's right.

Mr. WOODHEAD. Well, I don't know about that, Senator; I can't explain it.

How extensive were those increases?

Mr. PRATT. Some of them 100 percent.

Mr. WOODHEAD. Doubled their numbers? How many head?

Mr. PRATT. Well, I couldn't say exactly, without looking it up. I happened to have the count that came off of there. All of these fellows claim they have had an increase in permits, so I know they must have had.

The CHAIRMAN. When was that?

Mr. PRATT. Last winter.

The CHAIRMAN. Is the local ranger here?

Mr. GRAY. Yes, Mr. Chairman.

STATEMENT OF G. J. GRAY, FOREST RANGER, JACOBS LAKE, ARIZ.

Mr. GRAY. As I recall it, increases, last year, were granted, on the average of 5 head, in this particular area.

The CHAIRMAN. Why wasn't he granted one?

Mr. GRAY. Mr. Pratt had a temporary permit, during all of last summer, the drought period, for 55 additional cattle, carried on that range which Mr. Judd mentioned was his complaint. Mr. Pratt, who runs in with Mr. Judd, had this 55-head temporary increase in his permit during that drought period.

The CHAIRMAN. I haven't got that clear. That is I can't quite straighten it out in my own mind.

Mr. GRAY. In the first place, there are two different allotments. Where Mr. Pratt is talking about, the increases were granted, there, in the Willis Canyon allotment.

The CHAIRMAN. Is that where he runs?

Mr. GRAY. No; he and Mr. Judd run on what is called the Ryan allotment. There is no fence between them, but, nevertheless, it is set up in two different, separate units.

The CHAIRMAN. Do the cattle occupy the two allotments; the same cattle?

Mr. GRAY. More or less. There is a drift back and forth.

Mr. KNEIPP. Then, as I understand it—may I ask the ranger a question?

The CHAIRMAN. Certainly.

Mr. KNEIPP. It was proposed to grant temporary increases, on the Willis Canyon allotment to a number of people who applied for them, and they were granted, to the extent of about an average of 5 head. But Mr. Pratt was not given one because he already had received a temporary permit, on the other allotment, for 55 head. Is that right?

Mr. GRAY. That is right.

Mr. PRATT. That was temporary and emergency permit.

Mr. KNEIPP. These were all temporary permits, these increases.

The CHAIRMAN. Did you make use of that increase that was given to you?

Mr. PRATT. Yes.

The CHAIRMAN. Are you still making use of it?

Mr. PRATT. No; they wouldn't allow it again. I was turned down.

Mr. ARTHUR WOOLLEY. How about the increases to the others?

Mr. PRATT. They had their increases last winter.

Mr. WOOLLEY. In other words, they were allowed again?

The CHAIRMAN. Well?

Mr. GRAY. They have only been allowed once, this season. It doesn't start until December, again.

The CHAIRMAN. I again draw your attention to the fact that I doubt very much the right of this committee to go into individual cases, excepting as they become outstanding cases, involving a policy. But I respectfully recommend that this matter be looked into, to the end that no lack of fair play takes place. We are interested in fair play, and it is discouraging to think somebody else can get something you are being denied.

Mr. DANIEL K. JUDD. As to the figures these forest officials give, on the acreage it takes to feed a cow, I can't see where there is anything to it, whatsoever, that it takes several thousand acres to feed a cow.

The CHAIRMAN. I didn't hear that several thousand acres.

Mr. JUDD. That is the way I understood it; so many acres on the Kaibab, and only several more thousand acres in the Kaibab than they were running cattle on.

The CHAIRMAN. The figure I got was an acre and a fraction to graze a cow.

Mr. KNEIPP. Forage acre, Senator; that would be an average of 12 acres.

Mr. JUDD. That was the choice ground of the forest. I happened to have lived in a time when I know there was around 4,000 head of cattle permitted, on the west slopes, and they always wintered on the west slopes; and I was a very close friend of the Bar-Z foreman. They run around 10,000 head, all the time, and they were doing well, and ranging on the Kaibab Forest, at that time. Now there is plus 1,300 head, and the biggest part of those are winter permits.

The CHAIRMAN. My observation is—and I wonder if your experience will bear me out—the Almighty has a great deal to do with these graz-

ing permits. When he brings down plenty of moisture, they will feed more livestock than when he denies it. Is that right?

Mr. JUDD. We have had 25 years for that to recuperate. It has been 25 years since they cut the number down to practically what it is today. It has been 25 years that they took to build that country back up. If it's not going to build up in 25 years, when is it going to build up?

The CHAIRMAN. Well, I've seen some range built up in 1 year.

Mr. JUDD. So have I. I've seen the Kaibab, too. You can go out there now and investigate the feed. It is there today. I was raised in this country, and I have traveled that Kaibab as much as any of the forest rangers, and I know the feed is there today; just as good as it was in the time they were feeding twelve to fourteen thousand head of cattle; and still we can't only—and they are issuing permits upon the ground that is misused today. That is where they are issuing permits and allowing the extra cattle to go on the territory that is overstocked. That is the ground that the new permit, and emergencies, is issued on; and that is the ground that is being issued today for emergency permits.

The CHAIRMAN. Is there anyone else who wants to be heard on that particular subject?

STATEMENT OF MERLE V. ADAMS, KANAB, UTAH

Mr. ADAMS. I would like to give a little picture of the Kaibab. Mr. Jensen has done some of it, and so has Mr. Pratt. But I have been very closely associated with the Kaibab.

Since 1917, until 1940, the Grand Canyon Cattle Co.—they went out of business after the national park came in on the north rim—their permit was cut from around 9,000 cattle to 3,000; and they could not operate. In 1926, I bought the remnants and later Mr. Woolley went in with me on these cattle, half and half. There wasn't any way that we could retrieve any of the Bar-Z permit from the Forest Service.

The CHAIRMAN. From the Forest, or the Park?

Mr. ADAMS. Either one. Now, it has been my experience that the Forest Service has tried to make the forest look like Mr. Tillotson wants the park; and, that is, a lot of that country you could run a mowing machine and stack hay on. You could do that today on the park and on the forest. That has been the case for a good many years. The winter range has been a little slower about coming back. About 1928, I traded my half of the Bar-Z cattle to Mr. Roy Woolley, for a little permit he had bought on the west side, for 16 head. I carried and struggled along with that 16-head permit until 1940. Every year I asked for an increase to 25. I believe the record will show that every year I asked for that increase. In 1940 I gave up and sold out.

There was new permits issued in that period of time. Now, most of these cattle—I doubt very much that there is 3,000 cattle—ever look at the Kaibab. I would have to see the figures to believe that, and if they are there on the slopes of the Kaibab, that doesn't even touch up on the top, where the grass is that high, and acres, and hundreds of acres, of it are there.

On the national park, when we had that rim on the Bar-Z cattle, we followed them miles and miles and miles by grass trails. But we got it off in the summer. Mr. Tillotson, I think, will bear me out. These

cattle had to be removed because it was against the policy of the park. Now, they have got thousands of acres that will never see a dude. I don't care, it might as well be grazed on the park.

I would be tickled to death to go back on the Kaibab, with just 25 cows, if I could go back tomorrow. At the price they're paying today, with a gradual year after year increase, why any she stuff I could build up, until I had an outfit that would pay out. There is ample room on the forest for 6,000 head. Back in the old days the Bar-Z had 10,000 and the local people had two or three thousand.

The CHAIRMAN. What do you mean, "In the old days"?

Mr. ADAMS. Back to when the Bar-Z left, in about 1924.

The CHAIRMAN. What happened just before they went out. Was it that the park came in?

Mr. ADAMS. The park came in, and got their equity back from the rim. I think it was something like 11 or 12 miles. They didn't mention here the points that run out into the canyon for 15 or 20 miles. On Greenland Point, alone, the year after the north rim came into the National Park—

The CHAIRMAN. That is this monument that we have been talking about?

Mr. ADAMS. No, that is the national park; out on the Kaibab.

The CHAIRMAN. When was that increased? I understand this witness to say they got this increase.

Mr. ADAMS. It wasn't an increase, sir, when the Park Service took jurisdiction on the north rim of the Grand Canyon.

The CHAIRMAN. It wasn't a change of lines then, but just a matter that the line had not been formally established?

Mr. ARTHUR WOOLEY. The first line was established a mile back from the rim. Later they came out here and extended it back 15 miles and they took some points that still run out 15 miles farther.

The CHAIRMAN. Was that done by act of Congress?

Mr. DRURY. The park was established by act of Congress.

The CHAIRMAN. And extended the area?

Mr. DRURY. Yes; extended it by act of Congress.

The CHAIRMAN. How does it come that first you set up your boundary on the rim, as stated by the witness a moment ago, and it never was fixed on the rim?

Mr. TILLOTSON. No; there is one portion in the extreme west, as Dr. Bryant explained this morning, where the boundary is the north bank of the Colorado River; and then, a little farther on to the east, it becomes the rim.

The CHAIRMAN. That isn't the country this witness is speaking of.

Mr. ADAMS. It is all this country. I know that country as good as any living person, Park Service, Forest Service, and it doesn't make any difference—

Mr. TILLOTSON. No change in the boundaries.

Mr. ARTHUR WOOLEY. There has been a change in the boundary. There's been an extension north. You know when they first set the park line it didn't come a mile back from the rim.

Mr. TILLOTSON. You're talking about the old National Monument; I was talking about the Grand Canyon National Park, which is created by an act of Congress.

The CHAIRMAN. Again, distinguishing between a park and a monument, a park is set up by act of Congress, and a monument may be

set up by Executive order. Now the Grand Canyon National Park must have had defined, definite boundaries, when Congress created it a park. Was there ever another act extending those boundaries, to go into this territory?

Mr. DRURY. No, sir.

The CHAIRMAN. What about this territory running back 12 miles or more?

Mr. TILLOTSON. The original act of February 26, 1919.

The CHAIRMAN. So that, what appears to be an extension, was in reality in the original act?

Mr. TILLOTSON. In the original act, creating a national park, yes, sir.

Mr. ADAMS. I didn't know there was any difference. I thought it was all the same. There is a long point there, Greenland, that runs out into the Grand Canyon, probably 12 miles long. Isn't that right?

Mr. TILLOTSON. Yes—

Mr. ADAMS. The Grand Canyon Cattle Co. used to have that fenced off, to keep saddle horses in, during the year after the national monument—I don't know which it was, a national monument, but they came out into the Grand Canyon, and gathered up their saddle horses, and took them up on the forest pasture. They held those horses there for 6 weeks, and watered them every day, around 250 head of saddle horses, while the company had a chance to go back to Washington. The next season they took the cut, down to 3,000 head of cattle, and couldn't operate. So they went to Mexico.

I bought the remnants, and struggled along on that trade, on the Kaibab Forest for a period of 10 or 12 years with a little 16-head permit; weathered all that deer situation that the Government created—that the Forest Service created—as well as anyone else. The cattle men who told the Service at that time they were being overgrazed were called biased. There are men in this audience who left their big permits. Jed Johnson left 207 because he couldn't compete against the Forest Service and the deer. Mr. Findlay, I don't know how many he left with because he couldn't. A few of the boys stayed with it, with a few head. I stayed along with this little 16 head through all that crisis. Then when they started back up they still didn't give us any consideration. In 1940 I sold that little 16 head because I was discouraged. I couldn't see any future on the Kaibab; and anyone knows you can't afford to run a 16 head permit of cows on an area like the Kaibab.

I would like to say to the Forest Service, I would hate to be operating and be the judge of a range like the Kaibab and make the statement you men have made here today, because it is false, and you people know it. The grass is there and any unbiased cattleman could go on the forest and they'll come back with that same story.

The CHAIRMAN. Are there any questions? Does anyone care to interrogate?

Mr. KNEIPP. Senator, I haven't ridden over the Kaibab since 1924 and 25, when I was last out there, but it is difficult to believe that the range could have recovered to the degree alleged.

Going back to the question you asked me, Grand Canyon Park, on this side, was created out of the original Grand Canyon National Monument. By act of Congress, under date of February 26, 1919, an area north of the river, amounting to 320,000 acres, was given

a national park status. Then, in 1924, or '25, a committee came out here—an interdepartmental park and forest committee—and made a study of the boundary, and agreed, or recommended, the addition of another 48,000 acres. That was made by an act of Congress, in 1927. So there have been two withdrawals; the first one, a little in excess of 300,000 acres, the second one, which added another 48,000 acres. A larger addition has been proposed to this committee, which I accompanied, at the time; but they drew the line so as to leave the waters on the forest side available for stock use, and to add to the park some areas they thought were necessary for the planning of road, by which the visiting public could get out to the western point. Now, I haven't had the advantage of trips over the Kaibab since that time. But in 1924 this committee made a rather extended trip, and if there were any fields of waving grass from which one could cut hay, I didn't see them and nobody else along on that trip saw them, either, although there had been—

Mr. ADAMS. I'll bet you \$500 you can find it today. I can take you out there and show you where you can cut hay out of the waving grass.

Mr. KNEIPP. Mr. Woodhead has been over the Kaibab Forest in considerable detail. He might be able to comment regarding Mr. Adams' statement, on recent conditions.

Mr. WOODHEAD. Mr. Adams, I don't want to take issue with you. Darn it all, we have a hard time agreeing on grazing capacity; it is always a bone of contention.

Senator, the south end of the entrance road in the national park, along that road in and about the park, there is pretty good feed. We have tried deliberately to protect that entrance into the national park for two reasons—because of the esthetic elements, which some people value, and to provide, as far as possible, for a deer spectacle in those parks, up there along that highway. Now, aside from that, within reach of the available waters, and on slopes that livestock normally will use, it is our judgment, as I said, that the range is carrying about all the livestock it can.

Mr. ADAMS. I would hate to have to be you, doing that, and going on record.

Mr. WOODHEAD. Well, that is just a difference of opinion.

The CHAIRMAN. Just a moment. I don't want you to be interrupted.

Mr. WOODHEAD. I think that's about all I have to say. There is a difference of opinion, and I don't think it can be reconciled.

Mr. ADAMS. But—we will start from the north end of Dry Valley down where Dry Valley is and go right across the mountains and probably get in around the head of Kings Canyon, and possibly north of there, then run west to Naylor Canyon and through there. Can you honestly say to the Senator that that country through there isn't just as good as those open valleys where it is opened? Can you truthfully tell him that?

Mr. WOODHEAD. Well, now, I don't know that I quite get your question. I'll say this, Mr. Adams, and stay with it, that it is our judgment that the Kaibab Forest as a whole is carrying all the livestock it should. I said a while ago that there were areas that were pretty badly overstocked, and some relatively understocked; and, by some shifting of fences, and adjustment in use, that load could be more nearly equalized. I will stand on that statement, sir.

Mr. ADAMS. That's all.

Mr. ARTHUR WOOLLEY. Let me see if I get your picture of the road into the park. Is that the south road?

Mr. WOODHEAD. Not the road; the trail goes down through Pleasant Valley—

Mr. ARTHUR WOOLLEY. The park runs up to what we call the north end, or rather the south end, of the V. T. Now, the Little Park—do you think that the Little Park is more recovered; that the growth is much more luxurious and higher there?

Mr. WOODHEAD. Is the Little Park inside the national park?

Mr. WOOLLEY. Yes.

Mr. WOODHEAD. I don't know about that.

Mr. ARTHUR WOOLLEY. You have been down to the ridge—

Mr. ADAMS. Will you tell the Senator how many miles you think it is, since you mention Pleasant Valley, down to the park line?

Mr. WOODHEAD. I suppose, Mr. Adams, just guessing, I have ridden down there several times, and it must be 20 miles.

Mr. ADAMS. That's fair enough. I'll settle for that.

Mr. ARTHUR WOOLLEY. Now, see if I have got this: In the Big Park, in recent years—is there more moisture on the Big Park, in recent years?

Mr. WOODHEAD. Where is that?

Mr. ARTHUR WOOLLEY. How long have you been supervisor?

Mr. WOODHEAD. I've been in region 3 and out West 4 years.

Mr. ARTHUR WOOLLEY. I was astonished that you didn't know what we call the Big Park.

Mr. WOODHEAD. Well, "V. T. Park" is the name I know for that area. I said that we have tried—

Mr. ARTHUR WOOLLEY. You contradicted this gentleman about his statement that he could cut hay or grass out there with a mower. Let me see if you couldn't actually do it this very day, in the south end of the Big Park.

Mr. WOODHEAD. No; I didn't contradict him, that he couldn't cut hay on the park on that entrance road. We could try to do it.

Mr. ARTHUR WOOLLEY. Now, speaking about, before you get to the Big Park, in that grass, down by the spring, on V. T. isn't that where the deer congregate for the tourist's enjoyment?

Mr. WOODHEAD. Yes, sir.

Mr. ARTHUR WOOLLEY. Pleasant Valley is the cattle area, farther north. Did you ever try to cut hay in the south end of that?

Mr. WOODHEAD. No.

Mr. ARTHUR WOOLLEY. You could, couldn't you, to this day?

Mr. WOODHEAD. You might along the edge of the swale there, where there is water.

Mr. ARTHUR WOOLLEY. There is no running water on the Kaibab; so that you mean in the low places in the park?

Mr. WOODHEAD. That's right.

Mr. ARTHUR WOOLLEY. That is to say, that the Kaibab is a mountain, lying down, and placed across the center of it, lying north to south, is a series of open places, almost level ground. There is no run-off at all. They are mountain meadows. Now, Pleasant Valley is the north one. About how many miles long? Would you say 3 miles?

Mr. WOODHEAD. I expect it is.

Mr. ARTHUR WOOLLEY. And a mile and a half wide?

Mr. WOODHEAD. Yes.

Mr. ARTHUR WOOLLEY. Then comes the V. T., or the Big Park, 12 miles long, and a mile and a half, or a mile wide. And then you go through a narrow strip of timber, probably 3 or 4 rods in length, and on up into what is called Little Park. That is in the park itself. That is probably 5 miles long and still a mile wide. Now, that is all right on top of the mountain, and is all mountain meadow, and is, this day, isn't it?

Mr. WOODHEAD. Well, speaking for the V. T. and Pleasant Valley, those are mountain meadows. Part of it is pretty dry meadow; and part of it is pretty wet, where those swales are.

Mr. ARTHUR WOOLLEY. It depends on the rain?

Mr. WOODHEAD. That's right.

Mr. ARTHUR WOOLLEY. Along to the west, there is another series of little parks, not quite so big, and right on top of that mountain. Those parks are not as verdant, and never have been as verdant, as the parks on top of the mountain, have they?

Mr. WOODHEAD. I expect not.

Mr. ARTHUR WOOLLEY. But then, long points run out from that park, to the west, where the mountain breaks off sheerly? And those points are all covered with heavy timber?

Mr. WOODHEAD. I don't know what area you are talking about.

Mr. ARTHUR WOOLLEY. Between the second park area and the points where the mountain breaks off, lifting squarely out——

Mr. WOODHEAD. You don't mean where the trail falls off?

Mr. ARTHUR WOOLLEY. No; that runs the length. Now, all those points are timbered graze, aren't they?

Mr. WOODHEAD. All of the whole forest has some grass on it, Mr. Woolley.

Mr. ARTHUR WOOLLEY. But there are meadow areas. What we are talking about is a series of parks, down the center. Down on the south end of all of that, where the national park is now reserved, the whole thing has grown up to a dense growth of verdure of all sorts, grasses, ferns, browse, cliff roses, and all those things that make a dense undergrowth on the sidehill.

Mr. WOODHEAD. Not that I know about.

Mr. ARTHUR WOOLLEY. Well, have you been down in the Grand Canyon since you have been here?

Mr. WOODHEAD. I haven't been inside the park boundary at all.

Mr. ARTHUR WOOLLEY. But, as you come to it, have you made it a point, in your allotments, to permit a denser growth or greater recovery, approaching the park, any place except along the highway?

Mr. WOODHEAD. No; that has been a deliberate policy.

Mr. ARTHUR WOOLLEY. You haven't any fence that keeps the cattle from coming into the south end of the V. T., have you?

Mr. WOODHEAD. No.

Mr. ARTHUR WOOLLEY. So they can't get——

Mr. WOODHEAD. We do not salt in V. T. Park.

Mr. ARTHUR WOOLLEY. But it is salted immediately over to the west side, in what is called——

Mr. WOODHEAD. Dry Park.

Mr. ARTHUR WOOLLEY. You salt it there, so that your mountain now is fairly uniformly recovered, is it not?

Mr. WOODHEAD. I think not.

Mr. ARTHUR WOOLLEY. Where do you think it is not recovered?

Mr. WOODHEAD. That main central unit, Mr. Woolley—

Mr. ARTHUR WOOLLEY. I said the V. T. Park is in the central unit.

Mr. WOODHEAD. I'll make it a little more specific. From Jacob's Lake Lodge, west of the highway, those little drainage areas that run to the west, all down through there, in my judgment, have not anywhere near enough to support the amount of forage that they might. Now, the fact that it has improved is something that we are proud of. I think we are getting—the steers off the north Kaibab will weigh more, perhaps, than on some other areas around through this country; and I believe we are producing more pounds of beef per breeding cow, perhaps, than some other areas. I wouldn't argue with any stockman, because I wouldn't know what the weights are, off the areas. But we're rather proud that it has improved. That is what we have been working for, for 25 years.

Mr. ARTHUR WOOLLEY. Your area—speaking of Jacob running out to the point—that same area, running up to the ridge, on the north, is rather a rocky area?

Mr. WOODHEAD. Well, those little gradings, to the west, are not rocky; and, undoubtedly, once those areas produced a large part of the forage on that western side because that timber is so heavy that it can't support a very heavy stand of grass.

Mr. ARTHUR WOOLLEY. That's right. In other words, you don't know how it compares with what it was in the days when there was heavy grazing?

Mr. WOODHEAD. No.

Mr. ARTHUR WOOLLEY. Historically, of course, you know a large part of the heavy grazing was on the South Breaks?

Mr. ADAMS. How long have you been connected with the Kaibab?

Mr. WOODHEAD. Four years, Mr. Adams, which isn't very long.

Mr. ADAMS. You've actually been in there 4 years. How much time have you spent there?

Mr. WOODHEAD. I don't suppose, altogether, as much as 3 weeks.

Mr. ADAMS. Well, then, you're practically as much of a judge as the Senator himself is. I apologize, because he isn't a judge of the Kaibab.

Now, this country on the park, I don't know how many miles along that park boundary, running east and west, is a series of points that run out into the Grand Canyon, some of them as much as 10 or 12 miles, and they could support a lot of stock. I think Mr. Tillotson will agree—on any of those canyons, Milk Creek, the Basin, Sublime, or Jane Townsend Hollow, Big Springs Swamp, Whipple, clear through, and back to Stymie—do you think there is a canyon in there, Mr. Tillotson, that the grass is not that high, and as thick as it will stand?

Mr. TILLOTSON. The last time I saw it, it was very good grass in there. That is, in the park.

Mr. ADAMS. Thank you.

The CHAIRMAN. Talking now about the park—

Mr. ADAMS. Mr. Tillotson, if you were blindfolded, and taken down near the park boundary, and then the blindfold was taken off—I mean, while you couldn't see—would you be able to tell which was park and which was forest by the grass?

Mr. TILLOTSON. To the extent that the grass, the growth, is better in the park than in the forest, I could; yes.

Mr. ADAMS. On the park boundary?

Mr. TILLOTSON. Well, maybe not exactly on the boundary. I wouldn't define the boundary by a single line.

Mr. ADAMS. Could you tell within 5 miles?

Mr. TILLOTSON. Well, that is a hypothetical question. I doubt it.

Mr. ADAMS. That's right.

The CHAIRMAN. I think we've about exhausted that.

Mr. ARTHUR WOOLLEY. How many cattle could a man see—say, get a car today and start out early in the morning—how many cattle could anybody show you on the Kaibab, by driving all day long, just driving over, and taking every road that you could, on the whole forest? Approximately how many cattle do you think you could see, Mr. Adams?

Mr. ADAMS. Well, if you went at noon you wouldn't see over 15 or 20 head.

Mr. ARTHUR WOOLLEY. But if you spent the whole day driving, what would it tally?

Mr. ADAMS. I would say 11. I didn't see over 10.

Mr. ARTHUR WOOLLEY. And a thousand head on the national park would be lost; and a tourist outfit, driving through, wouldn't see more than 10 head.

Did you want to ask a question?

Mr. CHARLES ANDERSON (Glendale, Utah). I just wondered if anybody is going to take up Mr. Adams' bet, on mowing hay?

The CHAIRMAN. Which end of the bet are you talking about?

Mr. ARTHUR WOOLLEY. Well, I'll take the middle. I'll go over into that area—I haven't been over there for about a year, but I'll go over there and mow hay. I'll go over to that park and mow hay, and up around Knife Lake and mow hay. That's all on the forest.

While I'm on my feet I'd like to ask the Forest: The year that committee came over here—it was called the Audubon Society—and the recommendations they made, let me ask if that isn't the policy you are following, rather than waiting for the feed to come back on the Kaibab?

Mr. KNEIPP. What committee?

Mr. ARTHUR WOOLLEY. We called it the Audubon Society, when 21 of you came out there.

Mr. KNEIPP. There was one committee of sportsmen that came out on the Kaibab, from June 8 to June 15 in 1931, and spent that time on the forest, studying the deer situation.

Mr. ARTHUR WOOLLEY. What was their recommendation?

Mr. KNEIPP. By the way, Mr. Chairman, we have here a summarized statement. I wonder if you wish a copy of it?

The CHAIRMAN. Is that a statement of a study made at that time?

Mr. KNEIPP. I merely mention that as one of a series of events leading up to the present. But the one to which I referred was a coordinating committee on national parks and forests, the purpose of which was to adjust boundaries between national parks and forests, an outgrowth of the National Conference on Outdoor Recreation. That committee was out here in 1925. It was at that time that the boundary was settled. The coordinating committee had nothing to do with

this later game committee, in 1931; but it was taken over a great part of the forest, even out to the middle ranges, to see the deer damages, and they spent 2 or 3 days going over the boundary question.

Mr. ARTHUR WOOLLEY. I would like the report they made, on what disposition they made of the livestock on the Kaibab in that report.

The CHAIRMAN. Does that report touch on that?

Mr. ARTHUR WOOLLEY. I have it, sir, the conclusion——

The CHAIRMAN. The report itself should be of interest.

Mr. KNEIPP. It discusses, briefly, each of the several units by which the forest is divided for range management purposes, summary of numbers of stock: cattle, horses, sheep, buffalo, deer; acres per animal; and merely outlines the situation with regard to the Kaibab. It quotes a part of that 1931 committee report.

The CHAIRMAN. This report was made when?

Mr. KNEIPP. This document I have here was recently prepared, as a summary of several different sources of data.

The CHAIRMAN. By whom was that prepared?

Mr. WOODHEAD. By the forest supervisor, and Mr. Johnson, in my office.

The CHAIRMAN. Have you the report of this committee?

Mr. WOODHEAD. This quotes a part of it.

Mr. ARTHUR WOOLLEY. I have a copy of the 1931 committee's report, with the conclusions in full.

The CHAIRMAN. I think the committee would like to have that. If there were other committees that came out here and made reports, I think it would be well for us to have those reports, if they are available, all of them. If they are available, we'd like to have them.

Mr. KNEIPP. I think the 1931 report was printed, Mr. Chairman, and probably a copy of it could be had.

Mr. JACKSON. By what authority, and who were this committee? Were they qualified to make the recommendations?

Mr. KNEIPP. This committee was composed of representatives from the following organizations: The Arizona Game and Fish Commission; the Arizona Game Protective Association; the University of Arizona; American National Livestock Association; the United States Biological Survey; the American Society of Mammalogists; the American Game Association; the American Forestry Association; the Campfire Club of America; the National Association of Audubon Societies; the Izaak Walton League; the National Park Association.

The Kaibab situation was at a high peak of agitation. The Forest Service appealed to all the various organizations which were interested to form a committee of qualified personnel, to make a disinterested study of the whole situation. This study, from June 8 to 15, 1931, by the representatives of these organizations, was a result of that.

The CHAIRMAN. Well, now let's see where that fits in, Mr. Kneipp. As a result of that report, following that study by the committee, the personnel of which you have named, has the forest followed their recommendations?

Mr. KNEIPP. Yes; because one of their findings was that there was an excessive number of deer, and the safety of the herd required a reduction to the capacity of the range. The Forest Service has been working toward that end. That was the crux of the whole problem

before the committee: Were the facts as represented; were the deer increasing to such a degree that they were destroying all the livelihood for themselves, and destroying the range? The committee found that was the case.

The CHAIRMAN. What was the recommendation as to the deer?

Mr. KNEIPP. The recommendation as to the deer was reduction in numbers, down to one that would be in balance with the food supply, and, I think, speaking from memory, that contemplated a reduction to 15,000 or so, at that time.

The CHAIRMAN. Was it following that that the action of the Government in going in and killing off the deer occurred?

Mr. KNEIPP. Yes.

The CHAIRMAN. That followed that report?

Mr. KNEIPP. Yes.

Mr. ARTHUR WOOLLEY. This conclusion is very brief; I can read it into the record.

Mr. JACKSON. What was the recommendation of the committee as regards livestock?

Mr. ARTHUR WOOLLEY. I will read the total conclusion, with the permission of the Senator:

There is need of additional manpower for the proper field administration of the Kaibab Forest. It appears impossible for a supervisor with only one ranger to maintain adequate administrative control over 700,000 acres of forest and range lands.

The committee recognizes the necessity for the present limited use of the range by local residents. There should, however, be no increases while the range is in a depleted condition. Stock in excess of permits must be eliminated and appropriate action taken to stop trespassing in unauthorized grazing, and to remove any uncertainty as to the number of cattle that do actually graze within the Kaibab National Forest. The Forest and Park Services should continue to remove unowned wild horses and unpermitted cattle from the range.

There exists a most urgent need for reducing the present number of deer in the Kaibab area to a point much below the present limited carrying capacity of the range and maintaining the deer herd at such a level until such time as the various species of shrubs and young trees upon which the deer depend for browse are reestablished. Thereafter, by careful game management, the deer may be permitted to increase to such numbers as the natural food supply may sustain. During this necessary period of reestablishment, we recommend that all forms of natural wild animal life, other than deer, in the Kaibab area be left undisturbed, except for necessary scientific purposes, or where serious damage to private property is being done, and that suspension of Federal and State predatory animal killing be continued, also the area should be closed to private trapping and hunting of flesh-eating animals until adequate annual reductions of deer are made.

The CHAIRMAN. In other words, they wanted the coyotes to do the work.

Mr. ROYAL B. WOOLLEY. I want the report on what they were going to do with the livestock.

Mr. ARTHUR WOOLLEY. Eliminate themselves as fast as they could.

Mr. ROYAL B. WOOLLEY. I can tell you what it was; I will tell you what it was.

The CHAIRMAN. I didn't hear any specific recommendations, except that they be not increased.

Mr. ROYAL B. WOOLLEY. Not increased; shall allow no increase in permits; those that are there may remain, but you are to take every advantage possible to eliminate them as fast as you can, and that has been the policy of the Forest Service ever since. That palaver about

no feed out there—there is nothing to that. That is the policy they are following. They have taken every advantage to eliminate it as fast as possible.

Mr. JAMES E. BABBITT (State senator, Flagstaff, Ariz.). Might I ask how many deer were on the forest at the time this report was prepared?

Mr. ROYAL B. WOOLLEY. I'm sure they made an estimate, Mr. Babbitt.

Mr. BABBITT. It seems to me it was around 50,000. I wonder how many cattle were on the forest at that time?

The CHAIRMAN. Have you that, Mr. Kneipp?

Mr. KNEIPP. The estimated number of deer, Senator, varied widely, some as high as a hundred thousand. The estimates used by the Forest Service for the period from 1922 to 1929 estimated the number as 30,000. Then there was some killing. In fact, that killing you mentioned the other day, where the meat was distributed, occurred prior to this report. In 1930 the number dropped to 23,000 in 1931, the year this committee made the study, the estimated number was 20,000. In other words, at the time the committee made this study, the deer had been reduced one-third in estimated numbers from the high peak.

Mr. BABBITT. Twenty thousand deer and how many cattle?

Mr. KNEIPP. That year the number of cattle under the permits was only 1,762.

Mr. BABBITT. And sheep?

Mr. KNEIPP. The number of sheep was 2,405.

Mr. BABBITT. How many do the Forest Service figure—that is, the Forest Service figures, I presume, that a deer will eat probably half as much as a cow. How do they figure?

Mr. KNEIPP. There is a great argument about that, because they eat in large part a different type of forage. In Utah, for purposes of classification, they are using the factor of three deer being equal to one cow, or five sheep equaling one cow.

Also, since that committee report, Mr. Chairman, there has been a gradual increase in the number of livestock. There was only 1,762 in 1931, when the report was made. In 1942 it was 3,242.

Mr. ARTHUR WOOLLEY. That increase was 800 head, on the north end of the mountain, but no increase at Jacobs Lake and south. The only increase was that 800 head, which Mr. Silcox recommended here in 1934. There was an increase, that many increase; people couldn't use them, only about a third of them; that is where the increase was, at the north end of Willow Canyon allotment; no increase south of there except to Ed Hatch. He got a little increase, but there was no increase on the central unit, not one cow.

The CHAIRMAN. Mr. Woodhead, you are not directly in charge of this forest?

Mr. WOODHEAD. No.

The CHAIRMAN. Who is?

Mr. WOODHEAD. Supervisor Walter Mann.

The CHAIRMAN. Is he here?

Mr. WOODHEAD. No; he was here a month or 6 weeks ago, but he had to go to the hospital for a serious operation, and could not be here.

The CHAIRMAN. Well, it's quite evident, Mr. Kneipp, that the matter

is one for serious consideration in this community from the sparks that appear to be here in this room, and it would be perhaps on the part of good judgment to give the matter pretty careful study.

Mr. KNEIPP. I quite agree with that, Senator. I can speak somewhat from personal knowledge. I have been here several times in past years, and I can't remember any time I ever saw the range when feed was abundant or going to waste. When the deer were occupying the Big Park, or V. T. Park, in numbers of two to four hundred, and they did keep the grass pretty well cut down there. I have walked across the park on foot in midsummer and found no grass high enough to make hay. In earlier years when I was here it was the habit of the deer to congregate in large numbers, and they kept those meadows pretty well trimmed. Here you have the judgment of the cowman on the one side, and the result of this inventory by the Forest Service on the other. We don't know which is correct. They contradict each other. This estimate of grazing capacity is based on the recognized practices of the Forest Service in other forests in determining the range capacity. Probably a detailed inspection by a committee would be the only way you could determine the facts.

The CHAIRMAN. Only one member of the committee being here, and our time being limited, I don't know how we can make a detailed inspection right at this time. But I can see it is a matter of serious moment here in this community, from the way people have addressed themselves to it. Before we leave here I hope to have a conference with all agencies, including the stockmen, and see if I can't come to some tentative arrangement whereby probably an amicable inspection can be worked out.

Mr. KNEIPP. That is all right. That is very good.

Mr. ADAMS. There is one thing I'd like to make—maybe I hadn't ought to say this, since the man isn't here to protect himself, but on one occasion when I was over here after a little raise in my permit, and I was also after him for a little horse permit in a section of country that no one on earth ever sees, even a ranger, just a cowboy, once in awhile, he said, "Well," he said, "it is against our policy to raise the grazing numbers on the forest, because it wouldn't look good for Mr. Tillotson to have all that grass over on the park, and us show a little grazing over here. Then, the tourists don't want to see the cattle along the road." That's a very poor excuse I think.

Mr. ARTHUR WOOLLEY. That is the crux of it; that has, in the past few years, been the crux of this controversy.

The CHAIRMAN. I shall try to get some kind of an investigation for the thing. I think both the Forest Service and those who use it want something done.

Mr. JACKSON. Just before we leave that question of tourists' wishing not to see cattle, I have been along that road a lot, and in almost every case—oh, between 90 and 95 percent of the tourists who come along the road—if they ever see a cow or bunch of cows they'll stop and take pictures. I've talked to them a lot. There have been tourists from every part of the United States, and in every case they say, "We can see deer and wild animals in zoos, but we never in our lives have seen cattle on the open range." They say it is an added attraction for them to see those fine cattle along the road. So I think that the park would have an added asset if they would encourage grazing, and allow the

cattle to graze along that road. The tourists would much rather see the cattle than a rank growth of grass. It is a thought that might be well to remember when you are going further with the investigation.

The CHAIRMAN. How about sheep; are there any sheep in that section?

Mr. JACKSON. Well, I had better not say about the sheep.

Mr. KNEIPP. There are 1,280 head of sheep on the forest.

Mr. JACKSON. Occasionally I've seen herders cross the road with their sheep, during the season when the tourists were coming pretty strong. Sometimes there would be a lot of tourists coming from each way and the sheep would be in the middle, and the tourists all jump out of their cars, and every one of them take pictures. I've seen the traffic jammed for half a mile each way down the road for the tourists attempting to take pictures, and the herders trying to get them across to water somewhere. So the sheep are also distinctly an added attraction for tourists.

The CHAIRMAN. We have been doing some considerable discussing of the matter of wildlife. At the hearing we held at Ely, Nev., just a few days ago, the topic of wildlife, and especially Senate bill 1152, was the uppermost subject for discussion. I don't know how many there may be here who are interested in S. 1152, or the subject matter thereof, but if during the hearings anyone wishes to discuss it and wishes to make a record, the committee will be very glad to have it. We will be very glad to have comments, or your constructive criticism. While we are on the subject I think it might be just as well for the chairman, who by reason of being the author of S. 1152, can say that there are many people in this country who have discussed S. 1152 and the preservation of wildlife and the matter of the disposition of wildlife who apparently have not given any study to the law governing the subject.

S. 1152 or any other statute of similar kind, if it were enacted, would not be as drastic nor as far reaching as the present law. The law of the land today is that the Federal Government has a right to go into its own land and, for the protection of its own land and for the protection of those who use the Federal lands kill off, if necessary, wildlife on those lands just the same as it has been decided that a private individual may, for the protection of his own lands, kill off trespassers, wildlife, and so on and so forth. That was brought to emphatic light in the Kaibab incident, when the Forest Service went in and killed off large numbers of deer due to the congestion that prevailed, that we were just discussing here. The matter was taken finally to the Supreme Court of the United States, and the Supreme Court of the United States laid down emphatically what has always been the law, but merely brought it out clearly by language, that the land belongs to the Federal Government, and that the Federal Government had a right to go in and kill off so as to protect the land.

Now that is the law of the land now. Not many people realize that, but it is true nevertheless. The fact that it is not exercised any more is largely due to the careful attitude on the part of those who control the Federal domain.

The object of S. 1152 was to bring to the attention of those who are interested in the subject the fact that the Government has the right to do this, and the further fact that an Executive order might issue

at any time giving the Federal Government the right to do it without hindrance. In other words, the Government has the right now, without even asking the State authorities for permission or cooperation, to go in where an area is overly infested with destructive animals and kill off.

My object in this is to try to get a cooperation between the Federal Government and the State authorities so that there may be a protection to the range, and at the same time a protection to the wildlife and a systematic propagation of the wildlife on the public domain, so that a harmonious attitude and relationship may exist, so that those who utilize the open public domain may have a full measure of the right of utilization, and so that those who would enjoy a sportsman's life can go out for recreation to shoot deer under the law may have the knowledge that the deer is being properly propagated, and so that the wildlife, itself existent upon the public domain, may have forage sufficient to sustain it in the proper condition and not starve itself out, as has been the case in many instances.

This S. 1152 was brought forward so that you might know what the law was in the first instance; and, secondly, so that you might constructively criticize it and, if possible, bring out eventually a statute that would work harmoniously between the Federal Government and the people of the respective States.

There are false theories about this that might be discussed. One false theory I have heard discussed is that the wildlife belongs to the State. That is not true at all. The wildlife is in the custody of the State. The wildlife belongs to the people, and the State is the custodian. The State has the right to legislate for protection, so that all the people may enjoy it. But the Federal Government controls and owns the land on which the wildlife exists and, as such, has the right to protect the land from destruction.

That has been decided by court after court.

Eventually I hope we may get harmonious action between the respective States on the one side, and the Federal Government on the other, because I am forever, and always will be, a believer in States' rights. I don't think the States should ever be relegated to where they have lost their rights, I am one that believes there should be a decided limitation of the overlapping of Federal authority into the States, and I think this can be accomplished as regards wildlife by a careful study of the subject rather than by nonconstructive criticism.

If it is desired to bring the subject up, we can bring it up at a later hour.

Mr. ROYAL B. WOOLLEY. Mr. Chairman, I would like to have John H. Page give us the history of that Little Mountain.

The CHAIRMAN. Mr. Page, you may make any statement you see fit.

STATEMENT OF JOHN H. PAGE, ATTORNEY AT LAW, PHOENIX, ARIZ.

Mr. PAGE. Mr. Woolley reminded me of the situation that Mr. Adams referred to a few minutes ago, about when the Grand Canyon Cattle Co. was forced to leave the Kaibab Forest, after many years of very large operations. Mr. Adams—under the circumstances, he

was very close to them. Their permit was around 10,000 head and when the park was created their permit was canceled. Their winter range was down in House Rock Valley, on the east side of the Kaibab. The Kaibab slopes to the east and to the large House Rock Valley.

This cattle company and its predecessors developed, starting in the eighties, most of the live water, and constructed extensive pipe lines. When the company lost its summer range by reason of the creation of the national part, it could not operate. So it has not ure for its winter range. But it held intact the remnants, as Mr. Adams said, and he purchased the remnants of the cattle.

I was employed by some of the land attorneys to conserve the assets, which were pipe lines and water springs and water developments. For several years we leased the waters to local people. A great many who are here today have leased these waters from the old company, which I represented.

When the Taylor Grazing Act was passed, which we all knew provided an orderly and proper grazing administration for House Rock Valley and other areas, we canceled the leases of those that we had leased the waters to, and got things in shape to build up our acreages and our commensurate property privileges, to be able to operate again under the Taylor Grazing Act. When those leases to our several different local operators here were canceled, there was the water leases—the Forest Service canceled their permits on the forest, that had been given by reason thereof. This Little Mountain has its slopes fenced off in a separate allotment from the east end of the Kaibab down to what is now the Grazing Service boundary.

Then, in planning for new operations under the Taylor Grazing Act, having our adjudication of priorities and commensurate properties, the question came up, what can we do about getting back onto the forest on that slope called Little Mountain? I talked with Mr. Mann two or three times about it. I said, "You have canceled the permits of the men that we had allowed to use our waters because we had to cancel our water privileges to get our house in order for the Taylor Grazing Administration." I said, "Now, what is going to be your policy on new permits for that area?" I said, "The company may liquidate, probably. It will probably sell its remnants of property, and those who purchase the waters succeed in all the rights and privileges that belong—of the long-time operators and owners and developers, shouldn't they be accorded the privilege of obtaining the forest permits adjoining the Grazing Service area, and contiguous to at least two watering places that are right on the boundary?"

Mr. Mann told me he thought that was what could be done; that he would, gradually, if others bought the watering places—they should be given the first consideration for that area for the permits, there being no permits, I think, but one still outstanding. They might have 82; but the rest have all been canceled for the reason I have explained. That was the situation when Mr. Woolley, who was one of the purchasers, with several of these other gentlemen here, when they started operations in the House Rock Valley as successors in interest to the Grand Canyon Cattle Co. and the owned waters, which are all a part of—which are all on private lands. Then

they developed what they could in the forest, to get back the permits that properly went with the waters which they had purchased and which were exactly on the boundaries. One is right on the corner—corners the boundaries—and the other is right on contiguous property.

The CHAIRMAN. Is that the park boundaries?

Mr. PAGE. No; that is all Little Mountain territory, what I call the part that is slipping down to the Kaibab plateau, where the Grazing Service starts its administration. That little slope in there is what Mr. Woolley wants to talk about in relation to the Forest Service Administration.

The CHAIRMAN. Now, the Forest Service canceled the permits when you canceled your leases on the water?

Mr. PAGE. That is correct.

The CHAIRMAN. Then, following that, there were no legitimate users?

Mr. PAGE. There might have been one or two by reason of some water somewhere else, Senator, but that took care of the miscellaneous permittees who had had their permits by reason of their release from my client.

The CHAIRMAN. Now, what became of the forest rights that had been in existence when they used your water? Did they just pass out of existence?

Mr. PAGE. That is my understanding. Mr. Woolley can go on from there.

The CHAIRMAN. Well, I wanted to catch it up so I would be able to follow Mr. Woolley's thought.

Mr. PAGE. One or two, by reason of some other waters, kept their permits. But most of those small cattlegrowers lost their permits; and my expectations, from the conferences with the Forest Supervisor, were that somebody started operations with the waters which my clients owned, and naturally, new purchasers would be allowed back on the forest—their contributory country, that had always gone with those watering places.

The CHAIRMAN. And Mr. Woolley bought the water?

Mr. PAGE. He was one of the purchasers of the group.

The CHAIRMAN. What else did he buy from you, excepting the water?

Mr. PAGE. This group of cattlemen, Senator, bought all the remnants of the property of the Grand Canyon Cattle Co., in House Rock Valley and bordering the forest.

The CHAIRMAN. That is all they would buy; no cattle and no permits?

Mr. PAGE. No cattle; and it has all gone under the Grazing.

The CHAIRMAN. I mean, no exchange of permits—no transfer of permits?

Mr. PAGE. A few little permits, but they weren't grazing permits, use permits; pipe lines up in the Vermilion Cliffs country, and everything; pipe lines, rights-of-way under the 1901 Right-of-Way Act, and all those appurtenances to the water.

The CHAIRMAN. All right. There is a gentleman there who wanted to be heard.

STATEMENT OF W. J. MACKELPRANG, JACOB'S LAKE, ARIZ.

MR. MACKELPRANG. I have been in House Rock Valley for 23 years, off and on. I would like to ask Mr. Page when the Forest Service canceled the Grand Canyon Cattle Co.'s permit?

MR. PAGE. That is what I can't answer.

MR. MACKELPRANG. After they canceled that permit, I was operating there. When the Grand Canyon Cattle Co. was there, four other parties of us went in there, Mr. Woolley among them, to develop some water. I developed some water, two watering holes. Mr. Cram developed some water. At that time there were no forest permits, and the Grand Canyon Cattle Co. didn't have any.

What we called Little Mountain, on the east side of the Kaibab, we worked with our four watering holes. There were 108 cattle to the permit, on the forest. The forest granted me that permit, on my watering; 108 head permit on the Little Mountain, for the water in House Rock Valley. Alec Cram got a permit for 108 head for the water; and Royal B. Woolley got a permit for 108 head on his water; and the Forest Service has claimed that is all the range will run. Each and every one of us has applied, and made application, to the Forest Service. Each time we put in the applications, all these years, for increase in our permits, the Forest Service has not granted it. Now, after the Grand Canyon Cattle Co. went out of existence, us 4 men went in, and have been willing, and ready, at all times, to take up all the permits, as far as possible, on the waters we have developed.

I feel like if there is any increases in that winter permit, on that Little Mountain, that we men that have applied for extra each year should have the first rights and privileges before any new applicants are allowed in there. I'll leave that to the Forest Service. I have been dealing with the Forest Service for about 23 years now, and they have been very good to me, and I would appreciate it. It is a hard thing to get these rights. I have worked hard. Mr. Woolley and I have worked along, side by side, with our watering holes, down in House Rock Valley, to get these permits. Then Mr. Woolley changed the permits from Little Mountain, and moved over to South Canyon, and piped the water down, and built tanks, and made a fine set-up there; even come off the top of Kaibab Mountain with the permit, went down the South Canyon, which is a very good set-up for 300 head of cattle year round. That is where the permits went. The Grand Canyon Cattle Co. have lost their permits by going out and staying out. We never made our permits on that forest, for the leased waters, from the Grand Canyon Cattle Co. Us four men made it on the waters we filed and owned and developed.

MR. PAGE. Mr. Mackelprang, that confirms what I was saying; those who have leased the Grand Canyon waters lost their permits. But there were a few other permits, based on other waters than the ones I was talking about. What you said doesn't differ in any way from what I said, at all.

MR. MACKELPRANG. No; the Forest Service has been giving us, according to their surveys, what they think all that the range can support. Now, I don't know as to that, but we are the four men that have made the rights, made the water, and made the trails into House Rock

Valley; that got the permits to the Little Mountain. We went on and got permits.

Mr. PAGE. What about the closer waters of the successors of the Grand Canyon Cattle Co., which had permits, by reason of the leases? Why aren't those waters entitled to be represented?

Mr. MACKELPRANG. They went out of existence; made these permits when this water wasn't recognized. Apparently that made our waters recognized. Mr. Woolley has his 108 head, and we're running side by side.

Mr. PAGE. What you said confirms what I said.

Mr. MACKELPRANG. I figure the man who has stayed there, all these years, and who went along with the forest, and built our permits, all need their permits. There are others in there, Mr. Cram and Curtis and John Schoppmann, and Bob Vaughan. They have got some permits.

Mr. PAGE. Well, he is in the class of permits on the Little Mountain, on different waters than I was talking about. Those that I represented had lost their permits. As far as I know, no new permits were given to the successor in ownership that purchased those waters.

The CHAIRMAN. All right.

Mr. ROYAL B. WOOLLEY. In 1934 Mr. Silcox, who was then head of the Forest Service, came out here, and he held a conference at Jacobs Lake, and after he had gone he wrote a letter back to my brother. We had quite a confab there, about the same question as Mr. Mackelprang brought up. He set out a policy as to what should be done on the Kaibab. He said there was room for an additional 800 on the north end of the mountain. They increased that. They figured there was a carrying capacity there of 800, and everybody that applied took the number and divided it, and it amounted to about 22 head each. That was granted. Then he comes down to Little Mountain, and I'll read what he says:

It is my desire to see these areas operated to the best possible advantage in connection with units lying outside of the forest. Under these circumstances, and in accordance with the best estimate of carrying-capacity figures that can be determined at the present time, 840 head of cattle belonging to existing users will be permitted on the north-end winter range for the season December 1 to April 30, or for a period of 5 months. This represents an increase of 300 head over those permitted in 1933 and 1934 which will be allowed under temporary permit. On the east-side winter range, the present estimated carrying capacity of 600 head of cattle for the season December 1 to March 31, or for a period of 4 months, will be permitted to present users under temporary permit. This represents an increase over permitted numbers of 315 head of cattle. In reaching this conclusion, it should be understood the exact carrying capacity of these ranges is not known. That can be arrived at only by a grazing test of a few years. Under these circumstances, local forest officers will be glad to make such changes in these estimates as actual trial and test indicate to be necessary. In order to secure flexible administration, the seasons above indicated will be varied to meet climatic or other conditions which may develop in the practical handling of the animals. That is to say, that the numbers of livestock and period of use may be varied by the local forest officers to meet the conditions, providing the total stock months and the estimated carrying capacity is not exceeded. That rule will hold until a more accurate determination of the carrying capacity shows changes to be necessary.

Now, he estimates there that there is room on the Little Mountain for 315 cattle, in addition to the permitted number at that time. Now, at that time I had, as stated, a permit for 108, which is included in this number. I transferred that to yearlong, in the South Canyon,

which took 108 away, which made 108 additional to the 315. Then, as Mr. Page has stated Bob Vaughn had a permit, predicated on his leasing of 25 head; Bill Wilmot had a permit for 25, and Ben Williams had a permit for 25 head. When the Grand Canyon Cattle Co. canceled the permits, the Forest Service automatically canceled those. That reduced that number, so it only left Mr. Mackelprang with 216 head and Mr. Cram with 108, when they purchased these properties from the Grand Canyon Cattle Co.

On the 1st of November 1939 we anticipated that the permits would be reinstated, predicated on the waters, and we have asked that that be done. Year after year we have asked it, but they have refused to do it.

Now, they may have a reason for not doing it, but I don't think I need to ask them the reason. I think I know it myself. Along in 1941, when this reorganization was hot, we was asked to express a preference as to whether we wanted to go to the Grazing Service, or Forest Service to be thrown into the Grazing Service. Well, I came down to Kanab, and thought we had better act as a community on the question; didn't want each individual going in several directions. So we met and formulated a telegram to the President. That is what I'm trying to find out here. I wish I had it, but I haven't got it. We expressed our wishes in the matter, and we said, "* * * if such and such is the case, we prefer this * * *," and one thing and another, criticizing the Forest Service, in excluding grazing from the Kaibab, and said if that policy was going to continue in force we would prefer to be transferred to the Grazing Service. The telegram was along that line.

Now, we had one party that has the same ownership in these waters, of the Grand Canyon Cattle Co., who opposed that telegram; and the rest of us, four others of us, signed. Now, a little while following the sending of the telegram, this party, that sided with the Forest Service, and against us, was allowed to be reinstated for his number, that had been canceled with the Grand Canyon Cattle Co.; and the rest of us have been reduced, up to this time; and I don't think it is any theory at all. I think it is a retaliation on the part of the Forest Service, for the part we took in sending that telegram to President Roosevelt. We would like to know why one man has been actively reinstated, on the same ownership. A fence runs down there; he goes on the forest. This party can cut into the fresh feed on one side of the fence, and our water is on the other; and he goes back into the country and is grazing all summer. It just don't look good to us.

Mr. Silcox, there was 315 additional besides that I have enumerated. There are those taken off. We have a thousand acres of patented ground on House Rock Valley; leasing 18 school sections; and these waters, 2 of them. The forest pipe line runs through 1 of them, and within 3,700 yards of the other. Now, we would like to know why we cannot be reinstated on the forest. The excess that they claim is on the Little Mountain.

The CHAIRMAN. Do you gentlemen wish to discuss that?

Mr. KNEIPP. Well, Mr. Chairman, I'm not familiar with the details. The supervisor who can explain is not here, but this is the way it strikes me:

We have this east side range unit. It is occupied by several permittees who have been there for a long while. You can't put any more stock in there without reducing those permittees.

Mr. ROYAL B. WOOLLEY. I take issue with you there.

Mr. KNEIPP. We don't want to disturb anybody that is there. These people are all there. Mr. Silcox said, in addition to previously permitted numbers there was room for 315 head subject to later range study and later determination. However, I am assuming that the actual use by stock would control this. The people having definite preferences, established by long use, occupied the range. Proposals are being made which would, I understand, reduce those preferences, in order to make range available to another group. The only claim that the other group has for that action is as the successor of a defunct cattle company, that went out of existence 20 years ago, and so hasn't used the range since, and which, as a matter of fact, at that time, relinquished its preferences to the United States. I just can't see it, Mr. Chairman.

The CHAIRMAN. Well, the way I caught the story—I may have it wrong—when the Grand Canyon Cattle Co. went out of existence, due to the emplacement of a park, they continued to lease their water rights to independent stockmen; and the Forest Service, if I caught this correctly, on the leases made to the independent stockmen, gave the independent stockmen permits on the forest.

Mr. KNEIPP. These men came as applicants, and one of the requirements was that they furnish water in proportion to their share of the range. They did that, by showing they had leased these waters.

Now, the Grand Canyon Cattle Co. was a big corporation, owned by Los Angeles people. In later years, through the establishment of the park, and the competition of increasing deer numbers, the number the company could run dropped to the point where operation was no longer profitable. They relinquished their forest preferences. While I can't recall the specific details, they relinquished quite a lot of water they were holding, under one type of unperfected claim or another, and they discontinued the use of the range. They did, however, own some waters. Those they kept, and they leased them to these permittees, but I can't see that there is any succession between these present applicants and the Grand Canyon Cattle Co. as of 1920.

The CHAIRMAN. Is there anything further that you want to offer?

Mr. MACKELPRANG. I was one of the leasers from the Grand Canyon Cattle Co. I think I leased more water from them than anybody, but the Forest Service never granted me no permits or anything on the forest on that water. The only permit I got, I got it out of my own water, the same as Mr. Woolley and Mr. Cram. We leased that water, but the Forest Service never recognized this water during all those years; never allowed Mr. Woolley any permits. Mr. Woolley leased a lot of it from the company, before he bought it. But they never allowed him no more permits on that. It did build the Grand Canyon Cattle Co.'s range on the public domain, but it reduced the water. The Interior come in and granted them some rights for leasing their water. The permits we got on the forest was from individual water. It wasn't from any leased water. For 23 years these men come in, come in and buy these holes. In the last 3 years, now, they have come in and maintained they should have some rights on that forest. There is enough for us that has got permits there and is asking for an increase in our permits; and, if the Forest Service has got any more grass there, we want to take it. We are the users and we have got stock, and

we need it, and want to increase our permits. We made an application every year for increase but they don't do it. With our permits we feel if there is any increase in the forest permits, we want the Forest Service to give it to us permittees and not to new applicants. There never was a cow permitted on that forest through the companies waters since they lost their permits.

The CHAIRMAN. When did the Grand Canyon Cattle Co. cease to run any stock on that territory?

Mr. MACKELPRANG. As I recall, I wouldn't be positive of the year, but as I remember, they sold it about 1926, the remnants; sold the body of them before that, but it sold the remnants—I wouldn't be sure of the date—it sold the remnants to Mr. Woolley and—

The CHAIRMAN. That is the remnants of cattle?

Mr. MACKELPRANG. Yes; a few wild ones that they didn't gather, say 40 or 30 head of cattle that were scattered on the range, at that time, on the Kaibab and around. They didn't sell no holding, no water, no rights.

The CHAIRMAN. All right. Now, how long between the time they relinquished their permits on the forest, due to the setting in of the park? Was it until they sold these water rights to Mr. Woolley and others?

Mr. MACKELPRANG. I would say it was somewhere between 2 and 3 years ago that they had no rights in there; no cattle, no stock whatever. I wouldn't be sure of the number of years, but it seems, to my recollection, that its about 1926 they sold out, and never run no cattle in there of their own at all; no cattle run in there, but leased the water to different applicants.

The CHAIRMAN. Why did these parties lease this water if they were not getting permits by reason of it?

Mr. MACKELPRANG. That was to use the Federal range. It wasn't for the forest, but for the Federal range; not from the forest. They got use on the Federal range for these water rights, but not from the forest.

The CHAIRMAN. Did you have water to run the Federal range, aside from that?

Mr. MACKELPRANG. Yes; ample water. Mr. Woolley had ample water. Mr. Cram and myself, we had enough water to run all of the cattle; water scattered around in different localities. Another thing we had in mind, release waters from this company.

Mr. WOOLLEY. How did Bob Vaughn get his permit?

Mr. MACKELPRANG. I don't know that.

Mr. ROYAL B. WOOLLEY. He got it, didn't he?

Mr. MACKELPRANG. I don't know why.

Mr. ROYAL B. WOOLLEY. Well, he had cattle on it. He couldn't put them on without a permit. How did he get it?

Mr. MACKELPRANG. I don't know. I know Schoppmann and Bob put in as partners, and bought out an adjacent homesteader who had 50 head. Schoppmann and Bob Vaughn bought him out and that allowed them 50 head of cattle.

Mr. ROYAL B. WOOLLEY. That was Mr. Parker. How much land does Mr. Parker own?

Mr. MACKELPRANG. He had 160 acres and didn't prove up on it. After he sold it they got 50 head. We're not trying, Mr. Senator, to take rights away from anybody. But there are rights there that should

be used, and we want them. We would like to know how Bob Vaughn got a permit when we can't, and he is in exactly the same ownership.

The CHAIRMAN. Is this Bob Vaughn, whom you mention, is he the one who protested the telegram?

Mr. ROYAL B. WOOLLEY. Yes, sir; he owns with us. He is one of the parties that bought out the Grand Canyon Cattle Co. He goes individually, and we go with one another, with exactly the same ownership.

The CHAIRMAN. Can anyone explain that?

Mr. G. J. GRAY (forest ranger, Jacobs Lake). Mr. Chairman, in the first place, I don't know just who all the stockholders in the company are.

The CHAIRMAN. Which company?

Mr. GRAY. The company that now owns the House Rock rights. But I do know that Mr. Woolley is one of the large owners. He has his own permit, his own set-up on the forest, which is equal to the upper limit of 300—in fact, exceeds it—305 head the limit set, above which we do not allow consolidations. He has the water piped to it.

The CHAIRMAN. On this forest?

Mr. GRAY. On this forest, in the same House Rock area on the south end of the valley a little bit further up on the slope on the mountain. He uses some of the flat lands that run down into the canyon and also up to the mountain where a certain part summer up on the slope.

Mr. John Schoppmann, who is another member of the company, has a permit on the Burro allotment, and Rubin Broadbent—they have the same permit on the same face of the mountain, but at the north end of the mountain opposite what they call Two Springs. They have their permits in there. Bob Vaughn, one of the other members of the company, has the permit in House Rock Valley. Now he has to explain where he got the permit. I don't know all of the particulars to it. He has 23 head just bought and transferred with this Parker place and he had a 25-head permit up at the north end. As he has explained it to me, and he was here a few minutes ago, he made a trade some way with the existing permittees; traded this permit from the north end down where it is at present. That's the way he explained it to me. It will probably show in the records.

Mr. WOODHEAD. May I interrupt a moment?

The CHAIRMAN. Yes.

Mr. WOODHEAD. The history of this case Mr. Woolley has been discussing, I never have had the occasion to look into it, but I should be glad, tonight, to go into the record as far as we have the records here and tomorrow morning to give you any additional information on that that we may be able to get.

Mr. ROYAL B. WOOLLEY. I am glad you brought that up, that transfer from Two-Mile on the Burro line on the House Rock. John Schoppmann also had that very same permit on the Burro. He requested that those be transferred from the Burro allotment down to the Little Mountain. But that never has been done. Bob Vaughn is reinstated for his 25 that he had on it; and purchased the interests of Church who had it for 15; was reinstated for 15. We are trying to find out just exactly what we have got. We have the same set-up but we can't get it. The Forest, up until lately, said there was room for 315. Well, I moved off 108 since that report was made, and 35 were canceled for Alex Findlay. Now it just don't make sense to us.

We just have our ideas of why it can't be done, and I don't think I am wrong. I won't admit I am wrong. I know it isn't a theory. I know it's a fact that is so self-evident, that immediately after this happened they still wanted to give one man something who had exactly the same ownership, as far as I am concerned, having a limited number. I should have an increase over as far as Little Mountain, and Rubin Broadbent should have an increase. Mackelprang should have an increase. Alex Findlay should have an increase. As far as I am concerned, on the Little Mountain, that will help. But these other boys should be reinstated with the same ownership, exactly the same as Bob Vaughn. They don't have to increase me any. They can just forget me as long as the others get theirs.

The CHAIRMAN. Is there anything more you have to say on this?

Mr. WOODHEAD. Nothing more. I can't say, Senator; I don't know the details——

The CHAIRMAN. Were you not here when the telegram was sent?

Mr. WOODHEAD. I was in Albuquerque.

The CHAIRMAN. Are there any records that reflect that telegram?

Mr. WOODHEAD. Not that I know of.

Mr. ROYAL B. WOOLLEY. There is a record because the Forest Service made a fuss about it. They said we were lobbying here in favor of it; got all excited and came down to see Alex Findlay about it. I said, "Let them go ahead. We can put a fire under their house any time we want to."

The CHAIRMAN. Who was the forester?

Mr. ROYAL B. WOOLLEY. Mr. Ritts was the local man. Mr. Mann was the supervisor.

The CHAIRMAN. May I ask the year that was?

Mr. ROYAL B. WOOLLEY. January 2, 1941, when we held the meeting.

Mr. POOLER. I remember the occurrence. There was some correspondence.

The CHAIRMAN. On what?

Mr. POOLER. On this meeting.

The CHAIRMAN. Correspondence of the Forest Service?

Mr. POOLER. Yes; I can't recall just what the first notice was. I think it was a copy of the letter, or a direct letter, from the State game warden and then we inquired as to what it was all about, and in the meantime——

The CHAIRMAN. What was the State game warden doing writing you about it?

Mr. POOLER. Well, this meeting resulted in telegrams, and I don't know exactly how this came up. The first thing I knew there was some correspondence and it informed us there was such a meeting. I believe it had something to do with the game conditions here, the buffalo conditions. That was probably why the game department was so interested.

Mr. ROYAL B. WOOLLEY. There was nothing said in the telegram about any game.

The CHAIRMAN. Was this exchange of correspondence on the subject of this telegram?

Mr. POOLER. I don't recall having an exchange of correspondence direct with the State game warden on our part. But I do recall that I was requested for some information from Senator Hayden, as to the circumstances as to whether there had been such a meeting and

what the situation was up here as to the use of the national forest for grazing of livestock, game, and such other activities as we engaged in.

The CHAIRMAN. In just what capacity are you connected with the forest?

Mr. POOLER. I am the regional forester.

The CHAIRMAN. How long have you been in that capacity?

Mr. POOLER. About 20 years, a little over that.

The CHAIRMAN. So along in 19—when did you say?

Mr. ROYAL B. WOOLLEY. January 2, 1941.

The CHAIRMAN. You were the regional forester in 1941.

Mr. POOLER. Yes; in Albuquerque. I can't recall the exact circumstances, but I do know of the occurrence. There was some correspondence and we asked for reports here. We had the petitions that were sent, that is, the names of the signers were sent for identification as to whether they had permits, and what size. That was supplied to Senator Hayden at his request.

The CHAIRMAN. Why were you interested in knowing what names were on the telegram?

Mr. POOLER. I wasn't particularly interested in knowing that. I was surprised with the information, as I recall it, from the Senator himself, who asked for a report as to what the situation was. That is my recollection of it.

Mr. ROYAL B. WOOLLEY. There were 43 signatures on the telegram. I have it somewhere. I tried to find it but it was misplaced. I will furnish it for the records.

Mr. POOLER. I will have to refresh myself on it. I haven't got any correspondence here.

The CHAIRMAN. Well, you brought the subject up, of course, and now I am interested to know what the correspondence was, because that correspondence may reflect something that will clarify the situation very much. There is a direct charge here of reprisal that the committee cannot countenance. I don't know that the charge is substantiated. But it is a charge, and anything that would give us a light on it would certainly be acceptable.

Mr. KNEIPP. Reprisal or favoritism, sir. I assume a certain number considered whether to favor the Forest Service, or the Grazing Service, and the majority favored the latter. Mr. Vaughn favored the former.

Mr. ROYAL B. WOOLLEY. A rose is just as sweet by any other name.

Mr. KNEIPP. Mr. Vaughn, it is alleged, therefore, gets a privilege that others don't get. May I stress the point that Mr. Woolley and the others know the circumstances under which he got those permits, whether attributable to favoritism or not.

Now, a lot of our records have been transferred from the Kanab office to the Albuquerque office and, unfortunately, the supervisor is ill and unable to attend this meeting. Apparently Mr. Gray, the ranger, who has been here something less than 2 years, lacks the background of the earlier conditions. I, personally, have not visited this country for a dozen or 15 years and, therefore, I can't discuss on the basis of current knowledge what the conditions are at the present time. However, I think the implication by Mr. Woolley merits being dragged out in the open. In fact, I would be glad to have the committee go into it very fully. If the data can't be made available to you here,

they can be made available at Albuquerque, because the regional office has all of the old files. If not, they can be transmitted from the Ogden office, which previously had jurisdiction. At the appropriate time I will welcome an opportunity to go into the case in detail.

Mr. ROYAL B. WOOLLEY. Well, it was a very recent date; just a little over a year ago that this happened.

The CHAIRMAN. That Vaughn got his permit?

Mr. WOOLLEY. Yes; 1942.

Mr. ROYAL B. WOOLLEY. Yes; 1942.

The CHAIRMAN. Is that all on this subject?

Mr. ROYAL B. WOOLLEY. Yes.

The CHAIRMAN. Now, I want to say to you that it isn't the purpose of the chairman of the committee to go into this thing. The Forest Service deserves that it should be cleared up; the party who makes the charge deserves that it should be cleared up; and the committee certainly wants it to be. I am not going to take a snap judgment on anybody. We are going to try to take our time and work the thing out and work it all out thoroughly. If there is anything more that you have on the matter, any files—

Mr. ARTHUR WOOLLEY. I merely have a telegram that is not complimentary to the Forest Service, and I think that's what it's all about. I will produce it and give it to Mr. Haskell.

The CHAIRMAN. All right. Is there anything else on that particular subject?

Mr. GRAY. Mr. Senator, I would like to mention one thing that I believe entered into this case in a way. Some of the other men that were here at the time, the stockmen, may know of this. As I understand it, there were two telegrams, one sent by Mr. Woolley and signed by a long list of names favoring the transfer to the Grazing Service. At the same time there was another telegram sent in, favoring the retention by the Forest Service, and I believe, as I have heard it, and I know, practically two-thirds of the names on both telegrams were identical. In other words, the same people signed.

Mr. ROYAL B. WOOLLEY. Yes, Mr. Chairman; but the telegrams were very different.

Mr. GRAY. What I'm getting at is, as far as the names on the telegrams, there was a duplication.

Mr. ROYAL B. WOOLLEY. Yes; but the telegrams were very different. Besides—

Mr. MACKELPRANG. Mr. Senator.

The CHAIRMAN. Yes, sir.

Mr. MACKELPRANG. What would it have forty-some-odd names on a petition that were not interested in it—names of clerks, drug-store clerks, and telephone operators, as against the permittees that were in the meeting. There wasn't a permittee on the forest that sanctioned that. That is why Bob Vaughn didn't sanction it. He was a permittee. We have been working, Bob Vaughn and I, for 20 years to get that permit out there and don't want to take a chance of losing it. We want to keep it. There wasn't anybody using the forest that signed that petition. There were forty-some-odd names on there that didn't even own forest permits.

The CHAIRMAN. Didn't Mr. Woolley sign the telegram?

Mr. ROYAL B. WOOLLEY. And there wasn't one on there but what was a stockman. Out of the 43, about 42 would like to get on the forest but had been denied the rights. That is the reason they signed it. But somebody was out there on that 800,000,000 acres, and had it all to run on, and didn't want to be disturbed.

The two telegrams were as follows:

KANAB, UTAH, *January 4, 1941.*

FRANKLIN D. ROOSEVELT,
Washington, D. C.

DEAR MR. PRESIDENT: We, the undersigned citizens and livestock growers of Kanab, Utah, and Fredonia, Ariz., wish to express to you our views and wishes in the matter of the reorganization and consolidation of grazing units in one department. This is essentially a grazing area and we, the citizens thereof, depend upon the range lands for our livelihood.

This area has been subjected to withdrawals for dam sites, mill sites, power sites, buffalo reserves, Indian reservations, recreational areas, national park, national monuments, game preserves, and what not, until we feel thoroughly drawn. We have felt the hard heel of bureaucracy in the administration by the Forest Service of the Kaibab National Forest, and feel that that department has gone for recreation far in excess of its value and to the detriment of the livestock interests.

We are unalterably opposed to any further extension of the Grand Canyon National Park and maintain that the same objectives could be obtained in a much smaller area than now embraced and respectfully recommend that the area be reduced to the boundary of the original withdrawal.

We wish to take this opportunity to commend the advisory board and administrative officials of grazing district No. 1, Arizona, for the efficient, impartial administration of the Taylor Grazing Act in said district.

Due to the uncompromising fixed policy of the Forest Service in its administration of the Kaibab National Forest, this community can see no relief for grazing from that source. Therefore, Mr. President, if we can have your assurance that the few grazing privileges now in force on the Kaibab Forest be not disturbed we further wholeheartedly recommend that the Forest Service be transferred to the Interior Department and all grazing be administered by the Grazing Service.

Respectfully submitted by the undersigned.

Ray Bunting, Royal B. Woolley, Frank L. Farnsworth, Dell Averett, Fay Hamblin, W. E. Hamblin, Merl G. Shumway, P. E. Church, W. C. Little, J. E. Bunting, Alvin Judd, W. R. Little, George W. Fisher, J. E. Swapp, J. Arthur Brown, L. Elmer Jackson, Gerald Swapp, D. K. Judd, I. H. Chamberlain, Thomas Jensen, Cecil B. Cram, Preston Shumway, Thos. E. Robinson, Chas. A. Mace, Chas. G. Cram, Hoyt Chamberlain, John V. Schoppman, Melvin Shoppman, Rubin Broadbent, Glen Hamblin, Edwin L. Swapp, Wilfred Greenhalgh, Wm. S. Swapp, G. Elmer Judd, J. D. Waring, A. F. Jensen, E. B. Pratt & Son, Elwin Pratt, Charles C. Heaton, F. B. Hamblin, Hubert Bunting, Gilbert Heaton, Alex Findlay, Chairman.

KANAB, UTAH, *January 11, 1941.*

FRANKLIN D. ROOSEVELT,
Washington, D. C.

DEAR MR. PRESIDENT: We the undersigned citizens and livestock growers of Kanab, Utah, and Fredonia, Ariz., wish to express to you our views and wishes in the matter of the reorganization and consolidation of grazing units in one department. This is essentially a grazing area and we the citizens thereof depend upon the range lands for our livelihood.

This area has been subjected to withdrawals for dam sites, mill sites, power sites, buffalo reserves, Indian reservations, recreational areas, national parks, national monuments, game preserves, and what not until we feel thoroughly drawn.

We are unalterably opposed to any further extension of the Grand Canyon National Park and maintain that the same objectives could be obtained in a

much smaller area than now embraced and respectfully recommend that the area be reduced to the boundary of the original withdrawal.

We feel that the Forest Service in the past has been very efficient. We recommend that the Forest Service remain as it is. If the present permittees could hold their present rights and the grazing could be transferred to the Division of Grazing we would recommend this transfer of the grazing part, but are opposed to any transfer being made of the Forest Service.

Respectfully submitted by the undersigned.

Cecil C. Pugh, Harold I. Boreman, L. Elmer Jackson, Leo Chamberlain, Wester Lewis, Dave Brown, Lloyd Pugh, W. E. Ford, Guy Chamberlain, Alex Findlay, Dell Averett, R. Nelson Factor, A. Fred Fleming, M. S. Haycock, Knowlton Little, C. D. Judd, Claud M. Glazier, Frank L. Farnsworth, Grant Robinson, Frank Little, Osborn Brown, A. I. McDonald, Orvil Averett, C. H. Ackermore, James A. Young, Daniel S. Frost, F. S. Broadbent, Virgil Riggs, Dan K. Judd, Elwin Pratt, Wilford Brooksly, E. P. Pratt and son, Robt. P. Owen, A. F. Jensen, A. E. Lewis, Sr., C. D. Pugh, Leslie Pugh, Philo Allen, W. J. Smirl, Ray B. Young, E. Hamblin, F. J. Rider, G. W. Eatveigh, Alma Heaton, Ormand Cram, Alex Cram, George A. Swapp, J. J. Ford, D. W. Bowman, Thos. E. Robinson, Cecil S. Cram.

Mr. MACKELFRANG. Mr. Woolley, I don't want no permits in this locality that I am not entitled to. The Forest Service isn't giving Mr. Woolley this South Canyon; but know he is not looking out for himself, but he is looking out for his neighbors. He doesn't need it. He got the limit. I understand 300 head is the limit; and he got that fenced to himself, and water put down in there, cement troughs, and several miles of pipe line, and a trench put around it for the use. The other fellows are running there in common.

Mr. ROYAL B. WOOLLEY. Go into the South Canyon now, and buy it up, and see what Mr. Silcox will say.

The CHAIRMAN. Now, we have gone all over that.

Mr. A. T. SPENCE (Jacobs Lake, Ariz.). Mr. Senator, I would like to say a word in regard to reopening that Kaibab Forest. I will try to take but a moment of your time.

The CHAIRMAN. I don't like to break this record—have you anything more, Mr. Woolley?

Mr. ARTHUR WOOLLEY. I would just like to read a further portion of this letter, from Mr. Silcox to my brother. It reads as follows:

As indicated during this discussion, the area of forest land known as the North End and the East Side winter range, are now being developed primarily in the interests of livestock producers and will be devoted to the grazing of livestock. In accordance with the general plan for adequate protection of the summer ranges, the area now between the fences on the area known as the South Canyon range will be used to relieve overstocked or overgrazed areas on other parts of the forest.

Mr. ROYAL B. WOOLLEY. Now, at the time, Mr. Senator, I had a permit on the central unit, as we have been discussing, and they wanted to relieve that. As I told you before, they were anxious to eliminate all grazing off the central unit, so we fenced this area at South Canyon, and made application to transfer from the central unit to South Canyon, in accordance with Mr. Silcox's letter, to relieve that condition up there. That is how I am in the South Canyon.

Mr. A. T. SPENCE. What I would like to say is in regard to tax matters. We have a very small taxable area, here in Coconino County, on this strip, and we are operating under a lot of handicaps, due to the fact that it is a long ways from the market, and it is difficult to get

things in here to operate with; and difficult to get our cattle out to market them.

I operate across the Canyon, here in Coconino County. Out here our tax rate is \$2.77 or \$2.80; and over here it is \$5.92, which is more than double in Coconino County. In this area, on the Kaibab Forest, if it could be opened up, more men could come in here to earn a livelihood and make a living on that forest, and a lot of them, who have small permits now, and are barely making a subsistence, could do better. I would also open up a means of taxable wealth, for this industry, for Coconino County, that would relieve us fellows who are paying the load at the present time. If that happened, it would bring the tax rate down to approximately 3 cents on the dollar.

This rate is quite a weight to be carried on, by the few of us who are paying the tax, at the present time. As it is, a lot of feed goes to waste up there, thousands and thousands of dollars are spent every year for fire guards, and in finding men to fight forest fires, which could be eliminated if there were cattle allowed to run on it. We have just a small taxable wealth here, in this end of Coconino County, and it would help us out a lot. It seems to be the general trend of the American public now to make a better livelihood for men who are trying to make a living. It looks like these boys, who are willing to get out and fight the elements and market conditions, with a few head of cattle—their living conditions could be made better by opening up the forest and giving them big enough projects to make a living off of.

The CHAIRMAN. All right, thank you.

I don't regard this Woolley matter as closed. It is just one of the matters that has to go over for the time being. But, gentlemen of the Forest Service, if you have any record on this matter, or can refer the committee to anything—and the same with you, Mr. Woolley—if you can clarify the situation, we would appreciate it. I want to say frankly to you that I like to carry the spirit into these hearings that I have learned in the process of the law, and that is that no man is guilty until he is proved guilty beyond a reasonable doubt. So the accusation against the Forest Service has got to be established, there is no question about that, as well as it can be established, if it is established.

Mr. ROYAL B. WOOLLEY. Well, can't you convict by circumstantial evidence?

The CHAIRMAN. I'll give it some weight; but you have got to connect it up, some place.

Mr. WOOLLEY. All right, I'll connect it up.

The CHAIRMAN. Mr. Broadbent, do you care to be heard?

Mr. RUBIN BROADBENT. Jacobs Lake, Ariz. Yes, Mr. Senator.

The CHAIRMAN. Where do you live?

Mr. BROADBENT. House Rock Valley.

The CHAIRMAN. State what you care to say.

STATEMENT OF RUBIN BROADBENT, JACOBS LAKE, ARIZ.

Mr. BROADBENT. Well, I would like a permit, down on that Little Mountain. I am an old owner in this company. They don't give me no permit at all, not even a temporary one.

The CHAIRMAN. How many cattle have you?

Mr. BROADBENT. Only got a permit for a hundred.

The CHAIRMAN. A permit on the forest?

Mr. BROADBENT. No; I have got a small permit, up in the burro rough country, where they don't have no water.

The CHAIRMAN. And you want to run down on the forest?

Mr. BROADBENT. Down on the Little Mountain, yes; where the water is—where the water is on the forest.

The CHAIRMAN. You are one of the purchasers of the waters that belonged, formerly, to the Grand Canyon Cattle Co.?

Mr. BROADBENT. Yes.

The CHAIRMAN. Do you use that water now?

Mr. BROADBENT. Yes; we use it on the outside.

The CHAIRMAN. What did you buy that water for?

Mr. BROADBENT. Bought it to use that mountain.

The CHAIRMAN. You didn't have permits to use the Mountain, did you?

Mr. BROADBENT. No; but we should have permits; we owned the water.

The CHAIRMAN. Had you been given any promise, or assurance, or representation made to you, that, upon purchase of the water, you would be given a permit?

Mr. BROADBENT. There was some the company had. They always fed at this mountain, with this water.

The CHAIRMAN. Did anybody ever say to you that if you bought the water, that formerly belonged to the company, you would get a permit?

Mr. BROADBENT. Not to me; no.

The CHAIRMAN. You bought the water blind, without assurance of permit at all?

Mr. BROADBENT. Outside, it wasn't, the forest wasn't fenced there; and we fed the forest; and the forest, before it was fenced, joined right on our water line.

The CHAIRMAN. You did that without a permit?

Mr. BROADBENT. We had a private permit.

The CHAIRMAN. And now you haven't that?

Mr. BROADBENT. No. We have one up on this rough country.

The CHAIRMAN. Were you one of the signers of either, or both, of these telegrams?

Mr. BROADBENT. No.

The CHAIRMAN. You didn't sign the telegrams?

Mr. BROADBENT. No.

The CHAIRMAN. Did you know there were telegrams going out?

Mr. BROADBENT. No.

The CHAIRMAN. Were you in the stock business at that time?

Mr. BROADBENT. I have been in the stock business for 15 years.

The CHAIRMAN. Well, then, the matter of your name being on the telegram, protesting, or demanding a change, could not apply to you, could it?

Mr. BROADBENT. It must be, if it was there.

The CHAIRMAN. Well, it wasn't there, as I understand you to say. You didn't sign the telegram. Did you sign any telegrams, requesting that the administration be changed to the Grazing Service, from the Forest Service?

Mr. BROADBENT. Oh, I could have done it. It has been quite a while ago.

The CHAIRMAN. Can anyone correct us on that? Have you got that telegram?

Mr. ARTHUR WOOLLEY. Mr. Broadbent's name is on the one. It is one of the 43 names.

Mr. BROADBENT. Well, I must have been there.

The CHAIRMAN. Must have been there; is there anything else, Mr. Broadbent?

Mr. BROADBENT. No; that's about all.

The CHAIRMAN. You are running about a hundred head of cattle?

Mr. BROADBENT. Yes.

The CHAIRMAN. How many do you want to get, on this Little Mountain?

Mr. BROADBENT. Oh, 50 or 60. I have that many now. But last winter I was afraid to use the permit.

The CHAIRMAN. Is that a winter range?

Mr. BROADBENT. Yes.

The CHAIRMAN. That Little Mountain range is a winter range?

Mr. BROADBENT. Yes.

The CHAIRMAN. Did you lose cattle last winter?

Mr. BROADBENT. Yes.

The CHAIRMAN. How many?

Mr. BROADBENT. Oh, 8 or 10.

The CHAIRMAN. By reason of starvation?

Mr. BROADBENT. Yes.

The CHAIRMAN. When was the last time you made an application for a permit on the forest?

Mr. BROADBENT. Made an application for increase every year.

The CHAIRMAN. Well, you do have some on the forest now?

Mr. BROADBENT. Yes; on up to the Burro allotment, and on north.

The CHAIRMAN. How far away?

Mr. BROADBENT. Oh, it's 8 or 9 miles.

The CHAIRMAN. And they are not permitted to graze on this Little Mountain?

Mr. BROADBENT. No; it is a Little Mountain, but it's rough country, on up there.

The CHAIRMAN. All right; is there anything else?

Mr. BROADBENT. No; that's all.

The CHAIRMAN. Very well.

Now, we have come down to the topic of the House Rock Valley and the buffalo matter. It is now 7 o'clock, and I think we had better go over now until tomorrow.

The committee will be in recess until tomorrow morning at 9:30. (Recess until 9:30 a. m., Tuesday, August 31, 1943.)

ADMINISTRATION AND USE OF PUBLIC LANDS

TUESDAY, AUGUST 31, 1943

UNITED STATES SENATE SUBCOMMITTEE OF THE
COMMITTEE ON PUBLIC LANDS AND SURVEYS,
Fredonia, Ariz.

Present: Senator Pat McCarran, chairman.

Also present: Mr. E. S. Haskell, special investigator.

The CHAIRMAN. The committee will be in order. I want to break into the regular agenda today, because Mr. Drury, of the Park Service, is required to leave us today to return to Wyoming, and I wanted to take up the matter of charges made against moving-picture companies making films in the parks and recreational areas.

Mr. Parry, who is familiar with the subject, was to be here at 9:30. I think we may have to proceed without him.

Mr. Drury, what is the policy of your department with reference to making charges for the taking of moving pictures on the parks and recreational areas?

STATEMENT OF NEWTON B. DRURY, DIRECTOR, NATIONAL PARK SERVICE, CHICAGO, ILL.

Mr. DRURY. The policy of the department is to issue, not only for motion pictures but other types of use, what we call a special-use permit, and to establish a schedule of fees, which the Secretary, of course, approves, based upon the number in the case of the companies, and the length of time that they use the parks or monuments, or other areas.

The CHAIRMAN. How do those fees range?

Mr. DRURY. We have here the latest schedule of fees that was approved by the Secretary on April 20, 1940. It has since been modified with respect to the other features. I think that is correct, isn't it, Mr. Tillotson?

Mr. TILLOTSON. This is the latest, as far as the amount of fees is concerned; that's right. It was modified just this month.

Mr. DRURY. Yes.

Mr. TILLOTSON. Modified as to the terms; not the amount.

Mr. DRURY. This memorandum order No. 1472 of April 20, 1940, approved by the Secretary of the Interior, establishes the charges for the taking of feature, motion, or sound pictures involving sets, professional casts, and technical crews on various types of areas administered under the Department of the Interior, deals with the Land Office, the Office of Indian Affairs, and the National Park Service, and National Park Service areas.

The fee consists of \$50 per day for casts of less than five persons, when domestic animals, sets, or equipment are used or not used; \$250 per day for casts of 5 to 25 persons; \$500 per day for casts of over 25 persons, where the area is administered by the National Park Service.

The charge is paid in the form of a donation to what is known as the National Park Trust Fund. That applies to commercial motion pictures.

The CHAIRMAN. Let's see what that is now, the money is paid to the National Park Trust Fund, as I understand it. What is the object of that fund?

Mr. DRURY. It is devoted to purposes for the benefit of the national park system.

The CHAIRMAN. For instance, what?

Mr. DRURY. It can be used for a great variety of purposes; purchase of lands, or making of improvements.

The CHAIRMAN. It doesn't pass into the Treasury of the United States?

Mr. DRURY. It goes into the United States Treasury into a trust fund account known as the National Park Trust Fund and is used entirely for national-park purposes.

The CHAIRMAN. Where do you get the authority and law for it?

Mr. DRURY. The act of July 10, 1935.

The CHAIRMAN. What is the substance of that act?

Mr. TILLOTSON. It merely provides for the establishment of the National Park Trust Fund. It was established by Congress.

The CHAIRMAN. Did that provide—I am not familiar with the act—did the act provide that charges might be made for the use of the parks and recreational areas?

Mr. DRURY. No; that act simply establishes the National Park Trust Fund, into which revenues of this type or similar revenues, might be put.

The CHAIRMAN. No specific reference is made to the filming of motion pictures, is there?

Mr. TILLOTSON. No.

The CHAIRMAN. In other words, it is the regulation of the Secretary of the Interior that the money is placed in that particular fund.

Mr. DRURY. I want to make clear that photographers making travelogs and professional photographs, photographing scenes in the park areas for the purpose of stimulating park travel, are not charged a fee for filming. It is only where commercial pictures are filmed, involving a cast of actors, in many cases involving construction of sets.

The CHAIRMAN. Is any requirement made in the way of a bond?

Mr. DRURY. There is, in the case of commercial companies. The purpose of that is to assure the performance of the conditions in the special-use permit or agreement.

The CHAIRMAN. How much is that bond?

Mr. DRURY. It varies, in accordance with the possibility of damage to the park areas. Perhaps Mr. Tillotson can tell us of some of the cases where a bond has been made.

The CHAIRMAN. What bond is exacted, as a rule, for a commercial company?

Mr. TILLOTSON. As Mr. Drury says, it depends upon the danger of damage to a national-park area.

Usually it is from five to ten thousand dollars, if merely the use of the land is involved. But if use of historic structures, irreplaceable

historic structures, or something of that nature is involved, then the bond may be higher.

The CHAIRMAN. What is the greatest bond you have ever known to be exacted?

Mr. TILLOTSON. Well, I can't say. I should say around—well, I don't know, Senator, without the figures before me.

Mr. DRURY. I have a list of the fees, but I don't seem to have here a list of the bonds.

The CHAIRMAN. I think both are of interest.

Mr. DRURY. I imagine the fees in the national park trust fund would be around \$20,000.

The CHAIRMAN. Somewhere there must be someone who would know the greatest bond you have ever known to be exacted.

Mr. TILLOTSON. We have the fees, but we don't have the bonds.

The CHAIRMAN. Who fixes this bond?

Mr. DRURY. That is fixed by the Secretary, on the recommendation of the National Park Service.

The CHAIRMAN. Someone in the National Park Service must have had experience in recommending bonds.

Mr. DRURY. Mr. Bryant and Mr. Tillotson have been in on that sort of thing. We have had very few of these things in the last few years.

The CHAIRMAN. Now, this recent movie that was taken here in this vicinity; was that on a park area?

Mr. DRURY. It was not. It was a proposal for using the Pipe Spring National Monument, but they found another location.

The CHAIRMAN. Was there any discussion there as to fees?

Mr. DRURY. Yes; there was.

The CHAIRMAN. And the amount of the fees was a deciding issue, wasn't it?

Mr. DRURY. I don't know that that was the case. I think they studied all possible sites, and finally found one that suited them. That is something that Mr. Tillotson handled.

The CHAIRMAN. Was there a controversy between the Park Service and this movie company that just took the pictures here?

Mr. TILLOTSON. The only thing that might be called a controversy at all was whether they should pay the required fee, which was set at \$500.

The CHAIRMAN. Which was what?

Mr. TILLOTSON. It was set at \$500 per day, in accordance with the order which Mr. Drury just read; whether that should be paid for the time they were actually filming the scene, or for the entire time they occupied the area—constructed sets—until the final clean-up.

The CHAIRMAN. What was your provision there?

Mr. TILLOTSON. I simply told them that I had no information to lead me to believe that the fee was applicable only for the time they were filming; but that I would clarify the point with the director's office, and that I did, and received—

Mr. DRURY. Give the essence of what occurred.

Mr. TILLOTSON. I received from the Director's office a letter, on that particular thing, in which he said:

It is our interpretation of the Secretary's order No. 1472, that the prescribed fees are to be charged for each day the area is utilized in the production of the picture. This would include the time spent in the area in constructing sets, in filming, and in cleaning up after filming has been completed.

We are not informed of the source of the company's information that no charge is made for construction and clean-up periods, and if the company is not disposed to accept the Service's interpretation of the order, they are, of course, at liberty to appeal the matter to the Secretary.

Then, subsequently, that was taken up with the Secretary and a formal ruling was had applying to all cases. The ruling was to the effect that it would not be for the full time the area was occupied, as I said, and as the Director confirmed; but that instead it would be merely for the time spent in actual filming. That was approved by the Secretary.

Mr. DRURY. In other words we had to get a clarification from the Secretary, but our position was that it was reasonable to claim this fee for the actual filming, and not for the period of preparation or the period of clean-up. That is now our position.

The CHAIRMAN. In other words, a company coming in with 25 or more people in the cast—and I take it that that was what that "25" means, 25 in the cast—

Mr. DRURY. Yes.

The CHAIRMAN. The company would pay a \$500-a-day fee for the time spent actually in filming.

Mr. DRURY. That is right.

The CHAIRMAN. What, if anything, would they pay for the time spent in putting in the sets or tearing down the sets?

Mr. TILLOTSON. Nothing; under the ruling approved by the Secretary on August 6.

The CHAIRMAN. As to a bond, what would you exact as a bond, in a case like this?

Mr. TILLOTSON. In this particular case I set the bond at \$25,000.

The CHAIRMAN. That is in the case of the film company that has just concluded here?

Mr. TILLOTSON. That's right.

The CHAIRMAN. \$25,000. Where were they proposing to set up and film the picture?

Mr. TILLOTSON. Pipe Springs National Monument, some 14 miles east of here.

The CHAIRMAN. What is the nature of that monument?

Mr. TILLOTSON. It is an historic old Mormon pioneer settlement, a Fort Windsor, that was built in pioneer days, the early days of this country, and is very representative of the early history of northern Arizona and southern Utah.

The CHAIRMAN. It is not a place where there is a natural object; it is an artificial object?

Mr. TILLOTSON. It is an historic fort.

The CHAIRMAN. Is there anything more to it than what is portrayed in this Pipe Spring National Monument, Ariz., folder?

Mr. TILLOTSON. That gives a very comprehensive outline of the area. But there is more to it, sentimentally, for these people who live in this part of the State; yes.

Mr. DRURY. There was, of course, vegetation surrounding the buildings, which it is our duty to protect, and other features of the landscape.

The CHAIRMAN. Now, in that instance, that is, the instance of the company that just concluded the filming here, they did not set up

at this Pipe Springs site, but they filmed on the open public domain. Is that correct?

Mr. TILLOTSON. That's correct.

The CHAIRMAN. Were they on Grazing Service ground?

Mr. LEECH. Yes, sir.

The CHAIRMAN. Were there charges made?

Mr. LEECH. Yes, sir.

The CHAIRMAN. What were the charges?

Mr. LEECH. A fee of \$100 for each motion or sound picture, where the cast is more than 25 persons.

The CHAIRMAN. Is that for the entire filming?

Mr. LEECH. Yes, sir.

The CHAIRMAN. No matter how many days it may take?

Mr. LEECH. The permit states that it will be taken between certain dates, weather permitting.

The CHAIRMAN. And if anything happened that it was not taken between those dates, would there be a different fee?

Mr. LEECH. Well, I only know of one case, Senator, where it was not taken within the time, due to weather, and they were given an extension. That is the only case I know of.

The CHAIRMAN. Where was this film taken?

Mr. LEECH. It was taken in Utah Grazing District No. 4—

Mr. ALLEN. It was in three districts, Utah 4 and 5, and Arizona No. 1.

The CHAIRMAN. Have you ever known of a film company, desiring to set up within a park or recreational area, that abandoned their plans on account of the fee?

Mr. TILLOTSON. Well, in this particular case they abandoned the project, but they didn't indicate that it was on account of the fee. I imagine that it was. A letter from the company, dated June 30, says:

The company has decided that the scenery of that location—

That is Pipe Springs—

is not the type we need, and the fort is not large enough for the work we have to do around it, and we are therefore going to build our own fort on property not connected with the National Park.

That is the explanation they gave in writing. It is from the Fox Film Corporation.

The CHAIRMAN. Is there anything further you care to say on this?

This is now a hard and fast policy, established by the Department of the Interior, with reference to the taking of motion pictures on parks and recreational areas?

Mr. DRURY. I might say, Senator, the establishment of this fee has been the result of a considerable amount of study and observation, of what obligations the Park Service had to assume in the protection of property, and administering it during the time it is used for this particular type of commercial purpose. It is not considered to be an excessive fee.

I know of no actual cases where an important commercial film was deterred from being produced in a park area because of the sole question of the amount of the fee. There is no question that we have very definite obligations to protect both natural and historical features, in the areas we administer; and there is always a hazard,

when large-scale productions are undertaken. So we have to plan very carefully; have to supervise; and it involves an expense over and above ordinary administrative costs. The theory is just as in the case of our concessionaires in the parks. There is a method whereby compensation is given for the use of these properties of the United States. It is felt that it is reasonable to have this type of fee, in the case of these motion pictures.

The CHAIRMAN. I can see your reason for exacting a bond, and probably that is well taken; a bond for the safety of the surroundings while they are taking the picture; for the protection of your natural objects; and for the cleaning up of the park. But this is another policy, your charging \$500 a day. That is another thing. I don't think that addresses itself to the cleaning up, nor to the protection. It seems to me you are amply protected by your bond. At least, you should be.

Mr. DRURY. No; I think it addresses itself to the general question of commercial use of Federal property. In proportion to the total investment of these pictures, I imagine it is a small fraction of 1 percent.

The CHAIRMAN. How many instances have you on record of the pictures taken on the parks?

Mr. TILLOTSON. Seventeen. I have a list of those, with the fees charged, if it will be of value to the committee.

The CHAIRMAN. I think that might go in the record.

Mr. TILLOTSON. This is from 1936 to date.

Mr. DRURY. It shows, in many cases fees that run as low as \$200; and, in one case, in 1936, a fee for \$5,000 from Metro-Goldwyn-Mayer; an average of about \$1,000 per picture, during those years.

The CHAIRMAN. We will have it inserted into the record at this point.

List of National Park Service areas which have been used in filming scenes for motion pictures

	Fiscal year	Amount of fee
Sequoia National Park: Metro-Goldwyn-Mayer Distributing Corporation	1936	\$5,000.00
Mount Rainier National Park:		
Twentieth Century-Fox Film Corporation	1938	1,000.00
Loew's, Inc.	1943	50.00
Zion National Park:		
Metro-Goldwyn-Mayer Distributing Corporation	1938	3,000.00
Twentieth Century-Fox Film Corporation	1940	150.00
Yellowstone National Park: Universal Picture Co., Inc.	1937	3,000.00
Grand Canyon National Park: Alexander Korda Productions, Inc.	1940	250.00
Crater Lake National Park: Walter Wanger Productions, Inc.	1942	900.00
Great Smoky Mountains National Park: RKO Pictures, Inc.	1943	200.00
Yosemite National Park: Universal Pictures Co., Inc.	1943	200.00
Petrified Forest National Monument: Twentieth Century-Fox Film Corporation	1940	25.00
Death Valley National Monument:		
Loew's, Inc.	1940	1,000.00
Warner Bros., Inc.	1942	1,050.00
Joshua Tree National Monument: Paramount Pictures, Inc.	1940	304.00
Statute of Liberty National Monument:		
Metro-Goldwyn-Mayer Distributing Corporation	1942	50.00
Frank Lloyd Productions, Inc.	1942	150.00
Cedar Breaks National Monument: Twentieth Century-Fox Film Corporation	1943	50.00
Total received from movie companies to date		16,379.00
Plus amount of fees received and not connected with use of public lands		232.50
Total fees received as reported for the National Park Trust Fund Board for the fiscal year ended June 30, 1943.		16,611.50

The **CHAIRMAN**. Very well, Mr. Parry, you are here; would you care to be heard on this.

Mr. GRONWAY R. PARRY. Yes, thank you.

The **CHAIRMAN**. Mr. Parry, where do you live?

Mr. PARRY. Cedar City, Utah.

The **CHAIRMAN**. What is your business?

Mr. PARRY. Transportation of defense workers, and moving pictures.

The **CHAIRMAN**. You may make any statement you see fit with reference to charges made by the Park Service, on recreational and park areas, for the taking of moving pictures. Before you came in, may I say, if you didn't hear it, Mr. Drury and his assistant testified that a charge of \$500 per day had been established for the time utilized in actually shooting a picture, not for the time of set-up, nor the time of tearing down, or the time of putting up. That policy has been recently established, comparatively recently established by the Secretary of the Interior.

Now, you may discuss the subject, generally, in any way you see fit.

STATEMENT OF GRONWAY R. PARRY, CEDAR CITY, UTAH

I won't go too much into detail, but, in order to paint a picture of what has taken place, how this ruling has affected our industry, I will go back 21 years, back to 1922. That is in 1922, Tom Mix made the first moving picture ever made in Southern Utah. He came in to Zion on what is called the Shoerump. That is right adjacent to Zion National Park. They started there, on one location, and moved up to Zion Park, and shot several days, in and about where the cafeteria is now located; and finished that picture. Through that one, several more came up, until 1926 or '27, when several pictures that used Zion National Park, largely, as their shooting area; just, ordinarily, sometimes, going in to get three or four shots, as background, or processed, shots. All that brought a lot of revenue into that section. They used a lot of people, and it helped out materially; not only because, when the picture taken there was put on the screen, the people of the country could see it; but because it helped the people of the section, financially.

After this ruling came out, it automatically cut the thing out. I think we have only had one picture in there, in Zion, since then; and that was only for a couple or three days. The moving-picture people have objected to the fee. They figure it is prohibitive; and they can't afford to pay it; and that it was put on there for the purpose of eliminating moving picture companies in the parks.

The **CHAIRMAN**. I want to say right there, that this subject came to this Committee through a resolution introduced by Senator Ashhurst of Arizona, when this committee first came into existence. His resolution, and my resolution, were pending at the same time, before the Senate; and we had a conference on it, and combined the two resolutions.

Senator Ashhurst said, "You take that moving picture phase and join it to your resolution, and go forward with it," and then it was rather a hot subject, if I may use that common expression of the street. In other words, the moving picture concerns were prevailing on Senator Ashhurst, and, later, on the chairman of this committee, to take the matter up. They were bitterly complaining of the charges that

were being made. I had one visit with a moving picture concern, in Los Angeles, on a trip that I made down there, on my own private business. I just happened to meet up with some of them, and they were exceedingly anxious that we should hold hearings on that subject as promptly as possible, but we have never been able to get around to the hearings, and this is the first time that this subject has been touched upon.

I just wanted to interrupt you, and give you that background.

Mr. PARRY. We made a lot of Western pictures in and about Zion—some of the best pictures made—made the first outdoor picture—Old Arizona it was titled—and used some of the scenes in it. Since 1929—let me say that Zion is not a place where you can take an entire picture. It is the place where you can get a processed shot. It is valuable as that. But the way the thing has been, and the way the moving-picture people have understood it, they would have to pay—if they went in to get one little shot, they would have to pay \$500.

The film *My Friend Flicka* was made up on Cedar Mountain, located about 20 miles from Cedar Breaks. They were shooting all around, and they wanted to take one shot of Cedar Breaks. It would have been a beautiful shot, I think, when finally processed. They were somewhat anxious to get into Cedar Breaks and take this one shot, to tie into it. They don't particularly object to paying a reasonable fee. But they figure \$500 is too much. For instance, this picture, just recently photographed near here, if that had been taken in a national park it would have cost them \$15,000. They have been at it 30 days, and it would have cost them \$15,000 for the privilege of going into the parks.

The moving-picture people are not tight, as the expression goes; but they don't want to be gypped. They feel like that is a terrible gyp. They have said to me, repeatedly, that they feel like they are being gypped when they pay \$500 a day. They say that, since that ban has come on—you might say it is a ban, because it is prohibitive—well, we have lost a lot of business.

In Bryce—we haven't had a picture in there since Hal Roach made one, in 1924. Bryce is a place where you can make wonderful pictures. It is closed enough, and yet broad enough, so it lends itself to the making of several kinds of pictures. But I don't think we have had one picture since this thing came up.

Now, the Park Service—we have found the men have been cooperative, as far as they can go. The superintendents just say, "Our hands are tied, and that is the policy." We have no objection to the Park Service men, themselves, but it is the policy that they cannot get around; and it is just affecting our country, we figure, in untold ways. A large picture filmed up here will leave as high as \$400,000 in this community. It is interesting to know that they paid the Indians \$25,000 in salaries, for wranglers, and so on. Now that money is passed around to everybody, and that means an industry.

We have been working it up, Whit and Chaunce and myself. We started in 1922, and we have had 47 pictures worked on since. It has left a good many millions of dollars in this area, and it will continue to. But there are some things in Zion and Bryce that they would like to get photographed. There are a lot of companies that would like to come, but they feel that the price is too prohibitive. I am repeating what they have said to me.

Mr. DRURY. May I ask, Mr. Parry, is it your understanding, we have ever exacted a charge of \$500 for the taking of background shots, where no casts are involved?

Mr. PARRY. That's right; they can come in and take that processed shot, I think, free of charge.

Mr. DRURY. I understood you to say it would cost that.

Mr. PARRY. No; if you bring your cast in. In this particular case, with Flicka, they would have had to bring the cast in, of everybody working around this area.

Mr. DRURY. The charges are made only for the taking of feature sound motion pictures involving sets and professional casts.

Mr. PARRY. If they bring a crew in, or have to bring a crew to make a background, I imagine you would have to pay some kind of a fee.

Mr. DRURY. Of course, a cast of less than five persons is \$50.

Mr. PARRY. Well, you might as well give up on that. You never have a cast of less than five people. We had 147 people in here, from Hollywood, changing so rapidly that you never get a cast of less than five people, unless it is a travelogue, or something like that. I think travelogues are allowed in there free of charge. But that cast of five automatically rules it out. In the early days you did get them that small, but things have changed entirely.

Mr. DRURY. Our records show that from 1938 to the present, most every year at least one charge amounted to—in one case, \$50; another \$150; another, in 1940, \$25; in 1942, \$50. We haven't as much detail as we might have, as to what these charges were for, but I presume they were for small casts, or small technical crews.

Mr. PARRY. It might be a processed shot, or something like that. I am repeating what we get at the studios. We go down there to talk to them and they throw their hands up when we say \$500. We are interested in it only from the fact that it is our business, and we have worked at it for a long time and spent a lot of money. We have averaged \$5,000 every year and, naturally, we are interested in getting the pictures in here.

I feel that it is one way of seeing the national parks. A good many people in the United States never see the national parks, we know. I have been connected with the Park Service for 25 years, indirectly. There are a lot of people in the United States that never see the parks in any way.

Mr. DRURY. Well, they provide no charge for scenic films.

Mr. PARRY. A lot of them would like to take background shots in Zion. A lot of moving-picture companies would like to come into Zion and take shots of things like the Great White Throne or The Sentinels, or something like that. When you throw a shot like that on the screen you get a real reaction from people all over the country. There is the same thing at Bryce. This is going to be permanent, Senator, because I have had the privilege of operating up in the Jackson Hole country when they made Wyoming with Wallace Beery.

I am pretty familiar with that situation up there. When they first went in there and they saw Teton and the lakes—nothing could be more beautiful than that country up there. However, when it came to screening it, there was a haze that doesn't show up until it is filmed, and they didn't like it. This country in southern Utah and Arizona has something here that they liked. The atmosphere

photographs entirely different. Things are clear-cut, and the colors are especially good out here. That is why they keep coming back. I figure it isn't a passing fancy, by any means. This is the starting of an industry, and I want to see that nothing is left undone to keep them from coming in.

We have had three of them here in the last 2 months; and will have three or four more, possibly, between now and the first of the year. They come here for more than one reason. There are Indians, and cowboys, and scenery; and they get transportation accommodations, and housing accommodations, and all that. However, it is the scenery that they come for. That is the main objective, because the technicolor is coming in so rapidly, and is coming to the front. After this war is over, 98 percent of the pictures made in technicolor are going to come out here where color predominates.

The CHAIRMAN. Mr. DRURY, speaking from your knowledge of the subject, was the fee made for the purpose of making it prohibitive?

Mr. DRURY. I shouldn't think so; no, Senator. As I said before, it is in accordance with the departmental policy where commercial enterprises are involved.

The CHAIRMAN. I thought maybe you knew what gave rise to the policy; as to whether or not the policy was rather to keep these people out of the parks, because of their scenic and natural condition.

Mr. DRURY. No; I haven't any personal knowledge as to what the Secretary's purpose was, but in my own opinion, I would say that some reasonable fee should be charged, if only for the purpose of confining the films to the real first-rate outfits. I think we all recognize the advantage in having the beauties of the national parks shown to the people of America on a large scale through these films. There is no argument about that.

Mr. PARRY. I might be able to give you a little light on how that came up.

They were making a picture in here with Jack Holt, in Zion—I think along about 1926. Some company had been over in Sequoia, and they let the trees burn. I don't blame the Park Service for getting sore. The spoiled it for the rest of the companies, though, and immediately the Secretary of the Interior said, "We're going to make it so that they can't come in and spoil the scenery, and so on."

The CHAIRMAN. But the bond covers that.

Mr. PARRY. At that time that is what brought this thing to a head. Some company in Sequoia had spoiled the area. So they immediately put the idea into operation, they were going to put it so high—they didn't particularly cherish the motion-picture companies. So much for that.

Take a comparison of fees. The Grazing Service and the Forest Service have bent over backward. The Grazing Service have gone out of their way. The companies come out there and all the Service wants to do is have the stuff left as it was. Men are on the job, the same as the Park Service. I never could understand why three different agencies would be so at variance as to fees. One gets \$100 for all summer. Another operation costs you \$500 for 1 day, or part of a day, maybe only 5 minutes.

The Forest Service is the same way as the Grazing Service. If you are photographing in a sheep allotment, you go and make an arrangement with the man that has that allotment, and pay him \$25 or \$50 a day for the fees, and settle it all with him. The Forest Service sees that the thing is put back as it was.

Now, I can't see the reasonableness of three different fees at such a variation. The Park Service, before this edict was put on—I will say this—was very cooperative. The rangers in Zion were always there. The fellows would go out of their way to see that they got what they wanted. But since this has come in, their hands are more or less tied, and they can't do anything about it.

MR. DRURY. Mr. Chairman, of course you can't make comparisons of different types of lands, except that it is a fact that the National Park Service is set up by law for the protection of scenery, vegetation, historic, and scenic objects, and we have a definite responsibility in that regard. There are perishable values that might well be destroyed. In the case Mr. Parry mentions, in the trees at Sequoia, I know, from my own experience over some 20 years with the California State Parks that they had very definite cases of irreparable destruction of vegetation.

I have one case in mind at Point Lobos, on the Carmel Coast, where the State paid a large sum for a property which was used, and still is being used, for the filming of motion pictures. The qualities of that area have definitely been deteriorated by this use.

My explanation would be that the fee, as it is, without being excessive, puts the companies on notice as to the extreme importance of properties that are being used in the filming of these pictures.

MR. PARRY. But, Mr. Drury, your bond would take care of that. If a man comes in and destroys something, the bond is still there. There are only a few instances where they can do pictures at Zion and Bryce. In our immediate vicinity the kind of pictures they do don't burn trees or vegetation. And if they ever move a shrub the ranger is there to see that they don't move it; or they have to ask permission to do it. They don't do it promiscuously. I can't see the fairness of the three governmental agencies having such a variety of charges. If the \$500 is to protect them, that is one thing. If it is just put on there for protection, that's another thing.

MR. DRURY. Well, I know the Secretary of the Interior gave a great deal of thought; in fact, these provisions have been revised from time to time. Recently they were revised, and made more reasonable in this cleaning up period.

MR. PARRY. To my knowledge, four companies wanted to use Pipe Springs for one shot in the last 4 or 5 years. When they hear what the fee is they have given up the idea. But I should think it could be worked out. If they come in and make a shot for half a day, or 5 minutes—if they have to pay \$500 for it, they are not going to do it.

MR. DRURY. I am very glad to have this comment on our policy of procedure, and we will give it our consideration.

MR. PARRY. I have worked very closely with the Park Service since Zion started, and I know what the policy has been, and there is a responsibility there, no doubt. However, I feel that it can be changed somewhat, in some way, to benefit the whole country.

The CHAIRMAN. We are inserting the order 1472 into the record.

UNITED STATES DEPARTMENT OF THE INTERIOR,
Washington, April 20, 1940.

Order No. 1472.

Order No. 1445 of February 7, 1940, is hereby amended to read as follows:

Before any motion or sound picture may be filmed, except by amateurs and bona fide news-reel photographers, on any area under the jurisdiction of the Department of the Interior (except on areas administered by the Office of Indian Affairs, where the taking of sound and motion pictures shall be governed by the special provisions set forth below), authority must first be obtained, in writing, from the official in charge of the particular area involved. Application for such authority should be submitted substantially in accordance with the attached form.

Charges shall be made only for the taking of feature motion or sound pictures involving sets, professional casts, and technical crews.

The amount of the fee to be paid or of the donation to be made shall be determined in each case by the proper official in accordance with the following formulas:

I. ON AREAS ADMINISTERED BY THE GENERAL LAND OFFICE, THE BUREAU OF BIOLOGICAL SURVEY, THE BUREAU OF RECLAMATION, AND THE GRAZING SERVICE

A fee of \$100 for each motion or sound picture, where the cast comprises more than 25 persons, without regard to the equipment used or the time or extent to which the area is to be utilized.

II. ON AREAS ADMINISTERED BY THE OFFICE OF INDIAN AFFAIRS

In all cases throughout the Indian country any maker of pictures, including Government employees, on tribal lands must consult the superintendent beforehand. Limitations which they may impose must scrupulously be regarded.

The photographing, for whatever purpose, professional or amateur, commercial or otherwise, of (1) ceremonial performances, dances, etc., and (2) places or persons within any of the pueblos of New Mexico and Arizona, is subject to the consent of the governing officers of such pueblo.

In the case of the pueblos of New Mexico, where consent in writing by the governing officers of a pueblo has been obtained and has been registered with the superintendent in charge of the jurisdiction, a permit from any other source is not requisite.

Any charges made by the Indians and any schedules of wages or salaries to be paid to any Indians who may be employed by the permittee must be approved by the superintendent or other official in charge of the area or areas involved.

III. ON AREAS ADMINISTERED BY THE NATIONAL PARK SERVICE

Fifty dollars per day for a cast of less than 5 persons, and when domestic animals, equipment, or sets are or are not used.

Two hundred and fifty dollars per day for a cast of 5 to 25 persons, and when domestic animals, equipment, or sets are or are not used.

Five hundred dollars per day for a cast of over 25 persons, and when domestic animals, equipment, or sets are or are not used.

Where an area administered by the National Park Service is involved, the charge shall be paid in the form of a donation to the National Park Trust Fund.

GENERAL

Permission to take a motion or sound picture will be granted by the proper field official in his discretion and on condition that the permittee shall furnish a bond or make a deposit in cash or by certified check, in an amount to be set by that official, to insure against damage to the area involved and to assure a clean-up after filming has been completed; on condition that the permittee shall refrain, in accordance with the act of the Congress approved on March 3, 1917 (39 Stat. 1106), from offering any gratuity of whatsoever nature to any employee of the Government in connection with the exercise of the privilege granted; and on condition that the permittee shall give credit to the Department of the Interior in an appropriate courtesy title if any of the scenes

photographed are used in travelogs or motion pictures taken for educational purposes.

Motion or sound pictures of wildlife on any area administered by a bureau or division of the Department of the Interior shall be permitted only when such wildlife is shown in its natural state.

When a feature motion or sound picture is to be filmed, the official in charge of the area concerned shall report to Washington immediately, through channels, specifying the number of days the filming required, and giving in general terms and conditions.

Upon completion of the filming by the permittee, it shall be the duty of the official in charge of the area to submit a full report to Washington, through channels, specifying the number of days the filming required, and giving in general the scope of the picture and the manner in which it was taken.

A copy of the approved application, accompanied by a copy of the required bond or by a statement that a deposit has been made, shall accompany the report.

(Signed) HAROLD L. ICKES.

Secretary of the Interior.

APPLICATION FOR PERMISSION TO TAKE A MOTION OR A MOTION AND SOUND PICTURE
UNDER DEPARTMENT ORDER NO. _____ DATED _____, _____

Date _____

To the _____,
(Title) (Area)

According to the authorization of the Secretary of the Interior contained in the above-mentioned order it is proposed, with your approval, to film a motion or a motion and sound picture in the above-named area under the conditions stated in order No. __, the scope of filming and manner and extent thereof to be as follows (an additional sheet should be used, if necessary):

1. We will commence filming on or about _____, and estimate it will take approximately _____ days, weather conditions permitting.

2. If any of the scenes filmed are used in travelogs or for use in motion pictures for educational purposes, credit will be given to the Department of the Interior in an appropriate courtesy title.

3. The filming will be strictly in accordance with the applicable regulations of the Department of the Interior, and we will abide with any special instructions given to us by the official in charge of the above-named area. In addition, we will exercise the utmost care to see that no natural features are injured and that the area is left in a condition satisfactory to the official in charge of it.

4. We will refrain, in accordance with the provisions of the act of the Congress approved on March 3, 1917 (39 Stat. 1106), from offering any gratuity of whatsoever nature to any employee of the Government in connection with the exercise of the privilege herein authorized and will furnish to the official in charge of the above-named area, upon request, any additional information relating to the taking of the motion or motion and sound picture covered by this application.

UNITED STATES DEPARTMENT OF THE INTERIOR.

Washington, February 7, 1940.

Order No. 1445.

Before any motion or sound pictures may be filmed, except by amateurs and bona fide news-reel photographers, on any area administered by the National Park Service, the Bureau of Biological Survey, the Bureau of Reclamation, the Grazing Service, or any other bureau or division of the Department of the Interior (except on areas administered by the Office of Indian Affairs, where the taking of sound or motion pictures shall be governed by the special provisions set forth below), authority must first be obtained, in writing, from the official in charge of the

particular area involved. Application for such authority shall be submitted substantially in accordance with the attached form.

Permission to take a motion or sound picture will be granted by the proper field official in his discretion and on condition that the permittee shall furnish a bond or make a deposit in cash or by certified check, in an amount to be set by that official, to insure against damage to the area involved and to assure a clean-up after filming has been complete; on condition that the permittee shall refrain, in accordance with the act of the Congress approved on March 3, 1917 (39 Stat. 1106), from offering any gratuity of whatsoever nature to any employee of the Government in connection with the exercise of the privilege granted; and on condition that the permittee shall give credit to the Department of the Interior in an appropriate courtesy title if any of the scenes photographed are used in travelogs or motion pictures taken for educational purposes.

Motion or sound pictures of wildlife on any area administered by a bureau or division of the Department of the Interior shall be permitted only when such wildlife is shown in its natural state.

Charges shall be made only for the taking of feature motion or sound pictures involving sets, professional casts, and technical crews. Where an area administered by the National Park Service is involved, the charge shall be paid in the form of a donation to the National Park Trust Fund. The amount of the fee to be paid or of the donation to be made, shall be determined in each case by the proper official in accordance with the following formula:

\$50 per day for a cast of less than 5 persons, when domestic animals, equipment, or sets are or are not used.

\$250 per day for a cast of 5 to 25 persons, when domestic animals, equipment, or sets are or are not used.

\$500 per day for a cast of over 25 persons, when domestic animals, equipment, or sets are or are not used.

The photographing, for whatever purpose, professional or amateur, commercial or otherwise, of (1) ceremonial performances, dances, etc., and (2) places or persons within any of the pueblos of New Mexico and Arizona, is subject to the consent of the governing officers of such pueblo.

In the case of the pueblos of New Mexico, where consent in writing by the governing officers of a pueblo has been obtained and has been registered with the superintendent in charge of the jurisdiction, a permit from the Secretary of the Interior is not requisite.

In all cases throughout the Indian country any maker of pictures, including Government employees, on tribal lands must consult beforehand the tribal officers or the superintendent. Limitations which they may impose must scrupulously be regarded, and any charges asked by the Indians must be paid. In the discretion of the superintendent, a bond or deposit as described in the second paragraph of this order will be required. Indians are not landscapes or objects, but human beings with their privacies and dignities as such; and Indian places, though bearing no outward sign, may be as sacred in the Indian mind as any religious sanctuary in the white world.

When a commercial travelog or feature motion or sound picture is to be filmed, the officer in charge of the area concerned shall report immediately, through channels, to Washington that a permit authorizing it to be taken has been issued and its terms and conditions. Upon completion of the filming by the permittee, it shall be the duty of the official in charge of the area to submit a full report, through channels, to Washington, specifying the number of days the filming required and giving, in general, the scope of the picture and the manner in which it was taken.

A copy of the approved application, accompanied by a copy of the required bond, or by a statement that a deposit has been made, shall accompany the report.

Order No. 1418 dated September 5, 1939, as supplemented by order No. 1432, dated November 25, 1939, is hereby revoked and superseded.

HAROLD L. ICKES,
Secretary of the Interior.

Mr. DRURY. All expenditures are reported by the Secretary. There is a board of trustees, of which the Secretary of the Interior is one. I

don't recollect—I don't know of any expenditures. It isn't a large fund. It amounts, I think, to less than \$20,000. But it is under the control of the fiscal department of the Government.

The CHAIRMAN. Does that answer your question?

Mr. SPEAR. Yes.

**STATEMENT OF JAMES E. BABBITT, STATE SENATOR,
FLAGSTAFF, ARIZ.**

Mr. BABBITT. I would like to add that the Indian Service formerly charged very high fees for moving-picture companies going on the reservations.

I don't know whether that policy has been changed or not. But I know our Flagstaff Chamber of Commerce vigorously protested the charging of these fees by the Indian Service. We have a very large Indian reservation in Coconino County, and the Park Service—

The CHAIRMAN. I am advised by the special investigator of the committee that those fees have been reduced, and they are very moderate now.

Mr. BABBITT. Thank you.

The CHAIRMAN. Do you care to say anything more, Mr. Parry?

Mr. PARRY. No.

The CHAIRMAN. I would like to have a little more clarification of what these moving-picture activities mean, in income to the community?

Mr. PARRY. We will start with the Indians, for instance. I think \$25,000 is quite a sizable sum.

The CHAIRMAN. Let's clarify that a little bit. You mean by that, that this last picture paid about \$25,000 to the Indians for what work they did around and about the picture?

Mr. PARRY. Yes, sir; plus \$1.50 every day for their assistance.

The CHAIRMAN. In this community?

Mr. PARRY. That was all in this community, right around here. The reason they come in this area, they get Indians, and anything they want, wranglers and such, and they pay them \$1.20. I think some of these wranglers make more than any of us, here, some days, with time and a half. Nevertheless, the money is scattered around to the butcher, the baker, and everybody else. There isn't a man, woman, or child in the Fredonia area that doesn't make something off it. Horsemen are paid—there are 300 head of horses out there, and they have to have a wrangler for every 10 head. You can see what that means.

There are 63 pieces of equipment lined up every morning in front of that lodge. That is as much as a circus will take. You have all that financial assistance, and it isn't going into one pocket, but it is scattered around to everybody. When they hire a youngster for a picture he gets the same as somebody else. The riders get so much, the drivers so much, the truckers so much. The Parry Bros., on this last picture, will pay over \$15,000 in trucking hire alone, besides our own equipment. The gas man gets it. There isn't a man in the community, interested in the area, but what gets something.

I feel we should bend over backward promoting it, as long as it is not to the detriment of the park. I am as alive to the fact that they want to preserve these natural beauties as anyone. But if we can

make a picture, and still not disturb the natural beauty, I think we ought to make provision to do it.

Now, I believe the last 10 years the moving-picture industry has left a million dollars a year in southern Utah and northern Arizona; every year for 10 years. They have made some outstanding pictures, and they keep coming back. We've got something here that they want—I am repeating what they say. The biggest block, so far, is that price.

I am just repeating now what the studio men tell me. You can take it for what it's worth.

There are things in the country around here—scenes they want in Bryce, and in Zion; and if they can get it, without the detriment of the park, that is what they do.

The CHAIRMAN. I might say, in all fairness, that same statement has been made to me by moving-picture people who are in charge of the set-up. I just wanted to say that, because it has come to my attention, and the statement has been made directly to me.

Mr. PARRY. I believe, Senator, the last pictures that were made here will leave close to half a million dollars. That is outside money, not money that you have to get down and grub out of the dirt for. It comes from the outside, and it helps the whole thing. Here is an illustration, an actual fact that took place 6 years ago. The Kaibab district and Fredonia were pretty destitute. The truth was that prices and other things had hit rock bottom, and Kaibab had been carrying—the county was absolutely broke. I was instrumental in getting one picture in here, and the first thing was that the people got to pay the grocer. If it hadn't been for the moving picture in Kaibab, I don't know what would have happened. Of course, there are things that happen that we don't like; there are changes in living conditions and so on, but nevertheless, we have to meet that as it is, and after all, it is an industry that has come to stay. It isn't a fly-by-night proposition. We have got something here. They will go and travel 40 miles over the most damnable road you ever saw, and they do a lot of work around here. In one place, just to make sure there were no floods, while they were shooting a picture, they put in one dam alone there that cost them \$20,000. Now, that means something to an area like this.

There is no place in the United States that has got the atmosphere for technicolor that this has, and that is the reason they come here. They come here for those certain reasons. If we can have the Grazing Service, and the Park Service, and the Forest Service lend every possible assistance to them, it is going to mean something so big that we can't even visualize it at the present time.

The CHAIRMAN. All right. Thank you very much.

I think that is all, Mr. Drury, unless you have something to say.

Mr. DRURY. Well, on that one point, do you mean, Senator, anything I have to say on that?

The CHAIRMAN. Anything you have to say on that.

Mr. DRURY. Well, I don't want to appear to be trying to argue this question of the amount of the fees.

The CHAIRMAN. I don't think it is fees at all. It is a matter of this policy; a question of taking evidence before this committee who may be interested in changing the policy. We may be able to present it to the authorities that make the policy.

Mr. DRURY. In view of the hundreds of thousands of dollars expended on these productions, I cannot help wondering whether the

amount of these fees is a detriment to the filming of pictures, on the scale that is of such great benefit to these communities.

Senator, in connection with the hearings yesterday, there were a number of points brought up. You have a great many witnesses here today, and I don't want to prolong this—

The CHAIRMAN. I would like to have you make any statement you see fit, before you have to go.

Mr. DRURY. I felt, in fairness to this group here, and to the National Park Service, there were a number of points brought out, both in the testimony yesterday and in the partial report of this committee, on which we should have an opportunity to present our explanations and our views of the case.

I feel that it is very beneficial to those who are on the staff of the National Park Service to have the opportunity to be here, in this community, and get the point of view of our neighbors. I know that the opinions expressed, even when they were perhaps a little hard on the Service and its policies, were honestly held; and I want your committee, and those here, to know that our attempt to defend some of those policies represents an equally honest opinion.

Of course, we speak of the policies of the National Park Service. I don't think we should think of these as the opinion of any one man, or any one group of men. The policies that govern the particular type of land management, in which the National Park Service is engaged, really stem from acts of Congress.

The basic act, of course, in 1916, established the National Park Service, with certain purposes and objectives; to preserve the great areas of natural beauty in the United States, and the great historic sites, for the benefit and enjoyment of all the people of the United States. Based upon that mandate of Congress, certain regulations are established by the Secretary of the Interior. The Park Service is the bureau which administers those regulations and those laws. The policies which have been discussed, as to matters such as grazing and predators, and the use of the park by various commercial enterprises, are the outgrowth, over a long period of time, of experience as to what is in the public interest, from a national standpoint, in doing the job that the Park Service was set up to do—of administering and protecting these great properties.

We have been impressed during the past year with the fact that, even with the Nation at war, with travel of all sorts discouraged, with the railroad companies advertising for people not to use the trains, with the restriction on gasoline and rubber, still, at the end of this travel year, the 1st of October, we will have had close to 6,000,000 visitors to the 168 national-park areas distributed through the United States.

A large percentage of these are men in uniform. Another large percentage are the families of the men in service. Some of them are war workers, who are crossing the continent and, because of the fame of the national parks and the monuments and historic sites, are determined to see some of these examples of the greatness of America.

Mr. Bryant and Mr. Smith will tell you that the commanding officers of military establishments have been very eager to have their men go to Grand Canyon, and Zion, and Bryce, Yosemite, Yellowstone. They have had tremendous numbers of the armed forces, and the

feeling is that this institution of the national parks is something that the military want their men to know about, because it represents one of the great phases of the country that they are fighting to defend.

I mention all this, because this question of policy, in protecting and administering the parks, has to do with our honest attempt to be true to the trust that the Government has placed on us, to hold these properties unimpaired for future generations.

There have been a number of issues that I think we should comment upon, and on which I know there is an honest difference of opinion. One of them is this question as to just how much of a so-called land-grabbing agency the National Park Service is. I don't think that I should make any comparisons, but the tables that are given in the partial report show the amount of the acreage in the public-land States of land that has been incorporated in national parks and monuments. The figures are available as to the acreage on the continental United States, and the United States and its Territories. There are some 21,000,000 acres, all together, under the National Park Service, both on the mainland and in Alaska and Hawaii. This represents, as I said yesterday, only around three-quarters of 1 percent of the total land area of the United States.

Now, the theory of Congress, and it has, over the years been supported, I think, by the American people, 21,000,000 of whom visited the national parks and monuments in 1941, is that this small portion of the United States should be held intact; just as some of the great sites of history should be held; as they were in the days when they typified the struggles of the Revolution, the growth of this country, the pioneer expansion, and the Nation's growth to its present stature. It is debatable, of course, as to what percentage of our land should be devoted to this special type of use.

I don't believe that we necessarily have to concede that when lands are set aside to protect their beauty, and to afford an opportunity for recreation and for relaxation and for inspiration, those lands are not being used. In fact, I believe that Congress and the Department of the Interior take the position that, in setting them aside, we have put them to the very highest use, for so small a fraction of the land of the country, that they can be put to.

The record, I think, should be made, Mr. Chairman, as to the questions on whether or not the National Park Service is an agency which has a limitless appetite for taking in more property, and I would like to submit, without taking too much time, a statement on that later on.

I would like to say this, however, that, as far as I am concerned—and I am sure that it reflects the general attitude of the Department—the inclination is to confine any acquisitions of land to those properties that are very definitely of a national caliber, that mean something to people as a whole; that are really national parks and national monuments, in the true sense of the word; that people from all parts of the United States would want to visit, because they are outstanding and different and are symbols of the greatness of this country. It is not true that the National Park Service covets every piece of land it looks upon. There have been many supposedly fine areas, proposed for national parks and monuments, that have been turned down. I asked my staff to look into the past history of our investi-

gations of properties, and they give me this statement, in answer to the charge which I know has been made, and which we have heard, every once in a while, that there is apparently no limit to the demands for the National Park Service for additional areas to administer. During the 8 years, 1933-40, the National Park Service investigated 523 areas proposed for parks, monuments, and related purposes. Nearly all of those areas were turned down by the Service. During those same years a total of 420 proposals for area investigations went unfilled. We didn't even investigate the areas, because we felt it was not necessary, if they were not of national caliber.

Moreover, since the National Park Service was established, it has rendered adverse reports on many well-known national park proposals, Pikes Peak, Colo., Mount Baker, Wash.; the Upper Mississippi National Park; and many other sites were proposed in various States of the Union. We had, in connection with the land-resettlement program, some 41 so-called recreational demonstration areas which were under the administration of the National Park Service. Although the bill was at first vetoed by the President, we were able to secure, first, the approval of the Congress, and then the approval of the President, last year, for a bill which would authorize the National Park Service to dispose of these 41 areas which we considered were not of national caliber, but should really be State areas.

Already 16 of those areas in 13 States, involving 36,257 acres, have been relinquished by the National Park Service and turned back to the States.

I simply wanted to cite those facts, Mr. Chairman, and to state for the record that the National Park Service does recognize that there is a limit to the amount of land that should be included in areas of the national park type.

Now, related to that subject, is this question of the taking of lands off the tax rolls. There is now before Congress a series of acts, and I believe both Public Lands Committees are considering them, which aim to equalize the whole situation as to the contribution that Federal agencies will make to local communities in recompense for taxes lost with the taking of lands in those communities. The Department of the Interior and the National Park Service have been on record for many years as favoring some legislation that would put our Service on a par with other land administering agencies, as far as making that contribution is concerned. Without developing that topic further, unless there are questions on it, I would like to make this statement as to our attitude.

The CHAIRMAN. In that respect, it may be observed that the Park Service is not the only one under close scrutiny, with reference to the withdrawal of lands from the tax rolls of the several States. The Indian Service has been exceedingly avaricious in the acquisition of lands for Indian purposes and, of course wherever there is an acquisition of land in a State, that land is usually some of the best land that there is. It is usually highly cultivated land, and is immediately withdrawn from the tax roll.

All of this has been a matter of very serious consideration, especially by three or four of the States—Nevada, Arizona, New Mexico, and Colorado—where there is a decided limit to taxable property. It has been a matter of very serious consideration of what can be done,

or what should be done, with reference to these withdrawals, or purchases, of land—the withdrawal from the tax roll. It is much more serious than some of the Services give credit to.

Mr. DRURY. We recognize its seriousness; and we are doing our best to encourage some program of that sort.

The CHAIRMAN. It is a very difficult problem to deal with. It has been studied by some of us, and we are still studying it. It is not an easy thing to solve, as to what compensation should be made to the community, and how it should be made, where there is a withdrawal of that kind.

Mr. DRURY. The only other point, and I think I should deal with this very briefly, unless there are other questions, are the specific references that have been made, both in the testimony here and in the partial report, as to the policy of the National Park Service as regards grazing, and the wildlife management, particularly in respect to predators.

Now, those are two, among many of the policies, which, as I say, have been built up through years of experience, in keeping with the basic purpose of the national parks and monuments, as prescribed by law. Those are areas within which natural conditions have been maintained, both as to vegetation and animal life. In that respect, I recognize fully that there will always be a difference of opinion as to the extent of the lands which should be subject to this type of management; and all I can say, in respect to that, is that, as far as our present and future programs are concerned, it is the desire of the Park Service to be reasonable and to be fair.

The CHAIRMAN. Right on that, allow me to interrupt you. I might say the matters that have been brought out here yesterday, Mr. Drury, are matters which I am very glad you heard. It just strikes me that there is a place where, if I may use a homely term, common sense enters in regard to this grazing. In other words, you can carry it too far either way.

Mr. DRURY. I agree with that, Senator.

The CHAIRMAN. You can set up a cloistered spot where livestock can't graze at all, and you can see a community all around you impaired by lack of income which, if they could graze within reason, would do no harm to the area, and at the same time would sustain a taxpaying community. So I am in hopes that the Park Service and other recreational area services may arrive, sometime very soon, at a happy point where a certain amount of grazing can be indulged in, for the benefit of the park itself.

Mr. DRURY. Well, I can't say as to the future on that, Senator, but I agree with you fully that we ought to approach the problem from a common-sense standpoint and ought to be moderate in our demands as to the areas set aside according to the national park pattern. I frankly don't feel that we can agree that grazing does not harm the natural conditions. I admit that is a debatable matter. It is something we are giving constant thought to.

The CHAIRMAN. May I interrupt you? Let me draw your attention to the natural conditions. Nature itself seems to have made provision where the wild animals graze at will, wherever they will; and certainly Nature didn't say to the wild animals, "You have got to stay out of this place, because it is a point of natural interest"; nor

did Nature say to the deer, "You can go into Mount Zion Park and graze in here." They did go in and graze, and Nature seems to have balanced the thing up fairly well.

Mr. DRURY. We face as much of a problem there from the grazing of wild animals; an acute problem of overgrazing by deer. The only point, I think, we should make at this time is that we recognize that policies in matters of this sort should be based upon scientific investigation and study, and have to be frequently adapted to the conditions.

Now, we mentioned yesterday, in connection with Grand Canyon National Monument, the fact that a large area had been excluded at one time in recognition of grazing interests, and there is no doubt that in the future there will be other studies as to boundaries of areas which will have to be the subject of some consideration.

The CHAIRMAN. There is a gentleman here who wants to ask you a question.

Mr. DEWEY FARR (St. Johns, Ariz.). I would like to ask Mr. Drury to give us the figures on the total acreage on parks and monuments in Arizona. Do you have that, Mr. Drury?

Mr. DRURY. Yes; I have.

Mr. TILLOTSON. It is 1,441,720 acres.

Mr. FARR. What?

Mr. DRURY. 1,441,720 acres.

Mr. FARR. Thank you very much.

Mr. ARTHUR WOOLLEY. While on that subject, I wonder if Mr. Drury can give us the acreage on parks and national monuments within the Arizona strip?

Mr. DRURY. I don't know, maybe Mr. Tillotson, who is much more of an authority on the Arizona strip, can give it to you.

Mr. TILLOTSON. Within the Arizona strip, I think I can give it to you.

Mr. DRURY. It will take a little time to pick it out.

I have one more statement I wanted to make, and then I will be through, Mr. Chairman. That is on the subject of predator control. It is a fact that in that respect, we attempt to follow a realistic and flexible policy. About the best statement we have for it is one we have made in a recent outline of predator control, which I will read to you:

Predator control is practiced within the national parks and monuments when and if such control is necessary to safeguard the perpetuation of a threatened species, or if any critical predator situation exists. In no case will the National Park Service undertake or cooperate in a predator control project without careful consideration of the facts involved.

I agree we should make the investigation.

The Secretary of the Interior is empowered by an act of Congress to provide for the destruction of animals detrimental to Park Service areas, which destroy, or prove to be dangerous to human life or property in park areas.

Now, I know this statement of policy is of interest to those here in the community:

So far as the relation of park predator to livestock in surrounding land is concerned, the policy of the Park Service is a flexible one, designed to meet changing circumstances. When the facts indicate the control of coyotes or other animals on national park areas is necessary, this National Park Service authorizes such control. It will always cooperate with other agencies in this matter, insofar as it can and still discharge the duties Congress has placed upon it.

That duty is, as far as possible, to keep from extinction all species of animals within the areas.

Now, as I said, we rely not only on our own men, but particularly the Fish and Wildlife Service. We recognize that the last word has not been said on some of these problems; they need a lot more investigation, and a lot more study. I want to leave that thought with the committee and those present, Mr. Chairman.

The National Park Service is trying to approach all of these problems, that have here been so profitably discussed, with an open mind.

The CHAIRMAN. Are there any questions?

Mr. FARR. I would like to follow this up a little further. I have here a report, compiled by the office of land utilization, under the direction of Lee Cox, as coordinator, that gives a little different figures. I wonder what date this is? It states 1,441,000 acres in Arizona.

Mr. DRURY. That is July 2, 1943. This was made up, I know, by the land office.

Mr. T. C. HAVELL. We made this tabulation as of June 30 last. It is the latest, from the latest available figures.

Mr. FARR. We have two reports here, one for 1937, of the Committee on Public Lands and Surveys, which gives 2,522,000, and then our report here from the office of land utilization gives 2,500,000 as of 1943. I was wondering where the difference comes in.

Mr. DRURY. This does not include purchased land.

Mr. HAVELL. It does not include purchased land, but withdrawals of public lands.

Mr. DRURY. I beg your pardon for presenting this as complete. It represents the public lands involved in parks and monuments.

Mr. BABBITT. Mr. Senator, now, is it the policy of the national parks to purchase private lands included within a monument?

For instance, we have in Wupatki—they have recently increased from 2,000 acres to 37,000 acres, 6 sections of State land and approximately a similar amount of private land. Will the Park Service condemn that private land and reimburse the owners for it?

Mr. DRURY. Well, in general, the policy is to consolidate the areas, because that is the only way you can get efficient administration, as well as protection.

Mr. BABBITT. That land is worth less in the middle of the monument.

Mr. DRURY. We have no funds with which to purchase lands at this time. That depends upon Congress.

Mr. BABBITT. If they reimburse the owners, will they take consideration of the fact that a range of several hundred thousand acres might be destroyed by taking in half of the winter range of this outfit?

Mr. DRURY. That is a hypothetical question as to what we might do in the future. There is no money to acquire those lands; but I would say, in general the Government should be fair in dealing with those owners, considering all factors, either by negotiations or, if it went to condemnation, the courts would make an award.

Mr. BABBITT. Well, the private owners are very much interested now, because that already has been withdrawn. They have a 17-mile pipe line into that area, and if they can't use it for grazing lands they certainly would want to be reimbursed.

Mr. DRURY. Maybe Mr. Tillotson can add something?

Mr. TILLOTSON. Nothing, except that a grazing agreement was recently worked out between our office and Mr. Babbitt's interests, which I understand was satisfactory to the Babbitt people.

Mr. BABBITT. I would say it is not satisfactory because, if we die, the party during whose life that permit is given—if he dies the investment is wiped out without any compensation. That doesn't seem fair to the rest of the interested parties who are interested in that particular land. We are satisfied insofar as we got what the other people get whose permits are taken away in that manner. But we are certainly not satisfied by a long shot with that particular set-up, and I don't believe anybody else is.

Mr. TILLOTSON. It comes back to the entire policy that was discussed yesterday about the lifetime of the permits.

The CHAIRMAN. Which, to be very frank with you, impresses the chairman of this committee as having a high element of unfairness connected with it. I don't see the solution. I don't have the solution, not by a long ways, in my own mind. But I do see the exceeding unfairness of it.

Mr. DRURY. We recognize the difficulties of it, Mr. Chairman.

Mr. CHARLES C. ANDERSON (Glendale, Utah). I can give you the low-down on the predatory lay-out on the strip. At the present time we have two Government trappers on the Arizona strip, both threatening to quit, because they won't pay them enough money. Our losses from coyotes is greater than all our grazing fees and our taxes put together.

This year—that is, in my own outfit—I lost 300 lambs out of 2,000 lambing ewes. Now, our trappers that we have have broken the world's record. One of them has caught over 500 coyotes this year. That doesn't include pups, the young ones.

Now, it looks—it makes us feel bitter to have you have a breeding pen over here just supplying us with them. We are making a fight on them, and the Fish and Wildlife under Zimmerman, in Salt Lake City, is working with us diligently, trying to do something there. You have another office in the same building, and you are trying to raise them. It looks like these cowboys back in Washington had better find out what it is all about. We don't like it, and we want you to know it.

Mr. DRURY. I fully appreciate your difficulty. However, on the one question of the two agencies, they are set up by law to perform quite different jobs.

Mr. ANDERSON. You have authority to have your men investigate. If they are doing any damage outside, you can kill them.

Mr. DRURY. We can control the destructive animals.

Mr. ANDERSON. We were asking you to have an investigation made immediately. We will appreciate it, and we want it.

Mr. DRURY. We will certainly do that.

Mr. TILLOTSON. May I answer Mr. Woolley's question as to the areas? I understood you asked for the area of national parks and monuments in the Arizona strip?

Mr. ARTHUR WOOLLEY. All the withdrawals.

Mr. TILLOTSON. There are three areas: Grand Canyon National Park, with a total area of 645,119 acres, of which approximately half, or 327,560 acres, lie north of the Colorado River; the Grand Canyon

National Monument, an area of 201,291 acres, approximately 80 per cent of which lies——

Mr. WOOLLEY. Mr. Tillotson, give us the total?

Mr. TILLOTSON. Four hundred and eighty-three thousand five hundred acres.

The CHAIRMAN. Out of the total area of the strip?

Mr. TILLOTSON. I couldn't give you that.

The CHAIRMAN. Does anyone know the total area of the Arizona strip?

Mr. M. H. ALLEN (district grazier, Arizona grazing district No. 1). Approximately 3,450,000 acres.

Mr. TILLOTSON. And ours in round figures is 483,500 for parks.

Mr. WOOLLEY. I think you said for the whole State of Arizona it was 1,400,000. Now, I have heard speakers commenting on southern Utah and northern Arizona to the effect that when the Creator created the world he got all through, and he had a little handful of dirt and he threw it over and he said, "That's that." From the way they are grabbing us in withdrawals it looks like that's the way they started.

While we are on the subject of that predatory control, I was talking to a gentleman by the name of Jackson, who runs adjacent to the Grand Canyon National Monument. In years past he ran in the neighborhood of 3,000 sheep, and he has the only herd that runs in that area. During the summertime the rest of the sheep go into Utah. He told me he had lost from three to four hundred head of lambs and older sheep during the summer months, and then—that being a period of 4 or 5 months—then when the Utah herds come back and started helping to feed it, the coyotes—he has lost only 50 to 75 during the winter months. So that is an indication of the number of coyotes that are there, and the loss sustained by one man.

I was glad to hear Mr. Atkins bear this statement out. I am glad to hear there are others suffering the same thing.

There is one more observation that I would like to make with reference to the idea of the Government reimbursing the counties for the loss in taxes from lands withdrawn. Take Fredonia, this little community, for example, has about 300 people. And say, one man there had a number of cattle that would bring him in a thousand dollars a year. The county probably had been receiving \$100 of that in taxes.

Well, the United States Government might reimburse the county for \$100. But what is the community going to do with the other \$900, if we don't have this range? The community of Fredonia, and there are dozens of other communities in similar circumstances, might just as well move out, because we don't care whether the county gets it in taxes, if we are not allowed to live here.

The CHAIRMAN. Are there any other remarks?

Mr. PAGE. The other Mr. Parry would like to close for the motion-picture industry.

STATEMENT OF C. W. PARRY, KANAB, UTAH

Mr. PARRY. I don't have a great deal more to add other than what my brother has stated except this, that part of my job in connection with this motion-picture promotion business has been to make the contacts at the studios, and spend the winter making these contacts,

and attempting to sell them on the idea of making pictures in southern Utah and northern Arizona.

One of the first questions they ask is whether or not there has been any relief from the \$500 per day fee the Park Service has set. I think I would be safe in saying that there hasn't been one studio that has not asked that question, and asked whether or not there might be any relief from it in the future, and asked what is being done to set it aside.

Mr. Drury brought up the question as to whether or not \$500 was an exorbitant fee for a company who was spending a million or a million and a half dollars on a picture.

Well, in proportion to what this last company spent, \$500 isn't. But the studios are very funny in this way, that they are perfectly willing to pay for anything that they feel they are getting value received for but, at the same time, they simply will not go along and pay for something that they feel they are being held up for. That is the attitude they have taken in regard to the payment of this fee.

The question was also asked earlier in the proceedings by Mr. Senator, I think, as to whether or not he knew of any specific instances where studios had given up the location because of the fee.

We just have to go back to the Republic Co., that was in here earlier in the spring. They shot for 4 or 5 days down at the mouth of the Zion, and the virgin territory, and had it not been for the fee I am sure they would have shot at least another week or 10 days in that area, and moved further up into the canyon.

Another thing I might say is the studios, while they are competitive, at the same time they work more or less as a unit. What one studio does sort of sets the policy, and the rest of the studios more or less adhere to it. I don't think that you will find one studio—for instance, the Fox studio, a company of \$70,000,000 capitalization, can well afford to pay the \$500. They will not pay it and set the precedent for paying that fee. So the thing I want to emphasize is, while the studios could afford to pay the fee, they feel if they did pay it it would be paying it "with a gun in their backs," as they have so often stated.

I don't think there is anything more that I could add, but that is their feeling, that the fee was established not as a means of collecting revenue, but as a means of keeping them out of the parks.

The CHAIRMAN. All right, thank you, Mr. Parry.

I think that closes that particular phase of our investigation.

Now, I made a suggestion to Mr. Kneipp this morning for his study. It isn't to be considered as settled, because it largely comes out of the imagination of the chairman, with reference to a problem that was presented yesterday. That is as to the carrying capacity of the Kaibab at the present time. It was discussed here quite at length yesterday, and there was no way that we could come to any conclusion. The circumstances were related very fairly by Mr. Kneipp as to changes in the management, and changes in the organization, and one thing and another.

I made this suggestion, and I hope we might be able to work it out, that if the Forest Service would delegate an outside forester of outstanding ability, someone who was not connected with the community here around at all, and the committee would delegate its

investigator, Mr. Haskell, and a second, or a third, if it were necessary, and they could come in here and go into the area and make a study of it. It might help solve the problem.

Now, I have suggested it to Mr. Kneipp. It has not been determined upon. But Mr. Kneipp seemed quite friendly to the suggestion. I won't say that it should be only two. Perhaps a third might be added to it, perhaps some outstanding individual whose fairness and whose ability would be recognized. The committee would lend its investigator, who is a man of wide experience, to go with this man over the entire area and make a study of it at as early a period as possible. It's the only thing I see right now that might be of assistance to us.

If there is anyone who desires to criticize it—I make mention of it so that it could be shot at, if you please. If you see anything wrong about my suggestion, you could blame me, because it is entirely my own suggestion. It may not have any merit at all. It just struck me that some disinterested, impartial, fair agency might be called upon to lend a suggestion toward a solution.

Mr. KNEIPP. Senator, might I ask a question here on that point? In discussing the matter with the Senator, I pointed out that now in the employ of the Forest Service is Dr. Henry L. Schantz who, for many years, was president of the University of Arizona. Dr. Schantz is not a range man, in the grazing sense of the word, but he is one of the outstanding plant physiologists of perhaps the United States, perhaps of the world, and he is in Arizona at the present time. We were debating as to having him come in here and looking at the vegetative cover, not as a grazing man but as a plant physiologist, to see the degree to which the plant association has recovered from the earlier damage caused by deer and possibly by livestock, and if it has come back, regained its vigor with sufficient growth to permit utilization, or whether it has not. He would not endeavor to approximate how many cattle or sheep or deer it would carry; he would simply discuss the condition of the vegetation as he sees it.

That would be one approach. The other would be to get a man who has had more experience in range management, looking at it not so much from the physiological status of the vegetation but as to availability for range use; what it would carry; how it would be used.

It would be interesting to find out which of those two men these gentlemen think would command the most confidence as to the status of the vegetation.

STATEMENT OF K. C. KARTCHNER, ARIZONA STATE GAME WARDEN

Mr. KARTCHNER. Mr. Chairman, the Arizona Fish and Game Commission has already had to do with the deer on the Kaibab National Forest, even though it be in the Grand Canyon National Game Preserve. We have followed the history of that area and its relation to the production of deer and livestock for many years, and naturally we think that the Arizona Game and Fish Commission should be represented on any such a body that would make an examination of the area.

The CHAIRMAN. Well, now, you can run this thing into the ground, you know, and get too many in this committee.

Mr. ELMER JACKSON (Kanab, Utah). Mr. Chairman—

The CHAIRMAN. We would probably get a speedier solution if we limited the number pretty low. I think that would be best. However, it is only a suggestion. I am not wedded to the thought at all.

Mr. JACKSON. I might state that I think the suggestion of the Senator and Mr. Kneipp is very good. But if they are going to start loading it up with another agency, the stockmen ought to be represented. It would be better to keep it to one or two.

The CHAIRMAN. Well, then, they want a cattleman and a sheepman and a goatman, and so on, and so forth. You can shoot it to pieces; it's all right with me.

Mr. ARTHUR WOOLLEY. I would suggest perhaps you would consider asking Dick Rutledge, who is the director of the Grazing Service and who used to be a Forest Service man and who is familiar with the Kaibab, probably as familiar as any man in America. He might very well make the survey. He is out of the Forest Service now.

The CHAIRMAN. Very well.

Now, Mr. Kneipp, certain things were requested by you that you might have the opportunity of presenting certain things to the committee. Do you have any matters which you wish to present, or any statement you wish to make? The committee will hear you now.

Mr. KNEIPP. Yesterday afternoon in testifying, Mr. Royal Woolley, in an implication that actually became a specific charge, alleged that by reason of two telegrams that were sent certain men were suffering reprisals, and other men were enjoying benefits, or special privileges.

Well, the reprisal end doesn't look so strong. I think the record shows that Mr. Woolley himself who had an active part in one of the telegrams, in spite of his efforts, has on the Kaibab Forest the maximum number of stock allowed one permittee, and a range all of his own, watered at a considerable Government expense, and still has them. He certainly didn't suffer from signing that telegram. As a matter of fact, I don't know whether you can hold any other men accountable for signing the telegram. Mr. Broadbent made the remark yesterday that he had no recollection of having signed it. Mr. Woolley didn't say Mr. Broadbent signed it, he merely said his name was on it.

However, that is a serious charge that the chairman, very properly, noted was a matter demanding considerable and immediate investigation. He desired that it be made.

I might say that history has a queer way of repeating itself. Almost 35 years ago I took the railroad from Salt Lake City to Marysville; rode on the mail coach from there to Panguitch; rode a saddle horse from Panguitch to Kanab in connection with a similar situation. The leading member of one family, at that time, felt that certain members of his family were not being properly treated. Now we are having the same situation more or less, though better organized. This time Mr. Page is up here from Phoenix, and Mr. Arthur Woolley from Salt Lake City. But it is the same fundamental problem that existed a third of a century ago.

The Forest Service, unfortunately, is rather naive. We didn't foresee this coming. We didn't get our advisory board organized and consult with it, and we weren't prepared. As a matter of fact, we don't have available here the full records of the case, because they have been transferred to Williams. We don't have here the forest supervisor, who

would be the most authoritative representative of the Forest Service, because he is just recovering from a serious operation. But the ranger is here who does have copies of the permits by which we were able to get last night—as you gentlemen may have observed, as we sat in the ranger's office until quite late—a fairly good picture of why Mr. Vaughn, who was pointed to as the recipient of the special favors, has his present preference, and why two other men who are specifically named and who started somewhat similarly to Mr. Vaughn did not get increased preferences.

Here is what the record shows: Mr. Vaughn, I understand, was long associated with old Uncle Jim Owens, the famous lion hunter, who lived up here on the mountain for many years. In 1932 he was running some horses in House Rock Valley and at that time there was no fence along the boundary and the horses drifted back and forth, and everybody got what were called “on and off” permits. So Mr. Vaughn had an “on and off” permit, or a winter permit for one-half of 12 horses. He also had a permit over on the west side for 10 cattle yearlong, which I understand he had had for some years previous to 1932.

The next year, 1933, the same condition prevailed—6 horses, and during the winter 10 cattle.

In 1934, however, the boundary was fenced, and coincidentally, Mr. Silcox had announced this policy that was referred to yesterday. So, as a result, in 1935 Mr. Vaughn was given a permit for 25 head over on the east side here, and he also had a permit for 10 head on the west side, plus 7 head for the short season. They were the carry-over yearlings.

In 1936 his permit was 25 head on the east side, House Rock Valley side, and 16 on the west side, 10 yearlong, and 6 short season.

In 1937 he had 25 on the east side; and 10 yearlong, plus 5 short season on the west side.

In 1938 he had 45 head on the east side, the increase of 20 head being due to purchase of permitted stock from W. F. Hamblin. His permit on the west side had increased from 10 to 35 head, because he had purchased the permitted stock of A. D. Church on that side, and got the permit for it.

In 1939 he had his east-side permit over here on the House Rock transferred over to the Burro's allotment, and on the west side he ran in the same 35 yearlong, plus 16 for the short season.

MR. ROYAL B. WOOLLEY. May I interrupt right there? That Burro allotment was purchased from Billy Hamblin, it wasn't transferred.

MR. KNEIPP. There is a note here, “Burro purchased from Billy Hamblin,” but when he transferred his other previously permitted stuff over there—no; what he did, he applied that year for 20 head nonuse, and had 20 head nonuse for 1939 on that permit.

MR. WOOLLEY. That Burro allotment?

MR. KNEIPP. Yes.

MR. WOOLLEY. What did he do with his 25?

MR. KNEIPP. He had 20 head nonuse, and he had 25 head on the Burro allotment.

MR. WOOLLEY. How many did he buy from Billy Hamblin?

MR. KNEIPP. I haven't got the number here, but he got—what he bought was sufficient to give him that increase. Maybe the rangers here can answer that.

Mr. GRAY. Twenty head.

Mr. KNEIPP. In 1940 on the west side he got an increase of 16 head in his yearlong permit, by virtue of the purchase from M. V. Adams, who testified here yesterday that he had sold the stock. So as a result, his permit on the west side over here increased from 35 to 51, in addition to which he had a short-season permit for 28.

In 1940 he apparently had a nonuse for 45 head on the Burro allotment. He didn't put any stock on the Burro allotment.

Mr. WOOLLEY. Forty-five head?

Mr. KNEIPP. Forty-five head; 25 he had previously, and the 20 he bought from Adams. During that year he got nonuse on that range.

In 1941 he got on the west side the 51 head yearlong, and a permit for 30 for the short season, to carry yearlings, and it was that year that the ranger proposed that he be allowed to transfer from the Burro allotment over to the House Rock, on the ground that he was going to make, was arranging to make, a transfer from Ben Wilmot, who had been grazing 35 head on the House Rock. Wilmot had been told he could not continue to graze on the House Rock unit, because he had no commensurate property. Vaughn rented Wilmot a range, outside of the forest, on the grazing district, and Wilmot's removal from the House Rock unit made available additional range. So in 1942 Vaughn was transferred from the Burro allotment over to the House Rock allotment, with a permit for 68 head of cattle from December 1 to April 30. The increase of 23 head in number permitted being based on Vaughn's purchase of that many permitted stock from E. W. Parker together with land in House Rock Valley. Vaughn continued to receive a permit for 51 head on the west side yearlong, plus 30 head short season.

So, up to the present time, Vaughn's total permitted preferences, built up the way indicated, amount to 119 head of cattle. The record shows gains from 1932, of which 68 grazed during the winter period, on the House Rock side, and 51 graze during the year on the west side.

Now, it seems that Vaughn and Broadbent and Mr. Schoppmann, on the east side, started pretty well alike. They were all interested in the Grand Canyon Cattle Co. water, bought the improvements. Vaughn has now gone up to a total of 68 on the east side, whereas Broadbent and Schoppmann have not. As I understand the case from the records that are here the difference is that Vaughn purchased other permitted stock which, under the rules and regulations of the Forest Service, entitled him to renewals of permits, and the other two gentlemen did not.

This does not show that Mr. Vaughn has become a cattle king; 119 head of cattle is not a very excessive number. Nor has it been granted to him all of a sudden, but as a result of rather slow growth, over a period of 10 years or more—11 years. And there is nothing in this record to indicate that the fact he signed a telegram as to the continued status of the Forest Service had anything to do with the action on his permits. Nor is there anything in the record to indicate that the fact that the names of Mr. Broadbent and the others were on the other telegram had anything to do with their failing to get an increase.

Now, I wanted to bring this much out here, where all these gentlemen can hear it. The files, as I say, are not complete. We would appreciate the opportunity to file with the committee a more complete statement, for incorporation into the record, if the committee wishes it, after it has become practicable to consult the major files. But, I think I have disclosed enough here so that if any of these gentlemen feel that the case is being misrepresented, they can tell the committee so.

(The following corrected statement was furnished to the committee by Mr. Kneipp, under date of September 23, 1943:)

PERMIT RECORD OF C. H. VAUGHN, KAIBAB NATIONAL FOREST

CENTRAL ALLOTMENT (WEST SIDE)	HOUSE ROCK ALLOTMENT (EAST SIDE)
1931. Grant 10 cattle yearlong.	
1932: Grant 10 cattle, yearlong.	6 horses, winter, temporary. There were no boundary fences and this was to cover stock grazing on and off.
1933: Grant 10 cattle, yearlong.	
1934: Grant 10 cattle, yearlong.	6 horses, winter, temporary, under same conditions as in 1932.
1935: Grant 10 cattle, yearlong.	25 cattle, winter. After completion of boundary fences, this permit was granted to Mr. Vaughn. Grant permits were issued to other applicants this year.
1936: Grant 10 cattle, yearlong.	25 cattle, winter.
1937: Grant 10 cattle, yearlong.	25 cattle, winter.
1938: Grant 35 cattle, yearlong. (Purchased 25 cattle from Hades Church, supported by bill of sale.)	45 cattle, winter. (Purchase with waiver of grazing preference from W. F. (Billie) Hamblin, supported by bill of sale for livestock. Property rights in water. Permit increased 20 head as result of purchase.)
1939: Grant 35 cattle, yearlong.	45 cattle, winter.
1940: Grant 51 cattle, yearlong. (Purchased 16 cattle from Merle V. Adams supported by bill of sale.)	45 cattle, winter.
1941: Grant 51 cattle, yearlong.	45 cattle, winter.
1942: Grant 51 cattle, yearlong.	68 cattle, winter. (Purchase with waiver of grazing preference from E. W. Parker 23 cattle, with bill of sale and deed to land in Houserock Valley.)
1943: Grant 51 cattle, yearlong.	68 cattle, winter.

Mr. PAGE. One item there—I don't pretend to know very much about Forest Service permittees and Forest Service allotments, because that is something between us clients direct with the Forest, but you mentioned Mr. Vaughn there purchasing Mr. Wilmot's preference. Mr. Wilmot was one of the permittees on the Little Mountain area, by reason of the lease from my client. That is all he had, and when that lease was canceled his permit was canceled, so I don't see how anybody else could have any right from purchasing that item.

Mr. KNEIPP. I failed to make myself clear there, Mr. Page. He didn't purchase Mr. Wilmot's property. Mr. Wilmot was over on House Rock Valley, without commensurability. Mr. Vaughn was here on the Burro's and wanted to get to House Rock Valley. Mr. Vaughn rented Mr. Wilmot a piece of range outside of the Forest, so

Mr. Wilmot could remove from the Forest, and that created a vacancy on the House Rock Valley, to which Mr. Vaughn could be assigned. He got no increase in preference, by reason of any purchase from Mr. Wilmot.

Mr. PAGE. Your mention of Mr. Wilmot made me come right back to those who were canceled. Mr. Vaughn had some canceled, by reason of the lease of our waters. Mr. Wilmot did; several others also did. And my point yesterday was: We left it right there. What they have done since I don't know; except the way that the Forest Service issues permits is beyond me.

Mr. ROYAL B. WOOLLEY. Well, this seems to be an attack upon the Woolley family, going back for 35 years; and I am going to ask Mr. Woolley, my brother, to answer it.

The CHAIRMAN. Well, I haven't caught the attack; but it's all right, if you think there is one.

Mr. ROYAL B. WOOLLEY. He went back 35 years, talking about how he came down here on horseback; and there seems to be something about way back 35 years ago we got everything taken away from us.

The CHAIRMAN. All right, Mr. Woolley. If you wish to answer it, you may.

Mr. ARTHUR WOOLLEY. Senator, please: Perhaps we have now already presented to you here the grievances of this group.

I was born at Pipe Springs. That national monument was created because I was one of the historic incidents that occurred. It is a true national monument, gentlemen. It is an old fort of historic interest. My mother lived there for 5 years to keep my father out of jail. He was a polygamous Mormon. I looked over this desert country when I was a child. I went to school at Kanab, and every spring when school let out I got on a horse and joined the round-up down near Fredonia. We gathered each day about a thousand head of cattle progressively to the Hurricane, and in the fall we wrangled the horses and night-herded the steers, until they got over to the other end of the range; and we trailed them night and day to the railroad.

I rode this range until I went away in 1908 and 1909 to Germany. In 1908 Mr. Kneipp came down here. At that time the forest supervisor of the Kaibab was a man by the name of Clark. He lived at our house and we all learned to talk on our fingers, so as to have the pleasure of communicating with him. I sat in on the conference, to which Mr. Kneipp refers and interpreted what was said to the supervisor on my fingers.

As a boy I looked over this back country and saw the cattle, lean and gaunt, mere dragging bags of bones at the bare water holes; and spirals of dust rising over this dry desert. I saw, lifting out of this desert country, that Kaibab, which is Indian for Mountain Lying Down. Running off, Kaibab dropped acutely into the Grand Canyon. There is a canyon commonly called the Saiwats. You have heard of it. Zane Grey wrote a book about it. I'll tell you what that means to me. If you ride down the Saiwats and back up the canyon—it is dry canyon, about 1,700 feet high—you can touch the side walls with your hands. You lean back over the cante of the saddle and look up and see only a little bit of the sky overhead. As you meander down that gulch you see clustered on the side walls of it what looks like a wasp's nest. If you bring that closer to you with binoculars you will

see what looks like a wasp's nest; plastered on the side wall of the Saiwats is a cliff-dwelling, a habitation made of cedar and brown cement, and you realize that once it was a human habitation. A man and a woman lived and loved in that wasp's nest on the side of the Saiwats. How did it get up there? How did it get there? You suddenly realize that when a man and a woman lived in that wasp's nest on the side wall of the Saiwats it was on the bottom of the wash.

Now, the man who lived in the Saiwats, in the bottom of the wash, went away to war, went over the Kaibab to war with the tribe on the other side, either to protect the hunting ground, or to extend it, or to defend it, and each generation of mankind since then—the man has gone away to war. And now we meet here in this day of 1943, all old men, and the best of this community have gone away to war.

Now, my father, E. D. Woolley, brought Buffalo Bill into this country. He was the first to introduce this country to the world of tourists and to realize its possibilities as a scenic center. He brought Senator Smoot, he brought Senator Sutherland, and he brought Zane Grey. He brought Theodore Roosevelt out to view the Grand Canyon for the first time. He spent a fortune building a trail from the top of the rim clear down to the floor of the canyon. I worked in the bottom of the Grand Canyon for 3 years, building the trail which the Government took over to build their present one. They turned it over to the Union Pacific.

The slur by Mr. Kneipp is totally unjustified. My father was never a selfish man for himself. He never ran a head of cattle on the Kaibab until he left here. He ran out on the desert.

Royal B. Woolley has not been a selfish man over the normal selfishness of men; and he now presents this charge of favoritism which may not be established beyond a reasonable doubt, not in his own interest, but in the interests of the people who live in this community now, and in the interests of the people who are going to come back here, these boys who come out of the fox holes, if they come, out of the holocaust of war, if they come, who are coming back here to a reservation, and a limited reservation, and under a bureaucracy, to live here in this limited area, under the multitude of bureaus and unctuous gentlemen who represent the Government.

I am saying here what all of these men have said. That is all I am saying, sir; what all these men have said. They raised sons. My father wanted us to go away, out of this hard country. My mother came into St. George with the first pioneers, because my grandfather led the group. She came when she was 5 years old. Read the Giant Joshua, gentlemen, if you want to know my history. I am one of Pipe Springs' children. She was one of the Snow Daughters, and she said to me many times when we twitted her about drinking tea, "The Lord would forgive anybody who was raised in Dixie, for drinking a little tea with their dinner."

The Senator has alluded to the fact that this is a hard country. There isn't a place in the world as hard to raise a family, and make a living, as this country. The battle with nature is severe, the geology of it is a cycle of droughts. These gentlemen talk learnedly about the country coming back under their management. God has a good deal to do with it. His favors don't always fall equally. Only yesterday, over at Maxine they were flooded out and a man lost his entire crop.

Now, what I am trying to say, Senator, is this: We very much appreciate your coming down here. We very much appreciate your coming down here with the attitude of a Westerner, one who knows that a coyote is a coyote, and he is not a sacred mandate of the Congress of the United States, of which you are a part, sir. And if you go down into the bottom of that gorge, like I do, and turn as many rocks over as I have, not to mar the beauty of the canyon, but to make it accessible to people who are up to see it, you will find under every rock you turn over a bug with a thousand legs, and a sting on his end. He is called a centipede, and bureaucracy, gentlemen, is a centipede, a thousand-legged bug with a sting on its end.

Now, you gentlemen are estimable gentlemen, good, simple, personally pleasing. Everyone of these men have said so, but you represent to this country the gradual encroachment of that thing called bureaucracy, until now, when these boys come back they will be wards of the Government on what is left that is worthless. The very nature here of the ground that you take, you only take the best. You say, "We consider carefully on what we do, and we go into a huddle with ourselves to consider carefully the exclusion of that which we do not desire, which is necessary to our purpose." You always keep the best. The top of these mountains is the summer range. Out on this one it is winter range, but it is the best range, and you take it. You take it. I have never heard it said so severely before, and I was down here 10 years ago, and I have been down here a great many times. I come here nearly every year.

I heard it the first time, sir, that the purpose of a monument withdrawal was to preserve a lava flow down a canyon. Preserve it from what? From a cow? From a cow that is eating the grass that grows between the lava rocks? Preserve it in its pristine state, a mass of black rocks that flowed down the depression, when it melts out of the earth, and then water washed the sand away from it and left it standing exposed? It is all over this country, because when this country was made, there was a belching out. It is recent, in geological history. Royal and I once brought in a group of geologists, who made a study of this country, and the man wrote a textbook about it. We know something of that country, and we want you men to let this country be used for what it is suitable and designed for.

And I say to you, Mr. Senator, that you ought to amend the Taylor Grazing Act, and exclude the limiting words in the opening sentence of it, give the Grazing Service, the Secretary of Interior at the head of it, control over all lands owned by the Government that are usable, most particularly the grazing lands.

Now, you made a timid gesture when you passed the Taylor Grazing Act to control the grazing in the West. You were afraid of the very bureaus you had created. You still are. You are afraid to say there shall be one bureau for each cow. Now, a poor old cow in this country can't carry more than one bureau; and these poor old cows out on this hill carry four. They can't carry more than one bureau. One cow, one bureau.

Now, take that back, Senator, as a slogan, "One cow, one bureau," and say to those people back there that you come from the West, and they want the cattle to eat the grass. They don't want the coyotes exterminated completely, and they never will be. But don't you go

back from Nevada and tell them that you gave these gentlemen a mandate to preserve a hundred thousand acres of good grazing ground as a breeding place for the coyote; and that you are going to preserve it, and you are going to let these unctuous gentlemen go off into a huddle by themselves when we leave here, and throw little barbs of twittings at Royal B. Woolley and someone else, Mr. Adams, who made a rash statement. Don't let them go off and write a rule, and they agree upon it, and it contains the same old thing; when a man dies his permit dies; and when he sells, his permit is exterminated; and that the little grass that the Government still leaves to these people is withdrawn from the man who came back out of this war.

Now, that is all these men have said to you, and I have said it once more.

I thank you.

The CHAIRMAN. Thank you, sir.

I occupy rather a peculiar position here, sitting here as chairman of a committee that is not with me. All these matters have to be gone over and reviewed by the committee. There isn't anyone who realizes human frailties more than the chairman of this committee, because he is plumb full of them himself. Men do things sometimes that entirely wrong interpretations are put upon.

I don't think there is any accusation justified, either one way or the other, as far as I have heard, up to date. If it ever comes a time when there are accusations justified, this committee has no fear. It owes no allegiance to any source, per se, excepting to the Government of the United States. The matter will be handled fairly and frankly; and if we just be patient with each other, and give credit to every man, everywhere, out on the range, or occupying a swivel chair; just give credit, one to the other, that each is trying to be honest, we'll get along a lot better. These matters will all be taken care of, we hope, as best we can take care of them, as quickly as we can work them out.

There are many problems here. The Congress of the United States consists of men from every section of the country. We have a great section of the country known as the West, largely west of the Mississippi River; and a great section known as the East, east of the Mississippi. Those who represent the States east of the Mississippi River have little or no conception of the mode and manner of life of those who occupy the great intermountain regions, and we are constantly confronted with the necessity of teaching, as it were, those who are from the far East as to the conditions that prevail in the West, so those of us who represent western communities and Western States have that additional burden to carry all the time. But little by little we are getting into it. Little by little this western country is developing, and little by little justice, that is sometimes denied, finally finds its way into the proper sources.

I want this meeting when it does break up to break up with the realization that sitting here alone as a member of this committee, I have tried to receive every suggestion and have it made of record and to throw in such suggestions as I myself might believe we could do.

I am very much inclined to try to work out the problems of the Park Service. I think that those who have utilized the Park Service areas for grazing should be permitted to continue, so that the Park Service may, to some extent, add to the wealth of the country, by

creating taxable property and not be entirely utilizing the taxpayers' money to maintain them.

At the same time, I realize that there is a good ground for difference of opinion. In other words, the Park Service should preserve the natural conditions as much as possible. These are all things that have to be worked out, and this committee, we hope, will be able to cooperate with the various services, to the end that, little by little, we will work these things out.

Now, that's about all I have to say. The chairman of this committee is going away from here with no accusations justifiably made against anyone that I have heard up to date. I will tell you frankly, that if I thought the Forest Service was guilty of some infringement of a proper rule, I would not hesitate a moment to say so. But up to date I haven't heard it said. So, let's not convict a man by mere accusation. Neither can you deprive a man of his rights by merely arbitrary action.

I think, as far as Mr. Woolley is concerned, he is like the rest of us, honestly and fairly and frankly struggling to gain the best he can by his energies and his efforts. He has met his difficulties just as many other men have met with difficulties; things have not always gone too smooth, but I think we must, in fairness, look at the other side. I think if that spirit prevails here, we will get a lot more out of the Arizona strip.

That is the review that I have right now. You can correct me if you want to, but right at this time, having heard it, I pass on it as I do.

Now, we have got to go on to another topic. I want to get the Grazing Service into this thing. I want to take a shot at the Grazing Service.

Mr. MACKELPRANG. I understood, Mr. Page, at the time Ben Wilnot made the transfer, Wilnot was leasing water from me, had run with me a lot during that time. At the time he left House Rock Valley he went up to Two Mile. He was leasing water from me.

The CHAIRMAN. All right.

Unless someone has something further to offer, I want to say this, that the record will be open to anyone who has anything to offer on this subject. That goes to the Forest Service, or Mr. Woolley, or anyone else. If you have anything further to offer on this subject, either the telegrams, or anything else, they will be received as a part of the record. You must remember that everything that has been said here, and everything that goes into the record must be reviewed by the entire committee, and passed upon by the entire committee.

Now, we come to the subject of House Rock Valley and the buffalo question. I would like to call on Mr. Mackelprang, with reference to the House Rock Valley and the buffalo.

Mr. MACKELPRANG. Well, I have no objection, myself to the buffalo running on House Rock Valley, or running in common with me. But, as I have always understood, from the time the Taylor bill started, the State game department had agreed not to exceed 200 head, nor run more than 200 head of buffalo. That is the impression I have been under all the time, and I have no objections.

The CHAIRMAN. Who has charge of the buffalo, the State, or the Federal Government?

Mr. LEECH. I believe they are under the jurisdiction of the State.

Mr. KARTCHNER. The Arizona Fish and Game Commission.

The CHAIRMAN. The Arizona Fish and Game Commission?

Mr. KARTCHNER. Yes.

The CHAIRMAN. How do you run them on the open public domain?

Mr. KARTCHNER. Well, they have run there since 1905, in common with the domestic livestock.

The CHAIRMAN. What arrangements have you, if any, with the Federal authorities, for running them on the open public domain?

Mr. KARTCHNER. If you want to go into that phase of it at this point, there has been a withdrawal there since December 31, 1930, and it never has been under the jurisdiction of the Division of Grazing.

The CHAIRMAN. Under whose jurisdiction has it been?

Mr. KARTCHNER. It has been open public domain, subject only to that withdrawal.

The CHAIRMAN. For what purpose was the withdrawal made?

Mr. KARTCHNER. The withdrawal was made as an aid in legislation, and future classification of the areas, having in mind a buffalo and wildlife management unit.

The CHAIRMAN. That was an executive withdrawal?

Mr. KARTCHNER. Yes, sir.

The CHAIRMAN. How many acres of land?

Mr. KARTCHNER. Approximately 44,000.

The CHAIRMAN. Have your buffalo been ranging on that withdrawal?

Mr. KARTCHNER. On and off; everything grazes in common on the House Rock Valley.

The CHAIRMAN. Is grazing permitted on this withdrawal to which you make reference?

Mr. KARTCHNER. By sufferance, on the open public domain.

The CHAIRMAN. Not by permit?

Mr. KARTCHNER. Shouldn't have been. I think some permits were issued by the Grazing Service, although it has been determined they have no jurisdiction.

The CHAIRMAN. What is the history of that, Mr. Leech?

Mr. LEECH. I would like, Senator, for Mr. Havell to give us his views on the Executive order of 1930, and the orders creating the Grazing District.

Mr. PAGE. Mr. Leech, have you any objections if I gave the whole history in the matter to start with, and then have the comments afterward on the record I have compiled?

Mr. LEECH. That would be perfectly all right with us—

The CHAIRMAN. Wait a minute, we have this gentleman here. His name is given to the chairman here as one who wishes to testify on this subject. We will be very glad to hear your statement, Mr. Mackelprang.

STATEMENT OF W. J. MACKELPRANG, JACOBS LAKE, ARIZ.

Mr. MACKELPRANG. Well, I don't know as I have anything to testify to. As I understand that agreement between the game department and the stockowners there, we was to run that range in that locality, and as it is set up it would support so many stock in that valley; and

the Game Department agreed, at the time of the commencement of the Taylor bill, they would run 200 head of buffalo in common with the rest of us. They agreed it wouldn't exceed 200 head.

The CHAIRMAN. What is the condition?

Mr. MACKELPRANG. They have a few over 200 head. I don't think it is the intent or the attitude of the Game Department of going over. It is probably an increase, I wouldn't say; but I imagine and judge it wasn't their intention.

The CHAIRMAN. What steps are taken to keep it down to 200 head?

Mr. MACKELPRANG. Well, they have hunts pretty near every year. They give a license, out of so many licenses given to deer hunters, all on the Kaibab Forest. Then they draw; individuals draw; and one gets a lucky number, and gets to hunt a buffalo. They come on there and hunt these. The State game department comes out; and it is my understanding that the man that gets the license, he gets the hide and head and a quarter of buffalo meat, and the State gets the other three-quarters.

The CHAIRMAN. Has that been every year?

Mr. MACKELPRANG. No; I think they have missed some years. But that has been a practice pretty well the last 2 or 3 years since this agreement was made. I understand they tried to keep them out.

The CHAIRMAN. Have you discussed this matter with the Grazing Service?

Mr. MACKELPRANG. Not too much. The Grazing Service told me there was a kind of a move on; that they had wanted some withdrawals for more land. But I never—the Grazing Service has never said that it was a fact. As I understand it, I found out—as I understand, that is why we are here today, to find out what the Game Department really wants.

The CHAIRMAN. Hasn't this matter been gone into with the representatives of the Grazing Service here?

Mr. MACKELPRANG. Well, it probably has.

The CHAIRMAN. Haven't you conferred with them?

Mr. MACKELPRANG. Not individually; no.

The CHAIRMAN. Have you talked with them about it?

Mr. MACKELPRANG. I have talked to them.

The CHAIRMAN. Who did you talk to?

Mr. MACKELPRANG. Mr. Blankenagel, when he was here, talked to Allen some. Of course I understood, in the first place, this Game Department asked for 44,000 acres withdrawal. Then I was told again that they had compromised, are asking—I think it was Mr. Brooks, if I remember right, last year—he told me they were asking for 26,000.

The CHAIRMAN. Is that the State game department? Is that what we should understand?

Mr. KARTCHNER. Yes, sir.

Mr. MACKELPRANG. And that's about all the information. I have talked with the game department—

The CHAIRMAN. Are the buffalo now impairing the open public domain by their numbers?

Mr. MACKELPRANG. Yes; there is a few more than their numbers. I haven't a count on them; I wouldn't say how many.

The CHAIRMAN. Are 200 buffalo too many on that range?

Mr. MACKELPRANG. Well, I don't think so.

The CHAIRMAN. Does that take any of the livestock off?

Mr. MACKELPRANG. Well, yes. The more buffalo you have got, of course, it would take more livestock. But I don't think it does, under the present set-up. As I understand, that is what our agreement was, in the first place. They was to have so many buffalo, and we was to have so many cattle. I don't think the 200 head of buffalo is going to take our permits away from us today. As I understand it, if it exceeds that, it will take down some of the cattle.

The CHAIRMAN. Would the department of the State wildlife, or fish and game commission, care to be heard now?

Mr. PAGE. I would like, if it is agreeable to the Grazing Service and the Wildlife Service, to have this presentation of the history of this whole area. I think you would all understand the arguments, and the points, a little better, if we had that first.

The CHAIRMAN. Very well.

Mr. PAGE. I have prepared a memorandum on the whole matter which, very briefly, has all of the status information. I will produce the memorandum for the record, but I will read it first:

MEMORANDUM BRIEF, JOHN H. PAGE & CO., PHOENIX, ARIZ., JULY 31, 1943

HOUSE ROCK VALLEY, ARIZ.,—PUBLIC LANDS—WITHDRAWALS

(a) By Executive Order No. 5522 of December 31, 1930, under authority of the act of Congress approved June 25, 1910 (36 Stat. 847), as amended by the act of August 24, 1912 (37 Stat. 497), approximately 44,000 acres of public land, being the public lands in the southern portion of House Rock Valley, and situate south of the north boundaries of sections 17, 16, 15, 14, and 13, T. 37 N., R. 4 E., and of sections 18, 17, 16, 15, and 14, T. 37 N., R. 5 E., were "temporarily withdrawn for classification and in aid of legislation, subject to the conditions of the aforesaid acts and to prior valid claims initiated and maintained pursuant to law." Such order states that it "shall continue in full force and effect unless and until revoked by the President or by act of Congress."

While not stated in said withdrawal order, although said act of June 25, 1910, requires that the public purpose of a withdrawal be specified in the orders of withdrawals, it is understood that such lands, which are suitable only for grazing purposes, were temporarily withdrawn pending proposed congressional action to provide an area for the grazing of a herd of buffalo owned by the State of Arizona. The then Governor of Arizona, George W. P. Hunt, was interested in the buffalo herd which the State had acquired from private owners, the original buffalo having been brought into House Rock Valley many years previously by "Buffalo" Jones and attempt made to interbreed them with cattle. Governor Hunt consulted with me, John H. Page, as to procedure to enable the State to acquire from the Government an area of public lands in House Rock Valley for buffalo range. I suggested endeavoring to obtain an act of Congress granting the land to the State of Arizona. I further suggested that while this matter was pending the public lands desired should be removed from possibility of other disposal and that there was a method for accomplishing this, viz, issuance of an Executive order under the act of June 25, 1910 (36 Stat. 847), temporarily withdrawing the land for classification and in aid of legislation. We, thereupon, took up with our congressional delegation as to obtaining such temporary protective withdrawal and as to obtaining an act of Congress granting the lands to the State. The withdrawal of December 31, 1930, above cited, quickly followed. However, the proposed act of Congress failed of accomplishment. Our congressional delegation advised that no bill could be passed granting the lands to the State of Arizona unless it should be provided therein that the State should pay the Government at the rate of \$1.25 per acre for the land granted. Governor Hunt objected to the State making any payment for the lands and there was no provision therefor. He then abandoned the project. There was no legislation. The temporary withdrawal continued.

(b) By Interior Department withdrawal order of July 9, 1934, all of the unentered, unreserved, unappropriated, and undisposed of public domain lands

within Apache, Navajo, and Coconino Counties, Ariz., were temporarily withdrawn from settlement, entry, or disposition in aid of exchanges authorized by the act of June 14, 1934 (48 Stat. 960) defining the exterior boundaries of the Navajo Indian Reservation in Arizona and for other purposes. This order was revoked as to certain described lands in Coconino County, including all lands in House Rock Valley, by departmental order of July 16, 1940, effective on September 16, 1940. In said revocation order all the lands included in the Executive order of December 31, 1930, (a) above, were specifically described together with further lands in House Rock Valley.

(c) By Executive Order No. 6910 of November 26, 1934, under authority of the act of June 25, 1910 (36 Stat. 847), as amended by the act of August 24, 1912 (37 Stat. 497), all vacant, unreserved, and unappropriated public lands in the States of Arizona, etc., were temporarily withdrawn "for classification, and pending determination of the most useful purpose to which such land may be put in consideration of the provisions of said act of June 28, 1934 (Taylor Grazing Act), and for conservation and development of natural resources."

(d) By order of the Secretary of the Interior of July 9, 1935, under authority of the act of June 28, 1934 (48 Stat. 1269), (Taylor Grazing Act) Arizona grazing district No. 1 was established, and all public land in House Rock Valley was placed therein. This order was modified by departmental order of October 23, 1940, "to include all vacant, unappropriated, and unreserved public lands, all lands withdrawn or reserved for other purposes that have heretofore been included in the district in accordance with the provisions of section 1 of said Taylor Grazing Act by approval of the head of the department having jurisdiction thereover, and all lands heretofore or hereafter acquired by lease under the provisions of the act of June 23, 1938 (52 Stat. 1033, 43 U. S. C., sec. 315-m-1, 2, 3, 4), commonly known as the Pierce Act, not excluding lands withdrawn by Executive order of November 26, 1934 (No. 6910), within the following-described area: Arizona, all those parts of Mohave and Coconino Counties lying north of the Colorado River." House Rock Valley lies north of the Colorado River in Coconino County.

Section 1 of said Taylor Grazing Act provides that the Secretary of the Interior is authorized, in his discretion, by order to establish grazing districts or additions thereto and/or to modify the boundaries thereof "Provided, That no lands withdrawn or reserved for any other purpose shall be included in any such district except with the approval of the head of the department having jurisdiction thereof."

Departmental regulations of January 6, 1913 (41 L. D. 454), contain the general statement under the act of March 4, 1911 (36 Stat. 1253-1254), that "For the purposes of this statute, national parks, Indian reservations, and reservations for water-power sites, irrigation, classification of lands, or other public purposes, created under the Withdrawal Act of June 25, 1910 (36 Stat. 847), are considered to be under the jurisdiction of the Department of the Interior; military reservations under the jurisdiction of the War Department; and reservations created for the special occupancy, use, or control of other departments under the jurisdiction of such departments, respectively."

Therefore the lands reserved by the withdrawal order of December 31, 1930, under the act of Congress of June 25, 1910 (36 Stat. 847), for classification and in aid of legislation, (a) above, the so-called buffalo withdrawal, were clearly under the jurisdiction of the Department of the Interior. As the Secretary of the Interior on July 9, 1935, (d) above, included said lands in Arizona grazing district No. 1 and confirmed this in his modification order of October 23, 1940, it is evident that he had his own approval as head of the Department having jurisdiction of the lands embraced in the withdrawal of December 31, 1930, (a) above, to include said lands in a grazing district under the provisions of section 1 of the Taylor Grazing Act.

The said lands were in fact included in Arizona grazing district No. 1 and administration thereof proceeded under the Division of Grazing, now Grazing Service, of the Department of the Interior. Adjudications were had under the provisions of the Taylor Grazing Act and regulations thereunder as to grazing privileges for the prior users of the range and owners of commensurate property. In this district principally water. The numbers of head of livestock for each cattleman were determined and allotments of land to each were made, either individual or community allotments. All the land in House Rock Valley was allotted. Grazing licenses were issued in conformity with the adjudications of grazing privileges. Grazing privileges for the buffalo were adjudicated the same

as for the cattle and based on prior use of the range by both. This although the State owned no water for the buffalo while the cattlemen owned water for their cattle. An adequate allotment was awarded for the buffalo and they grazed in common with cattle on the Grand Canyon community allotment. There was also an allotment for the grazing of the buffalo upon adjoining national forest land. The Arizona Game and Fish Commission had enunciated its policy regarding the management, grazing, and numbers of the buffalo herd by order No. a-454, unanimously carried at its meeting of December 11, 1940, except from the minutes of said meeting being attached hereto."

The CHAIRMAN. Has the Grazing Service, or is it, now, administering the land just the same as though it were open public domain, not withdrawn?

Mr. LEECH. We have not administered it, or collected grazing fees on this area, since July 1942.

The CHAIRMAN. But is it being utilized and allotted to the grazers of domestic animals?

Mr. LEECH. It is no doubt being utilized, and was at one time within the allotments of these users.

The CHAIRMAN. What changed that status, if anything?

Mr. LEECH. In 1942 there was some discussion with the Fish and Wildlife Service, some discussions—

The CHAIRMAN. That is the State fish and wildlife?

Mr. LEECH. No, sir; the Fish and Wildlife Service of the Interior Department. There were some discussions about the region, and Mr. Brooks was directed not to collect fees on that area, or administer it.

The CHAIRMAN. Not to collect fees or administer it?

Mr. LEECH. Yes, sir.

The CHAIRMAN. Does that mean that that withdrawal is in contemplation, to be taken out of the grazing district, eventually, and grazing denied on that area?

Mr. LEECH. Well, as to the status of the withdrawal, in 1930, and the inclusion in the district, Senator, I think that would be something for the Department of Interior to decide, as to the status of the land.

The CHAIRMAN. What I have in mind, the vision I have of it, it is a considerable area in the midst of a grazing district. If it be withdrawn from utilization by those who use the public domain under the Taylor Grazing Act, it is going to cut into the numbers that will be permitted to go on the range. Is that true, Mr. Leech?

Mr. LEECH. That would be true.

The CHAIRMAN. Then it constitutes a rather serious threat, does it not, at the present time, to those who are utilizing the open public domain?

Mr. KARTCHNER. We don't believe that is true, Senator, and I presume I'll be allotted time to make a general statement here, and I will cover those points.

The CHAIRMAN. The trouble is, Mr. Warden, as I view it, you haven't any jurisdiction over it. You're a State representative, and the State of Arizona has no jurisdiction over this withdrawal, if it be in fact a withdrawal.

Mr. DAY. Might I explain the situation, Senator McCarran? As has been outlined here, this old original withdrawal—there have been some questions as to its validity. The Fish and Wildlife Service came into the picture about 2 years ago under the so-called Pittman-Robertson Act, Federal aid and wildlife restoration, where the State is allotted funds with which to do wildlife improvement work.

Mr. Kartchner submitted to us a project to extend a water pipe line for fresh water out on to this area. That constituted about an \$18,000 expenditure at that time. We raised a question as to what right the buffalo had on this area, so we could determine whether this would be a substantial project to be financed from Wildlife funds, and whether the buffalo would be eliminated, and the moneys spent for improving livestock facilities; one of the requirements we are enforced to follow in passing upon this contract.

Mr. Kartschner, as I recall, had some difficulty in getting any particular agreement as to the long-time number of buffalo that might be permitted on the area. From that point it was found this old original withdrawal might be withdrawn in whole or in part for the buffalo. At that point we entered the picture, proposing to withdraw as a wildlife area a certain acreage which would be turned over or reserved under the jurisdiction of the Department of the Interior for use by the Fish and Game Commission of the State of Arizona, House Rock buffalo range and wildlife management area.

Under such conditions prescribed by the Secretary of the Interior, that was a withdrawal for the Fish and Wildlife Service for use by this buffalo herd, which would be administered by the State under an agreement with the Secretary, with the full intention they would continue to range off the area; the buffalo and the cattle would use the water—private waters—and the waters from the constructed pipe line.

The CHAIRMAN. The cattle would also utilize the surface of the withdrawal for grazing?

Mr. DAY. That's right; continued mingling; use by the cattle and buffalo. But there is still a question up to Mr. Kartchner, the State game warden, as to the numbers, and things of that sort.

Mr. PAGE. The order that I referred to, from the record of the minutes of the Arizona Game and Fish Commission, held "that the State game warden is hereby directed to work with the United States Grazing Service with regard to the proper management of the buffalo herd in common with cattle on the Grand Canyon allotment of grazing district No. 1, and the adjacent national forest land."

That is the record from the game and fish commission, certified by Mr. Kartchner, who is also the secretary of the commission.

The CHAIRMAN. I would like to insert a copy of that into the record at this point.

COPY FROM THE MINUTES OF MEETING OF THE ARIZONA GAME AND FISH COMMISSION
HELD DECEMBER 11, 1940

ORDER NO. A-454

Motioned, seconded, and unanimously carried that it shall be the policy of the Arizona Game and Fish Commission to hold the buffalo herd in Houserock Valley to 200 head and that approximately 50 head shall be kept during the spring and summer months in the vicinity of what is known as The Pools along the main highway, where they may be seen by the traveling public. This contemplates disposal of the excess above 200 head each year. The State game warden is hereby directed to work with the United States Grazing Service with regard to the proper management of the buffalo herd in common with cattle on the Grand Canyon allotment of grazing district No. 1, and the adjacent national forest land.

EXPLANATION

Messrs. John H. Page, representing the cattlemen on the above allotment; Roy Woolley, the principal cattle owner; and Messrs. Ray Painter and Emil Blank-

enagle, of the United States Grazing Service, attended the meeting in the interest of working out a satisfactory agreement with respect to buffalo in their relation to cattle which graze on the same range. Explanation has already been made of a pipe line, extending some 5 miles from the end of the present Forest Service pipe line out of South Canyon and it is intended to construct such a line under Federal aid as soon as the details can be worked out. In consideration of this improvement the Grazing Service and stockmen are entirely satisfied with holding the buffalo at 200 head. Heretofore the game department has had no water outside the Kaibab Forest and at one time the game and fish commission entertained a proposition by the cattlemen to cut the buffalo to 100 head and allow the other 100 of its recognized preference on the grazing district to be used by the cattlemen in consideration of furnishing water for the buffalo. However, when this pipe line was found to be feasible the commission at once recognized the desirability of holding to the present 200 plus the natural increase each year up to the time of the annual hunt, when its equivalent is to be killed.

I. K. C. Kartchner, do hereby certify that I am the duly appointed and acting secretary of the Arizona Game and Fish Commission; that the foregoing is a true and correct copy of excerpt from the minutes of the meeting of the said commission held on December 11, 1940.

K. C. KARTCHNER,

Secretary, Arizona Game and Fish Commission.

Mr. PAGE. Before I am interrupted, I would like to complete the whole history of it, Senator.

The CHAIRMAN. I am not going to guarantee you that, but you go ahead.

Mr. PAGE. We thought that, with that agreement which Mr. Kartchner told me about within the last 2 weeks, there has been no further official order regarding or concerning the buffalo. We had every reason to believe that the matter was settled, for all time, and that the buffalo allotment, in the Arizona grazing district No. 1, or adjustments to be made thereto, and the whole matter was in perfect condition for all future time.

In Mr. Leech's first decision, adjudicating the grazing rights in House Rock Valley, the decision of July 28, 1937, "On the Matter of the Application for Grazing Privileges of H. S. Stephenson, Trustee for the Beneficiary of the Grand Canyon Cattle Company, and appeal from the decision of the Regional Grazier, Phoenix Serial No. 076547, Arizona Grazing District No. 1," when, after extended hearings on the prior use, he rendered a decision on the whole House Rock Valley area.

Here is what he says about the buffalo:

All of the public land in the enumerated sections in T. 36 N., R. 5 E., having a carrying capacity of 143 cows yearlong, or the equivalent of feed units, are reserved for the purpose of pasturage for the herd of buffalo now roaming and ranging on the House Rock Unit.

These buffalo roam and range part of each year in the House Rock Valley, and part of the year on adjacent forest lands in the United States, under the jurisdiction of the Forest Service, Department of Agriculture.

Then followed adjustments when the buffalo reached 200 head, and the allotment was increased; so now, as I recall, the allotment is for 231 head of buffalo.

Now, the insertion of the Wildlife Service is beyond my comprehension. These buffalo were imported into this country about 1904, by Buffalo Jones, and placed on this range as an experiment, in conformity with, and the cooperation of, the old Grand Canyon Cattle Co., which was then operating. The winter range was House Rock Valley. Buffalo Jones incorporated a company, which we called

the Buffalo Jones Cattle Co. Here is a certificate of stock, dated December 1, 1905, which is of value as evidence of the time this project for interbreeding buffalo and cattle was initiated.

That project failed, and that herd remained in the valley. Originally, Buffalo Jones built some fences to keep them from going too far. In later years, the Government sued the Grand Canyon Cattle Co. for illegal fences, and got a judgment against the Buffalo Jones fences. They were all laying down, at the time, so it didn't amount to very much. But from that time on, those buffaloes have interbred, and they have ranged the whole country, until they have become a nuisance.

The final outcome was that the owners sold them to the State of Arizona, as a relic of old times, to be taken care of by the State. We cannot conceive—I mean by “we,” the cattlemen, and this community, which I think I represent—we cannot conceive that these buffaloes are in any sense wildlife. They are a remnant of wildlife, to be sure. But they are very much interbred; a relic that the State has held for interest; and the public should see them, so it was thought; and it was all agreed, with the State game department, that the cattlemen were very considerate; the Grazing Service was very considerate. Nobody questioned giving them preference, in their proper numbers, even though they had no water; while all the cattlemen had to be considered only on the preference of water. The whole country in House Rock Valley was allotted, the numbers determined, and the administration went to the State game department. They made this agreement with the cattlemen; and, until this pipe-line matter came into the picture, everything was in perfect accord, and we all thought it was settled permanently.

Now, when the buffalo didn't have any water, the old Grand Canyon days, that company rented them water from its different permanent watering places, the same as they did some of the cattlemen. They collected a nominal charge. During my time the collection was \$25. Then the game department got pretty hard up, during the depression, and prevailed on the company, and the company cut the charge to \$20. Up to the time those holdings were sold to the several individuals, not as a company, but as different holders in this association of holders—they have already gone on the record yesterday. That was in the latter part of 1939.

Then the question came up, between them and the State game department, as to future water. Those cattlemen made the offer that, if they would hold the buffalo to 200 head and get a watering place of their own so there would be another watering place, they wouldn't charge anything further, as far as they were concerned, for the use of the waters which they purchased.

That was the plan of the State game department, as the record I read showed; and for 3 years, nearly 3 years, the State has paid these cattlemen nothing for the use of the water for the buffalo.

Now, a few months ago, or recently this spring, this pipe line was completed. The obtaining of that individual watering place has evidently changed the attitude of the game department or the game warden. We find nothing in the game department records as to what jurisdiction they would like to have for the buffalo, and the Wildlife Service is, we find, just within the last week, injected into the picture.

Now, the Wildlife Service is all right. As I told Mr. Day, last night, I can't feature this little herd of tame, inbred buffalo being wildlife, owned by the State of Arizona. Further, I can't feature that a grant under the Pittman-Robertson Act—an outright grant to the State, as I understand the provisions of that act—should entitle the Wildlife Service to come into Arizona, with that as a toehold, and say, "We have made this investment, and we want to run it, and want to reserve it, now, for ourselves," and then get another reserve down there, on top of all of this. As I have asked, are they prepared to buy out the cattlemen who have the permanent waters, have been there with their predecessors in interest since the eighties, and to give them any compensation for damaging their vested rights, which have been adjudicated by the Grazing Division?

There apparently is no such attitude, or thought about it, just now, though the Wildlife Service has made—I cannot reconcile it; I don't think they have made an investment. I think that the provisions of the act—you know more about it than I do—the act was granted to help the States in their different little individual problems. The Grazing Service, which is already installed, and under an agreement with the State game department, can go along and continue and not have this whole thing now disrupted with a new thought of a new reservation to be made.

Senator, every organization in this State, every official in this State and, also, the game department, are on record against any further reserves, or Government agencies to run our affairs and take our lands.

Mrs. Keith, what is the attitude of the Arizona Cattle Growers Association on any more reservations?

STATEMENT OF MRS. J. M. KEITH, SECRETARY, ARIZONA CATTLE GROWERS ASSOCIATION

Mrs. KEITH. Well, for as many years back as I remember it, the Arizona Cattle Growers Association has gone on record regularly at its directors' meetings and its conventions against any further withdrawals by the Federal Government for any purpose.

Mr. PAGE. Mr. Williams is State land commissioner. You know, I am sure, the attitude of Governor Osborn as to any more withdrawals from the State of Arizona?

Mr. O. C. WILLIAMS (Arizona State land commissioner). He is definitely opposed to any new withdrawals; that is certain. There is no question about it.

Mr. PAGE. I don't know of anyone that wouldn't oppose more withdrawals. And, when we cannot see the necessity for a further agency, a special preserve, where it conflicts, and intends to take some of the vested rights of these small cattlemen—they aren't large cattlemen, Senator, but a group of small cattlemen who have been in that country—and that doesn't mean just Mr. Woolley, Mr. Vaughn, Mr. Schoppmann, and Mr. Mackelprang and Mr. Alex Cram. But all down through there they are going to be impinged on by further definite withdrawals, when everything is in perfect shape, but administration by the Division of Grazing; already adjudicated—when the cattlemen have given every consideration to the buffalo. We cannot comprehend why a new issue, just at this time, when everyone is

opposed to more withdrawals, and everyone knows that the cattle industry has got to have its very best years, right at the present time.

The CHAIRMAN. Who is promoting this additional withdrawal?

Mr. KARTCHNER. There are 44,000 acres already under this withdrawal. We only want a little more than half of it. We merely want to change the withdrawal to a little more than half of the original withdrawal, and give the other to the stockmen, or whoever it properly belongs to.

Mr. PAGE. That is on the basis, Mr. Kartchner, as you say, that it is a separate withdrawal, that never went into the Grazing Service. The record itself is otherwise.

Mr. KARTCHNER. I maintain to the contrary, Mr. Page, that it is not otherwise. I have documentary evidence, here, to show that it never was under the jurisdiction of the Grazing Service; never was in a grazing district No. 1. And this is corroborated, not only by the Solicitor of the Department of the Interior, but the General Land Office itself.

Mr. PAGE. Have you any such orders from the Department of the Interior?

Mr. LEECH. I don't know what records you are referring to.

Mr. PAGE. Have you ever seen any orders from the Interior Department; did they ever advise that that 44,000 acres was not properly within the Arizona grazing district No. 1?

Mr. LEECH. I don't know of the records; no, sir. I haven't seen it. There could be such an order, but I haven't seen it.

Mr. PAGE. It is not in the records in your Salt Lake office?

Mr. LEECH. Not in the records that I have before me, Mr. Page.

The CHAIRMAN. That was not the question. Do you have the record in the Salt Lake office?

Mr. LEECH. Not to my knowledge. If it is in the Salt Lake office, I believe I would know it.

The CHAIRMAN. All right, go ahead.

Mr. KARTCHNER. I have in hand a nine-page decision, by the legislative counsel of the United States Senate, to the effect that these lands never were under the Taylor Grazing Administration.

Mr. PAGE. That is just an opinion, Mr. Kartchner. We have all had opinions.

Mr. KARTCHNER. I had better change that word from "decision" to "interpretation."

Mr. PAGE. It is the opinion of an outside legislative authority. Now, a parliamentarian doesn't decide anything definitely—

The CHAIRMAN. How does the legislative counsel of the United States Senate come here?

Mr. KARTCHNER. They were asked especially, to see whether or not the Grazing Service had any jurisdiction over these lands. May I read a short excerpt from a letter of Senator Hayden? [Reading:]

I have now been told informally by the Legal Division of the Interior Department that this withdrawal still controls the area in question, and has not been changed in any way as the result of the passage of subsequent legislation by the Congress such as the Taylor Grazing Act, or by the issuance of further Executive orders or Presidential proclamations. Therefore, these lands are still controlled by and subject to the terms and provisions of Executive Order No. 5522, signed on December 31, 1930. This fact has been confirmed by the General Land Office on the basis of its records.

Mr. HAVELL. Senator, I guess the General Land Office has got to get in there. I think Senator Hayden's statement is correct. The Executive order of 1930 stands; it is in effect. That is what Senator Hayden has just stated. It doesn't go so far as to say that the lands thus withdrawn are not included in a grazing district. As a matter of fact, I don't believe the Department of the Interior has ever been asked for an opinion on the question.

I have a personal opinion; but since the General Land Office is primarily responsible for the public lands—it is the Government agency that processes all withdrawals—all questions of the withdrawal of public lands come to the General Land Office. I understand there has been submitted to the General Land Office, just recently, a request from the Fish and Wildlife Service for a permanent withdrawal, a withdrawal that will take the place of this temporary withdrawal, which was for classification in aid of legislation. Since the lands are within the boundaries of a grazing district, that of course was referred to the Grazing Service or, we have asked the Grazing Service for a report. No action has been taken by the Department on that request, as yet.

Knowing that this matter was coming up, I got in touch with the office this morning, and I asked that no final action be taken on the request for the withdrawal of these lands until the Department had the benefit of reading the record that is being made here this morning; so that I assure you, Senator, what is being said here, this morning, will be considered. And, doubtless, it will be very helpful in the final determination as to the proposed withdrawal.

The CHAIRMAN. I am very glad to get that enlightenment.

Mr. PAGE. Mr. Kartchner mentioned a letter from Senator Hayden. If you have no objection, Senator, I would like to read the letter from Senator Hayden concurrent therewith.

The CHAIRMAN. Is that the letter to which Mr. Kartchner referred? Should not that go into the record in its entirety?

Mr. KARTCHNER. I presume it would be satisfactory to Senator Hayden. It is part of our official record. I presume you would want that interpretation by the Legislative Counsel also?

The CHAIRMAN. For whatever it is worth. Personally speaking, I don't regard it as binding, at all.

Mr. KARTCHNER. I don't mean to use the word "decision," Senator. I appreciate that it is an opinion.

Mr. PAGE. I can read this letter, Senator, and then put it in the record.

The CHAIRMAN. I want all of these, in view of the statements made by the Land Department, just a moment ago. It seems to me everything pertinent should go in the report, here, because the record is going to have quite a bearing on the attitude of the Land Department.

(Thereupon Mr. Page read the following letter:)

UNITED STATES SENATE,
October 19, 1942.

Mr. JOHN H. PAGE,

Attorney at Law, P. O. Box 3706, Phoenix, Ariz.

MY DEAR JOHN: I want to acknowledge your letter of October 15 with regard to the status of grazing lands in the House Rock Valley, and beg to say that, insofar as I know, the memorandum prepared for me by Mr. Robert W. McMillan, As-

sistant Legislative Counsel of the Senate, who is now in the Army of the United States, cannot be considered as finally determining what the legal status of such lands may be.

When Mr. K. C. Kartchner, the Arizona State game warden, was in Washington last spring, he asked me to make an effort to determine the status of these lands as a result of the enactment of the Taylor Grazing Act. I discussed this subject over the telephone with the Interior Department and was informally told that the original temporary withdrawal of December 31, 1930, still controls the area in question and that its effectiveness had not been changed in any way as a result of the passage of subsequent legislation by the Congress. I asked Mr. McMillan to go into the matter for me since I did not want to put the Legal Division of the Interior Department to the trouble of returning the memorandum. Mr. McMillan took several months and finally produced the original memorandum, a copy of which you have seen.

I want to assure you that I am entirely disinterested and simply trying to be helpful to Mr. Kartchner in obtaining reasonably authentic information as to the status of these lands. As to the question of what agency of the Federal Government shall have jurisdiction over the administration of House Rock Valley lands, I want to make it clear that I feel that is something that is entirely up to the Interior Department agencies involved.

I am sure that Mr. Kartchner had no intention of precipitating any disagreement, nor do I believe it is his purpose to make any attempt to increase the size of the present buffalo herd. It is certainly imperative that all the livestock possible be produced at the present time in order to supply the requirements of our military forces and the civilian population as well as the members of the United Nations to whom our Government has given commitments. I should suggest that you talk to Mr. Kartchner in an endeavor to determine just what his purpose may be, since I believe that what he has in mind is to clarify the legal status of these lands to the best of his ability rather than to initiate a fight. Since there is in existence an agreement between the stockmen and the fish and game commission, it would be too bad to upset the status quo.

If you believe there is further information I can supply, please let me know.

With kindest personal regards, I am,

Yours very sincerely,

CARL HAYDEN.

The following letter and memorandum were submitted for the record by Mr. Kartchner:

UNITED STATES SENATE,
COMMITTEE ON APPROPRIATIONS,

July 25, 1942.

Mr. K. C. KARTCHNER,
State Game Warden, Phoenix, Ariz.

MY DEAR KARTCHNER: I want to apologize for my failure sooner to acknowledge your letter of May 22, with which you enclosed a map, and to advise you as to the outcome of the inquiry I addressed to the Solicitor's office at the Interior Department with regard to the status of the 44,000 acres of land in Houserock Valley which were included within a temporary withdrawal dated December 31, 1930.

I have now been told informally by the Legal Division of the Interior Department that this withdrawal still controls the area in question and has not been changed in any way as a result of the passage of subsequent legislation by the Congress, such as the Taylor Grazing Act, or by the issuance of further Executive orders or Presidential proclamations. Therefore, these lands are still controlled by and subject to the terms and provisions of Executive Order No. 5522, signed on December 31, 1930. This fact has been confirmed by the General Land Office on the basis of its records.

I requested the Office of the Legislative Counsel of the Senate to make a thoroughgoing investigation of this same subject, and I am sending you herewith a memorandum prepared by Assistant Counsel Robert W. McMillan, which may be of some interest to you.

I hope that this information will serve to clarify the situation for you.

With kindest personal regards, I am,

Yours very sincerely,

CARL HAYDEN.

P. S.—I should suggest that you now get in direct touch with Dr. Gabrielson.

MEMORANDUM FOR SENATOR HAYDEN

The following is submitted in reply to your inquiry with respect to the status of certain public lands located in the State of Arizona.

The lands in question are described in Executive Order No. 5522, dated December 31, 1930, issued pursuant to the authority contained in the act of June 25, 1910 (36 Stat. 847), as amended by the act of August 24, 1912 (37 Stat. 497). By such Executive order, such lands were "temporarily withdrawn for classification and in aid of legislation."

It is understood that such lands consist of approximately 44,000 acres which are principally suitable for grazing purposes and that the reason for such withdrawal was to provide an area for the grazing of a buffalo herd.

Such order states that it "shall continue in full force and effect unless and until revoked by the President or by act of Congress." There has not been found any order of the President or any act of the Congress which specifically revokes such order.

The act of June 25, 1910, as amended, authorizes the President to "temporarily withdraw from settlement, location, sale, or entry any of the public lands of the United States * * * and reserve the same for water-power sites, irrigation, classification of lands, or other public purposes to be specified in the orders of withdrawals."

The Executive order of December 31, 1930, would seem to constitute a reservation of such 44,000 acres of land. In other words, by virtue of such order, such lands ceased to be a part of the unreserved public domain.

The first section of the act of June 28, 1934 (48 Stat. 1269), known as the Taylor Grazing Act, provides, in part, as follows:

"That in order to promote the highest use of the public lands pending its final disposal, the Secretary of the Interior is authorized, in his discretion, by order to establish grazing districts or additions thereto and/or to modify the boundaries thereof, not exceeding in the aggregate an area of 80,000,000 acres of vacant, unappropriated, and unreserved lands from any part of the public domain of the United States (exclusive of Alaska), which are not in national forests, national parks and monuments, Indian reservations, revested Oregon and California Railroad grant lands, or revested Coos Bay wagon road grant lands, and which in his opinion, are chiefly valuable for grazing and raising forage crops: *Provided*, That no lands withdrawn or reserved for any other purpose shall be included in any such district except with the approval of the head of the department having jurisdiction thereof." [Emphasis supplied.]

A study of the legislative history of such act discloses that as the bill (H. R. 6462, 73d Cong.) passed the House of Representatives, the words which are emphasized in the above quotation were not included. Such words were inserted by the Senate. As presented to the Senate, therefore, the bill proposed to authorize the Secretary of the Interior to establish grazing districts, or additions thereto, from any part of the public lands of the United States, with the exception of national forests and certain other specified lands; no reference whatever being made, at that point, to either reserved or unreserved lands.

During the debate on the floor of the House of Representatives, Mr. DeRouen, the manager in charge of the bill, stated that the provisions of the bill were "applicable to all public lands of the United States outside of Alaska and not included in national forests, parks, and monuments, or Indian reservations" (Congressional Record, vol. 78, pt. 6, p. 6346). Thus it appears that, except for certain homestead and other rights initiated under other laws and the lands affected thereby which are otherwise expressly excluded from the operation of such act, the provisions of the bill, as it reached the Senate, were not limited to unreserved public lands.

This view is substantiated by the proviso which appeared in the first section of the bill as it passed the House of Representatives, and which reads as follows: "*Provided*, That no lands withdrawn or reserved for any other purpose shall be included in any such district except with the approval of the head of the department having jurisdiction thereof." (See also portion of such section heretofore quoted.)

The lands here in question would seem to come within such category of "lands withdrawn or reserved for any other purpose," by virtue of such Executive order of December 31, 1930 (temporary withdrawal thereof for classification and as an aid to future legislation).

Such proviso, plus the statement of Mr. DeRouen, clearly indicates that the intention of the House of Representatives, at least, was that the Secretary of the Interior could establish grazing districts from any part of the public domain—from reserved as well as unreserved lands—the only restriction with respect to lands reserved or withdrawn for any other purpose being that the consent of the head of the particular department concerned would be required in order to include such lands within any grazing district. This proviso was not disturbed by the Senate, and, as a result, became a part of the act as finally approved.

On the theory that the lands affected by the Executive order of December 31, 1930, are reserved lands, it would appear, except for such proviso, that the provisions of the Taylor Grazing Act, as finally enacted, are not applicable to such lands, since the act without the proviso would appear to authorize the inclusion within grazing districts of only "vacant, unappropriated, and reserved lands." The proviso creates an ambiguity.

When the acreage-limitation amendment was under consideration on the floor of the Senate, the following explanation was given by Senators Adams and O'Mahoney of the Committee on Public Lands and Surveys:

MR. ADAMS. * * * There is now an area of 173,000,000 acres of land, which is the residue after all the forest withdrawals, after all the national-park withdrawals, after all the homestead entries. * * *

"The bill does not authorize the creation of grazing districts comprising the entire 173,000,000 acres, but has been limited to 80,000,000 acres. There was some question as to whether or not all this land should be included; consequently, the committee has modified the House bill by restricting the authority of the Secretary of the Interior so that he may create grazing districts out of but 80,000,000 acres.

* * * * *

"MR. BORAH. May I ask the Senator why the limitation was made? In other words, out of the entire 173,000,000 acres, I understand the bill operates only on 80,000,000?

"MR. ADAMS. That is correct.

"MR. BORAH. Is the Secretary of the Interior to determine for himself in what particular portion of the 173,000,000 acres he will select the 80,000,000 acres?

"MR. ADAMS. That is true. It was the idea to have compact grazing areas and perhaps leaving out the fragmentary areas which were not suitable for compact grazing districts.

"MR. BORAH. Then it gives the Secretary of the Interior complete power to determine for himself on what portion of the 173,000,000 acres he will operate?

"MR. ADAMS. Yes; the original bill gave him the power to act with respect to the entire 173,000,000 acres, but the bill now pending really restricts his power rather than enlarges it.

"MR. BORAH. Yes; if he is to have the authority to deal with a portion of the land, why is it not wise to give him authority over the entire acreage?

"MR. ADAMS. I will be quite frank in saying to the Senator that my own judgment is that it would be preferable to have the entire area of public lands subject to that jurisdiction, but the committee seemed to feel it was preferable to provide a limitation. That action was agreeable to the Secretary of the Interior, who stated through his representatives that their survey indicated that only approximately 80,000,000 acres were so located as to be available for the creation of such grazing districts.

* * * * *

"MR. O'MAHONEY. I may say to the Senator from Idaho in answer to his question, that the amendment limiting the operation of the bill to 80,000,000 acres was the result of a belief upon the part of a great many of us in the public-land States that it would be unwise to clothe the Secretary of the Interior with the power to shut off all homesteading in the public-land States.

"If the Secretary were permitted to create grazing districts without limitation it would have been possible for him to have stopped all homesteading. It was testified before the Committee on Public Lands and Surveys that the present prospects are, however, that only about 50,000,000 acres would be needed for districts which are contemplated. Consequently, it was felt that a degree of assurance might be conveyed to those who still believe that opportunity for homesteading upon the public domain should be maintained by inserting the amendment, which has the effect of saying to the Secretary and to all who are interested in the development of the public domain, that only 80,000,000 acres

will be affected by the bill without act of Congress. This gives us the assurance that all the public-land laws will continue to apply upon the area which is not included in the grazing districts" (Congressional Record, vol. 78, pt. 10, pp. 11139 and 11140).

In addition, the following appears in the report of the Senate Committee on Public Lands and Surveys: "The total area of such grazing districts shall not exceed an aggregate of 80,000,000 acres" (S. Rept. No. 1182, 73d Cong., p. 2).

The purposes of the Senate amendment thus appear to have been first, to restrict the power of the Secretary of the Interior, under the act, to the use of not more than a total of 80,000,000 acres for inclusion within grazing districts; second, to insure that the lands comprising any grazing district would not consist of land reserved for some other purpose; and third, to prevent the Secretary of the Interior from shutting off all homesteading in the public-land States. Attention is again directed, however, to the fact that the proviso previously referred to was not stricken out, nor was it rephrased in order to clarify on the face of the statute the true intention of the Senate.

The last-mentioned purpose of the Senate and, of course, the Congress seems to have been defeated, however, by the issuance of Executive Order No. 6910, dated November 26, 1934, approximately 5 months after the enactment of the Taylor Grazing Act. Such Executive order temporarily withdrew "from settlement, location, sale, or entry" all of the "vacant, unreserved, and unappropriated public land in the States of Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, North Dakota, Oregon, South Dakota, Utah, and Wyoming" and reserved such land "for classification, and pending determination of the most useful purpose to which such land may be put in consideration of the provisions of said act of June 28, 1934 (Taylor Grazing Act), and for conservation and development of natural resources."

It is understood that at such time practically all of the then vacant, unappropriated, and unreserved land suitable for grazing, which consisted of approximately 173,000,000 acres, was located in the States covered by such Executive order of November 26, 1934. The effect of such Executive order was, therefore, to withdraw and reserve practically all of the previously unreserved land in the public domain which was then suitable for grazing purposes.

The theory upon which such Executive order was issued probably grew out of an interpretation by someone in the Interior Department that the limitation of 80,000,000 acres applied only to "vacant, unappropriated, and unreserved lands," that that there was no acreage limitation on the use of reserved lands. In other words, any lands which had therefore been or should at any time thereafter be reserved for any purpose could be included in grazing districts; and, since most of the reserved lands were already under the jurisdiction of the Secretary of the Interior, the requirement of the proviso mentioned above, that approval be obtained by the Secretary of the Interior from the head of the department having jurisdiction over such lands, could be easily met.

At any rate, the matter was submitted to the Attorney General by the Department of the Interior for an opinion as to whether the approximately 173,000,000 acres of lands reserved by the Executive order of November 26, 1934, could be included within the grazing districts "without restriction as to acreage."

The opinion of the Attorney General on this question, when considered in connection with an event which thereafter transpired, has an important bearing on the question which is the subject of this memorandum. Portions of such opinion are as follows (38 Op. Atty. Gen. 350):

"It seems clear to me * * * that it was the intention of the Congress that not more than 80,000,000 acres of the lands which were vacant, unappropriated, and unreserved at the time of the act became effective should be included in the grazing districts authorized by the act.

* * * * *

"To hold that the (acreage) limitation in section 1 of the Taylor Grazing Act does not apply to lands reserved by Executive Order No. 6910 would seem to lead to an unreasonable result. As already stated, * * * at the time the Taylor Grazing Act was passed practically all of the then vacant, unappropriated, and unreserved public land suitable for grazing, consisting of approximately 173,000,000 acres was situated in those States now covered by Executive Order No. 6910. The effect of the Executive order was, therefore, to withdraw and reserve practically all of the public lands suitable for grazing that were unreserved at the time the act was passed. If the land so withdrawn could be included in the grazing districts without restriction as to the acreage practically the

whole of the public land unreserved at the time the act was passed could be included. Moreover, if the lands withdrawn by Executive Order No. 6910 could be included without restriction as to acreage, it would follow that land withdrawn under any other order, issued after the act becomes effective, could be so included. Hence, practically all public lands of the United States, chiefly suitable for grazing and raising forage crops, could be included in the grazing districts authorized by the act, as reserved lands. Under such circumstances, the grazing districts might include practically all public lands suitable for grazing purposes and still consist almost wholly of reserved lands—a situation certainly not contemplated by the statute.

"It thus appears that if the statute be interpreted to mean that the acreage limitation applies only to lands now vacant, unappropriated, and unreserved, and is not applicable to lands withdrawn by the Executive order in question, the limitation is in fact destroyed. Such an interpretation is contrary to the principle that a statute must be so construed as to give effect to every part of it, if possible.

"The statute at best is so ambiguous in the respects noted that it cannot be satisfactorily determined from its language alone whether the express limitation of 80,000,000 acres is intended to include or exclude lands unreserved when it became effective and only thereafter reserved. On that account, and because of the unreasonable result which would follow from a holding that the limitation does not apply to land reserved by Executive Order No. 6910 and because of the necessity of so construing the statute as to give effect to every part, the legislative history of the act must be considered in determining its meaning.

"For the foregoing reasons it is my opinion that the Taylor Grazing Act does not authorize the inclusion in grazing districts of more than 80,000,000 acres of the lands withdrawn by Executive Order No. 6910, of November 26, 1934." (By the act of June 26, 1936 (49 Stat. 1976), the acreage limitation was increased to 142,000,000 acres.)

It was the opinion of the Attorney General, therefore, that the words "not exceeding in the aggregate an area of 80,000,000 acres of vacant, unappropriated, and unreserved lands" were intended by the Congress to mean that not more than 80,000,000 acres of the lands which were vacant, unappropriated, and unreserved at the time of the enactment of the Taylor Grazing Act could be included in the grazing districts thereby authorized to be established.

The date of the opinion of the Attorney General was October 19, 1935. By Executive Order No. 7274, dated January 14, 1936, the Executive order of November 26, 1934, was amended by excluding from the operation thereof all lands covered thereby which were then, or might thereafter be, included within grazing districts established under the provisions of the Taylor Grazing Act, so long as such lands continued to be a part of any such grazing district. The reasons for issuing such Executive order of January 14, 1936, are not clear, but it may have been prompted by the view that only lands which are vacant, unappropriated, and unreserved may be included within grazing districts. At any rate, the effect of the Executive order of November 26, 1934, which were, or may hereafter be, included within a grazing district are to have an unreserved status so long as they remain a part of any such district.

The 44,000 acres of land here in question were not affected by the withdrawal order of November 26, 1934, since they were already in a "reserved" status on that date; and their status was not changed by the Executive order of January 14, 1936.

The opinion of the Attorney General certainly was that the acreage limitation in the Taylor Grazing Act, as originally enacted, was an over-all limitation and that not more than 80,000,000 acres of the lands withdrawn by the Executive order of November 26, 1934, could be included in grazing districts under the authority of such act. If the 80,000,000-acre limitation is an over-all limitation of the aggregate of the lands to be included in grazing districts, the words "of vacant, unappropriated, and unreserved lands" can only be construed to mean that all of the lands included within grazing districts must come from unreserved lands.

It might be said to follow, therefore, that lands which were reserved on the date of the enactment of the Taylor Grazing Act may not be included within grazing districts, at least so long as they are reserved lands. If such is the correct view, the action of the Secretary of the Interior in including within a grazing district the 44,000 acres of land reserved by the Executive order of December 31, 1930, until such Executive order is revoked, does not appear to be

justified, unless the proviso contained in the first section of such act and previously referred to herein, could be construed to authorize the Secretary of the Interior to include such lands by merely obtaining his own approval of such action, since he is head of the Department having jurisdiction of such lands at the present time.
